Bonner, Robert, publisher, born near Londonderry, Ireland, April 28, 1824; died in New York city, July 6, 1899. At the solicitation of an uncle who had become a prosperous farmer near Hartford, Conn., he came to the United States in 1839, and first found employment in the composing room of the Hartford Courant at \$25 a year and "found." In 1844 he removed to New York city to take the place of proof reader and assistant foreman on the Evening Mirror. While holding this place he also became the New York correspondent of the Hartford Courant and of newspapers in Albany, Boston, and Washington. He also while here displayed such originality and attractiveness in setting up advertisements that he made a handsome contract to do such work for the Merchants' Ledger, a small business periodical. Seven years after reaching New York he had saved enough money to buy the Merchants' Ledger plant. The name was changed to the New York Ledger, and the paper passed from a purely commercial to a literary publication. His first bold venture was to engage Fanny Fern to write a story at a cost of \$100 a column; the next was the spending of his last dollar in advertising the fact. Both proceedings were unprecedented at the time. Fanny Fern was paid \$1,000 for her story Fanny Ford, Henry Ward Beecher received \$30,000 for his Norwood, Alfred Tennyson's check for a very short poem was \$5,000, and Charles Dickens received a like amount for the only story he ever wrote for an American publication. Mr. Bonner often spent \$25,000 a week for weeks at a time in advertising his paper. He maintained his direct management of the Ledger till 1887, when he transferred the property to his three sons and retired. Mr. Bonner was widely known as an owner and driver of fast trotting horses, which constituted his chief recreation. He aspired to be the owner of the fastest trotting horses in existence, and whenever he purchased a record breaker the animal was at once withdrawn from all public racing. He owned a large stock farm near Tarrytown, N. Y., where he bred some remarkable horses. His expenditure for fast horses exceeded \$600,000. The most notable ones and their cost were: Pocahontas, \$40,000; Dexter, \$35,000; Edward Everett, \$20,000; Maud Macy, \$10,000; Edwin Forrest, \$16,000; Rarus, \$36,000; Maud S., \$40,000; Sunol, \$41,000; and Russell, \$10,000. Mr. Bonner gave Princeton College \$19,000 for its gymnasium fund, the sufferers in the Chicago fire \$10,000, and the Fifth Avenue Presbyterian Church \$130,000. He was known as a generous supporter of many charitable institutions and causes, but his aversion to publicity placed an injunction of secrecy

on most of his benefactions. Toward the close of his life he attributed his worldly advantages to three rules he had steadfastly observed: "Never bet; never borrow money; never give a note."

Boone, Thomas Carroll, telegrapher, born in Annapolis, Md., in 1876; died in Boston, Mass., March 19, 1899. He was a direct descendant of Daniel Boone and of Charles Carroll of Carrollton. He became an expert telegrapher, and under President McKinley's call for volunteers he enlisted in the 2d Massachusetts Regiment and went to the front as first corporal of Company K. While the regiment was at Tampa awaiting transportation to Cuba he was detached and appointed a sergeant in the United States Signal Service. When the land movement toward Santiago was begun he was one of three men who volunteered to go up in the observation balloon and telegraph signals. He discharged this perilous duty during the battles at El Caney and San Juan Hill, and again during the subsequent fighting on the outskirts of Santiago till the balloon fell, pierced by the long-range Mauser rifle bullets of the Spaniards. All three occupants of the car were severely injured in its descent. One received wounds that caused his death soon afterward, and another became hopelessly insane from the shock. Boone was sent to the field hospital for treatment, and then taken to Boston. His injuries made a delicate surgical operation necessary, and from this he had not sufficient strength to rally.

Booth, Henry Matthias, educator, born in New York city, Oct. 3, 1843; died in Auburn, N. Y., March 18, 1899. He was graduated at Williams College in 1864 and at Union Theological Seminary in 1867, and was pastor of the Presbyterian Church in Englewood, N. J., from 1867 till 1891. He resigned because of impaired health, and, after spending a year in European travel, became associated with the Rev. Henry Van Dyke, D. D., of the Brick Presbyterian Church, New York city. In 1893 he was elected president of Auburn Theological Seminary, where his work was marked by much success till his death. Dr. Booth received the degrees of D. D. and LL. D. from Williams College, and was a trustee of Princeton and Union Theological Seminaries. He published *The Heavenly Vision*, and *Other Sermons* (New York, 1885); *The Sunrise, Noonday, and Sunset of the Day of Grace* (1888), and other works.

Born, Peter, educator, born in Lycoming County, Pennsylvania, July 3, 1820; died in Selinsgrove, Pa., May 29, 1899. He was educated in the institutions at Gettysburg, Pa., being graduated at the college in 1848 and the theological seminary in 1850. In the following year he was ordained by the East Pennsylvania Synod. He was pastor of the Lutheran Church at Sunbury, Pa., in 1851-'59; principal of the classical department of Missionary Institute (now Susquehanna University), Selinsgrove, Pa., in 1859-'81; superintendent and first Professor of Theology in the same institution in 1881-'95, when he retired as professor emeritus, continuing, however, to lecture in the theological department. He received the degree of D. D. from Wittenberg College in 1879. He was a frequent contributor to church and other periodicals, and his articles, signed "Rhadamanthus," in the American Lutheran, attracted special attention.

Bosworth, Benjamin Miller, jurist, born in Warren, R. I., Jan. 17, 1848; died there, Feb. 9, 1899. He received a public-school education, studied law, teaching evening school in the meantime, and was admitted to the Rhode Island bar in 1873. In 1874-'76 he was trial justice of War-

ren; in 1882-'85, Assistant Attorney-General; in 1886-'97, justice of the Fifth District Court; and from 1897 till his death an associate justice of the Supreme Court of Rhode Island. Judge Bosworth represented Warren in the General Assembly in 1880-'82 and 1885-'86, was a member of the local school committee more than twenty years and acting superintendent for five years, and was a delegate to the Republican National Convention in 1888.

Boyd, David French, educator, born in Wytheville, Va., in 1835; died in Baton Rouge, La., May 27, 1899. He was graduated at the University of Virginia, began teaching in 1856, and was chosen Professor of Latin in the Louisiana Military Seminary, then under the superintendence of Col. William T. Sherman, in 1860. At the beginning of the civil war Col. Sherman came North and entered the national service, and Prof. Boyd joined the Confederate army as colonel of the 9th Louisiana Regiment, subsequently serving with the engineers under Gen. Kirby Smith. After the war Prof. Boyd was superintendent of the Louisiana Military Seminary ten years, when he resigned to become superintendent of the military school at Cairo, Egypt. He returned home to assume the presidency of Louisiana State University, of which he was practically the founder. In 1883 he was chosen president of Alabama Agricultural and Mechanical College, at Auburn; in 1889, of Kentucky Military Institute, near Franklin; in 1893, of Michigan Military Academy, at Orchard Lake; and in 1897, of Louisiana State University again, where he was also Professor of Philosophy and Civics.

Brand, James, clergyman, born in Three Rivers, Quebec, Canada, Feb. 26, 1834; died in Oberlin, Ohio, April 11, 1899. He was brought up on a farm, learned the carpenter's trade, and entered Phillips Academy, Andover, in 1858, and Yale College in 1861. He enlisted in the 27th Connecticut Volunteers, with which he took part in the battles of Chancellorsville, Fredericksburg, and Gettysburg. He returned to Yale in 1863, was graduated in 1866, spent three years in theological study at Andover, and was ordained pastor of a Congregational church in Danvers, Mass., Oct. 6, 1869. From 1873 till his death he was pastor of the First Congregational Church at Oberlin, and was intimately associated with the work of the college and theological seminary there. He received the degree of D. D. from Iowa College in 1888. Dr. Brand delivered noteworthy addresses at the great International Congregational Conference in London and at the Parliament of Religions in Chicago in 1893, and published numerous writings, of which Sermons from a College Pulpit and The Mission of the Christian Church are the best known.

Brandeis, Frederic, composer, born in Vienna, Austria, in 1835; died in New York city, May 14, 1899. He became a student in the College of Vienna, and received tuition in piano playing from Fischhof and Czerny, and in composition from Ruffnatscha, till the rebellion of 1848 ruined his father. The family emigrated to the United States in 1849, where Frederic attracted the attention of Theodore Thomas by the performance of an original sonata. Mr. Thomas introduced him to the public in his series of chamber-music concerts. In 1860 Frederic became organist in the Church of St. John the Evangelist, and on its destruction by fire went to St. James's Roman Catholic Church. From 1880 till 1886 he was organist in a New York synagogue, and thenceforth till his death was similarly connected with the Roman Catholic Church of St. Peter and St.

Paul. Mr. Brandeis won first honors in prize composition contests, and, among others, composed the ballad for orchestra and chorus, The Ring, and the songs My Love is Like the Red, Red Rose and The Castle by the Sea.

Breyer, Mary Anne, actress, born in Scotland in 1848; died in Nashville, Tenn., Feb. 14, 1899. She came to the United States with her mother, a well-known Scottish actress, in 1857, and made her first appearance at Saratoga, N. Y. She played several years with her mother, brothers, and sisters as a child actress in Western theaters. At about the age of seventeen she was received as a favorite representative of the heroines of the standard drama throughout the cities of the Ohio and Mississippi valleys, and she played many successful engagements as a star. She joined Mr. H. C. Milne as his leading woman in 1884, when that gentleman abandoned his profession as a clergyman in Chicago and became an actor. She finally went to New York as a representative of character parts and old women. Her first engagement in New York was in the part of Old Margery in Bronson Howard's play Shendoah. Her next New York success was as the old maid in The Private Secretary, and then for four seasons she played Mrs. Firman in Doctor Bill. In 1897 she joined the company supporting Otis Skinner, and played the Nurse in Romeo and Juliet and other similar parts. When Margaret Mather produced Cymbeline at Wallack's Theater, New York, in October, 1898, Miss Breyer played the Queen, and afterward the Nurse in Romeo and Juliet on the road until the death of Miss Mather. In January, 1899, she again joined Mr. Skinner, who was playing Rosemary. Her last appearance was in this play, in the part of Mrs. Menefee, at Nashville, Feb. 4, 1899.

Bridgman, Charles De Witt, clergyman, born in Saugerties, N. Y., Jan. 1, 1835; died in New York city, Feb. 21, 1899. He was graduated at Rochester University in 1855, and at its Theological Seminary in 1857, and held pastorates at Morristown, N. J., and Jamaica Plains, Mass., till 1862. In that year he was called to Emmanuel Baptist Church in Albany, N. Y., where he labored with exceptional success for seventeen years. During this period his congregation erected one of the largest church edifices of the denomination in the State. In 1878 he accepted a call from the Madison Avenue Baptist Church, New York city, where he remained thirteen years. On April 29, 1891, he surprised his congregation by resigning the pastorate because of a change of view concerning some denominational doctrines. A month later he entered the Protestant Episcopal Church, in December following he was ordained to its ministry, and in February, 1892, he became rector of Holy Trinity Church in the Harlem district. He was an eloquent preacher and writer, and many of his discourses were published.

Brinton, Daniel Garrison, ethnologist, born in Thornbury, Chester Co., Pa., May 13, 1837; died in Atlantic City, N. J., July 31, 1899. He was descended from William Brinton, of Shropshire, England, who came to Pennsylvania with William Penn in 1684. Of his early life it has been said that "many a day was passed in collecting the broken points, the stone axes, and the fragments of pottery that marked the presence of an older and mysterious race." He was graduated at Yale in 1858, and among his classmates were J. Willard Gibbs, the physicist, and William T. Harris, the educator. He was graduated at Jefferson Medical College in 1860, after which he spent a year abroad, chiefly in Heidel-

berg and Paris. Returning to the United States in 1862, he entered the National army as assistant surgeon, and in February, 1863, was promoted surgeon. He was made surgeon in chief of the 2d division of the 11th Corps in the Army of the Potomac, and participated in the battles of Chancellorsville and Gettysburg. A sunstroke at the last-named battle prevented further service in the field, and he became superintendent of hospitals in Quincy and Springfield, Ill. At the close of the war he was mustered out with the brevet rank of lieutenant colonel. He then settled in Philadelphia, where from 1867 till 1887 he was editor of the *Medical and Surgical Reporter*, at the same time editing the *Quarterly Compendium of Sciences*. In 1884 he was made Professor of Ethnology and Archæology in the Academy of Natural Sciences in Philadelphia, and in 1886 he was called to the chair of Linguistics and Archæology in the University of Pennsylvania, both of which places he held until his death. His interest in archæological studies obtained its first impulse during a winter spent in Florida, where he gathered material for *The Floridian Peninsula: Its Literary History, Indian Tribes, and Antiquities* (Philadelphia, 1859). After the civil war he resumed his interest in antiquarian studies, and, after publishing *The Myths of the New World: A Treatise on the Symbolism and Mythology of the Red Race of America* (1868), began the publication of the *Library of Aboriginal American Literature*, and was the responsible editor of *The Chronicles of the Mayas* (1882); *The Comedy Ballet of Gueguence* (1883); *The Lenape and their Legends* (1885); *The Annals of the Cakchiquels* (1886); *Ancient Nahuatl Poetry* (1887); and *Sacred Chants of the Ancient Mexicans* (1890). These gained for him the medal of the *Société Americaine de France* in 1886. The degree of LL.D. was conferred on him by Jefferson College in 1891, and that of D.Sc. by the University of Pennsylvania in 1893. Dr. Brinton was a commissioner to the Columbian Historical Exposition held in Madrid in 1892, and was a member of the Jury of Awards at the World's Columbian Exposition in Chicago in 1893, where he presided over the International Anthropological Congress. He had been president of the American Folklore Society, of the Numismatic and Antiquarian Society of Philadelphia, and of the American Association for the Advancement of Science, and he was a member of the Anthropological Societies of Berlin, Rome, and Vienna, and of the Royal Ethnographical Societies of Paris and Florence, the Royal Society of Antiquaries, Copenhagen, and the Royal Academy of History, Madrid. He was an associate editor of Science and an editor of the *American Anthropologist*, and, besides the works already mentioned, he was author of *The Religious Sentiment: A Contribution to the Science of Religion* (1876); *American Hero Myths: A Study in the Native Religions of the Western Continent* (1882); *Essays of an Americanist* (1890); *The Pursuit of Happiness* (1892); *Maria Candelaria: An Historical Drama from American Aboriginal Life* (1897); and *Religions of Primitive Peoples* (1897). Through his "rich, natural endowment, coupled with wise and persistent effort, he materially advanced the science of man, and placed himself in the front rank of the anthropologists of the world." His portrait appeared in the *Annual Cyclopædia* for 1894, page 32.

Broughton, Luke D., astrologer, born in Leeds, England, April 20, 1828; died in New York city, Sept. 22, 1899. He came of a family some of whose members had practiced astrology as

early as 1700. He began studying astrology when eighteen, and was an ardent disciple of it through life. In 1854 he came to the United States, and, after serving his time as a weaver's apprentice and working a few years in a chemical laboratory, was graduated at a homœopathic medical college in Philadelphia. He removed to New York in 1863, and engaged in medical practice. Dr. Broughton lectured extensively on astrology, was for some years editor of *The Monthly Planetary Reader*, and at the time of his death was president of the New York Astrological Society.

Brown, Felix, inventor, born in Belgium in May, 1826; died in Elizabeth, N. J., April 6, 1899. He came to the United States about 1849, and learned the machinist's trade in New York city in company with a brother. The employer thought so highly of the brothers that in time he established them in business, and they assembled a large plant, known as the Progress Iron Works, for the manufacture of shafting, pulleys, and power machinery. About ten years ago the plant was removed to Elizabeth. Mr. Brown was a man of much inventive skill, and had received numerous patents for improved machinery. Among his noteworthy inventions were the fog horn used in the lighthouse service of the United States and other countries and the machine long used for cutting block sugar. Mr. Brown was an original member of the Arion Singing Society of New York.

Browne, Irving, lawyer, born in Marshall, N. Y., Sept. 14, 1835; died in Buffalo, N. Y., Feb. 7, 1899. He was a son of the Rev. Lewis C. Browne, and, after studying law in New York city, formed a partnership with Martin I. and Rufus Townsend in Troy, himself taking charge of the office work. In 1879 he removed to Albany, where for many years he was editor of the *Albany Law Journal*. Since 1893 he had lived in Buffalo. Mr. Browne for two years previous to his death was librarian of the law library of the 8th Judicial District. He also had charge of a department in the Green Bag, and was a lecturer before the Buffalo Law School. He edited and annotated hundreds of volumes of reports, among them being the New York State Reports, 35 volumes of the American Reports, and 2 volumes of National Bank Cases. Other work included standard text-books on *The Law of Domestic Relations*, *Criminal Law*, *Parole Evidence*, *Sales and Bailments*, *Short Studies in Evidence*, *Judicial Interpretation of Common Words and Phrases*, and, in lighter vein, *Short Studies of Great Lawyers*, *Law and Lawyers in Literature*, *Humorous Phases of the Law*, a volume of book lore on *In the Track of the Bookworm*, and a volume of poems, entitled *The House of the Heart*. At the time of his death he was writing the American notes to the series of English Ruling Cases, now in its sixteenth volume. As a collector of books Mr. Browne sought all desirable standard works in history, biography, poetry, and romance, gathered an excellent collection of the old dramatists, of choice editions of Greek, Latin and French authors, and of works on the fine arts, and prepared personally 150 volumes containing extra illustrations, the last constituting the gem of his treasures.

Brumby, Thomas M., naval officer, born in Georgia in 1855; died in Washington, D. C., Dec. 17, 1899. He entered the Naval Academy on Sept. 25, 1873, and was graduated on June 18, 1879. He was assigned to the Tennessee. On Nov. 26, 1880, he was promoted to ensign, and the next year he went on the receiving ship Franklin. He then served successively on the Jamestown, Ged-

ney, and Vandalia, the receiving ship Vermont, and the schoolship St. Mary. He was promoted to lieutenant (junior grade) on April 21, 1887, and to lieutenant on Aug. 24, 1892. He was on the New York from 1893 to 1896. He was assigned to the Naval Observatory and War College in September, 1897, and in January, 1898, went on the Olympia, and participated in the battle of Manila Bay on May 1 of that year. In his capacity as flag lieutenant to the admiral (Dewey) Lieut. Brumby was thrown with his chief practically all the time, and acted as his personal representative in many matters of detail delegated to him by the commanding officer.

Bryant, Gridley James Fox, architect, born in Boston, Mass., Aug. 29, 1816; died there, June 8, 1899. He was the son of Gridley Bryant, who built the railroad to carry stone from the Quincy quarries to the site of Bunker Hill Monument, which is said to have been the first railroad constructed in America, and who invented the two-wheel and four-wheel railroad trucks and the first turntable put together in this country. Young Gridley was educated in the public schools and at home, studied architecture, and established himself in Boston. He designed and erected the first fire-proof building in Boston; rebuilt the Charlestown State Prison; remodeled the State Capitol at Concord, N. H.; erected the Old Colony Station in Boston; and in 1853-'54 added a fire-proof extension to the Massachusetts Statehouse. He also designed and erected county court buildings and jails; the customhouse at Eastport, Me.; the Maine State Reformed School, at Cape Elizabeth; the Peabody Institute, at Danvers, Mass.; the city halls at Lynn and Gloucester, Mass.; the City Hospital and St. Vincent's Orphan Asylum, both in Boston; and many churches and schoolhouses in that city. On the opening of Franklin Street, Boston, he built it up with granite blocks for business, and subsequently he did the same with Summer Street. The great fire in 1872 destroyed 152 of the buildings he had designed and erected, and afterward he was commissioned to rebuild 110 of them. For several years he was supervising architect of the Treasury Department.

Buberl, Caspar, sculptor, born in Bohemia in 1834; died in New York city, Aug. 22, 1899. He received his professional education in Vienna, came to the United States in 1854, and executed a number of noteworthy public works. Among his best-known productions are the soldiers' and sailors' monuments in Troy, N. Y., Manchester, N. H., and Hartford, Conn.; a bronze statue at Alexandria, Va., symbolical of "the lost cause"; the bronzes on the New York State Monument at Gettysburg; five bas-reliefs on the Garfield Monument at Cleveland; the figure of Columbia in front of the new Congressional Library; and the allegorical groups of the Patent Office, representing Electricity, Fire, Water, Invention, Agriculture, and Mining. In New York he executed the Muses at the Metropolitan Opera House, the Buckingham statue on the hotel of that name, and the Newsboy on the building of the American News Company. He also made a statue of Ponce de Leon for Venezuela. At the time of his sudden death he had just completed the medallion bas-relief of Rear-Admiral Dahlgren for the Dewey triumphal arch on Madison Square, and had begun work on a second medallion.

Buckalew, Charles E., lawyer, born in Bloomsburg, Columbia Co., Pa., Dec. 28, 1821; died there, May 19, 1899. He studied law, and was admitted to the bar in 1843. In 1845-'47 he was prosecuting attorney for Columbia County; in 1850-'56,

a State Senator; in 1854, a United States commissioner to ratify the treaty with Paraguay; and in 1857 chairman of the Democratic State Committee. During the last year he was re-elected a State Senator and appointed a commissioner to revise the penal code of Pennsylvania. He resigned these two offices in 1858 on being appointed minister to Ecuador. In 1861 he returned to the United States, and two years later he was elected United States Senator, to succeed David Wilmot, by a majority of one vote. During this service he was a member of the Committees on the Post Office and Indian Affairs, and opposed the reconstruction measures as illegal. On the expiration of his term he was again elected to the State Senate, where he began the movement for a State constitutional convention, of which he was afterward a member. In 1872 he was the unsuccessful Democratic candidate for Governor, in 1876 headed the Democratic State electoral ticket, and in 1886 and 1888 was elected a Representative in Congress. While in the House of Representatives he served on the Committees on the Judiciary and Education. He published Proportional Representation (1872) and The Constitution of Pennsylvania (1883).

Bullock, Jonathan Russell, jurist, born in Bristol, R. I., Sept. 6, 1815; died there, May 7, 1899. He was graduated at Brown University in 1834, studied law, and was admitted to the bar at Newport in 1836. Soon afterward he removed to Alton, Ill., where he practiced till 1843, when he returned to Bristol. He then served three terms in the General Assembly of Rhode Island, and in 1849 was appointed collector of the port of Bristol and elected a State Senator. In 1860 he was elected Lieutenant Governor, and in the following year the Governor appointed him a special commissioner to adjust the civil war claims of the State against the Federal Government. While engaged in this duty, in 1862, he was chosen an associate justice of the Supreme Court of Rhode Island. He remained on the bench of that court till March, 1864, when he was appointed judge of the United States District Court for Rhode Island. Judge Bullock was obliged by failing health to resign in 1869.

Bunnell, Jesse H., telegrapher, born in Masilon, Ohio, in 1843; died in Brooklyn, N. Y., Feb. 8, 1899. He began learning telegraphy when eleven years old, and when sixteen was an operator in Columbus. In 1861, while employed in Pittsburg, he went to Washington on the call for volunteers for the military telegraph service, and was first stationed at Annapolis, Md. After the battle of Big Bethel he was transferred to Hampton, Va., and on the organization of the Peninsular campaign he became Gen. McClellan's personal telegrapher. When Gen. McClellan transferred his headquarters to the steamer Commodore, at Yorktown, Mr. Bunnell operated the wire between the vessel and Washington. During the battle of Antietam he received and sent messages under continuous fire. In 1863 he was transferred to the Army of the Cumberland and assigned to Gen. Rosecrans's headquarters. In the battle of Chickamauga, after the right wing of the National army had been driven back, Mr. Bunnell found himself the only man left in that part of the field. When Gen. Rosecrans reached Chattanooga Mr. Bunnell reopened communication with him, informing him how the other division commanders had fared. From Chattanooga Mr. Bunnell went to Atlanta in 1864, intending to accompany Gen. Sherman on his march to the sea, but exposure and hardship had impaired his health to such an extent that he was obliged to leave

the service. After the war he was engaged in the manufacture of electrical supplies in New York city. Mr. Bunnell was widely known as the "lightning sender," because of his great feat in 1860, when he sent President Buchanan's message from Pittsburg to Cincinnati, making an average of 38 words a minute for two hours.

Butler, William, clergyman, born in Dublin, Ireland, Jan. 30, 1818; died in Old Orchard, Me., Aug. 18, 1899. He was educated for the Wesleyan ministry at Didsbury, completing his course in 1844, and joined the Irish Conference, in which he preached six years. In 1850 he came to the United States, and he labored in the New England Conference till 1856, when he went to India as a missionary. After ten years of foreign service, during which time he organized a Methodist mission in the Ganges valley, he returned home to assume the post of secretary of the American and Foreign Christian Union. During the Sepoy rebellion in India Dr. Butler escaped to the hills, and was in hiding several months. There are now 100,000 Methodists in India as a result of his labors. In 1872-'79 he was engaged in organizing Methodist missions in Mexico, and in 1880-'82 held a pastorate in Melrose, Mass. Among his writings are *Missionary Compendium*, *The Land of the Vedas*, and *Mexico from the Conquest to 1880*.

Butterfield, Consul Willshire, historian, born in Mexico, N. Y., July 28, 1824; died in South Omaha, Neb., Sept. 25, 1899. He was of Leyden Pilgrim ancestry and a brother of Emilie Butterfield, now the wife of Charles Loyson, better known as Père Hyacinthe. When ten years old he accompanied his parents to Ohio, where he was chiefly self-educated, and engaged in teaching. In 1848 he was appointed superintendent of public schools in Seneca County, Ohio; in 1850 he went to California, where he was defeated as an independent candidate for State Superintendent of Public Instruction; and in 1851 he began practicing law in Bucyrus, Ohio. He abandoned the legal profession in 1875 and removed to Madison, Wis., remaining there till 1888, when he settled in South Omaha. Mr. Butterfield produced many historical works of permanent value. Besides contributing to a large number of city, town, and county histories and biographical publications, he edited the *Washington-Crawford Letters* (Cincinnati, 1877); the *Washington-Irvine Correspondence* (Madison, 1882); *A Short Biography of John Leith* (Cincinnati, 1883); and *Journal of Capt. Jonathan Heart* (Albany, 1885); and was author of a *History of Seneca County, Ohio* (Sandusky, 1848); *An Historical Account of the Expedition against Sandusky in 1782* (Cincinnati, 1873); *The History and Biographical Annals of the University of Wisconsin* (Madison, 1879); *History of the Discovery of the Northwest by John Nicolet* (Cincinnati, 1881); *History of Wisconsin*; *History of the Girty's*; and *History of Brule's Discoveries and Explorations, 1610-1626*, his last work, published by the Western Reserve Historical Society of Cleveland.

Carpenter, Charles Carroll, naval officer, born in Greenfield, Mass., Feb. 27, 1834; died in Boston, Mass., April 1, 1899. He was appointed a midshipman in the navy, Oct. 1, 1850; was promoted passed midshipman, June 20, 1856; master, Jan. 22, 1858; lieutenant, the day following; lieutenant commander, July 16, 1862; commander, Feb. 10, 1869; captain, March 25, 1880; commodore, May 15, 1893; and rear admiral, Nov. 11, 1894; and was retired, Feb. 27, 1896. He was on sea duty seventeen years and seven months, and on other duty eighteen years and eight months.

His first service was on the sloop *Portsmouth*, of the Pacific squadron, in 1851-'55, and after leaving the Naval Academy he was on duty with the home squadron on the frigates *Merrimac*, *Roanoke*, *Colorado*, and *Dolphin* two years. While he was on the *Dolphin* that vessel, assigned to tracking American slavers, captured the *Echo* with 300 slaves aboard. In 1858 he was attached to the steamer *Mohawk*, which captured the slaver *Wildfire*, off the coast of Cuba, with a cargo of 500 slaves. After the outbreak of the civil war the *Mohawk* was assigned to the Texas and East Gulf blockading squadron, and in 1862 Carpenter was transferred to the steamer *Flag*, of the South Atlantic squadron, and he was with that ship when the steamers *Anglia* and *Emily* were captured. In 1863 he was assigned to the ironclad *Catskill*, and was on board of her during the attacks on the defenses of Charleston in April, July, and August of that year. The same year he was ordered to duty at the Naval Academy, where he remained two years, and then spent a year on the steam sloop *Hartford*, flag ship of the Asiatic squadron. His first sea command was the steamer *Wyoming*, of the same squadron. In 1868-'70 and for a short time in 1871 he was at the *Portsmouth Navy Yard*; in 1871-'72 he commanded the *Nantasket*, of the North Atlantic squadron; and in 1872-'75 the *Huron*. On receiving his commission of captain he became equipment officer at the Boston Navy Yard. In 1883, as commander of the *Hartford*, he carried the American and English scientists from Callao to Caroline atoll to observe the total eclipse of the sun. He was commandant of the *Portsmouth Navy Yard* in 1890-'94, and commanded the Asiatic squadron during the war between China and Japan. Although he was retired from active service by age limit, at the declaration of war against Spain Rear-Admiral Carpenter promptly solicited active duty, and he received command of his former post, the *Portsmouth Navy Yard*, where he remained till the conclusion of peace.

Castner, Hamilton Young, chemist, born in Brooklyn, N. Y., Sept. 11, 1859; died at Saranac Lake, N. Y., Oct. 11, 1899. He was educated at the Brooklyn Polytechnic Institute, and entered Columbia College School of Mines, where he completed the chemical course with the class of 1879. Deciding upon analytical chemistry as a profession, he opened a laboratory in New York city for commercial work, and was very successful.

He devoted his leisure to the study of means of improving chemical processes, and soon patented the first continuous process for the manufacture of carbon, or bone black, which proved a scientific success, but was not fortunate financially. His next invention was a chemical process for producing sodium from molten caustic soda by introducing into the caustic soda carbon in the form of a carbide—that is, the carbon was mixed with a sufficient quantity of iron in a fine state

of division to cause the combined mass to sink in the molten caustic, and thus come into intimate contact therewith, after which the sodium was distilled, the iron filings being recovered from the distillation vessel. This process was the key with which he opened a new and cheap method of producing aluminum. Castner placed his invention in England, where the Aluminum Company was formed, with himself as managing director of the works erected under his supervision in Oldbury, and there he further improved his process by devising methods for purifying the double chloride of aluminum and sodium. By the Castner process the market price of aluminum—then more than \$10 a pound—was reduced to \$5, and later to less than \$1 a pound. Sir Frederick A. Abel, in his address before the British Association in 1890 (see *Annual Cyclopædia* for 1890, page 31), said: "The success which has culminated in the admirable Castner process constitutes one of the most interesting of recent illustrations of the progress made in technical chemistry upon the happy blending of chemical with mechanical science through the labors of the chemical engineer." The introduction of the manufacture of aluminum by aid of the electric current made the chemical process obsolete. Mr. Castner then turned his attention to a method for cheapening the cost of sodium and to finding a market for that product. The latter he accomplished by introducing it in the manufacture of alkaline cyanide as distinguished from potassium cyanide, so largely used in gold-extraction processes, and also by using it in some of the reactions in the manufacture of certain coal-tar products. He invented a continuous process for production of sodium peroxide by causing a current of air to pass over heated sodium, the arrangement being such that the fresh sodium was first submitted to the action of air almost deprived of its oxygen, and as it was fed forward met air containing more and more oxygen, until just before withdrawal it met practically fresh air and was thoroughly oxidized. His sodium peroxide has largely taken the place of barium peroxide used in the production of hydrogen peroxide, the great bleaching agent. For the cheapening of the cost of the production of sodium he also invented the first practical electrolytic method of treating caustic soda, and his process is now used in Oldbury, England, in Niagara Falls, N. Y., and in Rheinfelden, Germany. Fully nine tenths of all the sodium used in the world is produced by his method. He invented a process for the manufacture of pure caustic soda, in which mercury was used at the same time, both as a mechanical seal and an electrical connection between two compartments of a decomposing cell containing sodium chloride in solution and water or weak caustic soda respectively, the mercury taking up the sodium in the chloride compartment and being moved to the water compartment, where the amalgam was decomposing in the presence of water, forming caustic soda, the mercury being returned to the sodium-chloride compartment to enable it to receive a fresh charge of sodium. The chlorine obtained in the process was used in the production of bleaching powder. This invention was a commercial success, and a plant was established by the Castner-Kellner Alkali Company at Weston Point, Runcorn, England, for the manufacture of caustic soda by this method. Castner was also the inventor of other processes of minor importance, which were used incidentally in his large undertakings. He was a member of the Society of Chemical Industry in London, and in a sketch of his life in its proceed-

ings it is written that "his name is likely to live among those men of science who have devoted their energy to practical manufacturing processes."

Chadwick, Edmund, educator and reformer, born in Middleton, N. H., Jan. 12, 1812; died in Eddytown, N. Y., April 7, 1899. His ancestors came to Massachusetts from England in the great immigration of 1630, under Gov. Endicott, and settled about Plymouth Bay. He was a lineal descendant in the fifth generation from John Chadwick, who died in 1707 and is buried in Bradford, Mass. Edmund Chadwick was the third son of the Hon. John Chadwick and Elizabeth Stearns, his wife. He fitted for college at Phillips Exeter Academy, spent one year at Dartmouth in the study of medicine, and then entered Colby College, where he remained two years, finishing his course at Bowdoin College, where he graduated in 1840. He studied two years at Lane Theological Seminary, and for the same period at Bangor Theological Seminary. He was ordained to the ministry and preached one year in Franklin, N. H., when, his health failing, he went South, teaching classics and mathematics one year in the Classical and Mathematical Institute at Nashville, Tenn. In 1847 he became president of Starkey Seminary, at Eddytown, N. Y. He married in 1847 Cassandra Hobart, who soon died. In 1849 he married Adaline Ward, by whom he had seven children, of whom six survive him. Mrs. Chadwick was associated for fifteen years with her husband in teaching, and contributed in high degree to his success. She died in 1873. Mr. Chadwick united to broad culture a distinguished personality and the ability to inspire in other minds his own high enthusiasms. He had in large measure a genius for teaching, and under his administration Starkey Seminary, hitherto little known, attained a wide reputation for individual methods and excellence of scholarship, drawing pupils from all parts of the United States and Canada. In 1861 Mr. Chadwick withdrew from the seminary, and after three years as principal of Dundee Academy retired permanently from teaching, devoting his energies to horticulture and moral reforms. He was an early and ardent abolitionist and a zealous temperance worker, and was the first to advocate the establishment of Niagara Falls as a national park. Later subjects to engage his attention were forest culture and jury reform.

Champney, Edwin Graves, artist, born in Boston, Mass., Aug. 24, 1842; died in Arlington Heights, Mass., Sept. 25, 1899. He studied art with his uncle, Benjamin Champney, and also spent several years in Antwerp, studying there in company with Millet, Van Beers, and others. He painted some fine cattle pieces, landscapes, and portraits. Among the latter was one of his father, which hangs in the Woburn Library. He was one of the early teachers at the Boston Art Museum.

Chickering, George Harvey, manufacturer, born in Boston, Mass., in 1829; died in Milton, Mass., Nov. 17, 1899. He was the youngest son of Jonas Chickering, founder of the pianoforte business that still bears the family name. He was educated in the public schools of Boston, and went from school life directly to work at the bench in his father's manufactory. In 1853, upon his father's death, he succeeded, with his two elder brothers, to the business, and after the death of his brothers he became the sole head of the company, though for several years previous to his death he was not actively engaged in it. He was active among the musical organizations

of Boston, having been at one time president of the Chickering Club and later a member of the Apollo Club.

Cilley, Bradbury Longfellow, educator, born in Nottingham, N. H., Sept. 6, 1838; died in Exeter, N. H., March 31, 1899. He was graduated at Harvard College in 1858. After teaching in the Albany High School a year, he went to Phillips Exeter Academy as Professor of Ancient Languages in February, 1859. The institution then had fewer than 100 students, and, as Prof. Cilley expected to hold the chair for a short time only, he began his new work and the study of law simultaneously. With his coming, however, a new life was infused in the famous academy, and his term was prolonged to the end of his life. He taught both Greek and Latin till 1871, and afterward confined himself to the former.

Clapp, Alexander Huntington, clergyman, born in Worthington, Mass., Sept. 1, 1818; died in New York city, April 27, 1899. He was graduated at Yale College in 1842 and at Andover Theological Seminary in 1845. In 1846 he occupied the chair of Rhetoric and English Literature in Middlebury (Vt.) College temporarily, and, declining the permanent professorship, was ordained pastor of the Central Congregational Church at Brattleboro, Vt. An affection of the eyes caused him to suspend preaching in 1853, but in 1855 he took the pastorate of the Beneficent Congregational Church in Providence, R. I. During a leave of absence from his church in 1862 he served as chaplain of the 10th Rhode Island Volunteers. From 1865 till 1878 he was secretary of the Home Missionary Society in New York city, and on resigning that office was elected treasurer of the society, which charge he held till his death. He was for many years editor of *The Home Missionary*, and from 1875 till 1895 was the New York editor of *The Congregationalist* of Boston. He received the degree of D. D. from Iowa College in 1868. While a student at Andover Seminary he edited a selection from the writings of Bishop Joseph Hall, and while at Brattleboro, Vt., he edited *Lives of the Presidents* and others works. Several of his sermons and addresses have been published, and he contributed frequently to magazines and to the religious press.

Clapp, Almon M., journalist, born in Killingly, Conn., Sept. 14, 1811; died in Washington, D. C., April 9, 1899. His parents removed to Livingston County, New York, when he was seven years old, and when he was fourteen he was apprenticed to the printer's trade. In 1835 he founded the *Aurora Standard*, in 1838 became editor and part proprietor of the *Buffalo Commercial Advertiser*, and in 1846 established the *Buffalo Express*. Mr. Clapp was a delegate to the convention at Pittsburgh in 1856, where the Republican party was formally organized, and after the election of President Lincoln he was appointed postmaster of Buffalo. In 1866 President Johnson removed him from this office. Three years later he was elected congressional printer, and he held the office till 1877. On removing to Washington he sold the *Buffalo Express*, and on the expiration of his term he purchased the *National Republican* and edited it till 1880, when he retired from active life. He was president of the Anti-Civil Service League.

Clark, Meriwether Lewis, sportsman, born in Louisville, Ky., in 1846; died in Memphis, Tenn., April 22, 1899. His life was principally spent in his native city, where he engaged in the banking business and accumulated a modest fortune. For twenty-five years his life was almost wholly de-

voted to promoting the American turf, and his character is best attested by the fact that during this period no breath of scandal ever assailed his name. He was the author of a majority of the turf rules or laws of the present day, the founder of the first American Turf Congress, the maker of the first uniform scale of weights, and the pioneer in a system of stakes and races that has been followed by every race track in the country. Mr. Clark was also the organizer of the Louisville Jockey Club.

Clarke, John Sleeper, actor, born in Baltimore, Md., Sept. 3, 1833; died near London, England, Sept. 24, 1899. In childhood he was closely associated with the family of the elder Booth, whose daughter Asia he subsequently married. With the Booth boys he formed an amateur dramatic society and gave a performance before the friends of the family at Belair, Md., in the county courthouse, Aug. 2, 1850, at which he and Edwin Booth made their *début* together in Shakespearean readings, the latter selecting Richard III, Macbeth, Hamlet, and Richelieu, and Clarke Shylock and Otway's Jaffier, and the boys appeared together in the quarrel scene from Julius Cæsar, Booth as Brutus and Clarke as Cassius. Mr. Clarke's father died in 1836, and, as he had designed the boy for the bar, young Clarke, after a fairly good education, entered a law office. But the drama was more attractive, and in the autumn of 1851 he made his first appearance at the Howard Athenæum, Boston, playing the part of Frank Hardy in *Paul Pry*. He remained until the end of the season in that theater, doing the usual work of a beginner in a stock company, and at the opening of the season of 1852-'53 became a member of the company of the Chestnut Street Theater, Philadelphia, where he entered upon a three years' prosperous sojourn on Aug. 28 in the part of Soto in Colley Cibber's comedy *She Would and She Would Not*. John Drew, the elder, then the leading comedian of that theater, relinquished his place in January, 1853, and Mr. Clarke was intrusted with its responsibilities. He was eminently successful, and in the autumn of 1854 went to Baltimore as the comedian of the Front Street Theater, where for a season he was enthusiastically applauded in all the parts of standard comedy. He became first comedian of the Arch Street Theater, Philadelphia, where he remained in very popular estimation for three years. In 1858 he entered into partnership with William Wheatleigh in the management of that theater. He began during this year to make short tours as a star through the South, meeting everywhere with large and delighted audiences. On April 29, 1859, he married Asia Booth at Baltimore. In 1861 he retired from the management of the Arch Street Theater and went to New York, where he appeared for the first time on May 15 of that year at the Metropolitan Theater. His first part was Diggory in *The Specter Bridgroom*. Mr. Ireland, in his *History of the New York Stage*, says of this *début*: "He was not merely a success; he was a revelation"; and George William Curtis wrote of him in *Harper's Weekly*: "I consider Clarke by far the finest artist who has been seen on our boards since Rachel." In May, 1862, Mr. Clarke went to England and made an engagement with Dion Bouicault to play Mr. Toodles, one of his most popular characters, in London, but for business reasons the arrangement was not carried out, and Mr. Clarke returned to the United States in time to resume his starring engagements in the autumn. The name of the Metropolitan Theater in New York was changed

to that of Winter Garden, and in August, 1864, Mr. Clarke, in partnership with Edwin Booth and William Stuart, assumed the management. Mr. Clarke played his repertory of comedy there from Aug. 18 to Christmas, and Mr. Booth followed him. At this time his popular characters were: Dromio of Syracuse in *The Comedy of Errors*, Smashington in *Somebody's Coat*, Paul Patent in *Love and Livery*, Paul Pry in the comedy of the same name, Bob Tyke in *The School for Reform*, Jeremiah Beetle in *The Babes in the Wood*, Bob Brierly in *The Ticket-of-leave Man*, Waddilove in *To Parents and Guardians*, Peter Plumley in *Single Life*, Mr. Dove in *Married Life*, Major Wellington de Boots in *Everybody's Friend*, Lord Sparkle in *A Roland for an Oliver*, Jack Shepherd, Toby Twinkle, Simon Parefoy, and Timothy Brown. In 1863 Mr. Clarke and Edwin Booth bought the Walnut Street Theater, Philadelphia, which they managed several years, and in 1866 they took the lease of the Boston Theater. In both of these they maintained the usual stock company, as well as that of the Winter Garden, New York, playing starring engagements in the three cities successively. In the autumn of 1867 Mr. Clarke visited England on a pleasure trip with his wife and family. While in London he found the opportunity to play *Major De Boots*, and made his appearance before a London audience, changing the name of the play to *The Widow Hunt*, at the St. James's Theater, in October. His success was instantaneous and permanent, and, acting partly on the advice of Charles Dickens, who became his enthusiastic friend, he settled in the English metropolis. In February, 1868, he played *Salem Scudder* in the Octoroon at the Princess, and he made thereafter a very prosperous tour to Liverpool, Birmingham, Dublin, Belfast, and Edinburgh. On returning to London he took an engagement at the Strand Theater, with which house he was identified many years. July 26, 1869, he began there with a signal triumph as Babington Jones in John Brougham's comedy *Among the Breakers*, and achieved great success as Dr. Pangloss in *The Heir at Law* and Dr. Ollapod in *The Poor Gentleman*. His performance of Mr. Toodles ran two hundred nights during this season. On his return to the United States he met with a series of ovations, opening, April 17, 1870, in New York, where he played forty-two nights, then visiting Chicago, St. Louis, Louisville, Cincinnati, Pittsburg, Baltimore, and Philadelphia. In the last named he played fifty nights. July 29, 1871, began a run of Dr. Pangloss at the Strand in London, one hundred and fifty nights. In December he was in Philadelphia again, playing alternately with Edward Sothern in two houses. Clarke began with Dr. Pangloss at the Arch, while Sothern played *Dundreary* at the Walnut. Then Clarke went to the Walnut and finished the performance with Mr. Toodles, and Sothern went to the Arch, where he gave *Dundreary Married and Settled*. Though prices were doubled in both houses, they were filled every night. March 9, 1872, Mr. Clarke was at the Strand again, and played Dr. Ollapod sixty nights, followed by Paul Pry for the summer weeks. In November, 1872, he assumed the management of the Charing Cross Theater, London, where he opened with a charming performance of Bob Acres in *The Rivals*. This ran one hundred and twenty-seven nights, and a long time in the provinces. April 4, 1874, he made another London success as Phineas Pettipogge in Henry J. Byron's *Thumbscrew* at the Holborn Theater. In 1878 Mr. Clarke became lessee of the Haymarket Theater, London,

but he did not play there till April, 1879, when he played for a short time Bob Acres, Toodles, and Dr. Pangloss. Sept. 20, 1880, he began another short engagement at the Haymarket, and in the beginning of 1887 went again to the United States. When he returned to London it was to play at the Strand, beginning Nov. 18, 1882. On Jan. 18, 1883, a revival of *The Comedy of Errors* was given for a run of considerable length. Thereafter his work was mostly in the provinces. His last appearance in America was in 1879, and in later years he lived in leisure near London.

Clarke, Joseph Morison, clergyman, born in Bethany, Conn., Oct. 6, 1827; died in Syracuse, N. Y., Nov. 30, 1899. He was graduated at Hobart College in 1847, and, deciding to enter the Episcopal ministry, was ordained deacon in 1852 and priest in 1853. From 1852 to 1858 he was rector of St. Peter's Church, Niagara Falls, N. Y., and from 1858 until his death rector of St. James's Church at Syracuse. From 1886 to 1891 he was Professor of Exegesis at Nashotah Seminary, Wisconsin. He published *Was John Wesley a Methodist?* and *Christian Union and the Protestant Episcopal Church* (New York, 1886).

Clarke, Robert, publisher, born in Annan, Scotland, in 1829; died in Cincinnati, Ohio, Aug. 26, 1899. When eleven years old he went with his family to Cincinnati. He was educated at Woodward College, and began his business life as clerk in a second-hand bookstore. In 1858, on the retirement of the publishing firm of H. W. Derby & Co., Mr. Clarke organized the firm of Robert Clarke & Co., which in 1894 became the Robert Clarke Company. Early in his career Mr. Clarke took a special interest in historical works, and he also began a systematic collecting, particularly of Americana, for his private library. This collection had reached nearly 7,000 volumes a few years ago, when William A. Proctor purchased it. In 1898 the purchaser presented it to Cincinnati University. Among the notable historical works that the firm published are Col. George Rogers Clarke's Campaign in the Illinois, 1778-79, James McBride's *Pioneer Biographies*, and Capt. James Smith's *Captivity with the Indians*. Mr. Clarke was the author of *The Prehistoric Remains which were Found on the Site of the City of Cincinnati*, with a *Vindication of the Cincinnati Tablet*, which he printed in 1876.

Clement, Nathaniel H., jurist, born in Tilton, N. H., March 23, 1844; died in Brooklyn, N. Y., March 3, 1899. He was graduated at Dartmouth College in 1863, and was a member of the Dartmouth cavalry company that formed a part of the command under Col. Davis that escaped from Harper's Ferry through the enemy's line during the night preceding the surrender of that post to the Confederates in September, 1862. After leaving college he spent three years as a clerk in the War Department, and then, removing to Brooklyn, became a law student in the office of Crooke, Bergen & Pratt. When Mr. Pratt was elected a justice of the Supreme Court Mr. Clement succeeded him as junior member of the firm, and held that place till the dissolution of the firm in 1873. In 1882 he was elected judge of the old city court, and in 1887 became chief judge. When the new constitution consolidated the city court and the Supreme Court Judge Clement became a justice of the Supreme Court for the 2d District for the term expiring Dec. 31, 1896. In the autumn of that year both Judge Clement and Judge Charles M. Brown were renominated for a term of fourteen years each. Both candidates, however, refused the nomination because they could not subscribe to the Chi-

cago platform, and they retired to private life. Judge Clement was noted for his remarkable memory of precedents and for his affability toward young members of the bar.

Cledenin, Paul, army surgeon, born in Illinois; died in Santiago, Cuba, July 4, 1899. He entered the army from civil life as assistant surgeon, Nov. 5, 1886, and was promoted to captain, Nov. 5, 1891. On June 4, 1898, he was commissioned major and brigade surgeon in the volunteer army, and in the Santiago campaign he was one of the division surgeons in the 7th Army Corps. After the disbandment of that corps he was placed in charge of the general hospital established at Santiago, and he there performed invaluable service, especially in the brief epidemic of yellow fever, till he was stricken with that malady himself.

Clinton, Henry Laurens, lawyer, born in Woodbridge, Conn., Feb. 21, 1820; died in New York city, June 7, 1899. On attaining his majority he removed to New York city, studied law, and was admitted to the bar in 1846. For several years he applied himself to criminal practice with success. He was counsel for Mrs. Emma A. Cunningham, charged with the murder of Dr. Harvey Burdell, a dentist of New York, on Jan. 30, 1857. The trial was exceedingly sensational, and Mr. Clinton secured the acquittal of his client and her alleged accomplices. His next celebrated case was in defense of Henri Carnal, a poor and friendless man, also charged with murder. Mr. Clinton, against his wishes, was assigned by the court to defend the accused, who, despite his counsel's efforts, was convicted. Mr. Clinton then appealed to Gov. Hunt for a reprieve, and fought the case through the Court of Oyer and Terminer, as well as the General Term, making new arguments before the Governor for reprieves as adverse decisions were encountered. Even the Legislature took cognizance of the case and enacted some special legislation to affect it. When the late Oakey Hall became district attorney Mr. Clinton advised his client as a last resort to plead guilty of manslaughter, and on this he escaped with a short term of imprisonment. In 1867 he abandoned criminal for civil practice. He was one of the counsel for the prosecution of William M. Tweed, and with John Kelly and Augustus Schell he aided in reorganizing Tammany Hall after Tweed's conviction. Afterward he was connected with several noteworthy causes, and for his services in one received, as he said, "between \$300,000 and \$500,000, the largest single fee that I ever knew to be paid to a lawyer." About ten years before his death he retired from practice and began speculating in real estate. Mr. Clinton was the author of two volumes of *Extraordinary Cases*.

Coffin, George W., naval officer, born in Massachusetts; died in Yokohama, Japan, in June, 1899. He was appointed an acting midshipman in the navy, Oct. 24, 1860; was promoted midshipman, July 16, 1862; ensign, Oct. 1, 1863; master, May 10, 1866; lieutenant, July 25 following; lieutenant commander, March 12, 1868; commander, Nov. 30, 1878; and captain, Sept. 27, 1893; and was retired because of a disability incurred in the service, Sept. 15, 1897. On becoming an ensign he was assigned to the steam sloop *Ticonderoga*, of the North Atlantic blockading squadron. He took part in both attacks on Fort Fisher, and was wounded in a leg during the land assault. After the war he served with the Brazilian and European squadrons; was at the Naval Academy in 1868-'69; chief of staff of the North Atlantic fleet, 1870-'71; commanded

coast survey steamer *Hassler*, 1876-'78, and steamer *Alert* in the Greely Relief Expedition, 1884; lighthouse inspector, 1888-'89; and secretary of the Lighthouse Board, 1889-'90. In 1898 he received a year's leave of absence, which he was spending with his daughter, the wife of Surgeon Henderson, at the Yokohama Naval Hospital, when he died.

Coghlan, Charles Francis, actor, born in Paris, France, in 1841; died in Galveston, Texas, Nov. 27, 1899. He was of an old Irish family. His father was a journalist and a compiler of guidebooks, whose works were very popular with English travelers of the early days of the century. Young Coghlan was educated in Paris and in London, and was intended for the bar. His first appearance on the stage was made at the Haymarket, London, then under the management of Mr. Buckstone, in the small part of Monsieur Mafoi in *The Pilgrim of Love*, April 9, 1860. He played various small parts in the Haymarket company until the end of November, 1861, and in the summer of 1862 was engaged for a company to occupy the new Theater Royal, Bath. Mr. Coghlan played *Demetrius* in *Midsummer Night's Dream*, taking the rank of juvenile leading man. After three seasons of great popularity he played for a short time at the Olympic Theater, London, and was there again in 1867. Thence he went to the St. James's Theater, Dec. 26, 1868. In February, 1869, he appeared in support of Adelaide Neilson at the Lyceum in *Life for Life*. He was then engaged as a member of the Bancroft company at the Prince of Wales's Theater. For six years he remained with this company, and was applauded as the most brilliant of London's young actors. His notable successes in 1872-'74 were Charles Surface in *The School for Scandal*, Alfred Evelyn in *Bulwer Lytton's Money*, and Geoffrey Delamayn in *Man and Wife*. He added to his fame the credit of a dramatist by producing at the Court Theater, March 12, 1875, a very clever comedy, *Lady Flora*, in which John Hare and Mr. and Mrs. Kendal played the principal parts. It had instant success and a long run. April 17, at the Prince of Wales's, he played *Shylock* in *The Merchant of Venice*, with Miss Terry as *Portia*, and was the means of bringing to attention that lady's great ability, though his own playing was too quiet to please those who were schooled to the traditions of the playhouse. Augustin Daly engaged Mr. Coghlan for the Fifth Avenue Theater, New York, in 1876, and he made his appearance there, Sept. 12, as Alfred Evelyn in *Money* to enthusiastic listeners. Almost at once he became the most popular man on the New York stage. During the season he played *Orlando*, Miss Fanny Davenport being the *Rosalind*, with great applause. The next season he was the leading man of the Union Square Theater, where he played *Jean Renaud* in the first wonderful run of *The Celebrated Case*, and for the season of 1878-'79 he was engaged as leading man of Wallack's Theater. In the summer of 1878 he played a short engagement in the California Theater, San Francisco, as a star. In Wallack's company he was associated with his sister Rose, then the leading lady of that theater. Together they played hero and heroine of the old and modern plays. In May, 1879, he played a short engagement at the Museum in Boston. On the opening of the Princess Theater, London, under control of Wilson Barrett, Mr. Coghlan played the *Marquis Des Arcis* in *Fernande*, Sept. 20, 1879. In Bronson Howard's *Banker's Daughter*, played at the Court Theater under the title *The Old Love and the New*, Dec. 18, 1879, he played

John Stratton. His own adaptation of Giacometti's *Morte Civile*, made famous by Salvini, was produced at the Prince of Wales's, Dec. 8, 1880, with himself in the part of Conrad. Another play, *Good Fortune*, arranged by him in this year from Octave Feuillet's *Romance of a Poor Young Man*, had been produced by the same company without Mr. Coghlan in the cast, Dec. 4. The Colonel was produced at the same theater on Feb. 2, 1881, Mr. Coghlan playing the part of Col. Wood, U. S. A., with very great success. This play was an adaptation from *Le Mari à la Campagne*, the same from which *The Serious Family* was written. At the Court Theater, Dec. 16, 1882, he made a thrilling portrayal of Capt. Darleigh, V. C., in *Comrades*. The first performance of *Fedora* at the Haymarket, May 5, 1883, presented him as the original Loris Spanoff in English. A stock company for the Fifth Avenue Theater, New York, was organized by John Stetson, of Boston, in the spring of 1883, and Mr. Coghlan was engaged as the leading man. He first appeared as Alfred Evelyn in *Money*, Oct. 8, 1883, and he played also Jean Renaud in *The Celebrated Case* and Henri de Lagadere in *The Duke's Motto*. Mr. Stetson suddenly closed the company, on account of which Mr. Coghlan subsequently recovered judgment from Mr. Stetson for salary at the rate of \$700 a week. He played a special engagement with Mrs. Langtry in *A Wife's Peril*, and, having been engaged as leading man for the Union Square Theater, opened there as Barton Blair in *Separation*, Jan. 28, 1884. At the close of the season he went again to England, and was engaged by Mrs. Langtry as her principal support. Jan. 20, 1885, he played Prince De Birac to the *Séverine* of Mrs. Langtry in his own adaptation of La Princesse Georges of the younger Dumas. This was followed by *The School for Scandal*, Mrs. Langtry as Lady Teazle and Mr. Coghlan as Charles Surface, and by *Peril*, in which he was the Captain Bradford. This was the beginning of an artistic association which continued between them without much interruption until 1891. *Enemies*, a dramatization by Mr. Coghlan of Georges Ohnet's *La Grande Marnière*, was produced by them at the Prince's Theater, London, Jan. 28, 1886. In the autumn of 1888 he prepared his sister's (Rose Coghlan) company for her tour as a star in his play *Jocelyn*, and rejoined Mrs. Langtry, who was preparing an elaborate production of *Macbeth* for New York city. This play was presented at the Fifth Avenue Theater, Jan. 21, 1889, with Mr. Coghlan as *Macbeth*. Mr. Coghlan spent about a year in retirement at his farm on Prince Edward's Island, and in the autumn of 1890 again joined Mrs. Langtry in London in a magnificent production of *Antony and Cleopatra*. In the part of Antony he added another to his London triumphs. On Feb. 28, 1891, his play *Lady Barter* was produced, with himself as Colonel Pearce. In the autumn of 1891 he joined his sister in a starring tour. They played principally his *Lady Barter*. During this engagement they revived *Diplomacy*, which they played at the Star Theater, New York. Mr. Coghlan's superb performance of Henri Beauclerc astonished and charmed a succession of crowded houses, and the play was taken to the Fifth Avenue Theater, where it had a long run. At the close of this season he retired again, but returned finally to London, where he played *Mercutio* with Forbes-Robertson's production of *Romeo and Juliet*. He was engaged by Mrs. Minnie Madden Fiske for her production of *Tess* of the D'Urbervilles, and gave an admirable rendition of Alec D'Urberville in that

play throughout the season of 1897-'98 in the United States, beginning at the Fifth Avenue Theater, March 2, 1897. On Dec. 2, 1898, he began his most successful venture in the United States by presenting his own adaptation of the elder Dumas's Edmond Kean, called *The Royal Box*, in which he played the part of the actor Clarence, at the Fifth Avenue Theater. He made more money, fame, and friends than ever until he offered, April 11, 1899, his play of *Citizen Pierre*, which was a failure. His last appearance in New York was on April 16. His last appearance on the stage was at Houston, Texas, Oct. 28, 1899, as Clarence in *The Royal Box*. The words that were written in 1790 of his kinsman, the MacCoghlan, last Lord of Delvin-Ara, well describe Charles Coghlan: "He was a remarkably handsome man, gallant, eccentric, proud, satirical, hospitable in the extreme, and of expensive habits." A contemporary American critic thus summed up his excellence as an actor in 1879: "It is to the complete and perfect forgetting of self in his performance that the high esteem in which Mr. Coghlan is held by the thinking audience is due. He never descends to the cheap creating of effects; he plays his part for all it is worth; he does not play Charles Coghlan, with the kind assistance of somebody's text, for the amusement of his friends and admirers." He was the author or adapter of these plays: *Lady Flora*, *Jocelyn*, *The Checkbook*, *Her Ladyship*, *Lady Barter*, *Citizen Pierre*, *The Royal Box*, *Good as Gold*, *The Brothers*, *A Quiet Rubber*, *For Life* (*Morte Civile*), and *The House of Darnley*.

Cole, Edmund Whiteford, manufacturer, born in Giles County, Tennessee, in 1832; died in New York city, May 25, 1899. He removed to Nashville when a young man, and was actively identified with the coal and iron and railroad industries of the South for forty years. He began his business life as a clerk in the employment of the Nashville, Chattanooga and St. Louis Railroad Company, of which he subsequently became president. In the early part of the civil war the rolling stock of this railroad was impressed by the Confederate authorities, and to secure his services to manage it he was commissioned a colonel and assigned to the quartermaster's department. Col. Cole was chief owner of three large blast furnaces in Sheffield, Ala., and had extensive holdings in valuable coal and iron properties. He was a member of the Methodist Episcopal Church, South, a director in its Book Concern, and president of its missionary society. The Tennessee Industrial School, one of the largest and most successful institutions in the State, was founded by him. An auditorium which he erected for the school at a cost of \$10,000 was completed a few weeks before his death.

Cole, Nelson, military officer, born in Dutchess County, New York, Nov. 18, 1833; died in St. Louis, Mo., July 31, 1899. He removed in 1854 to what was then called the far West, and ultimately settled in St. Louis. There he was engaged in the lumber business and manufacturing till April, 1861, when he organized and uniformed a company of volunteers for the National army. He reported with his company to Gen. Nathaniel Lyon, in St. Louis, April 17, and was at once ordered to protect the arsenal from an anticipated attack. Afterward he served under Gen. Lyon in the battles of Boonville, Dug Springs, and Wilson's Creek, in the last of which he was severely wounded. In 1862 and the spring of 1863 he was attached to the staff of Gen. John M. Schofield as chief of artillery. In Gen. Grant's campaign against Vicksburg he commanded a

battery, and after the surrender was appointed chief of artillery in the Department of Missouri. He was promoted major, Aug. 10, 1863; lieutenant colonel, Oct. 2; and colonel of the 2d Missouri Light Artillery, Feb. 5, 1864. In the spring of 1865 he was sent to the head waters of the Yellowstone river in command of an expedition of 1,500 veteran soldiers to subdue the northern Sioux, Arapaho, and Cheyenne Indians, and he accomplished that mission. He was mustered out of the service in November following, and returned to his business in St. Louis. On May 28, 1898, he was appointed a brigadier general of volunteers, and he was first assigned to the 3d brigade, 2d Division, at Camp Alger. Subsequently he was transferred to the camp at Columbia, S. C. The unwholesome conditions at Camp Alger undermined his health, and while at the Columbia camp he was obliged to resign. Gen. Cole was twice commander of the Department of Missouri, Grand Army of the Republic: senior vice-commander in chief, Grand Army of the Republic, in 1887; and a past commander of the Missouri Commandery of the Military Order of the Loyal Legion.

Collett, John, geologist, born in Eugene, Ind., in 1828; died in Indianapolis, Ind., March 15, 1899. He was graduated at Wabash College in 1847. In 1870 he was elected to the State Senate from Parke and Vermilion Counties, and he served through three sessions. He had been a student of geology from boyhood, and after his service in the Senate he was employed by Prof. E. T. Cox, the State Geologist, to make detailed geological surveys of the State. Subsequently he succeeded Prof. Cox. In 1878 he was appointed Statehouse commissioner, and in 1879 chief of the Bureau of Statistics and Geology.

Conant, Mrs. Helen Stevens, author, born in Methuen, Mass., Oct. 9, 1839; died in Brooklyn, N. Y., April 17, 1899. She married Samuel Stillman Conant, long the managing editor of *Harper's Weekly*, and assisted him in his work until his mysterious disappearance in 1885. She was the author of *The Butterfly Hunters* (Boston, 1868); *A Primer of German Literature* (New York, 1878); and *A Primer of Spanish Literature* (1879).

Cook, James H., clergyman, born in New York city in 1842; died there, Aug. 11, 1899. He was educated at Lincoln University, Pennsylvania, and in 1866 began to preach in the Union African Methodist Episcopal Church in New York. He was ordained in 1871, then spent several years in Springfield, Mass., returned to the Union Church in 1884, and in 1891 was elevated to the episcopate and assigned to the 2d district of Union African Methodist Episcopal churches, comprising 22 congregations in New York, New Jersey, Connecticut, and Massachusetts, with official residence in Wilmington, Del.

Cook, William H., physician, born in New York city in 1832; died in Chicago, Ill., April 14, 1899. In 1852 he became Professor of Chemistry in Syracuse (N. Y.) Medical College, in 1854-'84 was dean of the Physico-Medical Institute of Cincinnati, in 1891 removed to Chicago, and at the time of his death was president of the College of Medicine and Surgery and editor of *The Chicago Medical Observer*. He was the author of many medical treatises. Three of his sons are college professors.

Cooper, Ada Augusta, composer, born in Brooklyn, N. Y., in 1861; died in Orange, N. J., Sept. 18, 1899. She was graduated at Shaw University, Raleigh, N. C., and then taught for several years in the public schools of Raleigh and Washington, D. C. In 1892 she married the Rev.

A. B. Cooper, D. D., then just entered on the ministry of the African Methodist Episcopal Church in Raleigh. She assisted her husband in his pastorates, going to Orange in the spring of 1899. She was a pleasing and eloquent lecturer on temperance and woman's work, an author and poet of high merit, a musical composer of grace and feeling, and had mastered several languages. She was the author of many hymns, anthems, and carols. Among her most ambitious works is the children's Easter Day service *He is Risen* and a special service, the first one ever written, for the Sunday schools of the African Methodist Episcopal Church.

Cooper, Job Adams, banker, born near Greenville, Ill., Nov. 6, 1843; died in Denver, Col., Jan. 20, 1899. He was graduated at Knox College, Galesburg, Ill., in 1865. While at college he enlisted in May, 1864, with many other students, in the 137th Illinois Infantry, and served till mustered out in the latter part of the same year. In 1867 he was admitted to the bar, and began practice in Greenville. In 1868 he was elected circuit clerk and recorder of Bond County, Ill., serving till his removal to Denver in 1872. For a time he practiced law, and later he became interested in a fire insurance agency, retiring to accept a place with the German National Bank. During the early years of his residence in the West he was interested in the stock business. In 1888 he was elected Governor of Colorado on the Republican ticket. At the expiration of his term he became president of the National Bank of Commerce of Denver, which office he held till 1897. From that time he devoted his attention to the management of his property interest and to mining at Cripple Creek.

Corey, Charles Henry, educator, born in New Canaan, New Brunswick, Canada, Dec. 12, 1834; died in Seabrook, N. H., Sept. 5, 1899. He was graduated at Acadia College, Wolfville, Nova Scotia, in 1858, and at the Newton (Mass.) Theological Seminary in 1861. In September of the last year he was ordained pastor of the First Baptist Church at Seabrook, N. H., where he remained till Jan. 1, 1864, when he entered the service of the United States Christian Commission. He remained in the field till the close of the war, and then went to South Carolina as a missionary to the freedmen, under the direction of the American Baptist Home Mission Society. In the ensuing two years he organized churches for the freedmen and secured for them ministers of their own race. In the autumn of 1867 he was appointed principal of the Augusta (Ga.) Institute, and in the following year he became president of Richmond (Va.) Theological Seminary. He received the degree of D. D. from Richmond (Va.) College, Baylor University, Texas, and McMaster University, Canada. His publications include *Reminiscences of Thirty Years' Labor among the Colored People of the South*.

Coues, Elliott, naturalist, born in Portsmouth, N. H., Sept. 9, 1842; died in Baltimore, Md., Dec. 25, 1899. He lived in Portsmouth until 1853, when he accompanied his parents to Washington, D. C., where he was educated at Gonzaga College and at Columbian University, being graduated at the last named in 1861 and at its medical department in 1863. Meanwhile, in 1862, he entered the United States army as a medical cadet, and a year later was promoted to assistant surgeon. He received the brevet of captain for services during the civil war, and resigned on Nov. 17, 1881. An early fondness for natural history led him to devote much attention to the flora and fauna of the regions adjacent to the posts

to which he was ordered, and soon resulted in his recognition as a naturalist. In 1809 he filled the chair of Zoölogy and Comparative Anatomy in Norwich (Vt.) University, and from 1873 till 1876 he was surgeon and naturalist to the United States Northern Boundary Commission, part of which time he was occupied at the Smithsonian

Institution as a collaborator. He then was assigned as surgeon to the United States Geological and Geographical Survey of the Territories, with which he remained until 1880, serving also in 1877 as Professor of Anatomy in the medical department of Columbian University, which chair he then held until 1887. In 1883 he was for a short time Professor of Biology in the Virginia Agricultural and

Mechanical College, but he devoted most of his time in recent years to editorial work, preparing revised editions of the writings of early American explorers. Dr. Coues received the honorary degrees of A.M. and Ph.D. from Columbian University, and was a member of more than 50 scientific societies in this country and abroad, including the National Academy of Sciences, to which he was elected in 1877. He was chairman of the Psychical Science Congress in Chicago at the time of the Columbian Exposition in 1893. He was an editor of the bulletins of the United States Geological Survey, *Bulletin of the Nuttall Ornithological Club*, *The American Naturalist*, *The American Journal of Otolology*, *The Auk*, *The Osprey*, *The Standard Natural History*, and *The Century Dictionary*. He contributed nearly 1,000 monographs or minor papers to scientific publications. His larger works included: *Key to North American Birds* (1872); *Field Ornithology* (1874); *Birds of the Northwest* (1874); *Fur-bearing Animals* (1877); *Monographs of North American Rodentia*, with Joel A. Allen (1877); *Birds of the Colorado Valley* (1878); *Ornithological Bibliography* (1878-'80); *New England Bird Life*, with Robert E. C. Stearns (1881); *Check List and Dictionary of North American Birds* (1882); *Avifauna Columbiana*, with Daniel W. Prentiss (1883); *New Key to North American Birds* (1884); *Biogen: A Speculation on the Origin and Nature of Life* (1884); *The Dæmon of Darwin* (1884); *A Buddhist Catechism*, with Henry S. Olcott (1885); *Kuthumi*, with R. Dodsley (1886); *Can Matter Think?* (1886); *Code of Nomenclature and Check List of North American Birds*, with Joel A. Allen, Robert Ridgway, W. Brewster, and H. W. Henshaw (1886); *A Woman in the Case* (1887); *Handbook of Field and General Ornithology* (1890); *History of the Expedition of Lewis and Clark* (1893); *The Expedition of Zebulon M. Pike* (1895); *New Light in the Early History of the Greater Northwest* (1897); *Citizen Bird*, with Mabel O. Wright (1897); *The Journal of Jacob Fowler* (1898); *Forty Years a Fur Trader on the Upper Missouri* (1898); and *On the Trail of a Spanish Priest* (in press).

Cracraft, John Wesley, clergyman, born near Cleveland, Ohio, in 1827; died in Saratoga, N. Y.,

Oct. 31, 1899. He was graduated at Bexley Theological Seminary, Gambier, Ohio, in 1849, and, after passing a year at Lane Theological Seminary, Cincinnati, was ordained to the ministry. He was at one time rector of the Church of the Epiphany in Philadelphia, and he held a similar office at Kenyon College, Ohio. His publications included *Judaizing the Teachers*, *Great Principles of the Gospel*, and *The Old Paths: Truths of the Gospel* (Cincinnati, 1870).

Crampton, Henry E., physician, born in New York city, April 10, 1837; died in Glen Ridge, N. J., May 28, 1899. He was graduated at the New York Medical College in 1857, served as a volunteer surgeon in the National army till stricken with typhoid fever, and afterward was identified with the work of relieving the poor of New York. He was for many years vice-president of the Association for Improving the Condition of the Poor, and was immediately in charge of the department of hygiene. Through his energy the spacious buildings and grounds at Coney island, known as Sea Breeze, were secured for the sick poor. Dr. Crampton was one of the first advocates of a free public bath system, and for many years he served as a free physician to the poor during the summer months and gave ocean parties for poor children.

Crapo, Thomas, sailor, born in New Bedford, Mass., in June, 1842; presumably drowned at sea, May 3, 1899. He made his first ocean voyage in a whaler when fifteen years old, and had followed the sea continuously. In the civil war he served for a while in the army under Gen. Banks, then with the navy under Admiral Farragut. His life was full of adventure. He had lived among the Eskimos and been captured and adopted by a tribe of South Sea Islanders. In 1877 he attracted public attention by sailing from New Bedford to Penzance, England, in a 20-foot whaleboat, schooner rigged, with leg-of-mutton sails, accompanied by his wife. On April 4, 1899, he left New Bedford in a flat-bottomed skiff, 9 feet long, 3 feet wide at the stern, and 14 inches deep, intending to make his way to Cuba. He was last seen by the Point Judith life-saving crew on the morning of May 3 in a heavy gale. His boat was found bottom up on the beach the next day, and it was supposed he was drowned while trying to round the point.

Crary, Mrs. Horace H., benefactor, born in Liberty, N. Y., about 1833; died in Denver, Col., July 7, 1899. She was a member of the Burr family, married Mr. Crary in 1851, and for many years lived in Hancock, N. Y., where her husband had a tannery. Subsequently the family settled in Binghamton, N. Y., where Mr. Crary died in 1897, leaving his widow large wealth. Mrs. Crary had long been noted for her charities. She supported missionary workers in China and India, contributed liberally to the benevolent enterprises of the Methodist Episcopal Church, was a patron of the Methodist Hospital in Brooklyn, and with Mr. Crary erected Crary Hall in Tennessee, an industrial school.

Creamer, Henry H., inventor, born a slave on a plantation in what is now West Virginia, about 1854; died in New York city, July 12, 1899. On gaining his freedom he went to Richmond, obtained employment in a plumber's shop, and soon began developing remarkable genius as an inventor. While working there and producing many improvements in the tools and work of the trade he took a course in a technical school, which greatly strengthened his inventive abilities. About twenty years ago he removed to New York city, studied theology, and for several years

held pastorates in New York and New Rochelle. A few years ago he gave up pastoral work and applied himself wholly to his inventions. He was a steam specialist. He received about 15 patents, covering an automatic pump governor and receiver, balance steam traps and valves, high- and low-pressure boiler feeders, and improvements and new devices used in electrical construction.

Crosby, Peirce, naval officer, born near Chester, Pa., Jan. 16, 1823; died in Washington, D. C., June 15, 1899. He was appointed a midshipman in the navy, June 5, 1838; was promoted passed midshipman, May 20, 1844; master, Nov. 4, 1852; lieutenant, Sept. 3, 1853; commander, July 16, 1862; captain, May 27, 1868; commodore, Oct. 3, 1874; and rear admiral, March 10, 1882; and was retired Oct. 29, 1883. He was on sea service twenty-three years and one month, and on shore or other duty twelve years and nine months. His first sea service was on the line of battle ship *Ohio* while it was the flag ship in the Mediterranean, 1838-'41, and in the next two years he was attached to the receiving vessel *Experiment*, the steamer *Mississippi*, the frigate *Congress*, and the sloop *Preble*. In 1843-'44 he was at the Naval School in Philadelphia. After spending two years on the Coast Survey, he was ordered to the sloop *Decatur*, on which he served in the Mexican War, taking part in the capture of *Tuspan* and *Tobasco*. In the last year of the war he was on the gunboat *Petrel*. During the interval between the Mexican War and the civil war he was on cruising and shore duty. In the spring and summer of 1861 he served in Chesapeake Bay, keeping communication open, capturing and destroying Confederate vessels in the bay, and cutting off supplies and communications of the enemy. He also performed duty on shore at Fort Monroe, and transported the troops across Hampton creek before and after the battle of Big Bethel. Immediately before the naval attack on Forts Hatteras and Clarke, when a light-draught vessel was needed to aid in landing troops, he took the canal boat *Fannie*, secured boilers to her deck by chains, joined the squadron, and in the face of a heavy sea landed a force of officers and men. One after another of his landing boats was swamped or broken on the beach. By the time he had put 300 men ashore the squadron was compelled to put to sea. Lieut. Crosby made a great show of his landing work, leading the Confederates to believe that the force was more than 2,000 strong, and then established a picket line across the front of the enemy's batteries, thus preventing a reconnaissance. On the following day the squadron returned and captured the forts, which were garrisoned by more than 700 men. Lieut. Crosby then captured several blockade runners who were ignorant of the victory. Soon afterward he was prostrated with typhoid fever. On his recovery he took the new gunboat *Pinola* from Baltimore to Admiral Farragut's squadron in the Gulf, capturing a schooner loaded with cotton on the way, and commanded her when she co-operated with the *Itasca* in breaking through the chain barrier across the Mississippi. Afterward he took part in the passage and bombardment of the forts and the Chalmette batteries and in the capture of New Orleans, and also in the passage, bombardment, and repassage of the batteries at Vicksburg. In 1863-'64 he was engaged in several expeditions, and while on blockading duty destroyed two blockade runners and captured five. In 1864-'65 he commanded the *Metacomet* in the attack on Mobile, planned and placed torpedo nets across Blakely river to catch floating torpedoes sent down to destroy the fleet,

and cleared the channel to the city by removing 140 torpedoes. After the war he was stationed at several navy yards, and also commanded the South Atlantic and Asiatic stations.

Dabney, Walter David, lawyer, born in Albemarle County, Virginia, in 1853; died in Charlottesville, Va., March 12, 1899. He was graduated at the law school of the University of Virginia in 1875. In 1885 he was elected to the Legislature, where he sat through four sessions, serving also on the Debt Commission and the Committees on Railroads and Internal Improvements and on Finance. While chairman of the first-named committee he prepared the manuscript of *Governmental Regulation of Railroads* (1889), which attracted the attention of Hon. Thomas M. Cooley, then chairman of the United States Interstate Commerce Commission, who solicited Mr. Dabney to become the legal secretary to the commission. He entered on this duty in 1890. Two years later, in arguing a case in the United States Court in Chicago, he won the friendship of Judge Gresham, then presiding, and when Judge Gresham became Secretary of State he appointed Mr. Dabney solicitor of the department. In 1895 Mr. Dabney retired from the State Department to take the chair of Common and Statute Law in the University of Virginia.

Daly, Charles Patrick, jurist, born in New York city, Oct. 31, 1810; died in North Haven, near Sag Harbor, Long Island, Sept. 19, 1899. In 1839 he was admitted to the bar in his native city, and in 1844 was appointed judge of Common Pleas, which office he held forty-two years. During this period Judge Daly rendered many important decisions, and, besides winning fame as a lawyer and a judge, became widely known as a scientist and a man of letters. For more than a generation he was president of the American Geographical Society, and his annual addresses before that body were valuable contributions to geographical literature. His published writings comprise *The Judicial Tribunals of New York, 1623-1846* (1855); *A History of Naturalization and of its Laws in Different Countries* (1860); *Are the Southern Privateersmen Pirates?* (1862); *Origin and History of Institutions for the Promotion of Useful Arts by Industrial Exhibitions* (1864); *When was the Drama Introduced into America?* (1864); *The First Settlement of the Jews in North America* (1875); *What we Know of Maps and Map Making before the Time of Mercator* (1879); *The Nature and History of the Surrogates Court in New York State*; *Comparisons between Ancient and Modern Banking Systems*.

Daly, John Augustin, dramatist and manager, born in Plymouth, N. C., July 20, 1838; died in Paris, France, June 7, 1899. He was the son of a retired officer of the British navy. The family lived for a time in Norfolk, Va., during Augustin's childhood, and on the death of his father his mother removed to New York, where the boy was apprenticed to a house furnisher. While he was in this employ his attention was attracted to the theater, and he and his brother, ex-Judge Joseph F. Daly, became members of an amateur dramatic society. When Augustin was about sixteen he wrote a play in one act, which he called *A Bachelor's Wardrobe*, and took it to William E. Burton, the comedian. Mr. Burton returned the manuscript with some complimentary words, and the young aspirant for dramatic honors kept on writing and submitting his works to actors, but without success. When about twenty years of age young Daly took employment as a story writer on the *Sunday*

Courier, of New York. He was allowed to write dramatic criticisms occasionally. These attracted the attention of other editors, and he was successively employed by the Express, the Sun, and the Times to furnish them with dramatic criticisms. His first success as a dramatist was an adaptation from the German of Mosenthal's Debo-

rah, which he named *Leah the Forsaken*. This play was produced at the Boston Museum, with Miss Kate Bateman in the title rôle, Dec. 8, 1862, and its success there was repeated when Miss Bateman produced it at the Winter Garden Theater, New York. It ran nine weeks, a very unusual run at that time. An adaptation from

La Papillonne by Mr. Daly and Frank Wood, called *Taming a Butterfly* (since renamed *Delmonico's*), had a run of a month in 1864 at Laura Keane's Theater. In the same year Mr. Daly adapted a play which he called *Leslie's Wedding*, successfully produced by Mme. Methua-Scheller, who also produced another from his pen from Frau Borch-Pfeffer's *Dorf und Stadt*, called *Lorle*. Miss Avonia Jones produced two more of his plays at the Winter Garden—*Judith* and *The Sorcerer*. Mr. Daly's first original play to reach the public ear was *Under the Gaslight*. This play, which by its great popularity laid the foundation of his fame and fortune, was produced in 1867 at the New York Theater. It ran thirteen weeks, and presented the sensation of a very realistic locomotive and train of cars rushing at express speed diagonally across the stage. This "effect," as it is called, was patented by Mr. Daly, and has afforded much opportunity for litigation. It may have been the success of this effect which suggested the title of his next play, *A Flash of Lightning*, adapted from Victorien Sardou's *La Perle Noire*. The wild Indian of the plains appealed to Mr. Daly at this time as a fine dramatic figure, and was introduced with full justification of the thought in a new play called *Horizon*. Meantime Mr. Daly had engaged in management in a tentative way. The *début* of Mme. Methua-Scheller at the Winter Garden Theater, New York, in 1864, was under his direction. In 1868 he became interested in the Olympic Theater, and managed the engagement of Mrs. Scott-Siddons. John Duff, a well-known manager, was lessee of the Olympic Theater in 1869, and a strong and earnest friendship existed between him and Mr. Daly, who on Jan. 7, 1869, married Mr. Duff's daughter Mary. James Fisk, Jr., owned a theater on Twenty-fourth Street, in New York, on the site of the present Madison Square Theater. This house, called the Fifth Avenue Theater, was offered to Augustin Daly, and with that began the latter's remarkable career as a manager. The theater was opened on Aug. 16, 1869, with Tom Robertson's *Play Dreams*, by Boucicault and Robertson, followed on Sept. 6, and *Old Heads and Young Hearts* on Sept. 27. Fanny Davenport, who had been a soubrette at Mrs. Drew's Theater in Philadel-

phia, made her first appearance under Mr. Daly's management as *Lady Gay Spanker* in Boucicault's *London Assurance* on Sept. 29. Then came Mrs. Scott-Siddons with a Shakespearean repertory, after which came a swift succession of standard plays by members of the company. On Jan. 12, 1870, a new play by Olive Logan, called *Surf*, entered upon a run of one month. By this time the public had realized that a new force was at work in the theater of New York, and Daly's company began to be a name to conjure with. It comprised Agnes Ethel, Fanny Davenport, Fanny Morant, Amy Ames, Clara Jennings, Edwin L. Davenport, George Clarke, D. H. Harkins, James Lewis, Owen Fawcett, J. B. Polk, Mrs. G. H. Gilbert, George Holland, George Parkes, George F. De Vere, and William Davidge. *Man and Wife* was the first play of the season of 1870-'71, in which Mr. Daly introduced Clara Morris to her New York triumphs. *Fernande* was produced, with Miss Ethel in the title rôle, Nov. 23, and Dec. 21 Bronson Howard's *Saratoga* was produced and ran one hundred nights. Mr. Daly produced *Divorce* on Sept. 5, 1871, and made no change until March 18, 1872. On April 2 Clara Morris, in *Article 47*, took New York by storm for the remainder of the season. The last season of this house began Sept. 3, 1873, with Bronson Howard's *Diamonds*, in which Sara Jewett made her first appearance. *False Shame* was produced on Dec. 31, 1873, and the next day the theater was destroyed by fire. The old New York Theater, 728 Broadway, was immediately leased by Mr. Daly and renamed the New Fifth Avenue. He opened this house on Jan. 21, 1873. On Dec. 3, 1874, he removed to Daly's Fifth Avenue Theater, Twenty-eighth Street. Here the success of his company continued, and on Feb. 17, 1875, he produced the first of his adaptations of German farces, *The Big Bonanza*. On Dec. 14 his *Pique* was produced, with very great success. A visit was made to San Francisco in the summer of 1876, where he rented Platt's Hall, a large concert room on Montgomery Street, and brought his scenery and company into that unaccustomed place, but the result was not satisfactory. On Sept. 15, 1877, Mr. Daly gave up the Fifth Avenue Theater, and for a short time directed Booth's Theater. He retired from management in 1878, and spent a year in Europe. The house now known as Daly's Theater was opened by him on Sept. 17, 1879. Charles Leclercq, Helen Blythe, Ada Rehan, Catherine Lewis, Digby Bell, Laura Joyce, and Estelle Clayton were members of the company, and the repertory offered no new plays of any importance. In 1881-'82 *The Passing Regiment* and *Odetta* were very successful. The season of 1882-'83 brought Miss Ada Rehan into favor in *The Squire*, 7-20-8, and *She Would and She Wouldn't*. In 1883-'84 successful productions were made of *Dollars and Sense*, *The Country Girl*, and *Red-letter Nights*. From this time Daly's Theater and Daly's company were institutions again. During the following seasons, with Miss Rehan, Miss Cheatham, John Drew, Otis Skinner, James Lewis, Charles Leclercq, and Mrs. Gilbert, and such plays as *Love on Crutches*, *A Night Off*, *The Country Girl*, *Nancy & Co.*, *Love in Harness*, and the magnificent revivals of *Taming of the Shrew*, *Merry Wives of Windsor*, and *Midsummer Night's Dream*, this theater was in its golden age. In the summer of 1884 Mr. Daly began a series of European engagements with his company. London, Paris, Berlin, and Vienna were visited with a certain amount of success, and the ventures were repeated every year until a solid and

apparently lasting success of his players in the English capital induced him in 1893 to lease a house in that city, which is called Daly's Theater. Of late years, Daly's company having been for long periods absent from his New York theater every year, that house has been occupied much more frequently by traveling and other companies than by its own players. Musical comedies, like *The Circus Girl* and *The Geisha*, had attracted audiences greatly differing in taste from those who filled its seats during the performances of sterling plays by the company, and the fortunes of the place seemed not as bright as formerly. The energy of the apparently indomitable man who presided with a kind of kingly authority over the methods of this playhouse seemed not to flag, but when sudden death touched him all who knew him wondered how he had borne up unresting under his great life work for so long a time. The list of his plays, original and adapted, is of itself proof of an apparently tireless industry, presenting the names of about 75 works. He was a rapid as well as careful worker. The managers of the New York Theater—Mark Smith and John Lewis Baker—were anxious to have an adaptation of Charles Reade's novel *Griffith Gaunt* in 1868, and Mr. Daly was asked to do the work. He brought the first act to the theater next morning, and it was at once put in rehearsal. He finished an act each day, and on the night of the fourth day the play was produced with great success. It ran fifty nights. Augustin Daly in all his work aimed at a high standard of dramatic art. Men and women under his direction became accomplished players, and the drama of English speech was enriched by the best examples of modern play making. He was an ardent book lover, and his collection of works relating to the drama was one of the finest in the world. He devoted his leisure for several years to the preparation and printing of a life of Peg Woffington, copiously illustrated with reproductions of all the known portraits of that actress. He completed, after years of assiduous labor and research, a magnificent extra-illustrated copy of the Douai Bible, at a cost of \$25,000, which is unique and almost priceless.

Danforth, George Franklin, jurist, born in Boston, Mass., July 5, 1819; died in Rochester, N. Y., Sept. 25, 1899. He was graduated at Union College in 1840, and, after being admitted to the bar, began practicing in Rochester. In 1876 he was defeated as the Republican candidate for judge of the New York State Court of Appeals, but in 1878 he was renominated and elected. On the expiration of his term he became a member of the Judiciary Commission. Excepting these offices, he held no public charge, his time being wholly occupied with his extensive practice. He died of apoplexy in the courtroom just as he had finished arguing a case.

Darche, Louise, educator, born in Ontario, Canada, about 1854; died in London, England, June 1, 1899. She was graduated at the Bellevue Training School for Nurses in New York city, and in January, 1888, was appointed superintendent of the Training School for Nurses on Blackwell's island. In the autumn of 1897 overwork and ill health forced her to resign. She sought recuperation by going abroad. Miss Darche was a woman of exceptional energy and executive ability, and had the reputation of being one of the best-trained nurses in the country. While she was in charge of the Blackwell's island school her work was extended from the wards for women to those for men also, because of her improved methods of treatment. She concerned

herself deeply with the professional interests of the nurse pupils under her charge, and seemed never to spare herself in the execution of her regular and self-imposed duties. The title of F. Marion Crawford's romance *Marion Darche* was suggested by a visit to the Blackwell's island school. He was impressed with the importance of her work, and combined her family name with his own Christian name in the title of his story.

Davidge, William, actor, born in Manchester, England, March 11, 1847; died in Chicago, Jan. 26, 1899, son of the popular comedian of the same name (1814-'88). He was but three years of age when brought to America. The family settled in Brooklyn, N. Y., and young Davidge was educated in the public schools there. He made his *début* at the French Theater, Broadway, as the Widow Meddlenotte in *The Lady of the Lions*, a burlesque on Bulwer's play. He then ran away from home and played a few months with a stock company in Newark, N. J. His father finally procured an engagement for him as second low comedian of the Brooklyn Park Theater. He was engaged immediately thereafter for the Holman company, with which he remained as comedian for four years. In 1870-'71 he was associated with William H. Crane and Frank Drew in an operatic tour in Canada. During this tour he married the popular actress Maggie Harold. He was next engaged as comedian of Wood's Museum, Philadelphia, and subsequently at the Arch Street Theater to replace Stuart Robson. In the summer of 1875 he assumed the management of the Museum. He produced *The Two Orphans* there in a run of 169 performances in 1877, playing himself the part of Pierre. He was comedian of Kate Claxton's company in the season of 1877-'78, and then played the comedy part in a long run of *Enchantment* at Niblo's Garden, New York. He was then for a season with Augustin Daly, playing *Hercules Brown* in *The Arabian Nights*. Mr. and Mrs. Davidge then formed a company of their own, called the Maggie Harold Comedy Company, and played comedies for many seasons on the road. Mr. Davidge from 1881 to 1883 was the comedian and character actor of the Bijou and Museum Theaters in Philadelphia. He played subsequently several seasons with Roland Reed. His last engagement was with the Dearborn stock company in Chicago, where he made his last appearance.

Davies, Thomas Alfred, military officer, born in Black Lake, N. Y., Dec. 3, 1809; died there, Aug. 19, 1899. He was a son of Thomas John Davies and a brother of Charles Davies, the noted mathematician, and of Henry Eugene Davies, chief justice of the New York Court of Appeals. Thomas Alfred passed his youth on his father's farm, and when sixteen years old was sent to the United States Military Academy, where he was graduated in 1829. He entered the army as brevet second lieutenant in the 1st Infantry, and served at Fort Crawford, in Wisconsin Territory, and at West Point, as post quartermaster, till 1831, when he resigned and engaged in mercantile business in New York. Meeting with financial reverses in 1837, he accepted employment as a civil engineer in the construction of the Croton Aqueduct, and spent two years in that work, particularly in the building of High Bridge. He then resumed mercantile life and continued it till the outbreak of the civil war, when he offered his services to the Government and was commissioned colonel of the 10th New York Volunteers. After some service in Washington and the organization of the Army of the Potomac, he was assigned to the command of the 2d Brigade, 5th

Division. He led the advance on Centerville, and on the day of the battle of Bull Run received command of the 5th Division, and with part of his troops defeated an attempt to turn the left flank of the National army. When the retreat began he fell back to Centerville, and, posting his division on the heights, covered the retreat of the remainder of the army and checked the pursuit. He held his position till midnight, and then, under orders, retired to Alexandria. The winter he spent in the defenses of Washington. On March 7, 1862, he was promoted brigadier general and transferred to Gen. Halleck's army in the West, in which he became commander of the 2d Division (Army of the Tennessee). In the movement against Corinth he took part in the advance and the siege, and in the battle his division alone for a time engaged the whole force of the enemy. For these services he and his command were officially commended by Gen. Rosecrans. Subsequently he commanded the military districts of Columbus, Ky., Rolla, Mo., northern Kansas, and Wisconsin, and on June 11, 1865, he was brevetted major general of volunteers. Soon afterward he resigned and returned to New York, where he had acquired large property interests. Gen. Davies was the inventor and patentee of many devices, including some improvements in railroad construction which have been used with success. He also spent much time in philosophic and theological speculation, and was a firm believer in the authenticity and inspiration of the Bible. He was the author of numerous works, including *Cosmogony*; or, *Mysteries of Creation* (New York, 1858); *Adam and Ha-Adam* (1859); *Genesis Disclosed* (1860); *Answer to Hugh Miller and Theoretical Geologists* (1861); *How to Make Money, and How to Keep It* (1866); and *Appeal of a Layman to the Committee on the Revision of the English Version of the Holy Scriptures, to have Adam and Ha-Adam restored to the English Genesis where left out by Former Translators* (1875).

Davis, George Royal, director general of the World's Columbian Exposition, 1890-'94, born in

Palmer, Mass., June 3, 1840; died in Chicago, Ill., Nov. 25, 1899. He prepared for college at Williston Seminary, but, abandoning a college education, he enlisted as a private in the 8th Massachusetts Volunteers in 1861, and served throughout the civil war. He became a captain in the 8th Massachusetts and major of the 3d Rhode Island Cavalry. Upon being mustered out

of service he received a civil appointment at Gen. Phil Sheridan's headquarters, and went through the Indian campaigns of 1868 and 1869 in southern Kansas and Indian Territory. In 1871 he resigned and went into business in Chicago. He was elected to Congress in 1876, and was twice re-elected. He was a delegate to several national Republican conventions, but he was best known for his work in connection with the World's Columbian Exposition, which owed much of its success to his executive ability. (See *Authorized History of the World's Columbian Exposition*, 4 volumes, New York, 1898.)

Davis, Jesse L., song writer, born in Cincinnati, Ohio, Dec. 3, 1863; died in Whitestone, Long Island, N. Y., Oct. 18, 1899. He was a negro and a graduate of Gaines College, in his native city. For many years he had been known widely as a writer of popular songs, the most familiar of which are *The Lighthouse by the Sea*, *Wait till the Tide Comes In*, *Why don't you Write a Letter Home?* In the *Baggage Coach Ahead*, *The Fatal Wedding*, *Send Back the Picture* and the *Ring*, and *Down in Poverty Row*.

Dawes, Rufus E., military officer, born in Malta, Morgan Co., Ohio, July 4, 1838; died in Marietta, Ohio, Aug. 2, 1899. He was graduated at Marietta College in 1860, and in 1861 entered the National service as a captain in the 6th Wisconsin Volunteers, which formed a part of the famous "Iron Brigade." He served through the war, attaining the rank successively of major, lieutenant colonel, colonel, and brigadier general by brevet, took part in 20 battles, was several times wounded, and was the only officer of his regiment that went through the war. After the war he engaged in business in Marietta, and he was a Representative in Congress in 1880-'82. He was the father of Charles G. Dawes, controller of the currency.

Dewey, Chester Pomeroy, journalist, born in Pittsfield, Mass., Jan. 10, 1826; died in Rochester, N. Y., Aug. 5, 1899. He was the eldest child of Dr. Chester Dewey and his wife, Olivia Pomeroy, and went with his parents to Rochester in 1836. He was graduated at Williams College in 1846, and then spent a year as private tutor in the Taliaferro family in Virginia. Returning to Rochester, he studied law, and in 1850 was admitted to the bar in New York. Before he had time to establish himself in practice he was called to a place on the staff of the *Daily American*, of Rochester. He remained with the *American* till 1858, when it was consolidated with the *Democrat*, and then, returning to New York, was sent by the *Evening Post* into Illinois to report the famous debate between Abraham Lincoln and Stephen A. Douglas in their canvass for the United States Senate. On completing this assignment he took an editorial place on the *Commercial Advertiser*, of New York, with which he remained seventeen years, going thence to the *Brooklyn Argus*, the *American Agriculturist*, of New York, and the *Commercial Bulletin*, also of New York. Since 1890, because of failing health, he had not been steadily engaged in editorial work. Within a few weeks of his death he gave up his Brooklyn home and returned to Rochester. Mr. Dewey was an earnest student throughout his life, and he had a singularly retentive memory.

Dingley, Nelson, legislator, born in Durham, Me., Feb. 15, 1832; died in Washington, D. C., Jan. 13, 1899. He was brought up on his father's farm and in his country store. His early education was obtained in the local district and high schools. When seventeen years old he began teaching, and he continued to teach each winter till he entered Waterville College in 1851. Eighteen months later he went to Dartmouth College, where he was graduated in 1855 with high rank as a student, debater, and writer. His family removed to Auburn in 1854, and there he studied law, and was admitted to the bar in 1856. But the same year he purchased the *Lewiston Journal*, of which he was editor and proprietor till his death. In 1854 he cast his first vote for Anson P. Morrill, the antislavery and temperance candidate for Governor, and in 1856 he wrote and spoke for the first Republican candidate for the presidency, John C. Frémont. He was elected to the Legis-

lature in 1861, 1862, and 1863, and in the last year was chosen Speaker. Removing to Lewiston, he was re-elected to the Legislature in 1864, 1865, 1868, and 1873, and was again Speaker in 1864, declining a re-election to that office in 1865. In 1873 he was elected Governor of Maine by a majority of about 10,000, and in 1874 was re-elected with a majority of about 11,000. He declined a renomination in 1875. During the next six years his political work was chiefly in the interest of the Republican party in his State. He was first elected to Congress to fill the vacancy caused by the promotion of William P. Frye to the United States Senate, Sept. 12, 1881, and he held the seat by successive re-elections till his death. In this service he performed effective work as a member of the Committees on Banking and Currency, on American Shipbuilding and Shipowning Interests (select), on Merchant Marine and Fisheries, and, above all, on Ways and Means. From the beginning of his congressional career he was conspicuous as a defender of the principle of protection. He strongly opposed the Mills tariff bill in 1888, aided in the drafting of the McKinley bill in 1890, opposed the Wilson bill in 1894, and as chairman of the Committee on Ways and Means had charge of the bill of 1897 that bears his name. When President McKinley was forming his Cabinet he was anxious that Mr. Dingley should accept the office of Secretary of the Treasury, but the latter believed he could serve the country and party best by retaining the leadership of the House. In 1898 President McKinley appointed him a member of the Joint High Commission on the controversies between the United States and Canada. Mr. Dingley received the degree of LL. D. from both Bates and Dartmouth Colleges.

Dodd, Moses Woodruff, publisher, born in Bloomfield, N. J., Nov. 11, 1813; died in New York city, April 8, 1899. He was graduated at Princeton College in 1837, and immediately entered its theological seminary, but failing health soon caused the abandonment of his plans. In 1839 he entered into partnership with John S. Taylor, then one of the foremost publishers of religious books in New York city. In the following year Mr. Taylor withdrew, and for thirty years the business was continued in the name of M. W. Dodd. He continued in active business till 1870, when, on retiring, he was succeeded by a son and a nephew, under the firm name of Dodd & Mead. This name was subsequently changed to Dodd, Mead & Co., as at present. Mr. Dodd was an elder in the Presbyterian Church for fifty years. He was a remarkably well-preserved man, and to his last days had an absorbing interest in church music and painting, as well as in the fine arts generally.

Dodge, Reuben Rawson, genealogist, born in East Sutton, Mass., April 3, 1819; died in Saundersville, Mass., Aug. 24, 1899. He was brought up on his father's farm, and followed the carpenter's trade for twenty years. He belonged to three large and well-known families, and spent much of the past sixty years in compiling genealogies of them. In 1838 he published his *Genealogy of the Rawson Family*, and in 1879 his *Genealogy of the Dodge Family*. He discovered in Antiquarian Hall, Worcester, in 1873, the manuscripts relating to the early history of Sutton, which were afterward edited by the Rev. W. A. Benedict. In 1897 he published an *Historical Sketch of the Leland Hill and Old Stone School Districts in Sutton*, and in 1898 a pamphlet containing the names and inscriptions on more than 1,100 gravestones in six Sutton cemeteries. His

Rawson and Dodge genealogies have passed through several editions.

Doerflinger, Augustus, civil engineer, born in Baden, Germany, in 1845; died in Brooklyn, N. Y., Nov. 24, 1899. In 1849 he came to the United States. He was graduated at Cornell University in 1871 with the degree of C. E., entered the service of the United States Government, and was assigned to the Atlantic coast division of the engineering department. He was employed for a long time on the work at Hell Gate, and, in conjunction with J. H. Strietinger, invented a method of simultaneous explosion. The French Government awarded him a gold medal at the French exposition. After the completion of the work at Hell Gate he was in charge of the construction of the Harlem river ship canal, and later he worked on the channels at the entrance to New York harbor. He directed the placing of the land batteries on Sandy Hook at the beginning of the Spanish-American War. He was consulting engineer of the Grant monument.

Dow, Lorenzo, inventor, born in Paris, Me., July 10, 1825; died in New York city, Oct. 12, 1899. He was graduated at Wesleyan University in 1848, spent four years in mining in California and Nevada, and, after a brief residence in New York, settled in Topeka, Kan., of which he became the first mayor. In the early part of the civil war he invented improvements in ammunition, including the waterproof cartridge bearing his name, and manufactured such supplies for the Government. After the war he spent several years in South America, working valuable interests in gold mines and hard lumber that he had acquired in Colombia. On his return to the United States he settled in Colorado, where he aided in developing the towns of Silverton and Gladstone. He became interested in the problem of irrigating the arid lands, and through his inventive skill and wide experience was of much service in establishing the present system of irrigation. During the last fifteen years of his life he had applied himself almost wholly to making and perfecting the typesetting machine that bears his name in New York.

Duggan, James, clergyman, born in Dublin, Ireland, in 1825; died in St. Louis, Mo., March 27, 1899. He came to the United States in early life, and was ordained in the Roman Catholic Church at St. Louis in 1847. His first appointment was as superior of the St. Louis Theological Seminary at Carondelet, in which he also became a professor. In 1850 he was attached to the cathedral in St. Louis, and in 1854 was appointed vicar general of the diocese and pastor of the Church of the Immaculate Conception. In 1857 he became Bishop of Gabala and coadjutor of St. Louis. Two years later he was made Bishop of Chicago. His health soon gave way under the burdens of his new post, and he made a trip to Europe. While he was there complaints were made against his administration, and, returning to his diocese, he removed some of the remonstrants. An appeal was made to Rome, and the trouble was referred to the Archbishop of St. Louis. As none of the accusers appeared, their charges were dismissed. About this time it became evident to the bishop's friends that his mind was seriously affected. He sought medical advice and traveled in Europe, but his once brilliant intellect soon became a blank, and in 1870 he was placed in an asylum.

Dunton, Larkin, educator, born in Concord, Me., July 22, 1828; died in Allston, Mass., Oct. 30, 1899. He was graduated at Waterville College in 1855, and was admitted to the bar at

Augusta, Me., but practiced very little. He taught for short periods in the Hallowell High School, Bath High School, and Lincoln Academy, and for seven years was principal of Bath High School. On April 1, 1867, he became submaster of the Lawrence School, Boston, and in 1868 was made master. In 1872 he was elected master of the Boston Normal School, which office he held till Sept. 1, 1899, when he resigned. He received the degree of LL. D. from Colby University in 1880. Dr. Dunton edited a memorial volume of Dr. John D. Philbrick, and published several text-books, among them *The Normal Course in Spelling*, *The Young Folks' Library*, *Stories of Child Life*, and *The World and its People Series of geographical readings*.

Durfee, William Franklin, civil engineer, born in New Bedford, Mass., Nov. 15, 1833; died in Middletown, N. Y., Nov. 14, 1899. After a practical mechanical training at home, he took a special course of study at the Lawrence Scientific School of Harvard University. In 1853 he became an engineer and architect in New Bedford, and for five years served as city surveyor. In 1861 he was elected to the Massachusetts Legislature. He introduced a resolution which is believed to have been the first formal proposition for arming negro troops in the civil war. In June, 1862, he went to Lake Superior to test the suitability of the iron ore for the manufacture of steel by a method invented by William Kelley, and he succeeded in producing some ingots of steel from which, May 25, 1865, were rolled the first steel rails made in the United States. He established at Wyandotte, Mich., an analytical laboratory for the purpose of studying the Bessemer process. In 1876 he was one of the judges of machine tools at the Centennial Exposition. He afterward built at Ansonia, Conn., the first successful furnaces for refining copper by the use of gaseous fuel. In 1886 he became general manager of a company that controlled patents for the production of wrought iron and steel castings.

Earle, George, lawyer, born in Maryland, Sept. 10, 1821; died in Washington, D. C., May 10, 1899. For several years he was a law partner of John A. J. Creswell, who became Postmaster-General under President Grant. In 1864 he was a member of the Judiciary Committee of the convention that revised the State Constitution and abolished slavery in the State, and, although a slaveholder, he urged immediate emancipation. In 1869 he was appointed First Assistant Postmaster-General, and under his direction the postal service was fully restored in the Southern States. After completing this work he resigned and practiced law in Washington. In recent years he had applied himself to literary work relating to his native State and the proceedings of the Continental Congress.

Eastwood, Benjamin, clergyman, born in Clitheroe, England, July 4, 1825; died in Pawtucket, R. I., Jan. 26, 1899. He was ordained in the Church of England, Aug. 19, 1846, soon afterward espoused the Wesleyan movement, and returned to his first Church some years before coming to the United States. After holding rectorships in Plymouth and Torrington, Conn., he went to the Church of the Good Shepherd, in Pawtucket, more than twenty-five years ago, and remained there as active and emeritus rector till his death. He was a warm friend of Horace Greeley and a frequent contributor to his *Tribune*. He published *Trials and Triumphs among the Lowly and Cranberry Culture*.

Eberhart, Wilford Avery Power, engineer, born in Beaver, Pa., Sept. 12, 1819; died in Cedar

Rapids, Iowa, Feb. 14, 1899. He was educated at Beaver Academy, and when twenty years old joined his uncle, Gen. Thomas J. Power, and had several years' practical training with the corps of engineers that made the preliminary surveys for the present Philadelphia and Erie Railroad. For several years afterward he was resident engineer of the Northern Central Pennsylvania Railroad, and he had special charge of the construction of the long bridge across the Susquehanna, near the mouth of the Juniata. When his uncle became president of the Erie and Pittsburgh Railroad Mr. Eberhart was placed in charge of the construction of the northern division of the road. In 1856 Mr. Eberhart entered the Methodist ministry, joining the Erie Conference. He was commissioned chaplain of the 1st Pennsylvania Light Artillery in September, 1861, and served with it till July 21, 1862, when he was compelled to resign because of a wound received in the battle of Williamsburg. In 1871 he removed to Union, Hardin County, Iowa, where he served as county surveyor eight years, and then in pastoral work till within a week of his death.

Edgar, George (George Edgar Biddle), actor, born in New York city in 1841; died there, Feb. 25, 1899. His grandfather, John Hogg (1770-1813), was for several years an important member of the Park Theater company, New York. Mr. Edgar's earlier years were spent in commercial pursuits. His long-continued studies of the classic drama led him to assume the management of the old Broadway Theater in partnership with Chandos Fulton in 1878. His first appearance as an actor was in this theater in the character of King Lear, Jan. 27, 1879. He achieved considerable success, and on Feb. 10 following he played Othello. He was distinctly successful in the latter part. In 1882 he established a fine stock company in Chicago, with which he played for a time Othello, Lear, Macbeth, and Richelieu. The venture was not financially successful, and Mr. Edgar returned to New York, where he played an engagement as Othello at the Fourteenth Street Theater, beginning Sept. 10, 1883. He then established himself in New York as a teacher of dramatic art, making occasional short tours. During one of these tours Margaret Mather made her first appearance on the stage as one of Mr. Edgar's pupils. On Aug. 16, 1890, he began a short engagement in a play called *The Banker* at the Windsor Theater, New York. His last appearance was in Jim the Penman, with the Madison Square Theater company.

Egbert, Harry C., military officer, born in Pennsylvania, Jan. 3, 1839; died in front of Malinta, Philippine Islands, March 26, 1899. He was appointed from civil life first lieutenant in the 12th United States Infantry, Sept. 23, 1861; was promoted captain, April 1, 1865; major of the 17th Infantry, April 23, 1890; lieutenant colonel, 6th Infantry, May 18, 1893; and colonel, 22d Infantry, July 1, 1898. In the volunteer service he was commissioned a brigadier general, Oct. 1, 1898, and was honorably discharged on Dec. 1 following. He took part in the battles of Gaines's Mills, Malvern Hill, Cedar Mountain, Bethesda Church, North Anna, and Gettysburg in the civil war, was captured at Cedar Mountain and Gettysburg, and was severely wounded at Bethesda Church. After the war he took part in the Nez Percés Indian campaign of 1877 and that against the hostile Sioux in 1890-'91. At the beginning of the war against Spain he was lieutenant colonel of the 6th Infantry. This regiment he commanded in the Santiago campaign till shot through the body while leading a charge against

the Spanish works at El Caney, July 1, 1898. For his heroism in this fight he was promoted to colonel of the 22d Infantry, whose commander, Charles A. Wikoff (see obituary in the Annual Cyclopædia for 1898), was killed near San Juan Hill the same day that Col. Egbert was wounded. As soon as practicable Col. Egbert was sent to New York for hospital treatment, and before he had fully recovered he applied for service in the Philippines. He sailed with his regiment for Manila, Feb. 1, 1899; arrived there, March 4; and in the storming of Malinta received a wound from which he died within an hour.

Elbert, Samuel H., lawyer, born in Logan County, Ohio, in 1833; died in Galveston, Texas, Nov. 27, 1899. He was graduated at Wesleyan University, Ohio, in 1854, studied law, was admitted to the bar in 1856, and subsequently removed to Plattsmouth, Neb. He was a delegate to the National Republican Convention of 1860, took an active part in the campaign in support of Mr. Lincoln, and later was elected to the Nebraska Legislature. In 1862 he was appointed Secretary of the Territory of Colorado, and from that time was closely identified with its history. In the winter of 1864-'65, as acting Governor, he took a decided stand against the Indians, who were causing trouble on the lines of travel to the East. From 1865 till 1873 he continued his law practice. In the latter year he was appointed Governor of the Territory, and during his administration he gave particular attention to the subject of irrigation. A bitter political feud resulted in his removal from office in 1874, although no charge was made against him. He spent 1875-'76 in Europe, and on his return was made a judge of the Supreme Court of Colorado. He resigned this office in 1882, was again elected in 1885, and served till 1888, when he resigned on account of failing health. He received the degree of LL. D. from Wesleyan University.

Eldridge, Shaler W., abolitionist, born in West Springfield, Mass., in 1817; died in Lawrence, Kan., Jan. 17, 1899. Prior to 1855, when he went to Kansas, he was a railroad contractor. He bought the American House in Kansas City, which was the recognized headquarters of the Free-soil men. Proslavery men often stopped at the hotel in their incursions into Kansas, and trouble between the two factions was frequent. At one time a large body of border ruffians beset the house, demanding the delivery to them of the Free-soil guests, but Eldridge and his hotel force made a successful armed resistance. When Gov. Reeder escaped from the Territory in 1856 Eldridge concealed him three weeks in his house. In that year Eldridge leased the Free State Hotel in Lawrence, but within a few weeks it was destroyed by Sheriff Jones and his posse under a writ of indictment as a nuisance, issued by the proslavery court. This act greatly stirred the Free-soil men, and they appointed Eldridge a commissioner to go to Washington with a memorial in their interest, and also instructed him to represent them in the convention that nominated Fremont. He was also a delegate to the convention in Buffalo, where he was appointed a member of the National Committee and its agent for Kansas immigration. Under this authority he conducted large bodies of men to Kansas through Iowa and Nebraska. With one of these parties, numbering about 350 men, he was captured by United States troops. Later he organized a party of Free-soil men, who recaptured the arms from the Government officers at Leecompton. During all this exciting period he raised large amounts of provisions and ammuni-

tion, which he smuggled into the Territory, and powerfully aided the free State cause. In the civil war he served in the National army as soldier and paymaster, and afterward he was engaged in the hotel business till his death.

Ellerbe, William Haselden, politician, born in Marion County, South Carolina, April 7, 1862; died there, June 2, 1899. He studied at Vanderbilt University, but was obliged by failing health to give up the course. He then became a planter and merchant, and was so engaged at the beginning of the Tillman movement in 1886. To this revolt against the old political leaders of South Carolina he gave early and enthusiastic support, and in 1890 was elected Comptroller General of the State. In 1896 he promoted a movement to combine the forces of the opponents and more moderate followers of Mr. Tillman. He had attained much popularity throughout the State, and was the first choice of the leaders of the conciliation movement for the gubernatorial nomination in 1896. In his canvass he pledged himself to know no faction, and in the election he carried every county but one. He was renominated in 1898 and was again elected, though by a largely decreased majority. In his last campaign he was suffering with consumption, and he failed rapidly. (See portrait in Annual Cyclopædia for 1897, page 731.)

Ellis, Jacob H., composer, born in Kingston, N. Y., in 1871; died in Asheville, N. C., Feb. 28, 1899. When thirteen years old he composed The Ulster Academy March, and afterward he produced the music for a score of instrumental pieces and songs, as well as for popular dances. Among his best-known compositions are The Shenandoah March, The Carnation Waltzes, Under the Palms, The Columbian Exposition Polka, Boulevard Lancers, Diana's Jubilee, Bonnie Brier Bush, Remus takes the Cake, and The Man who has the Cash.

Elwell, James William, philanthropist, born in Bath, Me., Aug. 27, 1820; died in New York, Sept. 2, 1899. He was educated at Bath Academy, and after leaving school joined his family, which had removed to Brooklyn, N. Y. He entered his father's commission house in New York, and when eighteen years old became a partner in the firm. In 1852, five years after his father's death, he founded the firm of James W. Elwell & Co., with which he was actively connected till within seven weeks of his death. The firm established lines of vessels to the principal Southern, West Indian, South American, and European ports, and Mr. Elwell acquired large influence in the commercial world. He was an original incorporator of the Shipowner's Association and of the Marine Bank, and was interested in many financial concerns. It is believed that in the past twenty years his philanthropic gifts aggregated \$3,000,000. He was a founder of the Brooklyn Orphan Asylum, the originator and for many years president of the Helping Hand Society, a trustee of the American Congregational Union for twenty years, and a trustee or director of the Seamen's Friend Society of New York, the New York Port Society, the City Mission and Tract Society of Brooklyn, the Home for Friendless Women and Children, the Mariners' Family Asylum of Staten Island, the Fresh-air Fund, and many other benevolent associations. (See GIFTS AND BEQUESTS.)

Ernsberger, Mary Annin, missionary, born in Newark, N. J., Feb. 18, 1864; died in Gulbarga, India, Sept. 30, 1899. She was a daughter of the Rev. George Hughes, was graduated at Mount Holyoke Seminary, and in 1886 entered the foreign mission field of the Methodist Episcopal

Church, and was assigned to Madras, India. She married there the Rev. D. O. Ernberger, a missionary, and with him was instrumental in founding the Madras orphanages.

Etheridge, James, gynecologist, born in St. Johnsburg, N. Y., March 20, 1844; died in Chicago, Ill., Feb. 10, 1899. He was Professor of Gynecology at Rush Medical College. In 1887 he was president of the Chicago Medical Society, and in 1890 of the Gynecological Society. He was also connected with many other professional bodies, and contributed to medical journals.

Eustis, James Biddle, diplomatist, born in New Orleans, La., Aug. 27, 1834; died in Newport, R. I., Sept. 9, 1899. He was a son of George Eustis, Chief Justice of Louisiana, was educated in Brookline, Mass., and at Harvard Law School, and was admitted to the bar in 1856. He practiced in his native city till the beginning of the civil war. Entering the Confederate service, he was judge advocate on the staff of Gen. Magruder till 1862, and thence till the close of the war on that of Gen. Joseph E. Johnston. After the war he served in each house of the State Legislature. In 1876 he was elected United States Senator to fill an unexpired term. After a tour of Europe he became Professor of Civil Law in the University of Louisiana, and served till 1884, when he was again elected to the United States Senate. Here he was a member of the Committee on Foreign Relations. In March, 1893, he was appointed minister to France. He had charge of the protracted negotiations which resulted in the pardon of John L. Waller, ex-United States consul in Madagascar, who had been sentenced to twenty years' imprisonment on a charge of having illegally communicated with the Hovas during the French campaign. On the expiration of his term, in 1897, Mr. Eustis engaged in law practice in New York. While studying law he had translated into English the Institutes of Justinian, and after the war he translated Guizot's History of Civilization.

Fairbairn, Robert Brinckerhoff, educator, born in New York city, May 27, 1818; died in Brooklyn, N. Y., Jan. 27, 1899. He was graduated at Washington (now Trinity) College, Hartford, Conn., in 1840, studied at the General Theological Seminary, New York city, and became rector of Christ Church, Troy, N. Y. Thence he went to St. John's Church, Stillwater, N. Y., which he left in 1853 to become principal of Catskill Academy. Ten years later he accepted the professorship of Mathematics in St. Stephen's College, Annandale, N. Y., of which he was subsequently president twenty-eight years. Under his administration the college rose from the grade of a primary school to that of an advanced institution, with property worth \$500,000. He retired in 1891. He received the degree of D. D. from Trinity College in 1864, and LL. D. from Delaware College in 1876 and Columbia in 1887. Among his best-known works are *The Child of Faith*, *College Sermons*, and *The Doctrine of Morality in its Relation to the Grace of the Gospel*.

Farrand, Harriet Augusta, author, born in Bridgeport, Vt., June 7, 1832; died in Chicago, Ill., May 19, 1899. At an early age she removed to Ypsilanti, Mich., and she was graduated at the Michigan State Normal School in 1857. She became known as a writer of short stories, and in 1870 joined the editorial staff of the *Advance*, in Chicago, of which journal she eventually became associate editor. Her published books include *The Moravian Indian Boy* (Philadelphia, 1868); *The Berry Pickers*; and *Little Hands*.

Fearn, John Walker, diplomatist, born in Huntsville, Ala., Jan. 13, 1832; died in Hot Springs, Va., April 8, 1899. He was graduated at Yale College in 1851, and two years later was admitted to the bar in Mobile. In 1854 he was appointed secretary of the United States legation in Brussels, and in 1856-'58 he held the similar post in Mexico. During the civil war he served the Confederacy in a diplomatic relation as well as in the army, where he attained the rank of lieutenant colonel on the staff of Gen. Joseph E. Johnston. After the war he practiced law in New Orleans till he was elected Professor of French, Spanish, and Italian in the University of Louisiana. In April, 1885, he was appointed minister to Greece, Roumania, and Servia, and in 1891 chief of the department of foreign affairs for the World's Columbian Exposition.

Ferrero, Edward, soldier, born in Granada, Spain, of Italian parents, Jan. 18, 1831; died in New York city, Dec. 11, 1899. He came to New York city with his parents in 1832. His father opened a dancing school, which became fashionable, and the son, succeeding him, became one of the most successful dancing masters of his day. He also taught his art at West Point. When the civil war began he became lieutenant colonel of the 11th New York Regiment. Soon afterward he raised "the Shepard Rifles"—the 51st New York Regiment—of which he became the colonel. He participated in Burnside's expedition to Roanoke island, commanded a brigade at Newbern, was in the Virginia campaign with Pope, and was a conspicuous figure at the battle of South Mountain. For bravery at Antietam he was made a brigadier general of volunteers, Sept. 19, 1862, and after participating in several other battles he was brevetted major general on Dec. 2, 1864. He served at Fredericksburg, Vicksburg, and Knoxville, and solely with a compass for a guide he led the 9th Corps to Cincinnati. When the famous mine was exploded in front of Petersburg Ferrero's colored division was selected to make the assault. The effort was what Grant had styled "a stupendous failure," and in his Memoirs he says it was "all due to inefficiency on the part of the corps commander and the incompetency of the division commander who was sent to lead the assault." A court of inquiry decided that the failure was due in part to Gen. Ferrero "for want of readiness for the assault, not going with his troops, but remaining in a bombproof." Gen. Ferrero was mustered out of service a few months later. After his retirement he returned to New York city, leased a building at Twenty-eighth Street and Broadway (now the site of the Fifth Avenue Theater), and converted it into a ballroom, which was known as Apollo Hall. In this hall were held balls and other social gatherings of the exclusive social set. In 1872 he gave up his lease and took the ballroom of Tammany Hall. He took charge of the Lenox Lyceum, Jan. 1, 1889, and retired in May, 1899. He was a member of the Loyal Legion and of the Grand Army of the Republic.

Field, Stephen Johnson, jurist, born in Hadam, Conn., Nov. 4, 1816; died in Washington, D. C., April 9, 1899. He was a grandson of Capt. Timothy Field of the Revolutionary army, a son of the Rev. Dr. David Dudley Field, and a brother of David Dudley, Cyrus West, and Henry Martyn Field. When thirteen years old he went with his sister and her husband, the Rev. Josiah Brewer, to the missionary station in Smyrna, and while living there he learned the Greek, Turkish, French, and Italian languages and took part in the relief work during an epidemic of cholera.

On his return he entered Williams College, where he was graduated in 1837. He studied law, was admitted to the bar in 1841, and for seven years was a partner in his brother's firm. In 1849 he sailed for San Francisco. On the passage from Panama nearly all the passengers were attacked with Chagres fever, and Mr. Field, applying the experience he had gained in Smyrna, acted as nurse and assistant surgeon. In San Francisco he opened a law office in an adobe hut, but clients came not. Hearing that a new town was about to be founded at Nye's Ranch, he went there, bought 66 lots on credit, and when the town of Yubaville was organized in January, 1850,

he was elected alcalde, and soon afterward was appointed justice of the peace. Yubaville became Marysville, and for some time Mr. Field was the entire government. At this time he was particularly severe on thieves, and, as he had no place to imprison them, his customary sentence was 50 lashes. The rough element undertook to terrorize him, but soon found that he was a man of exceptional courage, and, furthermore, that his administration was supported by the army. In the autumn of 1850 he was elected to the first Legislature under the State Constitution, and as a member of its Judiciary Committee he prepared a code for the government of the State courts, and drew up civil, criminal, and mining laws that were afterward generally adopted in the new States of the West. About this time, as a result of a bitter quarrel among leading men of the State, Mr. Field was disbarred by Judge Turner, but he was reinstated by the Supreme Court. While debarred from practice he lost all his fortune in speculations. In six years after his reinstatement, however, he built up a large and lucrative practice. In 1857 he was elected a justice of the Supreme Court of California for the term of six years beginning Jan. 1, 1858. Before his term began a vacancy in the court occurred, and he was appointed for the unexpired term by a governor politically opposed to him, taking the seat in October, 1857. Early in September, 1859, David S. Terry, chief justice of the court, resigned his place in order to fight the duel with Senator David C. Broderick which resulted in the killing of the latter, and Justice Field became chief justice. He held this office till 1863, when, Congress having created the Tenth Circuit, President Lincoln appointed him an associate justice of the United States Supreme Court. In providing for an additional member of this court it was the intention of Congress that the appointment should go to a person familiar with the conflicting titles and with the mining laws of the Pacific coast. As Judge Field had framed the principal of these laws, President Lincoln recognized the wish of the people immediately concerned for his appointment, and the Senate confirmed the nomination unanimously. In April, 1867, Justice Field tendered his resignation, to take effect on Dec. 1 following. He had thus held the office thirty-four years, six months, and twelve days, and when he retired he was the oldest member of the court both in age and in length of service. During this period he saw two whole courts come and go, and sat with

three chief justices. He alone had written 620 opinions in this court, which, with 57 in the Circuit Court and 365 in the Supreme Court of California, made a total of 1,042 cases decided by him. His career was replete with romance and exciting occurrences. In 1873 he was appointed by the Governor of California one of three commissioners to prepare amendments to the codes of the State. When, in 1877, Congress created the Electoral Commission it designated him as one of the five justices of the Supreme Court who should be members of it. In 1880 he was a conspicuous candidate for the Democratic presidential nomination. In 1888 he sentenced ex-Judge Terry to a brief imprisonment for attacking the court officers with a bowie knife in the course of a sensational trial (see *Annual Cyclopædia* for 1889, page 649, article TERRY). Terry swore vengeance, and on Aug. 14, 1889, made a personal assault on Judge Field in a railroad dining room at Lathrop, Cal., for which he was at once shot dead by United States Deputy-Marshal David Nagle, who, unknown to Judge Field, had been ordered to accompany him for protection against threatened assault. Judge Field received the degree of LL. D. from Williams College in 1864.

Field, Walbridge Abner, Chief Justice, born in Springfield, Vt., April 28, 1833; died in Boston, Mass., July 15, 1909. He was graduated at Dartmouth College in 1855, studied law at Harvard, and was admitted to the bar in 1860. From 1865 to 1869 he was assistant United States district attorney for Massachusetts, and in 1869-70 Assistant Attorney-General of the United States. He was representative from Massachusetts in Congress in 1876-77, but declined to be a candidate at the next election, and in February, 1881, was appointed to the supreme bench of Massachusetts, and in 1890 became Chief Justice.

Fisher, George Farnall, jurist, born in Milford, Del., Oct. 13, 1817; died in Washington, D. C., Feb. 11, 1899. He was graduated at Dickinson College in 1838, and in 1840 he was elected clerk of the Delaware Senate, in 1843 a member of the Legislature, and in 1846 Secretary of State of Delaware. He served as commissioner to settle claims against Brazil, and in 1857-'60 he was Attorney-General of Delaware. At the outbreak of the civil war he raised a regiment for the National army, but his election to Congress prevented him from taking the field. He served on the Committee on Foreign Affairs. In 1863 he was appointed an associate justice of the Supreme Court of the District of Columbia. In 1870 he resigned this office to become United States attorney for the District of Columbia. In 1875 he resigned the office, and, after service in the Claims Bureau of the State Department, he was appointed first auditor of the Treasury in 1889.

Flagg, Jared Bradley, painter and clergyman, born in New Haven, Conn., June 16, 1820; died in New York, Sept. 25, 1899. He was a brother of George Whiting Flagg, the painter, and studied with his brother and Washington Allston. When sixteen years old he made his first exhibition at the National Academy, a portrait of his father, and when nineteen he exhibited *Angelo and Isabella*, a study inspired by *Measure for Measure*. He opened his first studio in Hartford, Conn., and his second in New York, in 1849. In 1850 he was elected a National Academician. He made a specialty of portraits. He studied theology privately and at Trinity College, Hartford, and was ordained in the Protestant Episcopal Church in 1854. He served St. James's Church, Birmingham, Conn., as rector several

months, and Grace Church, Brooklyn, N. Y., eight years. In 1864 he withdrew from the ministry permanently, and afterward applied himself wholly to painting. His portraits include those of Chief-Justice Church and several of the judges of the New York Court of Appeals, now in the State Capitol; a life size of William M. Evarts, also in the Capitol; and several of Commodore Vanderbilt. He received the degree of S. T. D. from Columbia College in 1863. Dr. Flagg also painted Holy Thoughts and Paul before Felix, and was author of *The Life and Letters of Washington Allston*.

Flagler, Daniel Webster, military officer, born in Lockport, N. Y., June 24, 1835; died in Newport News, Va., March 29, 1899. He was graduated at West Point in 1861; was commissioned a brevet and full second lieutenant of ordnance, June 24 of that year; promoted first lieutenant, Aug. 3 following; captain, March 3, 1863; major, June 23, 1874; lieutenant colonel, Aug. 23, 1881; colonel, Sept. 15, 1890; and brigadier general and chief of ordnance, Jan. 23, 1891. During the civil war he was first employed in drilling volunteers in Washington; was then aide-de-camp to Gen. McDowell, charged with the defense of the national capital; and afterward served as chief of ordnance with Gen. Burnside's expedition to North Carolina, was with the Army of the Potomac in the Maryland campaign, and was on special inspection and ordnance duty. He took part in the battles of Bull Run, Roanoke Island, Newbern, Fort Macon, South Mountain, Antietam, Fredericksburg, Chancellorsville, and Gettysburg, and won brevets for gallantry at Antietam and Fort Macon and for distinguished services in the field and in the ordnance department throughout the war. After the war he was on duty at various arsenals till promoted to chief of ordnance, and thereafter he was stationed at Washington. The importance and value of his services during the war with Spain are best attested by the report of the commission that investigated the conduct of the War Department: "The testimony before the investigating commission shows that the ordnance department was untiring in its work, both before and during the war, and that every effort was made by its officers properly to arm and equip the troops. The delays that occurred were none of them of serious import, and it was beyond the power of the department to prevent them."

Fletcher, Thomas Clement, lawyer, born in Herculaneum, Mo., Jan. 21, 1827; died in Washington, D. C., March 25, 1899. His father was a merchant and a large slaveholder, but the son became an abolitionist in early youth. He received a common-school education, and from 1849 till 1856 held county clerkships by appointment and election. In the last year he removed to St. Louis, where he was admitted to the bar in 1857. He was commissioned colonel of the 31st Missouri Volunteers in the National army in 1862 and of the 47th Volunteers in 1864, and in the last year was also brevetted brigadier general of volunteers. During a part of 1863 he was confined in Libby Prison. He was Governor of Missouri in 1865-'68. In 1869 he resumed law practice, dividing his time between St. Louis and Washington till about ten years ago, when he settled permanently in Washington.

Flower, Roswell Pettibone, banker, born in Jefferson County, New York, Aug. 7, 1835; died in Eastport, Long Island, N. Y., May 12, 1899. He was one of nine children of Nathan M. Flower, a wool carder and cloth manufacturer, on whose death his widow undertook to carry on the busi-

ness with the aid of her sons. Roswell worked in the mill and on the farm, attending a district school till he was fourteen years old, and then became clerk in a local store. At the age of sixteen he was graduated at the village high school, and, after spending two years in teaching, went to work in a dry-goods store in Philadelphia, and soon afterward in a hardware store in Watertown, N. Y. A month after taking his last place he was appointed assistant postmaster, and during his six years' service he saved \$1,000 out of his salary of \$50 a month. With this capital he bought an interest in a jewelry store. Two years later he bought out his partner, and on an enlarged scale continued the business till 1869. In that year he removed to New York city to manage the interests of his brother-in-law, Henry Keep, who at his death had large railroad holdings and responsibilities. Flower proved himself an able financier, and acquired wealth rapidly. Before leaving Watertown he had organized the Jefferson County Democratic Committee. His success in politics attracted the attention of Samuel J. Tilden, whom he induced to promote the extension of the Jefferson County plan to the other county organizations. In 1877 Mr. Flower, as chairman of the Democratic State Committee, successfully managed the campaign. Four years later he and William W. Astor were candidates for Congress in a strongly Republican district, and Mr. Flower was elected. He declined a renomination. He was appointed president of the Subway Commission in 1886, and was re-elected to Congress in 1888 and 1890. In 1891 he was elected Governor of New York. From the close of his term till his death he applied himself to the interests of a large banking house that he had established and to a systematic course of philanthropy. His fortune was estimated at his death at about \$25,000,000, and in the last year of his life he was known to have given away \$1,000,000. With his brother Anson he erected a new edifice for Trinity Church, Watertown, at a cost of \$100,000; with his wife he presented St. Thomas's Church, New York city, with a combined Sunday school, industrial school, and library building that cost \$50,000. To the Homeopathic College of Physicians he gave the commodious and thoroughly equipped Flower Hospital. Mr. Flower received the degree of LL. D. from Lawrence University in 1893. (See GIFTS AND REQUESTS.)

Follett, David Lyman, jurist, born in Sherburne, N. Y., July 17, 1836; died in Norwich, N. Y., July 5, 1899. He was educated at Oneida Conference Seminary, studied law, and was admitted to the bar in 1858. From March, 1867, till May, 1873, when the office was abolished, he was assessor of internal revenue for the 13th District of New York. In 1874 he was nominated by the Republicans for justice of the Supreme Court, and was elected without opposition. He was similarly elected in 1888. In 1887 he was appointed a commissioner, with David Dudley Field and William Rumsey, to revise a proposed Code of Evidence; in 1892 he was designated an associate justice of the General Term of the 1st department; and in 1895 was appointed an associate justice of the 4th appellate division of the Supreme Court for the 6th Judicial District, which office he held at the time of his death. After his service in the 4th department of the General Term he was appointed an associate justice of the Court of Appeals to organize a second division, and by this court he was chosen Chief Justice.

Force, Manning Ferguson, lawyer, born in Washington, D. C., Dec. 17, 1824; died near San-

dusky, Ohio, May 8, 1899. He was a son of Peter Force, the historian, and was graduated at Harvard College in 1845 and at its law school in 1848. In 1861 he entered the National army as major of the 20th Ohio Volunteers, of which he was subsequently made lieutenant colonel and colonel. After taking part in the battles of Fort Donelson and Shiloh, Gen. Grant's campaign in southwestern Tennessee and his expedition into northern Mississippi, and the siege of Vicksburg, he was promoted brigadier general of volunteers, Aug. 11, 1863. Two years later, after serving with Gen. Sherman in his Atlanta campaign and the march to the sea, he was brevetted major general of volunteers. At the close of the war and on the recommendation of Gen. Sherman he was offered a colonelcy in the regular army, but declined it. From 1867 till 1877 he was judge of the Court of Common Pleas of Hamilton County, Ohio, and thence till 1887 judge of the Superior Court of Cincinnati. After leaving the bench he declined all public preferments, excepting the office of commandant of the Ohio Soldiers' Home, which he held at the time of his death. He edited Walker's Introduction to American Law (Boston, 1878) and Harris's Principles of Criminal Law (Cincinnati, 1880), and published From Fort Henry to Corinth (New York, 1881); Marching across Carolina (Cincinnati, 1883); and Personal Recollections of the Vicksburg Campaign (1885). His other publications include Prehistoric Man, Darwinism and Deity, The Mound Builders, Some Early Notices of Ohio Indians, To what Race did the Mound Builders Belong? Letters of Amerigo Vespucci, and Life of Justice John McLean. His last work, General Sherman, in The Great Commanders Series, was published after his death. The failure of his health had prevented the completion of the study, and at his request Gen. Jacob D. Cox finished it.

Ford, Daniel Sharp, publisher, born in Cambridge, Mass., April 5, 1822; died in Boston, Mass., Dec. 24, 1899. He learned the printer's trade, and was at one time a member of the firm of Olmstead & Ford, publishers and editors of the Baptist Weekly, then known as the Christian Watchman and Reflector. In 1857 the firm purchased the Youth's Companion, of which Mr. Ford shortly became the sole owner, continuing its publication under the firm name of Perry Mason & Co. He had keen business instincts, editorial ability, and high ideals, and the Companion became under his management one of the great publishing successes of the time. His editorial supervision was constantly exercised upon all the departments, but his name never appeared in its columns, and his many charitable and other gifts were made in so quiet a fashion that his name was never published in connection with them. He was a lifelong member of the Baptist denomination, and his philanthropic work was usually performed through its agency.

Foster, Cassius G., jurist, born in Webster, N. Y., Jan. 22, 1837; died in Topeka, Kan., June 21, 1899. He received a good education, studied law in Rochester, N. Y., and was admitted to the bar in 1859, and the same year settled in Atchison, Kan. In 1863-'64 he served in the State Senate, in 1867 was mayor of the city, and from March 10, 1874, till March, 1899, was judge of the United States District Court of Kansas. He was the founder and president of the Foster Humane Society.

Foster, Joseph Coggin, clergyman, born in Milford, N. H., April 11, 1818; died near Augusta, Ga., March 16, 1899. When sixteen years old he was apprenticed to the printer's trade in Am-

herst, N. H., and in the following year began studying for the ministry. He was graduated at the New Hampton (N. H.) Theological Institution in 1841, was ordained pastor of the Baptist Church in Brattleboro, Vt., in 1843, and in 1856 left that charge for the First Baptist Church in Beverly, where he remained till 1872. During the next nine years he held a pastorate in Randolph. For twenty-two years he never attended the meeting of the association to which his church belonged without being elected either clerk or moderator. He received the degree of D. D. from Central University, Iowa, in 1883. He was a constant writer for religious periodicals, was assistant editor of the Watchman in 1881-'90, and published Baptism and Communion, a tract that was widely distributed, and Responsibilities for Intemperance.

Fontenelle, Henry, Indian chief, born in what is now Bellevue, Neb., about 1819; died on the Omaha Indian reservation, Nebraska, in July, 1899. It is said that when Napoleon I was rising to power Francois, Marquis de Fontenelle left France and settled in New Orleans in company with others of the French nobility who sought protection in the United States. His son Lucien, then sixteen years old, ran away and joined the colony of French trappers and traders at St. Louis. Fascinated by stories of adventure in the Northwest, Lucien made his way to the trading post of the Hudson Bay Company, on the upper Missouri, and settled on the site of the present Bellevue. He speedily made friends with the Omaha Indians, was received into the tribe, and in 1815 married Me-um-ba-ne, daughter of the head chief. Of five children of this marriage, Henry and Logan became eminent in the early history of the West. The brothers were educated in a school where Kansas City now stands, till Henry fought a duel with a fellow-student and ran away through fear of punishment. After long roving he returned to Bellevue and became a trapper. Here he met Stephen Decatur, who had been educated for the priesthood, and who taught the young half-breed Latin and Greek. In dealing with the Indians Decatur represented the trading company and Fontenelle the Indians. Both men became exceedingly wealthy, and with Peter A. Sarpy exerted an influence that restrained the Omahas from attacking the whites. In 1840 Henry Fontenelle married Emily Whiteman, sister of the chief of the Pawnees. Soon after his marriage his brother Logan, who had become chief of all the Omahas, was killed in battle with the Sioux, and Henry was chosen head chief in his place. For more than half a century Henry had lived in the same house in the southeastern corner of the Omaha reservation. He was always friendly with the whites, a man of wide information, able to recite freely in the vernacular from the Greek and Latin writers, and a born commander. Ex-Secretary J. Sterling Morton pronounced him the most wonderful man he had ever seen.

French, Justus Clement, clergyman, born in Barre, Vt., May 3, 1832; died in Newark, N. J., Feb. 14, 1899. He was graduated at Williams College in 1853, completed the course at Union Theological Seminary, New York, in 1855, and was ordained a Congregational clergyman in 1857. For fourteen years he was pastor of the Central Congregational Church in Brooklyn. After spending a year in California, he occupied the pulpit of the Westminster Presbyterian Church, Brooklyn, for nearly six years. In 1879 he was called to the Park Presbyterian Church in Newark, where he remained until his death. He re-

ceived the degree of D. D. from Williams College in 1865. Dr. French was one of the earliest supporters of the Young People's Society of Christian Endeavor, and was elected president of the New Jersey societies six times successively.

Garland, Augustus Hill, lawyer, born in Covington, Tenn., June 11, 1832; died in Washington, D. C., Jan. 26, 1899. His parents removed to Hempstead County, Arkansas, in the year following his birth, and he was educated at St. Mary's and St. Joseph's Colleges in Lebanon and Bardstown, Ky. He studied law, taught school, and, after a post-graduate course at St. Joseph's, was admitted to the bar in Washington, Ark., in 1853. Three years later he settled in Little

Rock. Early in his political career he was a Whig. In 1860 he was a presidential elector on the Bell and Everett ticket, and in 1861 he was elected to the State convention that adopted the ordinance of secession as a pronounced opponent of national disruption. He made a strong fight for the maintenance of

the Union, but after the convention had passed the ordinance he acquiesced in the result. During the civil war he was a member of both the provisional and permanent Confederate Congresses. After the war he returned to law practice at Little Rock. He had been admitted to practice before the United States Supreme Court in 1860, and now undertook to resume that practice, but was not permitted to do so, as he had not taken the oath prescribed by Congress in 1862. He thereupon instituted a case in his own behalf to test the constitutionality of the act in so far as it required all attorneys and counselors before that court to take the oath. After a personal argument the question that he had raised was decided in his favor in December, 1867. In 1866 he was elected United States Senator for the term beginning March 4, 1867, but was not permitted to take his seat. He served a short time as acting Secretary of State of Arkansas in 1874, and the same year was elected Governor under the new Constitution. In January, 1876, he was again elected United States Senator, and this time was seated. He was re-elected in 1883, and served till March, 1885, when he was appointed Attorney-General of the United States. In 1889 he resumed practice. He was stricken with apoplexy while arguing a case before the Supreme Court, and died within ten minutes.

Geiger, Hezekiah Ruebush, educator, born in Greencastle, Pa., Jan. 10, 1820; died in Springfield, Ohio, July 18, 1899. In 1831 his father's family settled in Holmes County, Ohio. He was graduated at Pennsylvania College, Gettysburg, in 1846, and was at once elected Professor of Mathematics, Physics, and the Natural Sciences in the newly established Wittenberg College, at Springfield, Ohio, which chair he held until 1873, from which time he taught the natural sciences only. He traveled extensively for the purpose of making original investigations. In 1874 he visited the Rocky mountain districts, the Pacific

coast, and the Sandwich Islands. His Hawaiian trip resulted in the collection of important data of great scientific interest obtained by original surveys of the volcanic craters of the islands and other investigations. The incidents and results of this trip were published in an interesting volume. In 1882 he resigned his professorship, and in 1883 accepted a place on the United States Geological Survey, in charge of the Blue Ridge division. His investigations extended through Maryland, Virginia, and West Virginia. While engaged in this work "he advanced and proved, in opposition to all previous theories, the true theory of the geological construction of the entire Blue Ridge system, as now accepted and recognized by scientists and Government authorities." For several years he was editor of the Lutheran Evangelist and of an agricultural journal. Shortly after his removal to Springfield he was ordained to the office of the ministry in the Lutheran Church, and in 1869 he received the degree of Ph. D. from Pennsylvania College.

Gemünder, George, violin maker, born in Ingelfingen, Württemberg, April 13, 1816; died in Astoria, Long Island, N. Y., Jan. 15, 1899. He was one of three sons of a noted maker of violins. August (see obituary in Annual Cyclopædia for 1895) and George followed their father's trade, and Albert became equally famous as an organ builder. On the death of the father, in 1835, George studied and worked successively in Vienna, Munich, Presburg, and Strasburg, and, having become the equal of his masters in these cities, went to Vuillaume, the violin maker of Paris. There he won the regard of the master to such an extent that when, in 1845, Ole Bull took his wonderful "Gaspar di Salo" to Vuillaume to be repaired the latter, despite the protest of Ole Bull, placed the instrument in George's hands, declaring that his assistant could do the work better than himself. In 1847 George joined his two brothers in Springfield, Mass. In 1852 he established himself in New York city. While working with Vuillaume he became noted for reproducing the works of the old masters. In 1851 he sent to the London Exhibition several instruments in which he had imitated the work of Stradivarius, Guarnerius, and Nicholas Amati, and for them he received a special award. His greatest triumph in this line was his "Kaiser" violin, sent to the Vienna Exhibition in 1873. This was an imitation of a Guarnerius, but the jury of awards declared it to be an original instrument, on the ground that it was impossible to produce so fine a tone on a new instrument. George's workshop was visited by many great violinists, and not one failed to be deceived when a Gemünder imitation and an original instrument were placed before him for trial. After making the invariable mistake, Ole Bull declared that "no man in the world but Gemünder can do that." Mr. Gemünder published Progress in Violin Making (Astoria, 1881).

Gill, Joseph Pearson, civil engineer, born near Trenton, N. J., about 1820; died in New York city, Jan. 9, 1899. He entered the navy and became an assistant paymaster. When the Mexican War broke out he was on duty at Hawaii, whence he was ordered to the frigate Savannah, on which he took part in the occupation of Monterey. He made a close study of mathematics and engineering, and attained a proficiency therein which made him an invaluable officer, as professional engineers were then unknown in the service. At the close of the war he resigned. After a course of advanced study in Philadelphia, he established himself as a civil engineer,

and till within recent years was engaged in the construction of railroads and gas works in the Eastern, Middle, and Southern States. Mr. Gill wrote monographs on subjects pertaining to his profession.

Goddling, William Whitney, alienist, born in Winchendon, Mass., May 5, 1831; died in Washington, D. C., May 6, 1899. He was graduated at Dartmouth College in 1854 and at Castleton Medical College in 1857. He was appointed assistant at the New Hampshire Asylum for the Insane in 1859, and in 1862 resigned to engage in general practice in Fitchburg, Mass. In 1863 he became assistant physician at the Government Hospital for the Insane, in Washington, in 1870 he was made superintendent of the Massachusetts Hospital, at Taunton, and since 1877 had occupied the similar post at the Government Hospital.

Goesbriand, Louis de, clergyman, born in St. Urbain, France, Aug. 4, 1816; died in Burlington, Vt., Nov. 3, 1899. He was ordained to the priesthood in Paris, July 13, 1840, and went to Cincinnati, where he remained seven years. On the erection of the diocese of Cleveland, he was made vicar general and rector of Bishop Rappe's cathedral. In 1853 he was ordained bishop and assigned to the newly erected see of Burlington, Vt. He was installed on Nov. 6, 1853, and began the work of building up a diocese with great zeal. In 1858 he attended the session of the Vatican Council at Rome, and he again visited the Pope in June, 1893, at which time he was presented by the Pope with a link from the chain of St. Peter.

Gosman, Abraham, clergyman, born in Danby, N. Y., July 25, 1819; died in Lawrenceville, N. J., Jan. 5, 1899. He was graduated at Williams College in 1843 and at Princeton Theological Seminary in 1847, was instructor in Hebrew at the seminary in 1850-'51, and was pastor of the Presbyterian Church at Lawrenceville from 1851 till 1865, when he became pastor emeritus. He received the degree of D. D. from Princeton in 1862. Dr. Gosman was selected to complete *The History of the Israelitish Nation from Samuel to the Babylonish Captivity*, left unfinished by Dr. Archibald Alexander, and he partly translated and edited *Genesis and Numbers*, and entirely, with a special introduction, *Deuteronomy* in the American edition of *Lange's Commentaries*.

Gray, Joshua, inventor, born in Sheffield, Vt., May 4, 1824; died in Medford, Mass., June 25, 1899. He received a public-school education, and when eighteen years old went to work in the Manchester (N. H.) Locomotive Works. While there he invented a system of quick-steaming boiler tubes, which was adopted by the concern, and also supervised the construction of the first locomotive built wholly by it. Subsequently he served many years in the construction department of other locomotive plants. Among his inventions were the rubber-tipped lead pencil, a breech-loading magazine rifle, a sewing machine shuttle, a railroad signal, and a seven-armature dynamo. At the time of his death he was perfecting plans for a new electric car carrying a dynamo on the roof, and was also engaged on a magnetized car wheel. His inventions yielded him handsome returns.

Greathouse, Clarence B., lawyer and editor, born near Versailles, Ky., in September, 1845; died in Seoul, Korea, Oct. 21, 1899. He was graduated at Bethany College, Virginia, studied law, was admitted to the bar, and became a member of the firm of Porter & Greathouse, the senior partner being at that time Governor of Kentucky. He served a term as county attorney of Wood-

ford County, and later was one of the founders of the Woodford Weekly. In 1870 he removed to San Francisco, where for several years he practiced law. He was one of the founders and, from 1880 till 1885, editor of the *San Francisco Examiner*. In 1886 he was appointed consul general at Yokohama, Japan. During his service there he became acquainted with Ni-Kung, King of Korea, to whom he gave much advice. His good address so pleased the King that he asked him to accept the newly created office of *Ho-Pang*, or Prime Minister. Mr. Greathouse resigned the consulate and accepted the premiership in 1890, and went to Seoul to live. His career in Korea was one of constant excitement. During the disturbances in 1894, which ended in the assassination of the Queen, he was appointed to investigate the murder, and he caused the arrest of several of the murderers, who were adjudged guilty and beheaded. Later he detected and frustrated a plot to kill the King, the Prime Minister, and the chief notables of the court. He held the office of adviser to the King till his death. He was the author of a volume of Korean tales.

Greene, George Sears, soldier, born in Warwick, R. I., May 6, 1801; died in Morristown, N. J., Jan. 28, 1899. He was descended from John Greene, who came from Salisbury, England, in 1635, and settled in Warwick ten years later. George was graduated at West Point, second in his class, in 1823; was made second lieutenant, 3d Artillery, July 1; was promoted first lieutenant, May 31, 1829; and resigned, June 30, 1836. In the course of his regular army service he performed garrison duty and was an instructor in mathematics at the Military Academy. On leaving the army he established himself as a civil engineer, and for twenty years was engaged in railroad construction. His high reputation as a builder of extensive engineering works led to his employment by the Croton Aqueduct Department of New York city in 1856, and while so engaged he designed and built the reservoir in Central Park, the enlargement of High Bridge, and a new reservoir near it. In January, 1862, he was commissioned colonel of the 60th New York Infantry, and on April 28 following was appointed a brigadier general of volunteers. He commanded his brigade in the battles of Cedar Mountain and Chancellorsville, and in the intermediate battle of Antietam he commanded the 2d Division of the 12th Corps. At Gettysburg, on the night of July 2, 1863, he performed a most important service by holding the right wing of the Army of the Potomac at Culp's Hill, with a part of his brigade, against more than a division of Confederate troops, thereby averting the disastrous effects of a turning of the wing. In September, 1863, he was transferred to the West, and on Oct. 28, in a night engagement near Chattanooga, he received a wound in the jaw that disabled him till January, 1865. He then rejoined Gen. Sherman's army in North Carolina and took part in the operations leading to the surrender of Gen. Johnston. On March 13, 1865, he was brevetted major general of volunteers for his services during the war, and on April 30, 1866, he was mustered out of the volunteer service. In 1894 Congress, in recognition of his military services and also of the fact that he was then the oldest living graduate of the Military Academy, authorized his reappointment to the regular army with the rank of a first lieutenant of artillery. The appointment was made on Aug. 2, and on the 11th he was placed on the retired list. After the civil war he resumed professional work. He was chief engineer and commissioner of the

Croton Aqueduct Department in 1867-'71, and chief engineer of public works in Washington, D. C., where he designed the elaborate plans for sewerage the city in 1871-'73. Gen. Greene had been president of the American Society of Civil Engineers and of the New York Genealogical and Biographical Society. He was the father of George Sears Greene, Jr., who became engineer in chief of the Department of Docks of New York city; Samuel Dana Greene, U. S. N., who fired all the shots of the Monitor in its fight with the Merrimac till he succeeded Lieut. Worden in command; and Francis Vinton Greene, major-general of United States volunteers in the war against Spain.

Gronlund, Laurence, socialist, born in Copenhagen, Denmark, July 13, 1840; died in New York city, Oct. 15, 1899. He was graduated at the University of Copenhagen in 1865, was imbued with the doctrines of socialism, and became a lecturer on that subject, first in his native city and later in London. About 1874 he went to New York city and identified himself with the Socialist-Labor party, soon becoming a member of its National Executive Board. Ten years later he withdrew from the active work of the party and lectured on the Pacific coast. He accepted an appointment in the office of Carroll D. Wright, Commissioner of Labor Statistics, in Washington, D. C. Here he performed valuable public service, but incurred the enmity of his former associates by having accepted a public office. For more than a year prior to his death he was engaged in journalism in Chicago and New York. Besides many magazine articles and an unfinished book treating of government, he was author of *The Co-operative Commonwealth*; *Ca Ira*; or, *Danton in the French Revolution*; *Our Destiny*; *Socialism and the Single Tax*; and *The New Economy* (1898).

Guillon, Charles F., physician, born in Philadelphia, Pa., July 26, 1813; died in New York city, Jan. 1, 1899. He was appointed an assistant surgeon in the navy when twenty years old, and after short cruises was assigned as surgeon to the sloop of war *Peacock*, commanded by Capt. William L. Hudson, in the Wilkes exploring expedition to arctic seas. The sloop was wrecked on the bar at the mouth of Columbia river. Dr. Guillon served through the Mexican War, and at its close made an extended cruise in Asiatic waters as surgeon of the *Columbus*. He was afterward assigned to the frigate *Constitution*, of the Mediterranean squadron. Returning from this cruise, Surgeon Guillon was assigned to the Brooklyn Navy Yard, where he remained till 1854, when he resigned his commission to take the superintendence of a large hospital in Honolulu. He remained in Hawaii till 1867, acting for some time as Italian consul at Honolulu and as court physician.

Hale, Edwin Moses, physician, born in Newport, N. H., Feb. 2, 1820; died in Chicago, Ill., Jan. 15, 1899. He was a nephew of Sarah Josepha Hale, the author. After following the printer's trade several years, he was graduated at the Homeopathic Medical College, Cleveland, in 1859. For twelve years he was in practice in Jonesville, Mich. In 1863 he became Professor of *Materia Medica and Therapeutics* in Hahnemann Medical College, Chicago, and in 1880-'84 he held the same chair in Chicago Homeopathic College, in the last year becoming professor emeritus. Dr. Hale edited the *North American Homeopathic Journal* in 1868, and, besides many monographs, published *New Remedies* (2 vols., New York, 1867); *Pocket Manual of Domestic Prac-*

tice (1870); *Lectures on Diseases of the Heart* (1871); and *Diseases of Women* (1875).

Halm, George B., artist, born in Ogdensburg, N. Y., Sept. 1, 1850; died in New York city, May 2, 1899. He first became an engraver on wood, and after working in Boston both as engraver and artist he joined the staff of Frank Leslie's publishing house in 1873. Subsequently he was for several years in charge of the art department of the Orange Judd Company. In later years he made a specialty of decorative work, allegorical illustration, and cover designing. He founded the artistic publication *Art and Decoration*, and designed the peculiar style of letter bearing his name that was adopted by De Vinne.

Hardcastle, Edmund La Fayette, military officer, born in Denton, Md., Oct. 18, 1824; died near Towson, Md., Aug. 11, 1899. He was graduated in 1846 at West Point, entered the army as a brevet second lieutenant of engineers, was first ordered on coast-survey duty, and was sent to Mexico at the beginning of the war there. He took part in the siege of Vera Cruz, the battle of Cerro Gordo, the capture of San Antonio, the battles of Contreras, Churubusco, Chapultepec, and Molino del Rey, and the assault and capture of the city of Mexico. For gallantry at Contreras and Churubusco he was brevetted first lieutenant, Aug. 20, 1847, and for signal courage at Molino del Rey he was brevetted captain, Sept. 8. In 1849-'52 he served on the commission to run the new boundary line between the United States and Mexico, and from 1852 till his resignation, April 30, 1856, he was engineer secretary to the Lighthouse Board. After leaving the army he retired to a farm in Talbot County, Maryland, where he passed the remainder of his life. He served in the Maryland Legislature in 1870-'78, was a delegate to several national Democratic conventions, and at one time was president of the Maryland and Delaware Railroad Company.

Harding, Benjamin F., lawyer, born in Wyoming County, Pennsylvania, Jan. 4, 1823; died in Cottage Grove, Ore., June 18, 1899. He received a public-school education, was admitted to the bar in 1847, and settled in Oregon in 1849. In 1850, 1851, and 1852 he was elected to the Territorial Legislature, of which he was Speaker in his last term, and in 1853 he was appointed United States district attorney for the Territory. From 1854 till 1859 he was secretary of the Territory. From 1859 till 1862 he was a member of the State House of Representatives, and in the two last years was its Speaker. In 1862 he was elected United States Senator, and he served as such till March 3, 1865.

Harlan, James, jurist, born in Clarke County, Illinois, Aug. 25, 1820; died in Mount Pleasant, Iowa, Oct. 5, 1899. He was graduated at Indiana Asbury University in 1845, having paid his way through the course by working on a farm, and studied law. In 1847 he was elected State Superintendent of Public Instruction as a Whig; in 1850 was nominated by that party for Governor, but was too young to accept; and in 1853 was elected president of Iowa Wesleyan University. Two years later he was elected United States Senator, and after he had served till January, 1857, his seat was declared vacant on a technicality. Five days after the declaration the Legislature re-elected him for the term ending in 1861, and at its close returned him. In 1865 he resigned his seat in the Senate to become Secretary of the Interior. In 1866 he resigned this office and again entered the Senate. At the end of this term he was defeated for re-election by William B. Allison. On the expiration of his last

term he became editor of the Washington Chronicle, and in 1882-'85 he was presiding judge of the Court of Commissioners of Alabama Claims.

Harrington, Nathan Russell, zoölogist, born in Somerville, Mass., Dec. 22, 1870; died in Atbara, Soudan, Africa, July 26, 1899. He was graduated at Williams College in 1893, and then spent four years at Columbia College as student, assistant, and fellow. He spent his summers either at the zoölogical station at Wood's Holl or on the expeditions of the department of zoölogy to Puget Sound, Alaska, and Africa. In the summer of 1898 Mr. Harrington, then fellow in zoölogy in Columbia, and Dr. Reid Hunt, tutor in physiology, spent considerable time on the lower Nile securing material for the study of the African polypteris. They returned with many specimens of this fish, but were unsuccessful in securing its eggs, as the Nile rose rapidly before the fish had spawned. In the spring of 1899 a second expedition was organized to secure the desired material in the region of the White Nile. The possibility of this expedition was largely due to a gift of \$5,000 by Charles H. Senff, of New York. On account of the Mahdi disturbances, the party had considerable difficulty in obtaining permission to enter the Soudan, but success seemed assured when Mr. Harrington was stricken with fever.

Harris, Frederick Henry, lawyer, born in Newark, N. J., March 7, 1830; died in Montclair, N. J., March 16, 1899. He was educated in Newark and Bloomfield, and was associated with his father in the quarry business till his admission to the bar, in 1862. In the autumn of that year he went to the field as a captain in the 13th New Jersey Regiment. He took part in the march to the sea, and commanded his regiment through the North Carolina campaign. For bravery on the field he was promoted major and lieutenant colonel and brevetted colonel, and for conspicuous gallantry in the battle of Bentonville, March 19, 1865, he was promoted brigadier general. From that time till his death he was engaged in the fire insurance business in Newark.

Harris, Houghton D., lawyer, born in Chesterfield, N. H., Aug. 16, 1822; died in Brattleboro, Vt., Jan. 19, 1899. He was graduated at Dartmouth College in 1841, and while studying law engaged in journalism. For a year he edited the Vermont Phoenix, and in 1847, with William B. Hale, established the Eagle. In the autumn of 1850 he was appointed the Secretary of the new Territory of Utah, of which Brigham Young was Governor. A bitter antagonism soon developed between the two officials. Gov. Young and the Legislature persisted in disregarding the provisions of the enabling act, and the trouble reached a point where Secretary Harris refused to disburse the money placed in his hands by the United States Government for the benefit of the Territory. At this juncture the Legislature passed resolutions directing the Secretary to deliver immediately all Federal money in his possession to the United States marshal of Utah, who was a Mormon. Amid threats of assassination Secretary Harris refused, and, avoiding arrest, hastened to Washington and turned into the Treasury all the funds in his care. The Mormon leaders protested against this act, but the Administration approved it, and, realizing that his life would not be safe in Utah, offered Mr. Harris the post of Secretary and acting Governor of the Territory of New Mexico, which he declined. He returned to Vermont, was elected to the State Senate in 1860 and 1861, and was engaged for many years in railroad building.

Harris, Robert P., horticulturist, born in 1823; died in Philadelphia, Pa., Feb. 2, 1899. He spent large sums for the importation and distribution of seeds, principally of melons and cucumbers, which he sent to almost every State for experimental purposes. One of his ambitions was to cultivate in this country the cucumbers eaten by the children of Israel in the Holy Land. He was a prolific medical writer, and edited textbooks on medicine.

Harris, Samuel, educator and clergyman, born in East Machias, Me., June 14, 1814; died in Litchfield, Conn., June 25, 1899. He was graduated at Bowdoin College in 1833 and at Andover Theological Seminary in 1836. He engaged in teaching until 1839, and was pastor successively of Congregational churches at Conway and Pittsfield, Mass. From 1855 to 1867 he was Professor of Systematic Theology in Bangor Seminary, and from 1867 to 1871 president of Bowdoin College. In the latter year he became Professor of Systematic Theology at Yale, and he was professor emeritus at the time of his death. He was the author of *Zaccheus: The Scriptural Plan of Beneficence* (1844); *Christ's Prayer for the Death of his Redeemed* (1863); *The Kingdom of Christ on Earth* (1874); *The Philosophical Basis of Theism* (1883); and *Self-revelation of God* (1887).

Hartley, Isaac Smithson, clergyman, born in New York city in 1830; died in Great Barrington, Mass., July 2, 1899. He was graduated at New York University in 1852 and at Andover Theological Seminary in 1856, spent several years in special study in Europe, and returned to the United States in time to perform a considerable service for the National soldiers under the auspices of the Sanitary Commission. He became pastor of the Reformed Church in Utica, N. Y., in 1871, and became widely known as a lecturer. About seven years ago he was ordained in the Protestant Episcopal Church, and became rector of St. James's Church in Great Barrington, Mass. Dr. Hartley was the founder of the Vetter lectureship at Rutgers College, New Brunswick, N. J. His publications include *Prayer and its Relation to Modern Thought*, a *History of the Reformed Church and Fort Schuyler in History*.

Haslam, Maud (Mrs. Samuel Groome), actress, born in St. Louis, Mo., in 1869; died in Liberty, N. Y., Feb. 24, 1899. She was a daughter of Alice Sherwood, a well-known actress, made her *début* as a child of three in the part of Little Fritz with Joseph Emmet, and for several years was identified with children's parts in the Olympic Theater, St. Louis. Her parents sent her to Clifton Convent, Canada, and to Mount St. Vincent, New York, from which last named she was graduated with high honors in 1883. After a year spent in rest and travel in Europe, she made her New York *début* with the Madison Square Theater company, Jan. 5, 1885, as Edith in *The Private Secretary*. She was received with great favor, and in the following season received the part of Rachel McCreery in *Held by the Enemy*, with which she began a tour, appearing first at the Grand Opera House, New York city, Oct. 21, 1889. In September, 1890, she was a member of the stock company at Proctor's Twenty-third Street Theater, and began her work there in the part of Fiji Oritanski in *All the Comforts of Home*. She played the juvenile rôles in all the important productions of this company for a season, and then became leading lady in the support of Nat Goodwin. On the first production of *Too Much Johnson* by William Gillette Miss Haslam played the leading female rôle, and she remained in that position with that popular star

until obliged by illness to resign from the company, in London, in 1898. A short period of illusive health allowed her to return to the stage in September, 1898, when she appeared for the last time as Tony Tostevin in *The Marquis of Michigan*, in Washington, D. C.

Hastings, Horace L., editor, born in Watertown, Mass., Nov. 26, 1831; died in Goshen, Mass., Oct. 21, 1899. For more than thirty years he was editor of *The Christian*, and he was also the author of a large number of papers, tracts, pamphlets, and books published under the general title of the *Anti-infdel Library*. Of this series his best-known work was *The Inspiration of the Bible*; or, *Will the Old Books Stand?* of which an exceedingly large number was distributed in all parts of the world. He was also the author of the familiar hymn beginning, "Shall we meet beyond the river?" In 1888 he created considerable commotion by preaching on Boston Common in violation of a city ordinance, which required him to procure a license. For so doing he was fined and imprisoned. The incident caused an agitation which resulted in an overturning of the city government.

Hawkins, Alexander Leroy, soldier, born in East Bethlehem, Pa., Sept. 6, 1843; died at sea, near Yokohama, Japan, July 18, 1899. He worked on a farm till fifteen years old, and was a student at Waynesburg College from 1860 till Aug. 7, 1862, when he enlisted in the 15th Pennsylvania Cavalry. He participated in the battle of Antietam, Sept. 17, 1862, after which his command was transferred to the Army of the Cumberland. In September, 1864, he was promoted to captain, and in December he won high praise for his conduct in the battle of Nashville. In June, 1865, he was appointed an aid on the staff of Gen. Clinton B. Fisk, and as an agent of the Freedmen's Bureau he remained in the service till Jan. 21, 1866. He then returned to Pittsburgh and engaged in the drug business two years, after which he bought a farm in Beallsville, Pa., and became a dealer in wool and live stock. In 1875 he was elected treasurer of Washington County, serving till 1878. He entered the 10th Regiment, National Guard of Pennsylvania, Jan. 1, 1877, as captain, and served during the Pittsburgh riots of July and August of that year. On Feb. 27, 1879, he was commissioned colonel of that regiment, and he served as such till he was mustered into the United States service, May 12, 1898. His command in the National Guard constituted part of the State forces sent to quell the riots at Morewood, Pa., in 1891, and at Homestead in 1892. The 10th Pennsylvania Volunteers took part in some of the most important engagements in the Philippines. On July 31 and Aug. 1, 1898, they were engaged in the night attack on Malate; on Feb. 4, 1899, participated in the repulse of the Filipino attack on the American defenses at Manila; and on March 29 they were led into a trap at Guiguinto Bridge and sustained a raking fire forty minutes. Gen. Hawkins left Manila Bay with his regiment, July 1, 1899, on its return to the United States, and died at sea as the result of cancer.

Hayden, Edward Simeon, inventor, born in Waterbury, Conn., in 1852; died in New York city, Feb. 14, 1899. For several years he was secretary and assistant treasurer of the Holmes, Booth & Hayden Brothers Co., of Waterbury and New York, and after resigning from that company he settled in Bridgeport. There he invented and perfected the system of separating precious metals from copper that now bears his name and is in use in many refining works.

Hayden, Henry Rogers, journalist, born in Seneca Falls, N. Y., Nov. 23, 1836; died in East Hartford, Conn., March 2, 1899. In early life he removed to Wisconsin, where he learned the printer's trade. He was successively local and city editor of the *Sparta Democrat*, the *Sparta Herald*, and the *Daily Sentinel* of Milwaukee. In 1868 he became editor of the *American Churchman*, published under the supervision of the Protestant Episcopal diocese of Mississippi, in 1873 founded the *Insurance Journal* in Hartford, and in 1880 became part owner and editor of the *Weekly Underwriter* in New York city. Besides editorial writings on insurance topics, he published *The Cyclopædia of Insurance*, *Fire and Marine Insurance Statistics*, and *Statutory Requirements: An Abstract of Insurance Laws*. Mr. Hayden was president of the Connecticut Horticultural Society.

Hayley, Herman Wadsworth, educator, born in West Concord, N. H., in 1864; died in Boston, Mass., Sept. 24-25, 1899. He was graduated at Amherst College in 1887, continued his studies abroad, and, after a post-graduate course at Harvard, received the degree of Ph. D. His unusual brilliancy as a scholar, his success as an instructor, and his great popularity with the students led to his retention at Harvard as an instructor in Latin. About two and a half years ago he became a member of the faculty of Wesleyan University. His published works include *Alcestis*, a Greek play.

Haynes, Lorenza, preacher, born in Waltham, Mass., April 15, 1820; died there, June 6, 1899. She was a teacher in Lonsdale, R. I., and in Leicester and Lowell, Mass., and in 1854 she opened a private school in Rochester, N. Y., and in 1856-'60 was principal of a young ladies' seminary there. Impaired health forced a retirement of four years, after which she served six years as librarian of Waltham (Mass.) Public Library. During this period she became intimate with the Rev. Olympia Brown and Mrs. Mary A. Livermore, and in 1872, after retiring from the library, she entered St. Lawrence University, Canton, N. Y., and before completing the course there was called to the pastorate of the Universalist Church in Hallowell, Me. She delivered her first sermon as pastor on July 26, 1874. While occupying this place she officiated as chaplain in both houses of the Legislature and also in the Soldiers' Home in Togus. In 1876 she went to the Marlboro (Mass.) Church, and afterward she held pastorates in Fairfield and Skowhegan, Me., and Rockport and Pigeon Cove, Mass.

Hayward, Monroe Leland, lawyer, born in Sillsboro, N. Y., Dec. 22, 1840; died in Nebraska City, Neb., Dec. 5, 1899. At the outbreak of the civil war he enlisted in the 22d New York Infantry; he was transferred to the 5th Cavalry, and in December, 1862, was discharged on account of disability. He then entered the Collegiate Institute at Fort Edward, where he was graduated in 1866. He went to Whitewater, Wis., studied law, and was admitted to the bar. In 1867 he settled in Nebraska City. In 1873 he was a member of the State Constitutional Convention. In 1886 he was appointed to fill an unexpired term on the district court bench. He was the Republican candidate for Governor in 1898, but was defeated, although he succeeded in reducing a fusion majority of 18,000 to 3,000. On March 8, 1899, he was elected to the Senate of the United States after a long struggle in the caucus of his party, and on Aug. 15 following he was stricken with apoplexy as he was about to address the Modern Woodmen at Brownville, Neb.

Hein, John, philanthropist, born in Kissingen, Bavaria, March 11, 1818; died in New York city in June, 1899. He learned the tinsmith's trade, came to the United States in 1850, and carried on the business in Brooklyn till about 1880, when he retired. During the last period he accumulated \$60,000. He was a cripple almost from birth, scarcely a day of his life passing without much pain, and after his retirement he devoted his means and time to the relief of suffering among his countrymen. He gave to the German hospitals in the boroughs of Brooklyn and Manhattan an aggregate of \$45,000, and bequeathed the remainder of his fortune to those institutions.

Henderson, Graham, actor, born in Cincinnati, Ohio, in 1858; died in New York city, Oct. 13, 1899. He made his first appearance in Davy Crockett with Frank Mayo, and for about ten years was a player of small parts in the stock companies of Cincinnati and Louisville. In 1880 he played in Bartley Campbell's Galley Slave at Niblo's Garden, New York, and was engaged by Mr. McKee Rankin for The Danites, with which he traveled for a season. He had become a valuable player of character parts and old men, and was engaged for the Union Square Theater, where he remained for a season. From 1882 to 1890 he appeared successively in the company of Frank Mordaunt, playing Old Shipmates, 1882-'83; in Queen's Evidence, 1884-'85; with Mlle. Aimée in Marita, 1885-'86; in Mr. Barnes of New York, 1887-'88; and in Dr. Bill, 1889-'90. In 1894 he became a member of the company supporting John Drew, with which he played until illness compelled him to retire.

Hendley, John Walter, scientific modeler, born in Virginia in 1827; died in Washington, D. C., July 3, 1899. He served in the American navy on the flagship Ohio in the war with Mexico, and afterward engaged in gold mining in California with considerable success. During the civil war he served in the Confederate army. From boyhood he had shown remarkable skill in painting and modeling flowers, fishes, birds, etc., in wax, and after his return from California the exactness of his imitations of natural productions called official attention to his work, and he was encouraged to exercise his skill in other directions. In 1868 he took the first prize at an exposition in London for a group of seven figures of fishermen, and at the Centennial Exposition in Philadelphia, in 1876, his exhibit was similarly rewarded. In 1878 he entered the service of the Federal Government at Washington, and he had since been employed in the Smithsonian Institution and the National Museum in modeling imitations of fishes, fruit, birds, and other objects. Much of his work is so realistic that it is difficult to distinguish it from the natural specimens.

Henry, Guy Vernor, soldier, born in Fort Smith, Indian Territory, March 9, 1839; died in New York city, Oct. 27, 1899. At the time of his birth his father, Major William S. Henry, of the 3d United States Infantry, was fighting the Indians on the Western frontier. Young Henry was graduated at West Point in 1861, and was assigned as second lieutenant to the 1st Artillery. He served with distinction in that regiment until he was made colonel of the 40th Massachusetts Infantry in the autumn of 1863. At the battle of Pocotaligo, S. C., Oct. 22, 1862, the attention of the commanding general was called "to the gallant and distinguished services of First Lieut. Guy V. Henry," and he was brevetted captain. He served in the Army of the James and before Petersburg. He was brevetted lieutenant colonel on Sept. 29, 1864. For his work in the campaign

in Florida he was complimented by Gen. Seymour in the following words: "I can not commend too highly the brilliant success of this advance, for which great credit is due Col. Guy V. Henry and his command, and I earnestly recommend him as a most deserving and energetic officer." At the close of the civil war he was brevetted a colonel in the regular army and brigadier general of volunteers. In the Indian troubles of the seventies he saw hard service. His left hand was badly frozen when he was on an expedition to the Black Hills in the winter of 1874-'75, and he was wounded in the face, losing an eye, in the battle of Rosebud Creek, Montana, in 1876. In the expedition against the Sioux Indians in 1876, in the Big Horn and Yellowstone country, he was colonel of the second battalion of the 3d Cavalry, which formed part of Gen. Crook's command. He made a notable march with a detachment of the 9th Cavalry to the relief of the Pine Ridge agency after the bloody conflict between hostile Sioux and the 7th Cavalry at Wounded Knee Creek, Dec. 29, 1890. He was promoted lieutenant colonel of the 7th Cavalry on Jan. 30, 1892, and placed in command of Fort Myer, Virginia. He became colonel of the 10th Cavalry on June 1, 1897. On May 4, 1898, he was made brigadier general of volunteers, and in October, 1898, was promoted to brigadier general in the regular army. On Dec. 7, 1898, he was made major general of volunteers. In the war with Spain he went to Cuba, arriving in time to participate in the final scenes before the surrender of Santiago. He afterward went with Gen. Miles to Puerto Rico. In December, 1898, he relinquished command of the district of Ponce to assume command of the Department of Puerto Rico and the duties of Governor General of the island of Puerto Rico. In April, 1899, he asked to be relieved of the duties of Governor General of the island on account of failing health, and in May returned to the United States. From that time he was in Washington awaiting orders, until he was assigned to the command of the Department of Missouri, with headquarters at Omaha, Oct. 18, 1899. He was the author of Records of Civilian Appointments, United States Army, Army Catechism for Noncommissioned Officers and Soldiers, Target Practice and Practical Information for Noncommissioned Officers on Field Duty.

Heth, Henry (commonly called Harry), soldier, born in Black Heath, Chesterfield Co., Va., Dec. 16, 1825; died in Washington, D. C., Sept. 27, 1899. After graduation at West Point in 1847 he was made second lieutenant in the 6th Infantry, and served in the war with Mexico. Subsequently he served on the frontier, and was promoted to captain in the 10th Infantry, March 3, 1855. At the beginning of the civil war he resigned and accepted a major's commission in the Confederate service. On July 17, 1861, he became colonel of the 45th Virginia Infantry. He was made brigadier general on Jan. 6, 1862, and during that year commanded the Department of West Virginia. Later he served in Kentucky and Tennessee under Gen. Kirby Smith. Early

in 1863 he joined the Army of Northern Virginia, and from Chancellorsville to Appomattox he participated in all the battles of that army, receiving on May 24, 1863, his commission as major general. On the death of Gen. A. P. Hill, near the close of the war, Heth succeeded to his command. After the surrender he engaged in mining in Virginia; but that proved unsuccessful, and he was for a time in business in Richmond and then in Baltimore. Later he made Washington his home, and received the appointment of Indian Commissioner for Washington Territory.

Hilton, Henry, jurist, born in Newburg, N. Y., Oct. 4, 1824; died in Saratoga, N. Y., Aug. 24, 1899. He was admitted to the bar in 1846, began practice in New York city, was elected judge of the Court of Common Pleas in 1857, and on the expiration of his term formed a partnership with Douglas Campbell and Joseph Bell. In 1869-'72 he was president of the department of parks. While judge he edited two volumes known as *Hilton's Reports*. Judge Hilton was best known because of his intimate connection with the late Alexander T. Stewart. This relationship began about 1869, and continued till Mr. Stewart's death in 1876. Mr. Stewart and Mrs. Hilton were cousins, and Mr. Hilton became Mr. Stewart's legal adviser and most intimate friend and associate before he was elected judge. Mr. Stewart appointed Mr. Hilton one of his executors, and bequeathed him \$1,000,000. A few days after Mr. Stewart's death his widow sold all her interest in the estate to Judge Hilton for \$1,000,000 and "other good and valuable considerations." It was understood that Judge Hilton was to carry out Mr. Stewart's charitable intentions, with which he was familiar. Besides a large fortune, Mr. Stewart left a large and prosperous business, and Judge Hilton organized a firm to carry it on; but the venture proved a steady loss, and in 1883 the firm went into voluntary liquidation. The sales had then fallen to about \$3,280,000. For several years thereafter various firms undertook to conduct the business, but none succeeded, and ultimately the establishment passed into the hands of John Wanamaker, of Philadelphia. Judge Hilton occupied a large share of public attention in 1877, when he issued an order prohibiting the reception of Jews as guests at the Grand Union Hotel, Saratoga, which was built by Mr. Stewart; and again, for a longer period, after the mysterious theft of Mr. Stewart's remains from the grave in St. Mark's churchyard, Nov. 7, 1878. The mystery has never been cleared up publicly. In 1890 Judge Hilton made a gift of \$500,000 to the cathedral and its schools at Garden City, Long Island. He left an estate valued at \$6,000,000, bequeathed to his relatives.

Hobart, Garret Augustus, twenty-fourth Vice-President of the United States, born near Long Branch, N. J., June 3, 1844; died in Paterson, N. J., Nov. 2, 1899. (For portrait and sketch of his life up to his election, see *Annual Cyclopædia* for 1896.) As presiding officer of the United States Senate he won the personal esteem of every member by his courteous bearing, his eminent fairness, and his ready and sound decisions. His brief career as Vice-President was further distinguished by a closer intimacy with President McKinley than probably ever before existed between a President and a Vice-President of the United States. He was not only the President's political heir apparent, but he was the President's staunch and constant personal friend, his confidential adviser, and, as far as their respective duties permitted, his companion. The uninter-

rupted strain upon his vitality preceding and during the war with Spain, and especially during the trying days when the treaty of peace was discussed by the Senate, undermined a robust constitution. (See GIFTS AND BEQUESTS.)

Hoge, Moses Drury, clergyman, born on College Hill, Hampden-Sidney, Va., Sept. 17, 1819; died in Richmond, Va., Jan. 6, 1899. He was a son of Moses and a brother of James, Samuel Davis, and William James Hoge, all distinguished clergymen and educators, and was graduated at Hampden-Sidney College in 1839 and at the theological seminary there in 1843. In 1844 he was licensed to preach, and was immediately called to the assistant pastorate of the First Presbyterian Church in Richmond, Va. Early in 1845 members of his congregation organized the Second Presbyterian Church, chose him for their pastor, and set about building a church for him, which was completed in 1848. In this charge Dr. Hoge remained until his death. He was an exceedingly energetic worker, and gained the reputation of being the most eloquent preacher in the Southern Presbyterian Church. During the civil war he applied himself to ministering to the wants of the Confederate soldiers. He visited them on battlefields, acted as chaplain at the camp of instruction at Richmond, and while discharging these functions maintained his congregational work regularly. In 1864 he ran the blockade from Charleston, went to England by way of Nassau, and in London procured 10,000 Bibles, 50,000 Testaments, and 250,000 portions of the Scriptures of convenient size for soldiers to carry in their pockets. He ran the blockade a second time, and personally distributed his books. Union Theological Seminary gave him the degree of D. D. Dr. Hoge was a delegate to the general conferences of the Evangelical Alliance in New York in 1873, Copenhagen in 1884, and Boston in 1890. He was Moderator of the General Assembly of the Southern Presbyterian Church in 1874, and in the General Assembly of 1876 he brought about the establishment of fraternal relations with the Northern branch of the Church. In 1877 he was a delegate to the Pan-Presbyterian Church Council in Edinburgh, and in 1888 was a commissioner to the Alliance of Reformed Churches in London.

Holliday, Frederick William McKay, lawyer, born in Winchester, Va., Feb. 22, 1827; died there, May 29, 1899. He was graduated at Yale and in law at the University of Virginia, and was practicing law when the civil war broke out. He entered the Confederate service, was appointed aid to Gen. Carson at Harper's Ferry, and was commissioned colonel of the 33d Virginia Regiment. He took part in several battles, and lost an arm at Cedar Mountain. He then retired from the army and was elected to the Confederate Congress, where he served till the close of the war. In 1876 he was a presidential elector at large, and in 1877 was elected Governor of Virginia as a Democrat. He was an enthusiastic traveler, and had gathered a large collection of paintings, curios, and relics in his foreign tours.

Hopkins, Abel G., educator, born in Avon Springs, N. Y., Dec. 5, 1844; died in Clinton, N. Y., July 27, 1899. He was graduated at Hamilton College in 1866 and at Auburn Theological Seminary in 1869, and in the last year was appointed to the chair of Latin, English, and Literature in Hamilton College, which he retained till his death. He was ordained in 1874, was a popular pulpit orator, and received the degree of Ph. D. from Lafayette College in 1887 and D. D. from Hamilton in 1899.

House, Samuel Reynolds, missionary, born in Westford, N. Y., in 1817; died in Waterford, N. Y., Aug. 13, 1899. He was successively graduated at Rensselaer Polytechnic Institute, Dartmouth College, and Union University, became principal of the Western Academy in Connecticut, and subsequently studied medicine. In 1846 he went to Siam as a medical missionary, and in the ten years of his stay in that country he served as physician to the King. On his return he was ordained in the Presbyterian Church. For several years Dr. House edited the *Knickerbocker Magazine*.

Howard, Guy, soldier, born in Augusta, Me., Dec. 16, 1855; died near Arayat, Luzon island, Oct. 21, 1899. He was a son of Gen. O. O. Howard. He entered the United States army as second lieutenant in the 12th Infantry, Aug. 31, 1876, upon direct appointment; was promoted first lieutenant, July 19, 1882; captain, Jan. 7, 1893; transferred to quartermaster's department, Jan. 31, 1893; promoted quartermaster and major of volunteers, May 12, 1898; chief quartermaster, with rank of lieutenant colonel, Aug. 11, 1898. He served on his father's staff in the Nez Percés war of 1877, took part in several battles, and for his services in the Plute and Bannock war of 1878 was highly commended. In 1882 he was graduated at the United States Artillery School. He was the constructing quartermaster in building Fort Ethan Allen, at Burlington, Vt. His service in the Spanish-American War began at Atlanta as assistant to the chief quartermaster. He was recommended for the post of quartermaster of the 4th Corps, and as such had charge of that department at Camp Alger, Virginia. Upon his promotion to lieutenant colonel of volunteers he took charge of the dispatching of troops from Newport News to Cuba. He was ordered to Manila in August, 1898, and assigned to Gen. Lawton's division as chief quartermaster. He organized the transportation for Lawton's advance, and was helping to establish a new sub-depot at San Isidro, 48 miles north of Manila. He was on board the army gunboat *Oceania*, Oct. 21, 1899, towing two cascoes, when the boat was attacked at close quarters by the Filipino insurgents, and he was shot in the breast. He staggered to the wheel, saying, "Whatever happens, keep the launch going," and soon expired.

Howarth, Mrs. Ellen Clementine (Doran), poet, born in Cooperstown, N. Y., May 20, 1827; died in Trenton, N. J., Dec. 23, 1899. She was the daughter of a calico printer named Doran, and, owing to the great poverty of the family, was sent to work in a factory at the age of seven, after she had learned to read and write. At eighteen she married Joseph Howarth, a calico printer, and removed with him to Trenton. Her husband became blind after some years, and his wife supported the family by caning chairs and washing. While at these tasks she composed her poems, which were published in local papers over the signature "Clementine." During the civil war her patriotic verses were very popular with the soldiers. "Tis but a Little Faded Flower is her best-known poem, which, as well as other verses of hers, has been set to music and been widely popular. Her published books include *The Wind Harp*, and *Other Poems* (Philadelphia, 1864), and *Poems* (Newark, 1867). The latter volume was issued in 1868 with a preface by Richard Watson Gilder, which helped materially in bringing her name to public attention.

Howell, George Rogers, historian, born in Southampton, N. Y., June 15, 1833; died in Albany, N. Y., April 5, 1899. He was graduated

at Yale College in 1854 and at Princeton Theological Seminary in 1864, and entered on ministerial work in western New York. In 1865 he delivered an historical address at the observance of the two hundred and fiftieth anniversary of the settlement of Southampton, and he published *The Early History of Southampton, L. I., with Genealogies* (New York, 1866; second edition, Albany, 1887). In 1872 he became attached to the New York State Library, at Albany, and subsequently he was appointed State archivist. In addition to many pamphlets, he published *Linguistic Discussions*, *The Open Polar Sea*, *Heraldry in America*, and an extensive *History of Albany and Schenectady Counties*.

Hull, William, clergyman, born in Claverack, N. Y., April 17, 1830; died in Albany, N. Y., June 19, 1899. He studied law, and was admitted to the bar in 1851. In 1853 he purchased the *Saugerties Telegraph*, and for four years he practiced law and edited this paper. In 1857 he abandoned the law and began a course in theology, and in 1860 was ordained in the Lutheran Church. He organized St. Matthew's English Lutheran congregation, New York city; was pastor at Ancram, N. Y., 1862-'66; at Athens and Hudson, N. Y., 1866-'69; and at the latter place, 1869-'90. He was a regular contributor to the Church periodicals for many years, the founder and editor of the *Eastern Lutheran*, and a frequent contributor of important historical and theological articles to the *Gettysburg Review*. He was the author also of a history of Hartwick Seminary, the oldest Lutheran institution in this country.

Huntington, David L., soldier, born in Charlestown, Mass., in 1834; died in Rome, Italy, Dec. 20, 1899. He was graduated at Yale in 1855, and studied medicine. He was appointed assistant surgeon in the regular army, July 11, 1862; was promoted assistant surgeon with rank of captain, July 28, 1866; major, April 28, 1877; lieutenant colonel in the department of the surgeon general, April 18, 1895; and was retired, April 10, 1898. In the volunteer service he was appointed medical director with rank of colonel, Feb. 25, 1865, serving till June 30, 1865. In the civil war he was medical director of the Army of the Tennessee, and accompanied Gen. Sherman on the march to the sea. At the close of the war he was assigned to duty in the West, and was in several engagements with the Indians. In 1876 he was placed in charge of the hospital connected with the Soldiers' Home in Washington, and for a time he acted as assistant and acting surgeon general of the army in that city. He was in charge of the Medical Museum in Washington for several years and edited *The Medical Record of the War*.

Hutchinson, Benjamin Peters, speculator, born in Reading, Mass., in 1829; died at Lake Geneva, Wis., March 16, 1899. At an early age he removed to Lynn, where he acquired a limited education and for some time was engaged in the boot and shoe business. In 1856 he settled in Chicago, then went to Milwaukee, and after two years returned to Chicago and undertook grain shipping on a small scale. The civil war gave a sudden stimulus to the meat-packing industry, and Mr. Hutchinson organized the firm of Burt, Hutchinson & Snow. When the Chicago stock yards were opened this firm was the first to operate there. In 1872, after the dissolution of the firm, Mr. Hutchinson connected himself with the Chicago Packing and Provision Company, which had a prosperous career till 1885. He also organized the Corn Exchange Bank, and was its president for many years. Mr. Hutchin-

son first became conspicuous as a speculator in wheat in 1880, and for five years he dominated that market in Chicago. In 1888 he made a memorable "corner" in September wheat. After this his fortunes declined steadily till 1891, when in his last great deal he was on the wrong side of the market for \$2,000,000. Ruined financially, he removed to New York city, where for a while he conducted a second-hand shop and attracted much attention by his eccentricities. Subsequently he returned to Chicago. He was familiarly known as "Old Hutch."

Hyde, Henry Baldwin, insurance president, born in Catskill, N. Y., Feb. 15, 1834; died in New York city, May 2, 1899. When sixteen years old he became a clerk in a mercantile house in New York. Two years later he was appointed a clerk in the Mutual Life Insurance Company, of which he subsequently became cashier. In March, 1859, he resigned from this company and organized a new one on an original plan—the Equitable Life Assurance Society of the United States. William C. Alexander was elected president and Mr. Hyde vice-president and general manager. In 1874, on the death of Mr. Alexander, Mr. Hyde succeeded to the presidency, and he held the office till his death. For many years he personally appointed all the principal agents and daily examined the reports from every department. He originated the system of sending circular letters periodically to agents.

Hyde, Thomas W., soldier, born in Florence, Italy, Jan. 15, 1841; died in Old Point Comfort, Va., Nov. 14, 1899. He was graduated at Bowdoin College in 1861 and later at Chicago University. He enlisted in a Chicago regiment which was not accepted, and then went to the East and was empowered to raise the 7th Maine Infantry. He was chosen major of the regiment, and took it to the front. He was present at the siege of Yorktown, at the battles of Williamsburg and Mechanicsville, and at all the seven-day battles before Richmond. He commanded the regiment in the battles of second Bull Run, Crampton's Gap, and Antietam. He was appointed acting inspector general of the Army of the Potomac. Later he served on the staff of Gen. Sedgwick, and with him took part in the battles of Fredericksburg, Gettysburg, and Spotsylvania. About this time he was commissioned colonel of the 1st Maine Veteran Volunteers, and though only twenty-three years old he was placed in command of the 3d Brigade, 6th Division, 6th Army Corps. He was mustered out in 1865, with the rank of brevet brigadier general. He settled in Bath, Me., leased the Bath Iron Foundry, and at the expiration of the lease purchased the plant. Later he bought the Goss Marine Works, now the Bath Iron Works, and enlarged it till he had a great iron shipbuilding plant. He was mayor of Bath two terms, State Senator one term, and a delegate to the National Republican Convention in 1896.

Ingersoll, Robert Green, lawyer, born in Dresden, N. Y., Aug. 11, 1833; died in Dobbs Ferry, N. Y., July 21, 1899. He was the son of a Congregational clergyman. When ten years old Robert accompanied his father to the West, where their nomadic life allowed the boy but slight opportunity to acquire an education. When eighteen years old he began studying law, and when twenty-one he was admitted to the bar, and formed a partnership with his brother in Shawneetown, Ill. Robert's gift of oratory soon made him conspicuous in the courts, and it was not long before he was recognized as a strong man in Democratic politics. In 1857 the brothers

removed to Peoria, and in 1860 Robert was defeated as the Democratic candidate for Congress. Early in 1862 Robert married Miss Eva A. Parker, of Boston, and soon afterward he organized the 11th Illinois Cavalry and went to the field as its colonel. Much of the time of his military service was spent in scouting and raiding. He commanded his regiment in the battle of Shiloh and in the two days' fight at Corinth. On Nov. 28, 1862, he was sent with a force of cavalry and artillery to intercept a Confederate raiding body of cavalry under Gen. Forrest that was supposed to be heading for Lexington, Tenn. He went into camp near the village at night, and early the next morning his command of 600 men was attacked by a Confederate division 10,000 strong. Col. Ingersoll deployed his men in a single rank on each side of the road, where he had planted his artillery, and while he was directing his command on foot the Confederates charged six ranks deep. Some of the command escaped, but the colonel was soon compelled to surrender. The Confederates, imagining that a larger National force was behind the unfortunate command, hurriedly paroled their prisoners and pushed forward. Col. Ingersoll was then placed in command of a parole camp at St. Louis, and, after waiting several months for exchange of prisoners, despairing of a return to active service, he resigned his commission. This version of Col. Ingersoll's capture by the Confederates is given by Lieut. John W. Kinsey, of his regiment, who took part in the movement, and differs materially from certain more sensational and ludicrous accounts. In 1864 Col. Ingersoll became an energetic and aggressive Republican. He was appointed Attorney-General of Illinois in 1866. In the Republican National Convention of 1876 he nominated James G. Blaine for the presidency in a memorable speech, which contained this sentence: "Like an armed warrior, like a plumed knight, James G. Blaine marched down the halls of the American Congress and threw his shining lances full and fair against the brazen forehead of every defamer of his country and malinger of its honor." This speech thrilled the great audience, and from the day the convention closed till the end of that memorable campaign its author's political services were in constant demand throughout the country. He took an active part also in the campaign of 1880, and Presidents Hayes and Garfield were anxious to do him honor, but his free expression of agnostic views had raised a barrier against official preferment. By 1882, when he removed to New York and was admitted to the bar of the State, he had become a lecturer of wide reputation. His best-known themes were *Some Mistakes of Moses*, *The Family*, *The Liberty of Man, Woman, and Child*, *The Gods*, and *Ghosts*. The family, woman, maternity, and child life were to him particularly hallowed themes, and with death they drew forth his greatest eloquence. He was a student of Shakespeare, whose writings held the place of honor in his library. His generosity was unbounded; to aid others he sometimes impoverished himself. He published *Lectures Complete* (1883); *Prose Poems and Selections* (1884); *Great Speeches* (1887); and several minor works.

Inman, Henry, author and plainsman, born in New York city, July 30, 1837; died in Topeka, Kan., Nov. 13, 1899. He was educated in the public schools and at the Athenian Academy. He went West in 1857 and became an associate of William F. Cody (Buffalo Bill). He entered the army and served through the Indian campaigns till the breaking out of the civil war.

In the latter he was aid-de-camp to Gen. George Sykes, of the 5th Corps. He was severely wounded before Richmond, and was brevetted for gallantry. He was again successively brevetted major and lieutenant colonel, the latter for his work in the great Indian campaign of 1868-'69. He has described his life and adventures in books: *The Old Santa Fé Trail* (New York, 1897); *The Ranch on the Oxhide* (1898); with William F. Cody, *The Great Salt Lake Trail* (New York, 1898); *The Delahoydes* (Topeka, 1899); *Pioneer from Kentucky* (1899). He also compiled *Buffalo Jones's Forty Years of Adventure* (Topeka, 1899).

Ives, Frank, billiard champion, born in Plainwell, Mich., Oct. 5, 1866; died in Progresso, Mexico, in August, 1899. He began to play billiards and pool when eight years old, and when fifteen had won the reputation of an expert. His first play in a public tournament was in 1888. The next season he gave himself up to baseball, becoming catcher for a team in Petoskey, Mich. While traveling with the team he gave frequent exhibitions of his skill at billiards, and defeated the best-known players in the West. His remarkable successes led to his engagement by Jacob Schaeffer, the "billiard wizard," for his parlors in Chicago. In his first serious match play—a handicap with Schaeffer and Slosson—Schaeffer won, with Ives second; and in a notable play with Eugene Carter, in Milwaukee, he equaled the world's record, then held by Vignaux. Subsequently Ives defeated Slosson, and in 1892 he won the championship of the United States by defeating his old mentor, Schaeffer. In 1896 he won the first prize in a tournament in Boston, and in January, 1898, he again won the championship by defeating Schaeffer, and retired from public playing. At the time of his death he was traveling for his health.

Jackson, William, scout, born in Fort Benton, Mont., in 1859; died on Cut Bank creek, Mont., Dec. 31, 1899. He was of one quarter Indian blood. Nearly all his early youth was spent north of the boundary line, with the Cree or with the Chippewa Indians. At the age of twelve he returned to the United States, and was sent to school. At the age of fifteen he enlisted with several Indian boys from the Santee School, to serve as a scout under Gen. Custer on his expedition to the Black Hills. In 1876 he was one of the scouts that accompanied the Custer expedition, serving under Reynolds as chief of scouts, and when the command separated on the day of the fight, these scouts were all left with Reno. Three days earlier Jackson, Bloody Knife, the Ree, and Mitch Boyer were the first to discover the Sioux camp on the Little Big Horn. When the great body of Indians charged Reno's panic-stricken command, Reynolds called out to his men to stand where they were, and all obeyed. But 15 or 20 men could accomplish little against the 500 who were sweeping down upon them. Reynolds was killed, and then Isaiah fell, and then others, until finally Bloody Knife shook hands with Jackson and said, "This is the last day I shall ever fight," and, rushing out among the enemy, killed two and was himself slain. Jackson, with one companion, retreated into the brush, and afterward, meeting Capt. De Rudio and an enlisted man, they hid themselves, and after two nights of extreme suffering and anxiety, managed to reach Reno's command. When the rescuing column of Terry appeared, Jackson was the first to discover them; for Reno, as soon as the Indians drew off, had sent him out with dispatches to find Terry. With this in view, he was

slowly making his way over the prairie, and had just passed over the bloody field where Custer and his troops lay dead when Terry's command appeared round the point of a bluff. For some years after that Jackson remained in Government service. In the spring of 1877 he went down the Yellowstone to Fort Buford with dispatches, and returned on the steamer on which Col. (now Gen.) Nelson A. Miles was a passenger. On the way up the Yellowstone the steamer was hailed by Indians bearing dispatches from Col. La Selles, who was then pursuing a large camp of Sioux. Col. Miles, anxious to communicate with Col. La Selles, persuaded Jackson to endeavor to overtake him with dispatches, a duty of very great peril. The three Indian dispatch bearers proved to be Cheyennes, who a little while before had been hostile, but who after Little Wolf's surrender had asked permission to enlist as Government scouts to fight the Sioux. They proposed to accompany Jackson if a fresh supply of ammunition were furnished them; and he, though distrusting them, had no choice but to accept their company. This was the beginning of a scouting service with the Cheyennes which lasted until the wars of the northern plains were ended by the defeat and surrender of every band of hostile Indians. Jackson, under his name Little Blackfoot, was almost as well known among the older men on the northern Cheyenne reservations as among the people of his own blood. At the close of the wars on the northern plains, when scouts were no longer needed, Jackson, then only twenty years old, conceived the plan of carrying into the enemy's country the war in which he had so long been engaged. At Poplar river and Wolf Point were gathered a large number of Sioux, many of whom had recently surrendered, and were only now recovering from the fatigues of the wars carried on in the past few years. Jackson determined to raid these camps for horses, and with one companion he did so. They descended the Missouri river in a boat which carried their saddles, landed and *cached* themselves at night, and after a day or two of reconnoitering picked out the best horses of the Indian herds and drove them westward. This operation was once or twice repeated, but soon became too dangerous. In the winter of 1879-'80 Jackson, with others, built a trading post on Flat Willow, in the neighborhood of the Snowy mountains, and traded with the Indians. Some years later, the Government of the Northwest Territories, alarmed by the acts of the half-breeds and Indians in the Riel rebellion, enlisted a company of scouts, who were stationed at different points. Jackson enlisted in this company, and not long after the close of the rebellion, and consequent disbandment of the company, he made his appearance on the Piegan reservation. After a time he took up a ranch on Cut Bank, and began to take parties into the mountains to hunt.

James, Charles P., jurist, born in Cincinnati, Ohio, May 11, 1813; died near Leesburg, Va., Aug. 9, 1899. He was educated in his native city, and admitted to the bar there in 1840. In 1840-'56 he was Professor of Law in the Cincinnati Law School, and during a part of the time was also judge of the Superior Court of Cincinnati. He removed to Washington, D. C., in 1864, occupied the chair of Law in Georgetown University four years, and in 1866 and 1870 was appointed a member of commissions to revise the statutes of the United States. In July, 1878, he was appointed an associate justice of the Supreme Court of the District of Columbia, from which he was retired in December, 1892.

James, William Cowles, jurist, born near Elmyra, Lorain County, Ohio, Jan. 1, 1830; died in Council Bluffs, Iowa, April 2, 1899. He was educated at Oberlin College, studied law in Cleveland till 1852, and in 1853 settled in Council Bluffs. In 1855 he built the first brick house in that village, in 1856 was elected county judge of Pottawattamie County and an alderman, and in 1874 and 1880 was chosen mayor of the city. He was intimately associated with all movements to promote the growth and prosperity of the city. Of all his public services, that rendered in the early seventies, when he was the chief promoter of the city's great fight in the courts for the retention of the Union Pacific transfer, will probably be longest held in remembrance.

Jarchow, Henry Nicholas, scholar, born in Rostock, Germany, Nov. 7, 1819; died in New York city, Feb. 24, 1899. He was graduated at the University of Rostock, became eminent and wealthy in the practice of law, and served in the ducal legislature of Mecklenberg-Schwerin. In 1869, owing to reverses, he sold his estate and removed to New York. Dr. Jarchow was well versed in classical literature, particularly Greek, Polish, and Slavonic, and was an enthusiastic student of agriculture and forestry. He founded the first German agricultural periodical in New York, and wrote the first elaborate treatise on forestry published in this country.

Jewett, Sara, actress, born in Buffalo, N. Y., in 1851; died in Cambridge, Mass., Feb. 27, 1899. She was educated in the seminary of Lenox, Mass., and became a pupil of Miss Fanny Morant, the actress. In the autumn of 1872 Miss Morant introduced Miss Jewett to Augustin Daly, who, after witnessing her rehearsals, gave her a contract for a three years' engagement at his theater. Her *début* was made as Mabel Wykoff in *Diamonds* at the Fifth Avenue Theater (Daly's), and she was at once accepted by New York audiences as a finished and favorite actress. It was but a short time after this first appearance that the burning of Daly's Theater occurred, and in consequence of that misfortune Miss Jewett went on a tour through the West until the New Fifth Avenue Theater was completed. On the night of the opening of this house Miss Jewett, as the youngest member of the now famous Daly company, had a full share of the enthusiasm with which New York greeted its favorites. She remained three years with the Daly company, during which time she played *Flora Penfield* in *Divorce*, *Clara Burrows* in *Fortune*, *Virginia Vanderpool* in *Saratoga*, *Eve* in *Charity*, *Maria* in *Love's Labor's Lost*, *Mrs. Glenham* in *Man and Wife*, *Mrs. Featherly* in *Everybody's Friend*, and many other important parts. She was particularly and always successful in the portrayal of gentle and emotional characters. She had a graceful carriage and a charming sweetness of voice and expression, especially fitting the lovable young girls about whom the modern society drama weaves its story. Miss Jewett made her first appearance with the Union Square Theater company, Nov. 20, 1876, in the part of *Mathilde* in *Miss Merton*. She remained with this company seven years, and was leading lady of the theater from 1879 to 1883. Her last appearance with the Union Square company was in the *Long Strike*. She then for a few months in 1883-'84 was leading lady with John Stetson's Fifth Avenue Theater company, which was not continued after that season. Miss Jewett, after a season or two of travel with different organizations, retired from the stage. Her last appearance was in *The Two Orphans* in 1886.

Johnson, Ellen Cheney, penalologist, born in Athol, Mass., Dec. 20, 1819; died in London, England, June 28, 1899. She was a daughter of Nathan and Rhoda Cheney, and the widow of Jesse C. Johnson. Mrs. Johnson was educated in the public schools of New Hampshire and in the Franconia Academy, and acquired a business training by traveling with her father, a cotton manufacturer. During the civil war she was associated with Mrs. Harrison Gray Otis in soldiers' relief work, and was an effective laborer in the United States Sanitary Commission. When this organization was in its infancy she undertook the formation of a New England auxiliary, and served on its Finance and Executive Committees to the end of the war. She was also one of the leading organizers and directors of the great Sanitary Commission Fair in Boston. After the war she continued to look after the soldiers and the widows and orphans of soldiers. While in charge of relief work in the north end district of Boston she was impressed with the desirability of having a separate correctional institution for women. She inaugurated an agitation for such a reform, and for nine years labored for it. The Massachusetts Reformatory Prison for Women, at Sherburne is the result. In May, 1884, Mrs. Johnson, who had already served on the Board of Prison Commissioners, was appointed superintendent of the new institution, a place she continued to hold until her death. From the day she assumed the office she gave her whole attention to improving its conditions. Additional grounds were purchased, both to provide work for the inmates and to furnish food instead of buying it. The new industry became profitable financially, and also proved a tonic for women in poor health. At the time of her death she had just read a paper before the International Council of Women, when she was suddenly prostrated with apoplexy. (See GIFTS AND BEQUESTS.)

Johnson, Isaac Gale, manufacturer, born in Troy, N. Y., in 1832; died in Spuyten Duyvil, N. Y., June 3, 1899. He was graduated at Rensselaer Polytechnic Institute in 1848, and, after spending two winters in special study, established himself as a manufacturer of malleable iron at Spuyten Duyvil, and in later years of steel. His scientific attainments, inventive skill, and good judgment made him successful. In recent years he had given much attention to projectiles, and among his inventions was a cap for armor-piercing projectiles, which was purchased by the Navy Department and used against Admiral Cervera's squadron off Santiago de Cuba.

Johnston, William Preston, educator, born in Louisville, Ky., Jan. 5, 1831; died in Lexington, Va., July 16, 1899. He was a son of Gen. Albert Sidney Johnston, and was graduated at Yale in 1852 and at the Louisville Law School in 1853. During the civil war he served in the Confederate army as colonel and aid-de-camp to Jefferson Davis. He was Professor of History and Literature at Washington and Lee University in 1866-'77, and president of Louisiana State University in 1880-'83. In 1884 he became president of Tulane University, New Orleans, and he held that office at the time of his death. He was the author of a *Life of General Albert Sidney Johnston* (New York, 1879); *The Johnstons of Salisbury: The Prototype of Hamlet; and Seekers after God*, a volume of verse.

Julian, George Washington, legislator, born near Centerville, Wayne County, Ind., May 5, 1817; died in Irvington, Ind., July 7, 1899. While he was a boy his father's death cast him on his own resources to obtain an education. He taught

in winter, surveyed in summer, and when twenty-one years old was admitted to the bar. In 1845 he was elected to the State Legislature, and in 1849 to Congress. There he almost immediately made himself a conspicuous foe of slavery and a champion of the homestead system. His prominence in 1852 led to his selection as vice-presidential candidate on the Free-soil ticket. In 1856 he was a delegate, vice-president, and chairman of the Committee on Organization in the first national convention of the Republican party. He was re-elected to Congress in 1860, and served there ten years, having a place on the Committees on the Conduct of the War, on Reconstruction, and on the Preparation of Articles of Impeachment against President Johnson. Mr. Julian was an advocate of woman suffrage, and in 1868 he proposed in Congress a constitutional amendment conferring the right to vote on women. In 1872 he united with the Liberal Republican party, and supported Horace Greeley for the presidency. He was Surveyor General of New Mexico in 1885-'89, and he afterward lived in retirement. He published *Speeches on Political Questions* (Boston, 1872); *Political Recollections* (Chicago, 1884); and *The Life of Joshua R. Giddings* (1892).

Juneau, Joseph, miner, born in Assumption, Quebec, Canada, about 1824; died in Dawson, Alaska, May 13, 1899. He was a second cousin of Solomon Juneau, founder of Milwaukee, Wis., and was one of a family of 21 children, 15 of whom were boys. He spent the first seventeen years of his life in his native place, then suddenly disappeared, and was neither seen nor heard of for twenty years. Leaving home, he had worked his way to the Western coast, journeyed to Portland, Ore., and in company with one companion had paddled in an open canoe from Portland to Sitka, Alaska. Prior to 1880 he had penetrated the Northern wilderness, discovered a rich lead of gold, and founded the little settlement that received its name from him and later became one of the important towns in the Territory. In Alaska he made and lost several fortunes. He had relatives in Milwaukee whom he was always promising to visit, but he rarely got beyond San Francisco, whither he was in the habit of going frequently for a few weeks' chat with his old mining friends.

Kaiulani, Princess **Victoria**, former heir apparent to the throne of Hawaii, born in Honolulu, Oct. 16, 1875; died there, March 6, 1899. Her father was Archibald S. Cleghorn, a native of Scotland, long a resident of Hawaii, and ex-governor of the island of Oahu, and her mother, his wife, the Princess Miriam Likelike, sister of the late King Kalakaua and of the deposed Queen Liliuokalani. The princess was carefully educated in England, and while studying there, March 9, 1891, she was proclaimed heir apparent to the throne by Queen Liliuokalani. Early in 1893 she visited the United States, and protested against the proposed treaty of annexation. She afterward returned to England, but revisited the United States in October, 1897, on her way to Waikiki, a suburb of Honolulu, where her father had built a beautiful place for her. After annexation was accomplished she dropped her royal title and called herself Miss Victoria Cleghorn. The princess was a typical Hawaiian beauty, and a favorite of all classes on the islands.

Kapiolani, dowager Queen of Hawaii, born Dec. 31, 1834; died in Honolulu, June 24, 1899. She was descended from a long line of principal chiefs on the island of Kauai, and was the granddaughter of the last king of the island, the only

monarch in Hawaii who was not forced to surrender to Kamehameha I, who united the islands under a single government. In 1863 she married High Chief David Kalakaua, who was chosen king in 1874. Her influence was all for good, and her greatest desire was the uplifting of her race. She had no children, and devoted most of her time to charitable work, and founded the Kapiolani Home for Leper Girls. She had visited England, and in 1887 made a tour of the United States.

Keener, John Ormon, educator, born in New Orleans, La., Aug. 17, 1854; died in Greensboro, Ala., Dec. 31, 1898. He was a son of Bishop John C. Keener, of the Methodist Episcopal Church, South. He was graduated at the Southern University, Greensboro, Ala., in 1874, united with the Alabama Conference of his Church the same year, and was employed in itinerant work till June, 1894, when he was elected president of his *alma mater*, which had given him the degree of D. D. the previous year. President Keener represented his conference in the General Conferences of 1894 and 1898, and was a member of the last Ecumenical Conference of Methodism.

Kellogg, Samuel Henry, theologian, born in Quogue, Long Island, N. Y., Sept. 6, 1839; died in Landour, India, May 2, 1899. He was graduated at Princeton in 1861 and at its theological seminary in 1864, and was ordained an evangelist and went to India under appointment by the Presbyterian Board. In 1865-'71 he was stationed at Futteghur, and in 1872-'76 in Allahabad, in the latter place acting also as instructor in theology in the synodical school. He returned to the United States early in 1877, and that year became pastor of the Third Presbyterian Church in Pittsburg, Pa., and Professor of Systematic Theology in the Western Theological Seminary, at Alleghany. In 1886 he was called to the St. James's Square Presbyterian Church, in Toronto, Canada, where he remained till 1892. As a missionary he returned to India late in 1892, and there applied himself to Bible translation and other literary work in the Indian vernaculars. He was killed by being thrown over a precipice while on a cycling tour in the Himalaya mountains. Besides his translation of the *Larger Catechism* of the Presbyterian Church into Hindi, his publications include *A Grammar of the Hindi Language* (Allahabad, 1876; enlarged edition, London, 1892); *The Jews; or, Prediction and Fulfillment* (New York, 1883); *The Light of Asia* and *The Light of the World* (1885); *From Death to Resurrection* (1885); *Are Premillennialists Right?* (Chicago, 1885); *An Exposition of the Book of Leviticus* (forming Vol. III of the *Expositor's Bible*, London, 1891); and *The Genesis and Growth of Religion* (1892).

Kemper, Delaware, soldier, born in Warren-ton, Va., Aug. 25, 1833; died in Alexandria, Va., June 30, 1899. He was educated at the University of Virginia. He entered the Confederate army in May, 1861, as captain of the Alexandria artillery, took part in the battles at Mitchell's Ford and Bull Run, and was wounded at the second battle of Manassas in August, 1862. On his recovery he was placed in command of the reserve artillery in Charleston and recommended for promotion to brigadier general. After the war he was elected Professor of Mathematics in Hampden-Sidney College, and he remained in that office seventeen years. He then became Professor of Natural Sciences in the Citadel Academy, Charleston, and later was appointed president of Adger College, South Carolina. In 1893 he was appointed consul at Amoy, China. Upon the ex-

piration of his term as consul he again settled in Alexandria and became part owner and editor of the Alexandria Times.

Kendall, Ezra Otis, educator, born in Wilmington, Mass., May 15, 1816; died in Philadelphia, Pa., Jan. 5, 1899. He went to Philadelphia in 1835, after receiving his early education in Woburn, placed himself under the instruction of his half-brother, Sears C. Walker, a noted mathematician, and was appointed Professor of Theoretical Astronomy and Mathematics in the public high school of that city in 1838. He organized and equipped an astronomical observatory, in which for many years he passed the greater part of the nighttime. The first results of his observations and studies appeared in his *Uranography*, which was accomplished by an original atlas of the constellations. His work attracted the attention of scientists in the employment of the Federal Government, and on their recommendation he was employed several years in making observations for longitudes for use in the United States Coast Survey. In 1851 he received an appointment on the United States Ephemeris and Nautical Almanac, and he had much to do with the compilation of that work till 1882. He edited scientific books and contributed frequently to technical periodicals on astronomical topics. In 1855 he was elected Professor of Mathematics and Astronomy in the University of Pennsylvania, and there he labored without interruption thirty-five years, retiring as professor emeritus in 1890. For seven years prior to his retirement he was vice-provost of the university, and for several he was dean of the faculty. He received the degree of LL. D. from the university in 1888.

Kerrigan, James E., politician, born in New York city, Dec. 25, 1828; died in Brooklyn, N. Y., Nov. 1, 1899. In his boyhood he was a leader of the Bowery youth and a member of No. 14 Hose of the old volunteer fire department, of which Harry Howard was foreman. At the age of seventeen he ran away from Fordham College and enlisted for service in the Mexican War. After the fall of the city of Mexico he joined Gen. Walker's filibustering expedition to Nicaragua as a captain. On his return to New York city he became the leader of the Bowery element of Tammany Hall. He was elected alderman from the 6th Ward, and served a term as clerk of the old Tombs police court. At the beginning of the civil war he organized the 25th New York Volunteers and became its colonel. He was dismissed from the service on account of having had intercourse with the enemy just before the advance on Miner's Hill in September, 1861. In 1862 he was elected to Congress, where he served one term. He next became an enthusiastic Irish Nationalist, and when the invasion of Canada was planned in 1866 he led a company across the border. In the spring of 1899 he went to the Klondike, looking for adventure.

Keyser, John H., philanthropist, born in Westport, Conn., in 1819; died in East Norwalk, Conn., Aug. 20, 1899. For forty years he manufactured stoves and furnaces in New York city, and had extensive business interests elsewhere, including a large foundry at Greenpoint, N. Y. He received 32 patents for original inventions, and made and lost several fortunes. While the Tweed ring was under investigation he was accused of having been a partner of Tweed and of having received large sums of money from the city because of this connection. He denied the charges, and made an assignment to Jackson S. Schultz, of the Citizen's Committee, of property of an estimated

value of \$600,000 to "repay out of the proceeds of it all sums of money which he may have improperly received from the city or county of New York." The committee fully exonerated him from all charges of corruption. In 1863 Mr. Keyser did much to protect the colored people of the city from the fury of the draft rioters. In 1868 he built the Strangers' Rest at a cost of \$25,000, and in it sheltered and fed annually about 9,000 homeless men and women, at an expense of \$12,000 per annum, for five years. Two years later he bought and rebuilt property on Tenth Street at a cost of \$80,000, and conducted a free Strangers' Hospital for three years. In the panic of 1873, when his residence was besieged by the hungry and homeless, he converted his back yard into a dining room, and for several weeks gave two meals daily to an average of 1,000 persons. In 1888 also he established a free eating house on Washington Square, in which 2,000 persons received two meals daily. Again, during the severe winter of 1894, he undertook to aid the homeless, and it was largely through his efforts that 1,200 homeless men were nightly sheltered.

Kreusi, John, engineer, born in Switzerland in 1843; died in Schenectady, N. Y., Feb. 22, 1899. He received his professional education in his native country, and in 1870 came to the United States and was employed by the Singer Sewing Machine Company at Elizabethport, N. J. Two years later he went to work with Thomas A. Edison, who was then making stock exchange telegraph instruments. He soon became Mr. Edison's most confidential associate, and was intrusted with the development of many of his electrical and mechanical ideas. After Mr. Edison had conceived the idea of the phonograph he placed in Mr. Kreusi's hands a rough drawing of the projected instrument and some hastily fashioned parts, and asked him to perfect the apparatus. This Mr. Kreusi did, and the first words spoken into the first phonograph were by Mr. Edison, and comprised the verse beginning with "Mary had a little lamb." Subsequently Mr. Kreusi invented and perfected the underground tubing system now in general use. At the time of his death he was the chief mechanical engineer of the General Electric Company, much of whose apparatus was of his invention.

Kynett, Alpha Jefferson, clergyman, born in Adams County, Pennsylvania, Aug. 12, 1829; died in Harrisburg, Pa., Feb. 23, 1899. He received as good an education as was possible to pioneer families in Iowa, was licensed to preach in 1850, and was admitted into the Iowa Methodist Conference in 1851. He became a presiding elder in 1860, and corresponding secretary of the Church Extension Society of the Upper Iowa Conference in 1864. In the last year he presented the plan and scope of the Church Extension Society before the General Conference, by which it was adopted. In 1867 Dr. Kynett was elected corresponding secretary of the General Church Extension Society, and he was re-elected at each quadrennial General Conference thereafter. Under his direction the society collected and disbursed more than \$4,000,000 in the first twenty-five years. During the civil war Dr. Kynett served on the staff of Gov. Kirkwood, of Iowa, aided in recruiting several regiments, and organized the Iowa branch of the Sanitary Commission. He received the degree of D. D. in 1867 and of LL. D. in 1887. He published Laws and Forms concerning Churches.

Lalor, John J., author, died in Washington, D. C., June 10, 1899. He taught in the East Side High School, Milwaukee, in 1885, and later went into the publishing business. He translated

various works from the French and German, and at the time of his death was employed as a translator in the office of the Director of the Mint in Washington. He edited *A Cyclopædia of Political Science, Political Economy, and Political History of the United States* (3 vols., New York, 1881), and translated Roscher's *Principles of Political Economy* (1878); Jhering's *Struggle for Law* (Chicago, 1879); Nohl's *Mozart* (1880); Nohl's *Beethoven* (1880); and, with A. B. Mason, *Von Holst's History of the United States* (1876) and *Principles of Political Economy* (1887).

Lamson, Charles Marion, clergyman, born in North Hadley, Mass., May 16, 1843; died in St. Johnsbury, Vt., Aug. 8, 1899. He was graduated at Amherst College in 1864, remained there as instructor in Latin and English for two years, and then took the theological course in Halle University, Saxony. In 1868 he became pastor of the Porter Congregational Church in Brockton, Mass., and in 1871-'85 he was pastor of the Salem Street Congregational Church in Worcester, Mass. He went to the North Congregational Church in St. Johnsbury, Vt., in 1885, and to his last charge, Hartford, Conn., in 1893. On Oct. 14, 1897, he was elected president of the American Board of Commissioners for Foreign Missions. He received the degree of D. D. in 1885.

Lansdale, Philip Van Horn, naval officer, born in Washington, D. C., Feb. 5, 1858; died near Apia, Samoa, April 1, 1899. He was a son of the late Philip Lansdale, medical director in the United States navy, and was graduated at the Naval Academy in 1879. He was promoted master, June 1, 1881; lieutenant (junior grade), March 31, 1888; lieutenant, May 15, 1893; and was assigned to his last duty, June 15, 1896. For several years he was attached to the Bureau of Naval Intelligence, and during the Columbian Exposition in Chicago was in charge of the Spanish caravels. In 1896 he was for a second time attached to the Philadelphia. Early in 1899 Rear-Admiral Albert Kautz, U. S. N., commandant of the Pacific station, was ordered to proceed from San Francisco to Samoa on his flagship, the Philadelphia. On April 1 a joint American and British naval expedition was sent from the ships of the two nations, then lying in the harbor of Apia, to suppress the uprising of the adherents of Mataafa, one of the claimants of the kingship. This force was caught in an ambush, and in the midst of a heroic defense in the face of overwhelming numbers was put to a great disadvantage by the repeated breaking down of the Colt automatic gun. The American and British bluejackets fought nobly side by side under their respective commanders till they ran short of ammunition and darkness set in, when a retreat was ordered. The expedition was led by Lieut. Angel H. Freeman, of the British cruiser *Tauranga*, who was shot dead in the fight, Lieut. Lansdale, who was fatally wounded while endeavoring to relieve the "jammed" Colt gun, and Ensign J. R. Monaghan, also of the Philadelphia, who was killed while trying to save Lieut. Lansdale.

Lawrence, William, jurist, born in Mount Pleasant, Ohio, June 26, 1819; died in Bellefontaine, Ohio, May 8, 1899. He was graduated at Franklin College, Ohio, in 1838, was admitted to the bar in 1840, and became commissioner in bankruptcy for Logan County in 1842 and prosecuting attorney in 1845. He owned and edited the *Logan County Gazette* in 1845-'47, and afterward edited the *Western Law Journal*. In 1846 he was elected a State Representative, in 1848 a State Senator, in 1851 reporter for the Ohio Su-

preme Court, and in 1853 was returned to the Senate. He was elected judge of the Court of Common Pleas in 1856 and 1861, served as colonel of the 84th Ohio Volunteers in 1862, and resigned from the Common Pleas bench in 1864. During 1865-'71 and 1873-'77 he was a Republican Representative in Congress, and in 1880-'85 he was Comptroller of the Currency. For several years he was president of the National Association of Wool Growers. He published *Reports of Decisions of the Supreme Court of Ohio* (1852); *The Treaty Questions* (1871); *The Law of Religious Societies and Church Corporations* (1873); *The Law of Claims against the Government* (1875); *The Organization of the Treasury Department of the United States* (1880); and *Decisions of the First Comptroller in the Department of the Treasury of the United States* (1881-'85).

Lay, John Louis, inventor, born in Buffalo, N. Y., Jan. 14, 1832; died in New York city, April 17, 1899. He was appointed a second assistant engineer in the United States navy in July, 1862, and first distinguished himself by accompanying Lieut. William B. Cushing on the expedition against the Confederate ram *Albemarle* and by designing the torpedo with which that vessel was destroyed. He was promoted first assistant engineer in October, 1863, and in 1865, after the occupation of Richmond by the National army, he was sent up the James river in advance of Admiral Porter's fleet to remove obstructions. Soon after the war he resigned from the navy and entered the service of Peru, where he spent some time in preparing the harbor of Callao to resist the entrance of a Spanish fleet by means of fixed mines and suspended torpedoes. While so engaged he conceived the idea of a moving submarine torpedo. On his return to the United States in 1867 he perfected the weapon that bears his name, and afterward sold it to the Government. The Lay submarine torpedo boat is a cylindrical vessel with conical ends, operated by an engine and screw propeller worked by carbon-dioxide gas, and controlled from ship or shore by an electric battery and keyboard. The boat is fitted to carry a spar torpedo or a charge of some high explosive, and has attained a speed of 9 miles an hour. Mr. Lay had received large sums of money from the United States, South America, and other governments, but unfortunate speculations and the heavy expense of continual experiments to keep his inventions up to the requirements of the day had impoverished him.

Le Brun, Nicholas, composer, born in France in 1819; died in St. Louis, Mo., July 23, 1899. He received his musical education in his native country, and came to the United States in 1842. For thirty-five years he was a member of the orchestra of the Olympic Theater, St. Louis. In 1865, in a week's time, he completed the *Lincoln Dead March*, which was played by a band of 100 pieces, with a chorus of 2,000 voices, under his personal direction, at the funeral of the President.

Le Gendre, Charles William, diplomatist, born in Paris, France, about 1829; died in Seoul, Korea, Sept. 2, 1899. He was educated at the University of Paris, and came to the United States in early manhood. At the beginning of the civil war he entered the National army, and was first placed in command of the post of Wille's Point, Long Island. Subsequently he became major and colonel of the 51st New York Volunteers, and brigadier general, serving to the close of the war and receiving several wounds. In 1865 he was appointed United States consul at Amoy, China, with consular jurisdiction in Formosa also. He induced the natives of For-

mosa to organize a system for the protection of shipwrecked crews from foreign ports, and greatly advanced the tea trade of the island. At the close of this service he was appointed minister to the Argentine Republic, and while on his way home he was stopped at Yokohama by United States Minister De Long, who urged him to remain in Japan and take charge of the Department of Foreign Affairs of that country. With the approval of the Government he accepted this post, and he held it throughout the ten years' reconstruction period of that empire. At the close of this service Gen. Le Gendre went to Korea and became adviser to the King, now Emperor.

Leiper, Charles Louis, soldier, born in Aven-dale, Pa., Dec. 25, 1842; died in Philadelphia, Pa., Aug. 13, 1899. He began his military career with the Philadelphia City Troop, serving from May 13 till Aug. 17, 1861. He then assisted in forming the 6th Pennsylvania Cavalry, known as Rush's Lancers, and was mustered in as first lieutenant, Sept. 7, 1861; was promoted captain, Nov. 20, 1862; major, Sept. 1, 1864; lieutenant colonel, Feb. 1, 1865; colonel, March 20, 1865; and was mustered out, Aug. 7, 1865. He was brevetted brigadier general, March 13, 1865. On his return from the army he engaged in the manufacture of textile goods. He organized the 6th Pennsylvania Cavalry Association, and was its only president. He was for several years president of the War Veterans' Club.

Leitch, Robert R., naval officer, born in Baltimore, Md., in 1850; died in Brooklyn, N. Y., March 14, 1899. He was graduated at the head of his class in the Naval Academy in October, 1871. He was promoted to be second assistant engineer, Jan. 23, 1874; assistant engineer, Feb. 24, 1874; and passed assistant engineer, Jan. 15, 1879. He became chief engineer, Sept. 30, 1894, and on Feb. 19, 1896, he was retired, on account of failing health, with the relative rank of lieutenant commander. Since that time he had lived in Brooklyn. When the war with Spain broke out he was assigned to special duty as chief engineer to the Pensacola Navy Yard.

Leland, Warren F., hotel keeper, born in Londonderry, Vt., in 1844; died in New York city, April 4, 1899. He belonged to a family of hotel proprietors and managers that has been known throughout the United States nearly a century. He was educated at Hiram College, where one of his teachers was James A. Garfield. After being graduated he went to New York, where his father had been conducting the Clinton Hotel, but had sold it to his brothers, Charles and Warren. In 1852 these brothers became proprietors of the Metropolitan Hotel, where young Warren began his hotel career when sixteen years old. He worked his way through the various departments till he became chief of the office staff. In 1868 he and his brother Charles leased the Delavan House, in Albany, N. Y. From Albany Warren went to Chicago, where in 1880 he purchased the Gardener House, made large additions, and opened it as the Leland Hotel. In 1892 he sold this property to a syndicate and built the Chicago Beach Hotel, which he managed throughout the Columbian Exposition. His next venture was at Newport, R. I., where he conducted the Ocean House a year, and during the winter of 1895-'96 he was at the head of the Windsor Hotel in Jacksonville, Fla. He leased the Windsor Hotel, New York, in May, 1896, and conducted it till its destruction by fire, March 17, 1899. Nearly a score of persons perished in the fire, including his wife and daughter. This dis-

aster was a terrible shock to Mr. Leland, but while directing the search for the remains of the victims and assisting in the work of identification he set about preparing for the erection of a new hotel. He was suddenly seized with an affection that necessitated a surgical operation, from which he failed to recover.

Leonard, Moses Gage, benefactor, born in Stafford, Conn., July 10, 1809; died in New York city, March 20, 1899. He received a district school education, and removed to New York in 1832. In 1840 he was elected an alderman. During the three years he held this office he was chairman of the Committees of Arts, Sciences, and Schools, served on the Croton Aqueduct and Finance Committees, and also presided in the different city courts, in which the aldermen of those days had jurisdiction. In 1844 he was elected to Congress, where he promoted the tariff reform measures. He was defeated for a second term in 1846, but was elected Commissioner of Charities and Alms, then the second officer of the city in point of honor and pay. During his term of this office he was conspicuous in organizing the hospitals of the city. Old buildings were replaced with new ones. The Bellevue structure, occupied by paupers, was converted into a hospital; an additional building for lunatics was erected; and a children's department building was put up on Randall's island from plans drawn by Mr. Leonard. For his services during the "ship fever" epidemic and the potato famine in 1847-'49 the citizens gave him a public reception and presented him with a silver service. In the summer of 1849 he was called to San Francisco by business, and in the following year was elected to the first Common Council of the city after the admission of the State into the Union. There he rendered valuable service in framing and enacting municipal ordinances and providing the city with a substantial government, and this service was recognized by a public banquet in his honor. In the second year of the civil war, at the request of Gov. Morgan, Mr. Leonard, in conjunction with the late Judge Robertson, organized, equipped, and sent to the front the 135th New York Volunteers, afterward the 6th New York Artillery. Later he was provost marshal of the 10th Congressional District, and made the first two drafts of troops there, for which he received the thanks of the Government.

Lewis, Lillian (Mrs. Lawrence Marston), actress, born in Midway, Ky., in 1852; died in Farmington, Minn., Aug. 11, 1899. Her first appearance on the stage was in 1882, when she played Marianne in *The Two Orphans* at the Fifth Avenue Theater, New York. After three years of success in various companies, she organized a company of her own and entered upon a successful career as a star at the People's Theater, New York, in the autumn of 1885. She chose the part of Cora in *Article 47* for her introduction to the public on that occasion, and was well received. In addition she played the principal woman in *Camille*, *The Lady of Lyons*, *An Unequal Match*, *The New Magdalen*, *Frou-Frou*, and *Adrienne Lecouvreur*. In 1888 she married Lawrence Marston, who had been for some time her leading man. Mr. Marston continued to act the principal men of her plays, managed her business, and adapted and wrote plays for her. By his work her repertory was increased with *As in a Looking Glass*, *Dofia Sol*, *Credit Lorraine*, *Lady Lil*, *Good-by*, *Sweetheart*, *Cleopatra*, *An Innocent Sinner*, *For Liberty and Love*, and *The Widow Goldstein*. The last three were the joint work of Mr. and Mrs. Marston. Her last appearance

was in St. Louis, April 27, 1898. The last year of her life was passed in seeking relief from consumption.

Littlefield, Milton Smith, soldier, born in Jefferson County, New York, in 1830; died in New York city, March 7, 1899. He studied law in the office of Abraham Lincoln in Springfield, Ill., and was practicing in that city when the civil war broke out. He was commissioned a captain in the 14th Illinois Regiment, of which Col. (afterward Gen.) John M. Palmer was commander. He went through the campaign of 1862 as provost marshal on Gen. Sherman's staff, with station at Memphis, Tenn. Subsequently he was transferred to the Department of the South, with headquarters at Hilton Head, S. C. He took part in the siege of Charleston, served on the staff of Gen. Gillmore, and afterward was inspector general of colored troops. After the war he engaged in railroad business.

Livermore, Daniel Parker, clergyman, born in Worcester, Mass., in 1819; died in Melrose, Mass., July 5, 1899. When nineteen years old he was ordained to the Universalist ministry, and became pastor of a church in Fall River. In 1845 he married Mary Ashton Rice, then a teacher in Duxbury, afterward widely known as a reformer. They lived successively in Stafford, Conn., Malden and Weymouth, Mass., Auburn, N. Y., Quincy, Ill., and Chicago, where in 1857 he became editor and publisher of the New Covenant, and for twelve years was assisted in editorial work by his wife. In 1869 they settled in Melrose, keeping their home there during the ten years he held a pastorate in Hingham. After his retirement he assisted his wife in her literary work.

Lockwood, Henry Hayes, educator and soldier, born in Kent County, Delaware, Aug. 17, 1814; died in Washington, D. C., Dec. 7, 1899. He was graduated at West Point in 1836 and assigned to the artillery service. He took part in the operations against the Florida Indians in 1837, after which he resigned and began farming in Delaware. In 1841 he was appointed Professor of Mathematics in the United States navy. He served in the Pacific squadron and took part in the capture of Monterey, Cal., in October, 1842. Later he was stationed at the naval asylum in Philadelphia. He was made Professor of National Philosophy in the United States Naval Academy in 1845, was Professor of Artillery and Infantry Tactics from 1845 till 1861, and also Professor of Astronomy and Gunnery from 1851 till 1861. In the civil war he was colonel of the 1st Delaware Volunteers, and was promoted brigadier general of volunteers, Aug. 8, 1861. He was in charge of Point Lookout and of the defenses of the lower Potomac. At the battle of Gettysburg he commanded a brigade of the 12th Corps. After the war he returned to the Naval Academy as Professor of Natural Philosophy. From 1871 till 1876 he served at the Naval Observatory. He was retired on Aug. 18, 1876. He was the author of *A Manual for Naval Batteries and Exercises in Small Arms and Field Artillery*, arranged for Naval Service. He was the father of Lieut. James B. Lockwood, who died while a member of the Greely arctic expedition.

Logan, John Alexander, soldier, born in Murphyshoro, Ill., July 24, 1865; died in Luzon, Philippines, in November, 1899. He received an appointment to West Point and attended for two years, but was not graduated. He then embarked in the real estate business in Washington, but soon removed to Youngstown, Ohio,

where he engaged in limestone quarrying, and at one time conducted a fancy stock farm. For several years he was captain of the local militia company, known as the Logan Rifles. In May, 1898, he received the appointment of assistant adjutant general, with the rank of first lieutenant, on the staff of Gen. John C. Bates. He went to Cuba and took part in the battle of El Caney. He was promoted to major for gallantry, and at the conclusion of the Cuban war was with Gen. Bates, who was governor of Santa Clara province. On Aug. 19, 1899, he was appointed major of the 33d United States Volunteers, and he sailed with his regiment for the Philippines early in October. He was the author of a book entitled *Joyful Russia*. The earlier reports of his death were that he had been shot by one of his own men; but this was disproved by later reports from witnesses, who declared that he was shot by a Filipino sharpshooter in a tree. The Filipino first shot a private, and Major Logan dismounted to help the wounded man, when the sharpshooter shot and killed him. Then the major's orderly went to Logan's assistance and was also shot, as well as the hospital steward. Major Lieberman then saw the Filipino in a tree, and killed him with his pistol.

Lord, Russell Farnham, engineer, born in Honesdale, Pa., in 1838; died in New York city, July 12, 1899. He was graduated at the Sheffield Scientific School of Yale University, and then spent several years as assistant to his father. At the beginning of the civil war Gov. Curtin appointed him a brigadier general of volunteers, and throughout the war he was engaged in organizing regiments for the field. After the war he went West to engage in mining engineering, remaining there till 1886, when he was appointed chief engineer to the Government of Salvador. In 1892 he went to Ecuador, and he was employed in developing mining property there till 1897.

Luna, Antonio, Filipino insurgent, born in Manila, Philippine Islands, about 1854; died on Luzon island, June 8, 1899. He was a son of Don Joaquin Luna, a retired merchant of Manila, among whose sons were a distinguished physician and surgeon, a musician, a painter, and a chemist. Antonio was educated principally in Paris, France, and returned to Manila early in 1898, where he became editor of the insurgent organ *La Independencia*. On the organization of Aguinaldo's so-called government in December, 1898, Luna was first announced as the new Minister of War. He had served the War Department in the preceding Cabinet, and made himself conspicuous in fighting the Spaniards after the American victory in Manila Bay and the surrender of Manila city. Soon after Luna's second appointment to the War Department Aguinaldo gave that post to his cousin and placed Luna in immediate command of the Filipino armies, with the rank of general. Accounts differ concerning the immediate cause of his death. That the relations between Aguinaldo and Gens. Luna and Pilar had become strained to the point of rupture is beyond doubt. The first account of Luna's death declared that he and an aid were killed by the guard at Aguinaldo's headquarters in an altercation over Luna's demand to see Aguinaldo for a conference. A released Spanish officer, who witnessed the stabbing and shooting of Luna and his aid, said that Aguinaldo and Luna had had a stormy interview, caused by Luna's attempts to assume full control of affairs and Aguinaldo's issuance of secret orders to the provincial governments. Aguinaldo, fearing that Luna might attempt a deadly assault on him, posted a trusty guard

about his headquarters, with instructions to kill any one, regardless of rank, who might try to enter the house. When, therefore, Luna reappeared and demanded an interview he was repelled. He drew a revolver, struck a guard, and was trying to enter the house when he received a bayonet thrust. His remains showed 20 bayonet and bullet wounds. On July 7, after a trial, the guardsmen were acquitted of blame on the ground of self-defense.

McClannin, Robert, actor, born in Boston, Mass., May 28, 1832; died in Hartford, Conn., Sept. 18, 1899. He made his first appearance at Forbes's Theater, Providence, Sept. 3, 1853, as Lopez in *Faint Heart ne'er Won Fair Lady*. He remained a member of the company at that house until 1855, playing, among other parts, Uncle Tom in the first production of *Uncle Tom's Cabin* in that city, Dec. 3, 1854. He had become identified with the parts of old men, and filled engagements at Rice's Theater, Chicago, and at the Gaiety and St. Charles, New Orleans. In 1861 he was engaged by Maggie Mitchell for the first production of *Fanchon*, in which he originated the part of Father Barbeaud. The same year he went to the Boston Museum as first old man, making his appearance there as Dr. Playfair in *Falconer's Men of the Day*. He remained in that theater, a great favorite of the public and of his comrades in the theater, as well as of all the great players that visited Boston, seventeen years. He was especially successful as Sir Oliver Surface in *The School for Scandal*, *Old Dornton in The Road to Ruin*, *Job Thornberry* in *John Bull*, *Lord Duberly* in *The Heir at Law*, *Admiral Franklin* in *Sweethearts and Wives*, *Hardcastle* in *She Stoops to Conquer*, and *Cadwallader* in *Big Bonanza*. He next assumed a like position in Maggie Mitchell's traveling company, where he remained until her retirement in 1889. From that year he played in many productions in New York city and on the road, and for two seasons before his death had been playing *Colonel Sapt* in *The Prisoner of Zenda*.

McCoy, Thomas F., soldier, born in 1819; died in Lewiston, Pa., July 20, 1899. He entered the Mexican War as first lieutenant of the 11th United States Infantry, and was brevetted captain for gallant conduct. At *Molino del Rey*, his superior officer having fallen, he commanded the regiment and was accorded the highest praise by the brigade commander. At the outbreak of the civil war he was appointed deputy quartermaster of Pennsylvania, and in 1862 he was made colonel of the 107th Pennsylvania Volunteers. For services at the battle of Five Forks he was brevetted brigadier general. At the close of the war he returned to the practice of law.

Mace, Mrs. Frances (Laughton), poet, born in Orono, Me., Jan. 15, 1836; died in Los Gatos, Cal., in August, 1899. She was educated at Bangor High School, and in 1855 married Benjamin H. Mace, a lawyer of that city. In 1885 she removed with her husband to San José, Cal., which continued to be their home. She was widely known by the familiar poem *Only Waiting*, written when she was but eighteen years of age, the authorship of which was for a time claimed by several writers. It is included in her volume *Legends, Lyrics, and Sonnets* (Boston, 1883). Her later work is comprised in *Under Pine and Palm* (1888) and *Wild Roses of Maine* (1896).

McEnroe, William Hall, therapist, born in Charlottesville, Va., Aug. 15, 1854; died in New York city, May 17, 1899. He came to New York with his parents when fifteen years old, and was graduated at the University Medical College in

1882. He became a member of the staff of house physicians at Bellevue Hospital, and for thirteen years was Assistant Professor of *Materia Medica* in University Medical College. In 1885 he published *Notes of Materia Medica and Therapeutics as Delivered by Prof. William H. Thomson*. At the time of his death Dr. McEnroe was enlarging this work. A few days before his death he was selected for the chair of *Materia Medica* in the new Cornell Medical College.

McKane, John Young, politician, born in County Antrim, Ireland, Aug. 10, 1841; died in Sheepshead Bay, N. Y., Sept. 5, 1899. His parents emigrated to the United States in 1843 and settled at Sheepshead Bay, where his life was spent. He attended private school till the age of sixteen, became a carpenter's apprentice, and in 1866 began business for himself. The same year he was elected a constable. In 1867, as a Democrat, he was elected a commissioner of common lands, and in 1883 he became a supervisor. He then left the Democratic party, and in 1887 became president *pro tem.* of the Board of Supervisors. About this time he became known as the "autocrat of Gravesend," holding simultaneously the following public offices: Commissioner and president of the town Board of Health, president of the Police Board, president of the Water Board, and chief of police. He had such a hold upon local affairs and such a reputation for political sagacity that nearly the entire voting strength of Gravesend was controlled by him. When the ballot reform law went into effect in 1891 he ingeniously contrived to have the six election districts of Gravesend unite at the town hall, and all the polling places were under his supervision in that building. At the election held in November, 1893, the action of McKane and his followers was so infamous that ten indictments were found against him. He was convicted and sentenced to six years in Sing Sing prison. Ineffectual efforts were made to secure his pardon, and he served a term of four years and two months, commutation being made for good behavior. He was released April 30, 1898.

McKee, Mary A., benefactor, born in Brooklyn, N. Y., March 2, 1833; died in Trenton, N. J., Aug. 4, 1899. She was a widow at the outbreak of the civil war, and was one of the first nurses enlisted in the National service. She served throughout the war, was one of the most trusted aids of Dorothea L. Dix, and was the last nurse to be mustered out, being retained after the war to take charge of hospital supplies in Washington. Through the influence of Miss Dix the New Jersey State Hospital for the Insane was established, and she secured for Mrs. McKee the post of housekeeper, which she held till her death, a period of more than thirty years.

Mackellar, Duncan A., illustrator, born in Lobo, Ontario, Canada, in 1867; died in Penetanguishene, Ontario, Canada, June 4, 1899. He was of Scottish origin, and till he was eleven years old he could speak no language but Gaelic. His education was principally acquired in Toronto, and before he came to the United States he had achieved distinction by his work on the *Toronto Saturday Night* as an artist, dramatic critic, and humorous writer. In 1892 he settled in New York, and took a course in the Art Students' League and later in the Brooklyn Art School. He established himself as an illustrator in black and white, and afterward did his chief work for *Life* and *Harper's Magazine*.

MacKellar, Thomas, type founder, born in New York city, Aug. 12, 1812; died in Philadelphia, Pa., Dec. 29, 1899. He was mainly self-

educated, learned the printer's trade, and removed to Philadelphia in 1833, where he became successively proof reader, foreman, and partner with Lawrence Johnson, type founder. After the latter's death the new type founders' firm of MacKellar, Smith & Jordan was established. He was president of the Type Founders' Association of the United States and a member of several scientific societies. His published books include *Tam's Fortnight Ramble*; *Droppings from the Heart*; *Lines for the Gentle and Loving*; *The American Printer, a Manual of Typography* (Philadelphia, 1866); *Rhymes atween Times* (1873); and *Hymns and a Few Metrical Psalms* (1887).

McKinney, Philip Watkins, lawyer, born in Buckingham County, Virginia, March 17, 1834; died in Farmville, Va., March 1, 1899. He was graduated at Hampden-Sidney College in 1853, and studied law in Lexington. When twenty-one years old he was elected to the Legislature. At the opening of the civil war he was a Union man, but went with his State into the conflict. He served as captain of the Buckingham Troop under Gen. Stephen D. Lee, Wickham, and Stuart, was incapacitated for field duty by wounds at the battle of Brandy Station, and afterward was in department and staff service till the end of the war. He then settled in Farmville to practice. In 1881 he was defeated for Attorney-General of Virginia, although he ran ahead of his ticket, and in 1884 and 1888 he was a delegate to the Democratic national conventions. He was elected Governor in 1889, defeating William Mahone, Republican, by an overwhelming majority.

McLellan, Isaac, poet, born in Portland, Me., May 21, 1806; died in Greenport, Long Island, Aug. 20, 1899. He was educated at Bowdoin College, where he was intimate with Hawthorne and Longfellow, and he remained the lifelong friend of the latter. Other notable friends of his were Daniel Webster and Willis, the poet. After his graduation he studied law and practiced in Boston several years, contributing at the same time in prose and verse to magazines. In 1851 he removed to New York city, and his latest years were spent at

Greenport. He was an ardent lover of Nature and of field sports, and was often styled "the sportsman's poet." His early work in verse speedily became popular, but is unfamiliar to the present generation. His latest volume, *Poems of the Rod and Gun*, with a sketch of the author by Frederick E. Pond (New York, 1886), contains some of his best work, and is likely to remain for some time especially dear to sportsmen. The *Trout Brook* is one of his most characteristic poems. Besides the book already named, he was the author of *The Fall of the Indian*, and *Other Poems* (Boston, 1830); *The Year*, and *Other Poems* (1832); and *Miscellaneous Poems* (1844). The *Journal of a Residence in Scotland*, etc., was compiled from the manuscripts of H. B. McLellan. He was never married. His most popular poems, once familiar to all readers, were *The Death of Napoleon* and *New England's Dead*.

Macnichol, Lizzie (Mrs. Elizabeth Reitz), singer, born in Washington, D. C., in 1865, died in Chocorua, N. H., Aug. 12, 1899. She began

to study in her native city in early youth, subsequently became contralto soloist of St. Matthew's Church, and afterward held a similar place in Dr. Chapin's church and Christ Church in the same city. In 1888 she was persuaded by Gustav Heinrichs, manager of Mrs. Thurber's American Opera Company, to try her ability for the musical drama in a performance by that company in Washington, and her success was such that on June 1, 1888, she made her formal first appearance in the rôle of Lazarillo in *Maritana*. She remained two years with the American Opera Company, and in 1890 entered upon a three years' association with the Emma Juch company. She sang the contralto parts in *Il Trovatore*, *Aida*, *Lohengrin*, and other operas. At the beginning of the season of 1894 Miss Macnichol originated the light opera rôle of Flora MacDonald in the musical adaptation of *Rob Roy*. She was enthusiastically applauded in this part in the cities of the United States and Canada for three seasons. Her last years were spent as a member of the Castle Square Opera Company in Philadelphia, New York, Boston, and elsewhere. She married first Franz Vetta, who soon died, and in November, 1897, she became the wife of C. L. Reitz.

McMillan, Duncan Cameron, author, born in Rondout, N. Y., in 1848; died in Closter, N. J., March 22, 1899. For many years he was official reporter of the Ulster County Court, and later he was engaged in newspaper and general stenographic work. He was the author of works entitled *The Elective Franchise in the United States* (New York, 1878) and *Christ reflected in Creation* (1897).

Madill, Henry J., soldier, born in 1829; died in Towanda, Pa., June 29, 1899. He enlisted in the 6th Pennsylvania Reserves, June 22, 1861, and was made major. On Aug. 30, 1862, he was appointed colonel of the 141st Pennsylvania Infantry, and he led the regiment through many battles. At Gettysburg he was with his men in the peach orchard, and of the 200 that went in only 19 came out. He was made brigadier general in 1866, and brevetted major general. He held several county offices and served in the Pennsylvania Legislature in 1879-'80.

Magill, Mary Tucker, author, born in Jefferson County, Virginia, Aug. 21, 1832; died near Richmond, Va., April 29, 1899. She was a daughter of Dr. Alfred T. Magill, of the University of Virginia, and was educated there. After the civil war she conducted Angerona College for Girls, in Winchester, Va. Recently she had removed to Staunton, Va. In addition to sketches and correspondence in newspapers and periodicals, she published *The Holcombes* (Philadelphia, 1868); *Women; or, Chronicles of the Late War* (1870); *a School History of Virginia* (Baltimore, 1877); and *Pantomimes; or, Wordless Poems* (Boston, 1882).

Maguire, Nicholas H., educator, born in Burlington, N. J., Sept. 21, 1814; died in Philadelphia, Pa., June 29, 1899. He was educated at Mount St. Mary's College, Maryland, became Professor of Belles-Lettres in Laurel Hill College in Philadelphia in 1835, was chosen principal of Coates Street (now Hancock) School in the same city in 1842, and from 1858 till 1866 was principal of the Central High School. In May, 1870, he was elected principal of the Southeast Grammar School (now the Horace Binney Combined School), and he held the place till 1894, when he resigned to become supervising principal over all the public schools of the city. Prof. Maguire said that fully 20,000 boys had been under his instruction.

Malone, Sylvester, clergyman, born in Trim, County Meath, Ireland, May 8, 1821; died in Brooklyn, N. Y., Dec. 29, 1899. He studied at the academy of Mathew and Martin Carroll, in Dublin, was brought to the United States in 1839 by the Rev. Andrew Byrne, of St. James's parish, New York city, and was placed in St. Joseph's Seminary at Le Fargeville, N. Y., to continue his education. He was ordained a priest on Aug. 15, 1844, and in 1847 was appointed to the Church of Saints Peter and Paul, Brooklyn. At the beginning of the civil war he hoisted on his church spire a United States flag, which was taken down and carried to the front by Williamsburg men. In 1852 and in 1866 he was appointed theologian to Bishop Reynolds, of Charleston. In 1881 he visited Europe and Asia. He was one of the ardent supporters of Dr. Edward McGlynn. On March 29, 1894, he was elected a regent of the University of the State of New York, and Aug. 15 the golden jubilee of his ordination to the priesthood was celebrated. In 1898 he established a free library in Henry McCaddin Hall, Brooklyn.

Mannheimer, Godfrey, collector, born in Bavaria in 1839; died in New York city, June 6, 1899. He came to the United States about 1869, and for fifteen years was engaged in the dry-goods business in St. Paul, Minn., and Chicago. He then settled in New York city. He accumulated an extensive collection of paintings, porcelains, bric-a-brac, ivories, and pearls. About ten years ago he presented the large painting Justinian and his Court to the Metropolitan Museum of Art.

Marcy, Oliver, educator, born in Colerain, Mass., Feb. 13, 1820; died in Evanston, Ill., March 19, 1899. He was graduated at Wesleyan University in 1846, and was called to Northwestern University as Professor of Natural History in 1862. From 1876 till 1881 he was also acting president, and since 1881 he had been dean of the faculty. In 1876 he received the degree of LL. D. from the University of Chicago. Dr. Marcy was geologist on the Government road from Lewiston, Idaho, to Virginia City, Mont., in 1866, and was a fellow of the Royal Geographical Society. He published many addresses and essays.

Marsh, Othniel Charles, palæontologist, born in Lockport, N. Y., Oct. 29, 1831; died in New Haven, Conn., March 18, 1899. He was a nephew of George Peabody, the philanthropist, and was graduated at Yale in 1860, after which for two years he studied science in the Sheffield School. He then went abroad, and for three years devoted himself to studies of zoology, mineralogy, and geology in Berlin, Heidelberg, and Breslau. Returning to the United States, he was made Professor of Palæontology at Yale in 1866, which chair he held until his death. He spent his vacations in exploring ex-

peditions, and saw the famous localities in this country and abroad. He first visited the Rocky mountain region in 1868, learned of the inexhaustible fossil riches of that territory, and organized the Yale scientific expedition, which he conducted to the West in 1870, 1871, 1872, and 1873. Thereafter he depended upon local collectors and small parties for the work of gathering fossils. From 1882 till his

death he was vertebrate palæontologist to the United States Geological Survey, although his field work for that survey terminated in 1892. More than 1,000 new fossil vertebrates were discovered by him, and more than half of these were described and classified by him. Among his more important discoveries are a new subclass of birds with teeth, which he called *Odonornithes*, and the first known American pterodactyles; two new orders of large mammals from the Eocene Tertiary of the Rocky mountains—the *Tillodontia*, which appear to be related to the carnivores and ungulates, and the *Dinocerata*, animals of elephantine bulk, bearing on their heads two or more horn cores; also, from the same formation, the *Epihippus*, or the early ancestors of the modern horse, and the first lemuroids, bats, and marsupials ever found in this country. He also discovered several new families of dinosaurs, probably the largest land animals yet discovered. In consequence of his influence Mr. Peabody presented to Yale the fund from which has been erected the Peabody Museum, of which Prof. Marsh was curator. In 1898 he presented his own collections to the university. Of the material collected and described by him Charles Darwin wrote: "Your work on these old birds and the many fossils and animals of North America has offered the best support to the theory of evolution that has appeared in the last twenty years." In 1877 he was the recipient of the first Bigsby medal awarded by the Geological Society of London, and in 1898 he received the valued Cuvier prize of the French Academy of Sciences. He was made honorary curator of vertebrate palæontology in the United States National Museum in 1887. In 1886 the degree of LL. D. was conferred on him by Harvard, and that of Ph. D. by Heidelberg. He was president of the American Association for the Advancement of Science in 1878, and from 1883 till 1895 was president of the National Academy of Sciences. Prof. Marsh was an honorary or corresponding member of the Institute of France and the Academies of Science in Bologna, Brussels, Copenhagen, Munich, and Philadelphia. His bibliography contains 237 titles. His work included Odontornithes: A Monograph on the Extinct Toothed Birds of North America (Washington, 1880); Dinocerata: A Monograph of an Extinct Order of Gigantic Mammals (1884); and The Dinosaurs of North America (1896). A memoir, with portrait and complete bibliography, by Charles E. Beecher, was published in the American Journal of Science for June, 1899. (See GIFTS AND BEQUESTS.)

Marvin, Selden Erastus, banker, born in Jamestown, N. Y., Aug. 20, 1835; died in New York city, Jan. 19, 1899. He studied law with his father, Judge Richard P. Marvin, but, finding the profession uncongenial, became teller in the Chautauqua County Bank. In 1862 he was appointed adjutant of the 112th New York Volunteers, and in that office and as assistant adjutant general of Gen. Foster's brigade and the Army of Southern Virginia he served through the Peninsula and Charleston campaigns till September, 1863, when he was appointed a paymaster and assigned to the Army of the Potomac. On Dec. 27, 1864, he resigned from the army to become paymaster general on the staff of Gov. Fenton, of New York. When Gov. Fenton was re-elected he appointed Gen. Marvin his Adjutant General, and he held this office till 1868. As paymaster general of New York Gen. Marvin reimbursed the different committees of the State for bounties to fill the quotas established by the Federal

Government, handling about \$27,000,000, and as Adjutant General he instituted many needed reforms in the National Guard. At the expiration of his term he engaged in banking in New York. In 1874 he removed to Troy, and in 1875 he organized the Albany and Rensselaer Iron and Steel Company, becoming its secretary and treasurer. At the time of his death he was president of the Albany City Savings Institution and of the Hudson River Telephone Company and a member of the State Board of Charities.

Mason, Theodorus Bailey Myers, naval officer, born in New York city, May 8, 1848; died in Saugerties, N. Y., Oct. 15, 1899, from causes incident to exposure while on the active list. He was baptized Theodorus Bailey Myers, but was adopted by his maternal grandfather, Sidney Mason, a New York merchant, and took his name. He was appointed a midshipman from Florida, Sept. 20, 1864; was graduated at the Naval Academy in 1868; promoted ensign, April 19, 1869; master, July 20, 1870; lieutenant, Nov. 20, 1872; lieutenant commander, Jan. 23, 1894. He served with distinction on the South Atlantic and Pacific stations; was executive officer of the

Atlanta, of the home squadron; was detached and assigned as executive officer to the New York, then building at Cramp's shipyard, Philadelphia, to supervise her completion and went to sea on her in that capacity. On July 19, 1894, condemned by medical survey on account of illness incurred by excessive work on the New York, he was ordered home, and

on Dec. 8, 1894, was retired. He organized the office of naval intelligence, and brought it to a high state of efficiency. He was naval aid to Presidents Grant and Arthur and Secretary Robeson, and naval secretary to Secretaries Whitney and Tracy. On May 11, 1876, he was detailed as instructor in ordnance and light artillery at the Naval Academy, and in 1879 was assistant inspector of ordnance at the West Point foundry. He commanded the light artillery in a naval expedition to the Isthmus of Panama in 1885. He volunteered for the Greely search expedition, the Chilean imbroglio, and the Spanish-American War, and bore a conspicuous part in suppressing several isthmian *émeutes* threatening the interests of the Panama Railroad. For saving two of the ship's crew from drowning in the harbor of Rio Janeiro in 1869 he received a gold medal from the New York Benevolent and Life Saving Institution and the decoration of the Order of the Rose from the Emperor of Brazil, and in 1873 he received a silver medal from the King of Italy in recognition of his distinguished bravery in the harbor of Callao, Peru, for saving the burning Italian bark *Detaid*, laden with powder. He was accredited in 1874 to different legations in Europe for facilities to report on naval matters, was made life fellow of the Society of Civil Engineers of France, Nov. 22, 1878; acted as aid to President McMahon of France at the grand review and

manœuvres closing the exposition, in Paris, of 1878; and was elected a life fellow of the American Geographical Society, Dec. 13, 1878. Sept. 14, 1883, he was ordered by the President to meet and accompany the first embassy from Korea to the United States, and on April 29, 1884, was ordered on the same duty with the first embassy from Siam to this country. In 1891 he received a commendatory letter from the Secretary of the Navy for his bravery and energy during a heavy gale in suppressing a fire on the *Atlanta*, occasioned by an explosion in the paint room, which blew off the hatch, destroyed the bulkheads, and ignited the woodwork, while the ship was in danger of foundering. He made important reports on the war between Peru, Bolivia, and Chili. He also wrote the text-book for Naval Artillery Drill and other professional works of merit, and was untiring in advancing the interests of the service in which he was one of the brightest members.

Mathews, Felix A., consular officer, born in Tangier, Morocco, in 1834; died there, April 17, 1899. He went to California when eight years old, and when fourteen entered the United States navy. After serving on the *Constitution* and at the Mare Island Navy Yard till 1857, he became United States marshal for the northern district of California. At the outbreak of the civil war he organized the 1st California Cavalry, of which he was commissioned colonel. He was United States consul to Tangier in 1866-'87, was reappointed in 1890, and the same year was promoted to consul general, and resigned in 1893.

May, Samuel, clergyman, born in Boston, Mass., April 11, 1810; died in Leicester, Mass., Nov. 24, 1899. He was graduated at Harvard College in 1829, in the class with Oliver Wendell Holmes and James Freeman Clarke, and at the Divinity School, Cambridge, in 1833. From 1834 to 1846 he was pastor of the Unitarian Church in Leicester, but he resigned in the latter year, his strong antislavery principles not being acceptable to some of his parishioners. He, however, continued to make Leicester his home for the rest of his long life. From 1847 to 1865 he was general secretary of the Massachusetts Antislavery Society, and for several years held the same office in the American Antislavery Society. He was a contributor to the *Liberator* and the *Antislavery Standard*, and his activities in behalf of reform were unbounded. He was the last survivor of the earlier generation of antislavery leaders, and remained to the close of his career keenly alive to questions bearing upon reform. His only published work was *The Fugitive Slave Law and its Victims*.

Maynard, Effingham, publisher, born in Massachusetts in 1830; died in Saratoga Springs, N. Y., Nov. 19, 1899. He removed to New York city when young and found employment in a publishing house. Later he entered business for himself, and about 1890, when several publishing houses consolidated their schoolbook lists and formed the American Book Company, Mr. Maynard refused to enter the combination. About this time he became associated with Edwin C. Merrill in the Maynard-Merrill Company, publishers of schoolbooks. At the time of his death he had been president of the company several years.

Medill, Joseph, journalist, born in St. John, New Brunswick, April 6, 1823; died in San Antonio, Texas, March 16, 1899. In 1831 the family removed to Massillon, Ohio, and engaged in farming. Joseph worked on the farm several years, spending his leisure in study, and walking 9

miles on Saturdays to receive instruction in Latin, logic, and physics from a clergyman in Canton. He studied law, and was admitted to the bar at Canton in 1846. After two years of practice at New Philadelphia he bought the Coshocton Republican, a weekly Whig newspaper, and conducted it for two years, when he decided to abandon the law for journalism. In 1851 he established at Cleveland the Daily Forest City, and in the following year united it with the Free Democrat, under the new name of the Cleveland Leader. He urged the organization of a new political party for the express purpose of preventing the extension of slavery, and was one of twelve men who were the nucleus of the Republican party in Cleveland in 1854. In 1855 he sold his interest in the paper and joined others in buying the Chicago Tribune. Under his editorial direction this journal soon became an aggressive antislavery organ, exerting wide influence and achieving financial success. Throughout the civil war Mr. Medill sustained the Administration with all his powers. He urged the proclamation of emancipation long before it was made. Later he opposed President Johnson's scheme of reconstruction, defended the impeachment proceedings, and supported the reconstruction acts of Congress. Early in 1868 he began urging Gen. Grant for the presidency. In 1870 Mr. Medill was a member of the Illinois Constitutional Convention, and in 1871 he was appointed a member of the first Civil Service Commission. He prepared a special report favoring a single presidential term of six years, but before he was able to urge his proposed reform Chicago was devastated by the great fire, and he was elected mayor of the stricken city. During his tenure of this office he secured a new charter for the city, and had much to do with establishing the Chicago Public Library and the city exposition building. He declined a renomination, returned to journalism, and in 1874 bought a controlling interest in the Chicago Tribune, and became its editor in chief. In 1882-'83 he inaugurated the high license and local option movement in Illinois, and in 1888-'89 carried on an agitation for annexation to the city of its thrifty suburbs. Both movements were successful.

Mergenthaler, Ottmar, inventor, born in Württemberg, Germany, May 10, 1854; died in Baltimore, Md., Oct. 28, 1899. He learned the trade of watchmaker in his native place, and at the age of eighteen came to this country, penniless and friendless. His first work was in the service of the Government in Washington. There he was employed four years on the mechanism of clocks and bells and signal service apparatus. His inventive genius manifested itself in several improvements which he made in signal service apparatus, and in 1876 he became connected with a mechanical engineering firm in Baltimore, and made his home in that city. The conception of the linotype was due primarily to James O. Clephane, a Washington stenographer, who had made the study of writing and printing machines a hobby for twenty years. Mr. Clephane employed the Baltimore firm to make some models from the drawings of a Western inventor, and Mr. Mergenthaler, who showed much aptitude in the work, took an interest in the idea of inventing a typesetting machine, and began to make experiments on his own account. For four years he devoted all his spare time to the invention of the machine. His first idea took the form of a rotary machine, with keys for impressing female dies in a continuous strip of heavy paper, which was cut into short lengths for adjustment as the matrix of a column of type. This was

superseded by a machine controlling a series of sliding bars, each bearing on one edge all the characters and spaces. A key mechanism moved these bars endwise, so as to bring a selected character on any bar in line with a selected character on any other, and thus form the matrix of a complete line of casting. In 1880 he made a complete change of system, and adopted the plan that he brought to perfection in the linotype. Finally he had a machine that, by action of a keyboard something like a typewriter, would set a line of key dies or types, justify it to any exact width, and cast it into a solid line of lead or type metal. Yet his work was not done, for after he had accomplished all this and had secured his patents another obstacle seemed to baffle him. Men of money discredited his machine even after they had seen it work. Publishers said it was impracticable. They were willing to try his device, but they did not care to take any risks. He at last succeeded in organizing a company with small capital, which in the next three years was consumed in efforts to place the linotype in the composing room of some daily newspaper. The machine had a trial by the New York Tribune, but its work was still crude. It was not until the linotype company bought the Rogers spacer that the machine became a success.

Merrill, Samuel, Governor, born in Turner, Me., Aug. 7, 1822, died in Los Angeles, Cal., Aug. 31, 1899. He received a common-school education, and in 1847-'56 was engaged in business in New Hampshire and served two terms in the Legislature. In 1856 he went to Iowa, and in 1860 was elected to the Legislature of that State. He entered the National army as colonel of Iowa volunteers in 1862, and served till seriously wounded at Black River Bridge. In 1868-'72 he was Governor of Iowa.

Miles, William Porcher, lawyer, born in Charleston, S. C., in July, 1822; died in Burnside, La., May 11, 1899. He was graduated at Charleston College, and was for several years assistant Professor of Mathematics there. In 1855, when yellow fever was raging in Norfolk, Va., he volunteered for relief work in that city, and on returning to Charleston was elected mayor with no opposition. He inaugurated a new police system and the system of tidal drains. In 1856, 1858, and 1860 he was elected to Congress. He was elected to the South Carolina convention that adopted the ordinance of secession, and after the convention he resigned his seat in the Federal Congress, became a colonel in the Confederate army, and was a member of the Confederate Congress. After the war he lived in retirement till 1877, when he was chosen president of the University of South Carolina. He occupied this office several years, resigning to take the management of the large sugar plantation that had come to his wife from her father.

Miley, John David, military officer, born in Illinois about 1864; died in Manila, Philippine

Islands, Sept. 19, 1899. He was graduated at West Point in 1887, and entered the army as an additional second lieutenant in the 5th Artillery. The same year he was transferred to the 4th Artillery as second lieutenant, and then to the 5th. He was promoted first lieutenant, Feb. 3, 1894, and was transferred to the 2d Artillery, May 4, 1898. In the volunteer service for the war against Spain he was commissioned major and assistant adjutant general, July 12, 1898, and lieutenant colonel and inspector general on Sept. 8. At the beginning of the war he became an aid-de-camp on the staff of Gen. Shafter, and first distinguished himself as an executive officer in relieving the congestion at Tampa, Fla., incident to the debarkation of the 5th Army Corps for Cuba. Later he made himself indispensable to his chief by his sound judgment and his enormous capacity for detailed work. He displayed conspicuous bravery in the fight on July 1, and was appointed a commissioner with Gens. Wheeler and Lawton to negotiate terms for the surrender of Santiago. After Gen. Toral surrendered the city and the Spanish forces under his command Major Miley was sent into the interior to receive the surrender of the garrisons there, which duty he accomplished with unusual tact in view of the fact that these garrisons had not been informed of the surrender at Santiago. At the close of the campaign Gen. Shafter recommended the promotion of his aid to brigadier general of volunteers. After his return to the United States, and at his own request, Major Miley was detailed to duty on the staff of Gen. Otis, who appointed him inspector general and, later, collector of the port. He published *In Cuba with Shafter* (1899).

Miller, Henry Carlton, jurist, born in Covington, La., in 1828; died in New Orleans, La., March 5, 1899. He studied law with his father, who for many years was reporter of the Supreme Court of Louisiana. On the secession of the State he resigned his office of United States attorney, and soon afterward was appointed district attorney of the Confederate States. After the war he resumed private practice. He became counsel for large corporations and also for the New Orleans Board of Liquidation, and for the latter he prepared the plan under which the debt of the city was settled. For several years he was Professor of International Law in Tulane University, and at his death he was dean of its law college. In 1894 he became an associate justice of the Supreme Court of Louisiana, and two years later he was reappointed for a term of twelve years.

Miller, Lewis, philanthropist, born in Greentown, Ohio, in 1829; died in New York city, Feb. 17, 1899. In early youth he was apprenticed to the machinist's trade, and after serving his time he opened a shop in Canton and manufactured agricultural implements. He was one of the first to produce a practical reaping and binding machine, and he brought out a variety of mowing and thrashing machines of his own designing. His ventures were so successful that five years after establishing himself in Canton he erected an additional and much larger plant in Akron, and a few years thereafter he put up a third plant in Mansfield. From boyhood he was actively employed in Sunday-school work, and soon after going to Akron he established a Sunday school that was at that time unique, and that became known as the model Sunday school of the country. He built a semicircular school-room with large sliding doors, by means of which the classrooms could be converted into a commodious auditorium. Piano and cornet music was introduced, and every effort was made to

render the Sunday-school hour attractive. In 1873 he laid before Bishop John H. Vincent and other Methodist clergymen the scheme since developed into the Chautauqua Assembly. Scarcely a change was made in his original plan, and the assembly was organized on a strictly nonsectarian basis, with himself as the first and only president till his death. Mr. Miller acquired large wealth, and gave handsome sums to religious and charitable institutions.

Moody, Dwight Lyman, evangelist, born in Northfield, Mass., Feb. 5, 1837; died there, Dec. 22, 1899. For a hundred years the family of Mr. Moody has lived in the beautiful town where he was born and where he died. It is the site of the great schools which in his later years he founded and built up, representing an outlay of nearly \$1,000,000, and having at the present time about 1,000 pupils, boys and girls, located severally in the Northfield Seminary and the Mount Hermon School for Boys. His father died when he was little more than an infant, leaving him, 7 brothers, and 1 sister a care upon his widowed mother, who struggled heroically through all the years of his youth to keep her home and rear her family, which amid great but cheerful and hopeful poverty she did. Mr. Moody's education was such only as a not particularly studious boy might gain at the intermitting district schools of his neighborhood. At the age of seventeen he went to Boston to seek his fortune. He was for two years a clerk in a shoe store, during which time he was converted and united with the Mount Vernon Congregational Church, Rev. Dr. Kirk, pastor. In 1856 he removed to Chicago, and engaged actively in Sunday-school mission work, gathering a Sunday school of more than 1,000 pupils. Two years later he gave up business entirely to devote himself to Christian work. He was in service in connection with the Christian Commission during the civil war, and after the war he took up work as general missionary of the Young Men's Christian Association in Chicago, and practically became the head of that movement. He built a church for his Sunday school and the converts gathered through his intense ministry in Chicago. This church was burned in the great fire of 1871, but was rebuilt, and is now known as the Chicago Tabernacle, one of the largest church buildings in the country, to which has been attached the great Chicago Training School for lay Christian workers and foreign missionaries. Mr. Moody was much devoted to evangelistic work during this period. He had twice visited England, but on tours of observation rather than for active work. In the summer of 1871 he was joined by Ira D. Sankey, his famous colleague. Quite unknown to the English Christian world, they together, in 1873, visited Great Britain, and in York began work in a very obscure and quiet way. The work grew rapidly, and the fame of it spread. Subsequently, by invitation, they visited Sunderland, Newcastle-on-Tyne, and other places. They were visited by important delegations from Edinburgh, and accepted an invitation to that city, where their work was greatly blessed, even to the revolutionizing of the spiritual methods and conditions throughout Scotland. All Scotland was aroused, and great meetings followed in Glasgow, Dundee, and other centers. Thence they went to Ireland, where they visited the chief cities, and wrought with equal success; and thence back to England, holding enormous meetings in Liverpool, Manchester, Birmingham, and London. In the latter city the meetings in Agricultural Hall called out audiences of 10,000, 15,000, and 20,000. On one occa-

sion 17,000 men gathered to hear him. Great interest was now awakened in this country, to which he returned in 1875. Immense meetings were begun in Philadelphia, continuing from November, 1875, to Jan. 16, 1876; then similar meetings were held in New York from February to April, 1876; then in Chicago from October, 1876, to January, 1877; and then in Boston in February, 1877, where an immense tabernacle was built at a cost of \$40,000, and where for four months 3 meetings were held daily, with 5,000 to 10,000 persons in attendance. Most of the principal cities of the United States were in a similar manner visited by Mr. Moody and his singing companion, Mr. Sankey, who continued his coadjutor until the end of his life. They revisited Great Britain in 1881, practically going over the old ground in Scotland and England, and meeting with great success. This campaign lasted the greater part of three years. After a brief return for five months to the United States, they went again to London, in the autumn of 1883, for the great campaign, and with the aid of 3 large movable tabernacles, each with a seating capacity of 7,000 to 10,000 persons, every part of that vast city was reached, and many thousands of men and women were converted to Christ. Mr. Moody's last visit abroad was to Scotland, in 1891, when he preached in 99 towns and cities. Thence he went for a brief visit to Palestine (his only holiday), and returned to the United States, never again to leave his own land. In the interval between these more conspicuous campaigns he was a tireless worker. In 1879 Mr. Moody opened a small school in his own house in Northfield for the education of poor but clever girls from the immediate vicinity, and in 1880 the foundation of the first of the now famous school buildings was laid. These buildings have risen to more than 50 in number, all substantially built of brick and stone, and the whole plant representing a cost of about \$1,000,000, with nearly 1,000 pupils. For twenty years Mr. Moody devoted his summers to these schools and to the conduct of the great Northfield summer religious conferences. His last work was in Kansas City, in the winter of 1899, where he was addressing audiences of 5,000 persons daily. In the midst of one of these meetings he was stricken with heart failure. He lived to get to his home in Northfield, where he died and is buried, beloved and mourned by millions of people who had been blessed by his ministry. His most conspicuous characteristics were his singleness of purpose, his undying enthusiasm, his indomitable will, his great common sense, his mastery of men, his great organizing ability, and his wonderful power of speech, together with that mysterious quality which we call personal magnetism. It is estimated that he addressed more than 50,000,000 persons during the course of his public life. His publications include *The Second Coming of Christ* (1877); *The Way and the Word* (1877); *Secret Power, or the Secret of Success in Christian Life and Work* (1881); and *The Way to God, and How to Find it* (1884). Besides these, several collections of his sermons appeared in book form. His published sermons and addresses have been translated into most of the languages of Europe and into some of the Oriental tongues, and their circulation has been enormous.

Moonlight, Thomas, diplomatist, born in Forfarshire, Scotland, in 1832; died in Leavenworth, Kan., Feb. 7, 1899. He came to the United States in 1846. At the beginning of the civil war he enlisted in the regular army, and during its progress he was commissioned colonel of vol-

unteers. In 1869 he was elected Secretary of State of Kansas, in 1873 a State Senator, in 1883 became Adjutant General, and in 1886 was defeated as Democratic candidate for Governor. In December, 1886, he was appointed Governor of Wyoming Territory. Early in 1894 he was appointed minister to Bolivia.

Moore, Clara Jessup, author, born in Philadelphia, Pa., Feb. 16, 1824; died in London, England, Jan. 5, 1899. She was a daughter of Augustus E. Jessup, the scientist of Major Long's expedition to the Yellowstone in 1816, and the widow of Bloomfield H. Moore, a paper manufacturer, from whom she inherited large wealth. She was educated in New Haven, Conn., was married in Philadelphia in 1842, and became a widow in 1878. More than a quarter of a century ago she became widely known as a writer of fiction and poetry, under the name of Mrs. Clara Moreton. Soon after the civil war began she established the Women's Pennsylvania Branch of the United States Sanitary Commission and the special relief committee for hospital work, and later projected and aided in founding the Union Temporary Home for Children in Philadelphia. About 1880 she established the Bloomfield Moore Art Collection in the Franklin Institute, Philadelphia, and afterward she provided the means for enlarging and maintaining that collection. In 1887 she made her permanent residence in London. From about 1881 till his death, in 1898, John E. W. Keely, of mysterious motor fame (see *Annual Cyclopædia* for 1898, page 551), was dependent on Mrs. Moore's bounty. She appeared to have implicit confidence in his integrity and theories, and supplied him with the means both to live and to continue his "experiments." The revelation of his imposition gave her a shock from which she never recovered. Mrs. Moore's publications include *The Diamond Cross* (Philadelphia, 1857); *Mabel's Mission*; *Master Jacky's Holiday*; *Poems and Stories* (1875); *On Dangerous Ground* (1876); *Sensible Etiquette* (1878); *Gondaline's Lesson* (1881); *Slander and Gossip* (1882); *The Warden's Tale*, and *Other Poems, New and Old* (London, 1883); and *Ether, the True Protoplasm*, in which she tried to explain the secret of Keely's alleged discovery (1885).

Moran, Mary Nimmo, artist, born in Strathavon, Scotland, May 16, 1842; died in East Hampton, Long Island, Sept. 25, 1899. She became the pupil of Thomas Moran, the artist, and married him in 1863. Continuing her studies, she devoted some years to painting, both in oil and in water colors, and exhibited in the National Academy and in the American Water-color Society. She went abroad with her husband in 1867, and studied in the galleries of Europe. In 1872 they removed from Philadelphia to New York, and in 1884, they established their summer home in East Hampton. In 1874 Mrs. Moran made a tour of the far West. Although she is best known as an etcher, her canvases possessed an equal charm for their truthfulness. Nearly all her works, whether paintings or etchings, were made directly from Nature. Her first etching—a bridge over the Delaware, at Easton, Pa.—showed a remarkable perception of the requirements of the art. This was followed by others, in which she developed such strength of technical skill and individuality of expression that she was elected to membership in the New York Etching Club and in the Royal Society of Painter-Etchers of London. Her style shows great originality, broad treatment, and bold execution. To the Exhibition of the Woman Etchers of America, at the New York Union League Club, in 1888,

Mrs. Moran contributed 68 examples of her work, many of the plates being large. Her more important etchings include East Hampton Barrens, Twilight, Twixt the Gloaming and the Mirk, Point Isabel, Fla.; The Goose Pond, East Hampton; Georgica Pond, An Old Homestead, East Hampton; A California Forest, and The Haunt of the Muskrat. At the Chicago Columbian Exposition, in 1893, she received a medal and a diploma for etchings. Mrs. Moran had a finely cultivated intellect and a wide range of interests, including intimate

knowledge of trees and flowers and practical work among them. As wife, mother, home maker, neighbor, and friend she possessed all the qualities that brighten life and dignify womanhood—a rounded character, perfect in its naturalness and simplicity.

Murray, James Ormsbee, educator, born in Camden, S. C., Nov. 27, 1827; died in Princeton, N. J., March 27, 1899. He was graduated at Brown University in 1850, spent a year there as instructor in Greek, and was graduated at Andover Theological Seminary in 1854. Soon afterward he was called to the pastorate of the Congregational Church at South Danvers (now Peabody), Mass., where he remained till 1861. He then spent four years with the Prospect Street Church in Cambridgeport, which he left to become the associate of the late Rev. Dr. Gardiner Spring, in the Brick Presbyterian Church, New York. On the death of Dr. Spring, in 1873, Dr. Murray succeeded to the pastorate. His connection with Princeton University began in 1874, when he was elected Professor of Belles-Lettres and English Language and Literature. In 1886 the office of dean of the faculty of Princeton was created, and Dr. Murray was chosen its first incumbent. He was also elected a trustee of the college in 1867 and 1883. In 1867 he received the degree of D. D. from Princeton, and in 1885 that of LL. D. from Brown. The respect in which he was held by the students is best attested by the fact that he never was nicknamed, but was always spoken of as Dr. Murray or the dean. He was especially popular in his lectures on the poets, dramatists, and prose writers of the seventeenth, eighteenth, and early part of the nineteenth centuries. His publications include *Life of Francis Wayland*; *George Ide Chace: A Memorial*; *Introduction, with Bibliography, to Cowper's Poetical Works*; *William Gammell: A Biographical Sketch, with Selections from his Writings*; *Lectures on English Literature*; and a compilation of Church hymns, *The Sacrifice of Praise*.

Nafsiger, Christian, clergyman, born in Hesse-Nassau, Germany, May 30, 1819; died in Hopedale, Ill., March 6, 1899. He was educated at Augsburg, Bavaria. In 1845 he settled in Pekin, Ill., and in March, 1855, he was appointed minister of the Amish Mennonite Church, at Hopedale, Ill., and in October, 1861, was made its senior bishop. He furnished the site and superintended the erection of the present church.

Neely, Henry Adams, clergyman, born in Fayetteville, N. Y., May 14, 1830; died in Portland, Me., Oct. 31, 1899. He was graduated in 1849 at Hobart College, where he was subsequently tutor. He took deacon's orders in the Episcopal Church in 1852, and was admitted to the priesthood in 1854. He was successively rector of Calvary Church, Utica, N. Y. (1853-'55), and Christ Church, Rochester, N. Y. (1855-'62), and from 1862 to 1864 was chaplain of Hobart College. From 1864 he was an assistant at Trinity Church, New York city, till he was elected Bishop of Maine in October, 1866. For some years he was rector of St. Luke's parish, Portland, but on the establishment of a diocesan fund for the support of the episcopate he resigned this office. Through his efforts St. Luke's Cathedral and the bishop's residence were erected, and he was instrumental in establishing St. Catherine's Hall as a girls' school, at Augusta, and St. John's School for Boys, at Presque Isle. He was an extremely conservative High Churchman, his doctrinal position not differing essentially from that of the early Tractarians in England. In the matter of ceremony he was not a ritualist, and the service at St. Luke's Cathedral was very simple. Yet he was a broad-minded man in spite of his theological position, and was on cordial terms with clergymen of his Church who held views widely differing from his, as well as with clergymen of other churches.

Newman, John Philip, clergyman, born in New York city, Sept. 21, 1826; died in Saratoga, N. Y., July 5, 1899. He studied theology, was received into Oneida Methodist Episcopal Conference, and began preaching in 1840. His first pastorate was in Canastota, N. Y. In 1855 he was transferred to Troy Conference, and in 1857 was appointed to a charge in Albany, where he began to attract attention as a preacher. In 1860-'61 he studied abroad and visited Egypt and Palestine. On his return he was stationed in Hamilton and Albany, N. Y., in New York city, and in 1864-'69 in New Orleans, where he established several conferences, two colleges, and the *New Orleans Advocate*. In 1869 he was called to the Metropolitan Church in Washington, D. C. He was pastor there three years, and again in 1875-'78. He was chaplain of three Congresses, and was appointed by President Grant inspector of United States consulates in Asia. In 1879 he went to the Central Methodist Church, New York city, and in 1882 to Madison Avenue Congregational Church, where he remained two years. He then visited California, returning East in season to be with Gen. Grant in his fatal illness. In 1885 he entered on a third pastorate of the Metropolitan Church, and three years later he was elected bishop. He received the degree of D. D. from the University of Rochester in 1883, and of LL. D. from Grant Memorial and Otterbein Universities in 1881. Bishop Newman was noted for his eloquence. His publications include *From Dan to Beersheba* (New York, 1864); *Babylon and Nineveh* (1875); *Christianity Triumphant* (1884); *Evenings with the Prophets on the Lost Empires and America for Americans* (Washington, 1887); and *The Supremacy of Law* (1890).

Nichols, Henry E., naval officer, born in New York; died off Paranaque, Philippine Islands, June 10, 1909. He entered the United States Naval Academy, Oct. 1, 1861, and was promoted ensign, Dec. 1, 1866; master, March 12, 1868; lieutenant, March 20, 1869; lieutenant commander, Jan. 1, 1881; commander, June 25, 1891; and captain, March 3, 1899. He served

on ordnance duty in Pittsburg, on the Coast Survey in 1876-'77, on the European station in 1878, and again on the Coast Survey, as commander of the Hassler, in 1880-'84. In 1886-'87 he was inspector of one of the new steel cruisers, in 1887-'90 again on the Coast Survey, and in 1897 took command of the Bennington, with which he joined Admiral Dewey's fleet at Manila in July, 1898. On Jan. 26, 1899, he received command of the double-turret monitor Monadnock, on which he performed an unusual amount of work, as his vessel was especially relied on to assist the army in the movements north of Manila. For nearly two months prior to his death the Monadnock had been lying off Paranaque, under fire almost daily from the insurgents. The heat was intense, and officers and crew suffered so severely that Admiral Dewey wished to relieve the Monadnock with another ship, but Capt. Nichols and his men preferred to remain till Paranaque was captured. On June 10 the Monadnock was engaged all day in shelling the insurgent trenches. While the fight was in progress Capt. Nichols was overcome by the heat, and he died a few hours later.

Oglesby, Richard James, lawyer, born in Oldham County, Kentucky, July 25, 1824; died in Elkhart, Ill., April 24, 1899. At eight years old he was taken into the family of an uncle, with whom he removed to Decatur, Ill., in 1836. He

learned the carpenter's trade, and worked at it, at farming, and at rope making till 1844, meanwhile applying all his spare time to study. In the autumn of 1845 he was licensed to practice law. He enlisted in the 8th Illinois Infantry in 1846, was elected a lieutenant before leaving home, and with his regiment took part in the siege of Vera Cruz

and the battle of Cerro Gordo. Returning to Decatur in 1847, he took an additional course of study at the Louisville Law School, where he was graduated in 1848. In 1849 he went to California, where he worked two years in the mines, and then resumed practice in Decatur. He was elected to the State Senate in 1860, and served during that session, but early in 1861 he resigned to enter the army as colonel of the 8th Illinois Volunteers. He commanded a brigade at the capture of Forts Henry and Donelson; was promoted brigadier general of volunteers, March 21, 1862; distinguished himself at the battles of Pittsburg Landing and Corinth, where he was wounded and disabled from duty till April, 1863; and was promoted major general, to date from Nov. 20, 1862, and assigned to the command of the 16th Corps. In May, 1864, he resigned his commission because of his wounds, leaving the service with the reputation of being the most-beloved officer in the Western army. He was elected Governor of Illinois as a Republican in November, 1864, and in 1872 was elected for a second term. A few days after his second inauguration he was elected to the United States Senate, and in 1878 declined a re-election. In November, 1884, he was again elected Governor, and after this term he retired to private life. During his first term as Governor he was active in carrying out war measures.

O'Hara, William, clergyman, born in Limavady, County Derry, Ireland, in 1817; died in Scranton, Pa., Feb. 3, 1899. In 1820 he accompanied his parents to Philadelphia. He was graduated at Georgetown College, and there spent several years at the Urban College of the Propaganda, Rome. In 1843 he was ordained, and during the following thirteen years he was pastor of St. Patrick's Church, Philadelphia. He was also for many years rector and professor in the Theological Seminary of St. Charles Borromeo. In 1860 he was appointed vicar general of the diocese of Philadelphia, and in 1868, when the diocese of Scranton was set off, he was chosen its first bishop. His jurisdiction comprised Luzerne, Lackawanna, Bradford, Susquehanna, Wayne, Tioga, Sullivan, Lycoming, Pike, and Monroe Counties, which then together had only 50 Roman Catholic churches, 28 priests, and 1 religious community. Twenty years afterward the diocese had 74 churches, 79 priests, 46 stations, and 12 convents.

Ormiston, William, clergyman, born in Symington, Lanarkshire, Scotland, April 23, 1821; died near Los Angeles, Cal., March 19, 1899. When thirteen years old he went with the family to Canada, settling about 40 miles from Toronto. He was graduated at Victoria College, Cobourg, Canada, in 1848, and in 1849 was ordained to the ministry of the United Presbyterian Church. During 1849-'53 he held a pastorate at Clark, Canada; in 1853-'57 he was mathematical master and lecturer in natural philosophy and chemistry in Toronto Normal School; in 1854-'57 was examiner in Toronto University; and in 1853-'63 was superintendent of classical schools in the province of Ontario. From 1857 till 1870 he was also pastor of the Central Presbyterian Church in Hamilton, Ontario. In the last year he accepted a call to the Collegiate Reformed Church in New York city, where he ministered till 1888, when a throat affection caused him to resign. He then removed to California, and for six years discharged pastoral duties in the Presbyterian Church at Pasadena. In 1859, while Moderator of the United Presbyterian Synod of Canada, he initiated a movement that resulted in 1861 in the union of the United Presbyterian and the Free Churches, and in 1869 he was Moderator of the united synods. He received the degree of D. D. from the University of the City of New York in 1865, and that of LL. D. from Victoria College in 1881.

Orton, Edward, geologist, born in Deposit, N. Y., March 9, 1829; died in Columbus, Ohio, Oct. 16, 1899. He was graduated at Hamilton College in 1848, and studied theology at Lane and Andover Seminaries, after which he studied in Lawrence Scientific School of Harvard. In 1856 he was called to the chair of Natural Science in the normal school in Albany, N. Y., where he remained until 1865, when he accepted a similar chair in Antioch College, Yellow Springs, Ohio, of which institution in 1873 he became president. On the organizing of the Ohio State Agricultural and Mechanical College in 1873 he was called to its presidency, with special charge of the department of geology. In 1880 he resigned the higher office, but retained his professorial charge. The splendid collection of specimens from every part of the State was gathered by him, and when a building was erected to receive the collections it was named Orton Hall. In 1869 he was appointed an assistant on the Geological Survey of Ohio, and he continued in that service until 1875. Later he returned to the survey, and in 1881 was made State geologist, in which office he continued until

his death. He was also at various times in the service of the United States Geological Survey and the Geological Survey of Kentucky. In 1884-'85 he presided over the Ohio State Sanitary Association, and later over the Ohio Academy of Sciences. He was chosen president of the Geological Society of America in 1896, and two years later of the American Association for the Advancement of Science. The degree of Ph.D. was conferred on him by Hamilton in 1876, and in 1881 the Ohio State University gave him that of LL.D. Dr. Orton was the author of many scientific papers, reports, and addresses. In geology he specialized on the economic products of Ohio, devoting chief attention to petroleum and its products, and under the auspices of the survey he published *Economic Geology of Ohio* (2 vols., Columbus, 1883-'88) and *Petroleum and Inflammable Gas* (1887). (See his portrait on page 35.)

Pacheco, Romualdo, diplomatist, born in Santa Barbara, Cal., Oct. 31, 1831; died in Oakland, Cal., Jan. 23, 1899. He was educated by private tutors, and was engaged in nautical and agricultural pursuits till he entered political life. In 1851 he was elected to the State Senate, in 1853 to the State House of Representatives, in 1855 county judge for a term of four years, and in 1861 to the Senate again. He was elected State Treasurer in 1863, and a State Representative again in 1868. In 1871 he was elected Lieutenant Governor on the ticket headed by Newton Booth, Independent, and in 1875, when Gov. Booth was elected to the United States Senate, he succeeded him as Governor. In 1876 Gov. Pacheco was a Republican candidate for Congress, and received the certificate of election, but after he had taken his seat the House declared his Democratic competitor legally entitled to it. In 1878 and 1880 he was elected beyond any doubt, although in the last contest his majority was only 135 in more than 34,000 votes. He was appointed minister to Guatemala and Honduras in 1890.

Page, Thomas Jefferson, naval officer, born in Gloucester County, Virginia, in 1808; died in Rome, Italy, Oct. 26, 1899. He was a grandson of Thomas Nelson, Jr., a signer of the Declaration of Independence. He was appointed midshipman on the flagship *Erie* in the West Indies, and served later on the *Hassler* in coast surveys. He was next sent as commander of the *Dolphin* to the China seas, which were then infested with pirates, where he captured several pirate junks. For a time he was attached to the Naval Observatory in Washington. In 1851 he was sent in command of an expedition in the *Water Witch* to explore the basin of the river La Plata. This mission occupied him three years, and his report went through two editions in English and one in Spanish. He was sent in 1858 with a fleet to continue his explorations, which included many rivers in Paraguay, Bolivia, and Brazil. A few weeks before the civil war opened he resigned his commission, and also declined an offer of admiral's rank in the Italian navy, and entered the Confederate service. After the war he spent some time on a cattle farm in Entre Rios, Argentine Republic, and later superintended in England the construction of four ironclads for the Argentine navy. During the last twenty years he resided in Italy.

Partridge, Frederick W., military officer, born in Norwich, Vt., Aug. 19, 1824; died in Sycamore, Ill., Jan. 22, 1899. He was educated at the academy in Norwich, was a student in Dartmouth College till his father's death, and in 1845 became an instructor in Harrisburg (Pa.) Military College. In 1847 he was sent on a secret

mission to Mexico by President Polk, especially charged with reporting on the conduct of operations at the front. Being necessarily without credentials, he was captured as a spy, and was confined at San Juan de Ulloa till released on orders from Washington. After the war he settled in Kendall County, Illinois, and resumed the study of law. On admission to the bar he began practicing in Sandwich, Ill. At the outbreak of the civil war he was commissioned a captain in the 13th Illinois Infantry. He was promoted major in June, 1861; lieutenant colonel in December, 1862; and colonel, for gallantry in the battle of Lookout Mountain, June 18, 1864. After the battle of Ringgold Gap he was brevetted brigadier general of volunteers. Gen. Partridge was wounded at Chickasaw Bayou, Chattanooga, and Ringgold Gap. After the war he resumed law practice in Sandwich and Chicago, was postmaster at Sandwich several years, and served a term as clerk of the Circuit Court of De Kalb County. In 1869 he became consul general at Bangkok, Siam, where he served eight years. While at this post he did much to secure greater protection for Christian missionaries and native converts, and gathered materials for a projected publication on his observations, which were subsequently lost in the burning of his home. In 1882-'89 he was a special examiner for pensions.

Paterson, William, jurist, born in Perth Amboy, N. J., May 31, 1817; died there, Jan. 1, 1899. He was a son of William Bell Paterson, a distinguished lawyer, and the last surviving grandson of William Paterson, second United States Senator from New Jersey. He was graduated at Princeton in 1835, was admitted to the bar in 1838, was defeated for the Legislature in 1840, and was elected in 1842 and 1843. While in the Legislature he was influential in securing the abolition of imprisonment for debt and the property qualification for the franchise. He also promoted the movement for the State Constitutional Convention of 1844, and was its secretary. In 1847 and 1857 he was deputy collector of internal revenue, and in 1864 was president of the New Jersey Electoral College. Between 1846 and 1878 he was elected mayor of Perth Amboy five times. He was appointed a judge of the New Jersey Court of Errors and Appeals in 1882, and served seven years. Although a staunch Democrat for fifty years, Judge Paterson actively opposed the candidacy of Grover Cleveland. With his twin brother he published *Poems of Twin Graduates of the College of New Jersey* (1882).

Payne, Charles Henry, educator, born in Taunton, Mass., Oct. 24, 1830; died in Clifton Springs, N. Y., May 5, 1899. He was graduated at Wesleyan University in 1856, and studied theology at the Concord (N. H.) Biblical Institute. In 1857 he was admitted into the Providence Conference, whence he was transferred to the East New York Conference, and was assigned to St. John's Church, Brooklyn. Subsequently he held appointments in Philadelphia and Cincinnati till 1875, when he was elected president of Ohio Wesleyan University. He resigned in 1888 to become corresponding secretary of the Board of Education of the Methodist Episcopal Church. He received the degree of D.D. from Dickinson College in 1870, and that of LL.D. from the Ohio State University in 1876. Dr. Payne was a member of the committee to revise the hymn book of his Church in 1876, of the Ecumenical Methodist Conference in London in 1881, and of the General Conference of his Church in five sessions. His publications include the pamphlets *The Social Glass* and *Christian Obligation* (1868); *Shall our*

American Sabbath be a Holiday or a Holy Day? (1872); and Daniel, the Uncompromising Young Man (1872), as well as Guides and Guards in Character Building (New York, 1883).

Peak, William Henry, singer, born in Boston, Mass., about 1820; died in Belvidere, Ill., July 11, 1899. His first public appearance is said to have occurred when he was seven years of age, but his real *début* was in what was known as the Peak Quartet, organized and engaged by the temperance societies of Boston to travel with the celebrated lecturer, John B. Gough. The other members of this family of vocalists were young Peak's father, mother, and uncle. They aided in giving entertainment to Mr. Gough's great audiences two years, and then began a series of concerts under their own management. Their first ventures were very modest, and the only instrument for accompaniment which they could carry was a small melodeon. William and his sister Julia shortly added guitars, and these two subsequently became very skillful on the harp. The celebrated staff bells, from the use of which this family came to be known as the Original Swiss Bell Ringers, were added through the ingenuity of William, who began with swinging bells and gave them up for glasses filled with water to different heights to secure the proper notes. A company of real Swiss bell ringers, having failed to get a favorable hearing in 1847, was obliged to sell its table bells. These the Peaks bought, and forthwith organized themselves into the famous coterie of entertainers named as above. They traveled over the country and gave concerts with great success until 1853. In that year William married at Niles, Mich., Miss Lydia Harris, and left the original family to organize a concert company of his own. His troupe, which eventually succeeded to great fame and emoluments, consisted of himself, his wife, her three brothers, and two talented children. This family continued together until 1875, when it was joined with the Berger family. The business of traveling entertainers, so well done by these families, gradually gave way to the stronger attraction of traveling dramatic companies, and most of the Peaks have been long in retirement.

Pendleton, William Kimbrough, educator, born in Yanceyville, Va., Sept. 8, 1817; died in Bethany, W. Va., Sept. 1, 1899. At the University of Virginia he completed an elective course, and was graduated in law. In 1841 he was associated with Alexander Campbell in the founding of Bethany College, West Virginia, and in 1866 became its president. From 1846 he was co-editor of the *Millennial Harbinger*, and he was from its foundation on the editorial staff of the *Christian Standard*. In 1871 he was unanimously chosen as a representative in the West Virginia Constitutional Convention. His wise judgment, manifested in securing a satisfactory free-school system, led to his being twice called to the office of State Superintendent. In his first term he framed the school law, which, passed by the Legislature, has since stood without material alteration. A list of his public addresses covers most of the practical questions of his time. Shortly before he died he said that, in looking over his editorial career, he had one end in mind, and that was to polish and spiritualize his Church (Disciples of Christ). Others made converts; it was his mission to educate them in all that pertains to life and godliness. In 1887, owing to failing health, he resigned the presidency of Bethany College and removed to Florida.

Pepper, George W., author, lecturer, and clergyman, born in Ballinagarrick, Ireland, July

11, 1833; died in Cleveland, Ohio, Aug. 6, 1899. He was educated at the Royal Academical Institution, Belfast, and when young took part in the temperance agitation under Father Mathew and John Bright. He came to America in 1854, resumed his studies at Kenyon College, Ohio, and subsequently was ordained a minister of the Methodist Episcopal Church. He was a circuit rider, and had various charges in Coshocton, Tuscarawas, and Morrow up to the breaking out of the civil war, when he became a captain in the 18th Ohio Volunteers. He fought in the campaigns from Corinth to Vicksburg. Afterward he was chaplain of the regiment. After the war he remained with the regular army in North Carolina as chaplain, and did much to aid in the educational work among the freedmen. In 1867 he returned to his church work, and had charge of various churches in northern Ohio. In 1889 he removed to Cleveland, Ohio, and in 1890-'95 he was United States consul at Milan, Italy. As "Chaplain Pepper" he was known as a speaker for the Republican party in every presidential campaign for twenty-eight years. He was also well known as a lecturer. He wrote several books relating to the civil war, the chief of which was *Sherman's Campaign in Georgia and the Carolinas*. At the time of his death he had just published *Under Three Flags*, a sketch of his life as preacher, army officer, and consul.

Perkins, Frederic Beecher, librarian, born in Hartford, Conn., Sept. 27, 1828; died in Morristown, N. J., Jan. 27, 1899. He was educated at Yale, but left in 1843 without a degree and began the study of law. Subsequently he entered the Connecticut Normal School, and was graduated in 1852. From 1880 to 1887 he was librarian of the San Francisco Free Public Library. He published *President Greeley*, *President Hoffman*, and *the Resurrection of the Ring* (Burlington, 1872); *Scrope*, a novel (Boston, 1874); *Check List for American Local History* (1876); *Devil Puzzlers*, and *Other Studies* (New York, 1877); *My Three Conversations with Miss Chester* (1877); *Charles Dickens: His Life and Works* (1877); *The Best Reading* (edited); and *Rational Classification of Literature for Shelving and Cataloguing Books for a Library* (San Francisco, 1881). Mr. Perkins was the author of unusually clever short stories, and was greatly esteemed for the accuracy of his historical and antiquarian attainments. He was a grandson of Rev. Lyman Beecher.

Perkins, George Hamilton, naval officer, born in Hopkinton, N. H., Oct. 20, 1836; died in Boston, Mass., Oct. 28, 1899. He was graduated at the Naval Academy in 1856, and on Oct. 20 was ordered to the *Cyane*, Capt. Robb, to cruise in the West Indies; detached from the *Cyane*, Jan. 11, 1858; Jan. 19, ordered to the *Release*, Commander William A. Parker, for the Mediterranean and Paraguay; appointed acting master of the *Release*, Aug. 18, 1858; detached from the *Release* and ordered to the *Sabine* at Montevideo, Capt. H. A. Adams, March 17, 1859; April 29, 1859, ordered to the *Sumter*, Commander Armstrong, as acting master, for a cruise on the west coast of Africa; Sept. 5, 1859, appointed master; Sept. 18, 1861, detached from the *Sumter*. On Dec. 16, 1861, he was ordered to the *Cayuga*, Lieut.-Com. Napoleon B. Harrison, as executive officer. In this vessel he passed Forts Jackson and St. Philip, April 24, 1862, and attacked the Chalmette batteries, April 25, and received their surrender. He landed at New Orleans, and went alone with Capt. Bailey to receive the city's surrender. George W. Cable has written the following description of the scene: "The crowd on the levee

howled and screamed with rage, and now the rain came down in sheets. About one or two o'clock in the afternoon (as I remember), I being again in the store, with but one door ajar, came a roar of shoutings and imprecations and crowding feet down Common Street. 'Hurrah for Jeff Davis! Hurrah for Jeff Davis! Shoot them! Kill them! Hang them!' I locked the door on the outside and ran to the front of the mob, bawling with the rest, 'Hurrah for Jeff Davis!' About every third man there had a weapon out. Two officers of the United States navy were walking abreast, unguarded and alone, looking not to right or left, never frowning, never flinching, while the mob screamed in their ears, shook cocked pistols in their faces, cursed and crowded and gnashed upon them. So through the gates of death those two men walked to the city hall to demand the town's surrender. It was one of the bravest deeds I ever saw done." He engaged in several skirmishes up the Mississippi after the taking of New Orleans. On Oct. 31, 1862, he was detached from the Cayuga and ordered as executive officer to the Pensacola. On Dec. 31, 1862, he was appointed lieutenant commander, and in June, 1863, received command of the gunboat New London, to convey powder and dispatches between New Orleans and Baton Rouge. He ran the batteries at Port Hudson successfully five times, and had a severe skirmish with the enemy at Whitehall's Point, July 9, 1863. On July 31, 1863, he was ordered to the command of the Scioto, for blockade duty off the coast of Texas, and on April 7, 1864, he captured the Mary Sorley, blockade runner, laden with cotton. On April 20, 1864, he was relieved from the command of the Scioto, with leave to proceed north; but he volunteered for the battle of Mobile Bay, and took command of the ironclad Chickasaw, July 28, 1864. In the subsequent operations, resulting in the taking of Mobile, in the reduction of Forts Powell, Gaines, and Morgan, and in the capture of the ram Tennessee, his ship was chiefly instrumental. On July 10, 1865, he was detached from the Chickasaw, with leave to proceed north, and on Nov. 12, 1865, was appointed superintendent of ironclads at New Orleans. On April 16, 1866, he was detached from ironclad duty and ordered north, and on May 17 became executive officer of the Lackawanna, for duty in the north Pacific. On Jan. 2, 1869, he was detached from the Lackawanna, and on March 19 was assigned to ordnance duty at Boston Navy Yard. On Jan. 19, 1871, he was appointed commander, and on March 3 received command of the United States storeship Relief, to convey contributions to the French. From September, 1871, till Jan. 29, 1876, he was on duty in Boston as ordnance officer, and afterward as lighthouse inspector. He commanded the Ashuelot, of the Asiatic squadron, in 1879-'81, was at the torpedo station, Newport, in 1882, and on leave of absence in 1883-'85. He was promoted to captain in March, 1882, and commanded the Hartford, on the Pacific station, in 1885-'86. He was on waiting orders in 1887-'88, on leave of absence in 1889, and on waiting orders again in 1890. He was retired Oct. 1, 1891, and on May 9, 1896, was promoted to commodore for his distinguished services during the rebellion. In 1886 his letters were edited and published under the title *Letters of George Hamilton Perkins*, U. S. N., and they have been used by Alfred T. Mahan in his *Life of Farragut*, and by J. Russell Soley in his books on the civil war. With his letters is included a sketch of his life by Commodore George E. Belknap, which was

originally published in the *Massachusetts Magazine*.

Perry, Amos, historian, born in South Natick, Mass., Aug. 12, 1812; died in New London, Conn., Aug. 10, 1899. He was graduated at Harvard in 1837, and immediately began teaching. Later he was one of the founders of the Rhode Island Institute of Instruction. In 1862 he was appointed United States diplomatic and consular agent at Tunis, and while there he devoted much time to the history and antiquities of the region. His last public service was the preparation of the Rhode Island State census in 1885. Mr. Perry was secretary and custodian of the Rhode Island Historical Society more than twenty-five years. His principal publications are *Carthage and Tunis: Past and Present*, and *An Official Tour along the Eastern Coast of Tunis*.

Pettit, Anna Stockton, biologist, born in Canton, N. Y., in 1863; died in Potsdam, N. Y., July 14, 1899. She was graduated at St. Lawrence University, New York, in 1882, studied drawing and painting and worked with the microscope eight years in New York city, and after a course at Barnard College received the degree of Ph. D. from Columbia in 1894. While prosecuting her studies she married Prof. Herbert D. Pettit, principal of the Lawrence (Long Island) School, in 1888, and for several years she aided him in his educational work. In the winter of 1895 she delivered at Lawrence a course of lectures on biology, and in the following spring was rendered blind and deaf by illness. So intense was her desire to study and teach that in spite of constant suffering she became proficient in the use of the point type for the blind and of the Morse alphabet. A collection of her original researches was published in a pamphlet by Columbia University.

Picking, Henry F., naval officer, born in Somerset, Pa., in January, 1840; died in Charlestown (Mass.) Navy Yard, Sept. 8, 1899. He entered the United States Naval Academy, Sept. 28, 1857; was commissioned an acting master on his graduation, June 4, 1861; was promoted lieutenant, July 16, 1862; lieutenant commander, July 25, 1866; commander, Jan. 25, 1875; captain, Aug. 4, 1889; and commodore, Nov. 22, 1898; and became a rear admiral under the act of Congress of March 3, 1899. His first active service was on the frigate *St. Lawrence*, of the North Atlantic blockading squadron. In 1862 he took part in the sinking of the Confederate privateer *Petrel* and in the memorable Monitor-Merrimac engagement. After a brief service at the Naval Academy in 1864, he was assigned to the monitor *Nahant*, of which he became commander in 1865, and was in several skirmishes with the batteries on Sullivan's island. In 1865-'68 he was with the West India and European squadrons; in 1869-'71 was at the Naval Academy; in 1873-'74 was on ordnance duty at the Washington Navy Yard and attached to the torpedo station at Newport; and in 1887-'89 commanded the naval forces on the Great Lakes. He was ordered to the Charlestown in 1892, and two years later attracted attention during the troubles at Rio de Janeiro by the energetic manner in which he asserted the authority of the United States Government over the interests of Americans, for which he received a letter of thanks from the Secretary of the Navy. On March 25, 1899, he succeeded Rear-Admiral Howison as commandant of Charlestown Navy Yard, where he died suddenly of heart disease.

Pierce, Abbie (Mrs. Harry Colton), actress, born in San Francisco, Cal., in 1862; died there, Oct. 29, 1899. She made her first appearance in

San Francisco, Jan. 9, 1879. In 1860, while playing at the Baldwin Theater, San Francisco, she married Harry Colton, a well-known actor then playing there. In December, 1882, she appeared in New York, playing the leading female rôle in *The Unknown* at the Windsor Theater, with her husband in the principal male character. She was associated with the tours of this play and another of similar character, called *Kentuck*, for several years. One of her most successful parts was Mamie Briscoe in *Passion's Slave*. She played with much success the part of Nellie Denver in *The Silver King* and the leading parts in *Wife for Wife* and *The Wages of Sin*. The death of her husband, with whom she constantly traveled, and her own failing health caused her retirement from the stage in 1890, from which time she lived in seclusion at her home in San Francisco.

Pierce, Henry Miles, clergyman, born in Pawtucket, R. I., Oct. 19, 1820; died in Fayetteville, Ark., Sept. 5, 1899. He was graduated at Brown University in 1842, and was admitted to deacon's orders in the Episcopal Church in 1843 and to priest's orders in 1894. After holding rectorships in Texas, Louisiana, and New Jersey, he became rector of Saint John's Church, at Mobile, remaining there from 1857 to 1868. For nearly two years following he was rector of Saint Paul's Church, at Springfield, Ill., and early in 1870 was consecrated missionary bishop of Arkansas and Indian Territory. In 1871 the diocese of Arkansas was organized, Bishop Pierce becoming its first bishop. In the face of much discouragement he administered diocesan affairs with skill and discretion, and under him the diocese made material advancement. Besides sermons, Bishop Pierce published *The Agnostic, and Other Poems* (New York, 1884).

Pierce, Samuel Everett, editor, born in New York city, Dec. 12, 1826; died in Roxbury, Mass., April 15, 1899. He studied at Princeton College, and was graduated in theology in 1852. He became pastor of the Baptist Church in Gloucester, Mass., and remained there till the beginning of the civil war in 1861. He was then appointed chaplain of the 71st New York Regiment, and participated in the battle of Bull Run. Afterward he was chaplain of the 4th Massachusetts Regiment. At the same time he acted as field correspondent of the *Boston Watchman and Reflector*, and his letters, which bore the signature *Ranger*, achieved a wide reputation. After the war he became associate editor of the *Watchman*, later of the *Christian Era*, and finally of the *Youth's Companion*, with which he remained until his death.

Pierpont, Francis Harrison, "the father of West Virginia," born in Monongalia County, Virginia (now West Virginia), in 1815; died in Pittsburg, Pa., March 24, 1899. He was born in a log cabin, and made his way in the world unaided and by severe toil. His early schooling was exceedingly meager. In college he supported himself by manual labor, and in his vacations carried a hod for bricklayers. After graduation at Allegheny College he engaged in teaching, and when about thirty-two years old he was admitted to the bar. He settled in Fairmount, Marion County, to practice, and soon became widely known as a lawyer of unusual ability and extraordinary energy. He early espoused the cause of abolition, and in the presidential canvass of 1848 was an elector on the Whig ticket, and made a vigorous canvass of Virginia. The civil war found him a staunch Union man. He organized the movement that resulted in the convention of delegates

from all the western counties, who decided that that part of the State should remain loyal to the Union. His activity and commanding influence in this movement attracted the attention of President Lincoln, who frequently sought his advice on matters pertaining to the situation of Virginia. In June, 1861, after the secession of the eastern counties of Virginia, he became Governor of the loyal counties, with headquarters at Wheeling. He was authorized by the President to raise troops for home protection, and a force was sent to give him aid. Gov. Pierpont remained at Wheeling till after the western counties had been organized into the new State of West Virginia and the State had been admitted into the Union with slavery prohibited. He then served as Governor of the loyal part of eastern Virginia from June, 1863, till May, 1865, at Alexandria, and as Governor of all Virginia from May, 1865, till January, 1868, at Richmond. In recent years he had lived quietly with a daughter in Pittsburg.

Pilar, Gregorio del, Filipino insurgent general, died near Cervantes, Luzon, Dec. 3, 1899. He was a mere youth, and was reported to have been graduated at a European university. He was one of the leaders of the anti-Spanish revolution in the Philippine Islands and of the insurgent army under Aguinaldo. In April it was rumored that he was about to desert Aguinaldo and submit to American rule, and in October messages purporting to come from him contained offers to sell out his army and to deliver Aguinaldo into the hands of Gen. Otis. The latter was firmly set against buying any surrenders, and the offers were not considered. In December he was encountered by a battalion of the 33d United States Infantry, under Major March, 18 miles northwest of Cervantes, and killed in the engagement that followed.

Pillsbury, Charles Alfred, manufacturer, born in Warner, N. H., Oct. 3, 1842; died in Minneapolis, Minn., Sept. 17, 1899. He was graduated at Dartmouth College in 1863, spent six years as clerk and partner in a commercial house in Montreal, and in 1869 removed to Minneapolis, where he engaged in milling with his uncle, John S. Pillsbury. About this time innovations were introduced into the art of milling, chief among them the substitution of steel rollers for stones to crush the wheat. Mr. Pillsbury and other millers adopted this system, and for several years enjoyed a monopoly of the "new process." In 1872 he took into partnership his father, George A. Pillsbury, and at a later period his brother, F. C. Pillsbury, also became associated with the enterprise. Till the acquisition of the property in 1890 by an English syndicate the firm was known as C. A. Pillsbury & Co. At the time of his death Mr. Pillsbury was the manager and one of the three American directors of the concern. A feature of the management is a profit-sharing scheme, by which in some years as much as \$25,000 is divided among efficient employees.

Mr. Pillsbury was a Republican in politics, and served as State Senator from 1877 till 1887. He was the author of the famous "bond bill," by which the repudiated bonds of Minnesota were paid after hanging like a cloud over its name for years. He was for many years president of the Minneapolis and Northern Elevator Company.

Plant, Henry Bradley, railroad and steamship promoter, born in Branford, Conn., Oct. 27, 1819; died in New York city, June 23, 1899. He received a common-school education, and in 1837 entered the service of the New Haven Steamboat Company in charge of their express business between New York and New Haven. In 1854 he was appointed superintendent of the southern division of the Adams Express Company, with headquarters at Augusta, Ga. In 1861 he organized the Southern Express Company, of which he was continuously president. During the civil war he had permission to run this express through the lines of the army without hindrance. In 1867 he became president of the Texas Express Company. While traveling in the interests of the Southern Express Company he became impressed with the many opportunities that Florida presented if its railroad facilities were developed, and, acting on this idea, he promoted the building of enormous hotels, the running of railroads, and the formation of steamship lines to make the hotels easy of access. The hotel at Tampa, Fla., one of the largest in the world, was the first of these ventures. It proved a great success, and he immediately began the erection of others. In 1879 he began to secure control of what later became widely known as the "Plant system" of railways and steamships. The railroads that were purchased by him and his associates include the Atlantic and Gulf of Georgia, the Savannah and Charleston, the South Florida, the Brunswick and Western, the Alabama Midland, the Abbeville Southern, and a number of smaller railroads. In 1886 he established the steamship line between Port Tampa, Key West, and Havana, Cuba; later the line running between Boston and Halifax was purchased and chartered as the Canada, Atlantic and Plant Steamship Company (Limited). In 1893 the North Atlantic line was purchased, and the route between Boston, Cape Breton, and Prince Edward Island is now operated by the company of which he was at the head. He left an estate in trust valued at about \$10,000,000. The last codicil of his will purports to extend the trust to great-grandchildren, and his widow contested the will on the ground that the trust was invalid as suspending the ownership of the personality and the alienation of the realty for a longer period than the laws allow.

Pond, George Edward, journalist, born in Boston, Mass., March 11, 1837; died at Spring Lake, N. J., Sept. 22, 1899. He was graduated at Harvard College in 1858 and at the Harvard Law School in 1860. From 1862 to 1864 he served as a first lieutenant of volunteers in the National army, resigning in 1864 to become an associate editor of the Army and Navy Journal. This place he gave up in 1868, but ten years later resumed it. He was also associated in an editorial capacity with the New York Times, the Philadelphia Record, the Galaxy Magazine, and the New York Sun, on which last he was an editorial writer at the time of his death. To the Galaxy he contributed a notable series of Driftwood Essays over the signature Philip Quilibet. In 1883 he published a volume of military history, entitled *The Shenandoah Valley* in 1864, in Scribner's Campaign Series. He wrote the article on

Gen. Philip H. Sheridan in the *Annual Cyclopædia* for 1883, and to *Liber Scriptorum*, the book of the Authors' Club, he contributed remarkably interesting recollections of James Russell Lowell in his intercourse with a select body of students who read Dante with him.

Pope, Charles Bohr (Charles Pope Rohr), actor, born in Weimar, Germany, Feb. 17, 1832; died in New York city, July 2, 1899. His father, who was an architect in Weimar and an intimate friend of Goethe, brought his family to the United States in 1834 and settled in Rochester, N. Y., where Charles learned the printer's trade. His first appearance was in the Rochester Theater, in 1848, in the character of Sir James Blount in *Richard III.* After two months in this theater he joined a traveling company, and then played small parts for a short season in the Adelphi Theater, Washington, D. C. On Dec. 25, 1848, he made his appearance in New York city at the old Broadway Theater as *Danglars* in *The Count of Monte Cristo*. There he remained, rising steadily in position and popularity, for several years. He was in the cast of *The Stranger*, Oct. 8, 1849, when Charlotte Cushman made her homecoming after a triumphant trip to England and Charles W. Coudock made his first appearance in the United States. Finally he attracted the attention of Edwin Forrest for his performance of *Lucius* in *Virginius*, March 19, 1852, who advanced him to the position of second man in his support. He was advanced to leading juvenile man in the support of Miss Julia Dean in 1853, first appearing with her as *Bertrand* in *The Belle of the Faubourg*, Sept. 17 of that year, and *Master Waller* in *The Love Chase* in subsequent performances. He remained at the Broadway until the end of the season of 1853-'54. He played *Salamenes* in the production of *Sardanapalus* at the old Bowery Theater for a short time beginning Sept. 4, 1854, and then for a time was leading man at the New York Theater (subsequently the Winter Garden). The promise of this theater depreciated rapidly, and Mr. Pope accepted a place as leading man of the St. Charles Theater, New Orleans. He remained there for the season, and in the autumn of 1855 went to St. Louis, with whose theatrical history he thereafter was most prominently associated. During the season of 1855-'56 he was the leading support of Miss Julia Dean in her first visit to California, and his acting was received by the Californians with scarcely less enthusiasm than was that of Miss Dean. Returning to the East in the autumn of 1857, Mr. Pope was for a time leading man of the Boston Theater, and then made a tour as principal support with Charlotte Cushman and another with Avonia Jones. Early in 1858 he accepted an invitation from Ben de Bar to play as a star in the West and South. He met with great success in this venture, and was especially popular in St. Louis, New Orleans, Louisville, Cincinnati, and Memphis. His repertory was practically the same as that of Mr. Forrest, Mr. Booth, and other Shakespearean stars. His magnificent and athletic figure, the dignity of his carriage, and the power and sweetness of his voice caused many to regard him as Forrest's equal. In April, 1861, he played on the Pacific coast several months with much good fortune. He remained three years in the far West, and conformed to the custom of the country by losing much of his well-earned fortune in mining speculation. After a short retirement he reappeared at the American Theater, San Francisco, Aug. 21, 1862, in *Schiller's Robbers*, and continued his former success. In 1864 he appeared at Niblo's

Garden, New York, as Chateau Renaud in the Corsican Brothers, Nov. 21, and a few weeks later he took an engagement as a star in German at the Stadt Theater (afterward the Windsor), in the Bowery. On Dec. 23, 1864, he played Othello (in German) there, with Mme. Methuascheller as Desdemona. In April following he returned to Niblo's Gardeh, appearing as Clifford in The Hunchback, with Kate Bateman as Julia. Subsequently he traveled several years as leading support with Edwin Forrest, Charlotte Cushman, Julia Dean, and Mrs. Jean Davenport-Landor. At the beginning of the season of 1868-'69 he took the management of the Indianapolis Theater. In 1867 he had married Miss Margaret E. Macauley, of Indianapolis, sister of the popular actor Barney Macauley. In 1869 he entered into comanagement of the St. Charles Theater, New Orleans, with Ben de Bar, and in 1870 took charge of the new opera house in Kansas City. During all this time he played in the West as a star. In 1874 he became associated with G. R. Spaulding in the management of the Olympic Theater, St. Louis, and he produced there an English adaptation of Salvini's Samson, which was made by William Dean Howells, and was often played by Mr. Pope with great public approval. In the same year he made another successful tour of California. In 1876 he became resident manager of the Varieties Theater, New Orleans, and in 1877 made a starring tour of Australia and New Zealand. With the encouragement of his friends in St. Louis in 1879, he built Pope's Theater, and then retired from active work as a player and devoted himself to its business management. In this he was very successful. In 1888 he sold his theater and ended his association with the drama to enter political life. In September, 1889, he was appointed United States consul at Toronto, Canada. At the incoming of another political party Mr. Pope was superseded, and thenceforward his home was in New York city. His skill as an orator and political debater made his services in campaign work valuable, and he was engaged by his party in that work in the State of New York for several years. In 1898 he made a brief return to the stage in the performance of Shakespearean parts, playing the week of May 7 at the National Theater, Philadelphia, and the week of May 14 at the Bijou Theater, Brooklyn. His last appearance was in the part of Colonel Sapt in Rupert of Hentzau, at Plainfield, N. J., Dec. 10, 1898.

Powell, Aaron Macy, editor, born in Clinton, N. Y., March 26, 1832; died in Philadelphia, Pa., May 13, 1899. He was educated at the New York State Normal School, and for several years previous to the civil war was editor of the Anti-slavery Standard, later called the National Standard. He was secretary of the American Anti-slavery Society from 1866 till 1870, assistant secretary of the National Temperance Society from 1873 till 1894, editor of the National Temperance Advocate and of the Philanthropist, and was president of the National Purity Alliance. His published works include State Regulation of Vice (New York, 1878); The Beer Question (1881); and The National Government and the Liquor Traffic (1882).

Prince, Frederick Octavius, lawyer, born in Boston, Mass., Jan. 18, 1818; died there, June 6, 1899. He was graduated at Harvard College in 1836, studied law, was admitted to the bar in 1840, and began to practice in Boston. He resided in Winchester, and represented that town in the State Legislature in 1851-'53. In the latter year he was a member of the Constitutional

Convention, and in 1855 was elected to the State Senate. In 1860 he allied himself with the Democratic party, and was a delegate to the National Democratic Convention at Charleston, S. C. By that convention he was elected secretary of the National Democratic Committee, and was re-elected to that office successively till 1888. Mr. Prince, having in the meantime become again a citizen of Boston, was elected mayor of the city in 1876, though his party was at that time in the minority. He was defeated for re-election in 1877, was successful in 1878, and was again twice re-elected, serving till the end of 1881. It was largely to his foresight that Boston owes its magnificent system of parks. He also labored successfully for the improvement of its system of sewerage. He was defeated as the Democratic nominee for Governor in 1885.

Putnam, John B., jurist, born in 1829; died in Hong-Kong, China, Nov. 28, 1899. He was elected to the Supreme Court of New York in 1887, and his term would have expired in 1900. In 1891 he was appointed to the General Term of the 3d department. He continued in that office till 1894, when he was designated as one of the justices of the appellate division of the 3d department. His death occurred while he was on his way to visit his son, a lieutenant in the 6th United States Infantry, stationed at Manila.

Rayner, William S., philanthropist, born in Bavaria in 1821; died in Baltimore, Md., March 1, 1899. In early youth he removed to Baltimore. He was a director in the Western Maryland Railroad and of the Western National Bank, and at the time of his death was president of the Kingwood Gas, Coal, and Iron Company, of the Curtis Bay and South Baltimore Harbor and Improvement Companies, and chairman of the Baltimore Equitable Fire Insurance Society. He gave the ground and erected the building of the Hebrew Orphan Asylum, and for many years was a director of the House of Refuge, vice-president of the Poor Association, and a manager of the Home for Incurables. To each of these and of other humane institutions he gave much of his time and wealth.

Rebisso, Louis T., sculptor, born in Italy in 1837; died near Cincinnati, Ohio, May 3, 1899. He took an active part in Mazzini's attempt to establish an Italian republic, and rather than serve a twenty years' imprisonment (the penalty imposed on the rebels by Victor Emmanuel's government) he escaped to an American ship, whose captain took him to Boston. Despite the subsequent amnesty to political prisoners and exiles, he refused to return to his native country. He had studied in Italy with the sculptor Rubatto, and also under Prof. Varni, and after settling in Boston he was employed several years in monumental establishments. His fame as a sculptor began to develop after his removal to Cincinnati, where he worked with T. D. Jones. The first important work that left his studio was the colossal equestrian statue of Gen. James B. McPherson, which was unveiled in Washington, D. C., in August, 1876. In 1887 he was awarded the commission for the Grant monument in Lincoln Park, Chicago, in a competition with 14 other sculptors. He also produced the statue of Gen. William Henry Harrison in Cincinnati and busts and monuments elsewhere. In 1875 he was appointed instructor in the McMicken School of Design (now the Cincinnati Art Academy).

Rector, Henry M., Governor, born in 1816; died in Little Rock, Ark., Aug. 15, 1899. In 1860 he was elected Governor of Arkansas as an Independent Democrat, after an intensely bitter can-

vass. In April, 1861, he refused to furnish the quota of soldiers called for by President Lincoln for the National army. He seized the arsenal at Little Rock and the fort at Fort Smith, with all the ammunition and stores. In May, 1861, a military board, one of whom was the Governor, was appointed to organize and equip an army, which was done to the extent of 40 regiments, to fight for the Confederate cause. The revolutionary convention of 1861, having omitted to continue the office of Governor, a contest arose over the question, and the Supreme Court declared the office vacant. Gov. Rector then fought in the Confederate army till the close of the war.

Reed, Alonzo, author, died in Remsenburg, Long Island, N. Y., Aug. 19, 1899. While a teacher of English in the Polytechnic Institute of Brooklyn he developed a plan of teaching English grammar which was embodied in an elementary text-book, published under the title of *Graded Lessons in English*, and this was followed by others on the same subject, some of them written in conjunction with Brainerd Kellogg (New York, 1877).

Reed, Harrison, editor, born in Littleton, Mass., in 1813; died in Jacksonville, Fla., May 25, 1899. In 1836 he removed to Wisconsin. He founded the *Milwaukee Sentinel*, of which he was editor. During the civil war he worked in the United States Treasury Department. In 1868 he was elected Governor of Florida, under its new Constitution, and he served four years and a half.

Reed, Myron Winslow, clergyman, born in Brookfield, Vt., July 24, 1836; died in Denver, Col., Jan. 30, 1899. He was preparing for the ministry when, in June, 1862, he enlisted as a private in the 18th Michigan Infantry, of which he was soon afterward appointed chaplain. This commission he resigned after two months, to accept a captaincy. He served till July, 1865, and for some time before he was mustered out he was chief of scouts on the staff of Gen. George H. Thomas. After the war he resumed his studies, was graduated at the Chicago Theological Seminary in 1868, and was pastor of Congregational churches in New Orleans and Milwaukee, and of the First Presbyterian Church in Indianapolis till 1883. In that year he went to the First Congregational Church in Denver, where he remained eleven years, resigning to take charge of the new Broadway Temple. Dr. Reed was for several years president of the Denver Charity Organization Society and of the Colorado State Board of Charities, and in 1892 was president of the National Conference of Charities and Corrections.

Reynolds, Joseph Jones, military officer, born in Flemingsburg, Ky., Jan. 4, 1822; died in Washington, D. C., Feb. 26, 1899. He was graduated at West Point, and commissioned a brevet second lieutenant in the 4th Artillery, in 1843; was promoted second lieutenant in the 3d Artillery, May 11, 1846; first lieutenant, March 3, 1847; resigned Feb. 28, 1857; was appointed colonel of the 26th Infantry, July 28, 1866; assigned to the 25th Infantry, Jan. 8, and to the 3d Cavalry, Dec. 15, 1870; and was retired June 25, 1877. In the volunteer service he was commissioned colonel of the 10th Indiana Infantry, April 25, 1861, and brigadier general, May 17; resigned Jan. 23, 1862; was reappointed a brigadier general, Sept. 17, 1862; promoted major general, Nov. 29, and was mustered out Sept. 1, 1866. He was brevetted brigadier general, United States army, for "gallant and meritorious services in the battle of Chickamauga," and major general for similar services in the battle of Missionary Ridge. In the early part of his career Gen.

Reynolds served at the Military Academy as Assistant Professor of Geography, History, and Ethics, and later as Assistant Professor of Natural and Experimental Philosophy. He was on frontier duty at Fort Wichita when he resigned from the army to become Professor of Mechanics and Engineering in Washington University, St. Louis, Mo. This place he resigned four years later, and engaged in private business in Lafayette, Ind. Between the times of resigning his first commission of brigadier general and of accepting the second he served without any commission in organizing Indiana volunteers. After returning to the field he was assigned to command the Cheat Mountain district in West Virginia. He made the campaign of the Army of the Cumberland in 1862-'63, taking part in the battles of Hoover's Gap, Chickamauga, and Chattanooga, and toward the end of 1863 became chief of staff of that army. In the early part of 1864 he commanded the defenses of New Orleans: in June he was placed in command of the 19th Corps, and in the next two months he organized the forces for the capture of Mobile. From November of that year till April, 1866, he commanded the Department of Arkansas. After his return to the regular army he commanded for five years the 5th Military District, comprising Louisiana and Texas, and while there (1871) was elected United States Senator from Texas, but declined the office. His last service was as commander of the Department of the Platte, in 1872-'76. Gen. Reynolds was retired for disability contracted in the line of duty.

Richardson, John Peter, planter, born in Clarendon County, South Carolina, in 1831; died in Columbia, S. C., July 6, 1899. He was graduated at the South Carolina College, and was a member of the Legislature till the civil war. He served on the staff of Gen. Cantey, in the Confederate army, from 1862 till the end of the war. He was again elected to the Legislature in 1878, was made State Treasurer in 1880, 1882, and 1884, and in 1886 and 1888 was elected Governor.

Richardson, Locke, elocutionist, born in Providence, R. I., in 1844; died in Berlin, Germany, June 15, 1899. He was a teacher of elocution at Cornell University, and made his first essay as a public reader before the Young Men's Christian Association, in New York city, in 1873. He was so well received that he made a season's engagement to give readings in different cities of the country, and became very popular. He was particularly admired in selections from Dickens and Shakespeare. Of his readings from the last-named writer, the most popular was *Henry IV*, in which he displayed an intimate and affectionate knowledge of the poet's dramatic intention and an admirable power of characterization.

Richardson, William, educator, born in Carnarvon, Wales, in 1843; died in New York city, April 15, 1899. He came to New York in 1869, and soon afterward began studying chemistry at Cooper Union. On completing the course he followed his profession for several years, and then returned to the school as an assistant in its chemical laboratory. He was afterward appointed director, and held the post nearly ten years. He received the degree of Ph. D. from Waynesburg (Pa.) College in 1888.

Richmond, Adelbert G., antiquary, born about 1840; died in Canajoharie, N. Y., Nov. 13, 1899. He was interested in various industrial enterprises in Canajoharie. For several years, in early life, he was private secretary to Francis E. Spinner, Treasurer of the United States. He was best known as a collector of relics of the North

American Indians, and his collection was especially rich in material relating to the Six Nations.

Rickoff, Andrew Jackson, educator, born near Newhope, N. J., Aug. 23, 1824; died in San Francisco, Cal., March 29, 1899. In 1830 his parents removed to Cincinnati. He began teaching at the age of seventeen, and by means of untiring application to his studies he won from the Ohio University the degree of A. M. He was for five years superintendent of schools in Portsmouth, Ohio. He then taught in the public schools of Cincinnati, was appointed superintendent of schools there two years later, and held that office five years. He afterward established a private school, which he conducted about nine years. He was elected to the Board of Education in Cincinnati in 1864, and was made president, which office he held more than two years, when he accepted an offer of the superintendency of the schools in Cleveland. Fifteen years later he assumed similar duties in Yonkers, N. Y. On resigning the latter office he returned to Ohio, and then removed to California. In 1885 he was president of the Ohio State Teachers' Association, and in 1889 was elected president of the National Teachers' Association. In 1880 he was elected a member of the National Council of Education, which is limited to 52 members. For several years after 1888 he was in charge of Felix Adler's Workingman's School. He was the author of an arithmetic and many other schoolbooks, and he was the editor of a series of six readers. He recommended the plan of reorganization of the educational system which is now in successful operation in Cleveland; and at the Centennial Exposition in 1876 his system of schools in that city was declared superior to that of any other city in the United States. In fact, his system was the pattern after which nearly all the school systems of the Western States were constructed. He also paid much attention to school architecture, and to the heating and ventilation of school-rooms. He was authorized by the Board of Education of Cleveland to make the floor plans of 6 of the large school buildings, the Central High School being one of the number; and he also made the plans for their heating and ventilation. At the Centennial Exposition he received a medal for the best designs for school buildings.

Robbins, Hiram, playwright, born in Harrisburg, Pa., in 1837; died in Little Rock, Ark., Jan. 21, 1899. In the years immediately following the civil war he appeared as an actor. His last work as a playwright was *The Destruction of Hell*, an extravaganza founded on Dante's *Inferno*, which was produced in Chicago in 1895. He went to the Klondike in 1897, and contracted a fatal cold. During his residence in Little Rock he was prominent in politics.

Roberts, Charles Boyle, jurist, born in Uniontown, Md., April 19, 1842; died in Westminster, Md., Sept. 10, 1899. He was graduated at Calvert College in 1861, and was admitted to law practice in 1864. In 1868 he was a presidential elector on the Democratic ticket. He was elected to Congress in 1874, and re-elected in 1876. In 1883 he was elected Attorney-General of Maryland, and in 1891 was appointed an associate judge of the State Court of Appeals. In 1892 he was elected chief justice of the 5th Maryland District, which office he held until his death.

Roberts, Daniel, lawyer, born in Wallingford, Vt., May 25, 1811; died in Burlington, Vt., Oct. 6, 1899. He was graduated at Middlebury College in 1829, studied law, and was admitted to the bar in 1832. He then went West, and spent a great part of the time till 1835 in Illinois, when

he returned to Vermont, practiced in Manchester till 1855, and then removed to Burlington, where he formed a partnership with Lucius E. Chittenden, afterward Register of the Treasury of the United States. Mr. Roberts was Bank Commissioner in 1853-'54, and in 1855-'56 was special agent for the United States Treasury Department. In 1868-'69 he was State's attorney for Chittenden County, and from 1870 till 1872 was city attorney of Burlington, which office he again held in 1880. In 1878 he completed a Digest of the Decisions of the Supreme Court of Vermont; in 1889 published a supplement to it; and at the time of his death had finished a second supplement. He received the degree of LL. D. from Middlebury College in 1877. In 1880 he was president of the Vermont Bar Association.

Robinson, Charles Seymour, clergyman, born in Bennington, Vt., March 31, 1829; died in New York city, Feb. 1, 1899. He was graduated at Williams College in 1849. After teaching nearly two years, he spent a year at the Union Theological Seminary, New York city, and the next at Princeton Seminary, and on April 19, 1855, he was ordained pastor of the Park Presbyterian Church in Troy, N. Y. In 1860 he went to the First Presbyterian Church, in Brooklyn, N. Y., and in 1868 accepted a call to the American Chapel in Paris, France, where he established a regular church organization. On the outbreak of the war between France and Prussia he returned to New York and assumed the pastorate of Madison Avenue Presbyterian Church, with which he remained till 1887. After the suppression of the Commune, in 1871, Dr. Robinson spent several months in Paris, striving to reorganize the work of the American Chapel. Since 1887 he had held no regular charge for any considerable period. He received the degree of D. D. from Hamilton College in 1866, and that of LL. D. from Lafayette College in 1885. Dr. Robinson published many volumes of sermons and other works, but was probably most widely known as a hymnologist. His books include *Songs of the Church* (New York, 1862); *Songs for the Sanctuary* (1865); *Songs for Christian Worship* (1866); *Short Studies for Sunday-school Teachers* (1868); *Chapel Songs* (1872); *Psalms, Hymns, and Spiritual Songs* (1874); *Christian Work and Bethel and Peniel, sermons* (1874); *Spiritual Songs* (1878); *Spiritual Songs for Social Worship* (1880); *Studies in the New Testament* (1880); *Spiritual Songs for Sunday School* (1881); *Studies of Neglected Texts* (1883); *Laudes Domini, hymn-book* (1884); *Sermons in Songs* (1885); *Sabbath Evening Sermons* (1887); *The Pharaohs of the Bondage and the Exodus* (1887); and *Simon Peter: Early Life and Times* (1887).

Rogers, Edward F., horticulturist, born in Salem, Mass., in 1826; died in Peabody, Mass., March 29, 1899. After receiving a common-school education, he made several voyages in his father's vessels, and then for fifteen years withdrew almost wholly from the public eye and applied himself to his garden. He produced the famous Rogers grape by taking the vine of the Mammoth Globe and the pollen of Black Hamburg and Sweet-water vines. To him belongs the credit of first hybridizing the grape, and he was awarded the only gold medal ever given by the Massachusetts Horticultural Society in this line. In 1856 he recrossed the hybrids with the *V. vinifera*, obtaining vines bearing fruit nearly identical with the foreign kinds. Subsequently he gave much attention to hybridizing pears, with equal success.

Rogers, William F., soldier, born in Philadelphia, Pa., in 1820; died in Buffalo, N. Y., Dec.

16, 1899. He entered the volunteer service in the civil war as a member of the 21st New York Infantry, served two years, and rose to the rank of brevet brigadier general. After the war he was successively auditor, comptroller, and mayor of Buffalo. In 1887 he was appointed superintendent of the Soldiers' and Sailors' Home at Bath, which office he held till 1891.

Ropes, John Codman, historian, born in St. Petersburg, Russia, April 28, 1836; died in Boston, Mass., Oct. 28, 1899. He was graduated at Harvard in 1857, and after studying at Harvard Law School was admitted to the bar in 1861. Since the latter year he had practiced his profession continuously in Boston, and from 1865 was at the head of the firm of Ropes, Gray & Loring. His interest in military affairs began early in his career, and it was in great measure through his influence that the Government attempted the collection and preservation of information relative to the civil war. He organized the Military Historical Society of Massachusetts, to which he left his valuable collection of military books and maps, and in recognition of his services to the United States army he was elected a member of the Loyal Legion. His earliest published work was *The Army under Pope* (New York, 1881), a concise analysis of the summer campaign of 1862 in northern Virginia. This was followed by *The First Napoleon* (Boston, 1885), originally given to the public in the form of lectures at the Lowell Institute, in Boston. This was followed by *The Campaign of Waterloo*, an elaborate monograph (New York, 1892-'93). At the time of his death two volumes of *The Story of the Civil War* (New York, 1894-'98) had appeared. The materials for the completion of this history had been collected by him, and a final review and critical summary of the war had been written.

Rose, William G., lawyer, born in Mercer County, Pennsylvania, Sept. 23, 1829; died in Cleveland, Ohio, Sept. 15, 1899. He educated himself, studied law, and was admitted to the bar in 1855. He was for a short time editor and proprietor of the *Mercer Independent Democrat*, and in 1857 and 1858 he was elected to the Pennsylvania Legislature as a Republican. In 1865 he removed to Cleveland, Ohio, where, after being admitted to the bar, he engaged in the real-estate business. In 1877 he was elected mayor of Cleveland, and his administration of municipal affairs was exceptionally able; and when, in April, 1891, he was a candidate for re-election, he was returned with a handsome majority. During the great railroad strike, in his first administration, he handled all difficulties so well that he was commended by both his friends and his political opponents. During the strike no property was lost and no citizen was in jeopardy of his life. At the beginning of his second administration the present federal system of city government was inaugurated, and upon him fell the work of setting the untried machinery in motion. So thoroughly and efficiently did he do this that his management of affairs has always been regarded as one of the best the city ever had. He was unanimously nominated for Lieutenant Governor in 1883, and ran 7,000 votes ahead of his ticket, which was defeated.

Russell, William Augustus, manufacturer, born in Wells River, Vt., April 22, 1831; died in Boston, Mass., Jan. 10, 1899. He was educated at Franklin, N. H., and Lowell, Mass., and in 1848 began working in his father's paper mill in the latter city. In 1853 the father and son

formed a partnership, and moved their plant to Lawrence. Soon afterward the father was obliged by failing health to retire from business, and the son assumed the whole management. In 1856 he began enlarging his operations by leasing and buying mills in Belfast, Me., and Lawrence, Mass. Having found by costly experiments that wood pulp was needed, he established in Franklin, N. H., in 1869, the first mill in the country for the production of the new fiber. He succeeded in this where many had failed, and created a new branch of industry. For the conversion of the fiber into paper he purchased two mills in Franklin and erected a large one in Bellows Falls, Vt. To carry out his plans in the last place he was obliged to purchase the entire water power there, build a new dam, and enlarge the canal. Through his enterprise this small town grew to be the third in valuation in the whole State. At the time of his death he was operating paper mills at Bellows Falls, Vt., Lawrence, Mass., St. Anthony's Falls, Minn., and in several places in Maine. Mr. Russell was a delegate to the Republican National Conventions of 1868 and 1876, a representative in the Massachusetts Legislature in 1869, and a member of Congress from 1879 till 1885.

Rust, John B., civil engineer, born in Wolfborough, N. H., in 1828; died in Brooklyn, N. Y., Sept. 12, 1899. He became a railroad builder, and helped to lay out the Lake Shore and the Chicago, Milwaukee and St. Paul lines. Among his other engineering works were the construction of the Portland and Ogdensburg Railroad through the White Mountain notch, the St. Johnsbury and Lake Champlain Railroad, and a bridge across Maquam Bay.

Rycraft, John, abolitionist, died in Milwaukee, Wis., in December, 1899. In 1854 a slave named Joshua Glover escaped from his master, a planter living near St. Louis. He was discovered near Racine, Wis., and was captured under the fugitive slave act and taken to Milwaukee. A mob broke open the jail and rescued the slave, and Rycraft and S. M. Booth, the publisher of an antislavery paper in Milwaukee, were arrested on the charge that they had incited the mob and aided in the rescue. Both were convicted of violation of the fugitive slave act, and a judicial conflict was precipitated between the State of Wisconsin and the United States; but the affair was closed by the events attending the outbreak of the civil war.

Sartori, Lewis Constant, naval officer, born in Bloomsbury, N. J., June 3, 1812; died in Philadelphia, Pa., Jan. 11, 1899. He was appointed a midshipman in the navy Feb. 2, 1829; promoted passed midshipman, June 15, 1837; lieutenant, Sept. 8, 1841; commander, April 27, 1861; captain, Sept. 26, 1866; and commodore, Dec. 12, 1873; and was retired June 3, 1874. He was on sea duty nineteen years and four months, and on shore or other duty nine years and nine months. Prior to 1840 he served successively at the Brazilian station and with the Mediterranean, West Indies, and Pacific squadrons. During the Mexican War he was attached to the bomb schooner *Stromboli*, in which he took part in the capture of Tabasco and Coatzacoalcas. While on the *John Adams*, in the Pacific squadron, in 1855, he commanded a successful expedition and engagement against the Fijis. In 1861 he commanded the blockading steamer *Flag*; in the latter part of 1862 the *Florida*, of the North Atlantic squadron; in 1863, the *Portsmouth*, of the Western Gulf squadron; and in 1864, the *Monongahela* and *Oneida*, off Mobile. After the war he served on

the Pacific coast till his retirement, and commanded the naval rendezvous at San Francisco in 1871-'72, and the navy yard at Mare island in 1872-'73.

Saunders, Alvin, Senator, born in Fleming County, Kentucky, July 12, 1817; died in Omaha, Neb., Nov. 1, 1899. He removed with his parents at twelve years of age to the vicinity of Springfield, Ill. When he was sixteen years old he obtained employment on a farm at Mount Pleasant (now in Iowa). Soon he became storekeeper's clerk, then part proprietor, and later postmaster for seven years. At the same time he studied law, but continued in business and became a banker. In 1846 he was a member of the convention that framed the Constitution under which Iowa was admitted as a State. Then he served as State Senator eight years. He was a member of the Republican National Convention of 1860, and took an active part in the campaign for Lincoln. He was also a commissioner to organize the Pacific Railroad Company. In 1861 he was appointed Governor of the Territory of Nebraska, and he held that place until the admission of Nebraska as a State in 1867. Although the population of Nebraska was only 30,000 for this period, Gov. Saunders not only raised 3,000 men for the National army, but was also able successfully to repel the attacks of hostile Indians. In the winter of 1876-'77 he was elected to the United States Senate, and in that body he was active in securing the resumption of specie payments. He obtained more than 600,000 acres for Nebraska by the straightening of the northern boundary, adjoining Dakota. Another of his acts in the Senate was that of securing a labor school for Indians on the Pawnee reservation. He was one of the commissioners to visit the Indian tribes and report on the advisability of turning the management of the Indians over to the War Department. As chairman, he presented the majority report, adverse to such a measure. He also recommended the teaching of Indians to work and to become independent. His service in the Senate ended in 1883.

Savage, Philip Henry, author, born in North Brookfield, Mass., Feb. 11, 1868; died in Boston, June 4, 1899. He was a son of the Rev. Minot J. Savage, and was graduated at Harvard in 1893. From 1896 until his death he was a member of the Boston Public Library staff, and in the spring of 1899 he was appointed clerk of the corporation of the library. His two volumes of verse—*First Poems and Fragments* (Boston, 1895) and *Poems* (1898)—displayed a marked degree of promise in thought and expression as well as skill in technique.

Sawyer, Thomas Jefferson, clergyman, born in Reading, Vt., Jan. 9, 1804; died in Somerville, Mass., July 23, 1899. He was graduated at Middlebury College in 1829, and entered the Universalist ministry the next year, and was pastor of a church in New York city 1830-'45, and again in 1852-'61. From 1845 to 1852 he was president of the Clinton Liberal Institute, at Clinton, N. Y., and in 1847 was instrumental in founding Tufts College, at Medford, Mass. In 1869 he became Professor of Theology at Tufts College Divinity School, then newly opened, holding office until 1892, when he was made professor emeritus. He was a profound scholar, an eloquent and graceful speaker, and as a controversialist had few rivals. He was one of the greatest men his denomination has produced, and his influence in liberalizing the tone of religious thought in the earlier part of his ministry was of wide extent. *Endless Punishment in the Very Words of its Advocates* (1880)

is almost his only published book, but for forty years he contributed regularly to the *Universalist Quarterly* controversial and other articles, and he was successively editor of the *Christian Messenger* and the *Christian Ambassador*, for both of which he wrote notable articles.

Schrivver, Edmund, military officer, born in York, Pa., Sept. 16, 1812; died in Washington, D. C., Feb. 10, 1899. He was graduated at West Point, July 1, 1833, and entered the army as a brevet second lieutenant in the 2d Artillery; was promoted second lieutenant, July 31, 1834; first lieutenant, Nov. 1, 1836; brevet captain and assistant adjutant general, July 7, 1838; captain in the 2d Artillery, Aug. 17, 1842; lieutenant colonel of the 11th Infantry, May 14, 1861; and colonel and inspector general, March 13, 1863; and was retired Jan. 4, 1881. In the volunteer army he served as colonel and additional aid-de-camp from May 18, 1862, till March 13, 1863. He was brevetted brigadier general, United States army, for meritorious services in the field, on Aug. 1, 1864, and major general, United States army, for distinguished service during the war, on March 13, 1865. After graduation, Gen. Schrivver served several years with the artillery in New York, Alabama, and Tennessee; then spent four years in the Adjutant General's office in Washington; and afterward in the Seminole Indian war, in Florida, till July 31, 1846, when he resigned. From 1847 till 1861 he was engaged in railroad business in New York State, during the last ten years being president of the Rensselaer and Saratoga Railroad. At the outbreak of the civil war he was among the first to offer his services to the Government, and re-entered the army on May 14, 1861. He served for some time as aid-de-camp to Gov. Morgan, of New York, and then was made chief of staff of the 1st Corps in the Army of the Potomac. After taking part in the Shenandoah and the northern Virginia campaigns, he was appointed inspector general of the army. He was engaged in the battles of Chancellorsville and Gettysburg, and in the campaign from the Rapidan to Petersburg, and thence till the close of the war he was on duty in the office of the Secretary of War. After peace he was on general inspection duty, principally in the West, and on special service till his retirement.

Seaver, Joel J., journalist and soldier, born in Salisbury, Vt., Dec. 17, 1822; died in Malone, N. Y., Nov. 20, 1899. He removed to Malone, where he taught school and studied law four years. In 1850 he joined the staff of the Malone Palladium. With his brother, J. K. Seaver, he purchased the Palladium later, and became its editor. When President Lincoln issued his first call for troops, in 1861, he was the first man in Franklin County to offer his services. He was subsequently chosen captain of Company I, 16th Regiment, New York Volunteers, and after serving as major and lieutenant colonel he became colonel, and within two years was in command of a brigade. He participated in sixteen engagements, among them Gaines's Mill, the two Fredericksburg fights, and Antietam. He was a member of the Constitutional Convention of 1867.

Sedley, Henry, author, born in Boston, Mass., April 4, 1835; died in New York city, Jan. 18, 1899. He was a son of William Henry Sedley, the actor, who became widely popular as Rolando in *The Honeymoon*. He was educated in Boston, studied civil engineering at Rensselaer Polytechnic Institute, in Troy, and engaged in his profession in San Francisco, where he surveyed and mapped many of the principal streets. After completing this work he made a tour of the world,

and, returning to New York, engaged in journalism. For four years he was dramatic editor of the Times, then took a similar place with the Evening Post, and afterward was editor in chief of The Round Table three years and principal editor of the Commercial Advertiser two years. In 1885-'88 he was a member of the editorial council of the Herald, and in 1891 was appointed a member of the Board of Civil Service Examiners for the customs district of New York. Mr. Sedley published *Dangerfield's Rest: A Romance* (New York, 1864) and *Marion Rooke* (1865).

Semmes, Thomas Jenkins, lawyer, born in Georgetown, D. C., Dec. 16, 1824; died in New Orleans, La., June 23, 1899. He was graduated at Georgetown College in 1842, and at Harvard University in 1845. He practiced law in Washington till 1850, when he removed to New Orleans. He was a member of the Democratic State Committee in 1852, was elected to the Legislature in 1855 and in 1858 was appointed United States District Attorney for Louisiana. In 1859 he resigned to become Attorney-General of the State. In 1861 he was a member of the Louisiana Constitutional Convention, and, in November of that year was elected to the Confederate Congress. In 1868 Mr. Semmes was pardoned by President Johnson, and returned to his law practice in New Orleans. He was appointed Professor of Civil Law in the University of Louisiana, and was a member of the Constitutional Conventions of 1879 and 1898. In 1886 he was president of the American Bar Association, and in 1890 he delivered an elaborate address on the personal characteristics of the chief justices at the centennial celebration, in New York city, of the opening of the Supreme Court of the United States.

Sexton, James Andrew, military officer, born in Chicago, Ill., Jan. 5, 1844; died in Washington, D. C., Feb. 5, 1899. In April, 1861, he enlisted in the 19th Illinois Infantry. After three months' service he re-enlisted in the 67th Illinois Infantry, and was made a first lieutenant. He was later transferred to the 72d Illinois regiment as captain. He served in Ransom's Brigade, McArthur's Division of the 17th Corps, Army of the Tennessee, and took part in nearly all its campaigns. In the battles of Columbia, Duck River, Spring Hill, Franklin, and Nashville he commanded his regiment. He was wounded at Franklin and Nashville, and at the capture of the Spanish fort, Mobile, his leg was broken by a piece of shell. After the war he purchased a plantation in Alabama, and remained there two years. He was appointed postmaster of Chicago in 1889, and resigned Jan. 1, 1895.

Shepard, Elizabeth G., author, born in Boston, Mass.; died in Reservoir, Mass., April 4, 1899. She was educated at the Boston Normal School. Her writings were mainly contributions to newspapers, among them being a series of letters entitled *Up the Charles*, published in the Boston Transcript. She also wrote *A Guidebook to Norumbega and Vineland* (Boston, 1893).

Simmons, Henry Clay, clergyman, born in Harford, N. Y., Feb. 15, 1845; died in Fargo, N. D., Dec. 20, 1899. He was graduated at Beloit College in 1869, and at Chicago Theological Seminary in 1872. He had charges in Fond Du Lac, Wis., from 1872 till 1874, in Marshall, Minn., from 1874 till 1879, and in Walnut Grove from 1879 till 1882. He went to Dakota in 1886 to act as superintendent of home missions for that State. He was instrumental in establishing Fargo College, of which he was president from 1894. He received the degree of D. D. from Chicago Theological Seminary in 1897.

Slater, James H., lawyer, born in Sangamon County, Illinois, Dec. 28, 1826; died in La Grande, Ore., Jan. 28, 1899. He received a common-school education; spent a part of 1849 in California; and in 1850 settled in Oregon, where he was admitted to the bar in 1854. In 1853-'56 he was clerk of the district court for Benton County, in 1857 and 1858 was elected to the Legislature, and in 1866 was elected district attorney in the 5th Judicial District. He was a presidential elector on the Democratic ticket in 1868, member of Congress in 1870, and United States Senator for the term beginning March 18, 1879.

Smalley, Eugene Virgil, journalist, born in Randolph, Ohio, July 18, 1841; died in St. Paul, Minn., Dec. 29, 1899. He was educated at the New York Central College, and during the civil war served in an Ohio regiment. From 1865 to 1873 he was clerk of a House committee at Washington as well as a correspondent for various papers, and was on the staff of the New York Tribune as correspondent and editor in 1871-'82. He founded the Northwest Magazine at St. Paul in 1884, and was its editor until his death. He was the author of a *History of the Northern Pacific Railroad* (New York, 1883); *History of the Republican Party* (1885); and *Political History of Minnesota*.

Smith, William Crawford, soldier, born in Petersburg, Va., in 1837; died in Manila, Feb. 5, 1899. He removed to Nashville in early life, and was an architect. At the outbreak of the civil war he returned to Petersburg and enlisted in the 12th Virginia Infantry. After the war he returned to Nashville, where he designed many important buildings, among them the Parthenon at the Centennial and the Vanderbilt University. At the outbreak of the Spanish-American War he was colonel of the 1st Tennessee Regiment, and with it volunteered for service. He was mustered in May 20, 1898, and immediately ordered to San Francisco. His regiment left San Francisco Oct. 28, and on its arrival at Manila Col. Smith was made district commander of Cavité, and served on the board that drafted the regulations for government of the natives. The insurgents around Cavité were numerous and hostile, but so carefully was the town guarded by Col. Smith and the men under him that all the night attacks came to naught. A few days before the general outbreak in February, with part of the 1st Tennessee Regiment, he was transferred to Manila, and on Feb. 5 died of apoplexy, at the head of his command on the firing line.

Smith, William H., jurist, born in Fayette County, Georgia, in 1827; died in Birmingham, Ala., Jan. 1, 1899. He removed to Randolph County, Alabama, in boyhood, became a lawyer, and was elected to the Legislature. After the civil war he was elected a circuit judge, and in 1868, while holding that office, became Governor of Alabama. He held this office for two years, and was influential in promoting reconstruction measures. In 1881 he was appointed United States District Attorney for the Northern and Middle Districts of Alabama, and this office he held four years. Judge Smith was a conservative Republican.

Smyth, Frederick, banker, born in Candia, N. H., March 9, 1819; died in Hamilton, Bermuda, April 22, 1899. He was educated at Phillips Academy, Andover, and engaged in business in Manchester, N. H., first as a merchant and later as a banker. In 1852 he was elected mayor of the city, and he held the office four terms. In 1857 and 1858 he served in the Legislature; in

1860 was chairman of the Republican State Convention; and in 1861 was appointed United States Commissioner to the International Exhibition in London (1862). In 1865 and 1866 he was elected Governor of New Hampshire, and in the last year was also appointed to the Board of Managers of the National Homes for Disabled Soldiers. In 1878 he was appointed a United States Commissioner to the Paris Exposition. He was president of the Boston, Concord and Montreal Railroad Company, and trustee and treasurer of the New Hampshire College of Agriculture and Mechanic Arts. See GIFTS AND BEQUESTS.

Southworth, Mrs. Emma Dorothy Eliza Nevitte, novelist, born in Washington, D. C., Dec. 26, 1819; died there, June 30, 1899. In 1840 she married Frederick H. Southworth, of Utica, N. Y., who three years later deserted her and their children. From 1844 to 1849 she taught in a public school in Washington, and to add to her income began at this period to write stories for weekly newspapers. Retribution, her first work to appear in book form, was published in 1849, and an incomplete list of its successors comprises *The Deserted Wife* (1850); *Shannondale and The Mother-in-law* (1851); *Children of the Isle and The Foster Sisters* (1852); *The Family Doom*; *Prince of Darkness*; *The Bride's Fate*; *The Changed Brides*; *How He Won Her*; *Fair Play*; *Fallen Pride*; *Ishmael*; *The Widow's Son*; *Bride of Llewellyn*; *The Fortune Seeker*; *Allworth Abbey*; *The Bridal Eve*; *The Fatal Marriage*; *Love's Labor Won*; *The Lost Heiress*; *Gipsy's Prophecy*; *Discarded Daughter*; *The Three Beauties*; *Vivia*; *The Two Sisters*; *The Missing Bride*; *The Wife's Victory*; *Haunted Homestead*; *Lady of the Isle*; *India*; *Curse of Clifton*; *Hester Strong's Life Work* (1869); *The Lost Heir of Linlithgow* (1872); *Unknown* (1874); *Red Hill Tragedy* (1877); *The Trail of the Serpent* (1879); *Sybil Brotherton* (1879); *Nearest and Dearest* (1881); *The Mother's Secret* (1883); *An Exile's Bride* (1887); *The Hidden Hand* (1888); *Leap in the Dark*; *Lost Lady of Lone* (1889); *Maiden Widow* (1888); *Self-raised*; *Tried for her Life*; *Brandon Coyle's Wife*; *The Specter Bridegroom*; *Broken Pledges* (1891); *Cruel as the Grave*; *Gloria*; *David Lindsay*; *Gertrude Haddon*; *Only a Girl's Heart*; *Skeleton in the Closet*; *The Unloved Wife*. Mrs. Southworth's stories have been widely popular among uncritical readers, and their sensationalism is not of a hurtful character. In *The Widow's Son* and *Ishmael* there is considerable tragic power, and in all the plots are ingeniously contrived. Translations of her books have appeared in French, German, and Spanish. Soon after the success of her early books Mrs. Southworth gave up teaching and devoted herself entirely to writing, her novels usually making their first appearance serially in the *New York Ledger*. Save for a few years, when she resided at Yonkers, N. Y., her life was spent in Washington.

Steers, Edward Paulet, banker, born in Cork, Ireland, Oct. 13, 1837; died in New York city, April 22, 1899. In early childhood he accompanied his father, an agent for Crown lands, to Canada; when about twelve years old went to Buffalo, N. Y., and became a bank cashier; and in 1862 removed to New York city, where he was first engaged in the lumber business, and from 1886 as president of the Twelfth Ward Bank, which he had organized. He was considered an authority on conchology and numismatics, had gathered an almost priceless collection of shells and coins, and was compiling a Dictionary of Conchology.

Stevens, Martha Bayard, philanthropist, born in Princeton, N. J.; died in Hoboken, N. J., April 1, 1899. She was the daughter of the late Albert B. Dod, Professor of Mathematics at Princeton, and the widow of Edwin A. Stevens, founder of Stevens Institute of Technology, in Hoboken. When she became the wife of John Stevens's son she came into possession of much of the property that had once been owned by her ancestors. Mrs. Stevens was noted for her works of charity and her efforts to improve the condition of the poor. She built the Church of the Holy Innocents; was largely instrumental in the founding of the Hoboken School for Manual Training, and in the erection of the building used by this school and the Free Public Library; opened the Martha Institution; endowed a ward in St. Mary's Hospital; and made large donations to Christ Hospital, St. Catherine's Home, and other benevolent institutions. Shortly before her death she decided to present to Hoboken a recreation pier on the river walk for the benefit of the poor, and her plans were carried out by her sons.

Stillé, Charles Janeway, historian, born in Philadelphia, Pa., Sept. 23, 1819; died in Atlantic City, N. J., Aug. 11, 1899. He was graduated at Yale in 1839, and was admitted to the bar, but devoted himself to literary pursuits. During the civil war he was an active member of the United States Sanitary Commission, of which he afterward became the historian. In May, 1866, he was made Professor of History and English Literature in the University of Pennsylvania, and in June, 1868, was chosen provost, which office he held until 1880. Dr. Stillé received the degree of LL. D. from Yale in 1868. In addition to numerous addresses and pamphlets, he published *How a Free People conduct a Long War* (Philadelphia, 1862); *Northern Interests and Southern Independence: A Plea for United Action* (1863); *Memorial of the Great Central Fair for the United States Sanitary Commission* (1864); *Historical Development of American Civilization* (1864); *History of the United States Sanitary Commission* (New York, 1866); *Annals of the United States Christian Commission* (Philadelphia, 1868); *Memoir of the Rev. William Smith, D. D.* (1869); *Studies in Mediæval History* (1882); *Beaumarchais and the Lost Million* (1886); *The Life and Times of John Dickinson* (1891); and *Major-Gen. Anthony Wayne and the Pennsylvania Line in the Continental Army* (1893). His work on mediæval history has wide use as a college text-book.

Stilson, Daniel Chapman, inventor, born in Durham, N. H., March 25, 1830; died in Somerville, Mass., Aug. 21, 1899. At the outbreak of the civil war he was a machinist in the Charleston Navy Yard, and in 1862 he was appointed third assistant engineer in the navy, and assigned to the steamer R. B. Forbes. The vessel sailed from New York Feb. 22, and two days later was wrecked off the coast of North Carolina. All the officers and crew reached the shore, and Mr. Stilson, with other members of the crew, was transferred to the frigate Roanoke, and later to the Somerset, which was engaged on blockade duty off the Cuban coast. On Aug. 31, 1862, he resigned on account of failing health; Aug. 14, 1863, he was reappointed to the navy as acting second assistant engineer on the Queen, and Nov. 16, 1864, he was promoted acting first assistant engineer. Jan. 25, 1865, he sailed with Farragut on his first voyage as vice-admiral. After the war Mr. Stilson resumed his trade of machinist, and later he invented the wrench that has made

his name known throughout the mechanical world, and devised other apparatus, including a safety fire sprinkler. He served in the Somerville Common Council in 1884, and in the Board of Aldermen in 1885-'86.

Stockdale, Thomas Ringland, jurist, born in Pennsylvania, in 1828; died in Summit, Miss., Jan. 8, 1899. He was graduated at Jefferson College in 1856; removed the same year to Covington County, Mississippi, to teach; and was principal of the Holmesville Academy, in Pike County, in 1857-'58. In 1859 he was graduated at the law department of the University of Mississippi, and began practicing. He enlisted in the Confederate service at the outbreak of the civil war; became a lieutenant adjutant of the 10th Mississippi Infantry, and major in 1861; retired from the regiment and organized and became commandant of a battalion of cavalry in 1862; and was promoted lieutenant colonel of the 4th Mississippi Cavalry in 1864. He commanded his regiment at the battle of Harrisburg, near Tupelo, July 14, 1864, where he was wounded, and was paroled with Gen. Forrest's men, May 12, 1865. After the war he served a term as justice of the Supreme Court of Mississippi, was a presidential elector on the Democratic ticket in 1872 and 1884, and was elected to Congress in 1886, 1888, 1890, and 1892.

Stone, Frederick, jurist, born in St. Mary's County, Maryland, Feb. 7, 1820; died near La Plata, Md., Oct. 17, 1899. He was educated at St. John's College, Annapolis. He was elected as a Democrat to the Maryland Legislature in 1859, and in 1864 was elected to Congress, and he held his seat there till 1871. In that year he was returned to the Legislature, and in 1876 was a member of the Constitutional Convention. Later he became a Republican, and in 1882 was elected chief justice of the 7th Judicial Circuit Court of Appeals. His term expired by constitutional limit of age in 1890.

Stone, Marvin Chester, inventor, born in Portage County, Ohio, in 1842; died in Washington, D. C., May 17, 1899. In boyhood he made many mechanical articles of practical utility. He was a student in Oberlin College, but his course was interrupted by the civil war, in which he served with the National army. Subsequently he undertook a theological course, but abandoned it for journalism in Washington. After a few years he applied himself wholly to inventing, manufacturing, and philanthropic work. Among his original devices are a machine for making paper cigarette holders, one for making paper tubes for use in place of straws with cold drinks, and a method for coloring fine china and other wares in imitation of the famous "peachblow vase." He was highly successful as a manufacturer, and he made his factory a model establishment, providing within it a library of standard fiction and other works, a music room, a hall for debates and social functions, and a large dancing floor, all for the exclusive use of his operatives and their friends. Several years ago Mr. Stone, in association with two or three others, erected two blocks of model tenement houses for the colored people of Washington, where they might have good home privileges at a low rent.

Stotsenburg, John Miller, military officer, born in New Albany, Ind., Nov. 24, 1858; killed in battle near Quingua, Luzon, Philippine Islands, April 23, 1899. He was graduated at West Point in 1881, and commissioned a second lieutenant in the 6th Cavalry; was promoted first lieutenant, Aug. 19, 1899; was graduated at the United States Infantry and Cavalry School in 1897, and became captain, Dec. 14, 1898. On the call for volunteers

for the war against Spain he was commissioned major of the 1st Nebraska Infantry (May 9, 1898), at the request of the State authorities, who had become attached to him while he was Professor of Military Science and Tactics in the University of Nebraska from December, 1897. On June 15 he sailed with his regiment for Manila, and with it took part in the operations against Malate Fort and in the attack and capture of Manila on Aug. 13. On Nov. 10 he was promoted colonel, and within a few weeks he overcame by his soldierly conduct a strong opposition in the regiment against his advancement. On April 23, 1899, the American troops had an encounter with a body of insurgent Filipinos near Quingua, four miles northeast of Malolos, the 1st Nebraska Infantry suffering the most severely, and the affair developed into a bloody, though successful fight. The Filipinos occupied a horseshoe trench about a mile long on the edge of a wood, and had a strong outpost. The 1st Battalion of the 1st Nebraska was sent to recover the body of a slain cavalryman, and it advanced till checked by a fierce volley from the trench. The battalion lay about 800 yards from the trench, under fire, for two hours. Re-enforcements were called, and Col. Stotsenburg, who had spent the night with his family in Manila, rushed to the rescue with the 2d Battalion. He ordered a charge, and when at the head of his men he came within 200 yards of the insurgents he was shot in the breast, and died instantly.

Strieby, Michael E., clergyman, born in Columbiana, Ohio, Sept. 26, 1815; died in Clifton Springs, N. Y., March 16, 1899. He accompanied his parents to Worcester, Ohio, in boyhood; entered Hudson College in 1830, and in 1835 he and his classmates went to the newly established Oberlin College, where he was graduated in 1838. Failing health forced him to abandon study for a year, and he then entered the theological seminary at Oberlin, but was able to remain there only a short time. As his health recovered he began preaching as a supply. In April, 1842, he was ordained pastor of the Free Presbyterian Church at Mount Vernon, Ohio, and he held this charge eleven years, during which the church became Congregational. In 1852 he went to the newly organized Plymouth Congregational Church at Syracuse, N. Y., remaining there nearly twelve years. He was then chosen secretary of the American Missionary Society. He had much to do with the establishment of Fisk University, Hampton Normal and Industrial Institute, Atlanta University, and about 20 other chartered institutions, besides the organization of scores of churches. In 1896 he retired.

Summers, Thomas Osmond, surgeon, born in Charleston, S. C., Nov. 10, 1849; died in St. Louis, Mo., June 19, 1899. He served in the civil war on the Confederate side. After the war he studied medicine in Nashville, Tenn., and later served as Professor of Anatomy at Vanderbilt University. With 15 students of the university he volunteered his services during the yellow fever epidemic in Memphis. Having discovered a new method for treating the disease, he was placed in charge of suppressive measures at Jacksonville, Fla. Later he was sent by the Federal Government to study the disease in Cuba and South America. In 1895 he was called to the chair of Anatomy in the College of Physicians and Surgeons in St. Louis. In the Spanish-American War he was surgeon of the 2d Tennessee Volunteers. He accompanied the army to Santiago, and had charge of the hospital of the 6th Brigade, 5th Corps. He published an Anatomy (Nashville, 1875).

Sweeney, John R., composer, born in 1838; died in Chester, Pa., April 10, 1899. For many years he was Professor of Music in the Pennsylvania Military College, Chester, and during the civil war was leader of the band of the 3d Delaware Regiment. He was much in demand as a leader of the singing at large religious assemblies; was a familiar figure at Ocean Grove, Round Lake, and the Thousand Islands; and was the editor of more than a score of song books. His best-known compositions are Beulah Land, Calvary, More about Jesus, Showers of Blessing, and Little Ones like Me.

Synnot, Joseph J., educator, born in Great Neck, Long Island, N. Y., Feb. 6, 1863; died in Montclair, N. J., March 16, 1899. He was graduated at St. Francis Xavier College, New York city, in 1882, and then entered the University of Innsbruck, Austria, where he studied six years. In 1888 he received the degree of D. D. from that university, being the first American to be so honored, and in 1892 Yale gave him the degree of A. M. On his return to the United States he was appointed curate to Dean McNulty in Paterson, N. J. In the autumn of 1889 he was appointed Professor of the Sacred Scriptures, Hebrew, and the Classics in Seton Hall College, South Orange, N. J. Subsequently he taught theology, philosophy, and moral theology there till 1897, when he was chosen president of the college.

Tabor, Horace Austin Warner, miner, born in Holland, Vt., Nov. 30, 1830; died in Denver, Col., April 10, 1899. He received a common-school education, learned the stonemason's trade, and worked in Massachusetts till 1855, when he engaged in farming in Kansas. There he took an active part in the Free-soil movement, and became a member of the Topeka Legislature that was dispersed by order of President Pierce. Impressed with the narratives of trappers from the Rocky mountains concerning marvelous discoveries of gold along Cherry creek, Colorado, he set out with all his possessions in a "prairie schooner," and reached the new mining camp in the autumn of 1859. In the following spring he settled in California Gulch, afterward named, at his suggestion, Leadville. He worked steadily at mining with only moderate success till 1865, when he became postmaster and opened a small general store. Combining mining and storekeeping, he toiled on with no fortune in sight till May, 1878, when he and his two mining partners discovered a rich deposit of silver in what was afterward known as the Little Pittsburg mine. A year later he sold his third interest in this property for \$1,000,000. This capital enabled him to engage in many large operations, and for several years every enterprise he undertook added greatly to his wealth. Within ten years from the discovery of the Little Pittsburg mine his fortune was estimated at \$9,000,000, and he was also considered one of the most extensive landowners in the world. In this period he was elected first mayor of Leadville, acquired claims that afterward yielded him several millions, put up an opera house in Leadville when it was but little more than a large mining camp at a cost of \$500,000, and, becoming interested in Denver, erected there a grand opera house that cost \$1,200,000, a block of office buildings that cost \$1,500,000, and a group of suburban residences that cost \$1,000,000. With the rapid increase of his wealth came a desire for political preferment. In October, 1878, he was elected Lieutenant Governor of Colorado. He held the office till January, 1884. He was elected United States Sen-

ator, to fill the unexpired term of Henry M. Teller, who had resigned to become Secretary of the Interior. This service only lasted from Feb. 2 till March 4, 1885. Soon after this he began to suffer serious losses, was obliged to place his great properties under mortgage, and in 1897 he lost the last of his real-estate holdings in foreclosure proceedings. He then hired a tenement in Denver for his family at a rent of \$12 a month, shouldered a pick, and went off prospecting for another fortune. For some time he operated in Boulder County, but from lack of capital he met with small success. In 1898 he became postmaster of Denver.

Talbot, Israel Tisdale, physician, born in Sharon, Mass., Oct. 20, 1829; died in Hingham, Mass., July 3, 1899. In 1843 he went to Baltimore, where he taught in a private school. He was graduated at the Pennsylvania Homœopathic Medical College in 1853, and at the Harvard Medical College in 1854. From 1854 till 1858 he continued his medical studies in Europe. From 1858 he practiced in Boston. He originated the Homœopathic Medical Dispensary, and acted as its secretary. He was active in organizing the Boston University School of Medicine, of which from its commencement he was dean and Professor of Surgery. He was vice-president of the International Homœopathic Congress held in London in 1881, and president of a similar congress held in Atlantic City in 1892. He established and for several years edited the New England Medical Gazette.

Taylor, Charles Fayette, surgeon, born in Williston, Vt., April 25, 1827; died in Los Angeles, Cal., Jan. 25, 1899. He was graduated at the medical department of the University of Vermont in 1856, and after studying the Swedish movement cure under Dr. Roth in London, settled in New York city and applied himself to the treatment of crippled and deformed persons. In 1866 he urged on Howard Potter, James Brown, and other philanthropic citizens the need of an institution where the crippled poor could receive scientific treatment, and his efforts resulted in the founding of the New York Orthopædic Dispensary and Hospital, which he served as surgeon till 1876. While holding this place he was also appointed consulting orthopædic surgeon to St. Luke's Hospital. Dr. Taylor was widely known by his inventions and writings in the line of orthopædic surgery. The former include an antero-posterior spinal apparatus and other contrivances for the correction of spinal deviations; a long counter-extension hip splint; a jointed supporting splint for secondary use in hip disease; contrivances for correcting deformities in the feet and legs; and an osteoclast and a genuclast. His inventions secured medals at the international expositions at Vienna in 1873 and at Philadelphia in 1876. His publications include papers on Synovitis of the Knee Joint, Emotional Prodigality, and Bodily Conditions as Related to Mental States, and volumes on the Theory and Practice of the Movement Cure (Philadelphia, 1861); Spinal Irritation, or Causes of Backache in American Women (New York, 1864); Mechanical Treatment of Angular Curvature of the Spine (1864); Infantile Paralysis and its Attendant Deformities (Philadelphia, 1867); Mechanical Treatment of Disease of the Hip Joint (New York, 1873); and Sensation and Pain (1881).

Taylor, Henry Augustus, railroad constructor, born in New York city, April 8, 1839; died there, April 8, 1899. He was educated in his native city, and for some years made his home

in Milford, Conn., where he had a fine estate—Laurelton Hall. In 1867 he went to the Northwest, and was engaged in constructing railroads in Iowa, Wisconsin, and Minnesota. Later he was similarly engaged in New York, Ohio, and Kentucky. He built the Buffalo, Rochester and Pittsburg Railroad into Rochester in 1878, and also built part of the Rome, Watertown and Ogdensburg road. About nine years ago he conducted the reorganization of the Wheeling and Lake Erie Railroad, securing for the road an entrance into Toledo, Ohio. He held important interests in large railroads, and had served acceptably in several reorganizations and receiverships. Among his benefactions are the church presented to the Methodist Episcopal congregation of Milford and the public library presented to the town.

Taylor, Joseph Danner, soldier and congressman, born in Belmont County, Ohio; Nov. 7, 1830; died in Cambridge, Ohio, Sept. 19, 1899. He was educated in public schools and at Madison Seminary. He then taught school, and studied at the Cincinnati Law School. In 1861 he purchased a half interest in the *Guernsey Times*, which he owned until 1871. In 1863 he was elected prosecuting attorney of Guernsey County. In 1863 he became a captain in the 88th Ohio Infantry, and shortly afterward he was appointed a judge advocate. At the close of the war he was appointed citizen judge advocate at Indianapolis. He represented his State in the Philadelphia Loyalist Convention in 1866. He was president of the Guernsey National Bank of Cambridge, and also president of the Ohio National Bank of Washington, and was identified with many large industrial interests. He was elected to the Forty-seventh Congress, and continued a member of that body through the Fifty-second Congress.

Thayer, Eli, educator, born in Mendon, Mass., June 11, 1819; died in Worcester, Mass., April 15, 1890. He was graduated at Brown University in 1845, and became principal of Worcester Academy. In 1848 he founded the Oread Institute—"the abode of the mountain nymphs"—a collegiate school for young ladies, in Worcester, which he conducted with marked success till he began his notable work in behalf of free Kansas. Within this time he served on the school and aldermanic boards of Worcester and in the Legislature. At a meeting in Worcester to protest against the repeal of the Missouri compromise, March 11, 1854, Mr. Thayer announced his celebrated plan of freedom. It was simply to take possession by lawful means of the new Territories through organized emigration of free State people, sustained by a base of supplies. This plan he defined as "business antislavery," as distinguished from "political and sentimental antislavery," both of which had been tried for many years and failed. While in the Legislature (1853-'54) he secured the passage of an act to incorporate the Massachusetts Emigrant Aid Company, and then organized and directed the practical work which resulted in the settlement of Lawrence, Topeka, Manhattan, and Ossawatimie. He also labored till 1857 to induce the Northern States to unite in sending antislavery settlers into Kansas under his plan, and undertook a colonization scheme in Virginia which the civil war interrupted after he had founded the town of Ceredo. He was elected to Congress as a Republican in 1856, and served till 1861. There his speeches on Central American Colonization, on the Suicide of Slavery, and on the admission of Oregon brought him much reputation. While

the civil war was in progress he proposed a plan for the military colonization of Florida as a war measure, and subsequently urged his general scheme as a remedy for the evil of polygamy in Utah. Alluding to Mr. Thayer's work, Charles Sumner said: "The State of Kansas should be named Thayer. I would rather accomplish what he has done than have won the victory at New Orleans." Mr. Thayer published a volume of his speeches in Congress, several lectures, a history of the Emigrant Aid Company, and the *Kansas Crusade*—a graphic account of his great work. He had also invented a hydraulic elevator, a sectional safety steam boiler, and an automatic boiler cleaner.

Thayer, William Wallace, lawyer, born in Lima, N. Y., July 15, 1827; died in Portland, Ore., Oct. 17, 1899. He studied law, was admitted to the bar at Rochester in 1851, and began practice at Tonawanda. In 1862 he removed to Lewiston, Ida., which he represented for a term in the Territorial Legislature. He was elected District Attorney of the 3d Judicial District in 1866, resigning in 1867 to remove to Portland, Ore. In 1878 he was elected Governor on the Democratic ticket, and during his administration the public service was reorganized and a large State debt was paid. In 1884 he was elected for six years judge of the State Supreme Court.

Thompson, Elizabeth, philanthropist, born in Lyndon, Vt., Feb. 21, 1821; died in Littleton, N. H., July 20, 1890. She was the daughter of Samuel Rowell, a poor farmer, and at the age of nine years went out to service. In 1843, while she was on a visit to Boston, her remarkable beauty attracted the attention of Thomas Thompson, a millionaire, and a year later they were married. He was well known as a philanthropist, and at his death, in 1869, Mrs. Thompson, who was left with the income of his great estate, followed his example in contributing largely to all kinds of charities. She devoted \$10,000 to the investigation of yellow fever in the South; founded the town of Longmont at the base of the Rocky mountains, giving 640 acres of land and \$300 to each colonist; and contributed largely to the purchase of the Vassar College telescope. For her presentation to Congress of Francis B. Carpenter's painting of the Signing of the Emancipation Proclamation she was granted the freedom of the floor. She contributed large sums to the American Association for the Advancement of Science, and was made its first patron. In December, 1888, she was stricken with paralysis, and from that time she was not able to continue her charitable work. On July 8, 1891, she was adjudged insane by a Kansas City jury, and a curator was appointed to care for her property in Missouri. She left an estate valued at \$400,000, with no public bequests. She was author of a temperance tract entitled *Figures of Hell*, which was widely circulated.

Thompson, Frederick Ferris, financier, born in New York city in 1836; died there, April 10, 1899. He was graduated at Williams College in 1851. In 1857 he married a daughter of Myron H. Clark, then Governor of New York; soon afterward established the banking house of Thompson Brothers, and within a year succeeded to his father's business. In later years he founded the National Currency Bank in New York, and was a founder of the First National Bank of Detroit, the Columbia Bank in Chatham, N. Y., and the First National Bank of New York city. He was also a director in the Maritime Canal Company of Nicaragua, and was interested in many manufacturing enterprises. Mr. Thomp-

son was highly successful in his business relations, and was a constant promoter of educational institutions. He presented Williams College with two chemical laboratories and a fund to provide a free course of lectures; erected a building for Vassar College at a cost of \$200,000; was a large contributor to the funds for erecting the buildings of the Teachers' College in New York city and the Ontario Orphan Asylum; and for many years had supported four students each in Williams and Vassar. The two last-named institutions were especially dear to him, and beside his special gifts he aided them liberally whenever there was need.

Thompson, John Polk, inventor, born in Glasgow, Scotland, in 1838; died in Olneyville, R. I., Sept. 18, 1899. In 1848 he went to New York city. He was graduated at the high school, and then learned the watch-making and jewelry business. A natural aptitude for mechanics led him into the mill business, and at the age of twenty-six he assumed charge of the carding department of the Sprague Cotton Mill, at Baltic, Conn. Afterward he was superintendent successively of the Voluntown Mill, the Robeson Mills, at Fall River, and the Fall River Print Works. For a considerable period he now conducted a watch and jewelry establishment in Fall River, but was induced to return to mill life, starting the Shove Mill, in Fall River. He next went to Phenix, Md., as superintendent, and later to Olneyville, R. I., as superintendent and general manager of the five Ross mills. In 1898 he went South to assume control of the Mammoth Springs, Ark., Mills and the Bluff City Mill at Memphis, Tenn. Mr. Thompson invented 14 distinct mechanical devices, each of which produced radical improvements in methods of manufacturing; they include carding appliances, stop and let-off motions, and self-threading shuttles.

Thomson, Frank, engineer, born in Chambersburg, Pa., July 5, 1841; died in Merion, Pa., June 5, 1899. He studied at Chambersburg Academy, and then entered the shops of the Pennsylvania Railroad at Altoona. He spent four years in obtaining a practical and scientific knowledge of mechanical engineering, and when he left the shops he was able to build a locomotive. During the civil war he rendered valuable service to the Federal Government as chief assistant to the Assistant Secretary of War. He constructed railroads and bridges and directed the transportation of troops. In June, 1864, he was appointed superintendent of the eastern division of the Philadelphia and Erie Railroad. In March, 1873, he was made superintendent of motive power of the Pennsylvania Railroad at Altoona. He relinquished this place July 1, 1874, to become general manager of the Pennsylvania Railroad system east of Pittsburg and Erie. Here he introduced reforms in the management and maintenance of the road; the standard track and solid roadbed owe their existence to his efforts. Oct. 1, 1882, Mr. Thomson became second vice-president; Oct. 27, 1888, was advanced to first vice-president; and Feb. 3, 1897, was elected president of the Pennsylvania Railroad Company.

Tiemann, Daniel Fawcett, manufacturer, born in New York city, Jan. 9, 1805; died there, June 29, 1899. In 1818 he became clerk in a wholesale drug house. He entered his father's paint factory in 1824 as an employee; in 1827 became a partner, and in 1848 succeeded to the business. He was a member of the first board of education of New York city, and was elected several times to the Board of Aldermen. In 1857 he was elected mayor on an independent reform

ticket, in opposition to Fernando Wood. The placing of the names of streets on the 'street lamps was due to a suggestion from him. In 1871 he was elected State Senator, serving one term, after which he retired from political life. He was a sound-money Democrat, and in 1896 cast his first Republican vote. He was a trustee of Cooper Union from its organization.

Truesdell, Gaylord Sangston, artist, born in Waukegan, Ill., in 1859; died in New York city, June 13, 1899. He studied painting at the Pennsylvania Academy of Fine Arts, went to Paris in 1885, and, with the exception of a year spent in Washington, lived abroad till early in 1899, when he came to New York city. Some of his best-known pictures are *Going to Pasture*, now in the Corcoran Art Gallery; *Shepherd and Flock*, which received a third medal at the Paris Salon; and *On the Beach*, exhibited in the spring Academy of 1899.

Tucker, Gideon J., lawyer and journalist, born in New York city, Feb. 10, 1826; died there July 7, 1899. He received a common-school education, studied law, and was admitted to the bar in 1847. In 1853 he was appointed clerk in the New York customhouse, but in a short time he went to Albany as editor of the *Argus*. In 1855 he sold his interest in that paper and founded the *New York Daily News*. In 1857 he was elected Secretary of State, and in the next year he became a regent of the university and received the degrees of A. M. and LL. D. In 1882 he was elected to fill a vacancy in the office of surrogate of New York County, and in the following year he was re-elected for a full term of three years. He was elected to the Assembly in 1865. He drafted and carried through the statute for the prevention of cruelty to animals and the act establishing the New York Free College. In 1866 he was again elected surrogate by a majority of 13,500 votes, the only other candidate on the same ticket being defeated by 19,000. He prepared and published *Tucker's Surrogate Court Reports*. From 1868 until 1875, with the exception of being supervisor of the State census in 1875, Judge Tucker practiced law in New York city. In 1875 he was one of those who bolted from Tammany Hall and founded Irving Hall. In 1886 he was identified with the mayoralty campaign of Henry George. He was a member of the New York State Constitutional Conventions of 1867 and 1894. The attention of the whole country was attracted to him in 1886 by a letter of his addressed to President Cleveland, in which he declined the appointment as commissioner to examine about 100 miles of railroad in Oregon.

Turini, Giovanni, sculptor, born near Verona, Italy, May 23, 1841; died in New York city, Aug. 27, 1899. He studied sculpture in Milan and Rome, becoming a professor of the art in the former city. He was a volunteer in Garibaldi's army in 1866. In 1867 he came to New York city, where he practiced his art until his death. He made several statues for the Venezuelan Government, and had received a commission to make three equestrian statues of Venezuelan heroes and a colossal statue of Liberty. One of them—that of Marshal Sucre—was completed and sent to Caracas; the clay model of the General Palz statue was finished, and the Bolivar statue was cast in plaster and accepted by the art commission for Central Park. For this work he was to have received \$75,000, but was paid only \$8,000. This failure of the Venezuelan Government to fulfill its obligations probably hastened his death, which took place while he was at work

on an heroic statue of John Paul Jones for the Dewey arch. Among his other works are the group Angelica and Medoro, the bust of Pope Leo XIII in the Vatican, the statue of Garibaldi in Washington Square, and the colossal bust of Mazzini in Central Park.

Turner, John Wesley, military officer, born in Saratoga County, New York, July 19, 1833; died in St. Louis, Mo., April 8, 1899. He was graduated at West Point in 1855; entered the army as a brevet second lieutenant in the 3d Artillery; was promoted second lieutenant in the 1st Artillery the same year, and first lieutenant April 21, 1861, and resigned while captain and commissary of subsistence Sept. 4, 1871. His services in the regular army prior to the civil war comprised chiefly participation in the Seminole Indian War in Florida and garrison duty. At the reduction of Fort Pulaski he commanded one of the principal breaching batteries. In September, 1863, he was brevetted a major in the regular army and commissioned a brigadier general of volunteers for gallantry at Fort Wagner. He was transferred to the Army of the James, and received command of a division of the 10th Corps. He rendered effective service in the campaign before Richmond, and was brevetted a lieutenant colonel in the regular army. From August, 1864, till March, 1865, he was chief of staff in North Carolina and Virginia, and then, as commander of an independent division of the 24th Corps, he took part in the operations culminating in the surrender at Appomattox. Under date of March 13, 1865, he was brevetted colonel, United States army, for the capture of Fort Gregg; major general of volunteers for meritorious services on several occasions; and brigadier general and major general, United States army, for services during the war. He was mustered out of the volunteer service in September, 1866, and thence till his resignation served as depot commissary in St. Louis and in the Indian Department. After leaving the army he became a civil engineer in St. Louis, and for several years was a member of the Board of Public Works.

Valentini, Philip J. J., archaeologist, born in Berlin, Germany, in 1828; died in New York city, March 16, 1899. His father was an Italian, a teacher of languages. The son received a careful training in philology, spent some time at the Gymnasium of Targau, and afterward studied jurisprudence at the University of Berlin. In 1854 he founded the seaport of Puerto Limon, in Costa Rica, under Government auspices, and there learned that the people could give no account of their ancestors. On his return to Germany he made diligent search for historical information regarding early Spanish colonization in Central America. He then spent eleven years in further research, which resulted in the preparation of numerous manuscripts that the Government desired to publish but political disturbances prevented. These studies induced Dr. Valentini to investigate the prehistoric remains of Guatemala and neighboring regions. He made such progress in deciphering the hieroglyphics on monuments and pre-Columbian manuscripts that in thirty years his work brought him to the front rank of American archaeologists. His interpretation of the famous Mexican calendar stone added greatly to his reputation. His last work was *A Study of the Voyage of Pinzon to America* (Berlin, 1898).

Vance, Robert Brank, soldier, born in North Carolina in 1828; died in Asheville, N.C., Nov. 28, 1899. He was a brother of Zebulon B. Vance, entered the Confederate service as a captain, and in

1863 was appointed a brigadier general. Near the close of the war he was captured, and was released on parole by President Lincoln that he might obtain clothes for the Confederate prisoners. He made a trip through the North and secured a large amount of clothing and money. He was elected to Congress in 1872, and re-elected for the five succeeding terms. In 1885 he was appointed assistant commissioner of patents.

Vanderbilt, Cornelius, capitalist, born in New Dorp, Staten Island, N. Y., Nov. 27, 1843; died in New York city, Sept. 12, 1899. He was the eldest son of William Henry Vanderbilt, and the favorite grandson of Commodore Cornelius Vanderbilt. He was educated in the common schools of Staten Island and in a private academy in New York city. When he left school he became a clerk in the Shoe and Leather Bank, and subsequently in the banking house of Kissam Brothers. In 1865 he was made assistant treasurer of the Harlem Railroad, and began his practical study of railroad management and finance. In 1867 he was made treasurer of the company, which office he filled ten years. In 1877, after the death of his grandfather, he was made first vice-president of the New York Central Railroad, with entire control of the finances of the company. Upon his father's death, Dec. 8, 1885, he became the head of the Vanderbilt family, and for ten years was the chief director of the Vanderbilt system of railroads. On July 14, 1896, he was stricken with paralysis, from which he never fully recovered, the three last years of his life being spent mainly at health resorts. At the time of his death he was associated as director, or in other official capacity, with 54 railroad companies. During his busy life he devoted a set portion of every day to the charitable organizations with which he was connected and to the consideration of his own private beneficences, which were numerous. In April, 1886, he united with his brothers in a gift of \$250,000 for the erection of the Vanderbilt Clinic of the College of Physicians and Surgeons. In 1897 he presented to St. Bartholomew's Home, in East Forty-second Street, an addition costing \$250,000. He was much interested in the railroad branches of the Young Men's Christian Association, and was personally active in establishing them. His gifts to Yale College amounted to about \$1,500,000, among them Vanderbilt Hall, a dormitory intended as a memorial to his son William H., who died there while a student. He presented Rosa Bonheur's Painting The Horse Fair to the Metropolitan Museum of Art, having paid \$53,000 for it at the sale of the Stewart collection. He gave \$100,000 to the fund for the new Episcopal Cathedral of St. John the Divine. He was a member of the Finance Committee of the Episcopal Board of Foreign Missions, and of the Executive Committee of the International Young Men's Christian Association; a trustee of the Seamen's Mission of the Episcopal Church, the Hospital for the Ruptured and Crippled, the Museum of Natural History, the Metropolitan Museum of Art, the General Theological Seminary of the Episcopal Church, and of the American Bible Society; a vestryman of St. Bartholomew's Church; vice-president of the Young Men's Christian Association; and chairman of the Grand Central Station Branch. He left an estate valued at about \$70,000,000, the bulk of which he devised to his youngest son, Alfred Gwynne. His eldest son, Cornelius, with whom he had quarreled, was practically cut off, receiving only the income of \$1,000,000, placed in trust. The other son and two daughters received equal shares—about \$7.

500,000 each. Upon the reading of the will, Alfred offered to his eldest brother from his portion an amount sufficient to make his share equal to that received by the other brother and sisters, and this proposition was accepted by Cornelius. (See GIFTS AND REQUESTS.)

Vaughan, Alfred Jefferson, soldier, born in Dinwiddie County, Virginia, May 10, 1830; died in Indianapolis, Ind., Oct. 1, 1899. He was graduated at the Virginia Military Institute in 1851, and began practice as a civil engineer. He made a survey of the Hannibal and St. Joseph Railroad, and later was United States surveyor for the district of California. He entered the Confederate army in 1861, and rose to the rank of major general. He was wounded at Columbus, Ky., and in the Chickamauga campaign he lost a leg. After the war he farmed in Mississippi till 1872, and was master of the State Grange. He entered into business in Memphis in 1873, and served as clerk of the criminal court of Shelby County, Tenn., from 1878 till 1886.

Walsh, Patrick, journalist, born in Ballingarry, County Limerick, Ireland, Jan. 1, 1840; died in Augusta, Ga., March 19, 1899. In 1848 his parents removed to Charleston, S. C., where he was apprenticed to the printer's trade. In 1859 he entered Georgetown (D. C.) College, where he remained till South Carolina seceded, when he returned to Charleston and entered the military service of the State. He removed to Augusta, Ga., in 1862, and obtained employment on the Daily Constitution, of which he became local editor in 1863. In 1864 he became associated also in the publication of the Pacificator, a weekly paper. In 1866 he was appointed Southern agent of the New York Associated Press, and in 1867 became business manager of the Chronicle and Sentinel, which in 1877 was consolidated with the Constitution under the name of the Augusta Chronicle. He was elected to the city council in 1870, to the Legislature in 1872, to the State and National Democratic Conventions in 1880, and in 1884 was a delegate to the National Convention in Chicago. On April 2, 1894, Gov. Northern appointed him United States Senator to fill the vacancy caused by the death of Senator Alfred H. Colquitt, and he served till March 4, 1895. At the time of his death he was mayor of Augusta.

Waterston, Mrs. Anne Cabot Lowell (Quincy), author, born in Boston, Mass., June 27, 1812; died there, Oct. 14, 1899. She was the last surviving daughter of Josiah Quincy, the second mayor of Boston and the president of Harvard College. She married the Rev. Robert C. Waterston, a Unitarian clergyman, with whom she subsequently traveled abroad extensively, and after his death, in 1893, her life was passed in retirement. She contributed to magazines and newspapers, but her only published books are Verses (Boston, 1863) and Adelaide Phillips: A Record (1883).

Watterson, John Ambrose, clergyman, born in Blairsville, Pa., May 27, 1844; died in Columbus, Ohio, April 17, 1899. He was graduated at Mount St. Mary's College, Emmittsburg, Md., in 1865; was ordained in the Roman Catholic Church, Aug. 8, 1868; became a member of the faculty of Mount St. Mary's immediately after ordination, and succeeded the Rev. John McClosky, D. D., as president of the college in 1877. In 1878 he received the degree of D. D. from Georgetown College. In 1880 Dr. Watterson was chosen Bishop of Columbus, Ohio. He applied himself especially to advancing the educational interests of his diocese, and by the end of 1884 he had

established a college in the city and also had 3 academies and 32 parochial schools under his supervision. In September, 1888, the pontifical college Josephinum was established in the city for the education of pious and talented boys without means for the priesthood. This institution is immediately subject to the Holy See; was promoted to a pontifical college by Leo XIII in 1892, and was incorporated by the State of Ohio with all the rights and privileges accorded to American universities in 1894.

Webb, William Henry, shipbuilder, born in New York city, June 10, 1816; died there, Oct. 30, 1899. He began to learn the trade of shipbuilding in the yard of his father, Isaac Webb, in 1836. Soon afterward, under a subcontract with his father, he built the Oxford, a packet ship of the Black Ball Line. He became a partner in the firm of Webb & Allen in 1840 and from 1843 until his retirement, in 1868, he carried on the work at the shipyard on the East river, Brooklyn. His was the largest private establishment of its kind in the world at that date. More vessels, and many of the largest tonnage, were built at his yard from 1840 to 1868 than were built by any other one firm. He launched at one tide 3 large vessels in twenty minutes. He had built more than 150 large ships at the date of his retirement. He devised a new model for naval vessels, which was rejected by both the United States and France, but was accepted by Russia, and upon its lines the screw frigate General Admiral was built for that Government in 1858. He built 2 frigates for Italy, for which the order of Saints Maurice and Lazarus was conferred upon him by King Victor Emmanuel. For France he built the Dunderberg, afterward the Rochambeau, the fastest war vessel of her time. He conducted several steamship lines after his retirement from shipbuilding. For fourteen years he was president of the New York city Council of Municipal Reform. In his declining years he prepared a work on Practical Shipbuilding. He also built and endowed Webb's Free Academy and Home for Shipbuilders on Fordham Heights.

Webster, George Parmelee, legislator, born in Watertown, Conn., in 1828; died in New York city, Jan. 11, 1899. When fifteen years old he went to Newport, Ky., where he began studying law. He spent three years mining in California, and after his return and admission to the bar served two terms as city solicitor, one term as district attorney of Campbell County, and two terms in the Legislature. When the Legislature came to vote on the question of secession, the votes were a tie when his name, the last on the roll, was reached. He voted "No," and thus kept Kentucky in the Union. Soon afterward he resigned his seat, and was appointed a captain and assistant quartermaster in the National army. Subsequently he was promoted major, and had charge of the fitting out of Gen. Burnside's expedition to North Carolina. In 1867 he removed to New York city and engaged in law practice. In 1889 he was elected to the Legislature, where he served six consecutive terms, during which he introduced the first bill providing for the creation of the Greater New York city, and the bills to organize the Aquarium in old Castle Garden, to construct the Park Avenue viaduct, and to build three large bridges in the city. In 1893 he retired from active life.

Wells, James Madison, politician, born near Donaldsonville, La., in 1808; died there, Feb. 28, 1899. He held various political offices. In 1864 he first attracted national attention by his elec-

tion to the office of Lieutenant Governor on the Union ticket headed by Michael Hahn (see obituary in the Annual Cyclopædia for 1886) in the election ordered by President Lincoln for the part of Louisiana that was held by the Federal forces. In January, 1865, Gov. Hahn resigned his office on being elected United States Senator, and Mr. Wells succeeded to it. In May he provoked a conflict with Gen. Banks by setting aside the register of voters that had been made under the latter's direction. The Democratic convention that met in October nominated him for Governor, and he was elected with the entire Democratic ticket. After the massacre of negroes in Grant Parish and the fatal riots in New Orleans in 1866 Gen. Sheridan, commander of the 5th Military District, officially accused Gov. Wells of want of energy and vigilance. Early in 1867 an effort was made in the Legislature to impeach the Governor, but a special committee reported that it would be inexpedient to press the matter at that time. On June 3 Gen. Sheridan removed Gov. Wells from his office for "having made himself an impediment to the faithful execution of the act of Congress of March 2, 1867, by directly impeding the general in command in the faithful execution of the law." Gov. Wells refused to recognize the order of removal, whereupon Gen. Sheridan sent Gen. Forsyth to eject him forcibly and obtain possession of the official records. Gen. Sheridan further charged him with "subterfuge and political chicanery." Gov. Wells made a determined fight for his office, but Gen. Grant approved Gen. Sheridan's act of removal. The particular act of which Gen. Sheridan had complained grew out of the appropriation by the Legislature of \$4,000,000 for repairing the levees broken by the overflowing of the Mississippi. Contrary to the act of the Legislature, Gov. Wells appointed a board, and acknowledged to Gen. Sheridan that his object was to disburse the money in the interest of his own party, by securing for it the vote of its employees (see Gen. Sheridan's letter to Secretary Stanton, dated June 3, 1867). Within five years Gov. Wells had acted as a Democrat, a Republican, and again as a Democrat. He next became conspicuous in national politics in 1876, when he was chairman of the State Returning Board, which declared that, through frauds in Vernon Parish and elsewhere, the Federal election returns were false, and that the Hayes presidential electors had been chosen. In 1877, when the Democrats came into power in Louisiana, he was tried and found guilty for his participation in what the Democrats called "the returning board steal," but the State Supreme Court dismissed the finding on a legal technicality.

West, George Warren, soldier, born in Lowell, Mass., July 19, 1832; died in Athol, Mass., May 27, 1899. At the outbreak of the civil war he enlisted in the 5th Massachusetts Infantry, but resigned to become a captain in the 10th Maine Infantry. He was promoted to major and colonel of the 17th Maine Infantry, and brigadier general for bravery at the battle of Antietam. After the war he served as special pension examiner for New York.

Weston, Lizzie (Davenport. Mrs. Charles Mathews), actress, born in New York city in 1828; died in Brighton, England, Jan. 4, 1899. She was a daughter of Abram Wilbur Jackson, "Black Jackson," manager of the Bowery Theater, New York, in 1845. Her first appearance was at the American Theater, New Orleans, Sept. 12, 1849. In 1851 she was a member of the company of the National Theater, New York city. Aug. 29,

1852, made her first appearance in Philadelphia as Lydia Languish at the old Chestnut Street Theater. For two seasons she was a favorite at this theater, and she became celebrated as "the beautiful Lizzie Weston." She played for a time at the Walnut Street Theater in the same city, when she met and married Adolphus ("Dolly") Davenport (Hoyt), a popular light comedian. When Charles Mathews, Jr., came to the United States in 1857 Miss Weston was at Burton's Theater, and she married him in Jersey City, N. J., Feb. 16, 1858, shortly after a divorce had been granted from her former husband. She accompanied Mr. Mathews to England, and made her *début* in London as Lady Gay Spanker in London Assurance, to her husband's Dazzle, at the Haymarket Theater, Oct. 11, 1858. She continued to play the leading female rôles with Mr. Mathews at the Haymarket until 1861, and she originated Mrs. Honeybun in Tom Taylor's Contested Election, first played at the Haymarket, June 29, 1859, and Mrs. Sebright in his Overland Route, first played Feb. 23, 1860. In 1861 Mr. and Mrs. Mathews took the Bijou Theater, London, and instituted a bright entertainment, which they repeated all over the British Kingdom for years, called Mr. and Mrs. Charles Mathews at Home. In 1864 she was the Marguerite in Burmand's burlesque Faust and Marguerite. She seldom appeared after that engagement.

Whistler, Joseph Nelson Garland, military officer, born in Green Bay, Wis., Oct. 19, 1822; died in Fort Wadsworth, New York harbor, April 20, 1899. His grandfather, John, and his father, William, were officers in the United States army. He was graduated at West Point and appointed a brevet second lieutenant in the 8th Infantry, July 1, 1846; was promoted second lieutenant in the 3d Infantry, Jan. 7, 1847; first lieutenant, June 6, 1852; captain, May 14, 1861; major of the 13th Infantry, Dec. 31, 1864; transferred to the 31st Infantry, Sept. 21, 1866, and to the 22d, March 15, 1869; promoted lieutenant colonel, 5th Infantry, Feb. 18, 1874; colonel, 15th Infantry, May 31, 1883; and was retired Oct. 19, 1886. In the volunteer service he was commissioned colonel of the 2d New York Artillery, May 9, 1863, and brevetted brigadier general, March 13, 1865. Gen. Whistler took part in the siege of Vera Cruz, the principal battles that followed, and the capture of the city of Mexico. In 1861, while on duty in Texas, he was captured by the Confederates and paroled. He served thence till March, 1863, as assistant instructor of infantry tactics at the Military Academy. After entering the volunteer service he took part in the Richmond campaign, participating in the battles of Spottsylvania, North Anna, Tolopotomoy, and Cold Harbor and the assaults on Petersburg, where he was wounded during the siege. He commanded a brigade in the defenses of Washington, and at the time of his retirement was in command of Fort Buford, Dakota Territory.

Wiles, Greenbury F., soldier, born in Zanesville, Ohio, April 4, 1826; died in Windsor, N. Y., June 14, 1899. He was a steamboat captain and owner, and when the civil war broke out he was caught with his vessel and cargo in the South. He aided in recruiting the 78th Ohio Volunteers, and went to the field as a first lieutenant in it. As lieutenant colonel he commanded the regiment in the battle of Champion Hill in 1863. At the beginning of the operations against Atlanta in 1864 he was promoted to colonel, and during most of the campaign he commanded a brigade. For these services he was brevetted brigadier general, March 13, 1865.

Williams, Edward H., manufacturer, born in Woodstock, Vt., June 1, 1824; died in Santa Barbara, Cal., Dec. 21, 1899. He was graduated at the Vermont Medical College in 1846, and spent the following year at Ann Arbor, Mich., where he engaged in civil engineering. From 1847 till 1851 he practiced medicine in Proctorsville and Northfield, Vt. In 1851 he became assistant in constructing a railroad from Coughnawaga to Plattsburg, N. Y. From 1851 till 1865 he was assistant superintendent and superintendent of various railroads, becoming in 1865 general superintendent of the Pennsylvania Railroad. On Jan. 1, 1870, he was admitted as a partner in the Baldwin Locomotive Works. In the interests of this firm he went three times to South America and Australia, twice to China and Japan, and several times to Europe, and introduced American locomotives into Russia, Mexico, Brazil, Argentine Republic, Australia, and Japan. In 1876 he was decorated with the Swedish Order of the North Star and was made a member of the Swedish Royal Academy. In 1879, while at the Sydney Exposition, he was made United States commissioner, and had control of the apportionment of the American exhibits. In 1881 he built Williams Hall for Carleton (Minn.) College, and in 1891 he presented that institution with a 16-inch telescope. In 1884 he built and endowed at Woodstock a public library. He also erected a building for the technical courses of the University of Vermont.

Williams, Henry Warren, jurist, born in Hartford, Pa., in 1830; died in Philadelphia, Pa., Jan. 25, 1899. He studied law and was admitted to the bar in 1854. In 1865 Gov. Curtin appointed him law judge of the 4th Judicial District. He was subsequently elected and re-elected by the voters of the district, and held the post for more than twenty-two years. In 1887 he was elected a justice of the State Supreme Court for the term of twenty-one years. Judge Williams was a representative of the Presbyterian Church of the United States in the Pan-Presbyterian Council in Edinburgh, Scotland, in 1877, and a vice-president of the International Sunday-school Convention in Toronto, Canada, in 1881. He was a strong temperance man throughout his life, and was actively interested in Sunday schools and Young Men's Christian Associations.

Williams, John, clergyman, born in Deerfield, Mass., Aug. 30, 1817; died in Hartford, Conn., Feb. 7, 1899. He was graduated at Trinity College in 1835, and was ordained deacon in the Episcopal Church in 1838.

After several years of foreign travel he was advanced to the priesthood in 1841, and following a year's duty as assistant minister of Christ Church, Middletown, Conn., he became rector of

St. George's Church in Schenectady, N. Y., where he remained six years. In the summer of 1848 he was elected president of Trinity College, holding office until 1853, but in the meantime he had been chosen Assistant Bishop of Connecticut. He retained ac-

tive connection with the college, serving as vice-chancellor and chancellor, successively, and was lecturer on history at the institution for nearly forty years prior to 1892. In 1854 the Berkeley Divinity School was founded at Middletown, the bishop becoming the first dean and remaining at the head of the institution until his death. At the death of the senior bishop of the diocese, in 1865, Bishop Williams became Bishop of Connecticut, and in 1887 he became senior bishop of the American Church. A few years later, on the death of the Bishop of British Guiana, he became the senior bishop, having jurisdiction in the entire Anglican communion, and on the death of Bishop Southgate, in 1894, the senior in date of consecration of all the bishops in the world acknowledging the headship of the Archbishop of Canterbury. His scholarship was as thorough as it was wide, and in intellectual force he had few superiors in his Church. He was conservative without narrowness, and he commanded the general esteem and reverence of the clergy of his communion. His personal tastes were simple and dignified both in the matter of ritual and in daily life, and in these matters, as well as in his entire devotion to his work and his wide charity toward those who differed with him, he furnished a noble example to clergy and laity alike. His published writings include *A Translation of Ancient Hymns of the Holy Church* (Hartford, 1845); *Thoughts on the Gospel Miracles* (New York, 1848); *Studies on the English Reformation*, being the Paddock Lectures for 1881 (1881); *Studies in the Book of Acts* (1888); *The World's Witness to Jesus Christ* (Bedell Lectures, 1882). His lecture notes on theological subjects and ecclesiastical history were printed for the use of his students.

Willie, Asa Hoyle, jurist; born in Washington, Ga., Oct. 11, 1829; died in Galveston, Texas, March 16, 1899. He removed to Washington County, Texas, in 1846; and, on being relieved of the disability of nonage by the Legislature, was admitted to the bar when nineteen years old. In 1852-'54 he was district attorney for the 3d Judicial District of Texas, declining a re-election that he might resume practice. He served as a Confederate soldier through the civil war. In 1866 he was elected a judge of the Supreme Court, and he held the office till October, 1867, when he and his associates were removed by Gen. Griffin, commanding the military department of Texas. He then resumed practice. In 1872 he was elected to Congress as a Democrat. Declining a re-election, he returned to practice, and soon became chief justice of the Supreme Court of Texas, holding that office six years.

Willis, Edmund Aylburton, landscape painter, born in Bristol, England, Oct. 12, 1808; died in Brooklyn, N. Y., Feb. 3, 1899. He was a son of John Aylburton Willis, an artist, and a brother of Henry Britton Willis, a fellow of the Royal Society of Painters in Water Colors. He studied art with his father, made an extended tour of Europe, and first came to the United States in 1851. After making a tour of this country he returned to England for a short time, and then established himself in Brooklyn. He was a member of the Brooklyn Art Society; painted almost wholly for private galleries; and, following a rule of an English society of painters to which he belonged, signed all his canvases "A Van Willis." His best-known paintings are *The Prairie Fire*; *The Long Sleep*; a portrait of himself in his studio; a Russian winter scene, with wolves attacking a sleigh; and an English moor, with cattle in the foreground.

Wilson, John L., philanthropist, born in Charlestown, Mass.; died in St. Augustine, Fla., April 7, 1899. He was the last of Boston's old-time West Indian merchants. He established a free hospital at Cape Haytien, Santo Domingo, where he had large business interests; built, endowed, and equipped a magnificent public library in St. Augustine; endowed a free bed in Framingham Hospital; and in 1898 provided a costly clock for the tower of the old cathedral at St. Augustine, recently restored.

Winthrop, William, military officer, born in New Haven, Conn., Aug. 3, 1831; died in Atlantic City, N. J., April 8, 1899. He was graduated at Yale College in 1851, and at its law school in 1853; took a further legal course at Harvard College, and was admitted to the bar in 1854. He began practicing in Boston, but soon removed to New York city. In April, 1861, he enlisted as a private in the 7th New York Regiment, and in October he was appointed first lieutenant in the 1st United States Regiment of sharpshooters. He was promoted captain, Sept. 22, 1862; major and judge advocate, Sept. 19, 1864; brevetted colonel, March 13, 1865; and transferred to the regular army as major and judge advocate, Feb. 25, 1867. In 1884 he was promoted lieutenant colonel and deputy judge-advocate general; on Jan. 3, 1895, became colonel and assistant judge-advocate general; and on Aug. 3 was retired. His brevet of colonel was given for faithful and meritorious service in the field and in the bureau of military justice. Under the act of Congress of June 6, 1874, he was appointed Professor of Law at West Point, where he served till 1890, subsequently being stationed in Washington till his retirement. Col. Winthrop was the author of *Digest of Opinions of the Judge-Advocates General of the Army* (Washington, 1865; enlarged editions, 1866, 1868, and 1880); *Treatise on Military Law* (two vols., 1886; condensed into one volume for a text-book at the Military Academy, under the title of *Abridgment of Military Law*, 1887); and of a translation of the *Military Penal Code of the German Empire* (1873). Of his *Treatise on Military Law*, a late judge-advocate general of the British army testified that it had changed the construction and procedure of English military law. Col. Winthrop was an accomplished linguist, botanist, and contributor to periodicals and scientific reviews. He was a brother of Theodore Winthrop, who was killed in the battle of Big Bethel in June, 1861.

Wolff, Christian D., soldier, born in Bavaria in 1822; died in Clayton, Mo., May 21, 1899. He was the son of one of Napoleon's dragoons. He emigrated to America in 1833 and settled on a farm near the home of Ulysses S. Grant. He fought in the Mexican War, and later became a member of Kit Carson's band of scouts. He organized a company of volunteers in the civil war, was promoted to the colonelcy of his regiment, and in 1864 was promoted brigadier general.

Wood, Edward Parker, naval officer, born in Mansfield, Ohio, Aug. 16, 1848; died in Washington, D. C., Dec. 11, 1899. He was graduated at the Naval Academy in 1867 and assigned to special service on the Minnesota. He was promoted ensign in 1868, master in 1870, and lieutenant in 1871. His service included special work for the Government in Europe and elsewhere. He also served on the Trenton, the Quinnebaug, the Monongahela, and the Concord. He was at the Naval Academy in 1881-'84, and again in 1886-'90. He was promoted to lieutenant commander in September, 1890, served in the Bureau of Navigation from 1893 to 1896, and was commissioned

commander in July, 1897. He was ordered to the Petrel Dec. 16, 1896, and in that command he earned the highest praise of Admiral Dewey and his brother officers. The Petrel is one of the smallest gunboats in the navy, and without protection except a steel deck. Because of her light draught, he saw his opportunity to run close inshore off the entrance to the harbor at Cavité in the battle of Manila Bay. The Spanish ships that remained afloat had sought shelter under the guns of the fort at Cavité, and Dewey's large ships could not reach them. The little Petrel steamed boldly into the harbor entrance, sank the remaining Spanish boats, and then silenced the Spanish forts. The Board of Naval Rewards recommended that "for his eminent and conspicuous conduct in battle" Commander Wood should be advanced ten numbers in his grade; and although this was a higher measure of reward than was bestowed on any other commander, Congress did not withhold it. He was detached from the Asiatic station on Dec. 31, 1898, and, coming home, after a short leave of absence was placed in charge of the 5th Light-house District, with his office in Baltimore.

Woolf, Michael Angelo, artist, born in London, England, in 1837; died in Brooklyn, N. Y., March 4, 1899. He came to the United States when twelve years old, and entered on a theatrical career in Philadelphia, where he ultimately leased the old Chestnut Street Theater. Later he turned his attention to drawing, and developed into a delineator of child life, his favorite subjects being the waifs of the streets. For more than thirty years he contributed to periodicals sketches contrasting the children of the poor with those born to luxury. He also did much as a cartoonist in association with Thomas Nast. His drawings of waif life and contrasts were always pathetic and frequently humorous as well. An appreciative sketch of his work, with illustrations, appeared in the *Saturday Evening Post*, of Philadelphia, Dec. 17, 1898. His last literary work, *Memories of Barn-storming Days*, was published in that periodical in March and April, 1899. A collection of his contributions to the periodical press was published after his death, under the title of *Sketches of Lowly Life in a Great City*.

Worrell, Jennie (Mrs. Jane Wilson), actress, born in Cincinnati, Ohio, in 1850; died in New York city, Aug. 11, 1899. She was the youngest of three sisters who were very well known as singers, dancers, and comedians. They were at first always seen together on the stage, and were billed as "the Worrell Sisters." Their names were Sophie, Irene, and Jennie. They were children of William Worrell, a popular circus clown. Their first engagement was in San Francisco in 1858. From that city they visited Sacramento and the mining towns of the North and of Nevada. For five years they were enthusiastically welcomed, and they repeated the good fortune in Australia. In 1866 they met with a warm welcome at Wood's Museum, New York. Here Jennie afforded great delight by her performance of Nan the Good-for-Nothing. She first married a gambler, from whom she soon obtained a divorce. She then married Alexander Hatfield, with whom she lived very happily, and who left her a small fortune. Her last marriage, with Robert Wilson, was soon ended by a divorce. Her last appearance in public was in 1884.

Wright, Horatio Gouverneur, soldier, born in Clinton, Conn., March 6, 1820; died in Washington, D. C., July 2, 1899. He was graduated at West Point in 1841, standing second in his class, and was commissioned second lieutenant of engi-

neers. For two years he was instructor of French and engineering at the academy, and after other service he became in 1846 superintending engineer of the building of Fort Jefferson at Tortugas, Fla., in which duty he continued until 1856, having also, subsequent to 1852, charge of other engineering works in Florida, notably at St. Augustine and Key West; and he was lighthouse engineer in Florida in 1852-'53. From 1856 to 1861 he was assistant to the Chief of Engineers in Washington, and he received his majority on April 6, 1861. During the civil war he was in field service from the beginning. In April, 1861, he was chief engineer of the expedition sent to destroy the navy yard at Norfolk, Va. From May until July, 1861, he was engaged on the defenses of Washington, after which he was chief engineer of Heintzelman's division in the Manassas campaign, participating in the battle of Bull Run. He was made brigadier general of volunteers on Sept. 14, 1861, and commanded a brigade in the Port Royal expedition, participating in the attack on Port Royal and the capture of Hilton Head in November. From February to June, 1862, he had command of the land forces in the Florida expedition that captured Fernandina, Jacksonville, and St. Augustine, and had a division in the attack on Secessionville, James island, S. C., in June, 1862. He was made major general of volunteers on July 18, 1862, and assigned to the command of the Department of Ohio, which he held until March, 1863, after which for a month he had the division of Louisville, Ky. During that period, which included Bragg's in-

vasion of Kentucky, Gen. Wright displayed administrative talents of high order. In May he received command of the 1st division of the 6th Corps of the Army of the Potomac, and he participated in the Pennsylvania campaign, being present at the passage of the Rappahannock and in the battle of Gettysburg, reaching that field on the afternoon of the first day after a forced march of 35 miles. Subsequent to the great

battle he took part in the skirmish at Fairfield and in the pursuit of Lee's army to Warrenton, Va. He continued with the Army of the Potomac during the Rapidan campaign, and commanded the 6th Corps at the capture of Rappahannock Station, receiving the brevet of lieutenant colonel for gallant and meritorious services in that battle. During the winter months he served as a member of a board to devise modifications of the system of seaboard defenses. He resumed command of his division in April, 1864, and participated in the overland campaign, being present in the battles of the Wilderness and those about Spottsylvania, in the last of which he was wounded, and received the brevet of colonel on May 12, 1864. On the death of Gen. Sedgwick he succeeded to the command of the 6th Corps, and he was present in the battles of North Anna, Totopotomoy, Cold Harbor, and the siege of Petersburg, receiving his appointment of major general of volunteers on March 13, 1864. In July, 1864, when Washington was threatened by Early, who had come down the Shenandoah valley, Wright with his command was sent to the capital by Grant, who wrote to President Lincoln from Petersburg, "I have sent from here a whole

corps commanded by an excellent officer." Early, who had been detained by the sturdy resistance of Lew Wallace at the Monocacy, reached Fort Stevens, about 5 miles northeast of the executive mansion, as the steamers with the 6th Corps arrived at the wharves. Late in the afternoon Wright and his men relieved the hastily gathered volunteers at Fort Stevens, Early's advance was checked, and Washington was saved. On July 12 an engagement took place, at the close of which Early withdrew and was followed by Wright, who overtook and defeated him in a sharp skirmish at Snickers Gap, Va. Grant said: "Boldness is all that is needed to drive the enemy out of Maryland, and Wright is the man to assume that." At Fort Stevens President Lincoln persisted in exposing himself to the Confederate sharpshooters, until he was peremptorily ordered down by Gen. Wright. Lincoln reminded Wright that as President of the United States he was commander in chief of the armies, to which Wright is said to have replied with military brevity and directness that he was in command at that particular spot; that he was responsible for the President's safety, and his orders must be obeyed. Lincoln appreciated the force of Wright's remark and withdrew. The Shenandoah campaign followed, in which Wright commanded the 6th Corps under Sheridan, and was engaged in the fights at Charlestown, Opequan, Fisher's Hill, and Cedar Creek, where he was wounded, and in numerous skirmishes. The battle of Cedar Creek has been immortalized at the expense of Wright by the famous incident of Sheridan's ride. Sheridan, having posted his men in a long drawn out line on the farther bank of Cedar Creek, turned his command over to Wright and went to Washington. A reconnoissance showed that Early could not be found and had fallen back, but with re-enforcements, and after a forced march in the early morning, aided by a fog, he suddenly captured a well-connected picket line of old soldiers without occasioning alarm, and the first warning of his presence was a volley of musketry fired into the main line of unarmed soldiers. This demoralized the veteran troops and gave Early, almost without a struggle, the entire left of the line, with considerable artillery. Seeing that no part of the original line could be held, Wright ordered the 6th Corps to fall back on a tenable position, and while accomplishing this movement by well-timed attacks did much toward checking Early's advance and giving time for the rest of the troops to take position. When that was successfully accomplished Sheridan arrived, and when the advance was made, precisely as Wright had ordered it, the enemy fled in panic. These facts are taken from Wright's report to Sheridan, the original of which has disappeared from the archives of the War Department. Sheridan is quoted as saying: "Read has given me a good send-off in Sheridan's Ride, but as a matter of fact I robbed Wright of the glory that he was clearly entitled to, for when I reached the field he had already gotten his forces well in hand, and but for my appearing when I did he would have had the victory that I got the honor for." (J. F. Saunders, in Washington Evening Star of July 4, 1899.) Wright returned with his corps to the Army of the Potomac and participated in the Richmond campaign. It was Wright's corps that broke through the strongly intrenched line at Petersburg and terminated the siege. In his official report, Gen. Grant wrote: "Gen. Wright penetrated the line with his whole corps, sweeping everything before him and to his left toward Hatcher's Run, cap-

turing many guns and several thousand prisoners." He fought the last battle and won the last victory of the Army of the Potomac at Sailor's Creek, April 6, 1865. After Appomattox, Wright, with his corps, was sent to Sherman's aid in North Carolina, and when Johnston surrendered he returned to Washington. He received the brevet of brigadier general for gallantry at Cold Harbor, and that of major general in the United States army for services at the capture of Petersburg, March 13, 1865, and also the thanks of the Legislature of Connecticut "for his eminent services." From July, 1865, to August, 1866, he commanded the Department of Texas, and he was mustered out of the volunteer service on Sept. 1, 1866. Returning to his corps, in which he had held the rank of lieutenant colonel from Nov. 8, 1863, he was assigned to duty as a member of various boards having to do with engineering works. He was made a colonel on March 4, 1879, and on June 30 brigadier general and chief of engineers, serving also *ex officio* as a member of the Lighthouse Board, which places he held until his retirement, March 6, 1884. He was co-author of a Report on the Fabrication of Iron for Defenses (Washington, 1871). In announcing his death the chief of engineers said: "For nobility of character, for gentleness of disposition, for all the grand attributes of the beau-ideal soldier, Gen. Wright stood pre-eminent." In Arlington, on the slope of the east bank of the Potomac, facing the city that he saved from the enemy, he was buried with military honors.

Yates, John Barentse, soldier, born in Schenectady, N. Y., Oct. 19, 1833; died there, Oct. 20, 1899. He began life in the service of the Utica and Schenectady Railroad as an axeman, later going West to serve as a rodman. On the breaking out of the civil war he enrolled a company of the 1st Michigan Engineers, and was commissioned as captain in 1861, promoted to the rank of major in 1863, and made colonel in 1864. In this command he was the main reliance of Gen. Sherman in his march to the sea, who wrote a letter to the War Department praising him in the highest terms. It was said of his regiment that it built and destroyed more railroads under fire than any similar organization of modern times. After the war he was appointed military superintendent of railroads for Tennessee, a place which he retained throughout the reconstruction period. Returning to his profession and his native city, he was made division engineer on the Erie Canal, and he then built the additional tracks of the New York Central Railroad. He was employed extensively throughout the country down to the time of his death.

Young, Henry A., physician, born in Salt Lake City, Utah, in 1866; died near Manila, Philippine Islands, Feb. 4-8, 1899. He was a nephew of the late Brigham Young; was graduated at the New York College of Physicians and Surgeons in 1893; spent two years as an interne at the Rhode Island Hospital, in Providence; and then settled in Salt Lake City. At the beginning of the war against Spain he enlisted in the Utah Light Artillery, becoming sergeant in Battery A. The Utah Artillery was among the few batteries of the State militia fully equipped with modern breech-loading 3.2-inch steel rifles at the beginning of the war, and was among the first organizations sent to Manila. In the attack on the American lines by the Filipino insurgents on the night of Feb. 4, and in the fighting that was continued till the 9th the Utah Artillery became conspicuous by its position and remarkable execution, and was highly commended by Gen. Otis

in his official dispatches. After the defeat of the insurgents and the cessation of fighting Dr. Young could not be found. His comrades instituted a search, and his remains were found, horribly mutilated, at a spot within the lines occupied by the insurgents while the fighting was at its height.

Young, John Russell, journalist, born in Downingtown, Pa., Nov. 20, 1841; died in Washington, D. C., Jan. 17, 1899. He was educated in the public schools of Philadelphia and New Orleans. In 1857 he became a copyholder on the Philadelphia Press, on which he was rapidly promoted to reporter, news editor, Washington correspondent, and at the outbreak of the civil war war correspondent with the Army of the Potomac. He remained with that army from the battle of Bull Run till the end of the Chickahominy campaign, when illness compelled him to return to Philadelphia, where he took the managing editorship of the Press. In 1864 he went as correspondent with the Red River expedition under Gen. Banks, and at the close of that campaign he resumed editorial control of the Press. In September, 1865, he joined the editorial staff of the New York Tribune, and in May, 1866, became managing editor. While holding this place he established the Morning Post in Philadelphia. Mr. Young retired from the Tribune in 1869, and the same year established the Standard in New York. In 1871 he went to Europe as a correspondent of the New York Herald, and traveled in each of its countries excepting Russia till 1877, when he was selected by the Herald to accompany ex-President Grant on his journey around the world. In 1879 he resumed editorial work on the Herald till 1882, when he was appointed minister to China. In 1885 he resigned his post and returned home. His last public office was that of librarian of Congress, to which he was appointed June 30, 1897. He was author of *Around the World with Gen. Grant* (2 vols., New York, 1879) and editor of a *Memorial History of the City of Philadelphia*, from its First Settlement to the Year 1895 (vol. i), and *Narrative and Critical History, 1681-1895* (New York, 1895).

OBITUARIES, FOREIGN. **Abdy, John Thomas**, English jurist, born in Madras, India, July 5, 1822; died in September, 1899. He was educated at Cambridge, and was admitted to the bar. From 1854 to 1873 he was Professor of Civil Law at Cambridge. He became recorder of Bedfordshire in 1870, and was raised to the county court bench in 1871. He was the author of a valuable *Historical Sketch of Civil Procedure among the Romans* (Cambridge, 1857), and of an edition of *Kent's Commentaries on International Law* (London, 1866). With Bryan Walker he translated and annotated the *Commentaries of Gaius and the Institutes of Justinian* (1876).

Achenbach, Heinrich von, German statesman, born in 1830; died in Potsdam, July 10, 1899. He was a Professor of Law in the University of Bonn when first elected to the Prussian Chamber in 1866. In 1872 he was appointed undersecretary in the Ministry of Education, and in 1878 became Prussian Minister of Commerce, having in his former post contributed much to the preparation of the Kulturkampf legislation. He took a prominent part in the purchase of the Prussian railroads by the State and in the extension of the railroad system. In 1879 he was appointed president of the province of Brandenburg, and under his instruction the present Emperor learned in 1882 the details of local administration.

Ahamuda, Marquis de, Spanish soldier, died in Saragossa in October, 1899. He fought with

distinction as a young officer in Morocco, and in consequence became aid-de-camp to Marshal Serrano, and one of his most devoted political friends. He was Captain General of Aragon when he was sent to Cuba, toward the close of the last insurrection, as second in command to Gen. Weyler. After his return to Spain he received his former appointment again. As a politician he was deputy for Ubeda in the early days of the Restoration.

Alfred, Prince of Saxe-Coburg-Gotha, born in Buckingham Palace, London, Oct. 15, 1874; died in Meran, Feb. 6, 1899. He was the only son of the Duke of Edinburgh, second son of Prince Albert of Saxe-Coburg and Queen Victoria of England, who succeeded to the throne of Saxe-Coburg on the death of his uncle, Ernst II.

Allen, Charles Grant Blairfandie (commonly called Grant Allen), English author, born in Kingston, Canada, Feb. 24, 1848; died in London, England, Oct. 25, 1899. He was educated at King Edward's School, Birmingham, and at Oxford, where he was graduated in 1871. For a few years after his graduation he was Professor of Logic and Philosophy at Queen's College, Spanish Town, Jamaica, but during the greater part of his career he resided in England. He was a prolific writer. He was widely known as a scientist in several departments, his aim being to popularize science, and his brilliant style contributed much to his success in this respect. As a novelist, too, he achieved a very considerable measure of popularity, but the greater part of his work in fiction, although entertaining, is ephemeral. A not wholly complete list of his fictions, the earliest of which appeared under the pseudonym Cecil Power includes *Philistia* (1884); *Babylon* (1885); *For Maimie's Sake* (1886); *In All Shades* (1886); *The Beckoning Hand*, and *Other Stories* (1887); *A Terrible Inheritance* (1887); *The Devil's Die* (1888); *This Mortal Coil* (1888); *White Man's Foot* (1888); *The Tents of Shem* (1889); *Dr. Palliser's Patient*; *Dumarescu's Daughter*; *The Great Taboo* (1890); *The Duchess of Powysland* (1891); *Blood Royal* (1892); *The Scallawag* (1893); *Michael's Crag* (1893); *The Woman Who Did* (1895); *The British Barbarians* (1895); *Miss Cayley's Adventures* (1899). The larger number of his other works comprises *Physiological Aesthetics* (London, 1877); *The Color Sense* (1879); *Vignettes from Nature* (1881); *The Evolutionist at Large* (1881); *Anglo-Saxon Britain* (1881); *Colin Clout's Calendar: A Record of a Summer* (1882); *The Color of Flowers* (1882); *Flowers and their Pedigrees* (1883); *Biographies of Workingmen* (1884); *Strange Stories* (1884); *Charles Darwin* (1885); *Common Sense Science* (Boston, 1887); *Force and Energy: A Theory of Dynamics* (1888); *Falling in Love*, with *Other Essays* (1889); *Science in Arcady* (1892); *The Attis of Catullus*, in English verse (1892); *The Lowest Slopes*, a collection of verses (1894); *Postprandial Philosophy* (New York, 1894); *The Story of the Plants* (1896); *The Evolution of the Idea of God* (1897); *Historical Guides of Paris, Florence, Belgium, and Venice* (1897); *Flashlights on Nature* (1898); *The European Tour* (New York, 1899). Since Mr. Allen's death it has been ascertained that he was the author of two novels not before attributed to him—*The Typewriter Girl* and *Rosalba*—which appeared under the pseudonym Olive Pratt Rayner. In the opinion of some critics the latter was his most effective work in fiction. He was an outspoken agnostic.

Annenkoff, Michael Nikolaivich, Russian soldier, born in 1835; died in St. Petersburg, Jan.

22, 1899. He was educated in the corps of pages, became senior adjutant of the general staff at St. Petersburg, was sent to Poland during the revolution of 1863, and there gained a reputation for ability and energy as assistant to the superintendent of police. He made a study of military railroads, and in consequence of his writings and reports on the subject was made chief director of military transport by railroads and by boats in 1867. In 1877, having risen to the grade of a general, he directed the movements of the rear guard or reserve troops of the Army of the Danube. In 1880, while attached to the Akkal Tekke expedition of Gen. Skobelev, he began the construction of the Transcaspien Railroad line, which in subsequent years he carried through the desert to Samarcand. After completing this great work he lived in St. Petersburg, where he was a member of the military council.

Apponyi, Count George, Hungarian statesman, born in 1808; died March, 1899. He was the sole leader of the Conservative party in the Hungarian Diet from 1840 to 1860. Later he was Chancellor of the Royal Cabinet, but since 1870 he has lived in retirement at Eberhardt.

Armstrong, Sir Alexander, British naval officer, born in Ireland about 1818; died in Sutton-Bonnington near Loughborough, England, July 4, 1899. He was educated at Trinity College, Dublin, and at the University of Edinburgh, and entered the medical department of the royal navy in 1842. He served in nearly all parts of the world, including five years continuously in the arctic regions in the search for Sir John Franklin. He held many important posts, among them that of director general of the medical department of the navy, 1869-'80. He was created K. C. B. in 1871, and received the Arctic, Baltic, and Jubilee medals. He was the author of *A Personal Narrative of the Discovery of the Northwest Passage* (London, 1857) and *Observations on Naval Hygiene*, particularly in Connection with Polar Service (1858).

Bamberger, Ludwig, German politician, born in Mainz, June 22, 1823; died in Berlin in March, 1899. He studied law, took part in 1849 in the revolutionary uprising in the Palatinate, and after this was repressed by Prussian troops he took refuge in Switzerland, and being condemned to death by a Bavarian tribunal settled in Paris, where he established a banking business, which he carried on with success until his return to Mainz in 1866. In the same year he was elected a deputy to the parliament of the Zollverein. He represented the same constituency in the Reichstag. He was a free trader of strong convictions and an advanced Liberal, and became one of the keenest and most vigorous debaters in the Reichstag, and in the course of time found himself at the head of the Opposition. In his contests with Bismarck he displayed remarkable strength of character and civic courage. When the National Liberal party divided finally on the question of Prince Bismarck's protectionist policy he went over to the Progressists, the party of Eugen Richter, but soon after this he retired from public life. He published books on *Liberty of the Press*, *Results of the Insurrection in the Palatinate*, *Monsieur de Bismarck*, *Natural History of the French War*, *The Right of Assembly*, *Germany and Socialism*, and *Journalism and Judaism*. He was a journalist and pamphleteer who employed irony and ridicule with more biting effect than any political writer since Heine. His skill as a writer and his knowledge of French affairs led to his being summoned to Versailles in 1871 to defend the cause of German union and

advise Prince Bismarck in his negotiations with Thiers.

Bates, Harry, English sculptor, born in Stevenage in 1850; died in London, Jan. 30, 1899. He practiced architectural decoration for many years before he studied art. He won a traveling scholarship in 1883 with a relief of Socrates Teaching, and went to Paris and studied under Rodin. His panels representing scenes from the Odyssey attracted attention at the Royal Academy as revealing a new talent. He exhibited *Aeneas* in 1885, *Homer* in 1886, and *Rhodope* and panels of *Psyche* in 1887. His works in relief with their highly decorative effect were most admired. In 1892 he showed a bronze group expressive of force and action, representing hounds held in leash by a hunter, which secured his election as associate member of the Royal Academy. His *Pandora*, exhibited at the same time, is in the Tate Gallery. He made a large equestrian statue of Lord Roberts, with a pedestal crowded with elaborate designs, which has been set up in Calcutta, and near it a companion statue of Lord Lansdowne. His masterpiece is considered to be his allegorical representation of Love and Life, a female figure in ivory being crowned by a winged male figure in bronze, with the terrestrial sphere for a pedestal.

Baumann, Oskar, an Austrian explorer, born in Vienna, June 25, 1864; died there, Oct. 12, 1899. He came from a family of geographers, and studied history and geography in the university and practiced in the map department of the Institute of Military Geography. In 1883 he undertook explorations in Montenegro, and in 1885 he went to Africa with the Austrian Congo expedition. He examined the lower Congo with Chavanne, and worked up the river alone. In 1888 he went to German East Africa with Hans Meyer to map the country, and was taken captive by the Arab rebels in Usambara, the exploration of which he resumed in 1890 for the German East Africa Company. He journeyed to Kilimanjaro, and made preliminary surveys for the railroad from Tanga to Korogwe. In 1892 he led an expedition, sent out by the German Antislavery Society, from Tanga through the Masai country to Victoria Nyanza. He was appointed Austrian consul in Zanzibar, but was recalled because he wrote a satirical account of German officialism in East Africa for a Vienna newspaper. His notes and sketch maps furnished data for all subsequent investigations in East Africa. He published books of travel and contributed many articles to geographical magazines.

Becque, Henri, French dramatist, born in Paris, April 9, 1837; died there in May, 1899. His first work was the libretto of an opera, *Sardanapale*, the subject taken from Byron, which was set to music by Victorin Joncières, and performed without much success at the Théâtre Lyrique in 1867. In 1868 his comedy *L'Enfant Prodigue* was given at the Vaudeville, and in 1870, at the Porte St. Martin, *Michael Pauper*, a drama of socialistic tendencies. In 1878 *La Navette* was produced at the Gymnase, inaugurating the pessimistic drama in France. He changed to another vein in *Honnêtes Femmes* in 1880, but in 1882 produced at the Théâtre Français *Les Corbeaux*, a satirical comedy of contemporaneous French manners, which for a long time no manager would present on account of its cynical gloom, although it contains scenes of great power and incontestable beauty. When it was finally acted at the Comédie Française it was received with mingled hisses and applause. *Navette* was a one-act drama. In 1885 *La Parisienne*

was played at the Renaissance. This provoked much discussion at first, and was finally accepted as one of the masterpieces of the modern drama. After that Henri Becque gave his time to criticism and polemics, lectures and congresses. He published a volume called *Querelles Littéraires*. Although his plays did not become popular, the young school of French dramatists have drawn their inspiration from *Les Corbeaux* and *La Parisienne*.

Blaikie, William Garden, Scottish clergyman, born in Aberdeen, Feb. 5, 1820; died in North Berwick, June 11, 1899. He was educated at the university in his native city, and was ordained in the Church of Scotland in 1842 as pastor of Drumblade. In 1843 he united with the Free Church of Scotland, and in 1868 became Professor of Apologetics and Pastoral Theology at New College, Edinburgh. He was one of the best-known clergymen of his denomination, and from 1888 to 1892 acted as president of the Pan-Presbyterian Alliance. He also belonged to many ecclesiastical associations, and edited several periodicals. His published books include *Six Lectures to the Working Classes* (1849); *David, King of Israel* (1856); *Bible History* (1860); *Outlines of Bible Geography* (1861); *Better Days for Working People*, a widely popular work (1863); *Heads and Hands in the World of Labor* (1865); *The Head of the House* (1866); *Counsel and Cheer for the Battle of Life* (1867); *Memorials of Andrew Crichton* (1868); *Life and the True Light* (1869); *For the Work of the Ministry* (1873); *Glimpses of the Inner Life of Our Lord* (1876); *The Personal Life of David Livingstone* (1880); *Christianity and Secularism Compared in their Influence and Effects* (1882); *Public Ministry and Pastoral Methods of Our Lord* (1883); *My Body* (1883); *The Witness of Palestine to the Bible* (1883); *Leaders in Modern Philanthropy* (1884); *The Preachers of Scotland* (1888); *The First and Second Books of Samuel* (Expositor's Bible, 1888); *The Family* (1889); *After Fifty Years* (1893); *The Book of Joshua* (Expositor's Bible, 1893); *Heroes of Israel* (1894); *Non-Christian Philosophies of the Age* (1894); *Summer Suns in the Far West* (1895).

Blanco, Antonio Guzman, ex-President of Venezuela, born in 1829; died in Paris, France, July 29, 1899. He was the son of a distinguished statesman, and became an ardent and active Liberal politician at an early age. He was elected Vice-President in 1865, and in the civil war of 1866 he took the field under Gen. Falcon and helped greatly to the triumph of the federalist cause. While Falcon was away in 1870 rebellion again broke loose, and revolution and anarchy were in sight when Blanco by a bold stroke seized the capital and placed himself at the head of a provisional government. His dictatorship was legally regularized by his election to the presidency in 1873. He ruled despotically and by unscrupulous methods, yet he aimed to advance his country in civilization, and helped much to improve its material development, its public credit, and its ways of communication. In 1874 he dissolved all the monasteries in Venezuela. After introducing a new code of laws, he resigned the presidency in 1877. His successor, Alcantara, was unpopular, and the admirers of Blanco overthrew him and proclaimed Blanco President again. Blanco returned from Paris and assumed the presidency, which he carried on successfully till 1884. He then retired, but in September, 1886, he resumed the office, which he laid down finally in August, 1887. His life was thenceforth spent in Paris in the enjoyment of his wealth.

Blomfield, Sir Arthur William, English architect, born in the palace of the Bishop of London, Fulham, March 6, 1829; died in London, Oct. 30, 1899. He was the fourth son of Bishop Blomfield, and was educated at Rugby and Cambridge. He was for some time a pupil of Philip Hardwick, the noted architect. In 1888 he was elected an associate of the Royal Academy, and in 1889 was knighted. He was a fellow of the Institute of Architects, and vice-president of the Institute. 1886-'87, while in 1891 he received the gold medal of the Royal Institute of British Architects. At the time of his death he was almost the latest prominent figure among the architects of the Gothic revival, having within a few months succeeded Pearson, perhaps the chief of them all, as architect to the chapters of Lincoln and Chichester. He was not a great architect, but his work was always refined and scholarly. His designs were frankly imitative of the best mediæval examples, but the character of his work was always intelligent, and exhibited great excellence in execution. He paid much attention to lighting, heating, and acoustics; did not disdain galleries in his churches, and even defended the use of iron pillars between nave and aisles. His fame will principally depend upon his design of the nave of St. Saviour's Church, Southwark. The number of his works is very great, but in the latest of these his two sons were associated with him. Ecclesiastical architecture was his specialty. He restored a large number of mediæval buildings, ecclesiastical and secular, usually in a conservative fashion. Some few of the many important erections with which he was concerned are St. Mary's Church, Portsea; St. Alban's English Church at Copenhagen; St. Katherine's Training College; the cathedral at Georgetown, Demerara; Selwyn College, Cambridge; Sion College, Victoria Embankment, a very successful achievement in secular Gothic. Next to the nave of St. Saviour's, St. Mary's, Portsea, appears to have been regarded as his best work.

Bonheur, Rosalie (commonly called Rosa), French painter, born in Bordeaux, March 22, 1822; died in Paris, May 25, 1899. She was the daughter of a painter, and devoted herself to art in early youth. Before long she was a rival of Bascassat and Landseer as an animal painter. She was addicted to compositions of large dimensions. The principal galleries of modern paintings in Europe and America have examples of her art. She practiced sculpture also. In foreign countries her reputation was as great as in France. She directed for many years the free school of design for girls. Her pictures include *Horses in a Meadow*, *The Three Musketeers*, *A Dove on the Road*, *Bucks in Repose*, *Deer Crossing an Open Space*, *Plowing with Oxen*, which is in the Luxembourg, and by some is considered her masterpiece), and *The Horse Fair*. The last named was the work of a year and a half, was exhibited in 1853, and is now in the Metropolitan Museum, New York. The National Gallery, London, has a replica. Miss Bonheur received several medals and other prizes and the cross of the Legion of Honor. Larnelle wrote a sketch of her life, with an essay on her work (1885).

Borlase, William Copeland, an English archæologist, born in Cornwall in 1848; died in London, March 31, 1899. He was educated at Winchester and Oxford, and was called to the bar in 1882. From 1880 he sat in Parliament. He was president of the Royal Institute of Cornwall, and attained prominence as an archæolo-

gist. His published books include *Nænia Cornubiæ: A Descriptive Essay* (London, 1872); *Nippon and its Antiquities* (Plymouth, 1876); *Sun Ways: A Record of Travel* (Plymouth, 1878); *The Age of the Saints: A Monograph of Early Christianity in Cornwall* (Truro, 1878).

Bowen, Sir George Ferguson, a British administrator, born in County Donegal, Ireland, in 1821; died in Brighton, Feb. 21, 1899. He was educated at Oxford, gaining a scholarship in 1840, and became a member of Lincoln's Inn, but was not called to the bar. In 1847 he was made president of the university established in Corfu, then under British administration. Becoming Secretary of the Government of Corfu, through his familiarity with Italian and modern Greek and his knowledge of Eastern affairs, he was of assistance to Mr. Gladstone when the latter was sent out in 1858 as High Commissioner to inquire into the constitution of the Ionian Islands. In 1859 Sir George Bowen was appointed Governor of Queensland, when it was erected into a separate colony. In 1867 he was transferred to New Zealand, and in 1873 became Governor of Victoria, and from 1879 till 1883 was Governor of Mauritius. His last appointment was Hong-Kong. He was the author of *Ithaca in 1850* (London, 1851); *Mount Athos, Thessaly, and Epirus* (1852); *A Handbook for Travelers in Greece* (1854); and *Thirty Years of Colonial Government* (1899).

Bowerling, Adelaide (Mrs. J. B. Steele), English actress, born in Sunderland in 1838; died in Wandsworth, England, May 26, 1899. She made her first appearance at Sunderland in 1854. She was leading lady of the Brighton Theater when Miss Braddon, the novelist, played as a member of that company under the name of Mary Seaton. She was in the original production of *The Hidden Hand* at the Olympic Theater, London, and was soon afterward engaged to go to Australia by George Copping, who at that time was managing theaters in Sydney and Melbourne. She became at once a great favorite as a leading lady and star in that country, and remained there at the head of her calling for more than seventeen years. She returned to London ten years before her death, and after one or two engagements retired permanently.

Boyd, Andrew Kennedy Hutchison, a Scottish clergyman, born in Auchinlech, Scotland, Nov. 3, 1825; died in Bournemouth, England, March 1, 1899. He was educated at King's College, London, and at the Glasgow University, and was ordained in the Church of Scotland in 1851. He was successively minister of the parishes of Newton-on-Ayr, Kirkpatrick-Irongray in Dumfriesshire, and St. Bernard's in Edinburgh. In 1865 he became minister of a parish at St. Andrew's, and in that city the remainder of his life was spent. In 1890 he was moderator of the General Assembly, the highest office in the Church of Scotland. As the "Country Parson" he won considerable reputation in the sixties by his volumes of contemplative essays, written in a light, entertaining style. Concerning *Veal and Concerning the Advantages of being a Cantankerous Fool* were among the most noted of these. But the public taste presently wearied of these pleasant but by no means profound papers, and for many years their author was almost forgotten outside of a small circle till in later life he published several volumes of readable reminiscences, which somewhat revived his fame. His work seldom gave evidence of original thought, but he was always pleasantly persuasive, and until his mannerisms palled upon the general taste was thoroughly readable. His writings comprise *The*

Recreations of a Country Parson (1859); Leisure Hours in Town (1861); Recreations of a Country Parson, second series (1861); Graver Thoughts of a Country Parson (1862-'64-'75); The Commonplace Philosopher in Town and Country (1862); People of Whom More Might Have Been Made (1863); Counsel and Comfort from a City Pulpit (1863); The Autumn Holidays of a Country Parson (1864); Critical Essays of a Country Parson (1865); Sunday Afternoons at the Parish Church of a University City (1866); Lessons of Middle Age (1867); Changed Aspects of Unchanged Truths (1869); Present Day Thoughts (1870); Seaside Musings (1872); A Scotch Communion Sunday (1873); Landscapes, Churches, and Moralities (1874); Recreations of a Country Parson, third series (1878); From a Quiet Place (1879); Our Little Life (1882); Toward the Sunset (1882); What Set Him Right (1885); Our Homely Comedy and Tragedy (1887); The Best Last, and Other Papers (1888); Twenty-five Years of St. Andrew's (1892); St. Andrew's and Elsewhere (1894); and The Last Years of St. Andrew's (1896).

Brand, Deane, English singer, born in Liverpool in 1860; died in London, Aug. 11, 1899. He was a boy on the naval training ship Conway, stationed in Australia, when he attracted the attention of a theatrical manager by his singing, and was offered a profitable place in an operatic company. He accepted the offer, and after a successful tour he went to London and spent a season of study at the Royal Academy of Music. He was then for four years the leading tenor of D'Oyly Carte's Company, making his *début* in Captain Corcoran in Pinafore. He then made a tour in Australia with his wife, Miss Kate Chard, in *Les Manteaux Noirs*, *Boccaccio*, and other comic operas. In 1886 Mr. Brand and his wife headed a company of their own in England with the popular comic opera *Rhoda* for a long tour. Since then they have made tours in northern Europe and in South Africa. They also came to the United States, and sang in New York and other cities in *Cinderella*.

Bree, Herbert, English prelate, born in Keswick in January, 1828; died in Hove, Sussex, March 26, 1899. He was educated at Cambridge, and after serving as curate at Drinkstone and Wolverstone, in Suffolk, he was rector of Harkstead, in Suffolk, 1858-'65; curate of Long Melford, in the same shire, 1865-'70; and rector of Brampton, in Huntingdonshire, for the twelve years following. In May, 1882, he was consecrated Bishop of Barbadoes.

Büchner, Ludwig, German author, born in Darmstadt, March 29, 1824; died there, April 30, 1899. He studied under Virchow, and established himself as a physician in his native town, but was called to Tübingen as professor and associate physician in the clinic. There he published in 1855 his *Force and Matter*, the bold materialism of which made a tremendous stir. It was translated into all the languages of Europe, but it cost him his professorship. Returning to Darmstadt, Büchner developed his ideas in other works, the most important of which are *Nature and Science*, *Man according to Science*, and *The Psychological Life of Animals*.

Bunce, John Thackray, English author, born in Faringdon, April 11, 1828; died in Birmingham, June 25, 1899. Almost his entire career was spent in Birmingham, where he began active life as a printer's apprentice. He presently became a reporter, and at a later period was editor of *Aris's Birmingham Gazette*, resigning this post in 1861. From 1862 to 1898 he edited the *Bir-*

mingham Daily Post, and in these years exerted a very appreciable influence in municipal and educational enterprises as well as in the wider sphere of journalism. He was the author of *Cloudland and Shadowland* (London, 1868); *History of Old St. Martin's* (Birmingham, 1875); *Fairy Tales: Their Origin and Meaning* (London, 1878); *Josiah Mason: A Biography* (1882); and *Books on Biography* (London, 1886).

Bunsen, Robert Wilhelm Eberhard, German chemist, born in 1810; died in Berlin, Aug. 16, 1899. He was the son of a distinguished theologian, a professor at Göttingen, at which university he was graduated as doctor of philosophy in 1831, after which he continued his studies in Paris, Berlin, and Vienna, and in 1836 became Professor of Chemistry in the Polytechnicum at Cassel, whence he went to Marburg. In 1852 he was called to the chair of Experimental Chemistry at Heidelberg, where he remained until his retirement in 1889. He invented a voltaic battery that came into general use as a cheaper and more effective instrument for generating electricity than the Grove battery. The Bunsen gas burner, still used in houses, laboratories, and factories all over the world, was elaborated in its perfect form only after a long series of delicate experiments which no one before him had undertaken because it was not believed that a nonexplosive mixture of coal gas and air could be made to burn from a simple tube burner. With Lord Playfair he investigated the gases generated in blast furnaces; with Sir Henry Roscoe he investigated actinometry and the chemical action of sunlight. He visited Iceland in 1847 to study the geysers. In conjunction with Kirchhoff he discovered spectrum analysis, the master key to modern chemistry and the mysteries of the constitution of matter so far as they have yet been solved, by which many new elements have been discovered and the presence of others detected where they were not suspected, by which the composition of the sun and the stars has been found out and their rates of motion obtained. Not less important to chemical science were the methods that Bunsen invented for analyzing, separating, and measuring gases with mathematical accuracy. His researches in physical chemistry, in the measurement of actinic action, in the determination of specific heat by a new method, in determining the composition of volcanic rocks, and his numerous chemical discoveries have enriched science with a wealth of new knowledge. As a teacher and trainer of other investigators and experimentalists and the originator of exact and thorough methods of observation and manipulation he diffused a fruitful influence.

Busch, Moritz, German author, born in Dresden, Feb. 13, 1821; died in Leipzig, Nov. 16, 1899. He studied theology at his father's desire, but against his own inclination, and obtained his doctor's degree in 1846; then devoted himself to literary work, contributing to periodicals, editing a story paper, and translating the novels of Dickens and Thackeray. He was a republican in 1848, and when reaction triumphed in 1851 he emigrated to the United States, but became disgusted with the plutocratic tendencies that he thought he observed there, gave up his pastorate in St. Louis, and returned to Germany after a year, publishing his observations on American political and social life in a book entitled *Wanderings between the Hudson and the Mississippi*. He threw himself into the agitation for German unity under Prussian headship, worked for this cause in the Elbe duchies, and published the

information derived from his tour in the Schleswig-Holstein Letters. In 1857 and subsequent years he traveled through Egypt, Nubia, Syria, Palestine, Asia Minor, Greece, Turkey, Roumania, and Hungary in order to gather materials for guidebooks that he was commissioned to prepare. His *Pilgrimage to Jerusalem* was published after his return in 1859. In that year he assumed the editorship of the *Grenzboten*. When the Prussian troops entered Schleswig-Holstein in 1864 Dr. Busch became the literary advocate of the pretensions of the Duke of Augustenberg and conducted a newspaper at Kiel, but he resigned his employment with its emoluments in 1865 because the duke would not make the necessary sacrifices for German unity, and resumed the editorship of the *Grenzboten*. He resigned his editorship in 1868 and entered the employ of the Government in 1870, receiving an appointment in the Foreign Office in which his task was to disseminate in the press the views of the Government, under personal instructions from Count Bismarck. He acquired the complete confidence of the Chancellor, whom he accompanied in the French campaign. Dr. Busch retained his post in the Foreign Office till 1873, then resigned and edited the *Hannoverscher Kurier* till 1878, then returned to Berlin and renewed his intimacy with Prince Bismarck and wrote in advocacy of his views in the *Grenzboten* and other publications. In 1890 he removed to Leipsic. He was the author of translations from American humorists and of numerous books apart from those on which his reputation rests, the vivid and candid memoirs of the great Chancellor, whose faults of character were as precious and admirable in his eyes as those of Dr. Johnson to Boswell, and whose wiles and artifices he laid bare in the spirit of a truthful biographer and in the belief that they were necessary means for carrying out a great policy. His eulogistic memoir entitled *Unser Reichskanzler* became very popular in Germany. When he published the *Diary* in 1878 Prince Bismarck revised the proof sheets, but the revelations of the secret history of the French war gave rise to considerable comment. Count Bismarck and his People during the War with France seemed, too, a very unreverential, though masterful, portrayal of the actors in that eventful period. Bismarck: Some Secret Passages from his History, was printed in English after the death of the Iron Chancellor, and was fiercely assailed by the German press and denounced by the whole Bismarckian following.

Caprivi, Georg Leo de Montecuculi, Graf von, German statesman, born in Charlottenburg, Feb. 24, 1831; died in Berlin, Feb. 6, 1899. He was descended from an Italian family which had been settled in Germany for several generations, his father being a counselor in the superior court of Berlin, his mother a daughter of the intellectual family of Köpke. After leaving the gymnasium he received, in 1850, a commission as lieutenant in the Grenadier Guards. Rising rapidly, he was a captain attached to the general staff in 1861, served on the staff of the first army in Bohemia in 1866 with the rank of major, and in 1870 was a lieutenant colonel and chief of the staff of the 10th Corps. His reconnoissance in the Moselle valley enabled his corps to take part in the battle of Mars-la-Tour. Later he took part in the battles of the army of Prince Friedrich Karl around Orleans and on the Loire. After the war he rose through the various grades until he became a lieutenant general in 1882 and was placed in command at Metz. In 1883 he was called into the Cabinet as Secretary of State for

the Navy, and the rank of vice-admiral was bestowed upon him. Although many of the higher naval officers showed dissatisfaction at seeing a general of infantry placed at their head, his temporary accession to the navy was marked by great activity and progress. In 1888, in consequence of a difference of views between him and Wilhelm II, he retired from the office, and was assigned to the command of the 10th Army Corps at Hanover. In the autumn he conducted the manœuvres of his corps before the young Emperor, who was much impressed with his generalship and with his extensive knowledge of military affairs. Hence it came about that on the fall of Bismarck Caprivi was suddenly and unexpectedly elevated into the difficult post of Chancellor of the German Empire. Although he was by nature and education a Prussian Conservative, under his administration the rigorous internal policy of Prince Bismarck was sensibly relaxed. The minor state of siege was revoked at Berlin, the exceptional laws against the Socialists were not renewed, proceedings for offenses against the Chancellor were abandoned, the use of the national language in the schools and churches of Poland was restored, and even in Alsace-Lorraine the troublesome passport regulations were suspended at the end of 1891. Count Caprivi, who received his title of nobility in 1891, contended against the protectionist tariff of France, and succeeded in raising a barrier against French goods in Italy and Austria, as well as in Germany, but by his commercial treaties he estranged the powerful agricultural interests of Prussia. In 1892 he carried through the Reichstag the army bill reducing the term of service to two years and increasing the army. The Chancellor accompanied the Emperor on his travels and conducted various negotiations, and held conferences relative to the triple alliance. One of the last acts of his administration was to secure the vote of the Reichstag for the military septennate in 1893. His fall was the work of the reactionary parties, who found him too liberal. He first resigned the Prussian minister-presidency on account of the defeat of compulsory religious education by the Prussian Diet, and on Oct. 16, 1894, retired from the Chancellorship.

Castelar, Emilio, Spanish statesman, born in Cadiz in 1832; died in Murcia, May 25, 1899. His father died while he was very young, and he was brought up by his mother in the village of Elda, in Murcia, received a little schooling at Alicante, and went to the University of Madrid in 1848, supporting himself by writing for the newspapers. He also published a novel, and won honors in his studies sufficient to gain a place on the teaching staff. In the revolutionary disturbances of 1854 he exhibited his oratorical talents. He was appointed Professor of History and Philosophy in the university, and delivered a brilliant course of lectures on the civilization of the first five centuries of the Christian era. Having become a republican of the school of Victor Hugo, he attacked the Government and the monarchy for the financial expedients resorted to after the dissolution of the Liberal union of O'Donnell, and when Narvaez removed him from his professorship in 1865 the students started a series of riots that led to the fall of the Ministry. He was compelled to flee abroad after the suppression of the rising of 1866, and while in exile he wrote for American papers. As a champion of republicanism he was received with enthusiasm in Italy, but he resided most of the time in Belgium. After Prim and Sagasta, landing in the south of Spain, had overthrown the Government and driven Queen Isabel

into exile, Castelar returned and, as a member of the constituent assembly that framed the new Constitution, argued that a republic was the only logical alternative to the historical monarchy. Marshal Prim would have a liberal monarchy under a foreign dynasty, and when the Duke of Genoa refused the throne approached the Catholic Hohenzollern prince, giving occasion for the Franco-Prussian War. After the Duke of Aosta had accepted and was enthroned as King Amadeo, Castelar sat in the Cortes. When Don Amadeo, resenting the insults and indignities to which he had been subjected, abdicated in 1873, the republican party was enabled to try its remedy for the disease in the body politic. The federal republic, with self-governing provinces, modeled after the United States, was the type preferred, with no more capital punishment nor forced service in the army. In pursuit of their ideal the republicans had thrown away their weapons for self-defense, attempting to establish an untried system through the good will of its enemies and the intelligence of the unthinking mob. The result was anarchy, and in September, 1873, the Cortes placed Don Emilio Castelar at the head of the Executive Government, with dictatorial powers, and adjourned till January, 1874. Castelar threw overboard his theories in order to reestablish order and save Spain from destruction. He re-enacted conscription in a severe form, in order to satisfy the generals and restore discipline in the army; he came to an agreement with the Vatican, and thus checked the Carlist revolution in the north; he applied capital punishment to the Cantanolist anarchists who were desolating the south. When the Cortes met in January a vote of censure was immediately passed upon the President, who had been so recreant to the principles of the federal republic, and immediately afterward Gen. Manuel Pavia turned the Cortes into the streets. He did not take the President into his confidence, because Castelar, he said, was one of the few men in Spain who had no understanding of the reality of the situation; but he acted with the concurrence of all the chiefs of the reorganized army, who were resolved that there should be no renewal of the anarchy that threatened the existence of Spain during the early part of 1873. Giving way to the provisional government of Marshal Serrano that was set up by the chiefs of the army, Castelar returned to his duties as professor in the university. After the restoration of the monarchy by Martinez Campos, in December, 1874, he went into exile once more, probably to cut himself off from the violent republicans who wished to carry out their idea by means of revolution. These acted under Ruiz Zorilla, while Castelar, when he came back, founded the party of Possibilist Republicans, prepared to league themselves temporarily with any party that would work for Liberal reforms. Castelar would not take office under the monarchy nor disown his republican principles, but he co-operated effectually with Sagasta in his efforts for the revision of the Constitution that had been drawn up in accordance with Conservative doctrines by Canovas, and when the Constitution was finally modified under the Queen Regent by the restoration of the right of universal suffrage he renounced his opposition to the monarchy. Castelar's *Life of Byron* was translated into English, and some others of his writings, of which there is a considerable list, have been rendered into foreign languages. His chief title to fame is his eloquence. He was the greatest orator in a nation of orators, and one of the most famous of modern times.

Cautley, Laurence (Laurence Aubrey Desborough), English actor, born in Streatham in 1862; died in London, Oct. 15, 1899. He was educated for the English bar, but joined the traveling company of Miss Marie Litton in 1879 and played with them in standard drama for a time sufficient to approve his worth in heroic characters. When *The Red Lamp* was produced by Mr. Beerbohm Tree in London, April 20, 1887, Mr. Cautley played Prince Alexas. At a matinee given at the Vaudeville, May 17 of the same year, he played Corréze in *Moths*, and confirmed himself as a favorite in London. On June 28 following he played *Savigny* in *Marion de Lorme*. He was the Charles Derwentwater in *Partners*, produced Jan. 5, 1888, and Sir Philip Sydney in *Love that Kills* on Feb. 9. March 7, 1888, he began an engagement with Mr. Toole at the latter's theater as Horace Milliken in Mr. and Mrs. Herman Merivale's comedy *The Don*. He played Luke Cranbourne in *Woodbarrow Farm* on its first production, June 18, and Mark Hargreaves in *Conscience*, July 17. He joined the Adelphi company in July of this year, and played Lieutenant Stanley in *The Union Jack*, beginning July 19. In 1889 he played Henri Vaudelle in *Esther Soudraz* at Wolverhampton most successfully. With Mrs. Langtry he played Orlando in *As You Like It*, beginning Feb. 24, and played Dick Fitzroy in *Old Friends*, beginning June 25. In the following August he went to Australia, where he played Harry O'Malley in *The English Rose* for a season with great success. He returned in 1893 and appeared again in London as Mr. Benjamin Brewster in *A Trip to Chicago*, Sept. 5. The following season he played Ned Annesley in *Sowing the Wind* with a touring company. His next part in London was Rupert of Hentzau in *The Prisoner of Zenda*. His last appearance was Sept. 25, 1899, as Captain Winton in *Rob Roy*.

Chaudordy, Comte Alexandre Damaze de, French diplomatist, born Dec. 4, 1826; died March 26, 1899. He was wounded in 1848 while serving as a national guard in suppressing the republican uprising. He was an *attaché* to the embassy at Rome in 1851, whence he was called in 1854 to a post in the Ministry of Foreign Affairs. He was subsequently attached to the legations in London, Weimar, Copenhagen, Karlsruhe, and Madrid. In 1870 he represented the Ministry of Foreign Affairs at Tours and Bordeaux. During the war he defended the French army against Prince Bismarck's accusations, and issued circulars complaining of excesses committed by German soldiers. He was elected to the National Assembly in 1871, and in 1873 became minister at Berne. In 1874 he was transferred to Madrid. He represented France at the Constantinople Conference of 1875, returned then to Madrid, and in 1881 became ambassador at St. Petersburg, retiring in the following year. The Comte de Chaudordy published several historical and political works.

Cherbuliez, Charles Victor, French author, born in Geneva in 1829; died in Paris, July 1, 1899. He was of French Huguenot descent, was well educated, knowing not only French and German, but other modern languages, and went to Paris to begin his literary career. His novels soon acquired a high reputation, and he wrote a great number, distinguished for their knowledge, style, subtlety, and wit, but, in the view of some critics, wanting in feeling, simplicity, and reality. His first was *Comte Kostia* (1863). This was followed by *Ladislav Bolski*, *Le Fiancé de Made-moiselle de St. Maur*, *Prosper Randoce*, and nu-

merous others. When the influence of realism began to be felt, he wrote *La Ferme du Choquard*, a picture of rural vices, and other works of the kind. His fiction and his style both lost their charm when newer writers arose. But his literary activity was not confined to this field. As an essayist and critic he exerted considerable influence on French thought, and opened an outlook on the activities of foreign countries that was free from the prejudice and distortion common to French writers. His discussion of public affairs and his literary criticisms were generally printed in the *Revue des Deux Mondes* under the signature G. Valbert. Selections from these articles were published in book form. One series of studies treats of Spain and the critical period in Spanish politics following the revolution of 1808. Another volume is *Hommes et Choses d'Allemagne*. Cherbuliez was a member of the French Academy.

Chesnelong, Pierre Charles, French politician, born in Orthez, Basses Pyrénées, April 14, 1820; died there in July, 1899. He was a republican in 1848, but entered the *Corps Législatif* in 1859 as an official candidate, and retained his seat until the fall of the empire. In 1872 he was elected to the National Assembly, and took his seat with the Right. He soon made himself known as an active worker for the restoration of the monarchy. He was spokesman of the committee that presented the programme of the party to the *Comte de Chambord* at Frohsdorff, and got his consent to a charter to be framed by the King and the Assembly in consultation, but not to the retention of the tricolor instead of the white flag. He was elected an irremovable Senator in 1876, and devoted his activities to founding clubs of Christian workingmen, while constituting himself in the Senate a champion of religion, the family, property, and old traditions.

Chiniquy, Charles, Canadian preacher, born in Kamouraska, Quebec, July 30, 1809; died in Montreal, Jan. 16, 1899. He was parish priest of Beauport until he joined the Oblate Fathers in 1846 in order to devote himself to a crusade against drunkenness, in which he was so successful that hundreds of thousands in Lower Canada took the pledge of total abstinence. He emigrated to Illinois in 1851 and established at Kankakee a colony of 10,000 French Canadians. In 1858 he became a Protestant and devoted his energy and oratorical powers to bitter attacks on the principles and practices of the Roman Catholic Church, going to Quebec in 1859, where he was mobbed. Such riotous assaults were frequent incidents of his polemical campaigns during the next thirty years and more, in which he continued his tours and almost daily addresses in Canada, the United States, Great Britain, and Australia. He was attacked so often with stones, sticks, pistols, and daggers, so many times struck and bruised, that he said the idea of dying under the blows of his enemies was his daily thought. Father Chiniquy was ordained a minister of the Presbyterian Church of Canada. He wrote controversial books, the chief of which was *Fifty Years in the Church of Rome*.

Chitty, Joseph William, English jurist, born in London in 1828; died there, Feb. 15, 1899. He was the son of Thomas Chitty, a famous special pleader and author of a text-book on common-law practice, who sent him to Eton, whence he passed to Oxford and won a first-class in humane letters. He was called to the bar in 1856, obtained a large Chancery practice, became a Queen's counsel in 1874, was at the head of the bar in the Court of Rolls, earning an income of

£13,000, was elected to Parliament in 1880, and in 1881 was made a judge of the Chancery division of the High Court, becoming virtually the successor to Sir George Jessel, his friend and guide, in whose court he had won his great reputation. He was a profound lawyer and a judge who deliberated well, from whose decisions appeals were not frequently made, and rarely with success.

Cleveland, Miss Louie (Mrs. Hermann Dickson), English actress, born in Plymouth, England, Oct. 22, 1868; died in Paisley, Scotland, March 26, 1899. She came of a theatrical family, and made her first appearance at the age of twelve. Her first engagement was as a singer of small parts in D'Oyly Carte's company, playing the Gilbert and Sullivan operas in the English provinces. After two years of this work she was engaged by Wilson Barrett at the Princess's Theater, London, where she played boys' and singing parts. She next made a tour of the Continent as the leading singer in *Faust* up to *Date* and *Carmen*. On the visits made by the company from the Gaiety Theater to the United States Miss Cleveland appeared in the principal rôles. On her return to England she married Hermann Dickson, a manager, and began to play comedy characters. She was very successful as Polly Eccles in *Caste*, Selina Sparks in *A Merry Madcap*, and Rebecca in *Pink Dominoes*. She was soubrette of the Princess's Theater, Glasgow, at the time of her fatal illness.

Colomb, Philip Howard, British naval officer, born in Scotland in May, 1831; died in Botley, Hampshire, Oct. 13, 1899. He entered the navy in 1846, and saw active service on the coast of Portugal. He was a midshipman on the *Reynard*, which was wrecked in 1851 while suppressing piracy in the China seas. In 1854 he was mate on the *Phoenix* in the arctic expedition, and in the Crimean War he served with distinction as a lieutenant. From 1858 to 1868 he was employed in construction in the Devonport dockyard. For the next twelve years he served at sea as commander and captain in the suppression of the slave trade on the China station and in the Mediterranean. For the remaining period of his active service he commanded at Portsmouth. He was retired as captain in 1886, and on the retired list became rear admiral in 1887 and vice-admiral in 1892. Foreseeing at an early period the changes that would follow the introduction of steam and rifled ordnance, Colomb devised a method of transmitting alphabetical signals by flashing lanterns which was completed in 1861, but not finally adopted till 1867. He studied the alterations in tactics that would be necessary for handling and fighting steam ironclad fleets. He was attached to the Channel fleet in 1863, and authorized to study experimentally the effect of the helm on steam-propelled vessels in varying rates of speed. The fruit of his observations was a new evolutionary manual, issued in 1865. He devoted his mind next to the means of avoiding collisions at sea, and after long discussion and controversy most of his views were adopted by the International Conference at Washington in 1899. In 1873 he devised a new system for the interior lighting of ships. His manual of fleet evolutions was published in 1874. After his retirement he gave himself up to the study of naval strategy and the history and theory of naval warfare, on which he lectured in the naval college at Greenwich in 1887 and 1888. In 1891 he published an elaborate work on *Naval Warfare*, and in 1893 a volume of *Essays on Naval Defense*.

Congreve, Richard, English philosopher, born in Leamington, Sept. 4, 1818; died in Hampstead, July 5, 1899. He was educated at Rugby and Oxford, and was subsequently assistant master at Rugby and tutor at Wadham. About 1855 he became an ardent follower of Auguste Comte, and resigned his post at Wadham College in consequence. For the remainder of his life he was the principal English exponent of Comte's religion of humanity. Besides a translation of Comte's *Catechism of Positive Religion* (London, 1858), he published *The Roman Empire of the West* (1855); *Gibraltar, or the Foreign Policy of England* (1856); *India* (1858); *Elizabeth of England* (1862); *Mr. Broadhead and the Anonymous Press* (1867); *Aristotle's Politics*, edited (1874); *Essays: Political, Social, and Religious* (1874); and *Human Catholicism* (1876).

Corvin-Kroukowski, Pierre, known under his literary name of Pierre Newski, Russian author, born in Nijni-Novgorod in 1844; died in Asnières in July, 1899. He wrote for the principal Paris newspapers, published a history of the Russian theater, wrote romances, produced plays, and collaborated with Alexander Dumas. His best-known piece is the *Danicheffa*.

Dawson, Sir John William, Canadian geologist, born in Pictou, N. S., Oct. 13, 1820; died Nov. 20, 1899. He was educated at the University of Edinburgh, and, returning to Nova Scotia, devoted himself to the study of the natural history and geology of the maritime provinces. The results of his investigations appeared in his *Acadian Geology* (Edinburgh, 1855). In 1842 and in 1852 he gave material assistance to Sir Charles Lyell during the latter's explorations in Nova Scotia. In 1886 he was president of the British Association at its meeting in Montreal. In 1884 he was knighted. Besides many professional papers, his writings include *Archæia, or Studies on the Cosmogony and Natural History of the Hebrew Scriptures* (London, 1858); *Agriculture for Schools* (Toronto, 1864); *Handbook of Acadian Zoology* (1871); *The Story of Earth and Man*, written in opposition to the Darwinian hypothesis of the origin of species (1872); *Nature and the Bible* (New York, 1875); *Life's Dawn on Earth* (1875); *The Origin of the World* (1878); *Fossil Men and their American Analogues* (1880); *The Chain of Life in Geological Time* (1881); *The Geological History of Plants* (1888); *Modern Science in Bible Lands* (1888); *Handbook of Canadian Geology* (1889); *Modern Ideas of Evolution* (1890); *Some Salient Points in the Science of the Earth* (1893); *The Ice Age in Canada* (1894); *The Meeting Place of Geology and History* (1894); and *Relics of Primeval Life* (1897).

Deane, Sir Thomas Newenham, Irish architect, born in Cork, June 15, 1828; died in Dublin, Nov. 8, 1899. His father, grandfather, and great-grandfather were architects. He studied with his father, with whom he became associated in business. He was knighted in 1890. His principal work is the *Science and Art Museum and National Library of Ireland*, in Dublin. Among his many other designs are *Tuam Cathedral*, *Church of Ireland Training College*, *restoration of Kilkenney Cathedral*, the *Physiological Laboratory* and the *Anthropological Museum* in Oxford. His work is characterized by dignity of treatment and excellence of general design.

Delaborde, Comte Henri, French art historian, born in Rennes in 1811; died in Paris, June 1, 1899. He was the son of Gen. Delaborde, and studied art under Paul Delaroche. In the series of historical pictures ordered by Louis Philippe for the galleries of Versailles he painted the

Knights of St. John of Jerusalem and the Taking of Damietta. In later life he became known as a critic and historian of art, on which he wrote books, essays, and reviews. For many years he was curator of engravings at the national library and secretary of the Academy of Fine Arts. Essays on contemporary art, studies of Italian and French art, and a life of Ingres constitute three of the best known of his volumes, besides his various works on engraving.

Dene, Dorothy, English actress, born in London in 1861; died there, Dec. 27, 1899. Her first appearance of importance was at the Prince's Theater, London, June 22, 1885, in *Gringoire*. On May 13, 1886, she appeared as *Cassandra* in *The Story of Orestes*, and was received with great enthusiasm. On June 14 of the same year she played *Madge* in the original production of *Jack at the Royalty*. She played the heroine in *Love's Martyrdom*, July 3, and on Oct. 27 created another original part in *Noah's Ark*. During the seasons of 1887, 1888, and 1889 she played in many London productions as the heroine, and was a member of Benson's Shakespearean Company and of the company engaged by Mrs. Labouchere for her production of *Midsummer Night's Dream*. She came to New York under engagement to the Theater of Arts and Letters, and played leading parts in the productions made by that organization. She retired from the stage in 1894. Her grace and classic cast of features made her a favorite model with Lord Leighton, who painted her in his *Greek Girls playing Ball*, and *Cymon and Iphigenia*.

De Salla, Barton, English actor, born in Paris, Dec. 6, 1832; died in Croydon, England, June 29, 1899. He went to London with his parents at six years of age, and made his first appearance on the stage as a player of children's parts in the companies supporting such French actors as visited England. His first appearance in English drama was as a member of the company of the Theater Royal, Belfast, where he demonstrated his worth as a singing comedian. For many years he played as a stock actor in the theaters of Dublin, Liverpool, and Edinburgh. He gave concerts and operatic performances. He was the Gen. Sir Drummond Fyfe in *The French Maid*, at the Vaudeville, London, in 1898-'99, and was playing Dr. Magrath in *The Broken Melody* when seized with his fatal illness. His last appearance was June 28, 1899.

Dèves, Paul, French statesman, born in Aurillac, Nov. 8, 1837; died Nov. 13, 1899. He first entered the Chamber in 1876, and in 1881 he became Minister of Agriculture in the Gambetta Cabinet. In 1882 and 1883 he was Minister of Justice in the Cabinets of Duclerc and Fallières. In 1885 he lost his seat in the Chamber, but in 1886 he was elected Senator.

Dollman, Francis Thomas, English architect, born in 1812; died in London, Dec. 26, 1899. He was a pupil of Augustus Pugin and afterward of Basevi, and became an associate of the Royal Institute of British Architects in 1864, and fellow in 1895. He built several churches, but was best known as a most accomplished draughtsman and the author of architectural works of much value. These include *Examples of Antient Pulpits in England* (London, 1849); *Examples of Antient Domestic Architecture* (1856-'58); *The Priory Church of St. Mary Overie, Southwark* (1881); *An Analysis of Antient Domestic Architecture*, with J. R. Jobbins (1860-'64). With Bowman and Crowther he was associated in the preparation of their great work on *The Ecclesiastical Architecture of the Middle Ages*.

Ellis, Thomas Edward, Welsh politician, born in Cynlas, Merioneth, in 1859; died in Cannes, France, April 5, 1899. He was the son of a farmer, and learned English as a foreign tongue. He entered the Bala Theological College to prepare himself for the Welsh Calvinistic ministry, studied afterward at University College, Aberystwith, and thence went to Oxford, where he took classical honors. After acting as private secretary to John Brunner, he became the leader of the Young Wales party, being elected to Parliament in 1886. The tithe troubles of 1887 afforded the opportunity for pleading the cause of land reform, Church disestablishment, and education in Wales. He helped in the elaboration of the schemes of education carried through by the Liberal party, obtained an electoral success for his party in the county councils when they were first instituted, many Welsh nationalists being elected on his programme, and in 1892 he was appointed a junior Lord of the Treasury. From 1894 till his death he was the Liberal whip in the House of Commons.

Ennery, Adolphe Philippe d', a French dramatist, born in Paris in 1811; died there, Jan. 26, 1899. He was of Hebrew parentage. Starting in life as a clerk, he took to journalism, and then turned to the drama, which he worked as a profitable business, studying scenic effects and the possibilities of the stage; startling, but not intricate plots; novel situations; the quick change from tragic to comic scenes, and the contrast between serious and ludicrous characters; and conventional morality, such as the general public likes. Thus he came to be the master of modern melodrama, whose plays were the staple attraction of country theaters, and were played in Paris, sometimes three in one night on the stages of different theaters. His first attempt was *Émile, on le fils d'un Pair de France* (1831). His *Honneur de ma Fille* (1835) was followed by others in quick succession. From 1837 he produced almost every year one play or two, sometimes six or seven, and kept it up for fifty years, amassing a fortune of 6,000,000 francs. Some of his successful plays are the *Prise de Pekin*, *Deux Orphelines*, *Martyre*, *La Grâce de Dieu*, *Dame de St. Tropes*, and *Afeule*. He possessed collections of Chinese and Japanese art, which he intended to bequeath to the state.

Erckmann, Émile, French novelist, born in Pfalzburg in 1822; died in Paris, March 14, 1899. He was the son of a bookseller, and studied law, but his talent for writing was early developed, and in 1847 he formed a literary partnership with M. Chatrian, then a professor at Pfalzburg. In the time of the second empire tales and legends of Alsace-Lorraine, signed by the coupled names of Erckmann and Chatrian, had some success, and long romances which followed attained an enormous popularity. The most celebrated of these was *Le Conscriit* de 1813. When interest in these began to wane, it was revived for a time by the success of the plays of Erckmann-Chatrian. *Le Juif Polonais* and *L'Ami Fritz* were dramas of considerable merit; the *Rantzau*, though of mediocre quality, was scarcely less remunerative. When their financial success was at the flood the two associates quarreled over business matters. They were business partners, rather than collaborators, for Chatrian attended to the advertisement and sale of the productions of Erckmann, who after they separated continued to write industriously, and his writings, although no longer in fashion, showed no diminution of merit. The short stories, strong in local color and sentiment, descriptive power, and keen and humorous

characterization of types of people, are still relished.

Farrer, Lord, an English economist and administrator, born in London in 1819; died at Dorking, Oct. 11, 1899. Thomas Henry Farrer was the son of an eminent lawyer, and was educated at Eton and Oxford, was called to the bar, and then entered the civil service as a clerk in the Board of Trade. Rising to be permanent secretary, he held that post nearly forty years, and was the arbiter in many decisions of the Board of Trade. But in later years he could not shape the policy of the Government in accordance with the Manchester theories of unrestricted individualism and *laissez faire*, which he was about the last economist in England to uphold in their purity. As a thoroughgoing individualist, it was the easier for him to appease the shipowners when Parliament imposed restrictions for the benefit of seamen and the railroad managers and shareholders when the regulation of railroads was made more and more stringent. He fought against forms of Government interference that since he retired have been introduced, and as adviser on commercial treaties he resisted unflinchingly and successfully every form of protection or retaliation. He was a leader in the organization of the Gold-Standard Defense Association in 1895.

Faure, François Félix, President of the French Republic, born Jan. 30, 1841; died in Paris, Feb. 16, 1899. He was descended from humble Provençal ancestors, received a good commercial education, learned the leather business from the foundation, became a shipowner and shipbuilder at Havre, entered the Chamber of Deputies at the age of forty, held various ministerial posts, and was elected President of the republic on Jan. 17, 1895 (see *Annual Cyclopædia* for 1895, page 280). He was a representative *bourgeois*, and his very lack of renown and political prestige made him popular with the middle classes, and his humble origin and the fact that he had once worn the workman's blouse as a tanner's apprentice pleased the fancy of the proletariat. The nation was more than satisfied when it found that this President, selected almost by chance and previously so inconspicuous, displayed extraordinary tact and dignity of style in his public utterances and communications with the heads of foreign states, and maintained the dignity of his office with graceful ease. The visit of the Czar to Paris in the autumn of 1896, and President Faure's return visit to St. Petersburg in the following year, marked by the open avowal of the Franco-Russian alliance, cast a temporary halo of glory about the presidency of Félix Faure, which began to fade, however, when the fickle and impulsive French public ceased to value the Russian alliance. President Faure's popularity diminished rapidly, and his taste for display and etiquette, which the people had first admired and encouraged, made him a butt for satire and detraction. His health broke down under the burden of responsibility that was imposed by the scandals and animosities of the Dreyfus crisis, and he was suddenly stricken by apoplexy.

Ferguson, John, British journalist, born in Lanarkshire, Scotland, Oct. 28, 1851; died in London, April 3, 1899. For nearly a score of years he contributed special articles to the *London Times*, besides writing regularly for the *Referee*, the *Academy*, and other periodicals. Among his published works are *The Insanity of Genius* and *The Human Machine: An Inquiry into the Divinity of Human Faculty* (1899).

Flower, Sir William, English naturalist, born in Stratford-on-Avon, Nov. 30, 1831; died in London, July 1, 1899. He studied in University College, London, served through the Crimean War as assistant surgeon, was demonstrator of anatomy in Middlesex Hospital after his return, then curator of the Hunterian Museum, and later Professor of Comparative Anatomy and Physiology in the Royal College of Physicians and Surgeons from 1869 to 1884, when he became director of the Natural History Museum in South Kensington. The collections he arranged in double series, one set arranged in types and exposed to view for popular instruction, while the great mass of specimens were carefully classified and safely stored so as to be available for morphological study. He was the author of an Introduction to the Osteology of the Mammalia, Fashion in Deformity, The Horse, essays on museum management, and memoirs on the brain and dentition of marsupials, the cranium of the carnivores, and the evolution of the cetaceans.

Foli, Signor (Allan James Foley), Irish singer, born in Cahir, Ireland, in 1835; died in Southport, England, Oct. 20, 1899. He was one of the most celebrated of bassos. He was brought by his parents to the United States in early boyhood, and lived in Hartford, Conn. He was there a member of a church choir, and attracted so much attention by his extraordinary voice that generous citizens contributed to a fund for his education as an opera singer in Italy. He made his *début* as Signor Foli, with instant approval, at Catania, Italy, in 1862, and soon was engaged for the Italian opera in Paris. There he attracted the attention of J. H. Mapleson, the English impresario, who engaged him for Her Majesty's Italian Opera Company, London, in 1865. Foli was associated in Mapleson's company, on his introduction to the English public, with Titiens, Grisi, Trebelli, Lablache, Mario, Arditi, and Rokitski. For the long term of Mr. Mapleson's management of Italian opera in England and America Foli was his favorite and perhaps most popular basso. In private life he was a big, jovial, and generous Irish boy, with the happy quality of making staunch friends everywhere. He visited both Americas, South Africa, and Australia, singing both opera and oratorio. In the last he was especially admirable in Elijah, The Messiah, The Redemption, and The Golden Legend. It had been his intention to retire from the stage at the close of his engagement with Mme. Albani's Concert Company, with which he was traveling in England at the time of his death, and he had fixed upon Tacoma, Washington, as a place of residence. But he had contracted a severe cold, and was suddenly attacked with pneumonia, from which he could not rally. His last appearance was in Southport, England, Oct. 14, 1899.

Forbes, John, a Scottish clergyman, born in Bohaven, Scotland, in 1802; died in January, 1899. His education was received at Marischal and King's Colleges and at Göttingen. In 1840 he became governor of John Watson's Institution in Edinburgh, and in 1850 of Donaldson's Hospital. In 1869 he was appointed Professor of Hebrew at Aberdeen University, and he was emeritus professor there at the time of his death. He was the author of Symmetrical Structure of Scripture (Edinburgh); Analytical Commentary on the Epistle to the Romans (London, 1868); Predestination and Free Will (Edinburgh, 1878); and Studies on the Book of Psalms (1888).

Ford, Sir Clare, an English diplomatist, born in 1828; died in Paris, Jan. 31, 1899. He was in

a dragoon regiment four years, sold out in 1852, entered the diplomatic service, and was attached by turns to most of the legations in Europe and America, acquiring gradually a reputation as a specialist in commercial questions. In 1875 he represented the British Government before the Halifax International Commission that made the United States pay \$5,500,000 for the fishery rights acquired under the treaty of 1871. This triumph secured him the appointment of minister at Buenos Ayres. He arranged a restoration of diplomatic relations with Uruguay, and was accredited to Montevideo. He was minister to Brazil for a year or two, was transferred to Athens in 1881, and in 1884 went to Madrid, where he remained till 1892. In 1884 and 1885 he was commissioned at Paris for the settlement of the Newfoundland fisheries question, but the conventions that he signed were not ratified. In 1886 he negotiated a commercial treaty with Spain.

Forsyth, William, Scottish author, born in Greenock, Scotland, Oct. 25, 1812; died Dec. 26, 1899. He was educated at Cambridge, and was called to the bar in 1839. He represented Marylebone in Parliament, 1874-'80, but he made little figure in the debates. He traveled extensively, and was deeply interested in prison reforms. He became Queen's counsel in 1857, and held office in various professional and other societies. He wrote professional and miscellaneous works, of varying degrees of excellence, but he outlived his literary reputation many years, and at the time of his death had passed from the memory of most readers. The list of his published books comprises The Law of Composition with Creditors (London, 1841); The Law relating to Simony (1844); Hortensius, or the Duty and Office of an Advocate (1849); The Law of Infants (1850); The History of Trial by Jury (1852); History of the Captivity of Napoleon at St. Helena (1853); Life of Marcus Tullius Cicero (1864); Rome and its Ruins (1865); Novels and Novelists of the Eighteenth Century (1871); Hannibal in Italy: An Historical Drama (1872); Essays: Critical and Narrative (1874); The Slavonic Provinces South of the Danube (1876); and Idyls and Lyrics.

Foster, Myles Birket, English artist, born in North Shields, Feb. 4, 1825; died in Weybridge, March 27, 1899. At sixteen he was apprenticed to E. Landells, a well-known wood engraver, who encouraged him to draw on wood blocks, and in 1846 he began the business on his own account. For a dozen years he was a prolific illustrator of books, but then turned his attention toward water-color painting, exhibiting his first picture, A Farm, at the Academy in 1859. At a later period he exhibited pictures in oils. His work, both as illustrator and colorist, is very popular and has a decided charm. Its sincerity is everywhere apparent, but it is deficient in insight and the deeper kind of pathos.

Frankland, Sir Edward, English chemist, born in Churchtown in 1825; died in Norway, Aug. 11, 1899. He was educated in the Lancaster grammar school and studied chemistry first in the Museum of Practical Geology and afterward in the laboratory of Liebig at Giessen and that of Bunsen at Marburg. He isolated with Kolbe several organic radicals, and afterward devoted himself to the synthesis of organic bodies. In this work he made the discovery of the union of organic radicals with metals, announcing in 1850 the preparation of compounds of zinc with methyl and ethyl and predicting the existence of a score of similar bodies. From this he deduced the conclusion that an atom of the metal

could only attach to itself a definite number of the atoms of other elements, which led to the doctrine of atomicity or equivalence of the elements. He was appointed Professor of Chemistry in Owens College, Manchester, in 1851, and there began to devote himself to applied chemistry. He investigated the gases manufactured from different kinds of coal, and incidentally invented a gas burner with two concentric chimneys. He also developed the process for making water gas. Becoming Professor of Chemistry in the Royal School of Mines in 1865, he made monthly analyses of the water consumed in the metropolis, elaborating new processes for the accurate detection of pollution by sewage or animal matters, in which he was helped by H. E. Armstrong. When he was appointed on the commission to report on the pollution of rivers in 1868 he went to work in an improved laboratory, and during six years he investigated waters from different geological strata, the water of lakes, wells, and rivers, the purification of polluted water, the propagation of disease by drinking water, the healthfulness of hard water, the deterioration of water in mains and pipes, the purification of sewage, and the means of preventing the pollution of rivers by factory refuse. Frankland proved experimentally that compressed gases are capable of giving out a flame as brilliant, with a spectrum as constant, as ignited solid or liquid matter, and from his experiments he was convinced that the sun is not solid or liquid, that the photosphere at least consists of vapor. These experiments grew out of observations on the rate of combustion of candles in the rarefied air at the summit of Mont Blanc when he passed a night there with Tyndall in August, 1859. With Fick and Wislicenus he made experiments to determine the origin of muscular power by calculating the muscular oxidation and measuring the amount of nitrogen expelled from the body before, during, and after an ascent of the Faulhorn, no nitrogenous food being taken during the experiment. He concluded that the transformation of muscle supplies only a small fraction of the energy, the larger proportion being evolved by the oxidation of non-nitrogenous substances, such as fat.

Fruin, Robert, Dutch historian, born in 1824; died in Leyden, Jan. 29, 1899. His researches in archives gave him a great fund of original knowledge, and his penetrating judgment and spirit of impartiality placed him at the head of modern investigators of Dutch history, of which he was professor at Leyden from 1860 till 1894. He wrote a work covering ten years of the Dutch struggle for independence, and many historical essays.

George Alexandrovich, Czarevich of Russia, born in Tsarskoe Selo, May 9, 1871; died in Abbas Tuman, in the Caucasus, July 10, 1899. The Grand Duke George was three years younger than his brother, the reigning Czar, whom he accompanied on a voyage round the world in 1890. During this voyage the symptoms of pulmonary consumption were observed, and, being affected by Indian fever also at Bombay, he returned home a confirmed invalid. The heir apparent after his death is the Grand Duke Michael Alexandrovich, born Dec. 4, 1878.

Gould, James Nutcombe, English actor, born in Devonshire in 1849; died in Lustleigh, Oct. 10, 1899. He was the son of a clergyman, and was educated at King's College, London. He began as an actor in Shakespearean comedy in 1884, and traveled three years, playing many Shakespearean parts with marked success. When Beer-bohm Tree produced *The Red Lamp* in Lon-

don, in 1887, Mr. Gould played Rheinveck during the entire run. After touring with the companies of Helen Barry and Ben Greet he returned to London, where he played Roger Willoughby in *The Power of Love*, March 6, 1888, and on Oct. 17 was the Lord Petersfield in *A Patron Saint* and Lord Sakmundham in Brantingham Hall, Nov. 29. During 1889 he was Lord Saltash in *A Panel Picture*, Prince Maleotti in *Forget-me-Not*, Mr. Crossley in *Doubt*, Mr. Basing in *Her Own Witness*, Lambert Streike in the revival of *The Colonel*, and Rev. Mr. Bream in *Man and the Woman*. When George Alexander organized his company to occupy The Avenue Theater in the spring of 1890, Mr. Gould, who had become one of the favorite representatives of dignified modern character, was engaged, and he played first in that house in *Fool's Mate*, Feb. 1, 1890. He was Mr. Wriothlesley in *Miss Cinderella*, Jacquemin in *The Grandsire*, Vaillant in *The Struggle for Life*, and Dr. Latimer in *Sunlight and Shadow*. He played at The Haymarket in *Comedy and Tragedy* in the interim, and as Jacques in *As You Like It* to the Rosalind of Mrs. Patrick Campbell. When Lady Windermere's Fan was produced, Feb. 20, 1892, he was Lord Darlington, and Mr. Pedrick in *Liberty Hall*. In *The Second Mrs. Tanqueray* he was Frank Misquith, Q. C. At the Haymarket, in 1894, he was Earl of Wauborough in *The Charlatan*, Diomedes in *Once Upon a Time*, Viscount Mount Sowell in *A Bunch of Violets*, and the Rev. Stephen Wynne in *John-a-Dreams*. In the fine production of *Romeo and Juliet* made by Forbes-Robertson in 1895 he was Friar Laurence. He also played in revivals of *Much Ado about Nothing* and *Fedora*.

Grant, Baron Albert, English promoter, born in Dublin in 1830; died there, Aug. 30, 1899. He was of Hebrew extraction, and after attending school in London and Paris began as a wine merchant, became a money lender, changed his name from Gottheimer to Grant, founded an investment company in 1865, and operated on an enormous scale in Erie shares, in worthless Nevada mines, in the Emma mine bubble, in visionary English mines, in Honduras and Paraguay government loans, in all sorts of speculative properties. He gave Leicester Square to London, contributed to the gallery at Milan, thus winning his title, made other lavish gifts, built himself a costly palace, represented Kidderminster in Parliament, and in 1885 went into bankruptcy.

Graves, Charles, Anglican prelate, born in Dublin, Ireland, Nov. 6, 1812; died there, July 17, 1899. He was educated at Trinity College, Dublin, where he became a fellow and was Professor of Mathematics, 1843-'62. He was president of the Royal Irish Academy in 1861-'65, and was also a fellow of the Royal Society. From 1860 to 1866 he was chaplain to the Lord Lieutenant, and was dean of Clonfert, 1864-'66. In the latter year he was consecrated Bishop of Limerick, Ardfer, and Aghadoc. He was a brother-in-law of Von Ranke, the German historian.

Greenbank, Henry Hewetson, English dramatist, born in London in 1866; died there, Feb. 26, 1899. He first became known as a play writer on the production of his comedy called *The Director* at Terry's Theater, London, May 7, 1891. This first effort was not successful, but was followed by an operetta called *Captain Billy*, Sept. 24, with success. Oct. 6, 1892, *Incognito*, adapted from *Le Cœur et la Main* of Charles Lecocq by Burnand, with lyrics by Greenbank, was produced and had fair success. *Beef Tea*, an amusing one-act operetta, was produced Oct. 27, and was well received. He was thenceforward the

leading writer of lyrics for musical comedy in London, and was the author of those of *The Gaiety Girl*, *An Artist's Model*, *A Runaway Girl*, *A Greek Slave*, and *San Toy*, which last work was not produced until after his death. He wrote also some pleasing songs for the successful play *Monte Carlo*.

Grosart, Alexander Balloch, English clergyman, born in Stirling, Scotland, June 18, 1822; died in Dublin in March, 1899. He held successive livings at Liverpool and Blackburn, but for several years resided at Dublin, editing the works of English authors of the sixteenth and seventeenth centuries. His original writings include *Small Sins* (1863); *Mighty to Save* (1863); *The Lambs all Safe* (1864); *The Prince of Light and the Prince of Darkness in Conflict* (1864); *Joining the Church* (1866); *Representative Nonconformists* (1879), and some of lesser note. His industry was prodigious, but his accuracy has not always gone unquestioned.

Groth, Klaus, German poet, born in Holstein, April 24, 1819; died in June, 1899. He studied philology at Bonn, and began to publish in the *Plattdeutscher dialect* poetry that soon attracted attention in Germany by its strength, sincerity, and conciseness. Afterward he wrote a long series of novels and tales devoted to the life, manners, and traditions of his native province. He was a zealous hunter of folklore, and was so attached to the Low German dialect that he wrote several philological treatises to prove its superiority to High German. In 1866 he was called to the professorship of the History of German Literature in the University of Kiel. Some of his most popular stories are *Meister Lamp und sein Dochter*, *Vettern*, *Baer de Goern*, and *Ut min Jungspardies*.

Hamilton, Walter, English author, born in London, Jan. 12, 1844; died Feb. 1, 1899. He was educated at the Collège de Dieppe. His earliest publication was *A Memoir of George Cruikshank* (London, 1878). Other works by him are *The Origin of the Office of Poet Laureate* (1879); *History of the Poets Laureate of England* (1879); *The Æsthetic Movement in England* (1882); *French Bookplates*; *Dated Bookplates*; *Odd Volumes and their Bookplates* (1898). He was the editor of *Poems and Parodies in Prayse of Tobacco*, and of an important work, in six volumes, entitled *Parodies of the Works of British and American Authors* (1884-'89).

Hay, John, British admiral, born in Perthshire, Scotland, in 1805; died in Edinburgh, Jan. 14, 1899. He entered the navy in 1819, and took part in the capture of *Morea Castle* in 1828. During the China war of 1840 and 1841 he served with distinction as lieutenant on the *Pylades*. He became commander in 1841 and captain in 1849, and was retired as rear admiral in 1866, receiving the rank of vice-admiral in 1873 and admiral in 1878.

Hennell, Sara Sophia, English author, born in England in 1813; died in Coventry, March 7, 1899. She was an early friend of George Eliot's, and appears to have exercised considerable influence in causing the latter to forsake the Methodism that she once professed. Miss Hennell's *Skeptical Tendency of Butler's Analogy* (London, 1850) made much stir at the time of its publication. Her other works are *Christianity and Infidelity*; *An Exposition of the Arguments on Both Sides* (1857); *The Early Christian Anticipation of an Approaching End of the World* (1860); *Thoughts in Aid of Faith* (1860); and *Present Religion as a Faith owning Fellowship with Thought* (1865-'87).

Herschell, Lord, English jurist, born in 1837; died in Washington, March 1, 1899. He was Attorney-General and afterward Lord Chancellor in Liberal cabinets. As Sir Farer Herschell he was one of the most active and distinguished of the legal members of his party, and when appointed Lord Chancellor in the Gladstone Cabinet of 1880 he was elevated to the peerage. He was sent to Washington in 1899 as chief of the British commissioners for the settlement of disputes between Canada and the United States.

Hervé, Édouard, French journalist, born in St. Denis, Réunion, in 1835; died in Paris, Jan. 4, 1899. He was the son of a Professor of Mathematics, studied in the Collège Napoléon, in Paris, took the first prize in philosophy in 1854, and entered the *École Normale*, but withdrew after gaining distinction in literature in order to devote himself to journalism. He wrote on politics in the *Revue de l'Instruction Publique* and the *Revue Contemporaine*, became editor of the *Journal de Dijon* in 1863, wrote for the *Temps* and the *Époque*, and sent to the *Journal de Genève* articles that could not be printed in France. In 1867 he founded, with M. J. Weiss, the *Journal de Paris*, in which appeared the boldest criticisms of the Imperial Government. He was an unsuccessful candidate for the Chamber in 1869. As editor of *Le Soleil*, which he established in 1873, he exercised a notable influence in public affairs. His articles on the visit of the Comte de Paris to Frohsdorff led to a duel, in which he wounded Edmond About. He upheld the policy of the Broglie, Cisse, and Buffet cabinets, and defended the reactionary measures in 1877; but after the elections had destroyed all hope of a restoration of the monarchy he warned the Republicans against attempts to effect it by violence. He attacked Jules Ferry's educational proposals in 1879 with energy and vigor. After the death of the Comte de Chambord he was the first to advocate a union of the Royalists and to hail the Orleans prince as the head of the house of France. He was elected to the French Academy in 1886.

Heureaux, Ulises, President of Santo Domingo, born in Puerto Plata in 1853; died in Moca, July 26, 1899. He was the son of a Haytian mulatto and a negress from St. Thomas, entered the Dominican army as a private, and rose through successive grades to that of major general, having distinguished himself in the wars against the Spaniards. He was Government delegate in Cibao in 1878, and in 1880 delegate of the provisional government for the southern provinces. During the administration of Merino he was Minister of the Interior and Prime Minister. He was elected President of the republic in 1882, serving till 1884. In 1887 he was elected again, and retained the reins of Government and scarcely disputed control of the electorate till his death by assassination. But for his vigilance and courage he would have been assassinated long before, for he did not himself spare the lives of his enemies. He was as unscrupulous as he was despotic and cruel, but always affable and dignified in his demeanor. His friends he permitted to enrich themselves by monopolies and concessions. Putting away his wife, he kept up luxurious establishments for women in various towns, and they were of service to him in watching the constantly hatching conspiracies. He employed a host of spies of both sexes, belonging mostly to the lower classes. Speaking their own *patois* to the country people and scattering lavish alms among them, he maintained his popularity among the ignorant. He drank only water, and

cared nothing for display, yet his expenditures were enormous, and he wrought confusion in the public accounts by using for his private purposes the moneys obtained at exorbitant rates for proposed public improvements. With people of intelligence he conversed brilliantly in excellent Spanish, and with foreigners he could talk in French or English. Wherever he went he was surrounded by a bodyguard. Yet when he was struck down by a young man of good family whom he had talked with and complimented on making his acquaintance the evening before his guards made no attempt to stop the murderer nor to remove their master's body, which lay in the street, an object of execration to the populace. His hold on the army, for he treated the soldiers well and they believed him to be invulnerable and invincible, helped to keep him in power so long; his personal debts helped still more, for his favorites and ministers who plundered the public all lent money to him, an enormous sum in the aggregate, on which he was paying usurious interest.

Hicks, John Wale, English clergyman, born in 1840; died in Bloemfontein, Orange Free State, South Africa, in October, 1899. He was educated at the University of London and at Cambridge, and was admitted to the priesthood in the Established Church in 1872. He was Demonstrator of Chemistry in the University of Cambridge, 1871-'82, and Lecturer on Natural Science at Sidney-Sussex College, 1871-'92. During this same period he served as curate in the Church of St. Mary-the-Less at Cambridge, 1871-'77, and vicar of the same church 1877-'92. In September, 1892, he was consecrated Bishop of Bloemfontein, his diocese including not only the Orange Free State but Griqualand West, Basutoland, and Bechuanaland. He was the author of *A Text-book of Inorganic Chemistry* (1877); *Lectures on the Real Presence* (Cambridge, 1885); *The Christian Doctrine of the Godhead; Predestination and Election*; and *The Fall and Restoration of Man*. He was reckoned among the more "advanced" Churchmen.

Hicks, Thomas, English clergyman and scientist, born in Exeter, July 15, 1818; died in Clifton, Jan. 25, 1899. He was for some years in the Unitarian ministry, being pastor of Mill Hill Chapel at Leeds; but on account of the failure of his voice he retired from the exercise of his profession and, taking up the study of science, became eminent as a marine zoölogist. He was the author of *A History of the British Hydroid Zoöphytes* (London, 1868) and *A History of the British Marine Polyzoa* (1889), both works being mainly the results of his own independent investigations.

Hogarth, William, English singer, born in South Shields, England, in 1844; died in Brighton, June 4, 1899. In his youth he was a railroad and marine engineer. About 1860 he became prominent in Brighton as a singer, and he was choir-master of St. James's Church in that city. He was also the trombone player in the orchestra of the theater in the evening, and in consequence of the opportunity thus afforded he met Sir Michael Costa and was allowed to sing with the Italian opera during one of its engagements in Brighton. He then appeared with marked success in comic opera. When the Prince of Wales went to India, Hogarth organized an English minstrel company and traveled in the wake of the royal party, winning great success and a fair pecuniary reward. After a year's absence he returned to England and organized a company of his own with which he toured for a season. He was then engaged by

D'Oyly Carte for the Captain in *Pinafore*, and followed a successful London season in that part with one equally as successful in the production of *Babil and Bijou*. In partnership with the late Shiel Barry he formed a company for the production of the comic opera *Les Cloches de Corneville*, Mr. Barry assuming the part of the miser Gaspard, and Mr. Hogarth that of the *marquis*. Mr. Hogarth continued in the management and performance of this very popular opera until 1897, when he gave up singing and attended solely to the business direction of the company.

Hogg, Jabex, English surgeon, born in Chatham, April 4, 1817; died in Kensington, April 23, 1890. He was educated at the Rochester grammar school and the Charing Cross Hospital, and practiced as ophthalmic surgeon, 1850-'95. His published works comprise *A Manual of Photography* (1845); *A Manual of Domestic Medicine* (1848); *English Forests and Forest Trees* (1853); *Experimental and Natural Philosophy* (1854); *The Microscope: Its History, Construction, and Applications* (1854; 15th ed., 1898); *The Ophthalmoscope* (1858); *Vegetable Parasites of the Human Skin* (1859); *A Manual of Ophthalmoscopic Surgery* (1863); *Color Blindness* (1863); *Cataract and its Treatment* (1869); *Boarding out of Pauper Children* (1870); *Skin Diseases* (1873), reissued as *A Parasitic or Germ Theory of Diseases* (1876); *Microscopic Examination of Water* (1874); *Impairment of Vision from Spinal Concussion* (1876); *Arsenical Wall Paper Poison* (1879-'89); *The Cure of Cataract* (1877-'88), and many professional papers.

Johnstone, Eliza, English actress, born in London in 1838; died there, Aug. 3, 1899. She was principally known for her connection with the theater and performances of John Lawrence Toole. Her father was a provincial actor, and she played for some years in country theaters. When Mr. Toole organized his company in 1879 her great ability was made known to metropolitan audiences. She remained in that theater until Mr. Toole's retirement, when she too retired. A London writer says of her: "She was not a 'foil' to the comedian; she was an invaluable, almost indispensable, collaborator in the creation and sustentation of his popularity. Her humor was ever rich and ready, and her comedy talent was rare, keen, and surpassingly clever." The parts in which she won most favor were Mrs. Grumley in *Domestic Economy*, Mrs. Torrington in *Uncle Dick's Darling*, Mrs. Cranky in *The Birthplace of Podgers*, and Anna Maria in *Ici on Parle Français*.

Jones, Henry, writer on whist under the name of Cavendish; born in London, Nov. 2, 1831; died Feb. 10, 1899. He was the son of a physician, and prepared himself to follow the same profession at King's College and St. Bartholomew's Hospital. He played whist in his own home, and when he had written a pamphlet under his pen name his father would quote it as authority without suspecting who was the author. His book on *The Laws and Principles of Whist* appeared in 1862. He published also *Whist Developments* and authoritative manuals on piquet, écarté, billiards, tennis, and other games, giving up his practice as a surgeon in 1869. For many years he conducted the card department of the Field and the column on pastimes in the Queen.

Keeley, Mrs. Mary Anne, English actress, born in Ipswich, Nov. 22, 1805; died in London, March 13, 1899. She first appeared under her maiden name of Goward. The playbill of the Theater Royal, Dublin, for Oct. 30, 1823, has the

line: "On Saturday (Nov. 1), The Beggar's Opera, Polly, Miss Goward (her first appearance in that character, and fourth on any stage)." Miss Goward took an important place in the company and played that season Diana Vernon in Rob Roy, Lucy Bertram in Guy Mannering, Barbara in The Iron Chest, Rosalie in The Peasant Boy, Ninetta in Clari, the Maid of Milan, Countess Rosalvina in The Devil's Bridge, Victoria in The Castle of Andalusia, Narcissa in Inkle and Yarico, Jessica in The Merchant of Venice (to the Shylock of Clara Fisher, April 10, 1824), Effie in the Vampire, Princess of Navarre in John of Paris, Rose in Fontainebleau, Barbarina in The Marriage of Figaro, Rosetta in Love in a Village, and Norah in the Poor Soldier. She went from Dublin to the Theater Royal, Leeds, where she made her first appearance, June 29, 1824, as Rosina in The Barber of Seville. In 1825 "little Miss Goward," as she was affectionately called, was engaged for a musical company in London. Of this, her first London appearance, Mrs. Keeley used to say: "I was so dreadfully frightened that when I got on the stage I turned around and was going to bolt back into the wings, but Mr. Broadhurst, the tenor, caught hold of me." Thenceforward, for three fourths of a century, the new actress was a favorite of London. On July 15 Miss Goward played Leonora in The Padlock; on the 21st, Mrs. Courtney in Free and Easy; and on the 23d Rosanthe in Brother and Sister. During the performance of this last play she met for the first time on the stage the comedian Mr. Keeley, afterward her husband, who sang the part of Bartolo. The season of this musical company closed Oct. 5, 1825, to be reopened on July 1, 1826, the singers going during the intervening months to the regular theaters of London, to whose stock companies they severally belonged. Mr. Keeley and several others belonged to Covent Garden, and Miss Goward was engaged for that theater, where at first she played very small parts, and for several years her place was very humble, though her success with the opera company in the summer was great. J. R. Planché, speaking in his Recollections (vol. i, p. 81), of the first production of Weber's Oberon says: "A young lady who subsequently became one of the most popular actresses in my recollection was certainly included in the cast. That young lady was Miss Goward, now Mrs. Keeley, and to her was assigned the exquisite mermaid song in the finale to the second act." On June 27, 1829, at the opening of the Opera House, her name appeared for the first time as "Mrs. Keeley (late Miss Goward)." The notices of the first performance, The Middle Temple, Mrs. Keeley as Penelope and Mr. Keeley as Brutus Hairbrain, conveyed the intimation that the marriage had been privately known for some time. Exactly when "clever little Miss Goward" was married to "funny little Bob Keeley" the wits of the time have not told us, but the story is that they were married like Beatrice and Benedick. The English opera was transferred to the Theater Royal Adelphi in July, 1830, on account of the burning of the Lyceum. Mrs. Keeley continued to be a member of Covent Garden with Edmund Kean, the Kembles, and the brilliant people of their company, from 1825 to 1833. She made her first appearance in a comedy rôle of high order as Nerissa in The Merchant of Venice, Oct. 27, 1830, Charles Kemble playing Shylock and Fanny Kemble Portia. On the same evening Mrs. Keeley played Bessie Bowline in the new opera The Blue Anchor. During the season of 1832 she played in The Tartar Witch, The

Peddler Boy, and The Clutterbucks, or The Railroad of Love, all new comedies. In June, 1833, she and her husband became the leading members of a company at the Coburg Theater, renamed the Victoria. Here, in August of that year, she made her first great hit in comedy as Nell Gwyn, in a revival of Douglas Jerrold's play of that name. The success of the play and of the company was due to the enthusiasm created by her acting. In May, 1835, she played with great success a serious and pathetic part for the first time in Serle's The Shadows on the Wall. In April, 1836, she was one of the English Opera Company to whom the Lord Chamberlain granted the license of the Theater Royal Lyceum, and the season of that house was opened April 4 of that year with Lucille, a new musical comedy, with Mrs. Keeley in the title rôle. The Keeleys made their first bow to an American audience at the Park Theater, New York, Sept. 19, 1836. Mrs. Keeley played Gertrude in The Loan of a Lover and Tibby Postlethwaite in My Master's Rival. During this engagement she played all her favorite rôles, and both husband and wife were very successful. Ireland, in his History of the New York Stage, says of Mrs. Keeley (vol. ii, p. 177): "Her expression of feature was wonderful, and she could charm you with a smile or sadden you with a tear with equal ease and the equal certainty of winning your entire sympathy." They appeared in Philadelphia, Oct. 15, 1836, and after a short tour returned to New York, where they began a second engagement at the Park, Nov. 21, in Lucille. Another engagement in the following June and a farewell on July 28, 1837, with visits to a few other cities, ended the American experiment. Returning to London, Mrs. Keeley joined the company of Charles Mathews and Mme. Vestris at the Royal Olympic Theater. Mr. Keeley and William Farren were also members of the company. Her first part was Xarifa in the burlesque The New Servant, Sept. 29, 1837. In November she went to the Adelphi, where she originated the part of Smike in a dramatization of Nicholas Nickleby. She also created a sensation at this theater in the following season as Jack Sheppard in a play of that name. The season of 1841 she was at the Strand, and in 1842 was engaged by Mr. Macready for Drury Lane. April 8, 1844, Mrs. Keeley began a long and famous career as manager and leading actress of the Lyceum as a burlesque and comedy theater. Mr. Keeley was the leading male actor and assistant manager. Under their direction for three years bright new comedies by Charles Dance, Planché, and Albert Smith were produced. On July 22, 1844, Martin Chuzzlewit, dramatized by Stirling, was first produced, Mrs. Keeley playing Sairey Gamp. This play ran until October. The Cricket on the Hearth, dramatized by Albert Smith, was first played Dec. 20, 1845. Mrs. Keeley played Mrs. Peerybingle, (Dot), Mr. Keeley Caleb Plummer, and their daughter, Mary Keeley, made her first appearance as Bertha, Caleb's blind child. This play ran until March, 1847, when Mrs. Keeley's illness obliged them to take it off. She next played a long line of comedy parts with Mr. and Mrs. Charles Kean at the Haymarket. She played for the first time before Queen Victoria at Windsor Castle, Dec. 28, 1848. The play was The Merchant of Venice, and her part was Nerissa. From 1850 to 1855 she was at the Adelphi, where on March 8, 1855, she created her celebrated part of Betty Martin in a farce of that name adapted from the French of Mme. Girardin. In 1859 she played Hector in a burlesque at the Lyceum called The Siege of

Troy. Since that time she had appeared only occasionally, for the benefits of old friends. She and her husband had acquired a modest competence, and had been blessed with good children, and so they went calmly and gracefully into private life. Mr. Keeley died in 1869, and his wife remained in stricter seclusion thereafter. On Nov. 22, 1895, her ninetieth birthday was celebrated by a grand reception in her honor at the Lyceum Theater, London, at which all England paid her the homage due to a good woman and gifted artist.

Kiepert, Heinrich, German geographer, born in Berlin, July 31, 1818; died there, April 21, 1899. He was a pupil of Karl Ritter, and for many years he directed the geographical institute at Weimar. In 1859 he was called to a professorship in the University of Berlin, and subsequently he held a post in the Government statistical bureau. His atlases and maps are celebrated, and he was the author of a masterly treatise on ancient geography.

Krementsz, Philippus, German prelate, born in Coblenz in 1819; died in Cologne, May 6, 1899. He was the son of a butcher, studied theology in Bonn and Munich, and for many years had a charge in his native city, where he acquired great reputation as a preacher and a theologian. In 1867 he was made Bishop of Ermeland, West Prussia. He opposed the dogmas enunciated by Pope Pius IX at the Vatican Council, but accepted the doctrine of papal infallibility after its adoption and rigidly enforced the penalties against the clergy of his diocese who refused to conform. The Prussian Government and the bishops first came into open conflict in 1871 in consequence of his action in excommunicating a professor in the Braunsberg gymnasium. His revenues were withheld, but he was not deposed, as some of his colleagues were later. He recovered the confidence of the Government to such an extent that he was elevated in 1885, by official request, to the archbishopric of Cologne. In 1895 he was made a cardinal. He was one of the early Christian Socialists, and also the friend and adviser of the organizers of the Center party in Germany.

Lampman, Archibald, Canadian poet, born in Morpeth, Canada, Nov. 17, 1861; died in Ottawa, Feb. 10, 1899. His father, who was a clergyman of the Church of England, removed to Port Hope in 1866, and to Gore's Landing, on Rice lake, in 1867. During the seven years' residence of the family on this lake young Lampman showed an intense love of Nature and remarkable powers of observation. While living in an unsuitable house in Gore's Landing he was stricken with rheumatic fever, which undermined his delicate constitution and was probably the ultimate cause of his early death. He was prepared for college at a private school, at the Collegiate Institute in Cobourg, and at Trinity College school in Port Hope. He entered Trinity College, Canada, in 1879. During his college course his time was largely devoted to reading and to the editing of two college papers. Nevertheless he was graduated with second honors in 1882. He taught school in Orangeville a year, but this proved uncongenial, and he was appointed to a place in the Canadian civil service in Ottawa, which he held until his death. His first contributions to public journals (1884) were the poems *The Coming of Winter* and *Three Flower Petals*. His first poem in a magazine was *Bird Voices*, which appeared in *The Century* for May, 1885. The greater part of his contributions to periodical literature appeared in this magazine. In 1888 he

published a volume of his poems entitled *Among the Millet*, and in 1893 another entitled *Lyrics of Earth*. During his last illness he was correcting proofs of still another, *Aleyone*, but he did not live to see it finished. All his works have now been collected in a larger volume, edited, with a memoir, by his friend Duncan Campbell Scott. Mr. Lampman was elected a fellow of the Royal Society of Canada in 1895. While he was distinctively a poet of Nature, yet he did not withdraw himself from men. He mingled freely with all, had a sympathetic word for every one, believed in the doctrine of socialism, and predicted the ultimate political independence of Canada.

Lane, Mrs. Sara, English actress and dramatist, born in London, Sept. 22, 1822; died there, Aug. 16, 1899. She was known in her early days on the stage as Miss Sarah Wilton. Her *début* was made at the Ironmonger-row Saloon in 1838 in small parts in melodrama. In 1843 she was engaged by Mr. Lane, proprietor of the Britannia Saloon (afterward the famous Britannia Theater), as a member of his company. In 1845 she married Mr. Lane, and thereafter was known by his name. She became the leading lady of this theater, and entered upon a career as unique and popular as ever fell to the fortune of an actress. All her life she remained identified with this one London theater, playing all the heroines of popular melodrama, of Shakespeare's plays, and of most of the farces of her time—the idol of the people of eastern London, and after her husband's death (August, 1872) the sole manager of the favorite old theater of the shop people. Mr. Lane established the Britannia as a first-class theater in 1846, and in 1850 he rebuilt it in its present proportions, and of those who were at different times members of his company are some of the most distinguished names in the history of the English stage. It was an iron rule of the house, maintained until Mrs. Lane's death, that no stars should be entertained. It was a pure stock company, never broken by the intrusion of extraordinary attractions. The people were loyal to it and it was always loyal to its people, not making false pretense or greater promise than it could fulfill. In 1852 the celebrated American colored tragedian Ira Aldridge was a member of the company. For the fourteen or fifteen years preceding her death Mrs. Lane practically abandoned the old melodramatic traditions of the house and devoted her time and talent to careful and finely acted repetitions of the best successes of the West End theaters. A traditional characteristic of the Britannia is its merry, original, and magnificent pantomimes produced at Christmas time. In these as well as in the plays, burlesques, and dramas Mrs. Lane always assumed an important part, and for nearly sixty years she was one of London's institutions. She was a generous caretaker of the poor of her poor part of the city, and she is said to have given away from £1,000 to £3,000 a year in small sums to the needy, and if any especial case of distress came up she at once organized a benefit for relief. Thus it came that the name by which she was best known was "the good lady of the Brit." Her last public appearance was about three months before her death. On the occasion of her funeral the procession of mourning seemed to include all East London.

Leathley, Mrs. Mary Elizabeth Southwell (Dudley), English author, born in 1817; died in Hastings, Dec. 22, 1899. She was the daughter of a Quaker of Clonmel, Ireland, but became a Roman Catholic in 1847. She married the same year William Henry Leathley, a barrister. She

was the author of more than a hundred books for children, of which the most popular, *Chickweed* without *Chickweed*, reached a sale of half a million copies. Among her other books are *Children of Scripture*; *Mamma's Bible Stories*; *Conquerors and Captives* (1875); *In the Beginning, or From Eden to Canaan* (1875); *The Star of Promise* (1875); *The Story of Stories* (1875); and *Requiescat* (1888).

Leclercq, Rose (Mrs. Rose Fuller), English actress, born in Liverpool in 1846; died in London, March 25, 1899. She was the daughter of Charles and Margaret Leclercq, and sister of Carlotta Leclercq and Charles Leclercq, all players of high reputation. Her first appearance in a speaking part was as Ceres in *The Tempest* before Queen Victoria at Windsor Castle. She went first before a London audience June 26, 1854, as first dancer in the ballet at the Princess's Theater, and continued at this theater as a dancer and actress in burlesques until 1860. On Sept. 28, 1861, her first notable success was made in the part of Mrs. Waverly in John Brougham's *Playing with Fire*. She originated the part of Mary Vance in Burnand's *The Deal Boatman*, Sept. 21, 1863, and thenceforward was a popular player of emotional and serious characters. She played then for several seasons outside of London in Shakespearean and standard drama. When Dion Boucicault's *After Dark* was produced, Aug. 12, 1868, she was the original Eliza, the heroine, and by her fine acting contributed much toward the wonderful popularity of that drama and its long run. At the Adelphi, in 1869, she was the original Kate Jessop in the same author's *Lost at Sea*, the success of which was nearly equal to that of the previously noted play. A long engagement at the Princess's Theater in London began March 7, 1870, when she appeared as the heroine in the first performance of Boucicault's *Paul Lafarge*. In 1871 she played Margaret in the *King o' Scots*, Marguerite in *Faust* and Marguerite, and Miss Sterling in *The Clandestine Marriage*, and was the original Ellen Moriarty in Falconer's *Eileen Oge*, June 29, 1871. When Charles Fechter revived *Ruy Blas* at the Adelphi, March 2, 1872, she played the Queen. She played Desdemona with Samuel Phelps at the Princess's on Sept. 28, 1873, and Mrs. Ford in *The Merry Wives of Windsor*, Dec. 19, 1874. She was the original Claire Ffoilliot in *The Shaughraun* at Drury Lane, Sept. 4, 1875, and the heroine of *That Lass o' Lowrie's* at the Opera Comique, Sept. 1, 1877. It may be said that from 1870 she was the most popular actress of the English stage. Other parts in which she was a favorite with the English people were Galatea in *Pygmalion* and Galatea, Princess Zeolide in *The Palace of Truth*, Lady Hilda in *Broken Hearts*, Suzanne in *A Scrap of Paper*, Countess d'Autreval in *The Ladies' Battle*, and Ruth in *Ruth's Romance*. She played Olivia in a successful revival of *Twelfth Night* at the Lyceum, July 8, 1884. In 1888 she was engaged for the Haymarket Theater stock company, and appeared as Maria Leczinska in *The Pompadour*, March 31, and in *Captain Swift*, Sept. 1, as Lady Staunton. She was the Mistress Page in Beerbohm Tree's production of *The Merry Wives of Windsor*, and afterward Mrs. Palfreyman in *Wealth*. When *The Dancing Girl* was produced at the Haymarket, Jan. 15, 1891, she was Lady Bawtre, and thereafter she remained in London, playing *grandes dames*. Her last performance was Lady Beechinnor in *The Manœuvres of Jane*, March 25, 1899.

Leitner, Gottlieb William, Anglo-Indian educator, born in Pesth, Hungary, in 1840; died

in Bonn, Germany, March 22, 1899. He was educated in Constantinople and Brussa, in Mohammedan schools, becoming familiar with the Levant to such an extent that he was appointed chief interpreter to the British commissariat in the Crimean War. He completed his studies in King's College, London, and was appointed Professor of Arabic, Turkish, and Modern Greek in 1859, and in 1861, when the Oriental section of the college was founded, Professor of Arabic and Mohammedan Law. A few years afterward he went to India to take charge of the Government college at Lahore. Later he founded the Punjab University, where Western science was taught in the vernacular for the first time in northern India with the approval of Hindu pandits and Mohammedan mullahs, and with the aid of endowments contributed by the maharajahs and rajahs of the native states. Dr. Leitner also founded many public libraries in India, and published journals in Urdu, Arabic, and English. In 1866 he explored for the Government the countries between Kashmir and Cabul. After returning to Europe he edited for ten years the *Asiatic Quarterly Review*. He founded at Woking the Indian institute for the training of aristocratic young Indians. He was one of the most accomplished of modern linguists, having an acquaintance with about fifty languages, many of which he spoke fluently. Among his published works are *Dardistan*, *The Races of Turkey*, *Philosophical Grammar of Arabic*, and *Sinin ul Islam: The History and Literature of Mohammedanism in their Relations to Universal History*.

Lisbourne, John, English actor, born in Manchester in 1866; died there, July 6, 1899. He was first engaged as a pantomimist, and played Fripps and the Cabman in *Round the Clock*, at Stockton-on-Tees, and in the same play at the Fourteenth Street Theater, New York. During his stay in the United States he was a member of Forepaugh's Circus for several months. On his return to England he took up Irish comedy, and was so successful that he traveled three years in England, Ireland, and Scotland, playing *Widow O'Brien* and *Tommy Cranberry* in *Fun on the Bristol*. His latest successful character was Mrs. Muldoon in the English tours of Muldoon's Picnic, in which he also played Mulcahey. He was especially popular in Dublin and Manchester.

Lloyd, Daniel Lewis, Welsh prelate, born Nov. 23, 1843; died Aug. 4, 1899. He was educated at Oxford, and was curate from 1867 to 1872 of Dolgelly, Merionethshire, Wales, and head master of the grammar school there. His abilities as an educator were already marked when in 1873 he became head master of the Friars' School at Bangor, an institution that had a rapid growth under his rule, which continued until 1878. In that year he went to Christ's College at Brecon as its head master, and he continued in that office till in 1890 he was consecrated Bishop of Bangor. As an educator he made a deep and lasting impression, and stood easily first in that respect among the Welshmen of his time. As a prelate his success was much less marked. He had a strong aversion to controversy, and as the years following his consecration were full of danger to the Welsh establishment, active defense was naturally to be looked for from its four prelates. Bishop Lloyd was incapacitated by temperament from exertion of this kind, and in 1898 he resigned his bishopric. He was a finished Welsh scholar, and his *Emyniadur yr Egllys* is a valued addition to Welsh hynology.

Loizillon, Gen., French soldier, born in Paris in 1820; died in Dammarie-les-Lys, May 4, 1899.

He was educated at St. Cyr and was commissioned an officer of cuirassiers in 1849. He served through the Crimean War, returning as captain. His military career was brilliant, and he was in command of the 1st Army Corps at Lille when, on Jan. 11, 1893, he was made Minister of War. He held the portfolio till Dec. 3.

Lorainé, Henry, English actor, born in London in 1819; died there, July 10, 1899. He made his first appearance in 1840 at Worcester. For years he was a favorite leading man of the Scotch theaters. He then established himself in Liverpool, whence he went to London in 1863, where he made his *début* as Don César de Bazan, at Drury Lane. His fortune was not great in this venture, but Barney Williams, the American actor, obtained him as a leading man for the Broadway Theater, New York. He made his first appearance there as Hamlet, and remained for a season. He then made several prosperous tours of the United States as a Shakespearean star, and returned to England in 1868. In the autumn of that year he again played Don César de Bazan at Drury Lane so successfully that it ran fifty nights. Mr. Lorainé after a time took the management of the Surrey Theater. He was next seen at the Princess's in a series of Shakespearean rôles. He became manager of the Theater Royal, Leeds, and for many years enjoyed prosperity both as an actor and as a business manager. Of late years he has been playing old men in London theaters. His last appearance was as Col. Sapt in the Prisoner of Zenda.

Lundberg, Ada (Margaret Ada Clegg Everard), English actress, born in Bristol in 1850; died in London, Sept. 30, 1899. She made her first appearance in Bristol in 1862, and after several years of stock experience she became noted as a music-hall singer of popular melodies. In 1876 she was very successful in London, and was engaged by the Music Hall Syndicate at a large salary for six years. In 1893 she came to New York city, and for a season was a popular favorite at Koster and Bial's. Her best-known ballads were *My First Young Man*, *Betsy Barlow*, and *Tooral Laddie*. Her last appearance was at the Tivoli, Manchester, in June, 1899.

Mackenzie, John, British administrator, died in Kimberley, March 22, 1899. He went to South Africa in the service of the London Missionary Society, of which he became a very active and energetic member. When the Dutch freebooters in the service of the Bechuana chiefs Massouw and Moshette and the English freebooters in the service of Mankaroane and Montsioa set the border aflame in 1881 and subsequent years, for the purpose of enriching themselves with native lands, Mackenzie was concerned for the chiefs that acknowledged British supremacy, and when the Boer freebooters founded the republics of Stellaland and Goshen he appealed to the British Government and was supported by nonconformist opinion in his protest against the alleged violation of the Keate award by the Transvaal Government. As the result of this agitation, a British protectorate was proclaimed over Bechuana-land in 1884, and Mackenzie was appointed deputy commissioner. He soon found himself at variance with the Cape Government when he attempted to deprive the Dutch farmers of their lands. Cecil Rhodes was consequently sent to replace him; but when he failed to restore order Sir Charles Warren marched into the country in 1885, and after a conflict with Rhodes sent for Mackenzie, whose views in favor of direct imperial control coincided with his own, and they prevailed over those of Sir Hercules Robinson and

Cecil Rhodes, who wished to annex the territory to the Cape, as was done ten years later. In 1889 he went to England to agitate against Sir Hercules Robinson and urge the separation of the offices of Cape governor and high commissioner. He returned to his work as a missionary. He published *Austral Africa* (1885).

Manning, Frank, English actor, born in London in 1861; died there, March 24, 1899. He was the son of a popular English comedian, John Manning. His first appearance was at the age of ten in a pantomime at Sadler's Wells, and he was identified with that line of business for several years in different theaters, and made a success as the drunken cobbler in *The Forty Thieves*. The result was his abandonment of mute rôles and the beginning of great popularity as an eccentric comedian. His principal engagements were a tour in America with the Leopolds as Sammy in *Frivolity*, a season of burlesque at the Theater Royal, Edinburgh, a tour with Wilson Barrett, another with *The Telephone Girl*, and his engagement at the Savoy, London, where he was playing the minister of police in *The Lucky Star* at the time of his fatal illness. His last appearance was March 18, 1899.

Marie Louise, Princess of Bulgaria, born in 1870; died in Sofia, Jan. 31, 1899. She was a daughter of the Duke of Parma, of the house of Bourbon, and married Prince Ferdinand of Bulgaria in 1893. When her husband, in 1896, had their elder son, Boris, admitted into the Greek Orthodox Church in order to save his throne it caused her much unhappiness. She took no great interest in politics, but her kindness and benevolence endeared her to the Bulgarians.

Maris, Jacques, Dutch painter, born in The Hague in 1837; died in Carlsbad, Aug. 8, 1899. He studied under De Keyser and Van Hove, went to Paris, and obtained a high reputation for his landscapes, especially in his own country, where he was acknowledged to be first in his branch. He was also an aquarellist and an engraver.

Mirsky, Dmitri Ivanovich Svatopolk, a Russian soldier, born about 1825; died in Nice in February, 1899. He entered the army at the age of eighteen, took part in all the battles fought with Shamyl, exhibited distinguished bravery, and was twice wounded, and in the Crimean War he was at the head of a regiment. Later, as chief of staff to Prince Bariatsky, he took part in the pacification of the Caucasus. In the war of 1876, as adjutant to the Grand Duke Michael, he took an active part in the capture of the fortress of Kars. His last office was that of Governor General and commandant of troops in Kharkoff.

Marshall, Mrs. Emma (Martin), English historical novelist, born in North Repps Hill House, Norfolk, Sept. 29, 1828; died in Clifton, Bristol, May 4, 1899. She was the youngest daughter of Simon Martin, a banker of Norwich, and in 1854 married Hugh Graham Marshall. Her early married life was passed at Wells, Exeter, and Gloucester, and her interest in the historical associations connected with these cities is strongly reflected in some of her stories. The average merit of her books is high, and their popularity is deservedly great. Properly speaking, they are not so much novels as a series of historical pictures in which there is one central celebrated person about whom are grouped other real personages of lesser note, with still others who are creations of the writer's own brain. The narrative in each case is of interest, the dialogue natural, and the descriptions of events and places worked up with a great deal of literary skill. The best of

them are to be found among those written within the past twenty years, and, in spite of the great number of books put forth by her, no falling off may be noted in comparing her very latest ones with those ten years earlier. While mainly designed for the reading of young people, they are not to be classed among juvenile tales, and in the study of English literature and history they form almost invaluable aids in awakening an interest in the famous people of the past. Such books as *Under Salisbury Spire* (1889), *In Winchester Meads* (1891), and *Penshurst Castle* (1893) might well find a place in the library of every school where English literature and history are taught. A nearly complete list of Mrs. Marshall's books includes *Happy Days at Fernbank* (1861); *Edith Prescott* (1863); *Rainy Days* (1863); *Rose Bryant* (1863); *Helen's Diary, or Thirty Years Ago* (1864); *Katie's Work* (1864); *Consideration* (1864); *Brook Silverstone* (1865); *Roger's Apprenticeship* (1865); *Ida, or Living for Others* (1865); *The Dawn of Life* (1866); *Millicent Legh* (1866); *Grannie's Wardrobe* (1867); *The Old Gateway* (1867); *Theodora's Childhood* (1867); *Daisy Bright* (1868); *Grace Buxton* (1868); *The Little Peat Cutter* (1868); *Violet Douglas* (1868); *Little May's Legacy* (1868); *Brothers and Sisters* (1869); *The Story of the Two Margarets* (1869); *Edward's Wife* (1870); *Primrose, or the Bells of Old Effingham* (1870); *Christabel Kingscote* (1870); *Heights and Valleys* (1871); *Stellafont Abbey* (1871); *Three Little Sisters* (1871); *To-Day and Yesterday* (1871); *Matthew Frost, Carrier* (1872); *Between the Cliffs* (1873); *Mrs. Mainwaring's Journal* (1873); *Nowadays* (1874); *A Lily among Thorns* (1874); *Three Little Brothers* (1875); *Life's Aftermath* (1876); *Joanna's Inheritance* (1876); *Lady Alice, or Two Sides to a Picture* (1877); *Mrs. Haycock's Chronicles* (1877); *A History of France* (1877); *True and Strong* (1878); *Marjory, or the Gift of Peace* (1878); *Job Singleton's Heir* (1878); *A Knight of our Own Day, and Other Verses* (1879); *Framilode Hall, or Honor is Humility* (1879); *A Chip of the Old Block* (1879); *The Rochemonts* (1879); *Ruby and Pearl* (1879); *Royal Law* (1879); *Stories of the Cathedral Cities of England* (1879); *Heather and Harebell* (1880); *Light in the Lily* (1880); *The Birth of the Century, or Eighty Years Ago* (1880); *Memories of Troublous Times* (1880); *A Rose without Thorns* (1880); *A Violet in the Shade* (1880); *Benvenuta* (1881); *Dewdrops and Diamonds* (1881); *Dorothy's Daughters* (1881); *Constantia Carew* (1882); *The Dayspring: A Story of the Time of William Tyndale* (1882); *The Court and the Cottage* (1883); *In Colston's Days: A Story of Old Bristol* (1883); *Little and Good* (1883); *Poppies and Pansies* (1883); *Sir Valentine's Victory* (1883); *Heathercliff* (1884); *Mrs. Willoughby's Octave* (1884); *In the East Country with Sir Thomas Browne* (1884); *My Grandmother's Pictures* (1884); *Silver Chimes* (1884); *The Two Homes* (1884); *Over the Down* (1884); *Cassandra's Casket* (1885); *Michael's Treasures* (1885); *The Mistress of Tayne Court* (1885); *No. XIII, or the Story of the Lost Vestal* (1885); *Salome* (1885); *The Story of the Lost Emerald* (1885); *Under the Mendips* (1885); *A Fight with the Swallow* (1886); *In Four Reigns* (1886); *Life of Our Lord Jesus Christ* (1886); *Rhoda's Reward* (1886); *The Roses of Kingwood* (1886); *The Tower on the Cliff* (1886); *Dandy Jim* (1887); *Daphne's Decision* (1887); *Eaglehurst Towers* (1887); *Miss Matchett's Mistake* (1887); *On the Banks of the Ouse* (1887); *Only a Bunch of Cherries* (1887); *The Story of John*

Marbeck: A Windsor Organist (1887); *Two Swords: A Story of Old Bristol* (1887); *Alma* (1888); *Bishop's Cranworth* (1888); *Bristol Diamonds* (1888); *Dulcibel's Day Dreams* (1888); *Houses on Wheels* (1888); *In the City of Flowers* (1888); *Oliver's Old Pictures* (1888); *Our Own Picture Book* (1888); *The End Crowns All* (1889); *Laurel Crowns* (1889); *Under Salisbury Spire* (1889); *Eventide Light* (1890); *Shakespeare and his Birthplace* (1890); *Winifrede's Journal of her Life at Exeter and Norwich* (1891); *In Winchester Meads* (1891); *Little Queenie* (1892); *Bristol Bells* (1892); *In the Service of Rachel, Lady Russell* (1892); *New Relations* (1893); *Pat's Inheritance* (1893); *Penshurst Castle in the Time of Sir Philip Sidney* (1893); *Nature's Gentlemen* (1893); *The Close of St. Christopher's* (1894); *Kensington Palace in the Days of Queen Mary* (1894); *Lizette and her Mission* (1894); *The Master of the Musicians* (1895); *The White King's Daughter* (1895); *Abigail Templeton* (1896); *By the North Sea, or The Protector's Granddaughter* (1896); *An Escape from the Tower* (1896); *Only Susan* (1896); *Sir Benjamin's Bounty* (1896); *Castle Meadow* (1897); *A Haunt of Ancient Peace* (1897); *Lady Rosalind* (1897); *Up and Down the Pantiles* (1896); *The Two Henriettas; The First Light on Eddystone; Her Season in Bath; Boscombe Chine; In the Choir of Westminster Abbey* (1897); *The Lady of Holt Dene; Better Late than Never* (1898); *Master Martin* (1898); *Under the Laburnums* (1898); and *Under the Dome of St. Paul's* (1898).

Lean, Mrs. Florence (Marryat) (Ross-Church), English novelist, born in Brighton, July 9, 1837; died in London, Oct. 27, 1899. She was a daughter of Capt. Frederick Marryat, the English novelist, and first married Col. Ross-Church, a soldier in the East Indian service, with whom she traveled extensively in India. After his death she became the wife of Col. Francis Lean. From 1872 to 1876 she edited *London Society*, and a few years later she appeared on the stage in lyric and other rôles, achieving her greatest success as *Lady Jane in Patience*. She was also favorably known as a lecturer and elocutionist, and made a tour of the United States in 1884 in original monologues. *Tom Tiddler's Ground* (1896) aims at giving her impressions of America at that time. She was the author of several successful plays, but is best known as a novelist, the entire number of her fictions including 75 titles. A partial list of her novels and collections of tales comprises *Love's Conflict* (London, 1865); *Too Good for Him* (1865); *Woman against Woman* (1865); *For Ever and Ever* (1866); *Confessions of Gerald Estcourt* (1867); *Gup: Sketches of Anglo-Indian Life* (1868); *Nelly Brooke* (1868); *Girls of Feversham* (1869); *Veronique* (1869); *Petronel* (1870); *Her Lord and Master* (1871); *Sybil's Friend* (1873); *No Intentions* (1874); *Open Sesame* (1875); *Fighting the Air* (1875); *My Own Child* (1876); *Her Father's Name* (1876); *Hidden Chains* (1876); *A Harvest of Wild Oats* (1877); *Written in Fire* (1878); *Little Stephen* (1878); *The World against a Lie*, successfully dramatized in England and played also in America as *Della* (1878); *The Root of All Evil* (1879); *The Broken Blossom* (1879); *With Cupid's Eyes* (1880); *Fair-haired Alda* (1880); *My Sister the Actress* (1881); *How they Loved Him* (1882); *Phyllida* (1882); *A Moment of Madness and Other Stories* (1883); *Peers and Player* (1883); *The Heart of Jane Warner* (1885); *The Heir Presumptive* (1885); *The Master Passion* (1886); *Spider's Society* (1886); *A Daughter of the Tropics* (1887);

Driven to Bay (1887); The Crown of Shame (1888); Gentleman and Courtier (1888); Scrapie (1888); The Risen Dead; Parson Jones; There is no Death (1891); How Like a Woman; A Lucky Disappointment and Other Stories (1876); The Poison of Asps and Other Stories (1876). She also published the Life and Letters of Captain Marryat (1872). Her novels have enjoyed wide popularity, and some of them have been translated into the principal European languages; but her writing is ephemeral and aims only at the entertainment of the moment.

Matson, William Tidd, English hymn writer, born in Kingsland, Herefordshire, in 1833; died Dec. 24, 1899. He was ordained in the Congregational ministry in 1858, and the greater part of his ministerial labors were devoted to charges in Hampshire. He obtained wide fame as a writer of popular hymns, and his religious verses appear in 45 different hymnals and religious anthologies. His published volumes comprise *A Summer Evening Reverie* (1857); *Poems* (1858); *Pleasures of the Sanctuary* (1866); *Sacred Lyrics* (1870); *Edderline and Poems* (1880); and *The World Redeemed* (1881).

Metford, William Ellis, English inventor, born in Somersetshire about 1825; died in Bristol. He was educated as a civil engineer, held an appointment on an Indian railroad two years after working under Brunel for a long time, returned to England broken in health, and after his recovery devoted his life to the study of the rifle. He introduced the principle of shallow rifling to prevent all leakage of gas and the use of a bullet of hardened lead, since replaced by the steel-cased bullet. His barrel combined with the Lee breech action was adopted by the British Government, but Enfield has since modified his grooving, making the edges square instead of smoothed, which is rendered necessary by the use of cordite and very hard bullets.

Meyer, Rudolf, German political economist, born in Friedberg, Brandenburg, Dec. 10, 1839; died in Dessau, Jan. 11, 1899. He published books treating of the emancipation of the Fourth Estate, the banks of Germany, socialism in Denmark, the causes of American competition, the international crisis in industry and agriculture, and the agrarian question.

Michie, Sir Archibald, Australian statesman, born in Maida Vale, England, in 1813; died in Melbourne, Victoria, June 22, 1899. He was educated at Westminster School, was called to the bar in 1838, and in 1839 went to Sydney, New South Wales, where he became a law reporter, a successful practitioner, and in 1844 the associate of Robert Lowe in the management of the Atlas newspaper. In 1852 he settled in Melbourne, where he practiced law and acted as correspondent to the London Times. When in 1856 responsible government was given to Victoria he was elected to the Assembly, was Attorney-General in 1857, became Minister of Justice in 1863 in the McCulloch Cabinet, served later under McCulloch as Attorney-General, and in 1873 accepted the office of agent general of Victoria in London, which he filled for six years.

Millocker, Karl, German dramatist, born in Vienna, Austria, May 29, 1842; died there, Dec. 27, 1899. He was graduated at the Vienna Conservatory of Music and became *Kapellmeister* of the Theater of Gratz in 1864. In 1866 he became musical director of the Harmonie Theater in Vienna, and on the closing of that theater went to Peth, where he held a similar post three years. In 1869 he returned to Vienna and became *Kapellmeister* in the Theater an der Wein. He also

edited the *Musikalische Presse*. He was author of the operettas *Der todte Gast*, produced at Gratz in 1865; *Diana*, produced in Vienna in 1866; *Der Regimentstambour*, *Ein Abenteuer in Wien*, *Drei Paar Schuhe*, *Die Musik des Teufels*, and *Das verwunschene Schloss*, produced in Vienna in 1878; *Gräfin Dubarry* (1879); *Die Jungfrau von Belleville* (1881); *Der Bettelstudent* (1882); *Gasparone*, and *Der Feldprediger* (1884); and *Der Vice-Admiral* (1886).

Mitchell, Alexander Ferrier, Scottish clergyman, born in Brechin, Scotland, in 1822; died in St. Andrew's in March, 1899. He was graduated at the University of Saint Andrew's in 1841, and from 1868 to 1894 was Professor of Ecclesiastical History and Divinity there. He published *The Westminster Confession: A Contribution to the Study of its History* (Edinburgh, 1866); *The Wedderburns and their Work* (London, 1867); *The Westminster Assembly: Its History and Standards* (1883); *The Primitive Church* (Edinburgh, 1883); *Union of Scotch Presbyterians* (1886); and *The Catechisms of the Second Reformation* (London, 1887).

Mitchell, Peter, Canadian statesman, born in Newcastle, New Brunswick, Jan. 4, 1824; died in Montreal, Oct. 25, 1899. He studied law and was called to the bar in 1848, but soon left the law to engage in lumbering, shipbuilding, and other business enterprises. In 1856 he was sent to the New Brunswick Legislature, and he remained a member of the Assembly until 1860, when he entered the Legislative Council as a life member. The most important incident in Mr. Mitchell's life was the part he played in bringing about Canadian confederation. When it was proposed to unite only the maritime provinces, he served in 1864 as a delegate to the Charlottetown Conference. Later in the same year he attended the Quebec Conference, which drafted the terms of union. In 1866 he was sent to England as a member of the London Conference on the same subject. There he stood by Sir George Cartier as against Sir John Macdonald on the question of a provincial union instead of a legislative union. In the first general election following the passage of the act of union, New Brunswick rejected the confederation. In the interval before the next election Mr. Mitchell redoubled his efforts in behalf of union, and his masterly speeches were undoubtedly the most important factor in bringing New Brunswick into line with the other provinces. When the confederation was accomplished he was appointed to the Senate of Canada by royal proclamation, and became one of the Government leaders in that body. With the forming of the first Dominion Government he took the portfolio of Marine and Fisheries. That department he organized and administered with ability and success. This was a difficult post, as it involved disputes and negotiations between Canada and the United States over the Bering Sea fisheries. He brought about the Halifax arbitration between Great Britain and the United States, which resulted in the payment of \$5,500,000 to Canada by the United States. Sir Alfred Smith was Minister of Marine and Fisheries when the arbitration was held, but the actual work had been done by Mr. Mitchell. He resigned from the Senate in 1874, and was elected to the House of Commons. He was again elected in 1882, and sat in the Commons until 1891. He was defeated in 1896 by a small vote. He was for a time president of the Mitchell Steamship Company, and he was an active promoter of the Canadian Pacific Railway. He bought the Montreal Herald in 1885. In 1897 he was appointed Inspector of

Fisheries for the Atlantic Provinces. He published *A Review of President Grant's Recent Message to the United States Congress relative to Canadian Fisheries and the Navigation of the St. Lawrence River* (1870) and *Notes of a Holiday Trip* (1880).

Monier-Williams, Sir Monier, English philologist, born in Bombay, Nov. 12, 1819; died in Cannes, France, April 11, 1899. He was a son of the surveyor general of Bombay, and prepared for the Indian civil service, coming out first in his class at Haileybury, then gave up that career in obedience to the wish of his widowed mother after his twin brother had been killed in a border war. Having already studied at Oxford, he returned in 1838, and applied himself to linguistic studies, for which he had shown an early aptitude. He took the scholarship in Sanskrit in 1843, and from 1844 till 1857 was Professor of Sanskrit, Bengali, and Telugu at Haileybury College. In 1860 he was elected Boden Professor of Sanskrit at Oxford. He desired to establish an Indian institute there, and in 1875 and again in 1876 he went to India to seek support for his project, which was finally carried out in 1883. He made another trip to India in that year, having been appointed curator of the institute, to which he presented later his own collection of Oriental books and manuscripts. He published the *Lost Ring*, a translation of the Sanskrit drama *Sakuntala*; an English-Sanskrit dictionary and a Sanskrit-English one that cost him twenty years' work; *Indian Epic Poetry* (1863); *Hinduism* (1877); *Modern India and Indians* (1878); *Religious Thought and Life in India* (1883); *The Holy Bible and the Sacred Books of the East* (1886); *Buddhism* (1890); *Brahmanism* (1891); and *Indian Wisdom* (1893). He was knighted in 1886.

Moore, Daniel, English clergyman, born in Coventry, June 23, 1809; died in London, May 15, 1899. He was educated at Cambridge, and was ordained in the English Church in 1841. From 1841 to 1844 he was in charge of Christ Chapel, Maida Hill, and from 1844 to 1866 was incumbent of Camden Church, Camberwell. In 1866 he became vicar of Paddington, which office he held until 1895. He had been chaplain ordinary to the Queen from 1870, and a prebendary of St. Paul's from 1880. He was one of the most respected of the clergy in London, in which almost his entire life was passed. He was the author of *Daily Devotion* (1847); *The Christian System Vindicated* (2d edition, 1844); *Sermons before Cambridge University* (1845); *Christian Consolation* (1848); *Discourses on the Lord's Prayer* (1852); *Family Duties* (1856); *Golden Lectures* (1857-'61); *Thoughts on Preaching* (1861); *The Divine Authority of the Pentateuch Vindicated* (1863); *The Age and the Gospel* (1864); *Aids to Prayer* (1868); *Sermons on Special Occasions* (1871); *Christ and his Church* (1875); *Sunday Meditations* (1876); *Temptation: Its Nature and Limits* (1876); *The Christian in his Relation to the Church* (1880); *Meditations for Advent* (1884); *Christ in All Ages* (1886); *Thoughts for Church Seasons* (1888); *The Faithful Departed*.

Nicholson, Henry Alleyne, English scientist, born in Penrith, Cumberland, Sept. 11, 1844; died in Aberdeen, Scotland, Jan. 19, 1899. He was educated at the Universities of Göttingen and Edinburgh, and in 1869 was appointed lecturer on natural history in Edinburgh Medical School. In 1871 he became Professor of Natural History and Botany in the University of Toronto, in 1874 Professor of Biology and Natural History in the

College of Physical Science, Durham University, and in 1875 Professor of Natural History in the University of St. Andrew's. In 1877 he was appointed lecturer on geology to the British Museum, and in 1882 became Professor of Natural History at the University of Aberdeen, occupying that chair till his death. His works comprise *Essay on the Geology of Cumberland and Westmoreland* (1868); *A Manual of Zoölogy* (1870); *Syllabus of Lectures on Zoölogy, Geology, and Palæontology* (1870); *Advanced Text-book of Zoölogy* (1870); *Introductory Text-book of Zoölogy* (1871); *Introduction to the Study of Biology* (1872); *Text-book of Geology* (1872); *Examinations in Natural History* (1872); *Monograph of the British Graptolitidæ* (1872); *A Manual of Palæontology* (1872); *Outlines of Natural History for Beginners* (1873); *Report on the Palæontology of the Province of Ontario* (1874-'75); *Report on the Fossil Coals, Sponges, and Polyzoa of the Silurian and Devonian Rocks of Ohio* (1875); *The Nature of Life* (1875); *The Ancient Life History of the Earth* (1877); *Structure and Affinities of the Tabulate Corals of the Palæozoic Period* (1879); *Structure and Affinities of the Genus Monteculipora and its Sub-Genera* (1881); *Synopsis of the Classification of the Animal Kingdom* (1882); *Natural History: Its Rise and Progress in Britain* (1886); *Bibliography of North American Invertebrate Palæontology*, with C. A. White (1878); and *Silurian Fossils of the Girvan District with R. Etheridge* (1879).

Nisbet, John Ferguson, Scottish dramatic critic, born in Lanarkshire, Oct. 28, 1851; died in New Southgate, March 31, 1899. He was for nearly twenty years a writer of special articles for the *London Times*, and in 1882 succeeded Mowbray Morris as dramatic critic on the *Times* staff. He was widely read in dramatic literature, possessed sound judgment, and was the author of plays and a treatise on *The Insanity of Genius*.

Northumberland, Algernon George Percy, Duke of, English statesman, born May 2, 1810; died at Alnwick Castle, Jan. 2, 1899. He was educated at Eton and Cambridge, and was elected to Parliament at the age of twenty-one from a family borough, which was abolished a year later. He served as lieutenant and captain in the guards, and re-entered Parliament after twenty years as Conservative member for the northern division of Northumberland, which he represented till 1865. He impressed the House by his business ability, and became a lord of the Admiralty in 1858, and vice-president of the Board of Trade in 1859. When his father became duke, in 1865, he exchanged his title of Lord Lovaine for that of Earl Percy, and in 1867 he succeeded to the dukedom. He accepted the office of Lord Privy Seal in 1878, and held it till the Government went out in 1880. He was president of the National Institution and of the National Lifeboat Association.

Novara, Signor Franco (Francis Naish), English singer, born in Wiltshire in 1859; died in London, Jan. 7, 1899. When a boy he was a chorister in Salisbury Cathedral, and, having attracted attention on account of his fine voice, was sent to Italy for a musical education. For several years he sang with opera companies in Italy, and in 1880 was engaged by Mr. Mapleson as the principal basso of the Italian opera in London. His first appearance with this company was as *Mephistofele* in *Boito's Faust* at the Academy of Music, New York. He was very successful, and remained with Mapleson, singing the basso rôles in the various engagements of the company in the United States, for two seasons. He then joined the Carl Rosa company in England. He

came again with Mapleson to New York in the season of 1883, and accompanied Patti in her tour of that year. In 1896 he was appointed a Professor of Singing in the Royal Academy of Music, London.

Nubar Pasha, Egyptian statesman, born in Smyrna in 1825; died in Paris, Jan. 14, 1899. He was an Armenian by birth and creed. After studying in Switzerland and France, he betook himself in 1842 to Egypt, where his relative Boghos Bey was minister of Commerce. Through the latter's influence he was appointed reader and interpreter to the Viceroy Mehemet Ali, whose sleepless nights he beguiled by reading books of history. He accompanied Ibrahim Pasha, the heir apparent, on a visit to Constantinople, and during the return voyage he had to exercise great tact and constant vigilance to restrain the already demented prince from ordering the Turkish captain to hang all the Christians of his suite at the yardarm. Nubar won the confidence of Abbas Pasha, who succeeded to the throne in 1850, and when he was sent to London to secure the support of the British Government for the resistance of the Viceroy to the pretensions of the Sultan, his success with Lord Palmerston established his reputation as a diplomatist and led to his appointment as Egyptian agent at Vienna, where he remained till the death of his master, in 1854. Under Said Pasha he conducted the negotiations with the English Government relative to the overland postal route and the railroad across the desert from Cairo to Suez. This was intended by the British to prevent the construction of the Suez Canal, for which Ferdinand de Lesseps had obtained a concession, and as French influence was predominant at court Nubar was dismissed in disgrace for his part in the negotiations. When Ismail Pasha succeeded Said in 1863, the opportunity of the wily Armenian came again. The new Viceroy, ambitious to shine among sovereigns, relied implicitly on this accomplished diplomatist and statesman. When Nubar succeeded in obtaining for Ismail the title of Khedive, and permission to change the order of succession in Egypt from the eldest male of the reigning family, as in Turkey, to the eldest son of the reigning Khedive, as in European monarchies, his ascendancy over Ismail could not be shaken, although as an Armenian and a Christian, an innovator who set at naught Mohammedan traditions and ideas, he antagonized the ruling caste. It was he who removed the objections of the Porte to the piercing of the isthmus, and who conducted to a successful issue the negotiations that led to the arbitration of the Emperor of the French. He was made first a bey, then a pasha, in spite of his religious disabilities, and received a grant of lands. Ismail's dream of founding a great African empire and his gigantic financial schemes for the economic development of Egypt are generally supposed to have been encouraged and fostered, if they were not suggested, by Nubar, who managed the negotiations connected with the Khedive's enormous borrowings and gained great wealth for himself in the process. He was not a sincere believer even in the independence of Egypt, but seems to have been from conviction or interest a partisan or agent for the upbuilding of English influence, even when this was at the lowest ebb, when French ideas were most in favor, and when Ismail Pasha was at the height of his renown as a powerful and progressive ruler and conqueror. At this period Nubar Pasha obtained the consent of the European powers to a revision of the capitulations to the extent of abolishing consular jurisdiction

and creating in the place of consular courts the mixed tribunals for the trial of civil suits between Egyptians and foreigners or between foreigners. The laws for these tribunals, based on the French code, were drawn up under his own directions. Nubar became Minister of Commerce in 1864, and Minister of Foreign Affairs in 1867. When Ismail Pasha, overtaken by financial embarrassments, learned to distrust him thoroughly he had established such a reputation with foreign governments and so ingratiated himself with the creditors of Egypt that he was repeatedly made Prime Minister in alternation with Sherif Pasha. After being dismissed and sent into exile in 1874, he was recalled and placed at the head of the Government in 1878, when Ismail Pasha conceived the idea of introducing representative institutions and an international control of the finances as the last hope of saving his throne and escaping from bankruptcy. In accordance with this plan, the English Government nominated Sir C. Rivers Wilson to be Minister of Finance, and the French Government M. de Blignières to be Minister of Public Works, in the Ministry of which Nubar Pasha was chief. Demonstrations in the street and protests of the *ulemas* against Christians being allowed to rule a Mohammedan country gave Ismail a pretext for soon dismissing first Nubar and then his European colleagues. Ismail appointed a ministry of Egyptians, in which his son and heir, Tewfik, was President of the Council. Nubar then set to work to bring about the downfall of his old master. Through his machinations the German Government, although Germans had no great interests in Egypt, threatened armed intervention to enforce a decree of the mixed tribunal which a foreign creditor had obtained against the Egyptian Government. Ismail Pasha discovered, to his consternation, that in the code sanctioned by the powers in 1873 for those tribunals a peculiar clause was inserted giving the court authority to enforce a judgment against the sovereign state by seizing state property. Great Britain and France, seeking to forestall the action of Germany, brought such pressure upon the Porte that the Sultan, as suzerain, deposed Ismail Pasha and made his son Tewfik Khedive. The dual control was then established, with M. de Blignières as Controller General, and Major Baring as the English representative. Nubar did not return to office until after the defeat of Hicks Pasha's army and the consequent evacuation of the Soudan. He was Prime Minister from 1884 till 1888, when he resigned in consequence of a dispute relating to the reorganization of the Ministry of Finance. In April, 1894, after a long dispute between Abbas Pasha, Tewfik's successor, and Lord Cromer, Nubar was induced to accept the premiership again as a sign of the definite establishment of British domination. In November, 1895, he resigned and returned to his Paris residence.

O'Grady, Hubert, English actor and dramatist, born in Dublin, Ireland, 1841; died in Liverpool, Dec. 19, 1899. He was educated by the Christian Brothers, and when a boy was engaged on account of his fine soprano voice for the choruses of oratorios at the Ancient Concert Rooms, Dublin. He was bound to the trade of upholsterer, but after serving nearly seven years he ran away to Liverpool, began to make his living as a minstrel and music-hall singer, and was very successful. He was engaged by Dion Boucicault for the first provincial tour of *The Shaughraun*, and made his *début* in the leading rôle at the Theater Royal, Edinburgh, Jan. 21, 1876. His success was instantaneous and remarkable, and

in the following season he produced in Stockton his original Irish drama *The Gommoch*, in which he played a droll and interesting Irishman of the Handy Andy sort. He continued playing this part two years, and was regarded as the best representative of such characters on the stage. He played a long starring engagement in Dublin in 1880, during which he produced besides his own play several old favorites. For a year he played in the principal towns of Ireland with much profit. In 1881 he produced his own play, entitled *Eviction*, at the Princess's Theater, Glasgow, with which he had an uninterrupted success for five years, at the end of which time he took his company and scenery to Canada and the United States. On his return to Ireland his play *Eviction* was interdicted by the Government, to the great increase of his favor with the Irish people. He then produced his second great success, *Emigration*, in Glasgow, and played it two years. Famine he produced in Dublin, and played four years in the chief cities of Great Britain without the loss of a single night. His next play was *The Fenian*, which equaled the others in popularity. By this time he had three companies besides his own playing these dramas on the road with great financial support. In 1890 he visited Australia and presented his plays before enthusiastic houses nine months. He then spent a year in travel, and in 1893 produced at the Queen's Theater, Manchester, *The Priest Hunter*, in which he created a character new to the stage. This drama he played two years, when having acquired a fortune he retired in 1896 with the reputation of the best player of Irish character since Boucicault. During his retirement he wrote another play, *A Fast Life*, and for a time returned to the stage to play the leading part.

Paileron, Edouard J. H., French dramatist, born in Paris, Sept. 17, 1834; died there, April 20, 1890. He was a notary's clerk until he began writing for the theater. His short comedy in verse, entitled *Les Parasites*, was produced at the Odéon in 1860. In 1861 he wrote *Le Mur Mitoyen*, a comedy that was very successful. *Le Monde ou l'on s'amuse*, performed at the Gymnase in 1868, was written in a vein of gay satire that appealed to the taste of the Parisian public. It was followed by *Les Faux Ménages*, *L'Autre Motif*, *Hélène*, *Petite Pluie*, *L'Étincelle*, and *L'Âge Ingrat*. In 1881 he made a great hit with *Le Monde ou l'on s'ennuie*, wittily satirizing the ladies of the fashionable world who had taken to philosophy and flocked to hear the lectures of Prof. Caro at the Sorbonne. The play was taken into the repertory of the Comédie Française, and in 1884 its author was elected to the French Academy. *La Souris* was also very successful. His last play of importance was *Cabotins*, produced at the Théâtre Française in 1894, a satire on the Bohemian tendencies of society. His *Amours et Haines*, a collection of verse, appeared in 1888.

Pennington, Arthur Robert, English clergyman, born in 1814; died at Utterby, July 19, 1899. He was graduated at Cambridge in 1838, and was ordained in the English Church in the same year. After serving as curate at St. Peter's, Colchester; St. James's, Walthamstow; and St. Dunstan's-in-the-East, London, he became vicar of Utterby, near Louth, in 1845, and held this living until his death. From 1882 he was a prebendary of Lincoln Cathedral. He was the author of *Carisbrooke Castle* (London, 1853), a book of verse; *Henri Arnaud: A Poem* (1862); *The Agency of God in the History of the Reformation* (1869); *The Life and Character of Eras-*

mus (1874), a scholarly, painstaking work; *Epochs of the Papacy to the Death of Pius IX* (1881); *John Wyclif: His Life, Times, and Teaching* (1884); *Preludes to the Reformation: From Dawn to Dark in Europe* (1886); *Recollections of Persons and Events* (1895); *The Papal Conclaves* (1897); and *The Counter-Reformation in Europe* (1899).

Penzance, James Plaisted Wilde, Lord, English jurist, born in London, July 12, 1816; died in Godalming, Dec. 9, 1899. He was educated at Cambridge, was called to the bar in 1839, and obtained a good practice. He became a Queen's counsel in 1855, was appointed counsel for the duchy of Lancaster in 1859, and in 1860 was made a judge of the Court of Exchequer. In 1863 Sir James Wilde succeeded Sir Cresswell Cresswell as judge of the Court of Probate and Divorce, but he resigned in 1872 under the excessive strain of his duties, having been raised to the peerage in 1869. After the passage of the public worship regulation act Lord Penzance was appointed judge to administer it, and also dean of arches and judge of the courts of Canterbury and York. The case of the Rev. Mr. Mackonochie was brought before him, and that of the Rev. Arthur Toth he entertained until inhibited for want of jurisdiction. In the *Ridsdale, Dale, Enraght*, and *Green* cases his decisions were approved by the Privy Council of the House of Lords. His suspension of Mr. Mackonochie from ecclesiastical functions for contumacy in continuing ritualistic observances in defiance of judicial injunctions was sustained by the House of Lords, and the attempt of Chief-Justice Cockburn to arrogate to the Queen's Bench the power of overruling the ecclesiastical court was disapproved.

Piccolomini, Maria, Italian singer, born in Sienna in 1834; died in Florence, Dec. 25, 1899. She was a descendant of the famous Tuscan family. She studied under Mazzarelli and Pietro Romani in Florence, and made her *début* at La Pergola as *Lucrezia Borgia* in 1852. She was the original *Violetta* in *La Traviata* in Turin and Paris. Her ability as an actress more than as a singer made her a great favorite with Italian, French, and English audiences. Her London *début* was at Her Majesty's Theater as *Violetta*, May 24, 1856. In 1860 she came to New York and repeated her European triumphs at the old Academy of Music. She was for two years the most popular prima donna of the Italian opera in this country. She returned to London in 1860, where after a series of successes she married the Marquis Gaetani della Forgia in the same year and retired from public life. Her best rôles were *Violetta*, *Norma*, *Maria* in *La Figlia del Regimento*, *Adina* in *The Elixir of Love*, and *Zerlina*. She returned to the stage in 1863 for four performances in London, and made her last appearance in April of that year as *Almina* in a new opera of that name.

Polko, Elise, German novelist, born in 1822; died May 15, 1899. She was the daughter of an eminent educator and sister of Eduard Vogel, the African explorer. In her youth she was well known as a public singer, but after her marriage she retired from the stage and devoted herself to writing novels and sketches in which music and musicians are usually prominent. Her *Musikalische Märchen*, printed in 1852, was translated into English, as were several of her later works.

Ponisi, Madame (Elizabeth Ponisi Wallis), English actress, born in Huddersfield, England, Dec. 18, 1818; died in Washington, D. C., Feb. 13, 1899. She made her first appearance in 1838 at Barnard Castle, England, in a farce called *Mr.*

and Mrs. Pringle. She had previously married James Ponisi, an actor of the company, which was very poor and used to make its way on foot from town to town. For twelve years she continued in the provinces, rising slowly into recognition until she attracted the attention of Mr. Macready, whom she supported for a week as leading lady of the theater at Newcastle-on-Tyne. Her first appearance in London was at the Surrey Theater, Dec. 26, 1848. She soon became the leading lady of that house, and remained there until 1850, when she came to the United States and made her American *début* at the Walnut Street Theater, Philadelphia, Oct. 7, as Mariana in Sheridan Knowles's *The Wife*. She played seven parts in her first week. She was transferred to the old Broadway Theater, where she made her first appearance, Nov. 11, 1850, as Lady Teazle. She was the leading woman of that theater until its removal in 1859. She played at Niblo's Garden as Zanine in *The Cataract of the Ganges* in December, 1853, and as Oberon in February, 1854. Edwin Forrest declared her Lady Macbeth the best on the stage. Her last part at the Broadway was Cleopatra in *Antony and Cleopatra*. In October, 1859, Dion Boucicault, who had written the part of Mrs. Cregan in the *Colleen Bawn* especially for her, engaged her for the production of that play at Laura Keane's Theater. The great success of the play kept her for a long time in that part. She then joined Edwin Forrest as the leading woman of his plays for several tours. She was the original Pompadour in *Narcisse* at Niblo's in 1863. In 1870 she played the Duchess with Fechter in *The Duke's Motto* at Niblo's, and she was the leading woman of that theater in the season of 1870-71. In 1871 Mme. Ponisi was engaged for Lester Wallack's stock company as the representative of the *grandes dames* of its great repertory, and she retained that place until the death of Mr. Wallack ended the organization. To enumerate the rôles played by Mme. Ponisi in the course of the years she passed in the Wallack company would be to make a history of Wallack's Theater for a quarter of a century. After the Wallack company closed its career Mme. Ponisi played with Mrs. Potter in *Twixt Axe and Crown* for a short time at Wallack's (Thirtieth Street), and only occasionally thereafter in New York. Her last appearance was at the Academy of Music, New York, April 6, 1893. She was divorced from her first husband in 1855, and married Samuel Wallis, Feb. 10, 1858.

Possiet, Constantin Nicolavich, Russian admiral, born in 1819; died in St. Petersburg, May 8, 1899. He entered the navy at an early age, gained a reputation by his treatises on gunnery, and was the inventor of improvements in naval ordnance that enabled the fleet to co-operate with the army in the conquest of the mountaineers in the Caucasus, whose strongholds were on the coasts of the Black Sea. He was governor of the Grand Duke Alexis (now commander in chief of the navy) from 1858 till 1874, and then Minister of Ways of Communication till 1888, and the originator in that office of extensive improvements in the harbors and water ways of the empire. An accident to the train on which the Czar was riding occasioned his retirement. As president of the Russian association for saving life at sea and on internal waters he initiated the establishment of most of the lifeboat stations. For the last ten years of his life he was a member of the Council of State.

Price, Sir Rose Lambert, English author, born in Trengwainton, Cornwall, July 26, 1837; died in Pontyclun, Wales, April 17, 1899. He

served in the English army in India during the mutiny in 1857, and later in China, retiring in 1874 with the rank of major. In 1876 he published *The Two Americas: An Account of Sport and Travel, with Notes on Men and Manners*, which was deservedly popular.

Reichberg, Bernhard, Austrian statesman, born in Ratisbon in 1806; died Feb. 27, 1899. He was *attaché* to the legations in Berlin, London, and Brussels, then minister at Stockholm, and afterward at Rio de Janeiro. In 1847 he was appointed Austrian minister to the Germanic Confederation, and in this capacity he presided over the federal Diet at Frankfort. In 1859 he was called into the Cabinet as Minister of Foreign Affairs while the Italian war was in progress. The heavy task of treating for peace at Villafranca and at Zurich thus fell to him. He had also to direct the long negotiations relating to the Schleswig-Holstein question, which ended only in a war with Prussia, but he was forced to resign before the war came, and the Austrian army was defeated.

Reynolds, Joseph Williams, English clergyman, born in 1821; died in January, 1899. He was trained for business life, but entered the Church and was ordained to the curacy of St. Peter's, Belper, in 1849. In 1854 he was appointed principal of the Operative Jewish Converts' Institution. In 1859 he became the incumbent of St. Stephen's, Spitalfields, London, and subsequently rector of St. Anne's and St. Agnes's, London, from 1882. He was a prebendary of St. Paul's from 1880. He published *The Miracles of Our Lord and Saviour* (London, 1865); *The Supernatural in Nature* (1878); *The Mystery of Miracles* (1881); *My Growth in the Divine Life* (1883); *The Mystery of the Universe* (1884); and *The World to Come: Immortality a Physical Fact* (1888).

Rhea, Mademoiselle (Mlle. Hortense Barbe-Loret), Belgian actress, born in Brussels, Sept. 4, 1844; died in Montmorency, France, May 5, 1899. She was the daughter of a wealthy organ builder, who died while she was a child, and was soon followed by his wife. She was educated under the care of guardians in the Ursuline Convent in Paris, and began to study for the stage soon after leaving school. Her *début* was made at the Théâtre de la Monnaie, Brussels, in *Les Doigts de Fée*. After a season she was engaged as leading young woman of the Théâtre Française, Rouen, where she played for another season, and went to Paris, playing with success at the Vaudeville, and subsequently making a tour of France. She went on a tour in Russia in the early seventies, and after a successful engagement in St. Petersburg was engaged as leading actress of the Imperial Theater there, in which she began in 1876 a very prosperous career which lasted five years. On the assassination of the Emperor Alexander II, March 13, 1881, the Imperial company was disbanded and Rhea went to England. She placed herself under the tutelage of John Ryder, and after one month's study made her *début* as Beatrice in *Much Ado about Nothing* at the Gaiety Theater, London. Harry Sargent engaged her for a tour of the American cities. Her first appearance in the United States was at the Park Theater, Brooklyn, as Camille, Nov. 14, 1881. She was not very successful at first, principally on account of the difficulty with which she spoke English, but after a somewhat disappointing tour she entered into an engagement in 1882 with Arthur B. Chase, under whose direction she made several tours that were profitable. Her repertory consisted of Adrienne Lecouvreur, Camille, Pygma-

lion and Galatea, The Country Girl, A Dangerous Game, The School for Scandal, Frou-Frou, and L'Aventuriere. She was the first actress to present in English a play on the subject of Napoleon, and it is said that her success in this particular had much to do with the renewed interest in him in the United States. Josephine, Empress of the French, adapted by William Harris, was first presented by Rhea at Buffalo, Sept. 2, 1882. This play afforded her the best opportunities of her career, and she played it almost continuously until about two years before her death. She played occasionally during that time The New Magdalen, The Lady of Lyons, The Queen of Sheba, and Nell Gwynn. Her last performance was in Hagerstown, Md., April 2, 1898.

Righton, Edward Corrie, English actor, born in London in October, 1838; died there, Jan. 1, 1899. He was the son of Thomas Collins Righton, an artist. When fifteen years old he went on the stage at Sadler's Wells Theater, and for several seasons he played small parts. For a few years he gave monologue entertainments in England and the United States, and in 1871 he assumed the management of The Court Theater, London. For two years of his management he played with success low comedy parts in a great number of new plays. He subsequently appeared in many of the London theaters, and was very successful as Dogberry in *Much Ado about Nothing*, Tony Lumpkin in *She Stoops to Conquer*, Bob Acres in *The Rivals*, and Touchstone in *As You Like It*. During the season 1877-'78 he managed the Globe Theater, London, and produced the successful plays *Stolen Kisses* and *Dearer than Life*. Until 1881 he played with his own company in the provinces, and in that year returned to London to play Mr. Parmenter Blake in *Pinero's Imprudencence*. In 1887 he became a member of the Conway-Farren company. In Beerbohm Tree's production of *The Merry Wives of Windsor*, Sept. 13, 1888, he played Parson Evans. In the Lyceum production of *The Dead Heart*, September, 1889, he played Toupet the Barber. Oct. 16, 1890, he was again with Mr. Tree at the Crystal Palace, playing Moses in *The School for Scandal*. He contributed poems to periodicals and wrote a play called *Insurance Money*. His pen name was Corrie Burns. His last appearance was May 24, 1899, when he recited his own poem *Just what I was when a Boy* at a hospital benefit.

Ristich, Jovan, Servian statesman, born in Kragujevatz in 1831; died Sept. 4, 1899. He studied in Berlin, Heidelberg, and Paris, and on his return to Servia became a clerk in the Ministry of the Interior, rose to the head of his department, and was sent by Prince Milosh in 1860 on a mission to Constantinople. He was diplomatic agent there in 1862 when the Turkish garrison in Belgrade bombarded the town, and conducted the negotiations that resulted in 1867 in the evacuation by the Turks of all the Servian fortresses. This success made him so popular that Prince Michael appointed him Prime Minister and Minister of Foreign Affairs in a Conservative Cabinet, although he was a Liberal. His speedy resignation increased his popularity, and after the Prince's assassination in 1868 he was appointed regent, with Blaznavatz and Gavrilovich as co-regents, until Prince Milan should attain his majority. He was the leading spirit of the regency, especially after the death of Blaznavatz, and was the chief author of the Constitution of 1869, which was replaced in 1888 by a Radical Constitution, and then put in force again in 1864 by King Alexander after his *coup d'état*.

He obtained from the Sultan Abdul Aziz a recognition of the hereditary rights of the Obrenovich dynasty, thus paving the way for the subsequent recognition of Servian independence. His Austrophil policy made the friends of Russia his enemies and caused an estrangement between Servia and Montenegro. Consequently he resigned the post of Prime Minister when Prince Milan reached his majority in 1872. He came into power again in 1876, was at the head of the Government during the war with Turkey, and in 1878 was sent as the Servian representative to the Congress at Berlin. The incorporation in Servia of the districts of Nish, Vranja, and Pirot, and the final recognition of Servian independence were gratifying to the Servians, but they and the Montenegrins were equally disappointed when Austria was allowed to occupy Bosnia and Herzegovina. He adopted a hostile attitude toward Austria after his return, leaning upon Russia, and broke off negotiations with the dual monarchy for a commercial treaty. Austrian influence compelled him in 1880 to resign his offices of Prime Minister and Minister of Foreign Affairs, and he remained out till 1887, when he was the head of a short-lived Liberal Cabinet. As such he carried through a revision of the Constitution of 1869. When King Milan abdicated in 1889 Ristich became a member of the regency appointed to conduct affairs during the minority of Prince Alexander. He took the side of the ex-King in his conflict with Queen Natalie, whom he forcibly expelled from Servia. In 1893 the young King dismissed his regents and declared himself of age. Ristich was out of favor until 1896, when he was once more called upon to form a ministry, having been chosen leader of the Liberal party in 1895 as the man best fitted to cope with the difficulties of the Balkan situation at that critical time. He retired after a brief tenure of office. He was a good linguist and the author of two volumes on Servian life and literature, written in German when he was a young man; also of papers on Servian history, the result of investigations in the Paris archives. He lived sumptuously in a Belgrade mansion, having accumulated a fortune.

Rittner, Eduard, Austrian statesman, born in Bursztyn, Galicia, in 1845; died in September, 1899. He was Professor of Canon Law and afterward rector of the University of Lemberg, taking little part in politics until he was called in 1895 to the Ministry of Public Instruction in the Kielmansegg Cabinet. In the Cabinet of Count Badeni he was retained as a representative of Galicia, but without a portfolio. He was a Deputy for Galicia in the Reichsrath and a member of the Galician Diet.

Roberts, Sir Randal Howland, English actor and author, born in the County Cork, Ireland, March 28, 1837; died in Clapham, England, Oct. 3, 1899. He was the fourth baronet of his succession, a retired captain of the 33d Regiment of the British army. He served in the Crimean War and the Indian mutiny. When the Franco-Prussian War broke out in 1870 he went to the Continent as war correspondent, with the Prussian forces, of the London Telegraph. His *début* both as an actor and as a dramatist occurred at the Olympic Theater, London, May 15, 1876, in his own comedietta *Under a Veil*. He became a favorite player of light, genteel comedy parts. He was a member of the company of the Olympic Theater for a season, and was subsequently in the United States one season. He wrote short plays of considerable merit, and was also author of popular military and sporting novels and histories. His best-known works are *Riverside*, or the

Trout and the Grayling, a novel (London, 1866); Glenmahra, or the Western Highlands (1870); Modern War, or the Campaign of the First Prussian Army (1870); In the Shires (1887); The Silver Trout, and Other Stories (1887); and Curb and Snaffle, a novel (1888).

Rochebouet, Gen., French soldier and statesman, born in Angers in 1813; died in February, 1899. He took part in the Crimean War and in the Italian campaign. In the Franco-German War he commanded the artillery in the Army of the Rhine, with which he was made prisoner at Metz. Marshal MacMahon chose Gen. Rochebouet to form the Cabinet that succeeded the Broglie-Fourtou Cabinet in November, 1877. He held the portfolio of Minister of War, and when he confronted the Deputies as President of the Council they passed an order of the day declaring that the Chamber refused to enter into relations with him because it saw in the constitution of his Cabinet the negation of parliamentary principles. The Chamber was dissolved, but fresh elections resulted in the return of the 363 Opposition members. The Rochebouet Cabinet therefore disappeared on Dec. 14, giving place to the Dufaure Cabinet, and thus was ended the political crisis begun on May 16, 1877.

Romero, Matias, Mexican diplomatist, born in Oaxaca, Feb. 24, 1837; died in Washington, D. C., Jan. 1, 1899. He was appointed secretary of the Mexican legation in Washington in 1859, and acted as *chargé d'affaires* till 1863, then left for home and in a short time returned as minister. He occupied this post till 1868, and negotiated the treaties consequent upon the fall of the Emperor Maximilian. In 1884 he was again appointed minister at Washington, and he occupied the post till his death.

Ronsbey, Arthur, English singer, born in Yorkshire in 1852; died at sea, Oct. 29, 1899. He ran away from home and joined a traveling company at the age of seventeen, but soon afterward, with the consent of his parents, devoted himself to the study of music. He was engaged by Gilbert and Sullivan for the first production of *The Sorcerer* in March, 1878, was the original Sir Marmaduke Pointdextre, and continued as a principal singer with the Gilbert and Sullivan productions until 1884. In 1879 he played Dick Deadeye in *Pinafore*, and subsequently Captain Corcoran. His next and probably most original creation was Grosvenor in *Patience*. He played this part many months in London, until sent by Mr. D'Oyly Carte to America for a restful change. His first appearance in New York in the autumn of 1883 was as Derrick in *Planquette's Rip Van Winkle*. His next part was Strephon in *Iolanthe*. After a short season in New York and Philadelphia he was recalled to London to resume his presentation of Grosvenor. After singing that part in various cities for a year, he obtained his release. He then entered English grand opera at Covent Garden, and made a profound sensation by his singing of Wolfe the Blacksmith in *The Pied Piper of Hamelin*. He played also Valentine and Count di Luna, and was engaged by Mr. Gye for the grand Italian opera for four years. The death of the Duke of Albany prevented the carrying out of this contract, and Mr. Ronsbey, after singing in several concert tours, organized his own English opera company in 1887. In this venture he was very fortunate, and he continued financially and artistically successful to the time of his death. He was the first to produce *Cavalleria Rusticana*, *Gli Pagliacci*, and *Pellegrini's Mercedes* in English. He had just completed a tour of South Africa, and was returning with

his company to England when suddenly stricken with fatal illness.

Saint-Germain (François-Victor-Arthur Gilles de Saint-Germain), French actor, born in Paris, Jan. 12, 1823; died there, July 16, 1899. He was schooled to follow his father's profession of architect, but his family suffered misfortune, and he became a bookseller's assistant. He made the acquaintance of Michel Masson, an actor, and a strong friendship began, which resulted in his entering the Conservatoire. There he was a pupil of Provost and a comrade of Got and Delaunay. He took the first prize for comedy, Aug. 5, 1852, and went with Provost on a playing tour. His *début* was made at the Odéon, Paris, Sept. 17, 1853, as Pasquin in *Jeu de l'Amour et du Hasard*. He originated there Torny in *Mauprat*, Antoine in *Conquête de Ma Femme*, Alexandre in *Que Dira le Monde?* and Crispin in *Dernier Crispin*. On July 1, 1854, he became a *pensionnaire* of the Comédie Française, and made his *début* at the Théâtre Française, as René in *Depit Amoureux*. His position became irksome to him in 1859, and he resigned, although upon the point of becoming a *sociétaire*. He went then to the vaudeville, where he remained in the performance of important rôles for sixteen years. Thence he went to the Gymnase, where he played nine years, and appeared occasionally at the Ambigu and the Palais Royal. He was always regarded as one of the best character actors on the French stage.

Saunders, Charlotte, English actress, born in London in 1826; died in Kettering, Northamptonshire, March 31, 1899. She made her *début* in May, 1833, at Wakefield, Yorkshire, in the rôle of Duke of York in *Richard III*. After acting children's parts for several years, she received great credit for her performance of Tillie Slowboy at the opening of the Theater Royal, Manchester, in January, 1846. She forthwith became a favorite soubrette of the Liverpool circuit, and went to London in August, 1849, where she made a very favorable impression as Mopsa in *A Winter's Tale*. In October, 1849, she played with Alfred Wigan in *The First Night at the Princess's Theater*, and in December, 1851, was the original Chang in Francis Talfourd's burlesque *The Willow-Pattern Plate* at the Strand Theater. In 1852 she went to Dublin, where she became the rage, and remained a great favorite, reproducing all the comedy successes of Mme Vestris and the Planché burlesques. In December, 1858, she returned to the Strand Theater, where she played the leading parts in all the successful burlesques of Henry J. Byron and other popular dramatists. She was of the original cast of Falconer's *Nature above Art* at Drury Lane, September, 1863, and in December, 1864, originated the part of Hercules in Brough's *Hercules and Omphale* at St. James's Theater. She was the original Bob Buckskin, the jockey in Boucicault's *Flying Scud*, at the Holborn Theater, Oct. 6, 1866, and played the part during its long run there and its revival in 1868. She played the original parts Billie Taylor in Burnand's *Billie Taylor*, Lord Ronald in Claude Duval, Tiddy Dragglethorpe in *Lost in London*, Ganymede in *Ixion*, and many characters in standard drama. In 1884 she retired.

Sarcey, Francisque, French critic, born in Dourdan, Oct. 8, 1828; died in Paris, May 18, 1899. He won the first honor at the Charlemagne Lyceum, and was fifth in his class in the École Normale. For several years he filled a professorship conscientiously, and then joined the staff of *Figaro*, attracting attention by his first article. He became a writer also for the *Opinion Nationale*, in which he began his career as a dramatic

critic. At the time of the political crisis of 1877 he contributed to the *XIX^e Siècle* a series of anticlerical articles that had a great effect on public opinion. He wrote philosophical reflections for *L'Illustration*, which were printed in a little volume called *Le Mot et la Chose*. Nearly all the literary journals and reviews had articles of his, either signed with his own name or with the pen name *Sganarelle*. He was one of the most successful of lecturers also, but his originality, his energy, and his influence found their main field of action in the domain of theatrical criticism, where he became involved in many an acrid dispute, as with the admirers of Victor Hugo, with Beeque, with Zola, or with Coquelin and other players. He wrote a little piece called *Les Millions de la Mansarde*, which was signed by Edmond About, and after that he made no further essay as a dramatist, fearing lest the author's self-love might pervert his critical powers. A like apprehension caused him to refrain from seeking a *fauteuil* in the Academy, as this would necessitate his soliciting the votes of persons whose works he had to criticise. Francisque Sarcey published numerous volumes, notably *Étienne Moret*, containing souvenirs of the *École Normale*, *La Siège de Paris*, and *Comédiens et Comédiennes*.

Schönborn, Franz Carl Erwin Paul, Austrian prelate, born in Prague, Jan. 24, 1844; died in Falkenau, June 25, 1899. He was the third of the Counts Schönborn whose family has for generations held the episcopal sees of Prague, Mainz, and Olmütz. In early life he was a cuirassier officer, and in 1866 at Königgrätz he distinguished himself by leading his men through a Prussian regiment. Studying theology later at Rome and at Innsbruck, he became Bishop of Budweiss in 1883, and in 1887 Primate of Bohemia. He was the confessor and confidant of the Emperor, and in 1889 was made a cardinal.

Shanly, Walter, civil engineer, born in the County Queens, Ireland, Oct. 11, 1819; died in Montreal, Canada, Dec. 17, 1899. His father, the late James Shanly, a member of the Irish bar, settled in the county of Middlesex, province of Ontario, in 1836. He was educated by private tuition, and adopted the profession of a civil engineer. He was early employed by the Government of Canada on the works of the Beauharnois and Welland Canals; was engaged on railway works in the United States in 1848-'50, and was engineer of the Ottawa and Prescott Railway in 1850-'53. He was engineer of the western division of the Grand Trunk Railway, 1851-'59; engineer on the Ottawa and French River Navigation surveys, 1856-'58; and general manager of the Grand Trunk Railway, 1858-'62. His most important work as a railway constructor was the Hoosac Tunnel, in Massachusetts, which he successfully constructed in conjunction with his brother Francis in 1869-'75, after several American contractors had failed. He sat in the old Parliament of Canada from 1863 to the union in 1867. When confederation was accomplished he sat in the Dominion House of Commons during the whole of the first Parliament and two others.

Simson, Martin Eduard von, German statesman, born in Königsberg in 1810; died in Berlin, May 3, 1899. He became Professor of Law at Königsberg in 1833, at the same time following his career in the judiciary, was elected to the National Assembly in 1848, and was made first secretary, then vice-president, and finally president, of that body. He declined to be re-elected as president in 1849, when Wilhelm IV of Prussia refused the proffered imperial Crown, and ac-

cepted a seat in the Prussian Chamber of Deputies. He was president of the Erfurt Parliament in 1850, and when it broke down he retired until he entered the Prussian Chamber again when the new era began and was elected its president in 1861. He had stood out for the principles of moderate Liberalism, equally opposed to the advanced theories of Young Germany and the reactionary policy of Prussian Conservatism. He was elected president of the Constituent Assembly, and was president of the North German Diet, of the Zoll Parliament, and of the German Reichstag when they were successively constituted. On Dec. 18, 1870, Friedrich Wilhelm IV accepted the tender that he made in the name of the North German Reichstag of the imperial Crown. Von Simson resigned the presidency of the Reichstag in 1874, and in 1877 his seat. He presided over the Supreme Court of the empire till 1891.

Skene, Felicia Mary Frances, English philanthropist and novelist, born in Aix, Provence, May 23, 1821; died in Oxford, England, Oct. 6, 1899. She was the youngest daughter of James Skene of Rubislaw, a noted traveler. Much of her early life was spent abroad, but in 1844 she returned to England, and nearly all her after life was passed in Oxford. When that city was visited by a cholera epidemic in 1854 Miss Skene organized a band of nurses, some of whom she dispatched to Miss Florence Nightingale at Scutari after the opening of the Crimean War. Later she engaged in rescue work, and from 1878 until her death she visited the Oxford jail week by week. She was the author of *Hidden Depths*, a story of rescue work (1866), and other books.

Strauss, Johann, Austrian composer, born in Vienna, Oct. 25, 1825; died there, June 3, 1899. His father, who was the originator of waltz music, had a poor idea of his son's talents in the same vein, though he had composed waltzes from the age of six, and determined to make a business man of him. His mother, however, helped him to obtain the necessary instruction, and before he was eighteen years old he organized and conducted an orchestra and at once captivated the Vienna public with waltzes and polkas of his own composing. After his fame was established he made tours through Great Britain, the United States, France, Russia, and Germany. For ten successive summers he gave concerts in St. Petersburg, besides taking his orchestra frequently to London, Paris, Berlin, and America. In 1872 he took part in Gilmore's Peace Jubilee in Boston. After composing dance music for many years, he tried his hand at an operetta, *Indigo*, which was produced in 1871, and met with instantaneous success, impelling him to give up his office as conductor of the court balls in order to devote himself to this new field. He relinquished later the conductorship of his orchestra, one of the most perfectly trained in the world, into the hands of his youngest brother, Eduard. His *Fledermaus* (1874) became popular in every musical city. His *Ritter Pasman*, brought out in 1892, was a serious opera, and was not well received. His comic opera *Simplicimus* (1887) had also little success. The operettas that became popular not only in Austria but in other countries include *Cagliostro*, *The Forty Thieves*, *Carnival in Rome*, *Prince Methusalem*, *The Tzigane*, *The Queen's Lace Handkerchief*, *The Merry War*, *A Night in Venice*, and *The Gipsy Baron*. Some of his best-known waltzes are the *Beautiful Blue Danube*; *Wine, Women, and Song*; *Roses from the South*; *Thousand and One Nights*; *Künstlerleben*; *Wiener Blut*; and *Morgenblätter*. He wrote 500 waltzes.

Swanwick, Anna, English author, born in Liverpool in 1813; died in Tunbridge Wells, Nov. 2, 1890. She went to Berlin in 1839, and obtained a familiar acquaintance of the German language and literature, and of Greek also, and some knowledge of Hebrew. After returning to England in 1843 she made notable translations and published several original books. She was one of the early and zealous promoters of the higher education of women in England, and gave a part of her time to teaching young working men and women.

Thorne, Sir Richard Thorne, English physician, born in Leamington, Oct. 13, 1841; died in London in December, 1899. He was educated at St. Bartholomew's Hospital, London, and at London University, and was knighted in 1897. His professional writings include *Use and Influence of Hospitals for Infectious Diseases* (1882); *Progress of Preventive Medicine during the Victorian Era* (1887); *Natural History and Prevention of Diphtheria* (1891); and *Administrative Control of Tuberculosis* (1898).

Thorne, Sarah, English actress, born in Chatham in 1837; died there, Feb. 27, 1899. She was a daughter of Richard Samuel Thorne, manager of the Pavilion Theater, London, in 1849, in which year she appeared as a child in pantomime. Her first speaking part was *Little Pickle* in *The Spoiled Child*, her next was the hero in *E. G. Burton's Warrior Boy*. Her success in this play caused the production of another by the same author, *The Blind Child of Africa*. She was then sent to school for a few years, and on her return to the stage was engaged at the Surrey Theater, and appeared as *Zamora* in *The Honeymoon*. She took a leading place at the Britannia Theater, London, and was a favorite there for a year. She then went to the Theater Royal, Dublin, where for three years she played everything from Shakespearean heroines to the women of the farces, and supported a great number of leading actors. After passing a season each in Glasgow and Brighton she joined Mr. Creswick in a joint starring season at the Standard Theater, Shoreditch. She became soon afterward the lessee of the Theater Royal, Margate, and was such at the time of her death. She was one of the first to travel through England with her own supporting company, and for many years she played a greatly varied round of characters in profitable tours. Her last performance was in September, 1898, as *Parthenia* in *Ingomar*. She married Edmund McKnight, a journalist.

Tissandier, Gaston, French scientist, born in Paris, Nov. 21, 1843; died there, Sept. 6, 1899. He had a scientific education, applying himself especially to chemistry and physics, and with his brother Albert devoted his attention to aerostatics, making 44 balloon ascensions, one of them 8,600 metres high. He wrote numerous popular works on chemistry, photography, and aerostatics, and from 1873 was editor of *La Nature*.

Traill, Mrs. Catherine Parr (Strickland), Canadian author, born in London, England, Jan. 9, 1802; died in Lakefield, Ontario, in August, 1899. She was a sister of Agnes Strickland, the historical writer. All the five Strickland sisters achieved literary distinction, but Mrs. Traill was the first to write, and her success induced her other sisters to undertake literary work. In 1832 she married Lieut. Traill, and immediately went to Canada with him, where they settled near Rice lake. She was the author of *The Backwoods of Canada* (London, 1835); *Canadian Crusoes* (1852); *Ramblings in the Canadian Forest* (1854); *The Female Emigrant's Guide* (To-

ronto, 1855); *Canadian Settler's Guide* (seventh edition, 1857); *Stories of the Canadian Forest* (New York, 1856); *Lady Mary and her Nurse, or a Peep into Canadian Forests* (London, 1856); *Afar in the Forest* (1869); *Studies of Plant Life* (Ottawa, 1884); and other books.

Wakeman, Henry Olney, English author, born Sept. 25, 1852; died in May, 1899. He was educated at Oxford, was called to the bar in 1877, and was modern history lecturer and tutor at Keble College, Oxford, from 1881. He was the author of *The History of Religion in England* (1885); *What has Christianity done for England?* (1886); *The Church and the Puritans* (1887); *Life of Charles James Fox*; *The Ascendancy of France*; and *Introduction to the History of the Church of England*.

Waller, Mrs. Emma, English actress, born in London in 1819; died in New York city, Feb. 28, 1899. Her wealthy parents educated her for the operatic stage, but she turned her attention to the drama and began with an English provincial company in 1848. In 1849 she married Daniel Wilmarth Waller, an American actor. In 1851, with her husband, she sailed for California and Australia. At Honolulu they played a very successful engagement, and upon their arrival in Australia they were enthusiastically received. The reputation acquired in Australia went before them to London, and when they returned to that city in 1856 it was to play a series of brilliant engagements at Drury Lane Theater. Mrs. Waller's *début* was in the part of *Pauline* in *The Lady of Lyons*, Sept. 15, 1856. For a year both Mr. and Mrs. Waller were associated with popular Shakespearean successes at Drury Lane and Sadler's Wells. In 1857 they came to Philadelphia, where Mrs. Waller made her American *début* at the Walnut Street Theater as *Ophelia* to her husband's *Hamlet*. But her first success was as *Lady Macbeth*. This part she played on the third night of her engagement, and the wonderful passion and power of her performance electrified the audience. Her next important appearance was at the Broadway Theater, New York, as *Marina* in *The Duchess of Malfi* to her husband's *Ferdinand*. The peculiar manner in which she portrayed this gloomy and grewsome part seemed to exercise a fascination upon the public, and she was long identified with its performance. For nearly ten years Mrs. Waller made extensive and prosperous tours of the United States. Dec. 27, 1869, she appeared for the first time as *Meg Merrilies* at Booth's Theater, New York city, and immediately achieved a triumph, which was duplicated by her performance of *Bianca* in *Fazio* at the same theater, Feb. 26, 1870. In 1876 she assumed the management of the Troy Opera House, which she retained for many years. She revived Guy Mannering at Booth's Theater, New York, supported by her husband, Dec. 6, 1875, and entered upon an extensive and very prosperous tour of the country. On this tour they went to California, where they were enthusiastically patronized. On her return to the East Mrs. Waller played only occasionally, and preferred to devote her time to work as a teacher and to Shakespearean readings. Her last appearance in public was in the reading of selections from Shakespeare and the classic dramas at Chickering Hall, New York, Dec. 1, 1881.

Wauchope, Andrew Gilbert, British soldier, born in Midlothian in 1846; died in South Africa, Dec. 11, 1899. He was the son of a large landowner, entered the army as an ensign in the Black Watch in 1865, served as adjutant from 1870 till 1873, when he went out with the Ashanti

expedition as commander of a company, and afterward served as staff officer with Col. McLeod, who commanded the advanced guard, was present in several engagements, and was severely wounded at Ordahau. As a captain he served with the battalion of the Black Watch that fought in the Egyptian campaign of 1882, was present at Tel el Kebir, served as deputy assistant adjutant and quartermaster general on Sir Gerald Graham's staff in the Soudan, and was again severely wounded at El Teb, winning by his brilliant services the brevet rank of lieutenant colonel. He served with his regiment in the Nile expedition of 1885, accompanying Gen. Earle's river column, and at Kirbekan he was badly wounded for the third time. He was promoted to the rank of colonel, and commanded a battalion of the Black Watch from 1894 till he was appointed a brigadier general in the Soudan expeditionary force in 1898. For gallant and distinguished services at the battle of Omdurman he was made a major general. Succeeding in 1882 to the family estate on the death of his brother, he contested Midlothian with Mr. Gladstone in 1892. He commanded the Highland brigade that was sent to re-enforce Lord Methuen's column in the South African campaign of 1899, and was killed in the attack on Magersfontein.

Walt, Emil, Swiss statesman, born in 1825; died in Bern, February, 1899. He entered the Federal Council in 1866, and proved himself a sagacious politician of large views who exerted a great influence on the progress of affairs in the Swiss Confederation, of which he was elected president four times. He retired from the Federal Council in 1891 because his project for the purchase of the railroads by the state received a check. His leisure time he gave to the study of classic authors, and he won considerable reputation as a Hellenist.

OHIO, a Central Western State, admitted to the Union in 1803; population, according to the last census (1890), 3,666,719, it being the fourth in rank of the States; area, according to the United States Geological Survey, 41,000 square miles, of which 40,700 is land surface and 300 water surface. Capital, Columbus.

Government.—The State officers during 1899 were: Governor, Asa S. Bushnell; Lieutenant Governor, Asahel W. Jones; Secretary of State, Charles Kinney; Auditor of State, Walter D. Guilbert; Treasurer of State, Samuel B. Campbell; Attorney-General, Frank S. Monnett; Board of Public Works, Edwin L. Lybarger, Frank A. Huffman, Charles A. Goddard; Commissioner of Common Schools, Lewis D. Bonebrake; Judges of Supreme Court, Joseph P. Bradbury, John A. Shauck, Thad A. Minshall, Marshall J. Williams, Jacob F. Burket, William T. Spear; Clerk of Supreme Court, Josiah B. Allen; Dairy and Food Commissioner, Joseph E. Blackburn. All these officials were Republican.

Finances.—At the close of the fiscal year, Nov. 15, 1899, after a total disbursement from the treasury of \$7,290,092.47, there was a balance in the general revenue fund of \$1,033,632.35; in the sinking fund, \$77,547.23; in the State common-school fund, \$39,064.15; in the university fund, \$40,733.35.

The funded debt of Ohio, all bearing 3 per cent. interest, was at the close of the year \$1,001,065, and of that amount \$1,165 represents a lost canal bond, upon which interest has long since ceased. Of the payable portion of the debt (\$1,000,000), \$300,000 will fall due July 1, 1900, \$250,000 on July 1, 1901, \$250,000 on July 1, 1902; and \$200,000 (the war loan) on July 1, 1903.

The aggregate municipal debt of Ohio was \$75,000,012.62.

Military.—With the return of the Ohio volunteers from the war it became apparent that the National Guard of the State would have to be completely reorganized. This was done, and at the close of the year the strength of the Ohio National Guard was about 4,850 officers and men in infantry, artillery, cavalry, engineers, and naval brigade, this organization being composed of 8 regiments (in whole or in part) and 1 battalion of infantry, 1 battalion of engineers, 4 batteries of artillery, 1 troop of cavalry, and 2 battalions of the naval brigade. Two brigades and 1 division have been formed. The infantry is armed with Springfield rifles of the 1884 model, 3 batteries of artillery have Gatling guns, and Battery A, of Cleveland, has modern field rifles and equipment.

GEORGE E. NASH,
GOVERNOR OF OHIO.

Canals.—The report of the Board of Public Works shows that for the year ending Nov. 15, 1899, on the canal systems of the State in operation the total receipts were \$90,809.12, apportioned as follow: Land sales, \$3,008; tolls, \$20,812.24; rents, \$66,298.25. Of the tolls, the Miami and Erie Canal contributed \$13,436.98, the northern division of the Ohio Canal, \$6,358.57; and the southern division, \$1,016.09. Of the rents, \$53,065.40 is credited to the Miami and Erie, \$8,446.98 to the northern division of the Ohio Canal, and \$4,785.87 to the southern division.

Penal and Benevolent Institutions.—The penal and reformatory institutions of the State are: The Ohio Penitentiary; the Ohio Reformatory, at Mansfield; the Boys' Industrial School, at Lancaster; and the Girls' Industrial Home, at Delaware. They were maintained during the year at an expense of \$738,553.75. The State benevolent institutions include one for the blind, one for the deaf and dumb, one for feeble-minded youth, seven hospitals for the insane, and one for epileptics. During the year ending on the 15th of November, 1899, \$394,681.26 was expended for additions and improvements to the buildings and \$1,942,080.67 for the support of these benevolent institutions. There are also a soldiers' and sailors' home at Sandusky, and a home for soldiers' and sailors' orphans at Xenia. In 1899 there was expended upon these the sum of \$401,892.70. The total number of inmates for the fiscal year ending Nov. 15, 1899, was: Penitentiary, 3,133; reformatory, 534; Boys' Industrial School, 1,232; Girls' Industrial Home, 408; seven hospitals for the insane, 9,144; Hospital for Epileptics, 1,115; Institution for Feeble-minded Youth, 1,137; Institution for Deaf and Dumb, 552; Institution for Blind, 378; Soldiers' and Sailors' Home, 2,014; Soldiers' and Sailors' Orphans' Home, 1,026.

Educational.—The report of the State School Commissioner shows that where in 1854 only 8,651 pupils were enrolled in the high schools of the State, now there is an enrollment of 57,031.

In the year 249 new schoolhouses were erected, at a cost representing nearly \$1,000,000, and there are now 13,077 schoolhouses. The value of all school property is \$41,446,838. There are 25,712 teachers employed, and the total enrollment of pupils was 798,000. In the universities and colleges of the State there are 6,438 students, and in private schools there are 37,413. The balance on hand in the school fund is \$8,432,973.55.

Labor Troubles.—The most important labor trouble in the State in 1899 was the street-car strike in Cleveland, which, in addition to the usual characteristic features of a great strike, was attended with continuous rioting, murderous assaults, destruction of property, and paralysis of business for some time by the rioting and a general boycott. The trouble began on the morning of June 10, when a strike on the Big Consolidated system tied up a dozen lines and involved more than 850 men. The attempt to run one car to the center of the city precipitated a riot, which the police were powerless to check, and further attempts were abandoned. The State Board of Arbitration endeavored to effect an arrangement, but without success. After nearly a week the company attempted to open some of the lines with nonunion men, when rioting began and continued for several days, cars being wrecked and persons injured. After two weeks the strike ended through the intervention of a committee of the City Council, and all the lines resumed operation on June 25, the company taking back 80 per cent. of the old employees at once and putting nearly all the others on the waiting list. July 17, without warning, all the former strikers left in a body, and the company began filling their places with nonunion men. July 18 a switch was blown up with dynamite and a waiting shed set on fire. That was the beginning of a series of outrages, which continued without intermission nearly two weeks. Cars with passengers were blown up with dynamite, nitroglycerin, and giant powder in different parts of the city, and several persons were injured. Cars full of passengers were stoned, trolley wires cut, and the tracks blockaded with obstacles of all kinds. A bomb was thrown through the roof of the car house where the nonunion men slept. Car crews and rioters shot at each other, and one rioter was killed by a conductor, who was tried for murder some months afterward and acquitted. After all the local militia had been called out State troops were ordered to Cleveland, until there were about 1,200 soldiers under arms, in addition to the police and special deputy sheriffs. This had the effect of quelling the more serious rioting, and nearly two weeks after the first call to arms the troops were gradually withdrawn. Rioting was then succeeded by a general boycott by all the union labor organizations against every person who patronized Big Consolidated cars or sold anything to the Big Consolidated Company or its employees or to persons who rode in the company's cars. The boycott was enforced with such universality and merciless severity that great hardship and distress were caused. It continued until the approach of winter made it impossible to enforce it against the working people who were compelled to use the cars, and by a general understanding it was abandoned without being formally declared off.

Political.—The Prohibition party opened the political year by the adoption of the usual platform and the nomination of the following ticket: For Governor, J. W. Bashford, for whom George M. Hammell was afterward substituted; Lieutenant Governor, A. S. Caton; Judge of the Supreme

Court, Gideon F. Stewart; Attorney-General, Walter S. Lister; Treasurer, C. M. Wise; Auditor, Fred W. Barrett; Member of Board of Public Works, John Danner.

The Republican State Convention was held in Columbus, June 2. The ticket nominated was as follows: For Governor, George K. Nash; Lieutenant Governor, John A. Caldwell; Judge of the Supreme Court, William Z. Davis; Attorney-General, John M. Sheets; Treasurer, Isaac B. Cameron; Auditor, Walter D. Guilbert; Member of Board of Public Works, Frank A. Huffman.

The platform, after reaffirming the principles declared by the St. Louis platform, went on to say:

"We earnestly indorse the great administration of William McKinley. It is distinguished to a remarkable degree in the history of national administrations. Under the last Democratic administration and as a result of Democratic principles and policy our industries were destroyed, capital and labor were unemployed; the poor suffered as never before in our history; agricultural products could not be sold, because consumers could not earn money with which to buy, and every branch of trade felt the blighting influence of the Democratic tariff-reform hard times; the Treasury of the United States was depleted, and the gold reserve disappeared. The Government borrowed money to pay current expenses, increasing the public debt in times of peace by hundreds of millions of dollars.

"The Democratic party proposed to the people as a remedy for all these Democratic ills a depreciated and dishonest currency, which intensified every evil.

"During all that period of depression and distress the Republican party stood fast for the principles and policies under which American industries had been built up and had flourished beyond example—the principles and policies under which the people had prospered and the nation had grown great for a generation—stood fast for a sound and honest currency, and in 1896 elected to the presidency William McKinley, the best exponent of Republicanism and true American ideas and policies, the friend of every American industry, and the wise and patriotic defender and advocate of honest money.

"Under his splendid Republican administration public credit has been restored, the prosperity of the people has developed, our commerce has grown great, our trade—domestic and foreign—has increased to a degree never before known, and the people are looking with confidence for greater things to come.

"The magnificent achievements of our army and navy in the war with Spain for the liberation of the downtrodden and oppressed people of Cuba from the domination of Castilian despotism, accomplished under the master guidance of a Republican administration, are necessarily subjects for highest encomium by a convention of Ohio Republicans.

"We are proud of the brilliant and conspicuous services rendered to the people of the State and the country by the Senators from Ohio, Hon. Joseph B. Foraker and Hon. Marcus A. Hanna, and of the matchless record of the delegation of Ohio congressmen now representing the Buckeye State.

"The present administration of State affairs under Gov. Asa S. Bushnell has been able, wise, and economical. It is pure, free from scandal, and eminently satisfactory to the people of the State, without regard to party.

"We commend the action of the seventy-third General Assembly of Ohio in passing the stringent

law now on our statute books prohibiting the organization of 'trusts,' and we denounce such unlawful combinations as inimical to the interests of the people.

"We demand such readjustment of our tax laws as will impose the burdens of taxation more equally and uniformly upon the various forms of property.

"The growing evil of lynching, attended at times by unspeakable horrors, is a blot upon our civilization and a menace to our republican form of government."

The Democratic State Convention met at Zanesville, Aug. 30. The following ticket was nominated: For Governor, John R. McLean; Lieutenant Governor, Abraham W. Patrick; Judge of the Supreme Court, DeWitt C. Badger; Attorney-General, William H. Dore; Treasurer, James S. Gorman; Auditor, George W. Sigafosse; Member of Board of Public Works, Fletcher D. Malin.

The platform contained these declarations:

"We heartily reaffirm the entire Chicago platform of 1896, and we especially emphasize the financial plank therein, and we continue to demand the free and unlimited coinage of silver and gold as equal primary money at the rate of 16 to 1, independent of all other nations in the world.

"The Hon. William J. Bryan still retains our entire confidence, and we demand his renomination in 1900.

"We recognize the solemn fact that our Government can not be both republican and imperial.

"We are radically and unalterably opposed to imperialism in the United States of America. When we have solved some of the race problems that confront us at home then by example we can proclaim the blessings that flow from free institutions, and thus procure benevolent assimilation 'without criminal aggression.'

"We proudly recognize the valor and glorious achievements of our gallant soldiers and sailors from Bunker Hill to this very hour as being among the most thrilling and glorious in the history of the world, but we profoundly regret that American soldiers are being unlawfully used in the name of liberty to crush and destroy dawning republicanism in the Orient; and we denounce the secret and vicious alliance now in evidence between England and the Republican administration, whereby this nation may become involved in war with foreign nations.

"We demand that the Cubans and Philipines not only be permitted but encouraged to establish independent republics, deriving all of their governmental powers from the consent of the governed.

"We denounce the Republican party for its thirty-eight years of abject subservency to the shipping interests of Great Britain, and we denounce the so-called Hanna-Payne shipping bill, which, if enacted into law, would further shackle our interests.

"We are in favor of maintaining our splendid and efficient navy.

"A large standing army in our republic is a menace to liberty.

"We favor the initiative and referendum, the passage of the eight-hour labor law, the more rigid inspection of mines and workshops, the prohibition of sweat shops, and the abolition of the contract system of prison labor.

"We declare that all unlawful combinations of capital are the legitimate fruits of a gold standard and other corrupt Republican legislation on questions of the tariff; and we demand that all articles the prices of which are controlled by the

trusts be placed on the free lists. We denounce the Attorney-General of the United States, appointed from the State of New Jersey, the hotbed of trusts, for his refusal to enforce the statutes of the United States against them; and we commend the present Attorney-General of Ohio for his earnest efforts to enforce the statutes of Ohio against such illegal combinations.

"Political bosses are to be detested, and are inimical to our form of government. Bosses represent simply a concentration of political power or a ring. They live and exist through jobs and schemes loaded upon the taxpayers. They substitute their rule in their party for the rule of its voters, and visit political death upon any who refuse to bow to their dictation. The Republican party in Ohio is now in such control. The nominees on its ticket should not and will not command the suffrages of self-respecting Republicans. They are not the free selection of the properly delegated representatives of that party.

"We deplore the frequent and outrageous exercises of lynch law in this and other States, especially against our colored citizens, and we recommend the adoption of prompt and efficient measures to suppress such unwarranted acts of violence.

"We recommend a constitutional amendment providing for the election of President, Vice-President, and United States Senators by a direct vote of the people."

The Union Reform party met in Columbus, Aug. 22, and nominated a full ticket, as follows: For Governor, Seth W. Ellis; Lieutenant Governor, G. W. Seelye; Judge of the Supreme Court, Alfred R. McIntyre; Attorney-General, Thomas Bentham; Auditor, Frank S. Montgomery; Treasurer, William E. Good; Member of Board of Public Works, Alfred F. Weaver.

The report of the Committee on Resolutions, which was adopted, was:

"Resolved, That the national preamble and platform of the Union Reform party as framed at Cincinnati be adopted as the preamble of the platform of this convention." This platform makes the initiative and referendum the only plank.

The Social-Labor party also nominated a full ticket, as follows: For Governor, Robert Bandlow; Lieutenant Governor, E. Bartholomew; Judge of the Supreme Court, S. Barton; Attorney-General, John Cooper; Auditor, H. Lavin; Treasurer, O. Freer; Member of Board of Public Works, C. M. Newton.

A unique feature of the campaign was the appearance of a candidate for Governor without a party to nominate him and on a platform of his own making. Samuel M. Jones was elected mayor of Toledo on the Republican ticket in 1897, but was rejected by the Republicans in the contest for the nomination in the spring of 1899. He announced himself as an independent candidate on the platform of the "golden rule," and overwhelmed the other candidates by his vote. It was understood that he would be a candidate for Governor, and it was planned for the Union Reform convention to leave the head of that ticket blank, that the members of the party might vote for Jones. When the convention nominated Ellis for Governor Mayor Jones next day published a manifesto announcing himself as a candidate for Governor on the following platform:

"Equality of opportunity for all. All men have an equal right to a place on the earth. It is the duty of every patriot to see that this right is guaranteed to every man. The steps necessary to attain this right for which I stand are:

"1. The right of self-government through the abolition of political parties—A, direct nomination of candidates by the people; B, direct making of laws by the people.

"2. Public ownership of all public utilities.

"3. Union wages, hours, and conditions, or better, for skilled labor, and an eight-hour day with a living wage for unskilled labor on all public work done.

"4. Abolition of the contract system, that glaring evil of the competitive system, on all public work, and the substitution of direct employment.

"5. It is the imperative duty of the State Legislature to deal with the question of unemployment, to the end that provision may immediately be made that no citizen of Ohio who is willing to work shall be driven into pauperism, crime, or insanity for want of work."

The campaign that followed was peculiar. The Republicans and Democrats were both divided by factions. The nomination of Nash by the section of the Republican party following the counsels of Senator Hanna was repugnant to the faction that had made a hard fight against the Senator the year before, and there were threats of active opposition to the ticket. On the other hand, the nomination of John R. McLean antagonized a large number of Democrats, who resented his selection on account of his having been for many years a nonresident of the State. The part the Jones vote would play in the result was a subject of great anxiety in both the leading parties. The total vote cast was 908,159. For Governor George K. Nash, Republican, received 417,199 votes; John R. McLean, Democrat, 368,176; Samuel M. Jones, nonpartisan, 106,721; Seth H. Ellis, Union Reform, 7,799; George M. Hammel, Prohibitionist, 5,825; Robert Bandlow, Socialist, 2,439. Nash's plurality was 49,023. Jones had the highest vote of any one candidate in two counties, having in Cuyahoga County a plurality over Nash of 14,904, and a majority over all of 5,888, and in Lucas County a plurality over Nash of 1,425. All the other Republican candidates were elected, with the following pluralities: Lieutenant Governor, John A. Caldwell, 12,720; Auditor of State, Walter D. Guilbert, 47,848; Treasurer of State, Isaac B. Cameron, 48,043; Attorney-General, John M. Sheets, 45,009; Judge of Supreme Court, W. Z. Davis, 46,313; Member of Board of Public Works, Frank A. Huffman, 47,670.

A Legislature was also elected, the political complexion of which is as follows: Senate—Republican, 19; Democrat, 11; Independent Republican, 1. House—Republican, 62; Democrat, 48. Joint ballot—Republican, 81; Democrat, 59; Independent Republican, 1.

OKLAHOMA, a Territory of the United States, organized in 1890; area, 38,715 square miles. The population, according to the census of 1890, was 61,834; by the Auditor's census of 1894 it was 212,635; the Governor's report gave it as 275,587 in 1896 and 311,400 in 1898. The Indian population is 12,041, a decrease of nearly 1,000 in a year. Capital, Guthrie.

Government.—The following were the Territorial officers in 1899: Governor, Cassius M. Barnes; Secretary, William M. Jenkins; Treasurer, Frank M. Thompson; Attorney-General, Harper S. Cunningham; Superintendent of Instruction and Auditor, Stuart N. Hopkins; Adjutant General, Bert C. Orner; Oil Inspector, Amos A. Ewing; Bank Examiner, John M. Pugh; Superintendent of Public Health, L. H. Buxton; School Land Commissioner, Charles H. Filson; Grain Inspector, C. F. Prouty; Game Warden,

Daniel R. Widmer; Librarian, George H. Dodson; Chief Justice of the Supreme Court, J. H. Burford; Associate Justices, B. F. Burwell, B. T. Hainer, John L. McAtee, and C. F. Irwin, who succeeded J. C. Tarney in March; Clerk, B. F. Hegler. All are Republicans except Judge McAtee, who is a Democrat.

Finances.—The total taxable property as assessed amounts to \$42,982,414. This is an increase of more than \$2,000,000 in one year. The Territorial tax is 5.2 mills, of which 3 mills is for general purposes, the remainder for education and charities. The bonded debt is \$48,000; the warrant indebtedness, June 30, was \$290,036.39.

Education.—The number enrolled in the schools in 1898 was 77,121, of whom 4,224 were colored. The schools taught numbered 1,962; the average length of school in days in the different counties varied from seventy-three to one hundred and seventeen. There were 2,107 teachers, and the average monthly salaries were from \$18.57 to \$62.50. The total receipts for the year ending June, 1898, were \$570,238; the expenditures, \$415,347.

The university, at Norman, is supported by a general tax of 0.5 mill, and has its share from the leases of the lands reserved for the benefit of the normal school, the university, and the Agricultural College. In all departments there were 336 students, with the prospect of 450 in 1899-1900.

The normal school at Edmond had an attendance of 250; 10 were graduated in 1899.

In the Agricultural and Mechanical College, at Stillwater, 219 were enrolled, of whom 95 were in the collegiate classes, the remainder in the preparatory department; and 8 were graduated. The courses of study have been strengthened and enlarged. The Legislature this year provided for a tax of 0.1 mill, and set apart one fifth of the income of the lands mentioned above for this institution. The annual income from all sources is now about \$50,000. A special appropriation of \$20,000 was made for buildings. The new building for the Northwestern Normal School, at Alva, was finished in April, having cost \$91,995. The school was organized in 1897, and has been in temporary quarters. The enrollment in 1898 was 211, want of room having necessitated the rejection of 73 applications. In 1899 there were 327.

Langston University, for colored students, was opened in September, 1898, and at the close of the year had 181 students. Buildings have been added at a cost of \$10,000, given by the last Legislature, which also granted \$44,000 for expenses of the coming two years.

Charities and Corrections.—For the care and education of 27 deaf-mutes the Territory paid for the year \$6,182 under contract. There is no provision now for the blind children, the contract formerly in force having been given up. July 1 there were 243 insane patients cared for by contract, at \$200 a year each.

The Territorial Penitentiary had in the autumn 168 convicts, whose care and keeping cost \$20,634, and transportation \$3,144. They are kept under contract at Lansing, Kan., at the rate of 35 cents a day.

Railways.—Three lines of railway were built in the year, and 4 are building; 26 companies were chartered within eighteen months. The mileage is more than 1,000, of which about 780 is main track. The valuation for taxation is \$3,338,345.

Militia.—The National Guard consists of about 450 officers and enlisted men, organized in 9 companies and a regimental band.

Banks.—There are 68 Territorial banks and 7 national banks, with a total paid-up capi-

tal of \$954,600,000. Of the former 19 were organized in 1898-'99. In two years gains in deposits amounted to \$1,523,223, a percentage of 103. The gain in cash was \$1,086,372, a percentage of 146. No failures occurred in the two years. The national banks show a gain in deposits of \$146,111, or 13 per cent. in one year.

Loan Associations.—Four of these are chartered, 2 of them very recently; the other 2 have paid dividends from 12 to 20 per cent. a year.

Insurance.—There are 39 fire, 19 life, and 6 accident and casualty companies licensed to do business in the Territory. In addition to this the various fraternal orders carry large amounts of insurance. The business done by outside fire companies is shown by the following statistics: Written in 1898, \$8,839,557; premiums received, \$107,080; losses paid, \$18,002; losses incurred, \$24,638. Life companies wrote \$1,738,307; received premiums, \$75,516; incurred losses, \$58,842.

Products and Industries.—The cotton crop of 1898 was about 140,000 bales, value about \$5,000,000. The crop of this year was estimated at about the same quantity. At the Omaha exposition Oklahoma showed the tallest stalk of corn—over 19 feet. The average yield of corn in many localities is 40 bushels to the acre on upland, and 50 to 60 on bottom land is common. The crop of castor beans was about 125,000 bushels.

There are 79 grain elevators in the Territory, with an aggregate capacity of 1,341,000.

The assessments of live stock were as follow: Horses, 216,971; mules and asses, 44,191; cattle, 849,767; sheep, 36,652; swine, 228,498.

Thirty flour mills are in operation, with total capacity of 5,100 barrels a day. The number of manufacturing establishments is 138, the employees 1,921; the number of wholesale houses 96, with 815 employees.

Lands.—The Indian reservations cover 6,949,715 acres. The school lands amount to 1,675,840 acres, and the net proceeds from leasing them amounted in 1899 to \$133,047. There are still 6,388,373 acres of Government land subject to homestead entry. In the year ending June 30 entries were filed on 666,747 acres.

Punishment of Lynchers.—In June N. M. Jones, ex-deputy United States marshal, was convicted of taking part in the crime of burning two Seminole Indians in 1898, and was sentenced to serve twenty years in the Penitentiary. Another member of the mob received a sentence of ten years. Others were arrested.

Political.—A new party in Oklahoma, the Socialists, was formed at a conference at Oklahoma City, Oct. 14, and permanent organization was effected, Dec. 27. The platform favors single Statehood, universal suffrage, direct legislation, compulsory education, inalienable school lands, and public ownership of public utilities.

Legislative Session.—The fifth legislative session began Jan. 10 and ended March 15. Hugh McCredie was president of the Council, and A. H. Huston president *pro tempore*; Thomas J. Reid was Speaker of the House, and W. H. Merten Speaker *pro tempore*.

Among the measures passed were a general election law; a general banking law; a law establishing a Territorial Board of Equalization; a general game and fish law, permitting fish to be sold for home consumption; and a general warehouse law, creating a board of commissioners; also creating the office of Chief Inspector of Grain, and requiring warehouses to be licensed. The office of Territorial Geologist was created. A

law was made for preventing the spread of contagious diseases of domestic animals. The law of 1897 creating a Territorial schoolhouse insurance fund was repealed. Distribution of funds arising from school-land leases was arranged for, and the law of levying taxes for Territorial institutions was amended. It was provided that the money received from Congress under the act of 1890 for agricultural instruction be divided so as to give one tenth to the Langston Agricultural and Normal University for colored students. Certain notes and mortgages of building and loan associations were exempted from taxation. Cotton factories are to be exempted from taxation for ten years after establishment. Other measures were:

Regulating the inspection and sale of oil.

Regulating the practice of pharmacy.

Permitting bodies of dead paupers to be given to medical schools and regular physicians.

A bill looking to immediate statehood was passed, providing for a constitutional convention to meet in the summer, composed of delegates to be chosen in June, after which an election should be held to ratify the Constitution and elect State officers; then admission was to be sought. The Governor vetoed this bill, as it is his opinion that Oklahoma and the Indian Territory should enter the Union as one State. A bill aimed at Christian Scientists was returned without approval on the ground that it was calculated to interfere with religious liberty.

ONTARIO, a province of the Dominion of Canada; area, 220,000 square miles; population in 1891, 2,114,321. Capital, Toronto.

Government and Politics.—The Legislature was opened on Feb. 1, 1899, by Lieut.-Gov. Sir Oliver Mowat with a speech from the throne, of which the following are the chief paragraphs:

"The legislation of last year which provided that all pine logs cut on the Crown domain after the termination of the then existing timber licenses should be sawn in Canada has been made effective by inserting the manufacturing conditions in all renewals of licenses for the current year.

"The mining industry of the province continues to improve, and it is giving constantly increasing employment to capital and labor. Since your last session the province has assumed the administration of the provincial fisheries. A fishery branch has been established, departmental officials have been appointed, and the outside service is being organized.

"Experience has shown that the election laws may be further improved, and a bill for that purpose will be submitted to you. Among the other measures to be submitted for your consideration will be a bill for amending the school laws; a bill to authorize the Parliament of Canada to pass an act confirming the survey of the boundary between the provinces of Ontario and Manitoba; and a bill to improve the workmen's compensation for injuries act."

Following up the policy of the Liberal party at Ottawa as enunciated during the preceding year, the Ontario Government gave notice of, and carried on a strict party vote, a motion regarding the Senate of Canada as follows:

"That in the opinion of this House the provisions of the British North America act respecting the constitution and powers of the Senate of Canada are at variance with the well-understood principles of responsible government, and should be brought more into harmony with those principles by an amendment to the said act, substantially providing that in case of disagreement be

tween the House of Commons and the Senate, the point of difference shall be decided by a majority of the members of the two houses present and voting in a joint meeting. Further, that it is the opinion of this House that the British North America act should be so amended as to provide that the appointment of Senators should be for a limited term of years, and not for life as at present."

The House adjourned after one of the heaviest sessions in provincial history, on April 3, with the following review of its work from the Lieutenant Governor:

"I cordially approve of the measures adopted for supplementing the revenues of the province. By the act last year which required the manufacture of saw logs in Canada, it was inevitable that the receipts from the Crown Lands Department would be impaired, and when to the probable loss of revenue is added the expenditure arising from the increase of population and the growing needs of the people, the public interests required that provision should be made for all necessary expenditure and for the maintenance of the financial standing of the province. I am glad you have been able to effect this by a moderate tax upon the accumulation of capital and by a reasonable increase in the duties upon distillers', brewers', and liquor licenses. I assent with much pleasure to the act respecting aid to certain railways. In order, however, that the resources of the northerly and westerly parts of Ontario may be opened for further settlement, the further extension of our railway systems to those sections becomes necessary. Within two or three years access will probably be obtained by railway to the agricultural lands in the Rainy river district and the mineral and timber lands lying between Rainy lake and Port Arthur. And through part of the railroad systems projected it is intended to place the capital of the province in direct communication with the tide waters of Hudson's Bay.

"The acts respecting public schools, the amendments to the election laws, the further improvement of our mining industries, for the protection of our fisheries, and for the better administration of the game laws, meet with my hearty approval."

The game protection bill settled a question that had been debated for years. It permits the shooting of deer in the water. It also enables persons and corporations engaged in the cold-storage business to keep game in cold storage during the close season upon taking out a license, and hotels, clubs, and restaurants to supply game to their customers at meals, also upon taking out a license. Carriers and other persons are prohibited from transporting wild deer, deers' heads, deers' skins, or any venison unless there is attached to each deer, deer's head, deer's skin, or venison one of the coupons belonging to the hunting license of the person shipping the articles.

By the mines act a bonus of 50 cents a ton is every year to be paid out of the iron mining fund on all pig metal smelted at the blast furnaces in the province from foreign ores with charcoal or peat made in Ontario. But to obtain the bonus the following yearly proportions of Ontario ores must also be smelted: In the first period of two years not less than 20 per cent. of the foreign ores; after two years not less than 40 per cent.; after four years not less than 60 per cent.; after six years not less than 80 per cent.; after eight years not less than 100 per cent. The bonus per ton on the pig metal produced from Ontario ores is to be \$1. No more than \$25,000 will be

paid out in any one year for these bonuses. The bill also rearranges the price and rental of mining lands.

Subsidies were granted to railroads as follow: Ontario, Hudson Bay and Western, 240 miles, \$2,000 a mile; James Bay, 175 miles, \$2,000 a mile; Haliburton, Whitney and Mattawa, 30 miles, \$3,000 a mile; Ontario and Rainy River, \$1,000 a mile for 205 miles and \$4,000 a mile for the remaining 75 miles; Central Ontario, 21 miles, \$3,000 a mile; Central Counties Railway, 14 miles, \$2,000 a mile; and Ontario, Belmont and Northern, 7 miles, \$3,200 a mile. The total amount of these subsidies is \$1,538,400.

The succession duties bill provides more effective means for recovery of succession duties where any property which previous to the death of the person whose estate is subject to duty has been conveyed or transferred to some other person is declared liable to duty.

The following railways incorporated: The Worthington and Onaping Railway, the Thunder Bay, Nipigon and St. Joe, the Nipigon Railway Company, the Nickel Range Railway, the North Lanark Railway, the Haliburton, Whitney and Mattawa, the Hamilton and Caledonia Railway, the Thessalon and Grand Portage Railway, the Bruce Mines and Algoma Railway, the Algoma Central Railway.

Politics in 1899 were very warmly discussed in Ontario. In the constituency of West Elgin evidences were produced of undoubted corruption in the preceding general election, and the Liberal (Government) member was unseated and subsequently defeated. In three other by-elections two seats were held by the Government and one went Conservative. But the Government majority in the Legislature was very small. On Oct. 18 the Hon. A. S. Hardy, Premier of the province for three years, resigned, and accepted a sinecure appointment under the Crown. On Oct. 21 the new Ministry was sworn in, with the Hon. G. W. Ross, who had acted for many years as Minister of Education, as Premier. His Ministry was much the same as the old one except that certain offices changed hands and that Messrs. J. R. Stratton and F. R. Latchford came in as new members. It was made up as follows: Premier and Provincial Treasurer, Hon. G. W. Ross; Attorney-General, Hon. J. M. Gibson; Minister of Education, Hon. Richard Harcourt; Minister of Agriculture, Hon. John Dryden; Commissioner of Crown Lands, Hon. E. J. Davis; Provincial Secretary, Hon. J. R. Stratton; Minister of Public Works, Hon. F. R. Latchford; ministers without portfolio, Hon. Messrs. J. T. Garrow and William Harty.

Finances.—Mr. Harcourt made his budget speech on Feb. 10, and had to deal with a deficit which seemed to depend in amount upon the question whether the Government or the Opposition were handling the figures. The principal receipts for 1898 showed a decrease of \$500,000 over the preceding year, and were as follow: Interest on capital held and debts due by the Dominion, \$272,414; interest on investments, \$31,646; Crown lands, \$42,602; rent, \$63,944; woods and forests, \$981,186; licenses, \$276,761; law stamps, \$57,283; Education Department, \$59,573; succession duty, \$206,185; casual revenue, \$116,568; public institutions, \$94,113. Only in two cases was there an increase of revenue. In the one case it amounted to \$60,000, this being derived from interest payable by the Dominion, and in the other, \$3,057, was caused by an augmentation in the revenue of the Education Department. On the other hand, the net decrease amounted to \$507,955. The larg-

est decrease was under the heading of woods and forests, where a decline of \$345,954 was shown. The total receipts as given by the Treasurer for 1898 were \$3,647,353; the expenditures, \$3,803,081.

Minerals.—The total value of mineral production in 1891 was \$4,705,673; in 1892, \$5,374,139; in 1893, \$6,120,753; in 1894, \$6,086,758; in 1895, \$5,170,138; in 1896, \$5,235,003; and in 1898, \$2,464,239. In 1897 statistics of building materials were not collected, and for that year a comparison of total products can not be made. Gold mining began in an uncertain way in Ontario in 1892, and although mines and mills have been worked irregularly since then, only seven are steady producers of bullion. During the three years 1892–93–94 the production ranged from \$33,776 to \$36,900. In 1895 it rose to \$50,781, in 1896 to \$121,848, in 1897 to \$190,244, and in 1898 to \$275,078. In the first half of 1899 the value of bullion produced was \$224,995.

The Hon. J. M. Gibson, Provincial Secretary, explaining the Government's policy in regard to charcoal iron smelting, etc., in March, 1899, said: "The blast furnace at Hamilton was started in 1896, and in the three years it has produced 100,566 net tons of pig metal, valued at \$1,172,696. It employs about 130 men, and the amount of wages paid in the three years has been \$148,475. Last year it produced 48,253 tons of pig metal, valued at \$530,788, and it paid for labor \$61,475. A blast furnace has been completed at Deseronto for the production of charcoal iron, and all the charcoal fuel to be used is made in the province. A second charcoal furnace is to be erected this year at Midland, which will begin with a capacity of 60 tons of pig metal a day.

"Under the act of 1891 the price of mining lands ranged from \$2 to \$4.50 an acre, and by the act of 1892 the maximum price was reduced to \$3.50. In 1894, owing to the business depression, the prices were further reduced to a range of \$1.50 to \$3. The present buoyancy of trade and business, with accompanying activity in mining enterprise, appears to justify a small increase."

Agriculture.—The year 1899 was a fairly good one for the Ontario farmer. The production was as follows: Fall wheat, 14,439,827 bushels; spring wheat, 7,041,317 bushels; barley, 14,830,891 bushels; oats, 89,897,724 bushels; peas, 15,140,790 bushels; rye, 2,284,846 bushels; buckwheat, 2,203,299 bushels; beans, 651,000 bushels; potatoes, 19,933,366 bushels; mangel-wurzels, 20,898,387 bushels; carrots, 3,674,035 bushels; turnips, 57,878,390 bushels; corn (for husking), 21,673,234 bushels; hay, 3,498,705 tons; apples, 19,126,439 bushels; tobacco, 2,241,562 pounds. Estimating the values at current prices, the total value was \$113,000,000.

Liquor and Licenses.—The ordinary licenses, the beer and shop and wine licenses, issued in 1898 were 3,123 in number—a slight reduction upon the preceding year. The revenue from them was \$268,247—also a slight reduction. The total raised by fines, etc., was \$602,853. Legislation was introduced during the session which increased the fees and licenses generally, and was expected to take \$24,000 of revenue more from distillers, \$16,000 from brewers, and \$65,000 from license holders per annum.

Education.—The total amount expended upon public schools in 1898 was \$3,913,501—an increase of \$24,058. Of this sum, \$350,457 was expended for sites and buildings, \$2,717,261 for teachers' salaries, and \$845,783 for all other purposes. The number of registered pupils of all ages in the public schools was 441,157, an increase for the year of

55; while the average attendance was 248,548, an increase of 1,824. The number of teachers employed was 8,376, of whom 2,090 were men and 5,686 women. The number of pupils in the Roman Catholic separate schools was 24,996, an increase of 366. Upon high schools, the total amount expended was \$715,976, of which \$532,837 was for teachers' salaries, \$46,027 for sites and buildings, and \$136,512 for all other purposes. At the night schools the total attendance was 1,406 and the average attendance 317. In 1872 486 high-school pupils when they finished their high-school education entered mercantile life. In 1897 the number had increased to 1,368. Similarly 300 high-school pupils left the high school for agricultural pursuits, and in 1897 1,153 pupils pursued a similar course.

The free library system had been very successful. In 1895, when the act regarding free libraries was passed, there were only 12 such institutions in the province. Now 103 reported, and others have been established. The total number of public and free libraries for 1898 was 384.

The Insane.—The annual report showed the insane population in 1898 to amount to 5,733—more than 700 in advance of any other year. The average numbers between 1889 and 1898 had been 4,538. Though the population in the asylums is increasing, it seems probable that the number of insane did not increase. Dr. C. K. Clarke, of Kingston Asylum, in his report said: "There is a prevailing impression that insanity is steadily increasing, whereas the generality of hospital physicians are inclined to the belief that acute insanity is not as common as it was some years ago. It is true that our hospitals for the insane are crowded at all times, and that as fast as accommodation is provided patients are found to fill the beds; but in the majority of instances the applications are not for acute cases, but for persons who have long since passed the curable stage." The marked feature of the report was the large number of patients cured in the season. They averaged 33.04 per cent. In 1897 the average was 24.97 per cent., and the average of the preceding eight years was 28.06.

ORANGE FREE STATE, a republic in southern Africa. The legislative body is called the Volksraad, a single chamber of 60 members, elected by adult male citizens for four years, half being renewed every two years. The qualifications for electors are possession of a freehold of the value of £150, a leasehold at an annual rental of £36, an income of £200, or personal property worth £300. The President is elected for five years. M. T. Steyn was elected President of the republic on Feb. 19, 1896. The Executive Council was composed in the beginning of 1899 of P. J. Blignaut, Government Secretary; H. F. D. Papenfus, Landrost of Bloemfontein; and G. van Tonder, J. Palmer, and A. Fischer, elected by the Volksraad.

Area and Population.—The estimated area of the Free State is 48,326 square miles. The population at the census of 1890 was 207,503, of whom 77,716 were whites, divided into 40,571 males and 37,145 females, and 129,787 were colored, divided into 67,791 males and 61,996 females. Bloemfontein, the capital, had 5,817 inhabitants in 1892. Of the total white population 51,910 were born in the Free State, 21,116 in Cape Colony, 1,002 in the Transvaal, 869 in Natal, 56 in Griqualand West, 2,549 in Europe, and 214 in other parts of the world.

Finances.—The revenue in 1897 was £402,230, and the expenditure £381,589. Of the revenue £162,929 came from customs, £53,975 from

stamps, £35,399 from posts and telegraphs, £33,736 from transfer dues, £14,932 from quit rents, and £17,429 from the native poll tax. Of the expenditures £53,234 were for salaries, £49,667 for education, £29,660 for posts and telegraphs, £27,365 for public works, £13,156 for police, and £10,543 for the artillery. The public debt in 1897 was £40,000; in 1899 it was £460,000. The property of the state is valued at £5,500,000,

minus of the Cape line at Norval's Point, on the Orange river, to Bloemfontein, and through to Viljoens Drift, on the Vaal river, was transferred on Jan. 1, 1898, to the Government of the Orange Free State, which gave debentures for £1,692,213. The net receipts for 1897 were £504,009, out of which £309,488 were paid for extensions and equipment. The total length of railroads is 366 miles, built at a cost of £2,500,000.

BUSHMAN ENCAMPMENT.

including railroads and public lands. The revenue for 1898 was £899,758; expenditure, £956,752. For 1899 the revenue was estimated at £840,455, and expenditure at £948,523.

Defense.—The whole male population between the ages of sixteen and sixty must turn out with horse and rifle at a summons to arms from the field cornet, or captain in command of the district. The strength of the army that can be thus mobilized is 17,381. There are 4 batteries of artillery, with a force of 150 trained artillerymen, at the capital, and 550 men who have served their time are retained as a reserve.

Commerce and Production.—The land is divided into 10,409 farms, covering 29,918,500 acres, of which only 250,600 acres are tilled. Sheep, oxen, goats, and horses are reared. The total value of the imports in 1897 was £1,231,699, of which £913,158 came from Cape Colony, £185,409 from Natal, £107,987 from Basutoland, and £25,043 from the Transvaal. The value of the exports was £1,794,242, of which £735,883 went to Cape Colony, £127,253 to Natal, £59,368 to Basutoland, and £871,738 to the Transvaal. The exports of diamonds in 1897 were £440,964 in value. In 1898 the total imports were valued at £1,191,932, and exports at £1,923,425. Since July 1, 1889, the Free State has formed a customs union with Cape Colony, which Natal joined on May 20, 1898.

Railroads and Telegraphs.—A railroad built by the Government of Cape Colony from the ter-

The telegraph lines have a total length of 1,429 miles, with 1,683 miles of wire, not including 333 miles of railroad telegraphs, with 999 miles of wire. (See SOUTH AFRICAN REPUBLIC.)

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 94,560 square miles. The population was 13,294 in 1850; 52,465 in 1860; 90,923 in 1870; 174,768 in 1880; 313,767 in 1890. By the State census of 1895 it was 362,513. Capital, Salem.

Government.—The following were the State officers in 1899: Governor, Theodore T. Geer; Secretary of State, Frank I. Dunbar; Treasurer, Charles S. Moore; Attorney-General, R. D. N. Blackburn; Superintendent of Instruction, J. H. Ackermann; Adjutant General, B. B. Tuttle; State Printer, W. H. Leeds; Food Commissioner, J. W. Bailey; Game and Forestry Warden, L. P. W. Quimby; Land Agent, T. W. Davenport, succeeded in March by L. B. Geer; Printing Expert, A. F. Hofer, succeeded in March by Ross E. Moores; Fish and Game Protector, F. C. Reed, succeeding H. D. McGuire, who was drowned in Umpqua river, April 8; President of the State Board of Agriculture, W. H. Wehrung, and of that of Horticulture, H. B. Miller; Biologist, F. L. Washburn; Librarian, James B. Putnam; Chief Justice of the Supreme Court, C. E. Wolverton; Associate Justices, R. S. Bean and F. A. Moore; Clerk, J. J. Murphy—all Republicans.

Finances.—The balance in the treasury Jan. 1 was \$763,699.23; the receipts during the year,

\$1,914,548.14; the disbursements, \$1,936,930.94; balance Dec. 31, \$741,316.43.

The valuation of property for taxation was \$133,533,571 in 1898, and the tax levy for 1899 based on this valuation was \$761,141.37, at the rate of 5.7 mills. The valuation in 1899 was \$120,287,879.

The State Land Board sold 114,945 acres in 1899, and paid into the several funds \$321,428.90. The value of mortgages discharged was \$462,062.98; the values of loans approved, \$836,700.25.

Education.—The school population is 132,408; the enrollment in public schools the past year, 85,230; average attendance, 61,234. The number of teachers was 3,675, of whom 2,558 were women. The value of school property was \$2,871,718.34, not including furniture, which was \$285,774.95, and apparatus, \$119,502.24. The average monthly salary of men teaching was \$42.96; of women, \$34.81. The receipts amounted to \$1,327,781.59; the disbursements, \$1,259,125.38, of which \$826,385.47 was for teachers' salaries.

The State Normal School at Monmouth graduated a class of 35 in June; the one at Drain, 12; and the Weston State Normal School, 10.

The report of the Agricultural College, at Corvallis, shows that 338 students were enrolled in the year ending in June, not including those in the farmers' short course, which bring the number to 440. The funds received amounted to \$102,587, and the expenditures to \$96,420. A sub-freshman class has been added for preparatory work. There were 34 graduates in the several departments.

The State University received \$44,963.43, and expended \$44,037.80. The Legislature reduced the rate of interest on the university land fund from 8 to 6 per cent., and the Villard fund has been converted into 4-per-cent. bonds; this has so lessened the income that all tutors and assistants have been dispensed with, and a reduction of the faculty is contemplated. The number of students was 266, of whom 84 were women. In June 44 were graduated.

Pacific University, at Forest Grove, has new buildings, and had an increased attendance the past year, 62 more than during the year preceding. The Pacific College, at Newburg, graduated 21 in June; McMinnville College, 8; Willamette University, 16.

Charities and Corrections.—The management of the Soldiers' Home, at Roseburg, was by act of the Legislature taken from the trustees and placed in the hands of the Governor. He is to prescribe the rules, appoint the officers, and have general supervision. There were 90 inmates in November.

At the insane asylum 1,170 patients were reported in December, of whom 370 were women. The expenses were \$133,952.33 for the supplies and salaries this year. No payment is accepted for any patient.

There were 322 convicts in the Penitentiary at the time of the last biennial report; one was a woman. In 1897-'98 the institution received from the legislative appropriation \$86,592.66, most of which was used. The Reform School had 99 inmates at the beginning of the year.

Industries and Products.—From a table of Oregon statistics of 1899 published in The Oregonian are taken the following: Corn, 344,161 bushels, \$172,080; wheat, 23,649,334 bushels, \$10,672,200; oats, 5,201,232 bushels, \$1,560,369; hay, 1,142,293 tons, \$6,853,758; potatoes, 5,126,241 bushels, \$1,537,872; wool, 18,028,276 pounds, \$2,163,393; sugar beets, 11,205 tons, \$50,827; hops, 14,400,000 pounds, \$1,206,000; poultry and eggs,

\$4,512,719; fruit crop, \$272,050; butter, cheese, and milk, \$5,459,469; sales of stock, \$9,500,000; rye and barley and miscellaneous, \$1,500,000; gold, \$3,285,000; silver, \$193,940; coal, \$264,163; manufactured goods (including lumber), \$56,140,195; Columbia river salmon pack, 340,125 cases, \$1,800,775; salmon pack of Oregon coast streams, 74,332 cases, \$271,532; fresh fish consumed locally and shipped, 5,448,617 pounds, \$370,848. Total, \$107,877,190.

The exports of Portland amounted to \$7,483,084; the imports, \$1,646,819.

Lands.—The area of unsurveyed and surveyed land, still unappropriated and not reserved, is given as 35,897,896 acres. The area reserved is 5,467,702 acres. In 1899 540,423 acres of Government land were sold. The forest reserves are: Cascade Range Reserve, 4,492,800 acres; Bull Run Reserve, 142,080 acres; Ashland Reserve, 18,560 acres.

In November the Commissioner of the Land Office decided in favor of the settlers who had taken up certain lands on the shore of Lake Malheur by homestead entry. The lands have been long in dispute. They were uncovered by the recession of the waters of the lake, and were entered upon by settlers as Government land. The owners of the original shores of the lake claimed the uncovered land, on the ground that their titles covered it, and sought to have the settlers dispossessed; but the decision is against them.

A co-operative colony has bought 8,000 acres at Monroe, Benton County, in the Willamette valley. It is called the Co-operative Christian Federation, No. 1, and the intention is that, while nonsectarian, the colony shall make the teachings of Jesus the rule of action in all its affairs. The charter members are mostly from Oregon and Washington, though some have come in from other States. To be accepted as a member of the community the applicant must be in good health and of sound moral character. "Membership in the federation gives free schools, free doctors and nurses, and free homes. Free schools include music and art and manual training in your chosen trade or profession, and when you, from any cause, can no longer labor, your home remains the same, your food and clothing the same, your medicine, doctor, and nurse the same. And if you die, your children have the same home, schools, food and clothing, and medical service until eighteen years of age."

Anniversaries.—The completion of forty years of statehood and fifty since the extension of United States laws into Oregon Territory, was celebrated in February by exercises in the Legislature, the army posts, and various educational institutions. The building in which the convention met in August, 1857, to frame the State Constitution is still standing in Salem.

Exposition.—The Oregon Industrial Exposition opened at Portland in September. It represented the natural products and manufacture of the entire north Pacific coast, and exhibited representations of some of its characteristic scenery.

Legislative Session.—The regular session opened at Salem, Jan. 9, and closed Feb. 18. T. C. Taylor was President of the Senate, and E. V. Carter was Speaker of the House.

Five amendments to the Constitution that were proposed by former Legislatures were approved, and will be submitted to vote in 1900. They are: Increasing the number of Supreme Court judges from 3 to 5; allowing woman suffrage; establishing regulations for reservoirs and water rights, and for granting right of eminent domain to irrigation and drainage companies; limiting city,

county, and school district debts to 5 per cent. of the valuation; and repealing the section that prohibits immigration of free negroes to the State, which is merely a dead letter.

Two other proposed constitutional amendments were approved, but will require action by the next Legislature before they can be submitted to the electors. These are: Providing for initiative and referendum concerning State measures, on petition of 8 and 5 per cent. respectively, and permitting referendum to be ordered by the Legislature; and removing the restriction that limits suffrage to white citizens, and providing that in addition to regular qualifications others in reference to residence may be required by enactment.

A law for registration of voters was one of the important measures of the session. Electors must register between the first Monday in January and May 15 with the county clerk or a notary or a justice of the peace. Foreign-born citizens must show their naturalization papers. The State was redivided into senatorial and representative districts.

County courts were authorized to declare un-navigable streams public highways for the floating of logs and timber, and to provide for their improvement and use. This act was pronounced unconstitutional, in so far as it authorizes the taking of private property for public use.

Several laws were made for the construction and preservation of good roads. Owners of vehicles used for heavy freight and in habitual use may secure rebates on their road taxes for four years by the use of wide tires; \$1 a year for each wheel of vehicles having tires at least three inches wide; and for those of four inches or more and so constructed that the front and rear wheels do not run on the same lines, a further rebate of \$2 for each vehicle. County courts may lay plank and corduroy roads, and authorize skid roads on county highways or roads of public easement. County convicts may be worked on highways, and State convicts on the roads between State institutions. In some counties it is permitted to levy a \$1.25 bicycle tax for side paths.

The privileges of the Soldiers' Home were extended to soldiers and sailors of the Spanish and Filipino wars.

Text-books for the schools are to be selected by a board of five commissioners appointed by the Governor, instead of by the State Board of Examiners and the county superintendents, as heretofore. Contracts as to price are to be made with publishers; and changes may not be made within six years. Agricultural college lands that have been subject to sale for twenty-five years are to be sold at \$1.25 an acre. It was provided that applicants for State certificates must take examinations and reach a general average of 85 per cent., not falling below 70 in any subject; and, in addition, must have had thirty months' successful teaching experience,

fifteen in the State. This conflicts somewhat with the privileges of normal-school graduates, who have heretofore been exempt from examination. Their normal practice in teaching is placed to their credit. A general school law was made, constituting the Governor, the Secretary of State, and the Superintendent of Instruction the State Board of Education.

The close season for salmon in the Columbia river system was changed at the special sessions of 1898, and other changes in the fish and game laws were made at this session. The office of Game and Forestry Warden was created—appointment to be by the Governor; deputy wardens were provided for, and general regulations adopted for protection of forests and game.

The Dairy and Food Commissioner is to be elected by the electors, instead of by the Legislature, and to serve for four years instead of two, as now. The pure food law was amended, and the adulteration of candy prohibited. A board of barbers' examiners was created.

An act amending the laws on management of State lands and one changing the duties and salary of the agent selecting lands given by the Government were passed. The Governor, Secretary, and Treasurer constitute a State land board.

The general law for negotiable instruments recommended by the conference of commissioners on uniform legislation was adopted. It was made unlawful to organize or employ armed bodies of men in any city, except those provided for by law. Other enactments were:

Creating the office of State Biologist, without salary.

Designating the Oregon grape, *Berberis aquifolium*, as the State flower.

Providing that insurance policies may be written only by resident agents.

Prohibiting the use of slot machines.

Creating a commission for the exposition at Paris.

Providing that mining claims, quartz or placer, shall be deemed real estate.

Amending the law for protecting trade-marks so as to prevent the use of second-hand packages to evade the law.

To prevent uninspected sheep from entering the State.

Providing that a sale in bulk of a stock of goods or wares may be presumed fraudulent unless the seller gives the buyer a list of his creditors.

The general and special appropriation bill carried items amounting to \$1,183,130 for the two years.

Mortgage Tax Liens.—The question came before a court in the State in May, whether a mortgage tax is a lien on the real property. The court decided that it is not, and that the mortgagor is not liable; the claim stands against the holder of the mortgage.

P

PARAGUAY, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 13 members and a Chamber of 26 members, all elected by universal male suffrage. The President of the republic, whose term of office is four years, is Emilio Aceval, elected in 1898. Hector Carvallo is Vice-President. The Cabinet at the beginning of 1899 contained the following members: Minister of the Interior, Rufino Mazó; Minister of Foreign Af-

fairs and Colonization, J. S. Decoud; Minister of Finance, Felix de los Rios; Minister of Justice, Worship, and Public Instruction, Mateo Collar. A new Cabinet appointed by the President was composed as follows: Minister of the Interior, Guillermo de los Rios; Minister of Foreign Affairs and Colonization, J. S. Decoud; Minister of Finance, José Urdapilleta; Minister of Justice, Worship, and Public Instruction, G. Pereira Casal; Minister of War, Gen. J. A. Ecurra.

Area and Population.—The area of Paraguay is estimated at 98,000 square miles, and the population at 600,000 whites and 130,000 Indians. The number of foreigners living in Paraguay is estimated at 17,000, including 5,000 Argentinians, 2,500 Italians, 1,500 Spaniards, 1,250 Germans, 800 French, 600 Brazilians, 600 Swiss, 400 Austro-Hungarians, and 200 English. - The number of immigrants in 1898 was 337. Asuncion, the capital, has about 45,000 inhabitants.

Finances.—The revenue in 1897 was \$5,752,841 in currency, of which \$4,950,311 came from customs. The expenditures were \$8,346,179, leaving a deficit of \$2,593,338. The internal debt in 1898 was \$12,085,234. The foreign debts amounted to \$30,773,089, consisting of a debt to Brazil of \$9,876,466, a debt of \$13,423,423 due the Argentine Republic, an English debt of \$4,973,200, and treasury bonds for \$2,500,000.

Commerce.—The imports in 1897 were valued at \$2,203,459 in gold, and exports at \$12,908,299 in currency. The chief imports are textile fabrics, wine, and rice. About 85 per cent. of the textiles and 48 per cent. of the total imports come from Great Britain. The export of yerba maté, or Paraguay tea, was 6,547,642 kilogrammes, valued at \$5,475,633 in currency. The Government formerly owned the lands yielding this valuable product, but has disposed of them to foreign companies. Brazil now produces more of it than Paraguay. The export of tobacco in 1897 was 1,064,593 kilogrammes, valued at \$595,609 in currency; of hides, 169,490 pieces, valued at \$1,959,293; of timber, the value of \$1,164,162; of oranges, the value of \$146,485. There were 197 vessels, of 132,592 tons, entered at the port of Asuncion during 1897. The value of the imports in 1898 was \$2,608,487 in gold; exports, \$2,463,924.

A railroad to Asuncion has a length of 155 miles, and there are three lines of telegraphs, one along the line of the railroad, one of 210 miles to the Argentine frontier, and one of 125 miles from Asuncion to Concepcion. The number of dispatches in the internal service in 1897 was 15,691; in the foreign service, 37,273.

PENNSYLVANIA, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles. The population, according to each decennial census, was 434,373 in 1790; 602,365 in 1800; 810,091 in 1810; 1,047,507 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,786 in 1850; 2,906,215 in 1860; 3,521,951 in 1870; 4,282,891 in 1880; and 5,258,014 in 1890. Capital, Harrisburg.

Government.—The following were the State officers in 1899: Governor, William A. Stone; Lieutenant Governor, J. P. S. Gobin; Secretary of the Commonwealth, William W. Grist; Secretary of Internal Affairs, James W. Latta; Treasurer, James S. Beacom; Auditor, L. G. McCauley; Attorney-General, John P. Elkin; Adjutant General, Thomas J. Stewart; Superintendent of Instruction, N. C. Schaeffer; Insurance Commissioner, Israel W. Durham; Commissioner of Banking, Thomas J. Powers; Secretary of Agriculture, John Hamilton; Commissioner of Forestry, J. H. Rothrock; Dairy and Food Commissioner, Levi S. Wells; Zoölogist, H. T. Fernald; Factory Inspector, James Campbell; Veterinarian, Leonard Pierson; Librarian, George E. Reed; Superintendent of Public Buildings and Grounds, T. L. Eyre; Chief Justice of the Supreme Court, James P. Sterrett; Associate Justices, Henry Green, Henry W. Williams, who died Jan. 25, James T. Mitchell, J. Brewster McCollum, John Dean, and D. Newlin Fell; Prothonotaries, Charles S. Greene, William Pearson, and George

Pearson; Justices of the Superior Court, C. E. Rice, J. A. Beaver, J. J. Wickham, George B. Orady, P. P. Smith, William Porter, and Dinner Beeber, appointed to take the place of Howard J. Reeder, who died at the close of 1898. N. C. Schaeffer and Judges McCollum and Smith are Democrats; the others are Republicans.

Finances.—There is a deficit of more than \$3,500,000 in the State treasury. The decision of the Supreme Court in declaring unconstitutional the direct-inheritance tax law makes quite a serious reduction in receipts. On the other hand, the new charter bonus law adds materially to the revenue. It appears that the Carnegie Company alone must pay \$666,000. There is an increase from added liquor license fees of about \$600,000 a year. The new mercantile tax law will go into effect in 1900. The receipts for the year ending Nov. 3, 1898, were \$13,235,120.97; for the ten months ending Sept. 1, 1899, they were given as \$12,927,872.

The total amount of county debts reported by the Secretary of Internal Affairs is \$68,724,651. Philadelphia reporting \$58,971,995, and Alleghany \$3,282,058.

The value of real estate, as returned by the assessors, is \$2,814,545,927; this includes property exempt from taxation. The number of taxables reported for 1898 was 1,805,496, a decrease from the number of the previous year.

Education.—The whole number of pupils in the public schools at the last biennial report was 1,143,100; the average attendance, 864,626; the total expenditures, \$19,644,401. The Legislature appropriated \$11,000,000 for the schools for the next two years, but the Governor reduced it to \$10,000,000. The act lengthening the minimum school year to seven months affects about 200,000 children.

The Governor cut also the appropriation of \$260,000 for the 13 normal schools. A bill prohibiting school directors from fixing the salaries of county superintendents below \$1,500 was vetoed, and therefore the item of \$230,000 in the appropriation bill for their salaries was reduced to \$205,000. The appropriation to the State College was cut to \$55,551.90. The trade school of the Builders' Exchange in Philadelphia was closed on account of the disapproval of the appropriation for its support.

The graduating class in the School of Medicine of the university numbered 218. In the examination by the State Board of Medical Examiners, which is a prerequisite to practice in the State, 143 of the graduates were examined and one failed, the general average being 86 per cent. Of the women's college, 28 were examined, none failed, and the average was 81.22. Of the whole number examined (425) the failures were 52, and the average 80.94.

Charities and Corrections.—The provision for the insane appears to be wholly inadequate. The condition of the old buildings at the Harrisburg Asylum is described as horrible—rooms intended for one having two to four inmates, and the floors of the halls being covered with mattresses laid close together without any aisle space between. New buildings were provided for by the Legislature of 1897, but they were not begun till April, 1899. The other institutions for the insane are also crowded. Some of the counties are building asylums under the county care act of 1897, which provides that counties providing quarters for their insane on plans approved by the Board of Charities may take their own patients and receive from the State \$1.50 a week for each. They now pay \$1 to \$1.75 to the State

for each patient. The following sums for State institutions, in the appropriation bill, were approved by the Governor: Eastern Penitentiary, \$124,000; Western, \$126,000; Morganza Reform School, \$102,000; Huntingdon Reform School, \$160,800; for the care of indigent and chronic insane, \$1,500,000; soldiers' orphans' schools, \$361,200; cottage State hospital, Blossburg, \$20,000; cottage State hospital, Mercer, \$11,000; State Board of Charities, \$27,200; Institution for Feeble-minded, Polk, \$247,425; Asylum for Chronic Insane, Wernersville, \$3,000; Western Pennsylvania Institution for Deaf and Dumb, \$100,000; Western Pennsylvania Institution for Blind, \$55,000; Oral School for Deaf-mutes, \$51,500; Working Home for Blind Men, \$25,000; Adrian Hospital Association, Jefferson County, \$12,000; Bradford Hospital, \$6,000; friendless children, city of Lancaster, \$3,000; Home for Aged and Infirm Women, Easton, \$2,000; Children's Industrial Home, Harrisburg, \$4,000; Home for Friendless Children, Reading, \$2,000; Lancaster General Hospital, \$6,000; Pennsylvania Society for Protection of Children from Cruelty, \$2,000; Homeopathic Medical and Surgical Hospital, Reading, \$5,000; Reading Hospital, \$15,000; Harrisburg Hospital, \$7,000; Children's Aid Society, \$10,000; York Hospital and Dispensary, \$5,000; Training School for Feeble-minded Children, at Elwyn, \$21,000; Columbia Hospital, \$4,000; Spencer Hospital, Meadville, \$5,000; Frederick Douglass Memorial Hospital for Nurses, \$10,000; Easton Hospital, \$12,000; Home for Friendless, Harrisburg, \$2,500; Wilkesbarre City Hospital, \$25,000; Home for Friendless, Williamsport, \$5,000; Lackawanna Hospital, Scranton, \$30,000; Institution for Deaf and Dumb, \$240,000; Oil City Hospital, \$15,000; Mary Packer Hospital, Sunbury, \$8,000; Kane Summit Hospital, \$6,000; Good Samaritan Hospital, Lebanon, \$6,000; Home for Widows and Single Women, Lebanon, \$2,000; Conemaugh Valley Memorial Hospital, Johnstown, \$2,000; hospital for middle coal fields of Pennsylvania, \$40,000; State hospital for insane, Warren, \$45,000; hospital for insane, Norristown, \$71,000; hospital for insane, Danville, \$70,700; Cottage State Hospital, Connellsville, \$15,660.

Railroads.—About 189 miles of track were added to the roads in 1899. The returns to the Bureau of Railways show an increase of 20 per cent. in the number of employees over last year. There were 206,028 employees in the service of the steam railways at the close of the year, against 245,057 in 1898. There was paid out in salaries \$143,604,542. The motive power was furnished by 10,208 locomotives, and the number of cars in service was 474,492.

The total number of passengers carried was 161,444,854, an increase of 250,922,394 over the number carried in 1898.

Of the six classes of products shipped over the lines of the companies reporting, there was increase in all except the products of agriculture and the products of animals.

The gross earnings of the various lines of the Pennsylvania amount to \$132,869,470.

The Pennsylvania, Northern Central, Philadelphia, Wilmington and Baltimore, and West Jersey and Seashore Railroads, and the Philadelphia and Camden Ferry Company, have adopted a similar plan of pension allowances, and a similar policy of age limitation, to take effect on and after Jan. 1, 1900. The basis upon which pensions will be allowed is as follows: For each year of service 1 per cent. of the average regular monthly pay for the ten years preceding retirement.

The total income of street railways in the State for the fiscal year was \$22,509,256, an increase of nearly \$2,000,000 over that of the previous year. The operating expenses of the street railways for the year were \$10,519,810. There was paid in dividends \$9,133,647. The mileage is 1,493.21; number employed, 12,506.

Business.—The records of the State Department for 1899 show a much larger volume of business than was ever before transacted during the same time in the commonwealth. More charters of every kind were issued than during any previous year. The iron and steel business comes first in importance.

Labor.—There have been strikes during the year in Philadelphia, Pittsburg, Hudson, Nanticoke, in the Dubois region, and at the Homestead works, but all seem to have been conducted peaceably. Advances in wages have been announced in some prosperous industries.

Lawlessness.—The superintendent of construction of a coke company at Dunbar was shot and killed by a negro employee, Dec. 19. The murderer was pursued by an angry mob to the mountains and killed by a shower of bullets.

The Bird Book.—The ex-State printer brought suit to compel the Superintendent of Public Printing to approve the payment of \$55,662 for work on the famous "bird book" (see Annual Cyclopædia for 1898, page 619). Payment was refused on the ground that the book was not a reproduction of the original pamphlet, as ordered, and the court sustained the defendant. This is not all the trouble over the book. It is in great demand, and the allotment of copies to members of the Senate is not satisfactory, the Attorney-General having decided that the Senate's share belongs to the Senators of 1899, while it is claimed by those of 1897, the Legislature that ordered the publication.

General Hartranft.—A portrait statue of Gen. John Frederick Hartranft, Governor of the State in 1872-78, was unveiled on the Capitol grounds at Harrisburg, May 13, with fitting ceremonies. For a sketch of the general's life, see Annual Cyclopædia for 1899, page 634.

Legislative Session.—The biennial session of the General Assembly opened Jan. 3 in the new Statehouse; it closed April 20. William P. Snyder was President *pro tempore* of the Senate, and John R. Farr was Speaker of the House. On joint ballot the Republicans had 164 votes, the Democrats 84, and the Fusionists 6.

The term of United States Senator Matthew S. Quay having expired, it was in order to elect his successor; but the Republicans were divided, and adjournment was finally taken without any choice having been reached. A large number of the Republican members stayed away from the caucus where Mr. Quay was renominated, and refused to vote for him throughout the session. The balloting began Jan. 17, and on that day he received his highest vote, 112. The seventy-ninth ballot was taken April 19. The Democrats supported George A. Jenks. The Republicans opposed to Mr. Quay voted for John Dalzell, B. F. Jones, Charles Tubbs, George E. Huff, E. A. Irvin, John Stewart, C. W. Stone, C. E. Rice, G. A. Grow, Alvin Markle, C. E. Smith, J. E. Downing, Hugh R. Eastburn, and Messrs. Widener and Riter. The contest was most bitter, and was marked by several unpleasant episodes. The rulings of the presiding officer of each House were in turn sharply criticised by resolutions adopted by vote of the Democratic and independent Republican members. A committee was appointed to investigate charges of bribery or attempts at bribery in connection

with the senatorial contest, and the passage of the so-called McCarrell jury bill. This measure was for limiting the power of the prosecution to challenge jurors, and the charge was made that it was pushed at this time in order to aid in the acquittal of Mr. Quay in the trial that was about to come on. It was eventually defeated. The investigating committee brought in a majority and a minority report. The majority report recited at considerable length the testimony taken by the committee, and said the evidence disclosed that undue means were taken by many persons corruptly to solicit members of the House, both for the purpose of influencing their official action in reference to the McCarrell jury bill and in reference to their official action to the election of a United States Senator. This corrupt solicitation, the report said, consisted of offers of money, position, advantage, and political preferment. Nine persons were named against whom the committee recommended that legal action be brought. Some of those named are Republicans and some Democrats. The minority report was substantially in accord with the majority report. A committee was appointed to bring criminal proceedings; the Governor cut from the appropriation bill the \$5,000 designated for the expense of the prosecution. Several indictments were found after the close of the session, and the date of trial was fixed for January, 1900.

After the acquittal of Senator Quay in the trial for conspiracy with his son and ex-State Treasurer Haywood and J. S. Hopkins, for alleged misuse of State funds on deposit in the People's Bank of Philadelphia, he was appointed United States Senator by the Governor the same day, April 21.

Bills were introduced for increasing the revenues, with a view to providing for payment of the deficiency of \$3,500,000 in the State treasury, but most of them failed. One that became a law was the mercantile tax bill, which goes into effect in 1900. The former law called for taxes only on sales amounting to \$1,000 or over; under this there are no exemptions. Retail dealers must pay annually \$2 and 1 mill on their gross receipts; wholesale dealers \$3 and 0.5 mill; exchange and board of trade dealers, 2.5 mills. Mercantile appraisers are to be appointed in cities and counties. In addition to the present tax on their capital stock, express companies must pay 8 mills on their gross receipts.

Amendments were made to the laws on trial of contests. A committee of five members were appointed to confer with committees from other States with a view to securing an amendment to the Constitution allowing the election of the President, Vice-President, and Senators by direct vote of the people.

A commission was appointed to investigate plans for good roads legislation and report to the next Legislature. Provision was made for acquiring toll roads and bridges by local authorities, and for construction of side paths by townships. Bicycles may not be taxed more than \$1 annually.

A general law was made for reorganizing and regulating the National Guard.

Provision was made for inspection of fruit trees, vines, etc., and the destruction of those found to be diseased. An appropriation was made to enable the live stock sanitary commission to investigate the causes, treatment, etc., of diseases of domestic animals.

Among appropriations not noted elsewhere in this article were: For the Fish Commission, \$35,000; National Guard, \$775,000; reuniforming and

equipping the National Guard, \$98,000; for investigating diseases of domestic animals, \$6,000; Board of Health and Vital Statistics, \$12,000; Game Commissioners, \$800; Supreme Court library, \$4,000; salaries of officers and employees of the Legislature, \$72,078. Other measures were:

Making it unlawful for one not admitted to the practice of law to advertise himself as a lawyer.

Allowing a wife to testify against her husband in certain cases.

Establishing civil service rules for employees of police and fire department in cities of 100,000 to 1,000,000.

Authorizing the State Board of Health to take measures for preventing contamination of water supplies of cities of 1,000,000.

Giving officers of charitable institutions power to bind out children.

Prohibiting goods, except beer, mineral water, and milk, from sale in second-hand bottles.

Creating a bureau of building inspection, and establishing a law regulating the construction of buildings in cities of 1,000,000.

For adding to forestry reservation; increasing the power of the Forestry Commissioner to buy unseated lands.

Providing for license to manufacturers of and dealers in oleomargarine, butterine, and similar products, and requiring process butter to be plainly labeled as such.

Establishing a board of examiners of accountants, and requiring public accountants to be certified.

Providing for the appointment of 30 commissioners to the Paris Exposition.

Making appropriation for a commission to co-operate with the United States Geological Survey in a survey of the State.

Requiring that in counties of 500,000 or more transfers of real estate be registered with the county commissioners before recording.

Regulating the forming of partnerships of limited liability.

Providing that real estate may be sold on judgment to collect dower interest due to widows.

Making it a misdemeanor for candidates for the office of county superintendent to pay expenses of delegates to conventions for electing, and making provision for their expenses.

Establishing a library commission of five members, to be appointed by the Governor for terms of five years. They are to have general supervision and establish traveling libraries.

Requiring insurance risks to be approved in writing by licensed resident agents.

Two constitutional amendments were passed, but the Governor did not approve them. The Philadelphia Municipal League brought proceedings to compel the Secretary of State to advertise them, as required, sixty days before election, on the ground that the Governor's approval was not necessary. The judge refused the mandamus, holding that the approval of the Governor is required, as for any other act of the Legislature. One of the amendments proposed was to regulate the registration of electors, and the other provided for greater secrecy in voting, allowing the introduction of voting machines.

The law of 1897 providing for a direct inheritance tax of 2 per cent. on personal property above \$5,000 was declared unconstitutional, on the ground that the exemption violates the provision that taxes must be uniform on the same class of property. The law providing that parties to civil suits, except those acting in a fiduciary capacity, may dispense with jury trial, and submit to de-

cision of the court, was declared in violation of the Constitution in so far as the exemption of fiduciaries is concerned.

Trial of Matthew S. Quay.—The trial of Senator Quay on one of the indictments in which he was charged with conspiring with John S. Hopkins, B. J. Haywood (then State Treasurer), and R. R. Quay, his son, to use State money unlawfully (see *Annual Cyclopædia* for 1898, page 621) took place in April, and resulted in acquittal. Mr. Haywood, who was also under indictment, died Feb. 23.

Political.—A State Treasurer, two justices of the Supreme Court, and a justice of the Superior Court were to be chosen in November.

A Democratic State convention was held in Harrisburg, June 14-15. The resolutions were in accord with the position of the party on national issues. In regard to State affairs, they denounced the unnecessary increase of offices and salaries, favored revision of the tax laws, fair assessment of franchises, and ballot reform; and said further: "We denounce the indecent haste displayed in the disrespect shown the people by the Governor of the State in the appointment to the vacancy in the United States Senate of M. S. Quay, who, to prevent a full investigation before a jury of his country, pleaded the statute of limitations against the most serious charges of crime. In this appointment, in the unwarranted reduction of the appropriation to public schools, and his unauthorized veto of the constitutional amendment resolution he has violated the Constitution, usurped authority nowhere granted him, and perpetrated wrongs against the people and the State that demand his condemnation."

The nominations were: For Judge of the Supreme Court, S. Leslie Mestrezat; for Judge of the Superior Court, Charles J. Reilly; for Treasurer, William T. Creasy.

The Republican convention met in Harrisburg, Aug. 24. The platform approved the administrations of President McKinley and Gov. Stone, commended the State executive for his appointment of Mr. Quay to the United States Senate, and pledged the party to a reduction in the expenditures of the State government. The so-called anti-Quay delegates objected to the resolution commending Mr. Quay and thanking the Governor for appointing him after the Legislature had failed to elect a Senator; and, as the resolutions were voted upon as a whole, they voted against them. The ticket follows: For Judge of the Supreme Court, J. Hay Brown; for Judge of the Superior Court, Josiah R. Adams; for Treasurer, James E. Barnett. J. R. Adams withdrew Oct. 19, and Judge Mitchell was made the nominee.

The People's party nominated J. H. O. Stevenson for the Supreme Court, N. I. Atwood for the Superior Court, and Justus Watkins for Treasurer.

The Prohibitionists named Agib Ricketts for the Supreme Court, H. L. Robinson for the Superior Court, and John M. Caldwell for Treasurer.

The Socialist-Labor party filed the following nominations: For the Supreme Court, Edward Kuppinger; for the Superior Court, Harry C. Parker; for Treasurer, Hermann Kreimer.

Nominations were made also by the Union Reform and Antitrust parties.

The election resulted in the success of the Republican ticket. The vote for Treasurer stood: Barnett, Republican, 438,000; Creasy, Democratic, 327,512; Caldwell, Prohibitionist, 18,072; Watkins, Populist, 1,988; Clark, Socialist-Labor, 375;

Wood, Union Reform, 506; Creasy, Antitrust, 657.

As there were two vacancies on the Supreme Court bench to be filled, owing to the death of Judge H. W. Williams, Jan. 25, and only one could be voted for by each elector, the nominations of the two larger parties were equivalent to election; and J. Hay Brown and S. Leslie Mestrezat are therefore justices of the court.

PERSIA, an empire in central Asia. The power of the Shah, or Emperor, is absolute in so far as he conforms his acts to the precepts of the Koran and the principles of the Mohammedan religion. He has full control of the public purse and the power of life and death over his subjects. The reigning Shah is Muzaffereddin, born March 25, 1853, who succeeded his father, Nasreddin, May 1, 1896. The heir apparent, called the Valiahd, is Mohammed Ali Mirza, born in 1872. The Grand Vizier at the beginning of 1899 was Mirza Ali Ashgar Khan, appointed Aug. 11, 1898. The ministers were as follow: Minister of the Interior, Amin el Mulk; Minister of Foreign Affairs, Mushir ed Dowleh; Minister of War, Amir Khan Serdar; Minister of Finance, Nizam es Sultaneh.

Area and Population.—The area of Persia is about 628,000 square miles. The population is believed to be about 9,000,000. The chief cities are Teheran, the capital, with about 210,000 inhabitants; Tabriz, with 180,000; and Ispahan, with 80,000.

Finances.—The revenue is about 54,500,000 krans a year, equal at the present price of silver to \$7,500,000. About 18,000,000 krans are expended on the army, 10,000,000 krans for pensions, 5,000,000 krans for the Shah's household, 3,000,000 krans for allowances to princes, 600,000 krans for allowances to the royal Kajar tribe, 800,000 krans for foreign affairs, 500,000 krans for colleges, 1,500,000 krans for civil administration, 2,600,000 krans for local government, and the remainder is paid into the Shah's treasury. About 15 per cent. of the revenue comes from customs and 3 per cent. from posts and telegraphs, fisheries, mining concessions, etc., while 82 per cent. is assessed on towns, villages, and districts, and collected almost entirely from the laboring population.

The Army.—The standing army is about 24,500 strong. The effective war strength of the Persian army is estimated at 35,400 trained infantry, 3,300 irregular cavalry, 2,500 artillery, a camel corps of 90 men, 100 engineers, and 12,130 untrained levies.

Commerce and Production.—Wheat, barley, rice, fruit, and gums are staple products of Persia, and silk, of which 606,100 pounds are produced annually, besides 390,000 pounds of cocoons, valued at \$160,000, which are exported to Europe. Opium has been an important article of export for ages, and the annual shipments to Europe and China are now about 13,000 cases, valued at \$3,750,000. The annual exports of tobacco are 5,500 tons; of cotton, 9,934,400 pounds; of wool, 7,714,000 pounds. Persian rugs and carpets are sought for the European and American market. The mineral resources of Persia are great, but the mines supply only local needs. Copper, lead, silver, tin, gold, iron, manganese, cobalt, nickel, and sulphur are found, and near the south coast petroleum is found in abundance. The turquoise mines of Persia have supplied the world from ancient times, and about \$40,000 worth of the gems are sent out from Khorassan every year. Dates are the most important of all the exports, opium, wool, cotton, silk, carpets, pearls, tur-

quoises, and rice following in their order. The imports are cotton cloth, woollens, glass, carriages, sugar, petroleum, tea, coffee, drugs, etc. The value of the foreign trade is about \$45,000,000 a year.

By the new Russian customs regulations of 1895 a large part of the British and Indian trade with Khorassan has been supplanted by the trade in competing Russian products brought by the Transcaspian Railroad. When that railroad was completed to Samarcand in 1888 the Persian Government was induced to build a wagon road from Meshed to the frontier to meet one constructed by the Russians from the frontier to Ashkabad, the capital of the Transcaspian province, the total distance between the two towns being 160 miles. Before that mainly British goods were to be found in the bazaars of Meshed and other towns of Khorassan. Prints from the new cotton mills of Moscow and other Russian manufactures began to compete with them, and the trade was encouraged by subsidies given by the Russian Government. The British merchants nevertheless held their own, because the main part of their trade, which went by sea from Indian ports to Bandar Abbas, and thence by a road 870 miles in length, a forty days' journey, to Meshed, was the transit trade in tea destined for the markets of Bokhara and the other newly acquired Russian provinces of central Asia. In 1895 the Russian Government established customhouses along the frontier of Khorassan, and diverted the trade in green tea, constituting two thirds of the total British trade, from this route to that of the Transcaspian Railroad by admitting this tea when dispatched in transit to central Asia by way of the Black Sea, over the Batum and Baku route, at the same tariff rate as was levied on the frontier of Khorassan, which is three eighths of the regular Russian duty on tea. Russian imports into Khorassan increased in two years 56 per cent., while British imports in 1897 were 71 per cent. below those of 1895. The Indian Government has begun to make a caravan road from Quetta to Meshed, 1,090 miles. A road in northern Persia from Resht, on the Caspian, to Teheran has been built at great expense by Moscow merchants and the Russian Government. By agreement with Russia the Persian Government can build no railroads nor grant concessions for railroads before 1905. Russian sugar, cotton goods, glass, earthenware, candles, petroleum, and other imports have driven all others out of the markets of northern Persia. In the south of Persia the British still retain the bulk of the commerce. The total value of the commerce of the Persian Gulf in 1898 was estimated at £2,090,191 for imports and £1,217,804 for exports. The imports through Persian ports were only £148,132, and the exports £90,336. The imports from India were £995,336, and exports to India £483,286; the imports from Arabia were £202,127, and exports to Arabia £226,006; the imports from China were £13,723, and exports to China £212,047; the imports from England were £539,238, and exports to England £127,470. The exports of opium by the southern ports and land frontiers were £246,034 in value; of pearls, £241,938; of rice, £71,331; of shells, £52,738; of carpets, £48,639; of wool, £43,099; of dates, £39,366; of cotton cloths, £37,537; of almonds, £28,715; of drugs, £24,264; of tobacco, £23,192; of cereals, £20,733; of skins, £18,675; of gum, £14,927.

PERU, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 48 members and a House of Representatives containing 108. Every adult male citizen who is either married, master of a

trade, an owner of property, a taxpayer, or able to read and write has a vote for the members of the parish electoral colleges, who elect delegates to the provincial electoral colleges, who in turn elect the Representatives of the province in Congress, in the proportion of 1 to every 30,000 inhabitants or fraction exceeding 15,000, and, in conjunction with the other provincial colleges, the Senators representing the department, two if the department contains only two provinces and one more for every additional two provinces. Members of both houses are elected for six years, one third retiring every two years. The President is elected for four years by the direct vote of the people. Nicolas de Pierola was elected for the term ending Sept. 10, 1899. The Council of Ministers in the beginning of 1899 was composed as follows: President of the Council and Minister of Justice, Worship, and Public Instruction, Dr. José J. Loayza; Minister of Foreign Affairs, M. F. Porras; Minister of the Interior and Police, J. M. de la Puente; Minister of War and Marine, M. J. Cuadros; Minister of Finance and Commerce, I. Rey.

Area and Population.—The area of Peru is 463,747 square miles, not including the province of Tacna, area 8,685 square miles, occupied by Chili for twelve years under an agreement that the people should decide by a plebiscite whether the province should belong to Chili definitively or be restored to Peru. The population of Peru was 2,629,603, comprising 1,323,080 males and 1,306,523 females at the last enumeration, which was in 1876. This did not include uncivilized Indians, the number of whom is estimated at 350,000. The estimated population in 1896 was 4,559,550. Lima, the capital, had 103,956 inhabitants in 1891. About 20 per cent. of the Peruvians are of Spanish descent, 57 per cent. Indians, and 23 per cent. of mixed race.

Finances.—The budget for 1898 made the revenue 10,785,850 soles, the sole being equal to about 50 cents, and the expenditure 11,488,240 soles. Of the revenue 6,320,000 soles came from customs, 2,167,410 soles from taxes, 1,130,440 soles from the salt monopoly, 272,000 soles from posts and telegraphs, and 896,000 soles from various sources. Of the expenditures 364,370 soles were for Congress, 2,656,200 soles for the Ministry of the Interior, 644,760 soles for the Ministry of Foreign Affairs, 1,265,450 soles for the Ministry of Justice, 3,086,000 soles for the Ministry of Finance, 3,214,320 soles for the Ministry of War and Marine, and 257,140 soles for the Ministry of Public Works. The revenue for 1897 was estimated at 10,721,520 soles, and expenditure at 11,308,240 soles. There was a deficit of 876,588 soles at the end of 1896, and to cover this and the anticipated deficits of 1897 and 1898 the Government was authorized to raise 1,500,000 soles, and to arrange for the payment of this loan with the company which collects the taxes. The total internal debt in 1898 was estimated at 47,591,760 soles. The foreign debt consists of a 6-per-cent. loan of £11,141,580 and a 5-per-cent. loan of £20,437,580 raised in England in 1870 and 1872 for the construction of railroads, on which the payment of interest was suspended in 1876. With accumulated interest the debt amounted to £64,600,000 in 1890, when an arrangement was made to turn over to the bondholders for sixty-six years all the railroads, mines, guano deposits, and lands belonging to the Government. The budget estimate of revenue for 1899 was 11,852,000 soles, and of expenditure 12,600,000 soles.

The Army.—The regular army consists of 2,086 infantry, 622 cavalry, and 449 artillery;

total, 3,157 officers and men. The gendarmery numbers about 2,500 men.

Commerce and Production.—The staple products of agriculture are cotton, coffee, and sugar. The export of cotton in 1897 was 5,586 tons; of coffee, 1,239 tons. The production of sugar was 105,000 tons; of rice, 4,222 tons. Of cocaine 4,206 kilogrammes and of coca leaves 493,679 kilogrammes were exported, valued together at 1,173,066 soles. Indian corn is the common food crop. There are 187,000 acres of sugar lands along the coast, of which 95,000 were planted in 1897. In the public lands transferred to the Peruvian Corporation, 5,000,000 acres in extent and largely covered with forest, colonies have been established for the cultivation of coffee. Coca is cultivated in Otuzco province, where there are 2,700,000 coca trees. Tobacco and cocoa are other cultivated products, and the forests yield rubber, dyes, cinchona, and other medicinal plants. There are valuable guano deposits on the islands off the coast, which were seized by Chili after the war between the two republics, but have been given up to the Peruvian Corporation. Gold is found in nearly every province, and large quantities have been mined, but now the industry is chiefly confined to washings by the natives. The silver mines at Cerro de Pasco, Caylloma, Castrovireina, and Recuay are still productive. The value of the silver exported in 1897 was 4,580,000 soles; of silver sulphides, 3,500,000 soles; of various ores, 2,250,000 soles. The exports of gold, copper, and lead were 700,000 soles. Other mineral products are zinc, quicksilver, salt, and sulphur. Coal and petroleum are found also.

The total value of imports in 1897 was 18,004,048 soles; of exports, 31,025,382 soles. The greater part of the trade is with Great Britain and Germany. Sheep and alpaca wool of the value of £300,759 was imported into Great Britain from Peru in 1897; also sugar of the value of £425,661, raw cotton of the value of £157,213, and copper and copper ore of the value of £105,790. The principal articles of import are cotton goods, woollens, iron goods, and machinery.

The values in soles of imports from and exports to different countries and the port of Iquitos in 1897 were reported as follow:

COUNTRIES.	Imports.	Exports.
Great Britain.....	6,832,000	15,648,000
Chili.....	1,207,000	5,753,000
Germany.....	3,060,000	2,822,000
Iquitos.....	1,875,000	2,857,000
United States.....	1,647,000	1,898,000
France.....	1,307,000	1,181,000
Ecuador.....	73,000	1,208,000
Italy.....	653,000	36,000
China.....	568,000	33,000
Belgium.....	587,000	9,000
Colombia.....	84,000	452,000
All other countries.....	261,000	130,000
Total.....	18,004,000	31,025,000

Navigation.—There were 492 vessels, of 600,049 tons, entered at the port of Callao in 1897, and 503 vessels, of 618,677 tons, cleared, exclusive of vessels under 50 tons, of which 889, of 10,966 tons, were entered. At Trujillo the number entered of vessels above 50 tons was 284, of 446,520 tons.

The merchant marine consisted in 1896 of 36 vessels over 50 tons, having a tonnage of 9,953 tons, and 96 smaller vessels, of 1,246 tons.

Railroads, Posts, and Telegraphs.—The railroads have a total length of 924 miles, of which 800 miles belong to the Government and are being operated and extended by the Peruvian

Corporation. The cost of the railroads, including those built on the territory ceded to Chili, was \$180,000,000. The Government telegraphs have a total length of 1,400 miles, and those of the Peruvian Corporation a length of 533 miles. The number of dispatches in 1897 was 121,492. There are 2,300 miles of telephone wire.

The post office in 1897 forwarded 12,760,771 pieces of mail matter. The revenue was 259,478 soles; expenditure, 261,360 soles.

Politics.—In the election which took place in May, 1899, Eduardo L. de Romaña was elected President of the republic. Dr. Isaac Alzamora was elected first and Federico Bresani second Vice-President. A revolutionary movement was started by Col. Vizcarra, in consequence of which the Government closed temporarily the port of Iquitos. The insurrection was suppressed without difficulty, as it did not spread into other provinces. The Congress was opened by the retiring President on July 28. The budget for 1900 showed ample revenue to cover expenditure. Peru accepted the Washington postal convention. At the close of an exciting session on Aug. 14 the returns of the presidential election were approved. President Romaña was installed on Sept. 8. He appointed the following Cabinet: Minister of Foreign Affairs, Dr. Manuel Maria Galvez; Minister of Justice, Dr. Elodoro Romero; Minister of the Interior, Col. Domingo J. Parra; Minister of War, Capt. Camillo N. Carrillo; Minister of Finance, Mariano A. Belaunde; Minister of Public Works, Dr. Carlos Basadre Forero.

PHILIPPINE ISLANDS, an archipelago in the Pacific Ocean, formerly a colony of Spain, ceded to the United States by the treaty of peace signed at Paris on Dec. 10, 1898.

Area and Population.—The land area is estimated variously between 115,000 and 140,000 square miles; the total population between 8,000,000 and 10,000,000. A partial enumeration in 1887 gave 3,029,423 males and 2,955,701 females, not including 1,000,000 or more unsubjected natives. There are over 1,400 islands, including a great number of bare volcanic rocks. They extend from 5° to 21° of north latitude. The temperature ranges between 61° and 97° F. Luzon, the largest island, contains about 44,400 square miles; Mindanao, which is much less thickly peopled, 34,000; Samar, 4,800; Panay, 4,700; Mindoro, 4,000; Leyte, 3,800; Negros, 3,300; Cebu, 2,400. The Spaniards, who have been in possession since 1565, have imposed their religion and laws upon the people. There are more than 30 distinct races and languages. The bulk of the people belong to the Malay stock, which has largely displaced the Negrito aborigines. Chinese and Japanese traders and settlers have from early times infused their blood into that of the native races in the districts where they have resided. There is also some admixture of Spanish blood. The Spanish planters, merchants, and priests number altogether about 8,000; Chinese colonists perhaps 70,000. Some parts of the islands, still inhabited by semisavage tribes, have never been explored. The population of Manila, the capital and chief seaport, is about 250,000. Lipa had 43,408 in 1887; Bauang, 35,598; Batangas, 35,587; Laoang, 30,642.

Finances.—The official Spanish figures for the revenue in 1897 made the total receipts \$17,474,120, of which \$8,496,170 came from direct taxation, \$6,200,550 from customs, \$1,222,000 from monopolies, opium, etc., \$1,000,000 from lotteries, \$257,100 from rent of Government property, and \$298,300 from various sources. The total expenditure was given as \$17,293,889, of which \$3,566,528

were for the naval force, \$6,042,449 for the army, \$2,198,350 for government, \$1,393,184 for the interior, \$1,896,277 for justice, \$615,198 for education, \$74,000 for foreign affairs, and \$1,507,900 for the debt. The Spanish Government issued \$40,000,000 of bonds in 1897, which were guaranteed on the customs.

Commerce and Production.—The soil of the islands is of unsurpassed fertility, and agriculture is the main occupation of the people, yet only a ninth part of the available land is cultivated. The principal products are rice, maize, hemp, sugar, tobacco, cocoanuts, and cacao. Coffee was once a valuable crop, but insects have destroyed the trees. Cotton was also much grown formerly, and woven into cloth for domestic use until the British factory-made cloths were sent in at prices so low as to drive out hand-woven fabrics. Rice and corn are grown in Luzon and Mindoro in barely sufficient quantities to feed the people of the islands. The rice crop is about 765,000 tons, in addition to which 45,000 tons were imported from Tonquin and the Straits Settlements in 1894. There were also imported 8,669 tons of flour, two thirds from China and the rest mostly from the United States. Cacao is cultivated in Mindanao and other southern islands. The Visayas, comprising Cebu, Panay, Samar, Negros, Leyte, and Bohol, produce most of the sugar, of which 3,233,483 piculs of 140 pounds were exported in 1897, two thirds of it to China and Japan, the rest mainly to Great Britain and Australia. About a tenth of the crop is consumed in the islands. The export of hemp in 1897 was 1,804,576 piculs, of which nearly 44 per cent. went to the United States, 40 per cent. to Great Britain, and the rest to China and Japan, Australia, and the Continent of Europe. Hemp is grown in southern Luzon, Mindoro, the Visayas, and Mindanao, and is exported in bales from Manila. Tobacco is raised in all the islands, but the southern part of Luzon produces the greatest quantity and the finest grades. It is used in great quantities by the people, both men and women being smokers, but the best quality is reserved for export. During the rebellion in 1897, when the tobacco factories of Manila were short of hands, the exports of leaf tobacco were much larger than usual; those of cigars smaller. Of leaf 309,585 quintals were exported, of which 245,436 quintals went to Continental ports of Europe, principally to Spain, and 51,635 to Great Britain, nine tenths of it to be exported in a manufactured form to Sweden and other countries. The number of cigars shipped abroad in 1897 was 169,465,000, of which 58,420,000 went to China and Japan, 37,310,000 to India and the Straits Settlements, 30,500,000 to Continental Europe, 24,290,000 to Great Britain, 16,300,000 to Australia, 2,643,000 to the United States and Canada. Cocoanuts are grown mostly in southern Luzon. Copra is exported, and many uses are found for the various products of the coconut palm. Exports of hemp, sugar, tobacco, cigars, and sapan wood declined in 1898, but not so much as might have been anticipated from the disturbed state of the islands. China and Japan took more than half the sugar, Great Britain about a fourth, and the United States less than a sixth, the total quantity having been 177,695 tons, the bulk of which was shipped from Iloilo. The export of hemp was 794,206 bales, going mostly from Iloilo since the blockade of Manila, less than half to England, nearly the whole of the remainder to the United States. The import trade was not reduced in volume by the hostilities. The preferential tariff enjoyed by Spanish

goods having been abolished, the monopoly that Barcelona manufacturers were acquiring ceased, and English, American, and German goods came in. The blockade of Manila led to a great increase in the trade of the port of Cebu, mostly with Hong-Kong. The mineral wealth of the islands is supposed to be great, but nothing has been done to develop it on a commercial scale. There are deposits of coal, petroleum, iron, lead, sulphur, copper, gold, and platinum. The pearl fisheries of the Sulu Islands are valuable.

The value of hemp exports in 1897 was \$18,040,760 in silver; exports of sugar, \$12,928,000; of copra, \$4,462,920; of leaf tobacco, \$2,786,200; of cigars, \$1,694,600; of native fabrics, etc., \$1,000,000; of indigo, \$107,000; of coffee, \$96,100; of rope, \$63,400; of dyewoods, \$49,100; of guma, \$47,500; of skins, \$38,900; of pearl shells, \$27,800. The exports of coffee formerly amounted to \$4,000,000 a year. The imports consist of cotton goods, hardware, coal, kerosene, flour, and other foodstuffs. The foreign trade has been conducted mainly by British, German, American, and Belgian merchants. The currency of the country consists of Mexican dollars, of which the amount in circulation is estimated at \$25,000,000, not including \$6,000,000 in lighter dollars coined by the Spanish Government in 1897. There is about \$10,000,000 in subsidiary coins, and the Philippine Bank has \$2,500,000 of notes in circulation. Since the occupation by the United States army American gold has been introduced.

The railroad running north from Manila to Dagupan has a length of 120 miles. The cables from Manila to Hong-Kong and Iloilo and the land and submarine lines connecting the various islands have a length of 1,592 miles. The number of telegraph messages in 1894 was 157,573. The number of letters and postal cards in the internal service was 4,684,606; in the foreign service, 2,544,581. The commercial prospects of the archipelago are thus depicted in the preliminary report of the Philippine Commission:

"Rich in agricultural and forest products, as well as in mineral wealth, commanding in geographical position, the Philippine Islands should soon become one of the great trade centers of the East. New steamship lines, established since the American occupation, already connect Manila with Australia, India, and Japan. She will become the natural terminus of many other lines when a ship canal connects the Atlantic with the Pacific, and yet others will inevitably be attracted by the development of the Philippine coal deposits. The building of a short railway has recently developed the rice crop of the archipelago. It can not be doubted that under an efficient administration of domestic affairs commerce will greatly increase, and the United States will reap a large share in this. Manila, with the immunity which it has thus far enjoyed from that terrible pest, the bubonic plague, should become a distributing center for China, Siam, the Straits Settlements, Tonquin, Annam, and Australia. Our control means to the inhabitants of the Philippines internal peace and order, a guarantee against foreign aggression and against the dismemberment of their country, commercial and industrial prosperity, and as large a share of the affairs of government as they shall prove fit to take."

The Filipino Hostilities.—An insurrection against the Spaniards had broken out previous to the departure of Admiral Dewey's fleet from Hong-Kong for Manila, and Emilio Aguinaldo, the leader in the rebellion of 1896, was taken to Cavité on board the McCulloch and allowed to

land there on May 10, 1898, in order that he might organize an army for the purpose of weakening the Spanish power of military defense; yet no alliance of any kind was entered into with him by Admiral Dewey, nor was any promise of independence made to him then or at any time. When the Filipino insurgents began to attack the Spaniards their numbers were rapidly augmented by the militia, who had been given arms by the Spaniards to fight the Americans, all of whom now revolted and joined the rebels. The revolutionary forces rapidly made themselves masters of the whole island of Luzon, capturing all the Spanish garrisons and making captives of Spanish civilians and friars, excepting those that escaped to Manila, where the Spanish garrison remained quiet, closely invested by the intrenched line of insurgents, among whose officers were engineers and tacticians of the best European schools. All the Filipinos who had served in the Spanish army joined Aguinaldo's army, and these had already been taught to build shell-proof intrenchments, the trenches 5 feet deep, the parapets an equal height above the ground, all battened with walls of bamboo. On the arrival of the first detachment of American troops under Gen. Anderson Aguinaldo was requested to evacuate Cavité. When he did so he issued a proclamation promising independence to the Philippine people in the name of the United States Government. He had already declared himself provisional President of the Philippine Republic and Dictator, and had appointed a civil cabinet. The landing of American troops at Paranaque on July 15 would have been prevented by the revolutionary leader if he had had arms, and he determined to wait for the fall of Manila, enter the city with the American troops, secure the arms of the Spanish soldiers, and then force the Americans to evacuate the island. Meanwhile he incited the natives to hate the Americans and to place all possible obstacles in their way. When Gen. Greene camped on the shore before Manila and Gen. Merritt, avoiding all official communications with Aguinaldo, let him know that he wanted his front clear, the insurgents moved aside, though not without a fresh diplomatic effort of Aguinaldo to be recognized as an ally and head of a *de facto* Government.

The commander of the Spanish garrison and the American commander had a tacit understanding that the Filipinos should not be allowed to sack the doomed city. Hence the town was surrendered quickly after the attack began, before the Filipinos had begun to move, and the American troops rushed in and occupied every point of ingress and aided the Spanish soldiers in repelling the belated advance upon their intrenchments. Aguinaldo claimed the right to occupy the city and establish his headquarters in the palace of the captain general. He demanded possession of the church treasures, part of the captured public moneys, and the arms of the Spanish prisoners as his share of the spoils. When his demands were refused the feeling between the Americans and the insurgents became more strained, and all kinds of abuses were practiced by the insurgent troops, who committed assaults and robberies, and under the order of Gen. Pio del Pilar, the organizer and chief of the insurrection previous to the arrival of Aguinaldo, they kidnaped natives who were friendly to the Americans, and either killed them or carried them off into the mountains.

The terrorism practiced for the purpose of preventing affiliation with the Americans not only operated on the ignorant masses, but closed the

mouths of the intelligent, and the anti-American feeling was fed by the venal native newspapers. Sandico, one of the most ambitious of the revolutionary politicians, organized people's clubs in Manila and the neighboring towns and villages, the secret object of which was to foster hostility to Americans and cultivate national aspirations among the Tagals. The influence of these clubs was far reaching, and from their membership was recruited later the local militia, which was to attack the Americans from within Manila when the regular insurgent troops should begin an attack outside. The Filipino Congress decreed that every male above the age of eighteen and not in the Government service should serve in the revolutionary army. Meanwhile every blacksmith in Manila was kept busy forging bolos.

The conduct of the insurgent troops became so threatening and insolent that Gen. Merritt, whose force was very small compared with them, ordered their forces back. They complied in sullen anger, and Aguinaldo removed his seat of Government from Bacoor to Malolos, where the so-called Filipino Congress was convened. An open rupture with the Americans was not desired, because an American protectorate was deemed necessary for the oligarchy in republican guise which the half-breed Tagal politicians desired to set up. The future of the Philippines was still under discussion in the Peace Conference at Paris, and the leading Filipinos, fearing that the United States would withdraw from the islands, asked Aguinaldo to forward a letter to President McKinley praying him not to abandon the Filipinos, and asking him to define the form of government that he wished to establish. The Filipino Cabinet and many members of the Congress united in this request, but Aguinaldo kept back the letter on various pretexts. His ambition grew with the growth of the army. He endeavored to get Congress to transfer to him the power of declaring war, and urged an issue of bonds sufficient to provide \$1,000,000 for the purchase of arms and ammunition.

Aguinaldo and the military party had a plan for expelling the small American army by a single stroke. Gen. Pio del Pilar was to direct the rising in the city of the 10,000 militia, armed for the most part with bolos, which was to be simultaneous with a general attack of the investing army. No definite date was fixed, because it was desired that the first overt act of hostility should come from the Americans, so as to give the revolutionary Government a better standing in the eyes of foreigners. Whenever such act should occur the signal for an advance all along the line would be given by the sending up of rockets. Hence persistent attempts were made to provoke the American soldiers to fire. The insurgents were insolent to the sentries, and made continuous efforts to push them back and advance their own lines farther into the city. During this long and trying period of insult and abuse heaped upon the American soldiers constant submission was the only means of avoiding an open rupture. The Filipinos came to believe that the Americans were cowards, and boasted openly that they were afraid of them. The commanding general with great tact and patience held his troops in check. At last he made a final effort to preserve the peace by appointing a commission to confer with a similar body appointed by the commander in chief of the revolutionary army and arrive at a mutual understanding of the intent, purposes, aims, and desires of the Filipino people and of the people of the United States. The Filipino commissioners were either

unable or unwilling to define the aspirations of their people, and the conference broke up without results. Before they departed they were assured that no hostile act would be inaugurated by the United States troops.

The moment for the projected attack was at hand. Filipinos in the city who were on the side of the revolutionists were secretly warned to take refuge outside. At the same time the affronts offered to the outposts became more flagrant. The insurgents laughed at the orders of the sentries, menaced and insulted them, and actually assaulted the soldiers of the Nebraska regiment holding the east line, trying to push them back by force, so as to advance their line. On the evening of Feb. 4 an insurgent officer with a detail of men attempted to pass the sentinel guarding the west end of the San Juan bridge, who drove them back without firing. Later a considerable body of insurgents made an advance on the South Dakota outposts, which fell back rather than fire. About the same time the insurgents appeared in force at the east end of the San Juan bridge in front of the Nebraska regiment, and a lieutenant, who for several nights had attempted to force back the outpost and post his guard within the line, advanced with a detail, paying no attention to the challenge of the sentinel. Crayson, the sentinel, as they rushed upon him in the dark, fired his weapon, killing the officer, and the men returned the fire and then retreated. Immediately rockets were sent up, and the Filipinos began firing along the entire line.

As the result of the fighting of Feb. 5, when the Americans attacked the insurgents along the whole line and drove them out of their trenches with great slaughter, the United States forces within a few days occupied a line extending from Pasai on the south to Caloocan on the north, and extending far enough eastward to protect the water supply of Manila. Then came the attempted rising in the city on Feb. 22, when 500 insurgents entered and set fire to the district of the city known as Tondo. It was planned that the local militia should join in the attack. All the whites were to have been massacred, and some of the more fanatical of the revolutionists included the Spanish mestizos in the list of the proscribed. The prompt and vigorous action of Gen. Hughes, the provost marshal, rendered abortive the intended uprising, but for weeks a reign of terror prevailed. Incendiary fires occurred daily. The streets were almost deserted, the people remaining shut up in their houses, except those who had fled, comprising half the native population. Very few Filipinos had the courage to come out openly in favor of the Americans for fear of assassination, but those who did included among their number some of the best men of the city.

The American troops occupied only Manila when the army of Aguinaldo, which invested the city, began hostilities on Feb. 4, 1899. The Americans immediately took the offensive, and after clearing the vicinity of the rebels, killing about 500, wounding 1,000, and taking 500 prisoners in several days' fighting, with a loss of 57 killed and 215 wounded on their side, they began a campaign for the possession of the railroad line, carrying on at the same time desultory operations against the rebels south of Manila, who were cut off from Aguinaldo's army in the north when American gunboats were placed in Laguna de Bay and military posts stretched across the narrow part of the island. The Filipinos suffered heavily in the battle of Caloocan on Feb. 10.

Gen. MacArthur conducted a vigorous campaign against Aguinaldo's main army, which contested his advance from behind breastworks thrown up in endless succession athwart the railroad track.

Gen. Otis began the campaign with 13,000 men. Re-enforcements soon brought up his force to 22,000, and later to 40,000; but the constant withdrawal of regiments to be discharged and sent home kept the available fighting force down to about 30,000 on the average. The commanding general was handicapped by the fact that he had to conduct the campaign with volunteers, whose time expired during the operations. Nevertheless, his troops were uniformly successful in their attacks, for the Filipinos, who in their rebellions against Spain engaged readily in a hand-to-hand conflict with the Spanish soldiery, had such respect for the fighting qualities of the Americans that they made no attempts to break their lines, but invariably gave way after inflicting what damage they could from their rifle pits. The losses they inflicted were insignificant compared with those that the Spanish armies had suffered at their hands. On the other hand, their own casualties, except in the first bloody battles, when they dashed themselves recklessly against the American lines, hoping to win a victory, as they had occasionally over Spanish troops, were slight compared with those they had suffered in their campaigns with Spanish commanders, who aimed to strike terror by giving no quarter, slaying even the women and children, and who made their rear secure from treacherous attacks by stripping the country of inhabitants as they advanced or by compelling them to remain in their villages, killing all who were found on the roads without a pass. The treachery of the Filipinos, who hid their arms when the Americans occupied their country, and afterward attacked small bodies of men and supply trains moving along the line of communications, made the American soldiers more ruthless, but the orders to spare all non-combatants subjected them to this constant danger in the rear. The animosity of the Tagals, who alone formed the strength of the revolutionary army, was greater against the Americans than it ever had been against the Spaniards, who had ruled them and lived among them for ages, and impressed their customs, habits, and ideas upon the country. The report of the Philippine commissioners vindicates the American soldiers:

"We were fortunate in witnessing some of the many brave deeds of our soldiers. All that skill, courage, and patient endurance can do has been done in the Philippines. We are aware that there are those who have seen fit to accuse our troops of desecrating churches, murdering prisoners, and committing unmentionable crimes. To those who derive satisfaction from seizing on isolated occurrences, regrettable, indeed, but incident to every war, and making them the basis of sweeping accusations, this commission has nothing to say. Still less do we feel called upon to answer idle tales without foundation in fact. But, for the satisfaction of those who have found it difficult to understand why the transporting of American citizens across the Pacific Ocean should change their nature, we are glad to express the belief that a war was never more humanely conducted. Insurgent wounded were repeatedly succored on the field by our men at the risk of their lives. Those who had a chance for life were taken to Manila and tenderly cared for in our hospitals. If churches were occupied, it was only as a military necessity, and frequently after their use as forts by the insurgents had made it necessary to train

our artillery upon them. Prisoners were taken whenever opportunity offered, often only to be set at liberty after being disarmed and fed. Up to the time of our departure, although numerous spies had been captured, not a single Filipino had been executed. Such wrongs as were actually committed against the natives were likely to be brought to our attention, and in every case that we investigated we found a willingness on the part of those in authority to administer prompt justice."

The fact that there was a party in the United States opposed to the assertion of American sovereignty over the Philippine Islands inspired Aguinaldo with the constant hope that his Philippine Republic would in the end be recognized, and the expectation of establishing their dominion as the dominant race throughout the archipelago kept the Tagals generally faithful to him. It was the Chinese mestizos, the wealthiest class in the islands, who furnished the means and most of the leaders for the revolution,* through which they aimed to become the ruling caste in a military oligarchy and occupy a position similar to that formerly held by the Spaniards.

While the American army was still confronting the Spaniards in Manila Aguinaldo sent garrisons to seize the chief posts in Panay, Cebu, Leyte, and other islands, and impose taxes, which the people paid unwillingly. He made allies of the bandits in the mountains, who lived by levying tribute on the planters. When the American naval force was sufficiently organized vessels were sent with troops to take possession of the southern islands. The military force under Gen. Miller took Iloilo, after overcoming the resistance of the natives, on Feb. 11. On March 27 a naval expedition was sent to Cebu, where the natives welcomed the American flag. Negros also hailed American rule with joy. Smaller islands were occupied subsequently, and a force was dispatched to Mindanao, where the natives were besieging Spanish garrisons that could not get away.

The strong anti-American feeling was entirely confined to the Tagal provinces. These are Manila, Cavité, Laguna, Batangas, Morong, Bulacan, Nueva Ecija, Principe, Infanta, and Zambales, estimated to contain a total population of 1,500,000. But only in the first six of these, those immediately adjacent to Manila, was the sentiment prevalent, and even in these it was by no means universal, while in the other four it scarcely existed. Among the people of wealth and intelligence there existed everywhere a strong conservative element that was opposed to the war. In the remaining provinces of Luzon the Tagal rebellion was viewed at first with indifference, and later with dread. Throughout the archipelago trouble and hostility existed only at those points to which armed Tagals had been sent in considerable numbers. In general the machinery of government that was set up by the agents of Aguinaldo served only for plundering the people under the pretext of levying war contributions, while many of the insurgent officials were rapidly accumulating wealth. The administration of justice was paralyzed, crime of all sorts was rampant, and the rule of force was the only law. In the worst period of Spanish misgovernment the people were not so overtaxed, nor was the administration so disrupted, sinking into absolute anarchy in many of the provinces. From all sides petitions were sent to the American military governor to send troops to occupy the country and protect the people. But while Aguinaldo's army was in the field troops could not be detached for that purpose.

Aguinaldo protested against the intrusion of the Americans from the time that Gen. Otis, as military governor, first issued a proclamation asserting the sovereignty of the United States. The Filipino leader insisted that he returned to the islands on an American war ship solely in order to conquer the Spaniards and win independence; that Gen. Merritt had stated that the American forces had come to overthrow the Spanish Government and liberate the Filipinos; and that the American forces had recognized the object aimed at by the insurgents by co-operating with the Filipinos as belligerents and by publicly saluting the Philippine flag. In regard to the Spanish prisoners held by the insurgents, whose liberation the American Government undertook to secure as soon as possible, he refused to treat with the American authorities, on the ground that it would imply a recognition of their rights over Philippine soil. Their surrender to Spain would be conditional on the repatriation of all Filipinos in Spain or her African possessions, in the Carolines, Mindanao, Jolo, or elsewhere held as prisoners of war or condemned as traitors or revolutionists. The friars held as prisoners by the Filipinos he would only set free as the result of a direct understanding with the Pope through an apostolic delegate, the conditions being that decrees granting special privileges to the religious orders should be revoked and the rights of the secular clergy respected; that no friar should hold any parochial or diocesan charge, but only the native or naturalized Filipino clergy; and that bishops should be made elective. The insurgents did not trouble the Jesuits or the Benedictines, but the monasteries of the Dominicans and other orders were despoiled, supplying a great part of the funds by which the revolution was supported, and the friars were made captives and treated very harshly.

The assurance of Gen. Otis that the welfare and happiness of the Philippine people depended on the friendly protection of the United States had no effect upon Aguinaldo and the politicians associated with him nor upon the Tagals who expected under his lead to become the dominant caste on the islands. The Philippine commissioners appointed by President McKinley met with no better response to their proclamation of April 4, which warned the Filipinos that the supremacy of the United States must be enforced, and those who resisted would accomplish nothing except their own ruin, but promised them the amplest liberty of self-government that is reconcilable with just, stable, effective, and economical administration and compatible with the sovereign rights and obligations of the United States. The commissioners assured the Filipinos that their civil rights and religious liberty would be guaranteed and respected, and that all would have equal standing before the law; that honor, justice, and friendship forbid the exploitation of the people of the islands, the purpose of the American Government being their welfare and advancement. It guaranteed an honest and effective civil service, in which, to the fullest extent possible, natives would be employed. The collection and application of taxes and other revenues would be put upon a sound, honest, and economical basis; the public funds, raised justly and collected honestly, would be applied only to defraying the proper expenses of the establishment and maintenance of the Philippine Government and such general improvements as public interests demand, and local funds collected for local purposes would not be diverted to other ends; with such prudent and honest fiscal administration it was believed

that the needs of the Government would in a short time become compatible with a considerable reduction of taxation. The establishment of a pure, speedy, and effective administration of justice would eradicate the evils of delay, corruption, and exploitation. The construction of roads, railroads, and other means of communication and transportation, and other public works of manifest advantage to the people, would be promoted. Domestic and foreign trade and commerce and other industrial pursuits and the general development of the country in the interest of its inhabitants would be the object of solicitude and fostering care. Effective provision would be made for the establishment of elementary schools, in which the children of the people would be educated, and appropriate facilities would also be provided for the higher education. Reforms in all departments of the Government, all branches of the public service, and all corporations closely touching the common life of the people must be undertaken without delay, and effected conformably with common right and justice in a way to satisfy the well-founded demands and the highest sentiments and aspirations of the Philippine people.

The proclamation of the American commissioners, issued a month after their arrival on March 4, made a deep impression on thinking and public-spirited Filipinos. The insurgents raised the objection that the Spaniards had promised even more, and yet had done nothing. To meet the demand for deeds, not promises, the commissioners applied themselves first to the re-establishment of the law courts, which had been in suspension since the surrender of Manila. Early in June the Supreme Court was reopened by order of the military governor, with 5 Filipino and 3 American justices. Courts of the first instance and justice courts were established later, as soon as qualified and trustworthy Filipino magistrates could be found. This action greatly aided in the restoration of public confidence. Natives who had fled began to return to their homes, and inhabitants of other districts asked permission to come or to send their families in. The native population nearly doubled in two weeks, so that it was necessary to impose restrictions on immigration in order to prevent overcrowding. Among the refugees came men of intelligence from all over Luzon.

The American plan of campaign was first to divide the insurgent forces by advancing eastward from Manila along the Pasig river, opening up that stream and the Laguna de Bay to light gunboats that had been made. Gen. Thomas A. Anderson advanced up the river, occupying the three principal villages, and scattering the forces to the south of it, cutting them off from communication with the forces in the north. When he turned over the command of his division to Gen. Lawton on March 22 the Americans controlled the river and Laguna de Bay, and had cleared the country to the south for 20 miles. The second part of the plan of operations was to divide the forces in the north by advancing along the line of the railroad. This also was accomplished successfully. The insurgents were driven back from village to village and from the strip of territory between the railroad and Manila Bay into the fastnesses of the swamps and the mountains. From Manila they were driven back in all directions as far as there were troops to command the lines. But an extensive effective occupation of territory with the forces at the command of Major-Gen. Elwell S. Otis was impossible. Hence, although white flags were raised over every house in the vicinity of the camps,

covert hostilities were practiced when Americans were not present in force. Malabon and other places near the lagoons and rivers were captured with the aid of the light-draught gunboats. The insurgents as they retired were in the habit of setting fire to the places that they evacuated. The storming of the strong intrenchments at Malabon by the Oregon troops was a brave deed, costing 49 casualties. Its capture drove the insurgents back on Malolos, where Aguinaldo had established the seat of the revolutionary Government and his military headquarters. This, which was the last fortified position of the insurgents in the lowlands, fell also at the end of March. In the beginning of April Gen. Lawton occupied eight towns south of Laguna de Bay and captured gunboats of the enemy. His troops were then recalled by Gen. Otis, as the American forces were not numerous enough to hold this southern country and carry on active operations against Aguinaldo's main army. Gen. Lawton took command of a flying column sent to clear the Filipinos out of the jungle north of Manila up to the mountains and to Bulacan. The troops of the main Filipino army, commanded by Gen. Antonio Luna, took up a strong position before Calumpit, on the Rio Grande. They were engaged by Gen. MacArthur's division on April 24 and succeeding days. The Nebraska, South Dakota, and Iowa regiments advanced on their trenches over open fields under a galling fire, and the Nebraska and South Dakota men swam across the river to get at them. Two men of the Kansas regiment swam the river under fire from sharpshooters to fasten a rope by which two companies of infantry, led by Col. Funston, were brought across on a raft to enfilade the enemy's trenches. The Filipinos, who believed the river line of defense impregnable, hastily retreated, and their defense of the intrenchments beyond was feeble and dispirited, though up to this point they had fought stoutly and inflicted severe losses on the Americans. After the retreat from Calumpit Gen. Luna, by order of Aguinaldo, sent his chief of staff on April 28 to ask for an armistice until the Filipino Congress be convened for the purpose of deciding whether to continue the war or to make peace. Gen. Otis replied that he could not recognize the Filipino Government, and would only consider the complete surrender of the Filipino army. This was the second proposal from Aguinaldo to treat for peace, the first having been made at the beginning of hostilities. Their proposal of a cessation of hostilities for thirty days was declined, Gen. Otis replying that universal amnesty would be granted on the surrender of their arms by the insurgents.

Gen. MacArthur continued his advance along the railroad, driving the enemy from Apalit, Santo Tomas, and San Fernando, which had been the revolutionary capital after the fall of Malolos until the approach of the American army compelled a transfer to San Isidro. Gen. Lawton's column advanced simultaneously along a parallel line, capturing in succession Novaliches, San José, Norzagaray, Balinag, where large stores of food were taken from the retreating force of Gen. Gregorio del Pilar, which he drove before him to San Ildefonso and beyond in the direction of the rebel capital in the mountains, upon which Gen. MacArthur's division also intended to converge by way of San Luis, Candas, and Arayat. The army gunboats operating on the rivers cleared the country of insurgents west of his line of march. Gen. Lawton's rapid advance from Balinag gave the insurgents no cessation from fighting. One fifth of their force was incapacitated

before the taking of San Ildefonso. The whole population of the valley fled at the approach of the Americans, terrified by the tales of cruelty and barbarity that their leaders falsely charged against United States soldiers. Gen. MacArthur's forces remained encamped for some time at San Fernando until the railroad bridges could be restored. The rebel soldiers were invariably stricken with panic when the Americans approached within gunshot. They abandoned their trenches and threw down their rifles if they saw only a scouting party.

A proposal from Aguinaldo to treat for peace was brought to Gen. Lawton's camp, and an arrangement was made for Filipino commissioners to go to Manila to confer with the American Philippine commissioners. Gen. Lawton in the meantime pushed on first to San Miguel, then to San Isidro, and on May 17 attacked the insurgent force in the flank and rear and drove them out of the trenches and the town into the mountains, having given them no time to reconcentrate their scattered troops. The Filipinos had, however, removed their arsenal and supplies and the Spanish and American prisoners long before the appearance of the American advanced guard. The Spanish Government was willing to pay a ransom of \$7,000,000 for the release of the captured Spaniards, but the United States authorities would not consent to allow such a contribution to be made to Aguinaldo's war chest. The Filipino peace commissioners, some of whom were appointed from the residents of Manila, met the American commissioners on May 22. They again asked for an armistice until the Philippine people could be consulted. Aguinaldo was busily preparing for further fighting at the same time that the commissioners were treating. The first suggestion of peace had come after the fall of Malolos from prominent citizens of Manila, Spanish half-castes, who had supported the rebellion, but were not in full accord with the Chinese half-castes that supplied the brains and the money and expected to reap the benefits of the revolution. After the principles of the future American rule in the islands had been laid down in the manifesto of the American commissioners, the Spanish mestizos were said to prefer the system offered to the rule of their fellow-countrymen of Chinese descent. The influence of these citizens of Manila in favor of peace was insignificant, however, compared with that of some of the active promoters of the rebellion, sugar planters and large landowners, who now began to feel the strain of the pecuniary sacrifices they had made and to foresee possible ruinous losses from the failure of the insurrection. When the Filipino Congress met at San Isidro on May 5 this element was in the majority, and the result of the discussion was the appointment of 7 delegates to open negotiations with Gen. Otis on the basis of the proclamation of the American commissioners. Aguinaldo agreed, provided the terms to be obtained should prove satisfactory to the army. Gen. Luna, however, who was Secretary of War, and Mabini, the Secretary of State, were in favor of continuing the war. Some time before this Gen. Luna had taken over from Aguinaldo the command of the forces in the field, which made him at this juncture the master of the situation and the practical dictator. He concentrated the army at Tarlac, a strong position on the railroad about 20 miles north of San Fernando, the American advanced position, and laid plans to get hold of the persons of the peace delegates of the Congress. Two of these he beheaded, as Aguinaldo had beheaded the first influential citi-

zen of Manila who had gone to his headquarters to plead for peace, three of the delegates were induced to support Luna's views, and two escaped through the lines and reached Manila in safety. Gen. Luna then took upon himself the direction of peace negotiations, but they were apparently intended, like the previous proposal for a month's truce, to tide over the remainder of the campaigning season until the rains should completely paralyze the active operations of the American army. Before another campaign the Government could be reorganized, the demoralized Filipino army toned up at least to the pitch of guerrilla fighting, and perhaps the American nation would become tired of the attempt to subdue the insurrection. Luna's ambition to become dictator was defeated, and the ascendancy of Aguinaldo was restored.

An attack on the Spanish garrison at Zamboanga, on the island of Mindanao, determined the Spanish Government to withdraw the troops that had been left in the Philippines under Gen. Rios in the hope that they might aid in securing the release of the Spanish prisoners. Aguinaldo refused to treat with the Spanish general or with the American commander, and a Frenchman, M. Dumarais, who went into the rebel lines to negotiate, was killed by the Filipinos. Gen. Otis was obliged to detail troops to take the place of the Spanish garrisons when they abandoned Zamboanga and Jolo.

The Filipino peace commissioners learned at their interview with the Philippine commission that President McKinley purposed appointing, pending the lasting decision to be made by Congress, an American governor general, who should be assisted by a cabinet composed of Americans, Filipinos, or both, and that the judges of the courts to be nominated by the President might be either Americans or natives. There would be also an advisory legislative council to be elected by the Filipinos. The request of the Filipino commissioners for an armistice was denied. The activity of the American troops was, in fact, redoubled. While Gen. MacArthur was preparing to occupy cities south and west of San Fernando, Gen. Lawton drove the rebels westward from San Antonio, Cario, and Arayat, and, joined by Major Kobbe's column, which operated from gunboats on the Rio Grande, advanced to Santa Ana and Candaba on May 22. Gen. Luna's army meanwhile was melting away. In the country that the American troops passed through a temporary civil administration was inaugurated. The inhabitants of the provinces of Bulacan and Pampanga, losing their dread of Americans, returned to their homes. Some of the volunteer regiments, reduced to skeletons through casualties and sickness, were anxious to be relieved from duty at the front or to be sent home, but cheerfully continued their arduous work when informed that they would receive their discharge at the end of May.

Regular troops, set free by the reduction of the army of occupation in Cuba and Puerto Rico, were sent over to take the place of the disbanded volunteers. Gen. Otis informed the War Department that it was important that his command should not fall below 30,000 men. The Philippine generals had on their rolls at least 70,000 men. When any of them returned to their homes their places were taken in the ranks by others who had fought before and left the army for a time to resume their ordinary occupations. These were the volunteers, who were able to render aid and comfort to the insurgents even after resuming the garb of peaceful citizens and the character of *amigos*, and who often kept their arms in hiding,

to bring them out when occasion offered and join in an attack on some exposed place. The bulk of the army was not of such material, but was composed of regular soldiers, who had served in the Spanish regular army or in the civil guards. With the volunteers Aguinaldo could increase or reduce his army according to his requirements. He had, however, a limited number of rifles. Perhaps a third of his troops were armed only with bolos—long, sharp-edged knives ground to a point. This is the national weapon. It was sometimes effective against Spanish troops, but in fighting the Americans, after the first few battles, the insurgents were accustomed to fire from the safe cover of the trenches until the attacking line approached, and then run for the intrenchments farther back. The Americans usually deployed at 2,000 yards from the enemy's trenches, and then advanced under fire, stopping at intervals where cover could be found to pour in volleys. When the insurgents broke cover to abandon the fight or to take a stand behind other intrenchments in the rear the American soldiers stood up and fired as fast as they could, taking aim at individuals when near enough. In the earlier engagements the Filipinos held their trenches till the Americans came near, but they grew demoralized as the campaign went on and fled before the attacking force got within 500 yards. Not many were hit in the trenches, but a great many while in flight. The numerous bolo men in the ranks carried off the dead and wounded on litters, and whenever a rifleman was struck a bolo man seized his rifle and cartridges and became from that time a rifleman himself. Owing to these conditions, very few wounded or prisoners fell into the hands of the Americans, and no rifles. In the first fighting around Manila Filipinos who were wounded or who shammed death shot at Americans from the rear or struck them with bolos. This drove some of the soldiers to kill wounded men that they passed. Such a thing never happened after the war was carried into the open country, as the cause ceased; but *amigos* often acted treacherously, and the deceitfulness of the natives led the Americans to despise the character of the Filipinos in general and to disregard often the rights of noncombatants. Houses were burned until the orders against it were strictly enforced, because the troops were often fired upon from houses flying white flags or from rifle pits underneath them. The exceedingly humane and conciliatory policy enjoined upon the military authorities by instructions from Washington seemed wrong to the volunteers, and deterred a great many from re-enlisting. Of looting there could not be much, except when Manila surrendered and when Pasig was captured by surprise in February by Gen. Wheaton's flying column, or when Iloilo or some such place capitulated. In the Luzon campaign the towns were abandoned, often burned, and everything of value was removed before the troops entered them. Later the inviolability of private property was strictly enforced by a provost marshal's guard whenever a town was captured. When the rebel troops began to disintegrate after Gen. Lawton's vigorous campaign and Gen. MacArthur's advance to San Fernando, Gen. Otis offered \$30 in silver to every rebel who would surrender and bring in a serviceable rifle. Very few rifles, however, were delivered. Aguinaldo offered \$60 for every American rifle, and a good many were stolen.

Toward the end of May Gen. Luna's soldiers appeared in force before San Fernando and began to attack the American outposts, inflicting only

slight losses. An ineffectual attack was made by about 8,000 insurgents under Gen. Mascardo, who held an intrenched position at Bacolor. The Macabebes were friendly, and after the gunboats under Capt. Grant were placed in the Rio Grande river a corps of them was enlisted for service under the American flag against the Tagals.

During May there was a tacit truce along the south line of the American occupation. In June the insurgents became aggressive again in the south. Gen. Pio del Pilar gathered together a considerable force, which Gen. Otis planned to surround by a rapid expedition under Gen. Lawton early in June. The city of Morong was occupied and garrisoned, but the enemy retreated to the hills. A second expedition was sent to clear them from Cavité province. Intrenched on hills and screened by woods, they were attacked on June 10 by 4,500 Americans, and resisted desperately. They were driven at last from the shores of the bay and the vicinity of Paranaque and Laspinas, retreating southwestward. A further advance in the direction of Bacolor was fiercely opposed at the bridge over the Zapote river. Gen. Lawton continued his march to Imus, having already killed, wounded, or captured a third of the insurgent force, numbering 4,000 men. The navy aided by shelling the enemy's trenches and landing forces on the shore of the bay. When Gen. Lawton reached Imus the rebels had abandoned it and fled to the mountains. Among the numerous captives taken in this expedition were soldiers dressed in the ordinary white dress of civilians and soldiers in uniform who carried such a costume in their knapsacks.

The rains now made active operations difficult. Troops were withdrawn from many posts that they had occupied, but other towns were still held, and the American lines extended 60 miles north, south, and eastward into the Laguna province. The insurgents were scattered, and had at no point a force exceeding 4,000 men. The civil courts were organized at Manila in June under the ablest of the native jurists, assisted by American lawyers. Municipal government was established in important towns of Manila and Cavité provinces. Several ports in southern Luzon and in Leyte and other islands were opened to trade. In the southern islands a general disposition to welcome American sovereignty was manifested.

The people of Negros, who accepted willingly the American occupation from the start, had a draft constitution made to submit to President McKinley. It was copied from the California State Constitution, Col. J. H. Smith, of the California volunteers, the military commandant, having been consulted. Gen. Otis ordained instead a provisional scheme of government prepared by the Philippine commissioners, with a military governor in supreme control, an adviser called the civil governor, elected by the natives under a property or educational qualification, an advisory council presided over by the civil governor, secretaries in charge of the departments of the treasury, interior, agriculture, and public instruction, judges appointed by the military governor, and a system of revenue and taxation to be devised by the civil governor and the advisory council, but all the executive and legislative authority vested ultimately in the military governor. The American force in the island was employed in punitive expeditions against the Babylanés, fanatical brigand hill folk who were in league with Aguinaldo. The Tagal emissaries had not been received by the people of Negros, nor any troops suffered to land. After the fall of the Spanish power they set up an independent

government of their own, with an elective governor and congress, at the same time raising the American flag and asking for a battalion of American troops to hold the Babylanes in check. Gen. Otis permitted them to proceed with their experiment in self-government, sending two additional battalions when the Babylanes became more troublesome. The men of the Sixth Infantry, led by Lieut.-Col. Byrne, on Aug. 31 dashed up a steep and bare mountain slope, while the bandits fired rifles and rolled down stones upon them, to storm the stronghold of Argongula, the chief arsenal of the Babylanes. After several months' trial the Negros people, who are among the most civilized and prosperous of the islanders, became dissatisfied with the liberal constitution they had first adopted and requested the Americans to take control of the administration, complaining that the commander of the native forces dominated the governor and that the officials were corrupt. After the military commandant assumed control of the administration public order was better maintained and the people were satisfied.

During the rainy season Gen. Hall, with troops landed from transports, took Calamba, a town on Laguna de Bay which aided the insurgents' communications. This place was held, and expeditions on boats were sent against several places on the shores of the lake where rebel troops were gathered. The rebels harassed the troops at San Fernando to such a degree that on Aug. 9 Gen. MacArthur's whole force of 5,000 men, except a guard of 600 left at San Fernando, advanced on Angeles, a more favorable base of operations than San Fernando. The main body of the insurgents, numbering about 6,000, was encountered, but was forced back on Porac. Armoured cars shelled Bacolor, and a feint toward Mexico led the enemy to evacuate that place. Calulut was made the camp until artillery could be brought up through the deep mud. The attack on Angeles was made on Aug. 16 by Col. Smith, who with the Twelfth Infantry and two guns drove 2,500 Filipinos from their newly made trenches and took possession of the town, with a loss of only 2 killed and 12 wounded. The objective of the new advance was Tarlac, now the revolutionary capital. When the new movement was begun Aguinaldo, who had obtained fresh funds, stirred up sedition again in Manila and the southern provinces and caused frequent attempts to be made to cut the railroad. He also strengthened his garrisons in the southern province of Vicol, and ordered an attack on the Americans in Imus.

Gen. Luna's order to the natives to fire their towns and flee before the advancing Americans was intended to prevent the reorganization of industry and the acceptance of American control, and as long as the people believed the tales of cruelty and outrage told against American soldiers they were generally glad to escape, taking their portable possessions with them. Those who were unwilling to leave their homes were driven out by the insurgent soldiers, who burned their houses. This method of procedure, eminently successful at first, in the end recoiled on its authors, provoking so much opposition that the obnoxious order was revoked. Nearly all the inhabitants returned to their ruined villages, rebuilt their houses, and began to cultivate the fields that had lain fallow for three years. Municipal government was organized in Bulacan province after the rebels had evacuated it, and under the protection of the American troops the people not only had peace and security, but enjoyed a de-

gree of participation in their own government that was unknown in the history of the Philippines. The system of municipal government proclaimed by Gen. Otis in general orders, after it had been elaborated by the Philippine commission with the assistance of native lawyers, was first put in practice in the towns of Cavité province occupied by Gen. Lawton's forces as the result of his vigorous campaign in June. The public sentiment had greatly changed in these places. Instead of abandoning or burning their homes, most of the people quietly awaited the arrival of the Americans. The mayor of Imus even requested the troops to occupy his town. Those who fled quickly returned. The insurgent forces had so pillaged and maltreated them that there was general satisfaction that the Americans had come at last, and when they came they distributed food among the starving people. The towns of Bacolor and Imus were selected for the purpose of testing the project of municipal self-government. In each place there should be a municipal council, composed of a president of the municipality and a head man from each ward, which would have authority to adopt ordinances, subject to the approval of the commanding officer of the occupying troops, the president, elected by the residents and approved by the commandant, to be the executive chief of the municipality and the examining magistrate in criminal cases, which would be tried by the provost court. The natives were so unfamiliar with the principle of popular representation that they asked the American commissioners to tell them for whom they should vote. When the new system was got into operation it worked fairly well and was liked by the people. Elections were held in Laspinas and Paranaque also. In Manila Gen. Otis established a system of public schools in which English was taught, and soon 6,000 pupils were in attendance.

Gen. Bates began negotiations in August with the Sultan of Sulu, who accepted Spanish sovereignty in 1878, but wished now to reassert his independence, and objected to flying the American flag or to having an American garrison in his dominions, though willing to acknowledge an American protectorate. Gen. Bates offered to continue the subsidies paid by the Spanish Government, \$2,400 to the Sultan and \$2,500 to his heir and the ministers, to leave his authority unimpaired, to allow him to retain the pearl fisheries and the control of trade. The town of Jolo, which the Spaniards built, was occupied by an American garrison of 800 men. In Mindanao the Filipino insurgents held the towns of Zamboanga and Mercedes, their force numbering 500 men with rifles, until Commander Very, of the Castine, arrived on Nov. 18 with 100 men from the Jolo garrison, having been invited by the inhabitants of the towns and Dato Mandi, the principal Moro chief. Alvarez, the Tagal commander, surrendered the posts to the Americans, who promised the inhabitants that they should be allowed to carry arms and to practice the Catholic religion and follow their native laws and customs, and be exempt from taxation until they have recovered in a measure their former prosperity. Gen. Hughes landed at Iloilo to clear Panay of rebels, who were intrenched in the neighboring towns of Jaro and Molo. The American troops found these places deserted, but with rapid marches pursued the fleeing rebels, forced a fight at Passi, captured 10 cannon, and chased them in detached bands into the mountains. The principal towns were garrisoned by the men of a volunteer regiment. Another regiment was sent to garrison posts on the Mindanao coast. Panay was the

only island to which a considerable force of Tagal soldiers had been sent. In Samar, Leyte, and Masbate the Tagal invaders were few, and they were disliked by the Visayan natives, whom they had oppressed. In Bohol, Mindoro, the Calamianes Islands, and Palawan the Americans were invited and welcomed by the native population. In Cebu and Negros it was only the lawless and barbarous mountain brigands who had been accustomed to plunder the plantations that entered into an alliance with the Tagal revolutionists. The small islands of Sibutu and Cagayan, near the coast of Borneo, were seized by order of Rear-Admiral Watson without objection from the authorities of British North Borneo.

Gen. Otis issued an order forbidding further Chinese immigration into the Philippines. Against this the Chinese minister in Washington emphatically protested. The Filipinos were opposed to the competition of Chinese laborers, who were coming in unusual numbers. The insurgents had a 6-inch Krupp gun mounted at Olongapo, in Subig Bay, and with their remarkably accurate firing they beat off an attack by the cruiser *Charleston*. On Sept. 24 the town was bombarded and burned by four ships, and a landing party destroyed the gun. The insurgent forces from Porac made an attempt to drive the Americans from Angeles with the aid of their artillery. On Sept. 28 a general advance on Porac was made by Gen. Wheeler from Santa Rita and Gen. Wheaton from Angeles, Gen. MacArthur commanding the entire operation. The insurgents, though strongly intrenched, made a poor defense, the movement of the American troops having been skillfully masked.

At the beginning of the new campaign Aguinaldo released 14 American prisoners that he held, and also the civilians and the sick soldiers among the Spanish prisoners. A Spanish commission went to Aguinaldo's headquarters for a conference regarding the release of all the Spanish prisoners. Another Filipino commission went to Manila with tentative proposals for peace, on the condition of independence under American protection. The Filipino Congress was now anxious for peace. Mabini, the irreconcilable head of Aguinaldo's Cabinet, was replaced by Paterno, the former mediator between Aguinaldo and the Spanish Government. Aguinaldo, however, still looked to the anti-imperial party in America to help him realize his ambition, and thus the commissioners came instructed to demand national independence. The American commissioners assured the delegates of as ample liberties as were consistent with the ends of government, subject to the recognition of American sovereignty. Gen. Otis declined to receive any proposition but that of the grounding of arms. The recognition of the revolutionary Government was out of the question. In the early days of October the insurgent forces in the south delivered vigorous attacks upon Imus and Calamba with the aid of artillery. A column under Gen. Theodore Schwan began operations in Cavité province, capturing Novaleta with the help of the marines, and Old Cavité, San Francisco, and other places. During the whole campaign, from Jan. 1 to Nov. 1, 1899, the losses of the American army of about 30,000 men were 477 killed in battle and mortally wounded and 366 dead from disease, making the total deaths 843. When the rainy season came on the sick list rose to 12 per cent. The annual death rate was only 17.2 per 1,000. The number of Filipinos killed, incapacitated, or captured during the campaign was estimated at 10,000. Of the volunteers in the Philippines,

about 2,500, a sixth of the total number, re-enlisted, and with newly enlisted men were organized into a brigade. Ten new regiments of 1,000 men were enlisted in the United States for service in the Philippines. The force in the Philippines in November numbered 905 officers and 30,578 men.

The additional troops that had arrived during the rainy season made the army strong enough to hold important towns that were captured and still leave large forces for field operations. A northward advance by Gen. Lawton and Gen. MacArthur was begun also. On Nov. 12 the American troops, which had reached Bamban, advanced upon Tarlac, passing through Capas, Murcia, Tayug, and San Quentin. Only small bodies of insurgents were encountered, and in the evening Col. Bell's force entered the deserted rebel capital. Aguinaldo had fled to Bayombong, where he hoped to establish the semblance of a government. The men of wealth and influence who supported the cause had fallen away. The insurgent army was broken up. A force of 1,200 attempted to make a stand at San Jacinto, and was routed by the Thirty-third Volunteers, though Major John A. Logan and 6 men were killed. All the lowlands, the populous, rice-growing country, whence the food supplies and the men were obtained for the revolutionary army, the United States forces occupied completely, with the exception of the districts south and east of Manila, where the insurgents were busy once more. In the valley of the Cagayan, the tobacco-growing region, Aguinaldo had little support, and on the mountains on either side his troops could find refuge, but scarcely any food supplies. The columns of Gen. Lawton and Gen. Wheaton attempted to catch Aguinaldo, but he eluded pursuit. The Treasurer and Secretary of the Interior of the revolutionary Government and the president of the Filipino Congress were captured or gave themselves up. The generals and their troops in small bands scattered through the provinces to act as banditti or concealed their arms and assumed the rôle of *amigos*. The Tagals on the island of Panay, numbering about 2,000, renewed their activity just before the flight of Aguinaldo, but the outbreak was quickly suppressed. The Visayans who inhabit the island were friendly to Americans. The scattered bodies of insurgents in northern Luzon, the broken remnants of Aguinaldo's army, were hunted down by the American columns. Gen. Lawton's troops captured money and deserted Spanish prisoners near Tayug on Nov. 25. Gen. Wheaton's troops scattered a force near Dagupan, capturing cannon and ammunition and recovering Spanish and American prisoners. Over 50 pieces of artillery were captured within three weeks. On Nov. 29 the rump of the Philippine regular army, commanded by Gen. San Miguel and Gen. Alexandrino, was surprised by Col. Bell's force in the mountains south of Lingayen. The Americans routed the enemy and captured all the stores and artillery, including rifles of various patterns, Nordenfeldt, Krupp, Maxim, and Hotchkiss guns, and a great quantity of ammunition in an arsenal and powder mills, which were destroyed. Aguinaldo with about 1,000 men fled before Gen. Young's column to Bangued, a mountain town in the west. Bayombong was occupied on Nov. 28. Major Peyton C. March with 300 men followed a trail taken by Aguinaldo over the mountains, and in Tilad pass came upon barricades which were defended by Gen. Gregorio del Pilar and 60 men of Aguinaldo's bodyguard until all but 8 were killed or wounded. The ports of Subig Bay, Cavité, and Aparri were

occupied by naval detachments, and military garrisons were stationed in Iba, Lingayan, Dagupan, and Vigan. In the interior garrisons were left in the principal towns along the routes followed by Gen. Lawton, Gen. MacArthur, and Gen. Wheaton. The provinces of Bulacan, Nueva Ecija, Pampanga, Bataan, Zambales, Tarlac, and Pangasinan were practically dominated by them. When additional troops arrived in December other ports were occupied and opened, allowing the trade in hemp and other products to be resumed. An expedition into the mountains of the north-west in search of the captive sailors of the Yorktown and Urdaneta was successful, and all the survivors, including Lieut. J. C. Gilmore, were brought down to Vigan. The ports of the Philippines were declared open to commerce on Dec. 11.

Although the Philippine army was utterly dispersed and Aguinaldo a fugitive, the rebels of the south who had first started the insurrection were determined on making another desperate effort to discourage the Americans. They fought fiercely in small bodies, employing guerrilla tactics, and Gen. Lawton met them successfully with skirmishing methods used in warfare with the American Indians. Gen. Wheaton and Gen. Schwan co-operated with flying columns, and where the army went a post was established in every town. On Dec. 19 Gen. Lawton, who in every battle had exposed himself to the hottest fire, was killed in an insignificant action at San Mateo, struck by a rebel sharpshooter.

The Philippine commission consisted of J. G. Schurman, George Dewey, Charles Denby, and Dean C. Worcester. The commissioners returned to the United States and submitted their preliminary report to the President on Nov. 2. They concluded from their investigations that the Filipinos are not a nation, but a variegated assemblage of various tribes, and their loyalty is still of the tribal type. The multiplicity of tribes, the diversity of languages, mutually unintelligible, and the multifarious phases of civilization, ranging from the highest to the lowest, and the utter want of experience and training in self-government disqualify the natives for the task of governing the archipelago at the present time, in spite of their domestic virtues and their intellectual capacities of a high order, though these capacities have been developed by education and experience only in a limited number of persons, the mass of the population being uneducated. The most that can be expected of them, in the view of the commissioners, is to co-operate with the Americans in the administration of general affairs from Manila as a center, and to undertake, subject to American control or guidance, the administration of provincial and municipal affairs. As education advances and experience ripens the natives may be intrusted with a larger and more independent share of government, self-government, as the American ideal, being constantly kept in view as the goal. Should American power be withdrawn, the commissioners believe that the government of the Philippines would speedily lapse into anarchy, which would excuse, if it did not necessitate, the intervention of other powers and the eventual division of the islands among them. Only through American occupation, therefore, is the idea of a free, united, and self-governing Philippine commonwealth at all conceivable.

PHYSICS IN 1899. Constitution of Matter, Ether, etc. Properties of the Ether.—Fessenden, in a paper (American Association) on the nature of electricity and magnetism and certain constants of the ether, points out the value of dimensional formulæ in the discussion of

physical problems, and takes up the question of the fundamental relations between certain optical properties and certain electro-magnetic properties of the ether. He notes that three formulæ exist for the relation between four quantities, and that consequently the equations can not be solved by the ordinary method. A fourth relation must be obtained, and then by a discussion of the dimensions of the quantities involved it becomes possible to make certain hypotheses. Two of these are shown to be the most probable, and then experimental observations are called in to determine which of these is preferable. A large mass of experimental observations on the relation between permeability, density, specific inductive capacity, and certain optical constants of a long list of substances leads to a choice between the two possible formulæ. It is thus possible to deduce values for the elasticity of the ether, as well as its density, and also, by constructing the dimensional formulæ for the magnetic quantities, to visualize the nature of magnetic quantities.

Gravity.—Burgess (Paris Academy of Sciences, Aug. 21) modifies the Cavendish method of determining the Newtonian constant by suspending in a mercury bath the weight that is supported by the torsion thread. In this way a mass of lead weighing 2 kilogrammes can be supported on a torsion wire of bronze or platinum only 0.05 millimetre in diameter. The sensibility of this device is very great, the shifting of the large attracting mass of 10 kilogrammes by 40° turning the torsion system through about 12°. The chief difficulties are connected with the necessity of maintaining the temperature of the mercury and with the fluctuation of its surface tension.

Unit of Time based on Gravitation.—Lippmann (Journal de Physique, August) proposes the adoption of an absolute measure of time based on the Newtonian constant of gravitation. This constant is independent of the units of length and mass, and is of dimension "minus two" in time, and could be used as an absolute time unit equal approximately to 3,862 mean-time seconds. As all this involves the assumption that the units of mass and volume are the same, the proposal amounts to the adoption of a unit of time based on the recognition of water as the substance of unit density.

Objectivity of Energy.—Lodge (Philosophical Magazine, XLVI, p. 414) holds that energy has all the marks of objectivity. He states the following among other propositions: "Stresses exist solely in the ether"; "the ether as a whole is at rest, and velocities referred to it are absolute"; "the two fundamental forms of energy are distinct and possessed by different bodies—viz., potential by ether, kinetic by matter—hence whenever there is transference there is transformation," and *vice versa*.

Mechanics. Inertia.—From experiments with mercury and gelatin Barus (Science, VIII, p. 681) believes it probable that a body moving through continuous ether will leave discontinuous or triturated ether behind it and have sheared continuous ether in front. If the triturated region be supposed to exist without any material body, it will be a seat of energy, and can not be at rest, but must continually break down the neighboring continuous ether. The resistance to this action varies as the velocity and as the front presented, which may represent mass. We thus have an approach to Newton's laws of motion as a manifestation of the ether.

Friction.—Brillouin (Comptes Rendus, CXXVIII, p. 354) states that in the neighbor-

hood of the surface of a body consisting of isolated molecules the forces exerted by which on an external molecule are functions of the distances the force function is periodic; hence there will be a large number of stable positions for the external molecule, separated by unstable ones. If the body, therefore, move past the molecule, the molecule's kinetic energy will be increased by the same amount every time the body advances through a molecular distance. The development of heat by friction thus follows from molecular theory.

Elasticity.—Weston (Physical Review, 5) has determined the modulus of elasticity for copper, brass, and steel under small loads by means of interference methods, and concludes that for the first two, and probably for the last, the ratio between deflection and load is constant for loads from 0.5 gramme to those that give the bar a permanent set.

Density.—Berthelot (Comptes Rendus, CXXVIII, p. 553) employs the density of liquids to calculate their molecular weight, using an equation connecting density with corresponding pressure and absolute temperature, and with critical pressure, temperature, and volume. He can obtain molecular weights within a few per cent.

Torsion.—Bouasse (Journal de Physique, August) finds that the torsion produced by a given couple depends on the mode of variation of the torsion with respect to the time. If wires of the same material but different diameters be loaded with weights proportional to their cross sections, and be given any torsions in the inverse ratio of their radii (so that the radius of the wire multiplied by the angle of torsion is the same for all), then this variation is the same at each instant for all. Unless the time is taken into account, experiments on torsion are of little utility. Moreau (Comptes Rendus, CXXVIII, p. 292) finds that the laws of torsion for steel are analogous to those for soft iron, with the difference that permanent torsion sets in later with steel.

Ductility.—Bouasse (Comptes Rendus, CXXVIII, p. 291) finds that the limiting pull at which permanent stretching occurs in the case of copper wire decreases with prolonged heating.

Liquids. Surface Tension.—Pockels (Wiedemann's Annalen, LXVII, 3, p. 668) determines the tension of a surface of separation between two liquids by means of the cohesion balance, either by dipping an adhesion ring into the lower liquid and lifting it or by allowing one liquid to expand on a contaminated water surface, reducing the surface tension of the water till expansion ceases. The remaining surface tension of the water is measured with the cohesion balance, and the tension between the two liquids is obtained by deducting that of the upper liquid from the surface tension of equilibrium. It is found that the intermediate surface tension rapidly falls with the lapse of time. Grunmach (German Physical Society) determines the surface tension of liquids and of molten metals by observing interference waves due to two vibrating centers connected to the prongs of a tuning fork. Some of his results are as follow:

METALS.	Temperature.	Specific gravity.	Surface tension in grammes per centimetre.
Wood's alloy.....	145° C.	9.52	0.345
Rose's alloy.....	145°	9.34	0.350
Lipowitz's alloy.....	160°	9.58	0.334
Tin-lead alloy.....	215°	8.05	0.394
Tin.....	240°	6.968	0.359
Lead.....	335°	10.645	0.482

Fischer (Wiedemann's Annalen, July), in a paper on the smallest thickness of liquid films, attempts to harmonize the results of various observers by supposing that when a drop of oil is placed on a surface of pure water a "precursory film" first spreads over the water, and is followed more slowly by another. In his own experiments he used a pure mercury surface.

Solution.—Dieterici (Wiedemann's Annalen, LXVII, 4, p. 859) concludes from experiments that within the degrees of concentration observed (normal to decinormal) there is in electrolytes no decrease of vapor pressure with decrease of concentration, and that Raoult's law, according to which the decrease of vapor pressure is independent of the nature of the solute, does not apply to aqueous solutions of electrolytes.

Crystallization.—Poynting and Gray (Proceedings of the Royal Society, LXIV, p. 121) have sought for a directive action of one crystal on another, rotating one quartz crystal near a second one, and watching for forced oscillations in the latter. The results were negative.

Solidification.—Wilson (Proceedings of the Cambridge Philosophical Society, X, p. 25) finds that the rate of solidification in a supercooled liquid depends on the difference between the internal pressure in the solid and that in the liquid, which difference in the case of water and ice at -1° C. amounts to 12 atmospheres. Phenomena resembling explosion occur when, at very low temperatures, solidification is retarded by viscosity and the supercooling is gradually diminished.

Gases. Efflux.—Embsen (Wiedemann's Annalen, LXIX, 1, p. 264) has observed the phenomena of periodic condensation in the efflux of gases from narrow openings, photographing them by Dvorak's method of striæ. Stationary sound waves are produced in all gases as soon as the pressure exceeds 1.9 atmosphere.

Viscosity.—Breitenbach (Wiedemann's Annalen, LXVII, 4, p. 803), using the method of transpiration, finds that the viscosity of gases is proportional to a power of the absolute temperature whose index in various gases lies between 0.6 and 1. The sphere of influence of a molecule therefore decreases as the temperature increases.

Condensation.—Mueller-Erzbach (Wiedemann's Annalen, LXVII, 4, p. 899) finds that the attraction of wax for vapor of carbon disulphide is still felt though the wax be painted with a layer of gum. The attraction lessens, however, with increasing thickness of the layer, and when this reaches 0.35 millimetre is no longer felt. The attraction was gauged by the ability of the gum-covered wax to condense the vapor, which was kept 1° to 2° colder than the wax.

Barometry.—Koch (Wiedemann's Annalen, LXVII, 2, p. 485) has devised a standard barometer in which a faulty vacuum can be restored by means of a permanently attached Sprengel pump.

Acoustics. Intensity.—The experiments of Rayleigh (Philosophical Magazine, XLVII, p. 308) negative Wilmer Duff's theory that radiation is the cause of deviation from the law of inverse squares in observations on sound intensity. He attributes this deviation to atmospheric refraction and reflection.

Propagation.—Vieille (Comptes Rendus, CXXVIII, p. 1437), from a study of intense waves of compression produced by the explosion of gunpowder in a closed iron tube, concludes that the pressure rises more and more rapidly in the wave front as it moves away from the point of explosion. The velocity of the disturbance is also

abnormal, about 600 metres per second, or nearly twice that of sound. On reflection at the ends the waves are re-enforced in intensity, owing probably to the fact that the gas in the tube moves in the direction of propagation on the passage of the waves, which movement is arrested by the ends of the tube.

Pitch.—Stumpf (Wiedemann's *Annalen*, January) defends the method of determining high pitches by means of difference tones, which he regards as convenient and reliable. When the primary notes are in the same octave there are only two difference tones below them, one representing the difference between the two notes sounding together, and the other the difference between the higher note and the octave of the lower one. As the higher note ascends the pitch of the first difference tone rises, while that of the second one falls. Von Lang (Wiedemann's *Annalen*, June) finds that stretched India-rubber threads when vibrated give a constant note between certain lengths, because the ratio of length to tension remains constant during the stretching.

Beats.—Maltézos (Paris Academy of Sciences, Aug. 28) notes that the ordinary equation for a thin elastic string, giving the relation between the number of vibrations, tension, section, and length, does not explain beats. Taking into account the rigidity of the string, he deduces theoretically an expression for the number of vibrations, which leads to the conclusion that the number of beats is proportional to the square root of the area of the section, inversely proportional to the cube of the length, and inversely proportional to the square root of the tension. The last conclusion agrees with experiment, but the second does not, experiment showing that the number of beats is nearly inversely as the simple length of the string. Hence some additional factor beyond rigidity must enter into the problem, probably a difference of elasticity in two directions across the sectional area.

Radiophony.—Dussaud (*Comptes Rendus*, CXXVIII, p. 171) has transmitted sound to a distance of 10 miles by using a selenium cell influenced by ultraviolet light through the intermediary of a fluorescent screen. Sella (*Nuovo Cimento*, VIII, p. 4) also uses ultraviolet light, but substitutes an influence machine for the selenium cell. The light, falling on a short air gap, modifies the sound of a telephone in circuit.

Heat. Expansion.—Le Chatelier (Paris Academy of Sciences, Aug. 7) finds that, while different specimens of iron and steel expand similarly up to about 750°, above the temperature of molecular transformation they expand very differently, according to the amount of carbon present. For an increase of carbon from 0.05 to 1.2 per cent., the coefficient doubles.

Temperature.—Berkenbusch (Wiedemann's *Annalen*, LXVII, 3, p. 649), using two new methods for measuring flame temperature indicated by Nernst—one founded on an estimation of the rate of heating and cooling of a thermo-couple, and the other on the electrical heating of a thermoelement to the temperature of the flame—finds that points in a Bunsen flame give a mean of 1,830°. This accords with Waggener's results and with thermo-chemical calculation, which gives 1,820°.

Radiation.—Ångström (Wiedemann's *Annalen*, LXVII, 3, p. 633) has devised what he calls an electric compensation pyrheliometer for measuring thermal radiation. Of two similar thin metal strips, one is exposed to the radiation, while the other is heated correspondingly by an electric current supplying a known quantity of energy.

Crova (*Annales de Chimie et Physique*, No. 17) calculates the intensity of solar radiation from the readings of a thermometer whose spherical black bulb is concentric with a metal sphere with a small window in it. The instrument is kept in partial shadow by diaphragms. Thus inclosed and protected, when the interspace between bulb and sphere is maintained at constant temperature the bulb shows by its rise of temperature in a given time the amount of radiant energy incident upon the exposed area.

Conduction.—Lees (Memoirs of the Manchester Literary and Philosophical Society, XLIII, 8, p. 1) finds that the thermal conductivity of glass, ebonite, and soft sandstone increases with pressure, while that of granite and marble did not change within the limits of the experiment (1 to 54½ atmospheres). The same experimenter (*Philosophical Transactions*, CXCI, p. 399) finds that poor solid conductors (except glass) generally decrease in conductivity with increase of temperature in the neighborhood of 40° C.; that liquids follow the same law near 30° C.; that conductivity does not always change abruptly at the melting point; that the conductivity of a mixture lies between the conductivities of its constituents; and that mixtures of liquids decrease in conductivity with increase of temperature at about the same rate as their constituents. Hempel (Wiedemann's *Annalen*, January) finds that the improved Dewar vacuum insulator (see article on LIQUID AIR, *Annual Cyclopædia*, 1898) will maintain the temperature of test tubes filled with ether and solid carbonic acid as low as -70° for eighty-eight minutes. Tubes packed in wool, cotton, or silk rose to -45° to -55° in the same time. Eiderdown kept the temperature down to -66°.

Ebullition.—Richards and Harrington (*Zeitschrift für physikalische Chemie*, XXVII, p. 421) have inquired whether the fact that a solution of mixed salts boils at a lower temperature than that calculated from adding the depressions corresponding to the constituents may not be due partly to the fact that the dissociation of one salt is affected by the presence of another. They find that molecular combinations appear to accompany the reaction.

Solidification.—Battelli and Stefanini (*Nuovo Cimento*, IX, p. 5) conclude that the molecular depression of the freezing point remains practically constant as dilution increases, and that for very dilute solutions it does not differ much from 1.87. This agrees with the results of Raoult, but not with those of the majority of other investigators. Tammann (*Zeitschrift für physikalische Chemie*, XXVIII, p. 17), in a determination of the viscosities of various supercooled organic substances, finds that in the neighborhood of the freezing point the viscosity increases normally, but at an average of 90° below it the increase begins to be abnormally rapid. The same investigator (Wiedemann's *Annalen*, LXVII, 4, p. 871), after an inquiry regarding a critical state between the solid and liquid states, concludes that no such state has ever been observed. An apparently continuous transition from the crystalline to the liquid state has been reported, but only when the conditions are unfavorable for seeing the dividing surface.

Specific Heat.—Sohncke (Wiedemann's *Annalen*, LXVI, 1, p. 111) concludes from the close agreement of the temperature coefficient of the specific heats of solids, liquids, and gases that for all bodies (when not near a change of state) the change of specific heat with temperature is determined chiefly by increase of internal molecular

energy. It follows that monatomic molecules should not show increase of specific heat. Mercury and cadmium have been found to show a decrease, for which the author accounts by the diminution of mutual molecular action due to increased distance apart caused by the rise of temperature.

Long Heat Waves.—Rubens and Aschkinass (Wiedemann's Annalen, LXVII, 2, p. 459) have succeeded, by using quartz prisms of small refracting-angle, in obtaining waves of $56\ \mu$, for which quartz has a refractive index of 2.18. Attempts to obtain longer waves failed, because the radiation of an absolutely black body beyond $60\ \mu$ is less than $\frac{1}{100000}$ of the total energy.

Light. Its Nature.—Rovida (Rivista Scientifica, XXX, p. 225) rejects Garbasso's conclusion that monochromatic light is due to a simple vibration, and regards it as doubly damped. The spectral "line" for each color must still have some breadth, else it would not be visible, but this indicates continuous damping in function of time or of displacement. The former, when considerable, gives rise to widening of spectral lines; the latter, to anomalous dispersion. The "continuity" of the spectrum resembles the imaginary continuity of water in hydrodynamics.

Absorption.—Fessenden (American Association) notes that the flash of smokeless powder may be distinguished at a distance by the use of an absorptive color screen. The flash, he says, proves to be essentially red, whereas the diffused light coming from the landscape at large is very weak in the red; consequently when a red screen is used the illumination of the general landscape is greatly reduced, and the gun flash appears with undiminished brightness. The contrast becomes sufficient to enable the observer to readily locate the flash.

Refraction.—Hallwachs (Isis Society, Dresden) has investigated the relation between the refractive index of various substances and their degree of concentration, in order to discover whether this is influenced at all by dissociation. Experiments with a double-trough refractometer, using the author's differential method with grazing incidence, show that the influence, if any, is too small for measurement. Le Blanc and Rohland had previously reported the existence of such an influence in the case of brome-cadmium. Besides this substance, Hallwachs used sugar and di- and trichloroacetic acids, with their potassium salts. Bender (Wiedemann's Annalen, LXVIII, 2, p. 343) has determined the refractive index of pure water for the hydrogen lines by means of Pulfrich's refractometer, in which a cube takes the place of the prism. Between 10° and 40° this index is the same as that for water containing air. Hallwachs (ibid., January) measures small differences of refractive index without an interference refractometer by using glancing incidence on a partition separating the two liquids to be compared. By this method the refractive index with respect to water may be found to within one millionth of its value.

Total Reflection.—Ketteler (Wiedemann's Annalen, LXVII, 4, p. 879) states that the so-called "glancing ray" which, according to Voigt, penetrates the second medium in total reflection, must be explained on different principles from those given. The energy of such a ray must be zero, and, though there is wave motion at the boundary of the two media, no train of waves is propagated into the second medium. (See also Polarization, below.)

Diffraction.—Rayleigh (Philosophical Magazine, XLVII, p. 375), in a mathematical investiga-

tion into the weakening of light by passage through a medium containing small particles, takes up the connected question whether the light from the sky can be explained by diffraction from the molecules of air themselves or whether it must be produced by suspended particles, solid or liquid. He concludes that even if there are no foreign particles the light scattered from the molecules of air would produce a blue sky, though somewhat darker than the actual sky.

Dispersion.—Becquerel (Comptes Rendus CXXVIII, p. 145), in a study of the anomalous dispersion of sodium vapor, finds that for waves with frequencies slightly higher than either of the lines D or D₂, the indices of refraction are negative—that is, these waves travel faster in sodium vapor than in a vacuum.

Polarization.—Geigel (Wiedemann's Annalen, LXIV, 4, p. 698) has observed polarization of the emergent beam in total reflection (ordinarily unnoticeable) by using a hexagonal prism in which a beam is totally reflected a large number of times. Polarization in the plane of incidence appears after the forty-fourth reflection. The author believes that the component normal to the plane of incidence emerges into the rarer medium and is lost. Light of all visible wave lengths behaves in the same manner. Beckenkamp (ibid., LXVII, 2, p. 474) finds that the rotation of the plane of polarization in certain crystals is independent of the orientation of the crystals but proportional to the length of the ray. He applies to the case a mechanical explanation devised to account for certain pyro-electric phenomena, according to which three ether currents circulate in normal planes around the molecule, and at all places where the current path changes the ether pressure is above or below the normal. Borel (Comptes Rendus, CXXVIII, p. 1095) has studied the magnetic rotatory polarization of quartz discovered by Becquerel. The natural rotational power of the mineral makes this difficult, but it was accomplished by using a combination of right-handed and left-handed quartzes. The rotation increases with the temperature at a rate that increases with the refrangibility.

Spectroscopy.—Hamy (Comptes Rendus, CXXVIII, p. 1380) describes a method for measuring the wave lengths of standard spectral lines by interference fringes. He has designed what he calls a "simplifier" with which he can suppress one or more members of a doublet or a triplet without appreciably reducing the intensity of the remaining light. Gramont (Comptes Rendus, CXXVIII, p. 1564) has devised a method to reduce a spectrum observed in an ordinary spectroscopic to any desired micrometric scale. In his spectroscope the micrometer is mounted in an extra collimator, and its image is reflected into the telescope by a face of the prism. Lenses in the extra tube permit the observer to enlarge or reduce the micrometer scale. The prism can be turned out of the position of minimum deviation, so that its dispersion in any given region can be altered. Thus an unknown spectrum can be mapped in terms of a known one. Liveing (Proceedings of the Cambridge Philosophical Society, X, p. 38) has observed by using the very hot flame of cyanogen in oxygen two spectral lines of mercury hitherto obtained only in the electric arc. The emission of these in conditions where high temperature is the only stimulus shows, according to the author, that part of the heat communicated to the mercury is transformed into vibrations that affects the ether. The true inference from the peculiar ratio of the specific heats of mercury vapor appears to be that, at

the temperature at which this ratio is measured, the amount of heat converted into vibratory motion is small compared with that which remains as heat. The hypothesis that in gases energy communicated to the molecules is distributed equally through all the degrees of freedom must apparently be given up, and so must that of gaseous atoms in the shape of rigid spheres, for such an atom could acquire no internal motion from heat communicated to it. Hemsalech (Comptes Rendus, CXXIX, p. 285) finds that a self-induction in the discharge circuit affects the spectrum of an oscillating spark discharge by lowering the temperature, and thus eliminating the lines due to the surrounding gas from the spectrum of the spark. In hydrogen under atmospheric pressure the lines due to the oscillating discharge have a sharpness which is not interfered with by the sparking distance.

Magneto-optics; Zeeman Effect.—Poincaré (Éclair Electrique, XIX, p. 5) has elaborated mathematically Lorentz's theory for explaining the resolution of spectral lines into complex forms in a magnetic field. The supposition that the ions are simple electrified particles accounts for triplex forms, but not for the others. Lorentz's theory supposes complex dynamical systems, which explains some of the more complex results of experiment. Kelvin (London Royal Society, July 17) concludes from mathematical analysis that a gyrostatic molecule could not in a strong magnetic field give the Zeeman effect. Only a broadening, not a splitting, of the spectrum lines could occur. This agrees with Larmor's statement. Voigt (Göttingen Nachrichten, IV, p. 329) concludes that the inverse Zeeman phenomenon (alteration of selective absorption of a body in the magnetic field) is nothing else than the Faraday phenomenon of magnetic rotatory polarization in substances possessing selective absorption. The author has developed a mathematical theory in which these two effects appear as special cases. Corbino (Academy of the Lincei, VIII, p. 250) finds that the phenomena of anomalous magnetic rotatory polarization with all their peculiarities can be deduced from the Zeeman phenomenon by the admission of certain postulates. The symmetry of the phenomenon also follows with the aid of Helmholtz's anomalous-dispersion postulates, and also the phenomenon of double refraction by absorbent vapors, normal to the lines of force. Voigt (Wiedemann's Annalen, LXVIII, 2, p. 352) shows that observed deviations from the normal type of the Zeeman effect are due to anomalous behavior of the component of the electric force that is parallel to the lines of force of the magnetic field. On this basis the author works out modifications of the Hertzian equations which account for the quadruplets of Cornu and Becquerel and allied forms. Preston, in a lecture before the Royal Institution (May 12), finds evidence in the phenomenon for a surmise that not only is the atom composed of different ions, but the atoms of those substances in the same chemical group are built up from the same kind of ions. It may be, he thinks, that all ions are fundamentally the same. Goldhammer (Wiedemann's Annalen, LXVII, 3, p. 696) shows that it is possible to explain the effect on the basis of the older magneto-optical theories, without calling in the conception of ionic motion. Preston (Philosophical Magazine, XLVII, p. 165) explains radiation phenomena in strong magnetic fields by Larmor's electro-magnetic theory. An ion describing an elliptic orbit is forced by the magnetic field into a precessional movement around the direction of the magnetic force.

As a deduction from this, a single spectral line should be tripled, and its constituents should be plane polarized when viewed across the force lines. The separation of the side lines of a triplet should vary as the wave length. The author believes that the results of observation so far confirm this. Cotton (Comptes Rendus, CXXVIII, p. 294) has studied the polarization of rays from sodium flames placed between the pole pieces of an electro-magnet, and finds that the vibrations in the neighborhood of the rays become elliptical—right-handed on one side and left-handed on the other. For all radiations more refrangible than one of the D lines the component perpendicular to the field was in advance of the other. For the less refrangible radiations the inverse is true. This double refraction is connected with the Zeeman effect, and is in accordance with Becquerel's explanation.

Kerr Effect.—Abraham and Lemoine (Comptes Rendus, CXXIX, p. 206) find that when the magnetic field productive of the Kerr phenomenon is abolished the bi-refringence does not cease at once, though the decay is rapid. The electro-optic phenomenon is reduced by one half in $\frac{1}{1000000}$ part of a second. Blondlot (Paris Academy of Sciences, July 24) shows that the time elapsing between the suppression of an electric field and the disappearance of the Kerr effect can not exceed $\frac{1}{1000000}$ of a second.

Phosphorescence.—Mears. Lumière (Comptes Rendus, CXXVIII, p. 549) find that the phosphorescence of calcium and zinc sulphides after exposure to the electric arc is enfeebled at -20° or -30° and disappears at about -50° . When the original source was the magnesium light the disappearance took place at between -70° and -80° . When the exposure to magnesium light was at the temperature of liquid air (-191°) the phosphorescence appeared at -180° .

Photo-action at Low Temperatures.—A. and L. Lumière (Comptes Rendus, CXXVIII, p. 359) find that ultrasensitive gelatino-bromide plates cooled to the temperature of liquid air (-191° C.) require 350 to 400 times as long exposure as at ordinary temperatures. Less sensitive plates are not acted upon at all. The plates are not altered in any way, nor is any latent image in the film affected.

Fluorescence.—Burke (Philosophical Transactions, CXCI, p. 87) finds that fluorescing bodies absorb differently, according as they are fluorescing or not, the rays that they give out while fluorescing.

"Dark Light."—Le Bon (Comptes Rendus, CXXVIII, p. 297) asserts that bodies inclosed in opaque boxes can be photographed by exposure for a few seconds to a plate of phosphorescent zinc sulphide, which is then put into contact with a sensitive plate.

Monochromatism.—Fabry and Perot (Comptes Rendus, CXXVIII, p. 1156) recommend as a source of monochromatic light the arc produced between mercury electrodes in a Torricellian vacuum. The principal radiations are: Violet, which may be cut out by yellow glass or a thin layer of bichromate-of-potash solution; green, cut out with the preceding by a weak solution of eosine; and two yellows, cut out by a concentrated solution of chloride of didymium. A mixture of this solution with bichromate of potash cuts out all except the green rays. The violet ray is useful for photography. For this the yellow and green need not be eliminated, but an acid solution of sulphate of quinine must be interposed in order to get rid of some ultraviolet radiations.

Photometry.—C. Henry (Comptes Rendus, CXXVIII, p. 941) has devised a photographic actinometer consisting of a series of semitranslucent and semiphosphorescent screens. The screen is first exposed to the source of light and then placed at the end of a tube, where its luminosity is compared with that of ground glass illuminated by a standard candle. The rate at which phosphorescent zinc sulphide loses its luminosity being known, it is easy to determine its original luminosity. Cattell (American Association) has utilized in photometry his observation that the time required to decide which of two surfaces is the darker is a direct measure of the difference in luminosity of the two surfaces.

Becquerel Rays.—Rutherford (Philosophical Magazine, XLVII, p. 109) finds no evidence of polarization or refraction in these rays, thus differing from the earlier conclusions of Becquerel, their discoverer. He explains the electrical conductivity produced by the radiation by supposing that the rays in traversing a gas produce in it oppositely charged particles, and that the number of these in a second depends on the intensity of the radiation and on the pressure. The radiation is complex, one constituent (α) being readily absorbed, while another (β) is more penetrative. The former produces the greater amount of leakage of electricity between two metal plates, while the latter is photographically more effective. The cause of the radiation remains unknown, but the energy spent seems to be extremely small. J. J. Thomson suggests that the rays are due to electrical effects arising from regrouping of atomic constituents. Becquerel (Comptes Rendus, CXXVIII, p. 771) in later experiments fails to confirm his original results, according to which the rays were regularly polarized, reflected, and refracted. Preparations made in May, 1896, have lost very little of their radio-active power. They seem, like a magnet, to contain a store of energy expended in producing their present condition, and the process of giving out this energy is very slow. It has not been possible to alter its intensity by physical means. Elster and Geitel (Wiedemann's Annalen, LXIX, 1, p. 83) find that Becquerel rays are uninfluenced by the impact of cathode rays or by temperature. The authors believe the rays to be Röntgen rays of small intensity, but they are not magnetically deflected. Behrendsen (ibid., p. 220) adduces still more evidence in favor of the identity of the rays with Röntgen rays. The polarization of Becquerel rays, which their discoverer had relied upon as a distinction from Röntgen rays, has been disproved by this investigator. Crookes (Comptes Rendus, CXXVIII, p. 176) says that the radiation from uranium and similar metals may be explained by supposing that they are able to separate the rapidly moving from the slowly moving air molecules, and to appropriate some of the energy of the former.

Focometer.—Devé (Comptes Rendus, CXXVIII, p. 1561) has devised an instrument to measure the curvatures, focal lengths, and aberrations of optical surfaces. The optical system producing the image observed is so arranged that it can oscillate about an axis near the image, and its position is altered till the image, as observed through an eyepiece, does not oscillate with it. It must then be on the axis, whose distance from the optical surface is next measured. The precision is much greater than that of the ordinary methods.

Sky Colors.—Bock (Wiedemann's Annalen, LXVIII, 4, p. 674) has investigated the "blue steam jet" described by Helmholtz, and finds its

color strictly identical with that of the blue sky. Under illumination similar to that of the atmosphere the jet shows a whitish color, which, when observed at right angles to the ray, can be made to disappear by turning the analyzer. The red, yellow, and green components are polarized, and the blue and the violet rays are unpolarized, the result being a phenomenon analogous to Tyndall's "residue blue." The transmitted ray shows reddish-yellow coloration. The jet is invisible in red light, and is distinct in blue. Probably the diameter of the droplets is equal to the wave length of the blue rays.

Electricity. Discharge Phenomena.—Haschek and Mache (Wiedemann's Annalen, LXVIII, 4, p. 740) estimate the increase of pressure within an electric spark to be about 11 atmospheres, increasing with the energy, with the pressure of the gas, and with the sparking distance. There is a similar increase when an arc is established, and in both cases it appears due not to heat but to particles projected from the electrodes. Riecke (ibid., p. 729) has measured the work consumed in a spark gap, which he finds to be as follows:

Gap 2 cm.....	1.64 watts	Heat 4.96 grm.-cal. per sec.
" 4 cm.....	3.08 "	" 6.05 " " "
" 6 cm.....	5.27 "	" 9.56 " " "
" 8 cm.....	1.79 "	" 5.39 " " "

The diminution of the work from 6 to 8 centimetres is due to the diminished quantity of the discharge. The potential continues to rise. Nikolaieff (Journal de Physique, VIII, p. 432) finds that when a layer of cotton wool, pressed between two ebonite rings, is placed in the path of a disruptive discharge the wool is traversed by a canal about 6 millimetres in diameter, whose sides are formed by compressed wool. If the wool is soaked in water or vaseline the passage is larger. Walter (Wiedemann's Annalen, LXVIII, 4, p. 776) adduces additional evidence to support his view that every spark discharge is preceded by tentative brush discharges from both electrodes. Oberbeck (ibid., LXVII, 3, p. 592), in an investigation of the difference between spark and brush discharges, finds that on reducing the pressure the character of both changes. Assuming that the discharge that is attached to both electrodes is the spark discharge, he shows how and where the two varieties merge. Almy (German Physical Society), in experiments on spark discharge in solid and liquid dielectrics, finds (1) that the discharge potential is reduced by about 5 per cent. when the spherical electrode is replaced by a pointed one; (2) that with dissimilar electrodes the discharge potential does not depend on reversal of polarity; and that (3) considerably lower values of the discharge potential are obtained if, instead of raising the potential gradually, oscillations are allowed to take place by connecting an air-spark gap in parallel with the apparatus and increasing the gap until the dielectric is pierced. Berthelot (Annales de Chimie et Physique, XVI, p. 5) has subjected many organic compounds to the action of the brush discharge (*effluve électrique*). The bodies were placed in a narrow space between armatures and subjected to a noiseless and invisible discharge from a rapidly interrupted induction coil of 12-millimetre spark length for twenty-four hours. In general there was observed first a decomposition, in which hydrogen and the simplest binary compounds were separated, and then a condensation or polymerization forming highly complex substances. There is thus an analogy with the action to which food is subjected in the animal body.

Phenomena in Rarefied Gases.—J. J. Thomson (Cambridge Philosophical Society, June 7) de-

duces mathematically the result that in a constant magnetic field ions moving at high speeds travel along the lines of magnetic force, while those of lower speeds move in spirals. In the discharge of electricity through gases the negative ion has always been found to move faster than the positive, and this accounts for many of the differences between the phenomena at the positive and negative electrodes. In like manner Prof. Thomson's results account for the difference in behavior of the negative glow and of the positive column in a magnetic field, the glow following the lines of magnetic force and the positive column taking a spiral path. Bouty (Paris Academy of Sciences, July 24) finds that when a tube of rarefied gas is placed in an electrostatic field there is a critical intensity of this field below which the gas acts as a perfect dielectric and above which it allows a discharge to pass. The relation between this intensity and the pressure is expressed by the formula

$$f = A \left(1 + Bp + \frac{C}{p} \right),$$

where f is the critical intensity, p the pressure, and A , B , and C constants, of which B , and perhaps C , are independent of the nature of the gas, and A increases with its molecular weight. Hüllers (Wiedemann's Annalen, LXVIII, 2, p. 196) finds, in experiments on the manner in which the pressure of the gas between two plates affects the current which passes when they are brought to different potentials and Röntgen rays are allowed to traverse the gas, that the moisture of the gas does not affect either the potential or the current intensity. Near the pressure of maximum resistance the current intensity varies as the square root of the pressure. Himstedt (ibid., LXVIII, 2, p. 294) finds that a disk connected with one pole of a Tesla transformer (the other terminating in a point beyond sparking distance) is charged positively, negatively, or not at all, according to the distance between point and disk. To explain this, it is assumed that the point gives out more positive electricity than negative, and that the negative electricity is capable of being propagated to a greater distance, no matter through what gas the discharge takes place, the only difference being that the transition takes place at different distances in different gases. Ebert (ibid., LXVII, 3, p. 608) has measured the energy consumed in vacuum tubes, and finds that it attains a minimum at a certain low pressure. His experiments show also that the dielectric strength of a gas increases with the valency of its molecules and the smallness of its sphere of influence, and support the view that the luminous phenomena of the tubes are due to dissociation caused by impact of cathode rays. Villari (Nuovo Cimento, IX, p. 77) finds that the cooling effect on a platinum spiral in a gas produced by the passage of electric sparks is increased with intensity of the spark. Lessening the pressure lessens the cooling effect. The cooling appears to be due to the impact of cool gas particles projected from the spark terminals. Fomm (Wiedemann's Annalen, July) describes a new phenomenon of the vacuum discharge seen when a vacuum tube is surrounded by wire rings at its ends. At a certain exhaustion blue rings concentric with these appear and inclose patches of positive light, which gradually disappear until the blue light fills the whole section. As the pressure continues to lessen, the blue light leaves the glass walls and expands lengthwise into a greenish-blue beam that proceeds in the direction of the other ring, and shows all the properties of cathode rays. Cantor

(ibid., LXVII, 2, p. 481) finds that under certain conditions vacuum discharges can be obtained that are apparently continuous. A coherer shows the presence of waves, but whether the wave system is quite discontinuous or not the author has not been able to determine. Moore (American Journal of Science, VI, p. 21) treats vacuum-tube phenomena from the point of view of kinetic theory, regarding their study as that of elementary action in electrical conduction. He traces an analogy between the flow of heat from a hot body and the motion of a discharge stream. Sutherland (Philosophical Magazine, XLVII, p. 269) maintains that J. J. Thomson's hypothesis that the cathode stream consists of atoms disintegrated into their component particles of primitive matter is not necessary. He believes that the electron, or natural electric unit usually associated with the atom to form an ion, resembles the atom somewhat and possesses inertia. The cathode stream contains separate negative electrons and some ions, the proportions varying according to circumstances. Impact on a thin aluminum window filters out the ions, and the transmitted electrons form Lenard rays. Röntgen rays are not electro-magnetic pulses, but are due to internal vibrations of the electrons, which would be caused wherever cathode or Lenard rays were absorbed, but which would always be damped by an associated atom, and hence would not accompany ordinary light. The author finds that his hypothesis explains the general phenomena of cathode, Lenard, and Röntgen rays. If it is true, it should be possible to get also a stream consisting of separate positive electrons. These may possibly be identical with Becquerel rays. In commenting on this paper, Prof. Thomson (ibid., p. 415) states that previously to his adoption of his own hypothesis he had considered and abandoned that of separate electrons. One of the difficulties that attend it is the large proportion of heat developed by impact of cathode rays. Wehnelt (Wiedemann's Annalen, July) distinguishes two classes of cathode-ray shadows, one produced by rays emerging from the cathode normal to its surface and crossing each other at a focus in case the cathode is curved, and the other consisting always of upright shadows thrown by rays parallel to the axis of the tube. Ewers (ibid., LXIX, 1, p. 167) concludes that Goldstein's "candle rays" consist not of projected anode particles, but of positive ions of cathode material. Berg (ibid., LXVIII, 4, p. 688), by perforating the anode instead of the cathode, obtains phenomena converse to the canal rays, thus showing that rays from one electrode are propagated across gaps in the other. Swinton (Proceedings of the Royal Society, LXIV, p. 377) finds that the rays that in a focus tube proceed from the front surface of the anticathode are reflected cathode rays. This reflection is largely diffuse, but is partly true specular reflection, the maximum of the reflected field being always that the point where the angles of incidence and reflection are equal. Guglielmo (Nuovo Cimento, IX, p. 131) finds that a filament of glass rendered fluorescent by cathode rays appears blurred when looked at through a thick stream of the rays at right angles to their course. This he believes to indicate perturbations in the ether along the course of cathode rays.

Röntgen Rays (see also paragraph just preceding).—Malagoli and Bonacini (Nuovo Cimento, IX, p. 279) conclude that substances may be divided into three groups: (1) Simple diffusers of incident Röntgen rays; (2) transformers of the rays; and (3) bodies acting partly in both these

ways. These results differ from those of Sagnac, who would place all bodies in the second group. He asserts that there is no diffusion of Röntgen rays; that the rays transformed by different bodies differ in penetrative power and absorbability by air; and that after transmission the rays are always accompanied by some transformed rays. The same investigators (Atti dei Lincei, VIII, p. 296) believe that there is no true deflection of Röntgen rays, the apparent deflection being due to diffusion or to secondary rays by transformation. Various observers have attempted, in the absence of regular reflection and polarization, to obtain the wave length of the rays by diffraction. Maier (Wiedemann's Annalen, LXVIII, 4, p. 903) obtains one thirtieth of the wave length of ordinary light, which agrees with Fomm's result. It is not certain, however, that the "fringes" used by these investigators are true diffraction phenomena. Haga and Wind (ibid., p. 884) regard them as an optical illusion. Zeleny (Proceedings of the Cambridge [England] Philosophical Society, X, p. 14) finds that the passage of electricity through a gas under the influence of Röntgen rays is accompanied by considerable motion in the gas itself, which for a given intensity of the rays is dependent on the potential gradient. The gas is dragged by the moving ions in both directions equally if there be no free charge, otherwise more in one direction. Experiments by Winkelmann on electric currents induced by the rays are in accordance (Wiedemann's Annalen, LXVI, 1, p. 1) with the theory that the air between the plates is ionized, and that almost as soon as the rays start a constant electro-motive force exists between them analogous to contact difference of potential.

Electrification.—Pellut (Comptes Rendus, CXXVIII, p. 169) has shown that electrified water lose part of its charge by evaporation. The author applies his results to explain the daily variation of atmospheric electricity after sunrise and sunset. Kelvin, Maclean, and Gaet (Philosophical Transactions, CXCI, p. 187) find that when air in a glass cylinder is electrified by needle points at 5,000 volts shorter times give larger values. Five minutes suffice to annul the electrification entirely. The authors suggest that continued electric disruptive action renders the gas conductive. Blondlot (Comptes Rendus, CXXVIII, p. 901) finds that an electro-motive force may be developed by mixing liquids in a magnetic field. The difference of potential disappears when the stirring stops, and also when the magnetic field is removed. If a person be supposed to lie on his right side in the vessel facing the north-seeking pole of the magnet, the positive electrode is at his head. The expression for the electro-motive force due to induction between the terminals is an integral, containing, among other things, the variable conductivity of the solution.

Peltier Effect.—Pochettino (Atti dei Lincei) has investigated variations of the Peltier effect in a magnetic field. Its coefficient is found to vary with the magnetization, increasing up to a field of 98 units, and then decreasing, passing its normal value at 345 units. This variation is independent of the direction of magnetization.

Resistance.—Coloman de Szily (Journal de Physique, June), from his experiments on the effect of torsion on the resistance of wires, using the alloy "constantan," whose resistance is but slightly affected by change of temperature, draws the following conclusions: Torsion increases the electric resistance of a wire; up to the limit of elasticity the increase is roughly proportional to the angle of torsion, but beyond it the resistance

increases more rapidly. The resistance of a twisted wire decreases slowly with the time.

Electrolysis.—Trouton (Electrician, Aug. 18) finds that during electrolysis liquid passes through a hole in a pierced partition between the electrodes. The flow is independent of the current, but is always toward the side of the hole where bubbles are formed with greatest difficulty. Behn-Eschenburg (Zeitschrift für Elektrochemie, V, p. 402) asserts that electrolytic conduction is subject to the same laws as metallic conduction, basing his conclusion on experiments with a continuous nonconducting trough placed around the iron core of a transformer and filled with a solution of an electrolyte. The trough constitutes an elementary coil, in which the varying magnetic field of the transformer induces currents.

Polarization.—Scott (Wiedemann's Annalen, p. 388), from researches on polarization of thin metal membranes, asserts that all such phenomena in the case of gold are due to pores in the metal. In platinum, however, they are caused by occluded gases. The polarization capacity of silver and lead is affected by the metallic ions in the electrolyte. Chassy (Comptes Rendus, CXXVII, p. 1203) finds that the initial capacity of polarization in an electrolytic cell is independent of the pressure. Cailletet had previously shown that the capacity after passage of the current is enormously increased by pressure. Anthony (Proceedings of the American Association, XLVII, p. 138) concludes that the high initial electro-motive force of a cell is due to dissolved oxygen, and that polarization is due to exhaustion of oxygen in the electrolyte.

Thermo-electricity.—Liebenow (Wiedemann's Annalen, LXVIII, 2, p. 316) shows that if we assume that heat and electricity are so connected that thermo-electric energy is produced whenever heat passes from a point at a higher to a point at a lower temperature, every electric current must be accompanied by a thermal current, and therefore an electro-motive force in a metal may force a stream of heat from a lower to a higher temperature; in other words, thermo-electric phenomena are reversible. The author's figures with regard to the ordinary thermo-electric current and the Thomson and Peltier effects agree with experimental data.

Dielectrics.—Edser (Proceedings of the Royal Society, LXIII, p. 374) believes that if a definite potential difference be maintained between any two parallel planes in a dielectric medium two kinds of molecular strain are produced—molecular rotation and a separation of constituent atoms. Double refraction is explained on the assumption that the molecules have their axes parallel, so that electrical disturbances perpendicular to these will produce rotation and those parallel will produce interatomic separation. Thomas Gray (American Association), in observations on the dielectric strength of oils, points out the peculiar fact that the strength per centimetre decreases as the thickness of the layer increases. His observations were made between spherical terminals. Pellat (Comptes Rendus, CXXVIII, p. 1312) explains residual charge by supposing that the polarization of a dielectric in an electric field does not take place instantaneously, and does not vanish instantly when the field is abolished. He believes that he has experimentally confirmed this hypothesis.

Hertzian Waves.—Le Bon (Revue Scientifique, XI, p. 513) notes that metals appear not to be as opaque to Hertzian waves as was at first thought. If the inclosure be perfect, however, the waves do not get through, for the apparent

transparency is due to chinks or to the waves getting round the metal. With no chinks a thickness of $\frac{1}{10}$ millimetre is as opaque as one of 2 millimetres. A chink is much more effective than a series of aperture, so that metallic gauze is nearly as opaque as a plate. The waves turn round obstacles with great facility, owing to their length. This accounts for the apparent partial transparency of metallic mirrors. Nonmetallic substances have been considered to be perfectly transparent, but the author believes that the waves do not come through a hill but around it. He finds that 12 centimetres of Portland cement are partially opaque; 30 centimetres wholly so. Dry sand is almost completely transparent; wet sand much less so. Freestone is much less opaque than cement, but it becomes more so when wet. In all these cases the transparency is greater for Hertzian waves than for light, but it varies from one body to another, decreases as the thickness increases, and increases when the bodies are wet. Sommerfeld (Wiedemann's *Annalen*, LXVII, 2, p. 233) finds from a mathematical investigation that in metallic conductors, especially heavy ones, the wave near the wire has always very nearly the velocity of light, and the damping is small. But if the wire is very thin or the oscillation slow both divergence from light velocity and damping may be considerable. In the first case the process is confined to a surface layer, and the electric force lines are nearly tangential inside the wire and nearly normal without. In the second the lines outside are not even approximately normal. Maclean (*American Journal of Science*, July), using an elementary type of coherer suitable for the determination of wave lengths from nodes produced by metallic reflection, finds that the velocity of Hertzian waves is 2.991×10^{10} centimetres per second, or practically the same as along wires.

Coherence.—Sundorph (Wiedemann's *Annalen*, LXVIII, 3, p. 594) and Tommasina (*Comptes Rendus*, CXXXIX, p. 40) report experiments which they regard as supporting the theory that "coherence" consists of the formation of actual conducting chains of particles. The latter finds that the chains are formed less easily in air than in liquid dielectrics. In distilled water he has made a chain 20 centimetres long, the action requiring a little less than one second. The former supports his conclusion by sparking across the gap between two metallic blocks on a glass plate, having between them a layer of nickel or iron filings. Augustus Trowbridge (*American Association*) finds that a certain minimum electromotive force of from 8 to 10 volts is necessary to break down the resistance of any particular coherer, and that electrical impulses after the first have practically no beneficial effect. It thus appears unnecessary that the disturbance should be oscillatory, as the first wave would produce all the effect. This observation explains much of the erratic behavior of coherers in experimental use. Branly (*Comptes Rendus*, CXXVIII, p. 1089) finds that a row of balls 1 centimetre in diameter forms a sensitive coherer, steel balls being equal to gold filings in this respect. To obtain uniform effects the shock used for de-cohering must be carefully graduated. Tommasina (*ibid.*, p. 1092) has made an electrolytic coherer by inclosing a drop of mercury between cylindrical brass electrodes in a glass tube. Conductors coated with electrolytic copper and immersed in water act similarly, a chain of particles, probably cupric oxide, joining the two conductors. This chain is often invisible. This same investigator (*ibid.*, p. 1225) has discovered that the

presence of a magnet immediately destroys the conductivity of the coherer after impact of the electro-magnetic wave. Bose (*Proceedings of the Royal Society*, LXV, p. 166) finds that all metals show contact sensitiveness toward electric radiation, the resistance generally diminishing. Potassium, however, and also the allied metals show an increase. Fine silver threads coated electrolytically with cobalt make very sensitive coherers. Neuschwender (Wiedemann's *Annalen*, LXVIII, 1, p. 92) publishes an explanation of the action of a gap between metallic deposits on glass bridged by a film of moisture. This device, which has been called an "anticoherer," shows an increase of resistance under the influence of electric waves, but the author observes that this occurs only when the moisture contains a salt that is capable on electrolysis of depositing pure metal. The crystalline deposits so formed are broken up by the sparks that pass when electric waves impinge, thus diminishing the conductivity. On the cessation of the wave the crystals partially cohere again, so that there is a so-called "self-righting" action.

Contact Breaker.—Wehnelt (*Elektrotechnisches Zeitschrift*, XX, p. 76) finds that a cell consisting of lead plate and a platinum wire inserted into a beaker of dilute sulphuric acid (the wire being inclosed in a glass tube of mercury) acts as an interrupter, with a frequency of about 1,000 per second, giving sparks 40 centimetres long with 6 ampères and 12 volts. A condenser is superfluous. D'Arsonval (*Comptes Rendus*, CXXVIII, p. 529) extends these results. With 70 volts he obtained sparks forming a continuous stream of fire 25 centimetres long and as thick as a lead pencil, the frequency being 1,700 per second. The new interrupter gave results ten times as strong as the Foucault interrupter, and acted also as a current separator. It gives regular and powerful Hertzian waves, and can therefore be used in wireless telegraphy. This Wehnelt interrupter has been discussed by a large number of writers. Kallir and Eichberg (*Zeitschrift für Elektrotechnologie*, XVII, p. 184) find from stroboscopic methods that the time interval of interruption is of the order of 0.0005 second. By using the platinum point first as anode and then as cathode the time interval with a point anode is found to be about double that corresponding to a point cathode. Simon (Wiedemann's *Annalen*, LXVIII, 2, p. 273) publishes a complete theory of the interrupter, according to which it is not electrolytic at all but "Jouleian," there being no electrolysis, though possibly disassociation by heat. Spies and Wehnelt (*German Physical Society*, I, p. 53) find that if the applied volts are increased the current increases, the rate of interruption increases, and the current density increases; while if the anode surface is increased the corresponding quantities are respectively increased, diminished, and diminished; and if the self-induction of the circuit is increased they are all diminished. Humphreys (*Physical Review*, July) suggests that the action of the Wehnelt interrupter depends upon electrical discharges. The current first increases, on account of self-induction, until the electrode is sheathed by a layer of gas, chiefly oxygen, which abruptly breaks the circuit. Owing to the self-induction, there is now an electrical discharge across the layer, giving rise to the glow, and decomposing the liquid. The sudden freeing of these gases and the heat of the discharge together produce an explosive effect; when this is over the liquid falls back to its place, and the action is continued. Voller and Walter (Wiedemann's *Annalen*, LXVIII, 3, p. 526) find

that hydrogen lines are pronounced in the spectrum of the Wehnelt spark. These do not interfere, but rather serve as lines of reference when metallic spectra are obtained, as may be done in great intensity and purity by varying the metal of the anode. E. Thomson (Electrical World, New York, XXXIII, p. 334) states that the interrupter furnishes a means of performing experiments hitherto regarded as requiring alternating currents, such as the repulsion of rings and the rotation of disks. A coil of few turns wound on a core of iron wire is used.

Electric Arc.—Merritt and Stewart (Physical Review, VII, p. 129) find that vapors from the carbon arc can discharge electrified bodies by contact. They retain the power for ten seconds, but lose it when passed between a charged and an earthed conductor.

Inductoscript.—McClelland (Proceedings of the Cambridge [England] Philosophical Society, IX, p. 522) concludes that the formation of figures on photographic plates by electric discharges is due principally to the light of the discharge, and not to direct chemical action. The radical difference between positive and negative figures he ascribes to the fact that the form of discharge in air is in one case a brush and in the other a glow.

Frequency Indicator.—Zeuneck (Wiedemann's Annalen, July) describes a method of controlling the frequency of an alternating current, in which the cathode beam of a Braun tube is exposed to a rotary field produced by the current. The end of the beam describes a circle on a screen, which is interrupted by a tuning fork twice every revolution. When the frequency is constant the dots thus produced are on the same diameter.

National Electric Laboratory.—Wolff (American Association) describes the progress that has been made in providing this country with a national laboratory in which electrical apparatus can be tested and standardized. In the office of the United States Standard Weights and Measures facilities are now available for testing most of the ordinary electrical apparatus. Many obstacles have been surmounted, and the progress is encouraging.

Magnetism. Magnetization.—Roget (Proceedings of the Royal Society, LXIV, p. 150) has extended up to 700° his experiments on the effects of prolonged heating on the magnetic properties of iron. He finds that annealed material is more liable to change and that annealing removes all changes produced by prolonged heating. The heating need not be continuous, and exposure to air makes no difference. The final state was found to be one of lower hysteresis the higher the temperature.

Permeability.—Meyer (Wiedemann's Annalen, June) has attempted to connect the magnetic permeability of the elements with their atomic weight. In the periodic series the paramagnetic elements are grouped in the center and the diamagnetic ones at the ends. The difficulty of obtaining the permeabilities of the rare elements interferes somewhat with the author's attempt. (See also the following paragraph.)

Low - temperature Phenomena.—Osmond (Comptes Rendus, CXXVIII, p. 1395) finds that certain nickel and manganese steels show no magnetic properties till they have been exposed to very low temperatures, the phenomenon being analogous to the lowering of the freezing point by dissolved substances. Some specimens have their transformation points lowered to such an extent that they do not become magnetic even at the temperature of liquid air. Claude (Paris Academy of Sciences, Aug. 21) finds that the

hysteresis and permeability of iron are both practically constant from 25° to —185° C., the permeability at —185° being only 2.5 per cent. less than at 25°. These results agree with those of Thiesen (who carried his experiments only as far as —80°), but they are opposed to those of Dewar and Fleming.

Properties of Alloys.—The same alloys of iron and nickel have both magnetic and nonmagnetic forms. This is explained by Houllevigue (Journal de Physique, VIII, p. 89) on the hypothesis that in one form an iron nucleus is compressed by a nickel shell, while in the other the shells are ruptured and the pressure relieved. In iron pressure decreases the magnetic susceptibility, while in nickel the same effect is produced by traction.

Dielectro-magnetic Medium.—This name is given by Boccard and Pandolfi (Nuovo Cimento, IX, p. 254) to a mixture of chemically pure impalpable iron powder with paraffin, the powder being suspended in the paraffin before cooling. The inductivity of this mixture increases more and more rapidly with the percentage of iron.

Change of Form.—Nagaoka and Honda (Philosophical Magazine, XLVI, p. 261) find that hydrostatic pressure produces decrease of magnetization in iron, and that magnetization produces increase of volume. In nickel both phenomena are the inverse of this, although the effect is smaller. In moderate fields a lengthwise pull increases magnetization in iron up to a critical value, after which it decreases to a point where it is less than in unstretched iron. Magnetization likewise produces increase of length up to a certain point, after which the length diminishes. With nickel tension first produces decrease of magnetization, and then gradual increase, but not to a value greater than in the unstretched metal. Magnetization produces continuous diminution of length in this metal.

Effect on Thermal Conductivity.—Korda (Comptes Rendus, CXXVIII, p. 418) finds that the thermal conductivity of soft iron is decreased along the lines of magnetic force, although unaffected normal to those lines. Theory indicates that the effect is proportional to the square of the magnetic permeability.

Effect on Boiling Point.—Du Bois (Proceedings of the Berlin Physical Society, XVII, p. 148) shows theoretically that a liquid alters its boiling point in a magnetic field, the point rising for a paramagnetic and falling for a diamagnetic body. The change varies with the field and the susceptibility, and is inversely as the density and the heat of vaporization. For water the change in a field of 50,000 C. G. S. units would be 1000th degree.

PHYSIOLOGY. Theory.—Conflicting views prevail concerning the structure of cell protoplasm. Many authors regard it as being composed of two substances, one of which is a contractile net according to some, a relatively rigid framework according to others, or as free filaments: others as built up of a more solid material and of a more fluid material which inhabits minute spaces or vacuoles hollowed out in the former; others as a heterogeneous jelly holding granules; while others deny the truth to all these views, and hold that the living cell protoplasm is homogeneous in so far that it does not manifest the coarse structure which these theories ascribe to it. Its peculiar and transcendent qualities are, according to them, associated with molecular and not molar structure. W. B. Hardy has endeavored to show that if we put on one side the confusion which has arisen from

the inheritance of two nomenclatures of parts of the cell, this lack of consonance in views concerning the structure of cell protoplasm is traceable in the main to the fact that they are largely based on details visible both in fresh and fixed cells which are the result of the physical changes that the living substance undergoes in the act of dying or under the influence of fixatives. A study of the action of reagents upon colloidal matter shows, according to this author, that when an insoluble modification is formed there is a separation of solid particles which are largely molecular aggregates, and that these become linked together to form a comparatively coarse solid framework having the form of an open net which holds fluid in its meshes. In some cases, however, the reagent is partially miscible with the colloidal mixture, when the latter is modified in degree, but remains the same in kind. The structure of dead matter which was once living may also be referred to the clotting phenomena of death as well as to post-mortem change.

In presenting the physiological aspects of symbiosis at the British Association, Prof. Marshall Ward distinguished between parasitism, where an organism grows upon another for its own benefit, and symbiosis, where two or more organisms are mutually dependent upon one another. A characteristic instance of symbiosis is that of lichens, which are dual organisms of alga and fungus. Other instances are afforded by the algæ in the stems of *Gunnera* and the roots of *Cycas*, in the fronds or thallus of *Anthoceros* and other plants. The roots of many humus plants are curiously swollen and modified by the presence of fungi, which do not injure the plant but link its roots to the decomposing leaves around. Budding and grafting are operations involving a process of symbiosis. The nodules on the roots of leguminous plants are agents through which they obtain nitrogenous food. Other cases are those of fermentations, which are all mixed, the decomposition of cellulose, and the direct alcoholic fermentation of starch by the simultaneous action of two fungi. Symbiosis in animals is exemplified by green infusoria, the hydra, sponges, etc. The general effect of the symbiosis of two or more organisms is observed to be that each in some way promotes and stimulates the growth and vigor of the other. But when we come to inquire as to the processes which increase the functional activity of one organism by another living symbiotically with it, the matter presents many difficulties. In some cases of close symbiosis, researches have made it practically certain that the provision of definite food materials by the one symbiont for the other may be an important factor. In other cases the advantage derived is one of protection from some injurious agent. "But there is evidence which suggests that mere nutrition or protection is not the only, or even the principal, factor involved. It is well known that the products of fermentative actions are frequently poisons, and we all know of cases where such poisonous excreta of living cells act as stimuli to other cells if supplied to them in minimal doses and very gradually." Several observers have shown that in presence of a particular food substance the living cell is stimulated to produce and excrete a particular enzyme, while the substitution of another food may cause the excretion of a different organism. There is evidence in support of the hypothesis that one symbiont may stimulate another by excreting some body which acts as an exciting drug to the other. It is known that the accumulation of the products of metabolism by a cell tends to inhibit its activity, and

that if the metabolite can be destroyed or removed as it is formed the cell concerned can go on working; and similarly with the accumulation of the products of ferments and enzymes. Now, if we have two organisms, one accumulating the product and the other removing it, the process will go on continually with undiminished activity.

A discussion of the chief features in plant physiology in which notable progress has been made during the past decade constituted the subject of the chairman's address of Prof. Charles R. Barnes before the botanical section of the American Association at the Columbus, Ohio, meeting. The author showed that the great advances in plant chemistry and physics, the progress in the investigation of causes of plant form, the widening ideas of the property of irritability, the investigation of the social relations of plants, and the minute study of cell action despite their diversity point to one end and purpose. This is the solution of the fundamental problem of plant as well as of animal physiology, of the constitution of living matter. The secret lies hid, entrenched within the apparently impregnable fortress of molecular structure. The attacks upon it from the direction of physical chemistry and physiological morphology, of irritability, of ecology, and of cytology are the concentrating attacks of various divisions of an army upon a citadel some of whose outer defenses have already been captured. The innumerable observations are devised along parallel lines of approach, and each division of the army is creeping closer and closer to the inner defenses, which yet resist all attacks and hide the long-sought truth. One outer circle of defenses yet remains untaken, and until that falls it would seem there is little hope of capturing the inner citadel. More must be known of the constitution of dead substances chemically related to the living ones. When the students of chemistry can put the physiologists in possession of the facts regarding dead proteids the attacks will be renewed more directly with greater vigor and greater hope of success. It is not possible to prove to-day that life and death are only a difference in the chemical and physical behavior of certain compounds.

Respiration.—Experiments by J. Lorrain Smith on the pathological effects due to increase of oxygen tension in the air breathed are regarded by him as supplementary to the investigation on the normal process of respiration of oxygen which was previously made by Dr. Haldane and himself. In that investigation it was shown that the absorption of oxygen by the lungs is an active physiological process. The experiments now described by Dr. Smith show that at a tension a good deal higher than that of ordinary air oxygen has the effect on the lungs of an irritant, and produces inflammation. The experiments also show that the toxic effects described by Bert occur at a tension which is much higher than that required to produce the inflammatory effect on the lungs. Further, it is shown that when the lungs are damaged the tension required for the production of this toxic effect is in a marked degree higher than that required when the lungs are normal. The experiments have a direct bearing on the pathology of caisson disease, a subject which the author does not discuss fully at present; but he considers that the oxygen tension of the high-pressure atmosphere is probably to be regarded as taking part along with the rapid decomposition predicated by Bert in his investigation of the subject in the production of that disease. Apart from this, the experiments have

a bearing on the general pathology of inflammation. Attention is especially drawn to the fact that the inflammatory condition of the lungs is in a sense directly continuous with the normal process of respiration. The transition from the physiological to the pathological stage is imperceptible. Oxygen, which at the tension of the atmosphere stimulates the lung cells to active absorption, at a higher tension acts as an irritant or pathological stimulant, and produces inflammation.

It was pointed out by Dr. A. Foxwell, in the Bradshaw Lecture to the College of Physicians, London, that the first result of exercise is an increase in the rise and depth of the inspirations—that is, of respiratory exchange. The respiratory quotient $\frac{\text{CO}_2}{\text{O}_2}$ is not increased, but rather, if anything, diminished; in other words, the tissues are as rich (or richer) in oxygen as during rest. This necessitates a great increase in the absorption of oxygen at the time; for it has been shown that a man gives off ten times as much carbonic acid when on the treadmill as he does when asleep. The fact is noted that arm work, per unit of work done, requires a greater absorption of oxygen than climbing, and climbing than walking on the level. If the amount of oxygen absorbed during sleep per minute be 100 grammes, then in a minute's walking at three miles an hour on the level it would be 500 grammes, in climbing a yard high 5,000 grammes, and in doing the same number of kilogrammetres by turning a wheel (arm work) 7,000 grammes. As to the distribution of the serious strain imposed upon the organs by the enormous increase in the absorption of oxygen and the giving out of carbonic acid, Dr. Foxwell considers that the lungs and the right ventricle of the heart bear the brunt of the extra labor involved in short, strenuous exertions.

Cheyne-Stokes breathing as defined by Stokes consists in the occurrence of a series of inspirations increasing to a maximum and then declining in force and length, each inspiration being less deep than the preceding one until they are all but imperceptible, and then a state of apparent apnoea occurs. This is at last broken by the faintest possible inspiration, followed by one more decided, marking the commencement of a new ascending and then descending series of respirations. In some cases the sequence of events is not so perfectly regular. The ocular phenomena which occur in association with Cheyne-Stokes breathing are regarded by Arthur L. Whitehead as worthy of attention not only as clinical facts, but because they may possibly help to throw light upon the ætiology of the symptom. In the majority of recorded cases no eye symptoms have been observed, but in some others definite disturbances of the intra- and extra-ocular muscles have been remarked. From the consideration of a number of cases cited from the records of many observers, Mr. Whitehead finds it evident that the ocular symptoms in question are of considerable variety, and may be observed in what may conveniently be called a Cheyne-Stokes state or condition apart from any disturbance in the rhythm of respiration. Every variety of case may be seen, from simple Cheyne-Stokes respiration to the complete clinical picture of the phenomenon accompanied during the pause by unconsciousness, closed eyelids, contracted pupils, and lateral conjugate deviation of the eyeballs, while the pulse is frequent, small, and of moderately high tension. At the end of some seconds consciousness returns, the eyes open, the pupils slightly dilate, the pulse loses some of its ten-

sion, and a superficial respiration follows. Cases of an intermediate character are referred to, and some that show that the periodic changes produced by alternations in the centers may begin in and be limited to those which are not concerned in vital phenomena.

In experiments made with sodium peroxide for absorbing from the air of a closed chamber carbonic acid, water vapor, and other irrespirable gases produced by a living animal within the chamber, and at the same time keeping up the supply of oxygen, MM. Desgrez and Balthazard found that while guinea pigs died very soon when no corrective provision was made, when sodium peroxide was placed in the chamber and water was allowed to drop upon it the animals lived a considerable period with no perceptible diminution of vitality. The reaction in the experiment was $\text{Na}_2\text{O}_2 + \text{H}_2\text{O} = 2\text{N}^\circ\text{OH} + \text{O}$. M. D'Arsonval proposes as an effective method of achieving the same end of the preservation of life the provision in the upper part of a tubulated receiver, in which the animal is inclosed hermetically, of a receptacle filled with pieces of soda lime; through the tubulus a solution of hydrogen peroxide coming from a Mariotte's bottle, is conducted by a tube so as to drop into a strong solution of chromic acid. The apparatus works automatically, for as the animal breathes and the carbon dioxide and water are absorbed by the soda lime the pressure falls and the Mariotte's bottle comes into action. The hydrogen-peroxide solution then begins to drop into the chromic acid, and disengages oxygen until the pressure is restored. The flow from Mariotte's bottle then stops, and the cycle begins again.

Experiments described by Vaughan Harley seem to show that when one pleural space is filled up so that the lung on one side is compressed and only the opposite lung remains active, a marked increase in the rate of breathing follows the majority of cases. At the same time more air is breathed per minute by the active lung than was previously breathed by the two lungs together. This increase in the quantity of air breathed is accompanied by an increase in the quantity of oxygen absorbed and of carbonic acid eliminated by the animal, the two being increased *pari passu* so that the respiratory quotient as a rule is not altered. The explanation of this increase is a subject for further investigation.

A new respiration calorimeter, devised by Prof. W. O. Atwater and E. B. Rosa, is intended for use in inquiries bearing first on the question as to whether the principle of conservation of energy holds good in the living apparatus, and, second, assuming this law to be true, on the acquisition of more definite knowledge of the ways in which the body is enriched and of the values and uses of food.

Circulation.—Several varieties of the condition of insufficiency of heart muscle are described by Martius. The first is pure acute insufficiency resulting from overwork or excessive exercise. The results of acute strains on a healthy heart are soon recovered from under the influence of rest, but often repeated strains lead to weakness. The second variety, acute myocardial insufficiency, is the primary and essential cause of paroxysmal tachycardia. The enormously increased frequency of the pulse is secondary. With recovery a return of efficiency ensues, which is brought on by a rapid disappearance of the dilatation of the heart. Third, a dilatation of the heart in very weak and anæmic girls has been observed by Henschen as a result of overwork. The condition develops slowly and persists for a

long time. Cardiac weakness and dilatation occurring in children from a primary insufficiency of the heart muscle is regarded by Germain Sée and other French physicians as due to the rapid growth of body and of stature which takes place toward the close of childhood, a growth in which the heart muscle also participates. Other authors have observed that the essential cardiac condition is not one of true muscular increase of growth or hypertrophy, but one of cardiac dilatation. Scrofulous children are especially disposed to this, and the demands of school life are mentioned as a possible exciting cause. In adults alcohol is the most important predisposing cause of heart insufficiency.

From observations on the effect of baths, massage, and exercise on the blood pressure, W. Edgecombe and W. Bain find that cold immersion baths of plain water raise the arterial pressures, maximum and mean, and lower the venous pressure; after reaction the arterial pressure falls and the venous pressure rises. The results may be attributed to rise in peripheral resistance. Percussion added to cold increases the rise in arterial pressure. Hot immersion baths of plain water lower the arterial pressure, and both absolutely and relatively lower the venous pressure to an extent roughly proportionate to the increase in temperature. Turkish baths lower the arterial and venous pressure to a greater extent than the preceding, though the fall in venous pressure is proportionately not so great as that in arterial pressure. Saline baths at warm temperatures lower the arterial pressure to a greater extent than plain water baths at the same temperatures. The venous pressure, though absolutely lowered, is relatively raised. When the amount of saline matter in solution is considerable, and especially if the factor of aëration is added, a further lowering of arterial pressure takes place, while the venous pressure becomes absolutely raised. Dry massage lowers the arterial pressure and relatively or absolutely raises the venous pressure, provided it be not performed too vigorously. When this is done, a rise in all pressure occurs. Warm temperature plus massage, as in the Aix douche, lowers the arterial and raises absolutely the venous pressure to a greater extent than dry massage. The effect of the Aix douche is cumulative. In the Vichy douche, when the needle-spray form of application and the recumbent posture have influence, a rise in arterial pressure takes place. The effect of exercise on blood pressure depends on the severity of the work performed. In all forms an initial rise in arterial pressure occurs; if the exercise is mild and insufficient to excite increased frequency of pulse and respiration, a fall in arterial pressure occurs during continuance of exercise; if it is severe, with marked increase in frequency of pulse and respiration, the initial rise becomes increased and may be maintained throughout the exercise. After exercise, moderate or severe, a fall in arterial pressure takes place. The venous pressure is raised during all forms of exercise, and remains raised during the subsequent arterial fall. The return of the blood pressure to normal after exercise takes place more or less rapidly according to the gentleness or severity of the exercise and the temperature of the atmosphere.

An important study of the variations of temperature and pulse in attacks of idiopathic epilepsy, epileptic vertigo, and hystero-epilepsy has been published by Marchand. This author finds that epileptic attacks cause an elevation of temperature of 0.5° C. on an average, lasting generally about forty minutes after the fit. This

rise of temperature is distinctly noticeable ten minutes after the fit, and attains its maximum—which lasts only ten minutes—in twenty minutes after it. Attacks of epileptic vertigo cause a decidedly less but still noticeable elevation of temperature. Epileptiform attacks of general paralysis cause a marked elevation of temperature comparable to that occurring in true epilepsy. In all cases, whether of epilepsy or epileptic vertigo, there is in general no relation between the maximum height reached by the temperature and the age of the patient, and in the same patient different attacks may produce slightly different temperatures. The pulse rises about 31 beats in frequency per minute above the normal after a fit, but fifty minutes after the fit it has fallen to the normal. The highest pulse rate is attained sixteen minutes after the attack, and this rate persists for five minutes. Both temperature and pulse fall after maximum slowly and steadily to normal, or only with slight oscillations during subsidence. In epileptic vertigo the pulse rises in proportion to the intensity of the attack. The elevation of temperature in epileptic vertigo is 0.3° C.; it lasts forty minutes. The maximum is attained fifteen minutes after the attack, and continues thirteen minutes, after which a gradual subsidence takes place. Hystero-epilepsy increases the temperature 0.4° C., and the elevation lasts thirty-five minutes, while a direct ratio exists between the length of the attack and the elevation of temperature. The duration of the maximum temperature is eight minutes, and the fall to normal is gradual. The pulse in hystero-epilepsy rises 57 beats, and the acceleration lasts twenty-four minutes. The maximum pulse rate is attained at the onset of the attack (epileptoid period), and this rate lasts for four minutes. The subsidence thereafter is irregular, and marked by considerable oscillations of the pulse rate. No relation is apparent between the duration of an attack and the maximum rate attained by the pulse in hystero-epilepsy. On the whole, the cardiac disturbance, indicated by the modification and irregular fall of the pulse, is much more marked than are the temperature variations in hystero-epilepsy.

Experiments by J. W. W. Stephens and W. Myers, constituting an elaboration of some investigations previously described by Kanthack, show that cobra poison delays or prevents the clotting of normal rabbits' blood; that this inhibitory action of cobra poison upon the clotting is neutralized *in vitro* by Calmette's antivenomous serum; that the action of the antivenomous serum *in vitro* is specific; that the antivenomous serum itself, when added to blood, delays clotting; that for certain doses of cobra poison (0.1 milligramme) the measure of the neutralization *in vitro*, using clotting as the test reaction, is also the measure of the neutralization *in corpore* for guinea pigs; that the neutralization of the toxin by the antitoxin *in vitro* is certainly not vital or cellular, but must be chemical; and that the blood of a rabbit immunized with injections of cobra poison, so far as clotting is concerned, has also acquired a certain amount of immunity against cobra poison.

M. P. Cazeneuve and P. Breteau represented in the French Academy of Sciences that pure crystallized hæmatine prepared from the blood of the cow, horse, and sheep show distinct differences in composition, particularly in the amounts of iron and nitrogen.

Digestion.—An important source of discrepancies in fact and opinion in the results of study of the physiology of the intestinal movements lies in the circumstance that the muscular coat

of the intestines is subject to inhibitory and augmentor impulses dependent, first, on the condition of the neighboring parts of the organ; and, second, on impulses ascending to the central nervous system from the intestine, abdominal wall, and other parts of the body, and affecting the nerves reflexly. The motor mechanism of the intestinal wall is, moreover, extremely sensitive to changes in the blood flow through the vessels of the intestine, or to the presence of drugs or other chemical substances in the blood or within the intestine itself. The subject has been investigated by W. B. Bayliss and E. H. Starling, who find two kinds of movements distinguishable in the small intestine—the rhythmic pendulum movements, due to rhythmic contractions affecting longitudinal and circular coats simultaneously, myogenic in origin, and peristaltic contractions, true co-ordinated reflexes. The activity of the intestinal muscles will at any time depend on the relative influence of the two sets of impulses—inhibitory from above, and augmentor or excitatory from below—to which every point of the intestine is subject. Besides these local influences, every point of the intestine is under the control of the central nervous system through the intermediation of the splanchnic and the vagus nerves. The splanchnic nerves exercise a tonic inhibitory influence on the intestinal movements, excitation of them causing inhibition of the intestine affecting the longitudinal and circular coats, which is independent of the vasoconstrictor action of the splanchnics. No satisfactory evidence was obtained that these nerves possess a motor function. The vagus nerves contain two sets of fibers—inhibitory and augmentor. The inhibitory fibers have a short latent period, the augmentor fibers a long latent period. The action of the vagus on the intestines is therefore twofold—an initial inhibition followed by augmentation which outlasts the extinction of the nerve. The vagi have no tonic action on the small intestine. The relations of the vasoconstrictor and vasomotor and of the splanchnic nerves to the small intestine and the action of certain drugs upon them have also been investigated by J. L. Bunch.

From a study of the structure and functions of the glands of the stomach, pursued chiefly from a histological point of view, Dr. R. R. Bensley holds that the present state of our knowledge does not permit any comparison between the pyloric glands and the other glands of the stomach, and that they can not be compared with any of the gastric glands of the lower invertebrates. He believes that the pyloric gland cells are in most animals closely allied to certain cells in the neck of the fundus glands which have up to the present time been regarded as ordinary chief inconspicuous cells, and that those of the cat, dog, and rabbit are identical with them. The author's researches have enabled him to satisfy himself that in the fundus glands of many mammals there are cells which are morphologically and physiologically equivalent to the mucous neck cells of the batrachian gland, and that the same relationship exists between these and the pyloric gland cells as obtains in *Anura*. These cells in the neck of the gland have been in great measure overlooked on account of their small size, and are generally regarded as pepsin-secreting chief cells. In the cat and dog, Dr. Bensley holds that the fundus glands contain two kinds of chief cells—those of the body and those of the neck of the gland. The former secrete ferment and present numerous large zymogen granules accumulated near the lumen, while the outer

protoplasmic zone of each cell dyes deeply with nuclear dye like hæmatoxylin and presents a coarse fibrillar structure. The staining properties of this part of the cell are due to the presence of a kind of chromatin which may stand in a genetic relation to zymogen, and which has been named prozymogen. He regards the cells of the neck of the gland and the cells of the pyloric gland, for reasons which he assigns, as of the same nature. The chief cells of the neck of the fundus glands and the pyloric gland cells of the cat and dog are the physiological and morphological homologues of the mucous neck cells and pyloric gland cells of the frog, with which they correspond in situation, structure, functional cells, and staining. The cells of the lowest portion of the gland duct or pit are of a type intermediate between the surface epithelium and the mucin-secreting neck cells or pyloric gland cells, and form the fundamental type to which the origin of both must be traced.

Dr. Southgate and B. K. Rachford published in 1895 the results of some experiments on the influence of bile and combined hydrochloric acid upon the proteolytic action of pancreatic juice. Their conclusions having been questioned, Mr. Rachford made further experiments, by the evidence of which he is led to believe that the conditions prevailing throughout the entire small intestine in carnivorous animals are favorable to the proteolytic action of pancreatic juice. In those animals, when the proteid food partly saturated with hydrochloric acid is discharged from the pylorus, it at once comes in contact with the mixture of bile and pancreatic juice, and immediately the trypsin finds itself under conditions most favorable for its proteolytic action. These conditions prevail for a short time only, when the pancreatic juice, more or less weakened by dilution as it passes down the intestinal canal, is called upon to act in the presence of sodium carbonate in the lower and alkaline portion of the ileum; and here again we find the conditions very favorable for the proteolytic enzyme of the pancreas. If the above conditions as assumed be correct, then throughout the entire small intestine trypsin finds itself in conditions more favorable to proteolytic action than if it were acting throughout the canal on neutral fibrin in neutral solution.

The question of what detrimental effects, if any, does the excessive formation and absorption of indol—a substance produced in some amount in the intestines of most adult human beings as the result of bacterial action on proteids—entail upon the human organism is the subject of a paper by Dr. C. A. Herter. The indol produced in the intestine is oxidized within the organism into indoxyl, which, in combination with sulphuric acid as indoxyl potassium sulphate, forms the basis of the well-known indoxyl or indican secretion of the urine. This reaction is in various derangements of digestion often more pronounced than in health, which suggests the inference that an unusual quantity of urine has been formed in the intestine and absorbed from it. The author considers himself justified by his study and experiments in believing that prolonged and excessive indol absorption is capable of causing headache, especially frontal headache, abnormal cephalic sensations, and indisposition for mental and physical exertion. The latter condition, if prolonged, may perhaps form the basis of a neurasthenic state. The subject is one for further study.

Secretion.—The known facts with regard to the secretion of urine are explained by assuming

that a watery exudation free from proteid is formed in the glomeruli, and that this becomes concentrated through the tubules, either by the absorption of water and certain salts or by a certain secretion of urea, uric acid, etc. The process has been regarded as one simply of filtration by Ludwig, and as besides filtration involving the secretory activity of the glomerular endothelium by Heidenhain. The experimental evidence collected by E. H. Starling in his study of the subject goes to show that the glomerular epithelium may be looked upon as a simple filtering membrane resembling in many particulars a membrane of gelatin. When the pressure in the glomerular capillaries rises above from 25 to 30 millimetres Hg, the measure of the osmotic pressure in the capillaries, filtration takes place through the glomerular epithelium, the filtrate representing simply plasma minus proteid. The higher the pressure in the glomerular capillaries the more rapidly would this process go on.

An account has been published by Prof. Emil Fischer of his researches on uric acid and the constitution of the substances chemically related to it, such as paraxanthine and heteroxanthine, which are associated in urine; xanthine, adenine, and guanine, which probably form part of the nucleins of cells; and theobromine, theophylline, and caffeine, the physiologically active constituents of tea, coffee, and cocoa. An accurate knowledge of the constitution of these substances is, in consequence of their relations, of great importance to physiologists, while a satisfactory process for utilizing uric acid in the synthesis of theobromine or caffeine would possess therapeutic interest as well as commercial value. Prof. Fischer's studies have led to a clear knowledge of the relationship that exists between these complex products of animal and plant life, and are believed to have made their commercial preparation possible.

The action of pancreatic juice on proteids is regarded as associated with an alkaline medium. Some experiments bearing upon this point have been made by B. K. Rachford, who, having obtained the pancreatic juice from rabbits, employed purified and dried blood fibrin for the determination of its solvent power, weighing the fibrin before and after the action of the juice had been exercised upon it. In some preliminary experiments he found, in opposition to Messrs. Chittenden and Albro, that when fresh rabbit's bile is added to the fresh pancreatic juice of the same animal, the proteolytic power of the juice acting on neutral fibrin is stimulated to a marked degree. In most of the experiments the juice was able to do one fourth more work by reason of the presence of the bile, which is entirely in favor of the value of alkalinity in promoting the action of the pancreatic juice. The presence of bile seems to limit bacterial action or the action of organized ferments on the albuminous fermentations. But when fibrin or other proteid is ingested into the stomach it combines with a certain proportion of hydrochloric acid, and the author, in endeavoring to determine the effects of the addition of hydrochloric acid outside the body, found that when fibrin was one half saturated with hydrochloric acid (no free hydrochloric acid being present) it was as readily acted upon by pancreatic juice as is neutral fibrin. When, however, the fibrin was nine tenths saturated with hydrochloric acid the proteolytic action of the juice was retarded; whence the conclusion may be drawn that the acidification of the proteid by the acid of the gastric juice to a certain moderate extent does not interfere with

the action of the pancreatic juice, though when it is fully saturated the action is impaired. From all the evidence Mr. Rachford has been able to obtain he is led to believe that the conditions which prevail throughout the small intestine in carnivorous animals are everywhere favorable to the proteolytic action of pancreatic juice.

In continued experiments by Wakelin Barratt on the discharge of water and carbon dioxide from the surface of the body, the influence of varnishing upon the aqueous discharge from the skin was determined and the mode in which water and carbon dioxide escape from the free surface was further elucidated. It was found that when the skin is varnished the elimination of water is diminished but not abolished, the diminution amounting in the experiments to 78.1 per cent. of the normal output. The behavior of the skin in dry inflammation has been shown to be similar, the diminution of output in this condition amounting in the experiments made to 56.3 per cent. In both cases the diminution is due to a mechanical blocking of the sweat ducts. In each case the incompleteness of the arrest of the aqueous discharge from the skin is due to the circumstance that this has a double origin: part escapes by the sweat ducts, either by appearing at their orifices or by diffusing from them into the horny epidermis and being thence discharged externally; the rest diffuses directly from the rete through the horny epidermis into the external air, this being made possible by the property which the horny epidermis possesses of taking up water in small amount. The water escaping by the sweat ducts directly and indirectly was found, in the experiments made, to be approximately equal in amount to that passing through the horny epidermis from the rete. The elimination of carbon dioxide by the skin is simpler than that of water, being essentially a single process, namely, that of diffusion through the horny epidermis.

It having been shown that after treatment with alcohol the liver, the blood, and various other tissues contain an amylolytic zymin, Noel Paton undertook to determine whether the liver, where amylolysis is so active during life, yields a stronger diastase than the blood and other organs after treatment with alcohol. Comparisons of the amylolytic activity of the liver, blood, and kidney gave no evidence that the liver, after treatment with alcohol, yields an amount of diastase in excess of that yielded by the kidney or by the blood. Indeed, in several instances the amylolytic activity of the blood and kidney was found to be greater than that of the liver. The amylolytic action of the liver after treatment with alcohol is not proportionate to its action in the fresh condition immediately after the death of the animal, and is frequently more powerful. So far the evidence we possess does not dispose of the possibility that the zymin is a product of the death and disintegration of cells. Even if such evidence as we have of the actual existence of a zymin be accepted, the experiments recorded show that the part it plays in hepatic amylolysis is uncertain. The idea that hepatic amylolysis is due to a zymin is in the view of the author strongly opposed by the observations referred to and by the experiments of Cavazzini.

It is found by MM. Lannelongue and Gaillard that the toxicity of the urine of children is inferior to that of the urine of adults, but is largely increased in cases of acute appendicitis. The color of the pathological fluid is also more marked, and its density and the amount of extractives present are greater.

Muscular System.—In all forms of considerable muscular exertion respiration through the open mouth is observed in healthy men. The breathing is of a "panting" nature, especially when the man feels hot. The work of Geppert and Zuntz shows that in animals muscular activity is accompanied by an increase in the oxygen and a decrease in the carbon dioxide of the blood. The hyper-pnoea of muscular exercise is, they consider, due to the effect of the same product of muscular energy acting on the nervous system. There appear, according to M. S. Pembrey, to be two other causes, one cardiac, the other the increased heat of the body, of which the latter is considered in the author's preliminary paper. The values obtained in the mouth in Mr. Pembrey's experiments and recorded in his communication are too high for the temperature of that part of the body immediately after exercise, for the thermometer was retained for at least ten minutes in the closed mouth. The observation was made in a warm room, and during the time of making it the temperature of the body was becoming more and more equal in its various internal parts. In the experiments respiration only took place through the mouth when there was actual and imperative need so to breathe. The author suggests that buccal respiration in man may play a part in the regulation of temperature during exercise. It increases the loss of heat. The temperature observed in the mouth in such cases is not a measure of the internal heat of the body.

Experimental researches in biothermogenesis pursued by M. Raphael Dubois through several years upon marmots have led him to the conviction that the heat produced by organisms, particularly in the muscular system, should not be regarded as simply a waste of physiological labor, for elimination with the excreta, but a condition of improvement useful and even necessary to the performance of the physiological functions. In order to a more complete demonstration of these facts he has undertaken to compare in the same individual marmot the action of a muscle normally and physiologically cooled with that of the same muscle normally and physiologically warmed. Conclusions are drawn from these experiments that the time lost from a muscular contraction is one third shorter in a warm than in a cold animal; that the duration of the period of increasing activity and of decreasing activity as well are one half shorter in the warm marmot; that tetanization is obtained with a number of excitations three times less in the warm marmot; that the force of work is greatly augmented in the warm marmot, which can not only lift heavier weights, but can raise them to a greater height and in a shorter time. The ratio of the weights raised is ten times higher in the warm animal; the muscle of the cold animal disengages less heat for the same excitation and a smaller weight raised; muscular fatigue is manifested much more quickly in the muscle of the warm marmot than in that of the cold one. The same effect is produced with the isolated cardiac muscle of the animal.

Nervous System.—Prof. G. Golgi finds evidence from the action of certain reagents of the presence of a special investing membrane in various nerve cells, and also of a peculiar reticular structure in the interior of nerve cells. The cell covering disclosed by his experiments is sometimes continuous and homogeneous and sometimes appears in the form of delicate scales deposited side by side. More frequently, however, it presents the appearance of a fine and delicate network,

with uniformly round and regular meshes, which completely invests the cell body and is prolonged upon the protoplasmic processes of the cell as far as to the second and even the third division, but on these it becomes a more continuous and homogeneous layer. The scalelike and striated characters of the investment are particularly observable in the cells of Purkinje in the cerebellum. The second structure mentioned is a delicate network which the author shows to exist in the interior of the cell—a reticular structure that is so distinctive as to enable it to be easily recognized even when seen only in a small segment of a cell. It consists of flattened fibers rendered brown by the action of the reagents used in the experiments, which unite in nodal points. These nodes appear to be small disks of circular form, with transparent center. The filaments near the periphery seem to be upon the same plane, but nearer the center they dip in all directions into the cell substance; peripherally they terminate in pyriform swellings from which again very fine filaments proceed toward the periphery. Prof. Golgi regards the presence of the external continuous or reticulated investment of the nerve cell as opposed to the view that nerve impulses are propagated by continuity; for it would act as an insulator.

Twenty recorded cases of transplantation of nerves are referred to by Dr. R. Peterson in an article in the American Journal of the Medical Sciences. The median nerve was operated upon in 7 cases, the ulnar in 3, the median and ulnar nerves in 2, the muscular-spiral nerve in 7, and the sciatic in 1. Eight of the operations were primary and 12 were secondary. The time from the injury to the operation varied from forty-eight hours to one and a quarter year. Eight out of the 12 cases of secondary operation showed improvement in sensibility or motion, while only 4 out of the 8 cases of primary operation improved. The interval between the ends of the divided nerves varied from 3 to 10 centimetres, but distance did not seem to affect the result. In some cases the transplanted segments were from the sciatic nerves of dogs, in 3 from rabbits, in 1 from a kitten, in 1 from the spinal cord of a rabbit, and in 5 from recently amputated limbs. In 9 cases catgut was used to unite the implanted segments to the divided ends, in 3 silk, and in 1 kangaroo tendon. No case recovered entirely. The nearest approach to complete recovery took place in the case longest under observation, in which at the end of six years sensibility had entirely reappeared, and the only weak muscle was the abductor pollicis. In 3 cases recovery of sensibility and motion was practically had, and the hand was useful. Muscular power improved in 4 cases. Sensibility completely returned in 4 cases, nearly completely in 3 cases, and was improved in 4 cases. Improvement in either motion or sensibility took place in 12 cases, and no improvement in either in 6 cases. The average time in which sensibility appeared after the operation was about ten days. Motion returned in about two and a half months.

The pathological changes produced in the brain by sunstroke have been regarded as involving an acute parenchymatous degeneration of the neuroses resulting from the action of an autogenous poison which was supposed to be the basis of the symptoms. The subject has been further studied by Dr. James Ewing from the necropsy of a deceased patient, in which a microscopical examination showed the anterior cornu cells of the spinal cord to have undergone characteristic changes, appearing diffusely stained and pale

blue. The nucleoli were enormously swollen and pale, and were surrounded by a number of large, deeply staining granules. Some cells still showed traces of Nissl's bodies, either of the original form and size, or swollen and fused together, or evenly and minutely subdivided, but invariably very pale. Many nerve cells appeared to be entirely devoid of chromatic bodies. The nuclear membrane was often invisible. In the medulla nearly all the nerve cells showed the more advanced changes noted in the spinal cord. Here many cells were colorless. Some of the Purkinje cells of the cerebellum were but slightly altered; many contained only a few slender and very pale chromatic masses, and some were devoid of chromatic bodies. In the cerebral cortex the usual nuclear changes were very prominent and the chromatolytic changes were advanced, most of the cells failing to show distinct chromatic bodies or network. In the posterior spinal ganglia the chromatic bodies in most of the cells were pale and minutely subdivided, while many were colorless. The nucleoli of these cells were much swollen. In another case only slight lesions were disclosed in the bulbo-spinal cord and cerebrum, and marked changes were found only in the cerebellum.

In experiments upon the relative acuteness of the senses of hearing, touch, taste, and smell in the blind and persons of normal vision, Prof. H. Griesbach has found that no remarkable differences exist as to tactile impressions, and such as do exist are in favor of the seeing. No difference was found in the capability of localizing impressions of sound. As a rule, in both the seeing and the blind, the use of both ears gives better impressions than the use of one alone. No difference in the acuteness of hearing was found, and no relation was observed in either blind or seeing between the acuteness of hearing and the power of localizing sounds. There seemed to be no difference between the two classes in acuteness of smell. The blind become fatigued in the execution of manual labor sooner than do those of equal age who see. They are more fatigued with manual than with mental work, which is not the case with the seeing of the same age. The results were substantially parallel as between the two classes in the experiments on the accuracy or the fallaciousness of determinations of touch. These results are in many respects opposed to generally received opinions, for it is usually supposed that deprivation of sight is accompanied with better development of touch and hearing.

Two cases of pathological changes in the nervous system accompanying delirium tremens are reported upon by Dr. Ewing, of Columbia University. Intense and general capillary congestion was found on post-mortem examination in the brains of both subjects. The great "motor" cells of the spinal cord and medulla were extensively affected and nowhere normal. The "chromatic rods"—the normal stored-up pabulum of the nerve cell which is used up during functional activity—were almost entirely disintegrated and destroyed or absent in those cells. In many other cells this "chromatolysis" was even more advanced, and the cell body showed transparent areas (hyaline degeneration). The outlines of many cells were irregular and ragged (erosion of surface) and the nuclei were dislocated from their normal position, sometimes in so marked a manner as to project from the side of the cell body. Similar chromatolytic changes of a less extent were found in the cerebellum (Purkinje's cells). In the hemispheres the cortical pyramids (archyochromes) failed to exhibit the usual network or

striated arrangement of these rods, and those which were present were either feebly colored and indistinct or broken up into coarse granules.

Of the results of experiments as to the practicability of rendering considerable areas of the body anæsthetic by the action of cocaine injected directly into the spinal canal, Dr. Bier, of Germany, reports that by such employment of from 5 to 10 milligrammes of cocaine hydrochlorate he produced anæsthesia of the lower limbs, and was able to perform a number of ordinarily severe operations painlessly. The only drawbacks resulting from the administration were severe headache, nausea, and vomiting. Making some exact experiments to determine more precisely the effects, Dr. Bier and his colleague, Dr. Hildebrand, subjected themselves to the action of the drug injected into the spinal subdural space. It was found that anæsthesia of the whole of the lower extremities supervened in from five to eight minutes after the injection and a dose of 5 milligrammes of the cocaine was sufficient to make this condition of anæsthesia last for about forty-five minutes, after which normal sensibility slowly and gradually returned. The after-effects were, however, not always pleasant and were like those found in the surgical cases. The authors therefore decided that further experiments should be made on animals, so that the effects might be more fully studied with a view to obviate the disagreeable effects produced by the drug and to enhance its usefulness.

Taking advantage of a case in the practice of one of the authors in which there was a constant issue of cerebro-spinal fluid from one of the nostrils, the properties of that fluid have been studied by Drs. St. Clair Thomson, Leonard Hill, and W. D. Halliburton. The fluid is characterized by its clear watery character, its low specific gravity, the small quantity of proteid in it, the absence of albumin, and the presence of a substance which reduces Fehling's solution but is not dextrose. The substance is possibly related to pyrocatechin. The contrast between such a fluid and the mucin-containing fluid of ordinary nasal hydrorrhea is very marked. Analysis of the fluid that escaped in the evening showed it to be more watery than that collected early in the morning. Dr. Hill found his theory confirmed that the rate of secretion of the cerebro-spinal fluid when the crania-vertebral cavity is opened depends directly upon the difference between the pressure in the cerebral cavities and that of the atmosphere. At the same time it was shown that cerebral capillary pressure varies directly and absolutely with vena cava pressure. On the other hand, cerebral capillary pressure varies directly, but only proportionately, with aortic pressure, for the peripheral resistance lies between the aorta and the cavities. It follows from these considerations that the easiest methods of raising the cerebral capillary pressure in man are by compression of the abdomen, by the assumption of the horizontal posture and by straining or forced respiratory effort with the glottis closed. By all these methods the vena cava pressure is considerably raised, and by the last method the venous inlets into the thorax may be blocked and the pressure in the cerebral capillaries raised to something like aortic pressure. It is to be observed that when the horizontal position is assumed the rise of venous pressure may be compensated by the fall of arterial pressure, which normally occurs when the body is at rest. This is, no doubt, the case during sleep; also that while by a forced expiratory effort the aortic pressure is lowered, the total effect on capillary pres-

sure is a very great rise. In the case of the special subject of the paper the flow of the cerebro-spinal fluid was accelerated by all the circumstances enumerated as raising the cerebral capillary pressure. The increase of flow is, moreover, accompanied by a decrease in the percentage of solid matter. The results of injecting into animals cerebro-spinal fluid removed from cases of brain atrophy, especially from cases of general paralysis of the insane, were studied by Dr. Halliburton and Dr. Mott. The fluid contains a toxic substance, choline, which is supposed to be derived from the disintegration of leithicin in the brain. Injection of such fluid into the jugular vein of animals anesthetized with ether causes a marked lowering of arterial blood pressure, which is partly cardiac in origin, but principally due to the local action of the poison on the neuro-muscular apparatus of the peripheral vessels, especially in the splanchnic area. The fluid obtained from the present case was also injected in a similar way, with negative results.

Glandular System.—The structure of the prostate gland has been studied and is described in detail by Dr. George Walker, of Baltimore, who has also paid particular attention to the function of the organ. On this subject he has observed that in the fluid taken from the testes of the dog the spermatozoa were motionless, and also that there was no movement in those from the head of the epididymis. Slight movements might be observed in the fluid from the tail of the epididymis, especially in those parts where the fluid was thin. There were very slight movements in the fluid contained in the vas deferens, except where the fluid was of thinner consistence. Distinct but not very lively movements were observed in a mixture of semen from the testes and the prostatic secretion. Only in a mixture of semen from the epididymis with the prostatic fluid did the spermatozoa present lively and persistent motion. The author endeavored to ascertain the functions of the colliculus seminalis which has been thought by some to undergo a kind of erection and thus to occlude the urethra, preventing the passage of the semen into the bladder during emission. He was unable to substantiate this view, but believes that the organ may interfere with the contraction of the sphincter vesical externus of Henle. The longitudinal fasciculi of the membranous portion of the urethra by their contraction dilate the distal segments of this portion of the urethra, and this tends to drive the semen forward by a process of exhaustion.

Experiments by J. R. Bradford on the effects of partial removal of the kidney upon metabolism show that excision of a wedge from one kidney tends in most cases to be followed by a variable amount of atrophy of this kidney, whether the second kidney be removed or not; that excision of a part of one kidney or even of portions of both kidneys is an operation not followed by death, even up to the removal of approximately two thirds of the total kidney weight, and often there is no great disturbance of health, except a variable amount of wasting, generally transitory and slight in duration; that if approximately three quarters or more of the total kidney weight be removed prolonged survival is impossible, death occurring in from one to six weeks. Death is apparently dependent rather upon the quantity of kidney substance removed than upon any mutilation inflicted by the operative procedures. After summarizing the effects of nephrectomy upon the urinary substance and processes, the author suggests that when the amount of available kidney substance is greatly reduced,

the tissues of the body, and more especially the muscles, rapidly break down and liberate urine. He has no observations to show whether this is dependent upon the cessation of the action of an internal secretion that is supplied normally by the kidney.

Two cases of pathological thyroid structure at the base of the tongue are reported by Dr. H. L. Williams, of Philadelphia. In one case the growth was about an inch and a quarter wide and an inch thick, oval, rounded, and smooth on the surface, except at the top, where it was superficially ulcerated and covered with a whitish membrane. A small portion was removed, and showed, in addition to the signs of inflammation, typical thyroid structure containing colloid material. It was situated in the same position as the growth just mentioned, and was but little smaller. It was soft and spongy in appearance, surrounded by a fibrous capsule, and showed a delicate reticulum of fine filaments extending through it in all directions. The surface was reddish, in some areas whitish, glistening, and resembled the thyroid gland. The microscope showed a network of acini separated by a delicate reticulum of connective tissue. The acini were as a rule dilated and cystic, and filled with colloid material. The diagnosis of cystic thyroid tissue undergoing colloid degeneration was established. An embryological explanation of thyroid tissue thus situated is suggested by the author.

Miscellaneous.—Experiments made by Prof. W. O. Atwater under the auspices of the United States Department of Agriculture, Wesleyan University, and the Storrs Experiment Station had for their purpose the study of the laws of nutrition, and particularly the inquiry whether alcohol was capable of taking any part in that function. The experiments were continued for from four to twelve days each, while the subject of them lived day and night in the chamber of the calorimeter. Of six experiments made with a variety of diets which are reported upon, alcohol was made a part of the diet in two. All the food and drink supplied to the body, and all the excretory products given off from it, even to the air before and after it was breathed, were measured and analyzed. Further, the energy latent in the material supplied to the body and in the excretory products given off, as well as the energy transformed by the body and given off in the form of heat, were carefully determined. The income and outgo of energy were thus exactly ascertained. When results had been obtained showing what amount of food material was required for the maintenance of the body of the subject when at rest, and how much more was necessary to enable him to perform a measured amount of muscular work, a certain quantity of the fuel constituents of the food was taken out and a chemically equivalent amount of alcohol was substituted. The daily portion included about two and a half ounces of absolute alcohol, and was administered systematically. The results of this administration showed that the alcohol was as completely oxidized within the system as any ordinary food; that in this oxidation all of the potential energy of the alcohol burned was transformed into heat or muscular energy; and that the alcohol protected the material of the body from consumption as effectively as the corresponding amounts of sugar, starch, and fat. These results were confirmed by those of a number of other experiments made afterward, which were practically identical. Different forms of alcohol tried on different subjects gave substantially the same results. The author utters a caution against the hasty drawing of

too wide deductions from the experiments. They simply show that the limited quantity of alcohol that was given with other food in the diet of healthy men for periods of a few days was almost completely burned in the body and yielded a certain amount of energy, and that this energy was utilized in the body as is the energy of the hydrocarbons of ordinary food. No other relations or effects of alcohol in the body come under the scope of the investigation.

Dr. A. Campbell White has obtained results from experiments on the application of liquid air to the tissues of the body which encourage the belief that that substance may come into use as a local anæsthetic, and possibly for other medical and surgical purposes. The difference in temperature between liquid air and the human body is so great that it affords a unique means of producing a sudden and extreme shock to a localized part of the body without localized destruction of tissue and without affecting the general system.

In a study of the coagulation of proteid by electricity, W. B. Hardy has found that under the influence of a constant current the particles of proteid in a boiled solution of egg white move with the negative stream if the reaction of the fluid is alkaline, and with the positive stream if the reaction is acid. The particles under this directive action of the current aggregate to form a coagulum.

Commenting on a reported case of a family of three children, two of whom, boys, have the right eye hazel and the left eye blue, and the third, a girl, the right eye blue and the left hazel, the father having blue eyes and the mother hazel, the Lancet says that the condition described, though uncommon, is not extremely rare. Two forms of heterochromia are recognized by ophthalmologists—one in which one eye only is parti-colored, a segment of the iris being of one color and the remainder of another, "heterochromia unilateralis"; and the other, in which the iris of one eye is different in color from that of the other, "heterochromia bilateralis." The dark color of the iris in the southern nations and in the yellow races, as in the Chinese, is due to pigment in the superficial cells and in the cells of the stroma. The blue iris observed in the northern nations is due to the absence of pigment. It has been thought that eyes presenting a difference in color in their irides are not perfectly developed, but it does not appear that there are any statistics bearing upon the question. The influence of heredity on the color of the eyes has been shown to be marked.

Investigating the question of the presence of a nucleus in yeast cells, H. Wager found in all the species of *Saccharomyces* examined what he called a "nuclear apparatus"—that is, a special portion which appeared to be set apart to perform the function of a nucleus. This nuclear body is perfectly homogeneous, even when observed under the highest powers of the microscope, and appears to correspond rather with the nucleole of higher plants. One of these bodies is found in every yeast cell. In addition to the nuclear body, there is in every yeast cell a structure of the nature of a vacuole, which appears to be an essential part of the nuclear apparatus, and to possess some of the attributes of a nucleus. This structure has often been mistaken for the nucleus itself.

In his microscopical observations of the structure of the skin in man and the lower animals, M. Ranvier has found that the Malpighian layer is characterized by the presence of numerous fibrils imbedded in the cell protoplasm, and he has therefore named it the stratum filamentosum.

The filaments are not affected by water even when boiling; they swell in acids and in alkalies, and are colored violet with hæmatoxylin and red with carmine. With thionine they assume a pale green tint or remain uncolored, though that substance renders the cell protoplasm intense violet. The filaments are therefore not simply processes of the protoplasm. They are doubly refracting. Like the granules of eleidine in the stratum granulosum or like starch grains they are products of cell activity. The stratum lucidum of Oehl and Schroen was found to be in reality double. To demonstrate this, sections of skin made after immersion for an hour in osmic acid, then for twenty-four hours in alcohol, are colored with picrocarmine and examined in glycerin. The eleidine is not colored, because it has undergone osmic metallization. The true stratum lucidum is not colored either by the carmine or by the osmic acid, but immediately beneath it and above the stratum granulosum is a thin layer which assumes a bright red color. It is composed of only two or three layers of transparent cells. Its external surface is smooth, its internal is festooned. It is this layer which in M. Ranvier's opinion really separates the two chief layers of the skin, the only ones formerly admitted—viz., the corneal layer and the Malpighian layer. The author names it the stratum intermedium. While it colors deeply with carmine, it does not color at all with purpurine. After hardening in alcohol it remains uncolored with thionine, while this stain colors the stratum corneum verum green and the stratum filamentosum violet. The nuclei of the cells of the stratum intermedium are atrophied and their investing membranes present epidermic fibrils which are wound like the threads in a cocoon. According to M. Ranvier, then, no less than seven distinct layers can be demonstrated by the aid of staining agents to be present in the epidermis.

PORTO RICO, an island of the West Indies, formerly a colony of Spain, ceded to the United States by the treaty signed at Paris on Dec. 10, 1898, and ratified by the United States Senate on Feb. 6, 1899, and by the Queen Regent of Spain on March 17, 1899.

Area and Population.—The island is about 43 miles broad and has an extreme length of 108 miles. The area is 3,688 square miles. The population in 1887 was 814,708, of whom over 300,000 were negroes and a large part of the remainder of mixed blood. The population was composed of 399,022 males and 399,544 females. The population of the chief towns was: Ponce, 42,388; Utuado, 31,209; San Juan, the capital, 26,387. In 1899 there were 957,000 inhabitants on the island. San Juan had 32,500 and Ponce 56,000.

Commerce and Production.—The most valuable product is coffee, of which 26,655 tons were exported in 1896. The export of sugar was 54,205 tons; of molasses, 14,740 tons; of tobacco, 1,039 tons; of cattle, 3,178 head. The value in United States currency of the total imports in 1895 was \$16,155,056, against \$18,316,971 in 1894; the value of exports was \$14,629,494, against \$16,015,665. The chief imports in 1895 were rice for \$2,180,004; fish, \$1,591,418; meat and lard, \$1,223,104; flour, \$982,222; manufactured tobacco, \$663,464; olive oil, \$327,801; cheese, \$324,137; wine, \$305,656; soap, \$238,525; iron, \$224,206; vegetables, \$192,918; provisions, \$171,322; jerked beef, \$133,616; coal, \$119,403. The value of the coffee exported in 1895 was \$8,789,788; of the sugar, \$3,747,891; of the tobacco, \$646,556; of the honey, \$517,746. The imports of Porto Rican produce into Spain in 1895 were reported as \$5,824,694 in value, and

that of Spanish exports to Porto Rico as \$8,572,549. The exports of merchandise from the United States to Porto Rico were valued at \$1,833,544, and of imports to Porto Rico into the United States at \$2,296,653, of which 98 per cent. represented molasses and sugar. The imports from Great Britain in 1895 were \$1,765,574; from the British West Indies, \$1,709,117; from Germany, \$1,368,595; from France, \$251,984; from Cuba, \$808,283. The exports to Cuba were \$3,610,936; to France, \$1,376,087; to Germany, \$1,181,396; to Great Britain, \$1,144,555; to the British West Indies, \$521,649. When the disturbances in Cuba and the Spanish interdicts cut off the supply of the Havana leaf for export a stimulus was given to the raising of tobacco in Porto Rico as a substitute. The tobacco grown on the island is inferior and variable in quality, the cultivation and curing being carelessly attended to, but some plantations produce a quality approaching that of the best Havana. The coffee crop of 1896 was valued at \$13,379,000; the product of sugar and molasses at \$5,000,000. The export of coffee in 1897 was about 55,000,000 pounds. The quality of Porto Rican tobacco is held in high estimation in Europe. France has taken the finer grades and Spain the poorer, but the bulk of the crop has usually gone to Cuba. The prices have been too high for much exportation to the United States. The sugar cane can not be grown as easily now as in former times, before the soil was partially exhausted, when the ratoon sprang up without replanting for six or seven years in succession, and the yearly crop of sugar reached 8,000 pounds an acre. Now the stocks will ratoon for four or five consecutive years, but there is little land that produces more than 4,000 pounds an acre, and the average is not much over 2,000 pounds. The value of the commerce of the island and its distribution, according to the Spanish official reports, are shown in the following table:

COUNTRIES.	Imports.	Exports.
Spain	\$7,152,000	\$5,067,000
United States.....	3,750,000	2,814,000
Cuba	689,000	3,515,000
Germany	1,815,000	2,118,000
France	215,000	3,088,000
British colonies.....	2,359,000	264,000
Great Britain	1,756,000	77,000
All other countries.....	618,000	1,692,000
Total	\$17,868,000	\$18,575,000

The export of coffee was valued at \$12,223,000; sugar, \$4,412,000; tobacco, \$1,194,000; cattle, \$221,000.

Navigation.—There were 1,077 vessels, of 1,079,236 tons, entered at the ports of Porto Rico during 1895, of which 150, of 296,424 tons, arrived from Spain; 190, of 182,165 tons, from Cuba; 171, of 180,772 tons, from the United States; 109, of 135,349 tons, from England; 50, of 79,495 tons, from Germany; 44, of 55,908 tons, from France; 160, of 49,997 tons, from the British West Indies; 25, of 36,089 tons, from Venezuela; 59, of 20,103 tons, from Santo Domingo; 16, of 12,751 tons, from Belgium; and 45, of 11,140 tons, from the Danish West Indies. The total number of vessels cleared was 1,070, of 900,379 tons, of which 262, of 358,427 tons, cleared for Cuba; 284, of 201,051 tons, for the United States; 121, of 126,662 tons, for Spain; 48, of 65,926 tons, for France; 151, of 44,285 tons, for the British West Indies; 47, of 24,528 tons, for the Danish West Indies; 25, of 32,740 tons, for Germany; and 60, of 21,594 tons, for Santo Domingo.

Communications.—There were 137 miles of

railroads in operation in 1898 and 170 miles were not yet completed. The telegraphs had a length of 470 miles. Transportation away from the railroads and the made highways, which have a total length of 150 miles, is carried on by means of pack horses and mules.

American Administration.—Gen. John R. Brooke, who as president of the Evacuation Commission took over the administration from the Spanish captain general when the Spanish garrison was withdrawn, found in office the Insular Cabinet selected by Capt.-Gen. Mavin, to be responsible to the elective Legislative Assembly that was to have assembled in February, 1898, under the autonomous Constitution granted to Porto Rico by the Spanish Government in November, 1897. Owing to the beginning of the war between Spain and the United States, the autonomous Government was never organized. Nothing was done toward it beyond proclaiming the Constitution and appointing the six secretaries composing the Cabinet. Gen. Brooke, who supposed that their selection was made through an expression of the will of the people, confirmed them in office. For economical reasons their number was reduced to four, and before the complete occupancy of the American troops two of these resigned and others were appointed in their places. Gen. Brooke had taken the Insular Cabinet as a guide to conform the military rule to the desires and customs of the people, and to allow the existing laws to operate undisturbed as far as they were compatible with American principles of justice. He announced that all the laws of the land not contrary to the Constitution of the United States would be enforced. Although the island was divided into military districts, over which the officers of the army had full authority, the machinery of the municipalities and the courts was not arrested nor altered.

When Gen. Guy V. Henry entered upon his duties as Governor General the Insular Cabinet stood as follows: Secretary of State and President of the Council, Luis Muñoz Rivera; Secretary of Finance, Cayetano Coll y Toste; Secretary of Justice, Juan Hernandez Lopez; Secretary of Fomento, or Public Works and Education, Salvador Carbonell. After two months of trial Gen. Henry, on Feb. 6, abolished the Insular Cabinet, which Gen. Brooke had consulted only as a body, requiring a unanimous decision regarding the suspension of any law, the appointment of officials, or other matter on which he asked advice, although he did not always follow the recommendations of the Council. Gen. Henry substituted for the collective Council of Secretaries heads of the Departments of State, Finance, Justice, and the Interior. Friction had arisen over the temporary substitution of American officers to take charge of education and public works and in regard to the introduction of American methods in the administration, in consequence of which the Cabinet had offered its resignation as a body previous to its dissolution. Gen. Henry found Dr. Carbonell too dilatory in carrying out his projects for the improvement of the public roads, and therefore appointed an American officer to conduct this branch of the department. The Secretary of Fomento thereupon tendered his resignation, and the Cabinet determined to resign as a whole if the slow and cumbersome method of dealing with all matters through the President of the Council were changed, as the Governor General resolved it should be. Major Pierce was appointed Director of Public Works after the retirement of Dr. Carbonell, and Gen. Eaton was assigned to the Department of Public Instruction.

The President of the Council, who had been instrumental in obtaining autonomy from Spain, was disposed to arrogate to himself the authority and control for which Gen. Henry was responsible, and in this he was supported by his colleagues, who claimed that the Cabinet as representative of the people, should exercise a responsible control over the internal policy and the civil affairs of the island, and act as the delegates of the people's will in their dealings with the Governor General. They declined to continue in office under the new arrangement longer than the time necessary for the Governor General to choose the new heads of departments. To do so would make them unpopular with the Liberal party, to which they belonged, of which Muñoz Rivera was the head, and which comprised the great majority of the people. Gen. Henry reappointed Cayetano Coll y Toste, who was in sympathy with the new system, Secretary of Finance. Francisco Acuña was made Secretary of State, Herminio Díaz Navarro Secretary of Justice, and Federico Degetan y González Secretary of the Interior. The last belonged to the Radical party, while the others were Liberals. Thus the idea of party government was banished from the administration, which under the new system proceeded in a far more expeditious and businesslike way than was possible under the old system. Gen. Henry invited the people to address him directly if they had complaints to make regarding local abuses. He called a convention of delegates from the Liberal, Radical, and Independent parties, who agreed to sink their past differences and work together for the good of the island, without regard to party affiliations. The party feeling was, however, so strong that the Governor General arranged to give equal representation to the Liberals and Radicals in the 70 municipal councils. For this purpose lists of eligible persons were made out by the existing councils, the only qualification being the payment of municipal taxes. From these lists the Department of State, which has charge of municipal affairs, public order, health, and elections, as well as of correspondence with Washington, selected names, and the Governor General appointed the councilmen. Subsequently the power of appointment was delegated to the Secretary of State. The assumption of power over municipal affairs was rendered necessary by the maladministration of the Liberal party in all parts of the island. The appointment of *alcaldes* was also committed to the Secretary of State. In the other departments of Government also the secretaries were intrusted with the guidance of affairs as soon as they learned the plan and method that the Governor General wanted to introduce; but he always acted when complaints were made or exceptions taken to the decision of a secretary, first communicating the complaint to the latter and getting a written explanation of his conduct. Subsequently the various governmental departments became bureaus, each with a United States army officer at its head. The departments under this system administered respectively sanitary affairs, education, the treasury, customs, the judiciary, and police. In order that he might have a ready means of communication with native society and opinion, he created the office of chief secretary, which was filled acceptably by Cayetano Coll y Toste.

Gen. Henry was succeeded as military governor by Gen. George W. Davis in the beginning of August. The new Governor General undertook to pave the way for the establishment of territorial government. All his reforms lay in the

direction of the substitution of the civil power for military rule. He restored the writ of *habeas corpus*, created a board of prisons, instituted a United States provisional court, introduced trial by jury, and secured the recognition, with improvements, of the code of laws and judicial practice previously existing in the island.

The work of political and industrial reconstruction when it was beginning to show good results was suddenly interrupted by a natural calamity more disastrous than the war had been. A hurricane of the most destructive kind swept over the island on Aug. 8, blowing down towns and houses, stripping off the mangoes, avocados, breadfruit, bananas, and plantains, on which half the people subsist, uprooting coffee trees, breaking the coconut and other palms, and laying waste the gardens and plantations. About 3,000 people were killed by falling walls or drowned in the floods that followed the storm, and 200,000 were left houseless, penniless, and famishing. The storm was most severe on the southern side of the island. Few of the planters and none of the peasants had money to rebuild, restock, and replant. The authorities at Washington at once loaded a transport with food to avert famine, and for many weeks rations were served out to the people. Private contributions were collected in the United States to aid the people to rebuild their dwellings and make new crops. One fifth of all the dwelling houses on the island were razed to the ground, and all the crops and most of the trees were ruined. A great many thousand cattle were drowned. Gen. Davis established a central board of relief at San Juan, and instituted boards all over the island to regulate assistance and distribute supplies. Work on the roads was extended to the utmost, so as to give employment to as many as possible. The erection of new houses and repairing of those that were partly ruined furnished work for a great many more, money for this purpose having been subscribed in the United States. The damage to buildings and machinery and to warehouses and stores of coffee, tobacco, and sugar, the loss of the sugar, coffee, and fruit crop, loss of live stock, damage to railroads and shipping, and injury to plantations amounted to more than \$30,000,000. All but the smallest of the coffee trees, which take five years to mature, were destroyed. Only the most sheltered banana groves escaped, and where the sugar cane was left standing on a few plantations the machinery was wrecked. Most of the crops were mortgaged for advances from banks and money lenders, and therefore but few planters were in a position to give employment to the peons and renew the industrial and commercial activity of the island. The rations from the United States were in the beginning given out freely and indiscriminately. After two weeks, when the relief works were in full operation, only the old and infirm or young children were fed gratuitously, while to all able-bodied adults work was offered.

The prompt and liberal assistance received from the Government and citizens of the United States went a long way toward effacing the lingering jealousy, suspicion, and prejudice felt by the Porto Ricans against the Americans, whom they had generally welcomed on the hostile invasion of the island by United States troops, because they were eager to be delivered from the capricious favoritism and corrupt extortion of the Spanish rulers, but latterly had distrusted and disliked for the despotic and often unsympathetic military administration, which ignored the elements of political liberty and self-government en-

joyed even under Spanish administration. Gov.-Gen. Davis on Aug. 15 explained in a proclamation that, while an arbitrary government over any territory included within the United States is not contemplated by the American Constitution and laws, under those laws it is impossible to supply any other form of governmental control than the military over territory conquered by the armies of the Union until Congress shall by suitable enactment determine and fix a form of civil government. Two boards, composed of leading Porto Rican citizens, were called into consultation by the Governor General in regard to governmental reforms, and both boards were of the unanimous opinion that, as regarded the organization of the civil branch of the military government, the system then in force needed to be radically changed in some respects. Changes had already been effected and others were in preparation which would supply for the island a form of government, as respects its superior branches, tending ultimately to merge into the Territorial form, as applied in the United States to the portions of the national domain that are in the transition stage preparatory to full statehood. The Territorial government was expected to consist of governor, legislature, judiciary, secretary, attorney-general, treasurer, auditor, and bureaus or boards of public works, agriculture, prisons, health, charities, etc. Gen. Davis was instructed to direct his policy to the primary purpose of adapting the laws and administration to suit the transition, when ordered by Congress, into full Territorial autonomy. Complete autonomy for municipalities was first desired, and was to be instituted as rapidly as possible, the government of the towns to be as independent as it is in the United States; but a bad economic state existed in many municipalities, and all the towns needed assistance to extricate them from their difficulties. It was intended to furnish an opportunity, through carefully and honestly regulated elections, for the municipalities to govern themselves, and the Governor General promised to all towns absolute freedom from superior restraint as soon as they were able to govern themselves in accordance with the principles of law and justice. Complaints of dishonest, corrupt, and unlawful municipal administration were found on investigation to be justified. A plan for municipal elections was adopted by means of which educated men and business interests could have expression. The plan was explained to the accredited leaders of the Liberal and Radical parties, and both gave it their approval.

The insular commission appointed to study the conditions of Porto Rico, consisting of Gen. Kennedy, Judge Curtis, and Major Watkins, reported to Secretary Root on Aug. 30, after six months of investigation. It recommended a form of civil government to take the place of the military régime, and submitted for adoption a code of laws to be put in operation by Executive decree, as the enactment of general laws for the island by Congress would alter its status, making it a part of the constitutional territory of the United States. The system of civil government does not give to the Porto Ricans the elective franchise for any offices, nor does the code grant the right of trial by jury except in cases of felony, when they have the privilege of a trial in United States courts. There would be 5 supreme judges (3 Americans and 2 natives), 2 Federal judges, 3 district judges, and 11 probate judges; an attorney-general and 1 deputy; 1 district attorney and 2 deputies; 1 United States marshal and 2 deputies; a prosecuting attorney in each of the 7 judi-

cial districts; and an interpreter for each court. The commission recommended that the military force remain on the island, but be kept in the background. The scheme provides for a public-school system under a superintendent and board of education, comprising schools in all districts conducted in English by American teachers, with night schools for illiterate adults. All taxes that bear heavily on the poor should be repealed; also double taxation of nonresidents. A marriage law like those in the United States was recommended. The commissioners made no provision for elections because they were satisfied that the people of Porto Rico were not ready to exercise the elective franchise, but after the new laws have been in force for a few years and the schools have afforded opportunities for the people to learn they would become better fitted to enter upon the work of Territorial or State government. There was found to be great need of currency reform.

Gen. Davis reported in favor of the establishment as soon as practicable of a Territorial government, but one in which the United States should retain for some time the executive and the higher judiciary, and one with restricted suffrage. He found that the first year of American rule had disappointed a majority of the Porto Ricans, chiefly on account of commercial inactivity. Having deprived them of their former market, the United States should see that they find another. No sentiment in favor of independence was observable. Regulations were adopted for the holding of municipal elections in January, 1900, under a restricted franchise, giving the right of suffrage to about 3,000 persons in all the towns.

PORTUGAL, a kingdom in southwestern Europe. The throne is hereditary in the family of Saxe-Coburg-Braganza. The legislative power is vested in the Cortes, consisting of a Chamber of Peers, containing 52 hereditary, 13 spiritual, and 90 life peers, and a Chamber of Deputies, containing 120 members, who are elected for three years by the direct vote of all citizens possessing an elementary education or an income of 500 milreis. The reigning King is Carlos I, born Sept. 28, 1863. The Cabinet of Ministers, constituted on Aug. 18, 1898, at the beginning of 1899 was composed as follows: President of the Council and Minister of the Interior, José Luciano de Castro; Minister of Foreign Affairs, F. A. de Veiga Beirão; Minister of Finance, M. A. Espregueira; Minister of Justice and Worship, J. M. d'Alpoim; Minister of War, Gen. Sebastião Custodio de Sousa Telles; Minister of Marine and the Colonies, A. E. Villaca; Minister of Public Works, Industry, and Commerce, E. J. de Sousa Brito.

Area and Population.—The area of Portugal is 36,038 square miles, including the Azores and Madeira, which have an area of 1,510 square miles. The population of continental Portugal in 1890 was 4,660,095, and of the islands 389,634: total, 5,049,729. The number of marriages in 1896 was 30,580; of births, 143,908; of deaths, 110,332: excess of births, 33,576; emigration, 27,980.

Finances.—The estimates for 1900 make the ordinary revenue 50,773,581 milreis, and extraordinary 1,600,000 milreis. The ordinary expenditure is estimated at 51,607,057 milreis, and extraordinary at 2,312,239 milreis; total expenditure, 53,919,296 milreis, showing a deficit of 1,545,715 milreis. Of the ordinary revenue 11,891,601 milreis come from direct taxes, 5,277,500 milreis from registration and stamps, 24,301,830 milreis from indirect taxes, 1,122,200 milreis from additional taxes, 4,674,540 milreis from national property and other sources, and 3,505,910 milreis are

recettes d'ordre. Of the ordinary expenditure the civil list, the Cortes, etc., absorb 9,755,918 milreis; the consolidated debt, 18,124,354 milreis; loss on exchange, 500,000 milreis; the Ministry of Finance, 3,702,007 milreis; the Ministry of the Interior, 2,400,594 milreis; the Ministry of Justice, 1,002,578 milreis; the Ministry of War, 5,973,128 milreis; the Ministry of Marine and Colonies, 4,272,054 milreis; the Ministry of Foreign Affairs, 348,097 milreis; the Ministry of Public Works, 5,460,990 milreis; deposits, 69,337 milreis.

The foreign debt outstanding on Jan. 1, 1898, amounted to £62,106,508, of which £38,504,551 represent consolidated 3-per-cent. debt, £1,817,000 redeemable 4-per-cent. and £12,760,348 redeemable 4½-per-cent. debt, and £9,024,600 a loan secured on the tobacco monopoly. There were £58,761,423 of 3-per-cent. internal debt largely held abroad, making a total of £120,867,931, besides which internal loans at 4 and 4½ per cent. amounted to £6,158,204. The Government held £30,068,949 of various issues, which amount is excluded from the above statement. The floating debt amounted to 58,576,400 milreis. In 1892 the interest on the foreign debt was reduced 66½ per cent., and that on internal loans 30 per cent.

The Army and Navy.—The army is recruited partly by voluntary enlistment and partly by conscription. It consists of 24 regiments of infantry, 12 of rifles, 10 of cavalry, 3 of field artillery, 1 of mountain artillery, 2 regiments and 4 companies of fortress artillery, 1 regiment of engineers, and administrative and sanitary corps. The peace effective is 35,337 men, with 4,892 horses; the war effective 160,000 men, with 18,000 horses and 276 guns. The colonial forces, which are not included in the above statement, have a total strength of 9,478 men, mostly natives.

The Portuguese navy comprises the old iron-clad Vasco de Gama, the São Gabriel, and São Raphael, 2 cruisers built in France in 1898, and 4 older third-class cruisers; the protected cruiser Adamastor, of 1,933 tons, recently built in Italy; the Dom Carlos I, of 4,100 tons, just completed in England; the Rainha Amelia, 2 other protected cruisers of 1,800 tons, 2 gunboats, and 2 coast-defense vessels built or building in Portugal. The Dom Carlos I has an armored deck 4 inches thick, an armament of 4 6-inch, 8 4.7-inch, 12 3-pounder, and 6 smaller quick-firing guns. There are 16 seagoing and 10 river gunboats and 15 first-class and 30 other torpedo boats.

Commerce and Production.—Of the total area of Portugal 45.8 per cent. is waste land, a large proportion of which might be cultivated. Vineyards occupy 2.2 per cent. of the area of the country, orchards 7.2 per cent., 12.5 per cent. is under grain crops, 2.7 per cent. under other crops, 26.7 per cent. pasture and fallow, and 2.9 per cent. is covered with forests. In northern Portugal, where corn and cattle are produced, the land is divided into small farms, either owned by the cultivators or under their complete control, subject only to a fixed ground rent. In the central and southern parts the land is generally cultivated by tenants or farmed on shares. Rye is grown in the mountainous parts, where sheep and goats find pasturage, and in the lowlands wheat is the chief crop, while in the great oak forests of the south hogs fatten on the mast. Wine is made everywhere, and in increasing quantities. Olive oil is one of the important products. Figs, oranges, and bananas are the principal fruits. Tomatoes are grown extensively, and onions and potatoes are important vegetable crops. The ores of Portugal would be valuable if coal were plenti-

ful. The mineral products include copper precipitate, copper ore, sulphur, lead ore, anthracite, lignite, antimony ore, manganese ore, arsenic ore, gold, silver, wolfram, and tin, of the total value in 1897 of 1,439,499 milreis. The fishery products include sardines and tunny, which are preserved and exported.

The total value of imports in 1897 was 40,683,097 milreis, and of exports 29,515,296 milreis. The special imports of live animals amounted to 2,667,877 milreis, and domestic exports to 3,400,695 milreis; imports of food stuffs to 13,250,085 milreis, and exports to 15,196,794 milreis; imports of textiles to 4,924,222 milreis, and exports to 1,628,836 milreis; imports of machinery to 84,491 milreis, and exports to 77,439 milreis; imports of various manufactures to 2,874,646 milreis, and exports to 1,634,471 milreis; imports of raw materials to 14,757,938 milreis, and exports to 5,381,034 milreis; imports of coin and bullion to 357,160 milreis, and exports to 2,196,027 milreis. The importation of wheat for consumption was 5,367,620 milreis in value; of raw cotton, 2,840,179 milreis; of codfish, 2,307,745 milreis; of cotton goods and yarn, 2,104,194 milreis; of sugar, 1,906,727 milreis; of coal, 1,808,065 milreis; of iron, 1,351,470 milreis; of wool, 1,170,622 milreis; of leather and hides, 1,020,761 milreis; of woollen goods and yarn, 839,247 milreis; of cattle, 767,369 milreis; of coffee, 674,697 milreis; of leaf tobacco, 394,611 milreis. The wine exports amounted to 10,289,232 milreis, consisting of 2,417,360 litres of Madeira, 28,099,230 of port, 267,150 of liqueur wine, and 47,372,230 of ordinary wine. The export of cork was 3,567,898 milreis in value; of sardines, 1,319,029 milreis; of cotton goods, 1,254,982 milreis; of cattle, 903,858 milreis; of copper ore, 782,687 milreis; of horses, 447,207 milreis; of tunny, 297,344 milreis; of figs, 246,045 milreis; of eggs, 231,115 milreis; of bananas, 205,090 milreis; of onions, 201,872 milreis.

Navigation.—The number of vessels engaged in foreign commerce entered at the ports of Portugal during 1897 was 6,107, of 7,910,128 tons, of which 4,119, of 5,507,784 tons, were with cargoes; cleared, 6,139, of 7,896,639 tons, of which 4,827, of 6,282,110 tons, carried cargoes.

The merchant navy on Jan. 1, 1898, consisted of 286 vessels, of 77,835 tons, of which 47, of 35,583 tons, were steamers.

Railroads, Posts, and Telegraphs.—The length of railroads in 1897 was 1,464 miles, of which the Government owned 507 miles. The net receipts were 3,215,379 milreis, from 9,599,117 passengers and 1,935,742 tons of freight.

The post office forwarded 51,891,818 internal and 9,258,335 international letters, newspapers, circulars, etc., in 1897. The telegraph lines had a total length of 4,584 miles, with 9,475 miles of wire, on Jan. 1, 1898. The number of messages in 1897 was 1,272,042 in the internal and 1,065,309 in the international service.

Political Affairs.—In opening the Cortes on Jan. 2, 1899, the King said that it was not sufficient to preserve the colonial domain in its integrity as the sacred heritage of the nation; it must also be turned to account and developed as the solid basis of Portugal's economic regeneration. Bills were submitted to the Cortes for the reorganization and development of the colonies. These have cost Portugal 67,500,000 milreis since 1870. England, Germany, and Portugal made an agreement in the latter part of 1898 whereby England and Germany agreed mutually and promised Portugal to respect, and Portugal promised not to alienate, the Portuguese African possessions for a certain period. Assurances were

obtained also from other powers that the integrity of the Portuguese colonies would be respected.

Negotiations with the foreign creditors of Portugal were carried on in Paris, but no definite arrangement was made for the settlement of the debt. The Prime Minister assured the Cortes that under no circumstances would the Government sign a convention admitting foreign control over the finances of Portugal. The budget for 1900 showed a deficit of 1,545,000 milreis, but the Minister of Finance, relying on a slight increase of taxation and a more favorable state of the exchange, hoped to bring about a balance. The Minister of Foreign Affairs continued his negotiations with various governments for new commercial treaties based on the policy of protecting the industries and agriculture of the country. In the negotiations with Germany and England and with some other countries the principal object was to secure favorable terms for the introduction of Portuguese wines. With Spain an arrangement was sought that would facilitate trade in coffee and other produce from Portuguese colonies to take the place of the imports Spain had received until recently from the colonies she had lost. A commercial arrangement was made with the United States by which special tariff rates were conceded by the United States on brandies, vermouth, still wines, sparkling wines, argols, and paintings and statuary in return for a corresponding reduction on American articles imported into Portugal. The Cortes approved the project for laying the German cable from the Azores to North America and to Great Britain and Germany.

Colonies.—The Portuguese possessions in Africa are the Cape Verde Islands, with an area of 1,480 square miles and 114,130 population; Portuguese Guinea, with an estimated area of 4,440 square miles and 820,000 population; the islands of Principe and St. Thomas, with an area of 360 square miles and 24,660 population; Angola, with an area of 484,800 square miles and 4,119,000 population; and Portuguese East Africa, with an area of 301,000 square miles and 3,120,000 population; total estimated area, 792,040 square miles, with an estimated total population of 8,197,790.

The population of Cape Verde is of mixed Portuguese and negro extraction. The products of the islands are coffee, millet, and medicinal plants. The revenue for 1899 was estimated at 336,400 milreis, and expenditure at 292,739 milreis. The imports were 1,595,900 milreis in value in 1896; exports, 386,500 milreis.

Portuguese Guinea is a territory on the coast of Senegambia inclosed by French possessions. Caoutchouc, wax, oil seeds, ivory, and skins are exported to the amount of 221,000 milreis, while the imports are 283,000 milreis. The revenue for 1899 was estimated at 72,280 milreis; expenditure, 180,854 milreis.

Principe and St. Thomas are inhabited by creole settlers and a laboring population of negroes. The former island produces 600,000 kilogrammes of cacao a year, the latter 2,250,000 kilogrammes of coffee. The cinchona tree is cultivated on both islands. The revenue for 1899 was estimated at 356,373 milreis; expenditure, 292,971 milreis. The imports in 1896 were valued at 1,055,500 milreis and exports at 2,283,917 milreis.

Angola is divided into the districts of Congo, Loanda, Benguela, Mossamedes, and Lunda. Copper, iron, gold, petroleum, and salt are found, and mining rights have been granted to a German syndicate, with concessions for curing fish and

raising cattle. The staple products are coffee and caoutchouc, besides which wax, sugar, oils, cocoanuts, ivory, hides, and fish are exported. The revenue for 1899 was estimated at 1,651,797 milreis, and expenditure at 1,846,469 milreis. The imports in 1896 were valued at 3,451,456 milreis in 1896; exports, 4,612,800 milreis. The railroad into the interior has a length of 230 miles; length of telegraphs, 430 miles. The posts were visited by 286 vessels, of 431,774 tons, in 1896. (For Portuguese East Africa see CAPE COLONY AND SOUTH AFRICA.)

In Asia Portugal possesses Goa, on the Malabar coast; Damão and the island of Diu in Bombay; the city of Macao, on the island of that name, at the mouth of the Canton river; and the eastern part of the island of Timor, in the Malay Archipelago, with the small adjacent island of Pulo Cambing. Goa has an area of 1,390 square miles, with a population of 494,836; Damão and Diu have an area of 168 square miles, with 77,454 population; Macao has an area of 4 square miles, with 78,627 population; and Timor has an area of 7,458 square miles, with about 300,000 population, making the total area of the Asiatic colonies 9,020 square miles and the total population 940,917.

In Goa and Damão the manufacture of salt is the principal industry. The salt works of Goa produce 12,200 tons annually. The imports amounted in 1897 to 644,928 rupees; exports, 75,186 rupees; transit trade, 4,224,787 rupees. A military force of 1,630 men is maintained in Portuguese India, including 1,426 native soldiers. The revenue for 1899 was estimated at 924,394 milreis; expenditure, 1,070,584 milreis.

The trade of Macao is mainly transit. Formerly opium was smuggled into China, but now there is a Chinese customhouse in the city. Later a considerable trade sprung up in opium imported in the crude state and manufactured in Macao for export to California and Australia, and \$1,428,000 worth was exported in 1896, although this trade also has fallen away. Of the total population 74,568 are Chinese, and these have the commerce of the port in their control. The other inhabitants are 3,106 native Portuguese, 615 settlers from Portugal, 177 from other Portuguese possessions, and 161 of other nationalities. The revenue for 1899 was estimated at 433,575 milreis; expenditure, 388,929 milreis.

Timor produces coffee and wax. The revenue for 1899 was estimated at 146,726 milreis, including a contribution of 38,400 milreis from Macao; expenditure, 176,965 milreis. A delimitation of the boundary between Portuguese Timor and the Dutch part of the island has been agreed to, but not yet carried out.

PRESBYTERIANS. I. Presbyterian Church in the United States of America.—The summary of the statistics of this Church reported to the General Assembly in May gives the following footings: Number of synods, 32; of presbyteries, 232; of ministers, 7,312; of churches, 7,657; of communicants, 983,907; of members of Sabbath schools, 1,029,229; of candidates for the ministry, 1,115; of local evangelists, 137; of licentiates, 433; of elders, 28,252; of deacons, 9,847; of churches organized during the year, 108, against 65 dissolved; of members added on examination, 48,259; of baptisms, 17,682 of adults and 24,998 of infants. Amount of contributions: For home missions, \$1,005,311; for foreign missions, \$764,976; for education, \$143,130; for Sabbath-school work, \$121,177; for church erection, \$101,597; for the Relief fund, \$98,304; for the freedmen, \$137,567; for synodical aid, \$85,921; for aid for col-

leges, \$261,268; for the General Assembly, \$80,160; congregational contributions, \$10,094,518; miscellaneous, \$793,788; aggregate amount of contributions, according to the footing of the table, \$13,777,717.

These numbers show a net gain for the year of 8,030 members, a decrease of 4,935 in the membership of Sabbath schools, and an increase of \$74,156 in the aggregate of contributions.

The total income of the Board of Church Erection had been \$155,476, and the total disbursements \$129,600. One hundred and sixty-eight applications for aid had been made to the board, calling for \$114,516. Including special gifts, appropriations, either grants or loans, had been made to 180 churches (to 53, aggregating \$15,150, for manse) to the total amount of \$99,086.

The Board of Publication and Sabbath school Work returned net profits in the business department of \$19,175, two thirds of which (\$12,783) was contributed to the Sabbath-school missionary work. The aggregate of publications, including books, tracts, periodicals, and the annual report, had been 46,151,961 copies. The Sabbath-school and missionary department had 79 missionaries in the field, under whom 848 schools had been organized and 319 reorganized. The schools returned 4,149 teachers and 38,530 pupils. Contributions of \$89,879 had been received for this work from churches and Sabbath schools.

The receipts of the Board of Relief for Disabled Ministers and the Widows and Orphans of Deceased Ministers had been \$185,513, as against \$197,136 in the previous year. The permanent fund amounted to \$1,547,804. The number of beneficiaries aided during the year was 877. The average amount paid all annuitants was \$226.20; to ministers on the honorably retired roll, \$278.12.

The Board of Education had had 814 men under its care, a falling off of 97 from the year before; but the number of new candidates enrolled was slightly larger. Of the whole number of beneficiaries, 31 were attending the German theological schools, 97 the various schools for colored men, and 7 were in schools for Spanish-speaking students. The receipts for the year had been \$78,370. The board was free from debt.

The Board of Aid for Colleges and Academies had aided 27 institutions, the value of the property of which above indebtedness had been increased \$134,781. Its total receipts for 1898-'99 were \$181,996.

The total contributions to the Board of Home Missions had been \$856,906. The board had expended \$685,454 on field work, and had extinguished the debt of \$167,839 with which it had begun the year. In all, 2,112 ministers were employed in home mission work, 732 of whom were under the charge of the synods of eight States and independent of the board. In the support of these the synods had expended \$125,365. The board had under its charge 347 teachers in 121 schools, with 8,411 pupils; and 106 teachers with 7,441 pupils in Sabbath schools. The 1,450 aided churches returned 74,832 members, of whom 7,346 had been added during the year on confession of faith. Seven church organizations had reached self-support, 47 new churches and 231 Sabbath schools had been organized, 66 churches had been built at a cost of \$34,051, 233 churches repaired and enlarged at a cost of \$57,916, and \$76,080 of church debts canceled, during the year.

The report of the Board of Missions for Freedmen showed an expenditure of \$132,578 during the year, or \$862 more than in the previous year. The board had reduced its debt by \$18,000, making the present amount \$40,065. It had main-

tained 62 schools, instructing 8,109 pupils, and had aided 192 ministers in the field. An appeal was sent out after the presentation of the report to the General Assembly to all the Presbyterian churches to make an offering to this cause on Sunday, May 21, and report to the moderator the next morning, so that, "for the first time in twenty-five years, the Assembly may conclude its sessions free from the burden of debt." Without waiting for a response to this appeal to the churches, the whole amount of the debt was pledged at a meeting held in connection with the sessions of the Assembly.

The Board of Foreign Missions reported that the year with it had ended, as it had begun, without any deficit. The receipts had been \$863,743, as compared with \$881,511 in the previous year, when extraordinary contributions were made for the payment of the debt. The board had felt constrained to limit the appropriations for the fiscal year 1899-1900 to \$825,000, with the hope that enlarged contributions would enable it to add to the amount. This was \$200,000 less than the appropriations of six years before. The report of the auditor showed that the current and invested assets amounted to \$1,798,210, and the liabilities to \$1,320,212. The board had under its direction 240 ordained ministers, 395 women, 67 medical missionaries, 2,021 native workers, 368 churches, 35,995 communicant members, 30,235 pupils in Sabbath schools, 87 candidates for the ministry, 686 schools and colleges, with 21,516 pupils, 35 hospitals, and 47 dispensaries, at which 349,789 patients had been treated. The 1,192 mission stations were situated in Africa, China, Guatemala, India, Japan, Korea, Mexico, Persia, Siam, South America, Syria, and the Philippine Islands.

The one hundred and eleventh meeting of the General Assembly was held at Minneapolis, Minn., beginning May 18. The Rev. Dr. Robert F. Sample, of New York, was chosen moderator. The committee appointed by the previous General Assembly to consider measures for reducing the size of the Assembly recommended the submission to presbyteries of an overture making the number of ministers necessary to constitute a presbytery 10 instead of 5; and also two alternative overtures—one, that each presbytery having less than 18 ministers be entitled to one commissioner (a minister and an elder, alternately); each presbytery having more than 18 members and less than 36 to two (a minister and an elder); and each presbytery having 36 ministers or more to two commissioners, one minister and one elder, for every 36 ministers. The second of these alternative overtures provided that the ratio of representation should be one minister and one elder for every 6,000 communicants and under in each of the synods, and one minister and one elder for every additional 6,000 members. Under the former plan the Assembly would consist of 422 members; under the second plan it would comprise 300 members. The recommendations of the report were not approved, and the subject was indefinitely postponed. Regarding union with the Southern Presbyterian Church, the Assembly resolved: "While reiterating our confidence in the Christian character and orthodoxy of our Southern brethren, and our fraternal feelings and desire for closer fellowship and more effective union, we do not deem it wise to take any further action in the matter proposed." Telegraphic greetings were, however, sent to the Southern General Assembly and responded to by it, and a written address was sent by the elders in the Assembly to the elders in that body, ex-

pressing more fully the sentiments of the laymen on subjects of common interest. The resolutions adopted on temperance urged the ministers and people "to a careful study of existing laws against the saloon in their own communities, and of those methods of suppressing and controlling the liquor traffic which are proved efficient in any part of the land"; and "so far as conscience and wisdom dictate," to approve and aid all measures which oppose the saloon and aim at its destruction. They further appealed to the President of the United States to carry the antican-teen law into full force and effect by issuing an order as commander in chief of the army for the total suppression of army saloons, at least until the Attorney-General's opinion has been finally tested in the courts; and invited the attention of Congress to the effect of the ruling of the Attorney-General in establishing the canteen as still a part of the military establishment. An overture having been presented from the Presbytery of Baltimore on the subject of church attendance of Presbyterian students at the Naval Academy, Annapolis, a correspondence was produced, from which it appeared that the Secretary of the Navy had explained that while students as a rule were expected to attend religious services at the chapel, where the preacher was a Methodist minister, they were allowed, upon making a request to that effect in writing, and with the written approval of their parents, to attend the church of their choice in Annapolis. The Assembly, while accepting the statements of the Secretary as an assurance that religious liberty prevailed among the cadets under the present rules of the Academy, urged upon the authorities of the Academy that no restriction, whether formal or otherwise, be laid upon the right of cadets to attend the Presbyterian Church at Annapolis under the prevailing rules; and upon those parents who wish their boys to be under distinctively Presbyterian training "not to fail to assert their parental influence with their sons and their undoubted rights with the authorities to this end." A protest was passed against the seating of Brigham H. Roberts, "an avowed polygamist," as a member of the national House of Representatives from Utah. The resolutions on the Sabbath deprecated the secularizing of the day; urged members and young people of the Church to realize the importance of Sabbath observance, and legislatures and Congress to protect the American Sabbath; commended various societies for the promotion of Sabbath observance; recommended every pastor to preach a sermon on Sabbath observance; advised the preparation by the Board of Publication and the use by Sabbath-school superintendents of a leaflet on the subject; and expressed sympathy with 3,000,000 persons "who, because of Sabbath desecration, are compelled to do secular work on the Sabbath." The Assembly, while expressing the utmost confidence in its trustees and its stated clerk, directed that, "in accordance with the most approved business methods, their accounts, cash, and securities be annually examined and approved by a public auditor, whose certificate should be appended thereto before submitting the said accounts to the standing Committee on Finance of the next and subsequent General Assemblies."

The Rev. Dr. A. C. McGiffert, professor in Union Theological Seminary, in response to the request of the preceding Assembly (see Annual Cyclopædia for 1898, page 651) that he reconsider the "questionable views" in his book, *A History of Christianity in the Apostolic Age*, "and if he can not conform his views to the

standards of our Church, then peaceably to withdraw from the Presbyterian ministry," sent in a letter declining to take either course. "The action of the Assembly," he wrote, "as well as the overture from the Presbytery of Pittsburg, upon which that action was based, make it evident that many of my positions, together with the spirit and purpose of my book as a whole, have been seriously misapprehended. Such misapprehension I sincerely regret, and I wish here emphatically to repudiate the false constructions that have been placed upon my book in many quarters. So far as my views are concerned, they have been and remain, as I believe, in accord with the faith of the Presbyterian Church and of Evangelical Christendom in all vital and essential matters, and I therefore can not feel that it is my duty, or even my right, in justice to myself and to my brethren, and to the Church of our Divine Lord and Master, in which I am an office bearer, to withdraw from the Presbyterian Church. In taking this position, to which I am constrained by a profound sense of duty, I desire to say that I recognize gratefully the spirit of Christian kindness which animated those who joined in the action of the last General Assembly, and appreciate the devotion to the truth and the concern for the welfare of the Church which prompted their action. I desire to say, also, that I yield to no one in my devotion to the truth and in my concern for the welfare of the Church." The Committee on Bills and Overtures, in whose hands the case lay, brought in a unanimous report, a majority report, and a minority report. The unanimous report, while taking notice of the repudiation by Dr. McGiffert of the interpretation placed upon his utterances in the book as being not in accord with the standards of the Church, and of his assertion of devotion to the truth and concern for the welfare of the Church, and accepting the same as sincere, nevertheless reasserted the deliverance of the General Assembly of 1898 condemning the statements of the book as being such as to justify the interpretation he repudiated; then laid down the fundamental doctrines of the Church on the points involved. This report was adopted by the Assembly. The majority report further recommended that the matter of the teachings of Dr. McGiffert's book "be referred to the Presbytery of New York, to which belongs the primary constitutional responsibility, for such disposition as in its judgment the peace of the Church and purity of doctrine may require." The minority report embodied a direction to the Presbytery of New York as to the course it should pursue in the matter. The majority report, leaving the Presbytery of New York free to exercise its judgment, was adopted, and the vote adopting it was made unanimous.

An appeal was made by Hermann Warszawiak against the decision of the Synod of New York in effect confirming his expulsion from the Fifth Avenue Presbyterian Church on a charge of gambling. The report of the Judicial Commission to whom the case was referred, which was confirmed by the Assembly, recommended that the judgment of the synod be reversed only in so far as the synod instructed the Presbytery of New York to remand the case to the session of the Church—on the ground that the synod had no constitutional right to direct a retrial on charges not involved in the original indictment. Otherwise, it was recommended and determined that the judgment of the synod stand in the case of the appeal and complaints, and the records be remanded

to the synod "for the purpose of the case being proceeded with according to the methods and requirements of the constitution." The appeal and complaints against the Presbytery of New York were dismissed and the judgment of the presbytery complained of and appealed from was sustained.

II. Presbyterian Church in the United States (Southern).—The following is a summary of the statistics of this Church as presented in the reports to the General Assembly in May: Number of synods, 13; of presbyteries, 77; of ministers, 1,471; of churches, 2,919; of members, 221,022; of teachers in Sabbath schools, 19,808; of pupils in the same, 143,609; of candidates for the ministry, 357; of licentiates, 60; of ruling elders, 8,979; of deacons, 7,571; of baptized noncommunicants, 41,627; of churches organized during the year, 56, against 14 dissolved; of members added on examination, 8,613; of adults baptized, 2,847; of infants baptized, 4,588. Amount of contributions: For home missions (Assembly's), \$30,005; for local evangelistic funds, \$116,533; for the Invalid fund, \$13,732; for foreign missions, \$111,191; for education, \$52,732; for publications, \$12,587; for colored evangelization, \$12,459; for the Bible cause, \$4,025; for presbyterial purposes, \$15,948; for pastors' salaries, \$802,607; for congregational purposes, \$583,570; miscellaneous contributions, \$96,276. The whole amount of contributions, according to the footing of the tables, is \$1,851,771. The increase in the number of communicants during the year was 3,947; increase in the aggregate of contributions, \$4,917; while the number of pupils in Sabbath schools was 2,268 less than in 1898. A comparison of the tables with those of past years shows that the net growth of the Church in the number of communicants for the past four years had been 2 per cent., or only half as large a percentage as in the years preceding.

The report of the Executive Committee on Education showed that the collections for that cause had amounted to \$16,809, and that assistance had been given to 215 candidates for the ministry.

The Executive Committee on Home Missions showed in its thirty-third annual report that it had received during the year for all purposes \$50,355, and had expended \$47,598. In the home mission department the committee had assisted in the support of 124 ministers and teachers in Florida, Arkansas, Texas, and the Indian Territory, and aided in the erection of four churches. In church erection, during the past thirteen years \$7,305 had been loaned to 54 churches for whites, of which \$4,365 had been repaid or canceled, and \$255 had been loaned to colored congregations, of which \$128 had been returned. An encouraging increase had taken place during the past five years in contributions from \$23,685 to \$31,906. The total receipts to the Invalid fund during the year had been \$14,573, an increase over the previous year of \$3,764, and the payments to beneficiaries had increased from 65 cents to 90 cents on the dollar of the amounts asked by presbyteries.

The Committee on Colored Evangelization reported to the General Assembly that it had begun the year with considerable indebtedness on the general fund. It had received \$6,621 on this account, had paid all debts, had maintained the work in all its departments, and closed the year with \$2,000 to its credit. Twenty-two students had attended Stillman Institute, 12 in the theological and 10 in the academic departments.

The Executive Committee on Foreign Missions

reported that its net receipts had been \$144,990, or \$1,053 less than in the previous year, and its expenditures had been \$145,343. The year had closed without debt, and with a balance of \$54 in the treasury. Four missionaries had been sent out during the year, one of whom went at his own charge, while the salary of another was paid by contributions from the field to which he was sent. The committee had 6 men and 8 women under appointment, and the applications of 8 candidates were under consideration. Reports were given from missions in China, Japan, Korea, West Africa, Brazil, and Mexico. Contributions had been made by the Young People's Societies for the support of a mission in Cuba. Four hundred and eighty-four members had been added during the year in the mission fields on profession of faith. A fund of \$10,393 had been secured for putting and maintaining a steamboat on the Congo river.

The Committee on Systematic Benevolence had received reports from 72 presbyteries, leaving only 5 which made no report. The reports were in the main full and satisfactory.

The General Assembly met at Richmond, Va., May 18. The Rev. Dr. J. F. Cannon was chosen moderator. The committee appointed to confer with the Associate Reformed Presbyterian Church on the subject of union reported that one of their number had visited the synod of that Church and presented the subject to it. The synod responded, expressing the highest respect for this Church and its desire for union with it, "provided our historical testimony in favor of an exclusive use of an inspired psalmody for the united Church might be maintained." But as this testimony appeared to be a barrier to organic union, the synod regarded it as unwise to prosecute negotiations to that end. The report of the Committee on Colored Evangelization presented the cause under its charge as including the entrance into a mission field, the erection of churches and mansees, the establishment and maintenance of schools, the support of evangelists and pastors, the selection and training of ministers, and everything connected with the elevation of a race. The establishment of Sunday schools among colored people taught by white teachers was advancing, with an increase in the number of such schools from 13 to 23. The colored ministers and evangelists had been paid \$2,427 by the committee, the sum covering all indebtedness. The students at Stillman Institute were now required to earn their board by laboring on the farm, and to bear all their other expenses themselves. The colored churches were being organized into an independent synod, which had held its first meeting at Chester, S. C., Jan. 19. The committee had decided to bring all the colored ministers together in a "summer school" at Tuscaloosa, where they would be diligently instructed in all the various departments of Church work. Plans had been matured for a considerable enlargement of the school work of Stillman Institute. Among them was an arrangement for keeping the doors of the institute open continuously, with some school in session all the time. The report on the Sabbath, while it cited numerous instances illustrating the growing disregard of the Lord's Day by world's people, presented as a gratifying incident in connection with the matter "the frequent commendatory notices of the conduct of church members." The distinction, the report said, "is everywhere drawn between the Church and the world. The statement is constantly reiterated that while the day is losing its hold upon the outside world, the people of God, with few exceptions, regard it

more or less with unabated reverence and affection." A report of a Committee on Church and Christian Education appointed by the previous General Assembly expressed satisfaction at signs of a reawakening in this Church and in all the evangelical churches to the great importance of Christian education, and at the increasing number of schools of various grades under direct church control; advised all the synods, presbyteries, and church sessions to undertake whatever might be practicable in furtherance of this cause; and embodied a constitution for parochial schools, to be maintained by single congregations or by two or more contiguous congregations, and to be governed by boards of trustees, all male communicants in the Presbyterian Church, appointed by the Church sessions; the schools to be primary and preparatory in grade, for young men or young women or both, and to be distinctively Christian in character, with the Bible as a text-book and the standard of the Church in use. The report also included a plan of organization contemplating the appointment of permanent committees on church and Christian education by the Assembly, the synods, and the presbyteries, the duty of which should be to gather and disseminate information and stimulate interest in the subject. This report was adopted. The Assembly decided that in case of the failure of the regular meeting or of an emergency, the moderator may convene a presbytery without the concurrence in request of two ministers and two elders. To an overture of inquiry on the subject, the Assembly responded that there is no warrant in the Scriptures for the observance of Christmas and Easter as holy days, "but on the contrary (see Galatians iv, 9-11, and Colossians ii, 16-21) that such observance is contrary to the principles of the Reformed Church, conducive to will worship, and not in harmony with the simplicity of the Gospel of Christ." A change in the baptismal formula whereby the clause "I baptize thee into the name," etc., is changed into "I baptize thee in the name," etc., submitted by the preceding General Assembly, having been approved by the presbyteries, was enacted into an amendment to the directory of worship. A minute was adopted expressing the strongest condemnation of the lawless spirit manifested in lynching, and, while expressing also the abhorrence of the Assembly for the crimes which have led to the disorders alluded to, urging all the Presbyterian people and ministers "in all scriptural ways to do their utmost toward cultivating and maintaining that order and reverence for authority which are enjoined by the Word of God." A committee of three ministers and two ruling elders was appointed to attend the unveiling of the Presbyterian historical monument erected in the Old Scots burial ground in Monmouth County, New Jersey, where the first general presbytery of which any official record exists assembled. A committee was appointed to prepare a pastoral letter, to be read in all the churches, on the subject of card playing, dancing, theater going, and other worldly amusements.

A committee reported concerning the propriety of ministers performing the marriage ceremony in case the parties are under age when there is reason to suppose that the consent of the parents has not been obtained, that it would be unwise and inexpedient to attempt to lay down any inflexible rule for the guidance of the ministry in the performance of the marriage ceremony, the great bond of society. The enlightened conscience and the laws of the land are as a rule the safest and only guides to be followed in such

cases. But in instances like those described the greatest prudence and caution should be exercised by the minister. He should assert his influence as far as he could properly and prudently do so to prevent such marriages, and only consent to perform the ceremony in those cases where he is satisfied from all the circumstances that the best interest of all the parties (including the parent or parents) will be subserved by his so doing.

III. United Presbyterian Church in North America.—The following is a summary of the statistics of this Church reported to the General Assembly in May, 1899: Number of synods, 12; of presbyteries, 66; of ministers, 957, of whom 674 are returned as pastors and stated supplies and 283 as without charge; of licentiates, 101; of licensures, 56; of students of theology, 75; of ministers ordained during the year, 48; of ruling elders, 3,880; of congregations, 968, of which 775 had pastors and stated supplies and 193 were vacant; of mission stations, 507; of houses of worship erected during the year, 32, at a total cost of \$264,326; of parsonages, 328, of which 19 were erected during the year, at a total cost of \$30,347; of members in America, 114,635; in the whole Church, 126,783; of members received on profession during the year, total, 6,834; of baptisms, 2,755 of infants and 1,384 of adults; of Sabbath schools, 1,126, with 12,584 officers and teachers and 113,502 pupils; of Young People's Societies, 1,029, with 41,280 members. Amount of contributions (in America): For salaries of ministers, \$596,228; for congregational purposes, \$508,637; for the boards, \$283,520; for general purposes, \$133,291; total for America, \$1,521,679; total for the Church, \$1,542,700; average per member in America, \$13.39; average salary of pastors in America, \$1,029. Of the 507 mission stations, 484 are preaching stations in the foreign field (Egypt and India). The amount of contributions of Sabbath schools was returned as \$90,120.

The Board of Education reported to the General Assembly that more than ordinary interest had been taken during the year toward increasing endowment funds and in securing buildings. The contributions to the college and seminary fund amounted to \$0,200, or \$3,381 more than in the preceding year. This sum was distributed among 11 institutions.

The Young People's Christian Union Convention was held in Pittsburg, Pa., Aug. 2 to 7, and was attended by 7,039 delegates. Reports were made of 598 Christian Union and 163 Christian Endeavor Societies, with 31,077 members and 5,096 tithers; and of 295 Junior Societies and 123 Junior Missionary Societies, with 15,523 members, 1,771 of whom came from homes outside of the Church. The senior societies had contributed \$36,540, and the Juniors \$8,704. The sum of \$25,000 had been contributed toward a proposed thank offering of \$50,000.

Of \$8,000 appropriated by the General Assembly of 1898 for ministerial relief, the board had received \$5,803. The payments to beneficiaries had amounted to \$10,390. The usefulness, and in fact the necessity of the endowment fund was made more and more apparent. Twenty-three ministers and 47 widows and orphans had been aided during the year. There were now 69 beneficiaries on the roll. The amount of the endowment fund was \$105,325.

The Board of Home Missions reported to the General Assembly that the net increase of membership in the missions had been greater than in the Church at large. For the first time the con-

tributions of the mission stations and congregations to all the work of the Church had exceeded the whole amount expended by the board. One hundred and fifty-five congregations had been added since 1880.

The total receipts of the Board of Foreign Missions for the year had been \$174,458 and the expenditures \$174,269. The debt had been reduced from \$23,238 to \$16,438.

The contributions for the year to the foreign work of the Woman's General Missionary Society had been \$16,674, or \$119 less than in the previous year. Thirty-six foreign missionaries were sustained by the society—24 in India and 12 in Egypt. Reports were made at the annual meeting in May concerning the Bible Training School, at Xenia, Ohio; the distribution of literature; work among the freedmen, in connection with which a farm in Alabama had returned a profit of \$600; a Little Girls' Home, at Knoxville, Tenn.; the magazine; church extension and parsonage work; the Warm Springs Indian Mission; the Orphans' Home; and the Hospital for the Aged. A new hospital was to be established at Tanta, Egypt.

The forty-first General Assembly met in Philadelphia, Pa., May 24. The Rev. W. J. Robinson, D. D., of Allegheny, was chosen moderator. The Committee on Union with the Associate Reformed Synod of the South reported that no progress was being made, except as the two bodies were growing nearer together through the Young People's Societies and co-operation in missions. The Committee on Union with the Christian Reformed Church reported that the basis of union submitted in overture had been defeated, but the Synod desired correspondence by fraternal delegates. The fraternal delegate of that Church was present, and said, in his address to the Assembly, that a growing regard prevailed among its people for the United Presbyterian Church, and an increasing desire for more intimate relations. There was also a desire for closer relations with churches of like faith, and a movement had been set on foot with reference to this. The Committee on Ways and Means and the Commission on the Debts of the Boards had worked together during the year as one committee, with the result of securing larger contributions to the boards. The committee appointed by the previous General Assembly on a comprehensive educational policy presented a plan contemplating control by the General Assembly of the establishment and location of educational institutions. The paper was discussed and referred to the Committee on Education. The Assembly advised that new educational enterprises should be undertaken by presbyteries or synods contingent upon approval by the General Assembly, to obtain which their case should be brought by the Board of Education before it for its action. To a memorial asking for action on the subject of marriage with a deceased wife's sister, the Assembly replied, after citing the refusal of the General Assembly of 1869, by a majority of four to one, to repeal the prohibition, that matters more practical and essential to the welfare of the Church were clamoring for discussion and legislation, and it would be wise to avoid the agitation of that vexed question at this time. The Board of Publication was instructed not to accept for publication in any of the Church periodicals any musical composition which alters the authorized wording of the Psalms in the construction of anthems, choruses, etc., but to require strict adherence to the forms of expression found in the metrical or the prose versions in all the books of

selections they publish; and that all adaptation of music for conventions and congregations be published by the board. The organization of a presbytery in eastern Virginia and North Carolina, to be under the jurisdiction of the Synod of New York, was directed. The Assembly advised the institution of a Sabbath observance department in the work of the Young People's Christian Union, and entreated ministers and members to give more earnest heed to their department on the Lord's Day in every particular. Provision was made for introducing the total abstinence pledge into all the Sabbath schools and securing the signatures of pupils to it. Concerning the jurisdiction of sessions over students of theology, the Assembly decided that the standing of a student in the congregation remains until he is ordained, when he passes from the jurisdiction of the session; and made it the duty of the clerk of the presbytery to notify the session of the fact of the ordination. Resolutions were passed condemning the construction put by the War Department upon the "anticanteen law," and opposing the seating of B. H. Roberts as a member of the national House of Representatives from Utah. Delegates were appointed to attend the convention of the American Antisaloon League to be held at Chicago.

IV. Associate Reformed Synod of the South.—The total number of members connected with this body was given in at the annual meeting of the Synod in November as about 11,500. This represented an increase, mainly accruing to the home mission congregations. The Synod met in Charlotte, N. C., Nov. 9. The business that elicited the most interest in the Synod was the election of a president for Erskine College, to succeed the Rev. Dr. Grier. The Rev. Dr. Chalmers was chosen, but declined to accept. The Rev. Dr. F. Y. Pressly was then elected. Negotiations for union with the United Presbyterian Church, which had been going on for several years, had been suspended.

V. Reformed Presbyterian Church in North America—Synod.—Statistics of which a summary follows were reported of this body at the annual meeting of the Synod in May: Number of congregations, 113; of missionary stations, 11; of ministers, 124; of licentiates, 21; of theological students not licentiates, 3; of communicants, 9,875; of attendants on Sabbath school, 10,387; of attendants on meetings of Young People's Societies, 2,436; net increase of members during the year, 22; total amount of contributions, \$164,485.

The Synod met at Mansfield, Ohio, May 31. The Rev. James Black, of Wyman, Iowa, was chosen moderator. The subject of most interest before the Synod related to the formation of a denominational union of the Young People's Societies. The question had been much canvassed in the Church, but the Synod declined to take favorable action upon it. At the meeting of the Synod two years before, the Rev. Dr. McAllister had been called to account for heresy in articles on Church union published in his paper, the Christian Statesman. The matter was then disposed of by requesting Dr. McAllister to cease the further publication of articles on Church union, while the Synod expressed neither approval nor disapproval of the views expressed in them. In 1898 the Synod had denied a request by Dr. McAllister for a removal of the restriction. The matter was now brought up again, when the Synod resolved that it perceived no reason for continuing the restriction in force. The Synod reiterated its condemnation of all Sabbath-break-

ing travel, and specially protested against the efforts of street-car and railway lines to increase such travel by providing special attractions on the Lord's Day at suburban and other resorts; and it urged all under its care "to guard most scrupulously against complicity in any way with such violations of the Lord's Day." In view of seeming difficulties in the way of the present attainment of its object, the committee on the preparation of a uniform version of the Psalms for use by all Psalm-singing churches was discontinued. The question having been brought up in the form of a proposition to change the practice and require rebaptism, the Synod decided by a very large majority that the practice pursued in the mission in Syria of receiving converts from the Greek Church without rebaptism should be continued.

VI. Cumberland Presbyterian Church.—The statistical returns of this Church, compiled in December, 1899, give it 1,720 ministers, 2,982 churches, and 186,582 members; showing a gain during the year of 121 ministers and 5,947 members, and a loss of 39 churches.

The Cumberland Presbyterian Church, colored, had 450 ministers, 400 churches, and 39,000 members; showing gains of 50 ministers and 150 churches. The gain of 28,750 members set down in the table is claimed to represent the gain of several years, but of how many is not indicated.

The receipts of the Educational Society for the year had been about \$12,000, of which \$10,282 had come in the form of offerings of the Church. The sum of \$5,920 had been paid to students. The society reported that the endowment of the Theological Seminary had been so increased that the committee would hereafter be relieved of the necessity of helping sustain the faculty of the institution. The policy avowed by a previous General Assembly expressed in the words "education before ordination" had been found by the society from the inquiries it had been commissioned to make to be approved by the Church, and appeared to be regarded as an established principle. Obeying the orders of the General Assembly, and disclaiming any purpose to determine who should be ordained, the society had simply gained information as to the processes employed by the presbytery in the case of each ordination, and submitted it to the Assembly without comment. Where the report had not seemed satisfactory, the Synod was requested to investigate and see that the law was duly observed. A school for colored Cumberland Presbyterians had been founded at Huntsville, Ala., and was flourishing. The society had been assisted by a Ladies' Society in Nashville, Tenn.

The Education Commission appointed by the General Assembly to manage the effort to raise \$1,000,000 for endowments met at St. Louis and organized, May 3. Besides the raising of the money the constitution adopted at the meeting specified as the object of the commission the encouragement and promotion of the co-ordination and correlation of the educational institutions of the Church so as to insure their greatest harmony and efficiency and to prevent the unnecessary waste of men and money. The preparation of an address to the synods and presbyteries was determined upon. Measures were proposed by which active pastors may engage in the canvass for funds.

The Board of Publication reported that the business transactions of the Publishing House for the year had amounted to \$84,414, on which a net profit was realized of \$8,955. The book department, which had for several years been conducted

at a loss, returned this year a net profit of \$1,784.

The receipts of the Board of Ministerial Relief for the year had been \$10,069. The board had spent \$3,058 for the relief of ministers, \$2,103 for the relief of widows and orphans, and \$2,566 in the support of Thornton Home for Ministers. Ninety-nine families had been aided by the board. The receipts for Church extension had been \$2,447. Two home mission churches had become self-supporting; and the appropriations to home mission points were being gradually decreased, with a view of bringing them to self-support. From the foreign field reports were made of work in Mexico, Japan, and China. Nine Church Extension superintendents were employed, two Indian missionaries, one missionary to the Chinese in San Francisco, 3 missionaries to the mountain people, missionaries on 21 home mission stations, 5 missionaries in Mexico, 3 in China, and 14 in Japan.

The total receipts of the Woman's Board of Missions for the year were \$29,079, making it the best financially of all the years. Reports were made at the convention, May 8, of the work of the manse department, which the board had undertaken under the direction of the General Assembly, but which had not yet become considerable; of Chinese work in San Francisco, which was partly sustained by the children and returned 91 pupils; of the mountain mission at Barnard, N. C., which had become so large that the erection of a new building, toward which more than \$2,500 had been subscribed, had become necessary; and of foreign mission work, in Mexico and Japan. The Colegio Morales in Mexico had 65 pupils, and the Nilmina school in Japan 28 pupils.

The sixty-ninth General Assembly met at Denver, Col., May 18. The Rev. James McGready Halsell, D. D., was chosen moderator. The predominant subject for consideration was that of education, on which a special report was presented. This report, expressly recognizing the importance of education, gave the schools of the Church full credit for the work they had done, which was good according to their resources; exposed the inadequacy of those resources to the accomplishment of what the colleges were called upon to perform, and urged the necessity of increasing their endowments. It had been shown by the Educational Society that the Church had no policy embracing the entire denomination, and to remedy this defect the following measures proposed by the committee were approved by the General Assembly as outlining such a policy: That the synods and presbyteries be instructed to favor the promotion of preparatory schools, colleges, a central university, theological seminary, and post-graduate seminary; that they discourage the effort of academies to do college work and urge them to affiliate themselves with the colleges as preparatory schools; that all concerned, including pastors and sessions, co-operate in the effort suggested by the Education Society to raise an educational endowment fund of \$1,000,000; that the fund so raised be apportioned according to a schedule embodied in the report among the colleges and seminaries of the Church, including \$100,000 for a college to be established on the Pacific coast and \$50,000 for the preparation for post-graduate theological seminary work in the University of Chicago; and the constitution of a commission to be located at St. Louis, Mo., to have the charge of the raising of this fund. The report of the Committee on Systematic Benevolence showed that the number

of persons practicing the contribution of tithes was growing every year. The resolutions adopted by the Assembly commended the cause of systematic benevolence; requested the presbyteries to provide a fund upon the basis of one cent per member to promote that work; disapproved of fairs, festivals, and entertainments of any kind where money is taken at the door, and deprecated the attendance by members at such entertainments when given by other denominations; and authorized the appointment of a commissioner to preach a sermon at the next General Assembly on systematic beneficence. In answer to an inquiry whether a licentiate might perform the marriage ceremony, the Assembly decided that he could not unless the law of the State in which the marriage took place expressly gave him the power. The Assembly having in its resolutions on temperance expressed the belief that it is the duty of Christian men "to separate themselves from every organization that sympathizes or compromises with the rum traffic, and unite in some way with some organization every member of which shall at all times, including Election Days, and at all places, including the polls, and with all their power, including the ballot, stand together against this giant evil," a protest was entered against this declaration, maintaining that the Assembly should not commit itself to any kind of civil or political action as in the report it seemed to do. The Assembly thereupon explained that the resolutions did not commit the body to allegiance to any political party. The report on Christian Endeavor recommended the appointment in each synod of a representative to look after the work of the Christian Endeavor Societies in that synod; that there be a permanent Christian Endeavor committee in every presbytery, reporting to the Synodical Executive Committee; that the Christian Endeavor Committee of the General Assembly be made permanent; that the month of May be allotted to the Endeavorers for the taking of offerings; and that the offerings of the Junior Societies be administered by the Woman's Board of Missions.

VII. Presbyterian Church in Canada.—The statistical reports of this Church for 1899 give it 212,026 members, 1,000 (in round numbers) ordained ministers, and 160,105 Sunday-school scholars. The year's contributions to home missions were \$106,169; those to foreign missions were \$175,223; and the total revenue of the Church was \$2,511,175, the largest amount contributed to the Church in any year since the union in 1875. Of this amount, \$473,936 were given for the "schemes" of the Church. The average of contributions was \$20.99 per family, \$10.81 per communicant.

The report on Sabbath-school publications showed that the department had been self-sustaining and had yielded a small surplus.

The financial reports to the General Assembly showed that the amounts raised had been larger than in any previous year. All the funds of the Church were out of debt, and began the new year with a balance in hand. The total expense of administering the funds was calculated to be 3.40 per cent.

The reports of the Home Mission Committees to the General Assembly showed that the revenue of the funds of the eastern and western sections together had been \$140,154. Four hundred and forty-two fields, with 1,204 stations, had been supplied by 559 missionaries.

The expenditures in the fields for French evangelization had been \$25,719, while \$7,289 had been contributed from them. Work had been

carried on in 36 fields, with 95 preaching stations and 13 colportage districts, by 29 ordained missionaries, 17 colporteurs and students, and 18 missionary teachers. Seven hundred and forty-four pupils were enrolled in the mission schools. The Point aux Trembles College, with 170 students, had been maintained at an expense of \$10,595.

The contributions for foreign missions had been in the two sections, eastern and western combined, \$175,222. The missions were situated in the New Hebrides, Trinidad, and Demerara, Formosa, India, China, and Korea. The question having been raised in the General Assembly, that body decided almost unanimously to continue and strengthen the college work of the India mission.

The twenty-fifth General Assembly met at Hamilton, Ontario, June 20. The Rev. Robert Campbell, D.D., was chosen moderator. A scheme was adopted for raising a "twentieth century fund" of \$1,000,000. This sum, it was provided, shall consist of two parts: one of \$600,000, to be known as the Common fund, for the missionary, educational, and benevolent work of the Church; and the other, of \$400,000, for the discharging of debts on church property. No endowments were asked for the ordinary missionary expenditure of the Church, but in order to obviate borrowing from banks, working balances were aimed at; for home missions, east, \$8,000; for home missions, west (to make up \$50,000), \$30,000; for augmentation, east (to make up \$6,500), \$3,000; for augmentation, west, \$15,000; for foreign missions, east, \$15,000; for foreign missions, west (to make up \$50,000), \$20,000; for French evangelization, \$15,000. Other objects to be embraced in the Common fund were \$40,000 each to the colleges at Montreal, Kingston, Toronto, and Winnipeg, and \$15,000 to the Presbyterian College, Halifax; \$50,000 to the Church and Manse Building fund, northwest; \$10,000 to the building fund for Algoma and North Bay; \$24,000 to the church building fund of New Brunswick, Prince Edward Island, and Newfoundland; \$60,000 to the Aged and Infirm Ministers' fund, west, and \$12,000 to that, east; \$60,000 to the Widows' and Orphans' fund, west; \$50,000 for a building fund for foreign missions, west; \$10,000 for a building fund for foreign missions, east; \$25,000 for a building fund for augmentation, west; and \$20,000 for a building fund for French evangelization. These allotments constitute the distribution of the Common fund of \$600,000. While members and adherents were expected to contribute to the common fund as a whole, yet any desiring to designate their contribution to a particular object embraced in the same were left at liberty to do so. It was stipulated that nothing should be paid out of the Common fund except for objects embraced in the schedule, of which a summary is given above; but congregations and individual contributions were encouraged to reduce or liquidate debts on churches, manses, or other church property, with the understanding that the amounts thus paid, if reported, should be included in the Century fund. Such congregations and individuals were expected to designate a certain portion of their contributions to the Common fund, the proportion to be designated by themselves. The Century fund being regarded as special and extraordinary, it was intended to be understood that contributions made in connection with it ought not to interfere with givings to congregational objects or to the schemes of the Church. The fund is open till May 1, 1901. The Rev. Dr. Robert Campbell, moderator of the Gen-

eral Assembly, was appointed general agent for the Century fund for a term of two years, with the duties of securing thorough organization in synods, presbyteries, and congregations in connection with it, and of presenting the scheme wherever possible. Six synodical conveners were appointed, to co-operate through their advisory committees with the general agent. A special committee was appointed to inquire into the subject of the eligibility of ruling elders to be moderators of church courts and prepare a finding for submission to the next General Assembly. The Committee on Education was directed, in co-operation with other committees, to continue to urge upon the governments of the provinces the importance of ethical and nonsectarian religious instruction. A proposal that nominations for moderator of the General Assembly should be hereafter made by a committee composed of all the ex-moderators, with the reservation of the right of nomination on the floor of the Assembly, was sent down to the presbyteries for consideration. Permission was given for keeping the official records of the Church in the form of duly certified printed copies. Progress was reported in the preparation of a revision of the Westminster Directory of Worship, and upon a manual of Aids for Social Worship. Some apprehension was expressed in the discussion of these reports of an introduction of ritualism, but they were not shared by the majority of the Assembly. A proposal to reduce the representation of ministers and elders in the Assembly, sent down to the presbyteries in 1898 and approved by 31 out of 53 of them, was tabled for fuller consideration by the next General Assembly. An overture calling for the appointment of an executive to act for the General Assembly during the intervals between its meetings was referred to a committee to consider and report to the next General Assembly. A resolution was adopted expressing thankfulness for the increased temperance sentiment in the country, and demanding, in view of a majority of votes having been cast in the recent plebiscite for prohibition, that legislation be enacted in conformity with that principle. The report on church life and work urged the cultivation of the family religious life, and of a strong spiritual tone in the congregation, and emphasized the importance of preserving the Sabbath.

VII. Church of Scotland.—The statistics reported to the General Assembly of this Church in May showed that the number of members at the end of 1898 was 648,476, as against 641,803 at the close of the previous year. The membership of the Church had increased during the past twenty years by 132,690. The number of baptisms during the past year had been 40,059. The income of the funds under the charge of the Assembly had been £190,272. An increase over the previous year was shown in the amounts received for the different schemes and funds, except in the case of the Aged and Infirm Ministers' fund, where a falling off in legacies had occasioned a decrease of £368, and the income of the Endowment Committee, which had decreased by £23,354. The total amount of voluntary contributions was £484,275, as against £485,694 in 1897.

The General Assembly met in Edinburgh, May 18. The Rev. Dr. John Pagan, of Rothwell, was chosen moderator. The Lord High Commissioner mentioned that in addition to her annual gift of £1,000 for the Highlands and Islands schemes of the Church, the Queen had ordered another similar amount to be paid, with the suggestion that it might be used in encouraging young men to preach the Gospel in the Gaelic lan-

guage. The report of the Aged and Infirm Ministers' fund showed an increase in all the items except legacies, making up the total income of £3,620. A legacy of £10,000 had been left to the fund, but, being subject to a life rent, was not yet available. The Home Mission Committee had 252 missionaries at work. In the missions to the Jews, the operations of which were largely educational, 29 agents were engaged, with an attendance on their schools of 32,000 children, two thirds of whom were Jews. The report on foreign missions mentioned nearly 1,000 baptisms as having taken place during the year in the mission field; represented the income as steadily increasing and being now £29,000; and announced a steady increase of native workers, trained by the missionaries. A letters of thanks was ordered sent to the Rajah of Chamba, in India, for the gift of a church. The attention of the Assembly being drawn to the Government regulations in India which make it obligatory on Presbyterian chaplains to obtain the consent of the bishop of the diocese before they can use the Government churches, a lively discussion ensued in which the equal right of Presbyterians with Episcopalians to the occupancy of those churches was insisted upon. The moderator gave in his closing address a review of the present position of the Church as compared with that which it occupied at the close of the last century. Speaking generally, he maintained that there were now in the teaching of the Church a greater simplicity and at the same time a greater warmth than existed in former days. During the period under review free inquiry had had full scope, and even if the Church had seemed at first to resent the claims of liberal thought to deal with the sphere of religious belief, time and the event had shown that there was everything to gain and nothing to lose from honest and reasonable criticism. Referring to the question of Church union, the moderator suggested that while union had in the past done good, separate courses of action had also proved fruitful, and it was noteworthy that the period of an undivided Church, whether Roman Catholic, Protestant, or Presbyterian, had not been the brightest phase of Church history. He believed that the great body of ministers and people would rejoice if there could be union without the abandonment of principle.

VIII. Free Church of Scotland.—The General Assembly met at Edinburgh, May 18. The Rev. James Stewart, of the mission at Lovedale, South Africa, was chosen moderator. The statistical reports showed that there had been a larger increase of members during the past year than had been the average for eighteen years. The number of Sunday scholars had increased by 1,656, while there was a falling off of 341 in the number of teachers. The report on the colleges mentioned a serious decrease in the number of entrants, which was ascribed to the enforcement of the preliminary examination. An increase of more than £10,000 in the contributions for the Sustentation fund, which aggregated £184,028, had made it possible to bring most of the small stipends up to £200. The Committee on Union presented their report, relating the proceedings of the joint committee of this and the United Presbyterian Church and the result of their deliberations. A motion, offered by Principal Rainy, to the effect that the plan of union be sent down to the presbyteries under the barrier act for their consent thereto, and that those bodies be asked to authorize a future Assembly to effect union in accordance with the present proposals, was carried by a vote of 565 against 38 for an amend-

ment declining to send down the overture. The motion as adopted also recommended the reappointment of the Committee on Union, with injunctions to prepare the uniting act for submission, if possible, to the next Assembly. A memorial, signed by 16 members of the Assembly, was filed disputing the competency of the Church to accept the resolution, and declaring that they would not be bound by the Assembly's decision in favor of it. Among the specific recommendations incorporated by the joint committee in the plan of union were the recognition of three colleges—at Edinburgh, Glasgow, and Aberdeen, with six chairs at Edinburgh and at Glasgow, and 5 at Aberdeen; a theological curriculum of four sessions; a union of the scholarships into one scheme for the entire Church and all the Scottish universities, and one examination for them; that the General Assembly consist of an equal number of ministers and elders elected by the presbyteries, in a proportion equivalent to one third of the charges within their bounds; mission presbyteries to have no representatives, but missionaries ordained in Scotland to have, when at home on furlough, seats as corresponding members; the congregations to be organized into 61 presbyteries and 10 synods; the property and agents of the two churches in the foreign mission fields to be amalgamated, and the whole work to be managed by one administrative body. Rules and forms of procedure were left to be dealt with after union has taken place. A resolution in favor of the separation of Church and state was carried "almost unanimously." A commission was instituted and empowered to decide finally any appeals that might be made in carrying out the provisions of the inefficiency act. The opinion of the Assembly was expressed that ministers of the nonestablished Presbyterian churches at all military stations in Scotland should have equal opportunities to those at present secured to ministers of the Established Church. The Assembly decided to support the action to be taken by the Established Church on the position of Presbyterian chaplains in India. Concerning lotteries at church fairs, a resolution was approved reminding the people of the Free Church that lotteries were illegal and open to grave moral objections, and expressing the hope that the practice of holding them might cease. The Assembly recorded its profound thankfulness that a Peace Conference had been called, and the hope that beneficial results might follow its meetings.

IX. United Presbyterian Church of Scotland.—The statistical report presented to the Synod of this Church showed that the number of members was 197,476, an increase for the year of 1845. The membership in the foreign field showed an increase of 3,472. Returns were made of 589 congregations and 35 home mission stations, and of 835 Sunday schools and 816 Bible classes, with a combined total of 142,136 scholars. The salaried home mission agents numbered 144.

The accounts of the Synod treasurer showed that the total income for 1898 had been £423,106, representing an increase of £24,792. The contributions by the presbyteries, however, amounting to £43,989, exhibited a decrease of £1,344. Among the amounts contributed for special funds were: For the Jubilee thanksgiving fund for foreign missions, £15,000; and for the Jubilee thanksgiving fund for the extension of the Church at home, £15,217. The legacies for the year reached £8,081, an increase of more than £4,000. The funds invested amounted to £211,025. The staff in the foreign missions comprised 157 fully trained agents, of whom 62 were or-

dained European missionaries, 16 medical missionaries, 21 native pastors, 15 evangelists, and 43 zenana missionaries. One hundred and fourteen mission congregations returned 26,971 members, and 20,146 children were enrolled in the day schools.

The Synod met in Edinburgh, May 8. The Rev. John Robson, of Aberdeen, was chosen moderator. The report of the Committee on Union with the Free Church of Scotland was presented. All the presbyteries had expressed themselves in favor of union. Four of them reserved final approval until a complete scheme should be laid before them. Of 539 sessions from which returns had been received, 509 had expressed themselves in favor of union, 15 disapproved, and 15 returned a qualified answer. The procedure of the committee as related in the report was approved by a very large majority, and its recommendations were ordered sent down to the presbyteries and sessions for their action. The expression of the desire of the Synod for disestablishment was reiterated. The Temperance Committee were instructed to petition against the measure designated "Threefold Option." The Committee on the Jubilee Thanksgiving Fund presented its final report, showing that the total amount of £36,247 had been raised on account of the fund. The treasurer of the fund had in the previous year paid £30,000 to the moderator for home and foreign missions; and it was arranged that after allocating £2,000 for the reduction of the debt on the Synod buildings, the available balance should be divided, one half for church extension abroad and the other half for the same purpose at home. The report on Church life and work represented that the increase of substantial comfort which the commercial and industrial progress of the time had brought to almost all classes had its influence in adding to the difficulties of the Church and lessening its power to overcome them. The growing facilities for pleasure excursions, week-end visits, and holiday traveling were making inroads upon the regular habits of family life, the continuous church attendance, and the prosecution of systematic Christian work, and were helping not a little to break down Scottish use and wont in relation to family religion, Sabbath keeping, and the ministry of the Word. The report on Sunday observance described pleasure and money making as the chief enemies of the day of rest. A debate on the subject of marriage with a deceased wife's sister was closed by the adoption of a motion declaring it inexpedient, in view of the present position of the union negotiations, to proceed further with the matter.

X. Presbyterian Church in Ireland.—The statistical report of this Church, presented to the General Assembly in June, showed that there were in connection with the body 662 ministers, including missionaries, 52 retired ministers, 38 assistants, 29 licentiates, 128 students—a decrease of 37 from the previous year; 2,042 elders, 571 congregations, 84,379 families, 106,424 communicants, 479 mansees, and 1,098 Sabbath schools, with 9,216 teachers and 105,046 pupils. The Assembly's Temperance Association had on its roll 348 ministers and 564 elders. The number of families in the Church had increased during the year by 522. The income of the Church from all sources had been £261,135, an increase of £13,478 over that of the previous year. The income of the Sustentation fund was returned at £39,350, of which the congregational contributions amounted to £23,449, against £23,743 in 1898. The supplementary dividend had been de-

clared at £10. While the contributions to this fund and to the Orphan Society had increased, there had been a decrease in the missionary income. The average amount received by the Assembly from bequests during the past six or seven years had been about £7,000 a year. The Assembly's Fire Insurance Company had 400 policies in force, covering property to the value of \$530,603.

The General Assembly met at Belfast, June 8. The Rev. Daniel A. Taylor was chosen moderator. Resolutions were unanimously passed "against the widespread revival of Romanism in a Protestant Church established by the state as a retrograde movement and a reimposition upon the free conscience of England and the colonies of a yoke which neither we nor our fathers were able to bear." Resolutions were also passed requesting the Government to substitute the word "church" for "meeting house" in its official communications. A motion to invest the moderator with the title of Right Reverend received no countenance. The questions concerning the use of instrumental music and the singing of hymns in service, which have greatly vexed previous General Assemblies, was not raised this year, only one reference having been made to the controversy, in the discussion of the report on the new hymnary.

XI. Presbyterian Church in England.—The statistics of this Church as reported to the Synod in April showed that 315 congregations were connected with it, having 73,249 communicants (a net increase of 1,805 members), 7,546 teachers and 89,930 pupils in Sunday schools. The churches provided 163,738 sittings. The total value of church property was £1,842,532, against which stood debts aggregating \$92,076. The total income for the year was £278,889, exceeding the total of the previous year by £8,000. The revenue for missionary purposes was £28,018. The annual report of the Women's Missionary Association showed an income of £4,885, and dealt with the work of 20 woman missionaries. Nearly £34,000 had been devoted during the year to missions and charities in connection with congregations. The receipts of the Sustentation fund had been £45,701, and the expenditure, including £1,100 added to the Reserve fund, £46,590. The capital of the Widows' and Orphans' fund was £63,753, yielding a revenue of £2,430.

The anniversary of the Missionary Society was held May 16, the Earl of Aberdeen presiding. The year's income had been £25,082. Fifty European medical and other missionaries were supported in China, 20 of whom, not including the wives of missionaries, were women; with 150 native pastors and agents—all laboring in connection with 189 mission stations; while the number of communicants in China and Formosa was 6,000. Attached to the missions were 9 hospitals, where about 30,000 patients were treated annually, and colleges for training native evangelists.

The Synod met in London, April 28. The Rev. Charles Moinet, D.D., of Bromley, was chosen moderator. The report on religion and public morals expressed regret at the increasing laxity of Sunday observance; urged all who love the Sabbath to discourage by all means in their power the journals and other publications that issue Sunday editions; and found occasion for joy in the disarmament proposal of the Czar. The question of undertaking a twentieth century fund was referred to the General Purposes Committee, in conjunction with the College Building and Home Mission Committees, to report at the next meeting of the Synod. A special committee which

had been dealing for two years with the question of remedies for ministerial inefficiency, and had been seeking means to facilitate interchanges of pastorates, was dismissed. Presbyteries were empowered to arrange for the settlement of ministers who desire, with the full consent of their congregations, to exchange pastorates. A revision of the Book of Order was directed. A resolution was unanimously adopted recognizing the serious nature of the crisis in the Church of England, and expressing sympathy with the evangelical party in that Church in the embarrassment of its contest with ritualism. Arrangements were ordered made for the opening of the college (which had been transferred to Cambridge) in the ensuing October.

XII. Reformed Presbyterian Church (Scotland).—The annual meeting of the Synod was held in Glasgow in May, with the Rev. A. C. Gregg as moderator. The financial statement showed that credit balances existed of £539 to the account of foreign missions, £63 to that of ministerial aid, £150 in favor of the Aged Ministers' fund, £36 of home missions, £17 of publication, and £714 of the general fund; while a deficit of £120 was scored against the Synod fund. A gift of £20 was voted to the foreign mission scheme of the Waldensian Church.

XIII. Original Secession Church.—The annual synodical meeting of the Original Secession Church was held in Edinburgh in May. The Rev. Alexander J. Yule was chosen moderator. The reports submitted showed that the total income for the year had been £2,005, an increase of £315, and that a balance was carried over after all disbursements of £362. The aggregate sum now at the credit of the Synod's accounts was £4,983. A passage in the report of the Committee on Religion and Morals referred to the adoption of the Common Hymnary by the three great Presbyterian Churches as another step in the wrong direction, tending to the further disuse of the divinely inspired Psalter. The Synod resolved to petition the Government in favor of the Peace Conference invoked by the Czar of Russia, to ask it to take measures intended to secure the better observance of the Sabbath, and to oppose any measure that might be brought forward to legalize marriage with a deceased wife's sister. It expressed approval of the local veto and threefold option schemes, in respect to the liquor traffic.

XIV. Welsh Calvinistic Methodist Church.—The General Assembly met at Liverpool, May 15, with the Rev. Evan Phillips presiding. The Rev. Thomas Roberts, of Bethesda, was chosen moderator for 1900. The report of the foreign missions showed good progress in various fields in India. The year's expenditure on the work had been £10,353. The report of the statistician showed that notwithstanding the financial disturbances of the year in large parts of Wales caused by the coal strike, the interests of the Church had continued to grow. The result of the special appeal in behalf of the missions in Khassia, India, which had suffered from earthquakes, had been an excess of £8,500 in the collections over the total of any previous year. The number of communicants had increased 1,830; while the number of hearers showed a gradual increase, and was now 316,053. The chapel debts had been reduced £67,000. The total revenue of the 1,339 churches exceeded £246,000. A proposition was adopted for the celebration of the close of the nineteenth century by instituting a thank-offering fund of £100,000, to be devoted to purposes hereafter to be defined. The report of the Education Committee included the results of an

inquiry that had been made into the state of elementary and secondary education throughout Wales, and embodied a complaint that many nonconformist children were compelled to attend Church of England schools. The committee on spiritual provision for expatriated Welshmen recommended that something practical be done in regard to London and South Africa. A grant was accorded for sending a minister to the Transvaal, to work among the Welsh there, under the auspices of the South African Presbyterian Church. Four new Welsh churches had been built in London, but the monthly meeting considered itself unable to cope with the many thousands of neglected Welsh people there. A grant was voted for this work. A request was directed to be sent to the justices in Cardiff that they do not grant a license to sell intoxicating drinks in connection with the Eisteddfod. The report of the "forward movement" showed that the year's collections had amounted to £3,304, being £600 in excess of those of the previous year. At a meeting held in behalf of this cause, on the eve of the opening of the meeting of the Assembly, the secretary, the Rev. Lewis Ellis, said that though it had been only eight years since the enterprise was started, 30 or 40 new congregations had been formed, 30 halls built, and 20,000 people had assembled to hear the Gospel, of whom 2,000 were now regular church members.

PRINCE EDWARD ISLAND, a province of the Dominion of Canada; area, 2,133 square miles; population in 1891, 109,088. Capital, Charlottetown.

Government and Politics.—Lieut.-Gov. Howland was succeeded by the Hon. P. A. MacIntyre and a new provincial ministry, or rather a reorganization of the former Liberal Government was effected under the Hon. D. Farquharson as Premier; Angus McMillan as Provincial Secretary, Treasurer, and Commissioner of Public Lands; J. R. McLean as Commissioner of Public Works; H. C. McDonald, and afterward D. A. McKinnon, as Attorney-General; and J. W. Richards, Benjamin Rogers, Anthony McLaughlin, and Peter Sinclair as members without portfolio. The second session of the Legislature, from April 17 to May 19, 1899, was unimportant. The following were the only measures passed which need be mentioned:

- Respecting fisheries and rights of fishing.
- To provide for the construction of a wing to the Hospital for the Insane.
- To amend the public schools act of 1877.
- Respecting tuberculosis in cattle.
- To amend an act to regulate the registry of deeds.
- Respecting dower.
- To amend an act respecting assignments for the benefit of creditors.
- To amend an act relating to life insurance.
- To incorporate the Prince Edward Island Dairy Association.

Respecting the profession of medicine and surgery.

In December, 1899, Attorney-General McKinnon and another Government candidate were beaten in by-elections, and the ministry was left in a minority in the Assembly whenever it should meet again.

Finances.—In 1898 the expenditure amounted to \$301,609.75, the provincial loans paid off to \$14,246.50, and the receipts to \$277,458. The receipts included the Dominion subsidy, \$181,952; public lands, \$14,273; provincial land tax, \$30,084; debentures sold, \$18,094; miscellaneous, \$33,055.

Education.—The annual report of the public schools for 1898 showed 21,852 pupils enrolled, against 22,478 in 1888, and an average attendance of 13,377, against 12,248 in 1888. The expenditure in 1898 was as follows: Total amount expended by Government, \$129,817; statutory allowance to teachers, \$112,037; supplements to teachers, \$5,425; Prince of Wales College and Normal School, \$5,153; supplements paid to teachers by trustees, \$9,278; expenditure for school buildings, \$5,327; contingent expenses of school boards, \$18,527; total, \$163,032.

Industries.—The following facts are from the report of President Horace Hassard at the annual meeting, early in 1899, of the Charlottetown Board of Trade. The direct steamship service asked for by the board was inaugurated by the steamship Lake Winnipeg in September last, and she made a second trip in November, and after that the Canadian Steamship Company were induced to send the *Gaspesia*, which sailed hence on Dec. 25. From the port of Charlottetown and outports the foreign shipments during the year aggregated \$1,073,496, while the imports made a total of \$417,440, paying duties of \$121,016.92. From Summerside and outports the shipments of the year were \$251,551. The imports at Summerside and its outports aggregated \$59,829, of which \$30,960 were dutiable and \$28,869 free. The duties collected were \$10,944. The total exports for the island were \$1,325,047, and the dutiable imports \$296,775, paying \$131,960.92 in duties. The free imports were \$180,494.

The wheat crop largely failed; oats were light in yield and quantity; potatoes were a short crop, but hay was abundant and excellent. Praise was accorded the Fruit Growers' Association for the interest taken in securing apples for shipment. In regard to the dairying industry, it was asserted that in handling milk, raising fodder of the right kinds, feeding and caring for stock, etc., the advance since 1892 had been enormous. Thirty-four factories made cheese in 1898, and 15 made butter also, and in addition there were 6 creameries. The output was estimated at 46,000 boxes of cheese, while 14 butter factories showed 172 tons of butter. The number of cases of lobsters packed was 42,112. The oyster catch amounted to 29,800 barrels; mackerel, 3,149½ barrels, valued at \$44,037; codfish, haddock, and hake were plentiful, and a limited quantity of salmon was taken.

In live stock the island has long been well to the front, as the prize lists of the Halifax and St. John exhibitions of 1899 attest. And yet there has been a little falling off in both horses and cattle within a few years. The substitution of electricity for horse power on United States street cars has lessened the demand for horses, and the long-continued United States duties have in like manner depressed the export trade in that direction for all kinds of live stock as well as field products. Two chicken-fattening stations—one housed in the exposition building at Charlottetown and the other at Summerside—were established, and have proved successful. One of the chief new industries of the island is the great pork-packing establishment of Mr. Rottenburg, the largest of its kind in eastern Canada, near the Charlottetown railway station.

Notable improvements in the way of public buildings in 1898 included the new Prince of Wales College building, in which a solid masonry foundation is surmounted by a brick structure with stone dressings and slate roof, replacing an old and shabby wooden building. There is also a new Prince Edward Island Hospital building.

PROTESTANT EPISCOPAL CHURCH IN THE UNITED STATES. A summary of the statistics of Church progress in the year shows the following: The number of dioceses in the United States is 59; missionary jurisdictions in the United States, 17; missionary jurisdictions in foreign lands, 4; clergy (bishops, 84; priests and deacons, 4,734), 4,878; parishes and missions, 6,519; candidates for holy orders, 503; ordinations—deacons, 166; priests, 167; baptisms, 59,998; confirmations, 43,059; communicants, 699,582; marriages, 18,400; burials, 34,184; Sunday-school teachers, 47,151; Sunday-school pupils, 441,777; total of contributions, \$13,816,669.84.

The gross receipts for missions for the fiscal year that ended Aug. 31, including those for "specials," were \$886,858.59. The contributions for the work for which the board made itself responsible were \$388,092.35, and the amount received from legacies designated by the testators either for domestic or foreign missions or for the use of the society was \$114,598.95, making the amount that the board was free to use in the payment of its appropriations \$502,601.30. Legacies amounting to \$15,580 were permanently invested. The number of parishes contributing—24 more than the year before and more than in any previous year—was 3,746, and the amount of church offerings was larger than in any year except last year. The Lenten offering from Sunday schools, amounting to \$87,382.23, was the largest yet made, and was an increase over last year's offering of \$5,600. The number of schools contributing was 3,118, a gain of 87 compared with the previous year.

The receipts for domestic missions (including a balance from 1898 of \$31,409.40) were \$447,861.97. The payments on account of white, Indian, and colored mission work amounted to \$254,985.31; specials were \$51,302.90; portion of Woman's Auxiliary united offering of 1898 applied to appropriations for domestic missions, \$3,834.90; legacy expenses (one half), \$46.30; one half amount paid to annuitants, \$1,074.36; one half cost of administration and collection, \$12,802.56; half cost of printing reports of the board, Spirit of Missions for the clergy, pamphlets and leaflets for gratuitous distribution, \$9,430.09; legacies for investment paid to trust funds, \$10,580; returned to Standing Committee on Trust Funds, \$22,500; making the total payments for domestic missions, \$366,555.52, and leaving for domestic missions and specials at the close of the fiscal year a balance of \$81,306.45. The salaries of the bishops and the stipends of the missionaries in 17 missionary jurisdictions were paid, and in addition assistance was given to 42 dioceses. The whole number of missionaries, clerical and lay, male and female, receiving salaries or stipends was 1,149, and the amount appropriated to the whole work (including the sums not directly chargeable to the dioceses) was \$294,093.95. The number of parishes and missions contributing for domestic missions was 26 more than ever before.

The receipts for foreign missions (including a balance for foreign missions and specials from 1898) were \$405,416.45. The payments on account of mission work amounted to \$228,525.69; specials were \$44,371.77; portion of Woman's Auxiliary united offering of 1898 applied to appropriations for foreign missions, \$4,875; legacy expenses (half), \$46.30; half of amount paid to annuitants, \$1,074.35; half of cost of administration and collection, \$12,802.56; half of cost of printing reports of the board, Spirit of Missions for the clergy, pamphlets and leaflets for gratuitous distribution, \$9,430.09; legacies for invest-

ment paid to trust funds, \$5,000; legacy for church building in Mexico, \$500; returned to Standing Committee on Trust Funds, \$34,689.48; making the total payments on account of foreign missions, \$341,315.14, and leaving for foreign missions and specials at the close of the fiscal year a balance of \$64,101.21.

The reports of the missionary bishops are encouraging, and all express the need of means to extend their work.

The character of the mission work among the colored people is both educational and evangelistic, and in every Southern diocese the work is steadily growing in strength and self-dependence, and evidence is given of slowly but surely increasing interest and activity in this part of the domestic mission field. The number of communicants given at the beginning of the year was 7,985.

Early in the year the Rev. George B. Pratt, who already had instituted church services in San Juan, was appointed a missionary of the board to Porto Rico, and provision has been made for the salary of another clergyman in the same island. In October the Missionary Council adopted a resolution that "recommends to the Board of Managers of the Board of Missions that a bishop be sent at the earliest practicable day to inaugurate the work of the Church in each of our new possessions and other new fields of responsibility."

The work of foreign missions has been sustained with remarkable vigor and persistence. More missionaries were appointed than in any previous year, the number, including the wives of 3 of the missionaries, being 27; and, while there has been no great conspicuous awakening in the spiritual ingathering, there has been a most gratifying and encouraging broadening and strengthening of the work, which betokens a healthful growth and development.

In Liberia the number of baptisms has exceeded that of any previous year, being 374, nearly half of whom were adults; confirmations were 188, only 1 less than the highest number ever reached; the number of communicants amounted to 1,502, more than half of whom are from heathenism; and the sum contributed (\$2,054.93) was never before so large. Two priests and 3 deacons were ordained. Political disturbances caused the destruction of 2 of the missionary stations.

Church property in China was much improved during the year, and the missionary staff was strengthened by the appointment of 10 missionaries. Reports show gain at all points except in the number of those confirmed; but this last, though a seeming loss, is in reality due to the longer preparation and more careful training now required. The baptisms of natives were 415; confirmations, 109; communicants, 994; day pupils, 863; boarding pupils, 373; contributions, \$1,991.65 (Mexican dollars). All boarding and day schools have Sunday lessons equivalent to Sunday-school work in the United States; but, as the Chinese have no Sabbath, not much of this work is done among the heathen at large. The Pentateuch has been translated into the easy classical style, the Church service into the Shanghai colloquial, and a syllabary of the Hankow dialect has been compiled.

The evangelistic work of the Japan mission is full of encouragement, but the educational work is hampered by the action of the Government Department of Education, which in August issued a letter prohibiting religious teaching in all schools of certain grades, whether sustained by the Government or not. In other respects, the

policy of the Government in regard to religious propagandism is just and liberal. Statistics for the Japan mission give: Natives baptized, 302, of whom 209 were adults; confirmed, 208; communicants, 1,745; day pupils, 1,570; boarding pupils, 319; Sunday pupils, 2,062, of whom 312 are reported to be distinct from the day and boarding pupils; contributions, \$8,205.39. Seven additional missionaries were appointed to this field in the year, and at Kanazawa a building for religious and educational uses was erected and consecrated.

A movement of importance has been continued in Hayti in the gathering into the Church of converts from voodooism—an African superstition whose stronghold is at Léogane. The baptisms of infants in Hayti were 76; confirmations, 50; and contributions, \$1,618.30.

The work of the Mexican Episcopal Church has gone steadily on, and missions among the English-speaking people in Mexico are being extended. The baptisms in the year were 66; the offerings, \$963.64; and the number of communicants, 729.

The statistics of the chaplaincies in Europe show: Clergy, 12; priests ordained, 8; organized chaplaincies, 9; baptisms, 30; confirmations, 69; communicants, 1,420; contributions, \$23,388.

The receipts of the American Church Missionary Society amounted to \$78,862.86, an increase of nearly 250 per cent.; the expenditures to \$47,177.10. Of these sums, the receipts for the missionary workings of the society were \$67,159.56, and the disbursements for the same objects \$34,960.62; and of the balance of cash on hand, \$45,885.17, there remained available for the general work \$4,227.67, together with \$5,000 awaiting reinvestment. The contributions for Brazil for current expenses amounted to \$15,890.45; "specials" for building churches, to \$21,936.36; and for other purposes, \$1,352.79; and a measure of self-help has been attained in this field which is altogether unusual in the history of missions.

In Cuba the work interrupted by the war has been resumed, and missions are maintained in Havana, Matanzas, Bolondron, Sagra la Grande, and Guantanamo. For orphanages in Matanzas and Havana "specials" to the amount of \$8,395.83 were contributed, and for other purposes in the island \$254.30. The contributions for current expenses were \$7,290.02.

The missionaries of the society in the domestic field number 20, who care for 66 stations, in which the number of communicants is 1,205, of whom 109 were added during the year.

The summary of the work accomplished in the year by the Woman's Auxiliary and its junior department, in which 2,360 parishes and missions took part, shows an increase in contributions to the amount of \$8,883.25. In money, \$229,807.64 was given, and boxes valued at \$178,511.62. Of the total of \$408,819.26, the junior department gave money and boxes to the amount of \$32,729.95. The triennial "united offering" presented at the meeting of the General Convention in October, 1898, and amounting to \$82,818.86, should also be credited in the current fiscal year, making the total of contributions of the Woman's Auxiliary for 1899 \$491,138.12.

The American Church Building Fund Commission reports that in the year gifts to the amount of \$4,800 were made to 30 churches, and loans

amounting to \$9,050 were made to 7 churches. The contributions to the permanent building fund were \$5,387.05; interest on loans and investments, \$14,997.98; and loans returned by parishes and missions, \$34,611.08. The first gift made to build a church in a foreign land was the grant in September, 1898, of \$300 for a chapel in Kurvana, Japan. The fund now amounts to \$349,277.15.

No definite arrangements for the transfer of the diocese of Honolulu from the Anglican to the American Church have yet been made. The statistics of the diocese for 1899 show: Number of clergy, 9; priests ordained, 3; church edifices, 7; parishes and missions, 9; baptisms, 144; confirmed, 62; communicants, 572; Sunday-school teachers, 22; Sunday-school pupils, 390; parish-school teachers, 11; parish-school pupils, 335; contributions, \$6,585.

John Williams, D. D., LL. D., fourth Bishop of Connecticut and tenth Presiding Bishop of the American Church, died Feb. 7. Henry Niles Pierce, D. D., LL. D., fourth Bishop of Arkansas, died Sept. 5. Henry Adams Neely, D. D., second Bishop of Maine, died Oct. 31. (See OBITUARIES, AMERICAN.) Also the Church lost by death 95 other clergymen. On Dec. 28, 1898, the Rev. Junius Moore Horner, associate principal of Horner School, Oxford, N. C., having been elected first bishop of the missionary jurisdiction of Asheville, was consecrated bishop. Jan. 6, 1899, the Rev. Lucien Lee Kinsolving, rector of the Church of the Saviour, Rio Grande, Brazil, and resident representative of the bishop in charge of the Church in Brazil, having been elected first bishop for the United States of Brazil, with the title of Bishop of Rio Grande do Sul, Brazil, was consecrated bishop. Jan. 25, the Rev. Samuel Cook Edsall, D. D., rector of St. Peter's Church, Chicago, having been elected second bishop of the missionary jurisdiction of North Dakota, was consecrated bishop. On the same day, at St. Luke's Church, San Francisco, the Rev. William Hall Moreland, M. A., rector of that church, having been elected first bishop of the missionary jurisdiction of Sacramento, was consecrated bishop. This was the first episcopal consecration in the American Church west of Omaha. On Feb. 22 the Rev. Theodore Nevin Morrison, D. D., rector of the Church of the Epiphany, Chicago, having been elected third Bishop of Iowa, was consecrated bishop. July 13, the Rev. James Bowen Funsten, having been elected first bishop of the missionary jurisdiction of Boisé, was consecrated bishop. Sept. 21, the Rev. Joseph Marshall Francis, D. D., rector of St. Paul's Church, Evansville, Ind., having been elected fifth bishop of the diocese of Indiana, in succession to the Right Rev. John Hazen White, D. D., who on the division of the diocese had chosen the new diocese of Michigan City, was consecrated bishop. Oct. 18, the Rev. Arthur Llewellyn Williams, rector of Christ Church, Woodlawn, Chicago, having been elected Bishop Coadjutor of Nebraska, was consecrated bishop. Nov. 10, the Rev. William Loyall Gravatt, rector of Zion Church, Charlestown, W. Va., having been elected Bishop Coadjutor of West Virginia, was consecrated bishop. Oct. 26, at a special meeting of the House of Bishops, held in St. Louis, the Rev. Sidney Catlin Partridge, missionary in Wu-Chang, China, was elected bishop of the foreign missionary jurisdiction of Kioto, in Japan.

Q

QUEBEC, a province of the Dominion of Canada; area, 228,900 square miles, population in 1896, 1,488,535. Capital, Quebec.

Government and Politics.—The session of the Legislature was opened on Jan. 12, 1899, by Lieut.-Gov. L. A. Jette with a speech from the throne, of which the following are the chief portions:

"Among the occurrences of the year just ended, I can not pass over in silence the meeting in this capital, in August, of the international conference charged with the duty of harmonizing the many relations between the population of the United States and ours. The presence in our midst of the notable men to whom negotiations of so grave and so delicate a nature were con-

laws adopted at almost every session of this Legislature have led my Government to submit a complete consolidation to you. The increase in the territory of this province, caused by concurrent legislation of this Legislature and of the Parliament of Canada during their last sessions, necessitates the civil and judicial organization of the newly acquired territory. You will, at the same time, be called upon to define again the northern, northeastern, and northwestern limits of the counties adjoining such territory. The proper administration of the public lands renders certain important amendments to the laws governing them imperatively necessary.

"In view of the financial situation which it had to face on its accession to power, the pres-

QUEBEC, FROM THE TERRACE.

fided was a source of satisfaction, and even of pride, to the inhabitants of this city, and at the same time was a tribute paid to the oldest province of the confederation. During the sitting of that commission, in September, the statue erected by the city of Quebec in honor of Champlain was inaugurated, and a more solemn or imposing spectacle was never witnessed by the population of this city.

"The decision by the Judicial Committee of the Privy Council with reference to the respective rights of the Government of Canada and the provincial governments over the fisheries of this country has necessitated legislation on this important matter. The numerous amendments to the game

ent Government found itself compelled to reduce public expenditure as much as possible, and to push the collection of the revenue in order to obtain the indispensable equilibrium between annual receipts and expenditure. This task was all the more difficult that the previous Government, after reducing the ordinary receipts by the extinction of several sources of revenue, and increasing the expenditure by statutory enactments greatly exceeding what it had provided for in its estimates had destroyed the basis on which it had founded the calculations of its last financial statement. Notwithstanding all these difficulties, my Government has succeeded, if not in completely doing away during its first year with the deficit

of the previous year, at least in considerably reducing it.

"My Government has devoted special attention to the most effective means of promoting agricultural progress, and to that end it has been considered that it was urgent to encourage, within the measure of its annual revenue, the improvement of municipal roads. It has done so by contributing liberally to the purchase of stone-breaking and road-making machines. The efficacy of this policy is manifest from the fact that within the past fifteen months over 100 municipal councils have provided themselves with these machines, by means of which over 1,200 miles of good road have been completed.

"The excellent reputation acquired by our fruit on the European markets, whither our exports have hitherto been directed merely as an experiment, has induced my Government to devote special attention to this important branch of our agricultural products. Five experimental fruit-growing stations have been established at various points in the province. We have reason to be satisfied with the work that has been done, and the continuation thereof will give a surer direction to our fruit growing, and in a methodical and rational manner establish the general principles that should guide it.

"Colonization has also received special attention from the Government. New roads have given access to regions hitherto uninhabited, which are now rapidly filling up with industrious settlers. Side by side with these agricultural groups, immense industrial establishments have sprung up in the heart of the forest, attracting large numbers of the working classes, for whom they provide employment by utilizing our forest resources for the manufacture of pulp and paper."

The chief legislation of the session was in connection with education. A measure was introduced and carried which consolidated existing laws and made detailed improvements, but omitted the main point of the unsuccessful bill of the preceding year, and did not attempt to appoint a political head to the Department of Education, which had been created by its terms. Legislation was carried forbidding the municipalities from attracting industrial concerns from each other by means of bonuses, and three extra judges were appointed for the city of Montreal. The House adjourned on March 11, after passing 158 measures, of which the following were the chief:

Respecting the constitution of the Superior Court.

Respecting certain immigrant children.

Respecting the inspection of insurance and other companies.

Respecting mutual benefit associations and charitable associations.

To amend the municipal code.

Respecting agricultural societies.

Respecting asylums for the insane.

To amend the Quebec license law.

Respecting public lands.

To revise the charter of the city of Montreal.

To incorporate Loyola College.

To incorporate the Provincial Trust Company and Agency Company.

To amend the pharmacy act.

To amend the law respecting dentists.

To incorporate the Catholic High School of Montreal.

To amend the civil code respecting the privileges of *voyageurs*, lumberers, and others.

To amend the act concerning civil engineers.

Respecting conciliation.

Late in December, 1898, four by-elections had taken place, in which the Conservatives gained one seat.

Finances.—On Feb. 7 F. G. Marchand, Premier and Provincial Treasurer, presented his annual budget to the Legislature. He stated that the public accounts for the fiscal year ending June 30, 1898, showed that the ordinary receipts and expenditure for that year, including the amounts received on the railway subsidy tax, embraced ordinary receipts amounting to \$4,177,656 and ordinary expenditure to \$4,364,686. The ordinary receipts for the previous year (1896-'97), as established on a new basis by his administration, were \$3,874,966, and the ordinary expenditure \$4,685,450. Thus the diminution of the deficit amounted to \$623,458. The decrease in expenditure chargeable to capital was as follows: The payments for railway subsidies in 1897-'98 were less by \$1,143,572 than in the previous year. The payments on Quebec Railway construction claims were less by \$4,256 than in 1896-'97. The balance of railway subsidies authorized by statute, but not yet earned, on June 30, 1898, was \$925,682. The amount repaid on guarantee deposits in 1897-'98 was less by \$143,715 than in 1896-'97. The balance of these deposits on June 30, 1898, was \$132,702.

Referring to the current year (1898-'99), Mr. Marchand said there was no reason to anticipate that the estimated expenditure would be exceeded, except in the item for lunatic asylums, for which an additional amount of \$45,000 had been asked, owing to the increase on the tariff under the contract passed Feb. 24, 1897, with the St. Jean de Dieu Asylum, and the increase in the number of patients in the asylums generally, and in payment of unforeseen and in great part uncontrollable expenditure.

As for the revenue, he said that the receipts for the six months had been in proportion to the estimates. He estimated the total receipts for 1899-1900, from all sources, at \$4,204,899, in which the Dominion subsidy figured for \$1,277,799; interest for \$310,000; land, forests, and fisheries for \$1,050,000; justice for \$255,900; licenses for \$675,000; direct taxes on commercial corporations for \$160,000; and duties on successions, \$225,000, etc. He placed the probable total ordinary and extraordinary expenditure at \$4,177,755, while for the probable payments out of capital he set down \$446,812, being \$33,072 for the reimbursement of railway guarantee deposits, and \$413,740 for railway subsidies, etc.

A statement of the assets and liabilities of the province as they stood on June 30, 1898, was given, showing that, including the public debt and its increase owing to the debt conversion policy, the amount of the liabilities was \$36,793,038, and of the assets \$10,962,565. A statement of the funded debt showed that on June 30, 1897, the amount outstanding was \$34,196,654, and on June 30, 1898, \$34,283,841. On the other hand, there had been invested during the year in the sinking fund \$10,677, bringing the latter investment up to \$10,004,677, and leaving \$24,279,163 as the net amount of the funded debt. The floating debt was placed at \$2,300,247 on June 30, 1898. Against this there was in cash and in claims for loans and advances to individuals and corporations a total of \$767,887.

The Provincial Treasurer in the late Conservative Government, A. W. Atwater, replied to Mr. Marchand. He said that from May, 1897, the Government had taken \$281,600 by special warrants to pay pretended claims which in the ordinary course would not have been paid until the

Legislature had voted the funds. As an example of the deferring of the collections, many Crown lands items were cited which should have been credited to 1897, and were credited to 1898. For the year ending in June, 1896, the receipts of that department were \$1,045,310; for the year 1898, \$1,087,042; while for 1897 they were only \$879,893. On the other hand, for the first six months of the fiscal year 1897 the Crown lands receipts were \$448,940, while for the same period of the previous year they were only \$194,339. This year the first six months produced \$515,727, from which must be deducted \$135,000 for the sales of lumber, which left the ordinary revenue \$380,000. The speaker charged the Government with having tried to prevent the payment of some of the liabilities incurred in 1897, and quoted various claims, making a total of unforeseen expenditure of \$628,790, which the present Government would be obliged to pay. In comparing receipts and expenditures for the years 1896 and 1898, Mr. Atwater said that in every department, except Public Works, the expenditure had been increased, and that an examination of the accounts showed that, though the Government started with a clean sheet at the beginning of 1897-'98, and a balance of uncollected revenues, there was really a deficit of \$239,230.75. Mr. Atwater closed by moving a long five-clause resolution to the effect that the House had already to vote the supplies, but regretted that the Government had, between May 25 and June 30, 1898, issued special warrants for the amount of \$281,628, and protesting against any expenditure by such warrants. This was, of course, voted down.

Shipping and Fisheries.—The tonnage of vessels calling at the ports of Quebec and Montreal, etc., increased somewhat in the year. British tonnage rose from 2,319,092 in 1897 to 2,577,989 tons, but purely Canadian tonnage decreased from 88,512 to 77,312 tons, and foreign tonnage from 255,633 to 205,403. The product of the sea fisheries of the province was valued at \$1,737,011 in 1897. The fishing bounties paid in 1897 were \$32,157, and since 1892 had amounted to \$494,396. The number of fishermen thus engaged and receiving the bounty was 7,688, and the value of the vessels was \$583,403. The fish exports from the province in 1898 were valued at \$485,135.

Railways.—The Report of the Hon. Mr. Duffy, Commissioner of Public Works, showed the length of railways in Quebec, at the close of the year 1897-'98, to be 3,377 miles, of which 2,802 miles were constructed after July 1, 1867, the date of confederation. During the past twelve months the province had paid in aid of railway construction \$185,285, as follows: To the Quebec, Montmorency and Charlevoix Company, \$15,191;

to the East Richelieu Valley, \$50,000; and to the Great Northern, \$120,000. There was also paid, in conversion of land subsidies, \$26,090, being \$9,555 to the Baie des Chaleurs, \$11,375 to the Montreal and Lake Maskinonge, and \$5,160 to the Great Northern. There remained to be paid on the same account \$9,573, being \$773 to the Hereford, \$7,356 to the Great Northern, and \$1,443 to the Baie des Chaleurs. Since confederation (1867) the province had paid for the construction of, or in aid of railways \$15,993,000, and by the legislation of the past ten years was under obligation to pay \$900,000 more.

Education.—In 1898 the report of the department showed in the schools of the province 304,197 pupils, of whom 256,669 professed French as their mother tongue, and 47,528 English. They were cared for in 5,784 schoolhouses, 5,096 of which were wooden, 393 brick, and 295 stone. In regard to the schools, the leading features of their work were thus summarized :

INSTITUTIONS.	Roman Catholic.	Protestant.
<i>Elementary Schools.</i>		
Number of schools.....	4,274	588
Pupils.....	176,681	27,578
Average attendance.....	122,594	20,671
Male lay teachers.....	65	33
Female lay teachers.....	4,227	1,085
Average salary, male teachers.....	\$222	\$570
Average salary, female teachers.....	\$108	\$128
<i>Model Schools and Academies.</i>		
Number of model schools.....	481	53
Pupils.....	65,453	4,379
Number of academies.....	127	36
Pupils.....	25,640	4,465
Grand total of pupils.....	91,093	8,845
Average attendance.....	76,334	7,017
Male lay teachers.....	208	78
Female lay teachers.....	394	236
Male religious teachers.....	856	7
Female religious teachers.....	2,373
Average salary, male lay teachers.....	\$492	\$694
Average salary, female lay teachers.....	\$120	\$201

Compared with 1897, these figures showed increases of 66 in Roman Catholic and 14 in Protestant elementary schools; of 6,916 in the total attendance at Roman Catholic schools; of 3,670 in the average attendance at Roman Catholic schools and 119 at Protestant elementary schools, and of 6 in the number of Roman Catholic and 4 in the number of Protestant model schools. There were decreases of 11 in Roman Catholic and 1 in the number of Protestant academies. There were increases, also, in the number of lay teachers, both Protestant and Catholic in the elementary schools, but a falling off of 21 in the number of male lay teachers in Roman Catholic academies and model schools.

R

REFORMED CHURCHES. I. Reformed Church in America.—The Board of Home Missions of this Church reported to the General Synod that it had received \$83,870, or \$829 less than in the previous year. In that year a legacy of \$15,000 had saved it from distressing debt, and a legacy of \$10,000 had done the same for the past year; and the debt of \$4,947 in the former year had been reduced to \$3,226. The sum of \$120,000 was mentioned as the amount it was desired to raise for the coming year. The Woman's Executive Committee had received \$23,166, \$3,052 more than in the previous year, of which

\$17,781 went into the general fund and \$5,384 to the Indian work. Permission was granted to the board by the General Synod to secure an amendment to its charter allowing its missionaries to engage more directly in evangelistic work when the establishing of churches seems doubtful.

The General Synod authorized the apportionment of the sum of \$12,000 among the classes for the general fund of the Board of Education.

The investments of the Disabled Ministers' fund were returned as amounting to \$63,293, and the resources for the year to \$8,940. The expenditures had been \$6,697.

The total receipts of the Board of Foreign Missions had been \$112,000, of which \$105,000 were contributed by churches, schools, societies, and individuals. The expenditures, not including those for the Arabian Mission, had been \$121,000. The debt had therefore been increased \$9,000, and was now \$49,000; but it was partly offset by a balance of \$13,000. Eight-six missionaries had been employed in the field, with 448 native ministers and assistants. There were returned in India, China, and Japan 42 native churches, 4,458 communicants, 23 seminaries and boarding schools with 1,100 students, 177 day schools with 6,200 pupils, 215 Sunday schools attended by 6,550 children, and 6 hospitals and dispensaries where 31,000 patients had been treated during the year. The General Synod recommended that a special effort be made to remove the debt of the board, advising that a missionary be assigned to lay before the churches the opportunities and needs of the work; fixed \$120,000, aside from legacies and interest on invested funds, as the least amount that would suffice to meet the requirements of the missions; and recommended that the churches during 1900 make a monthly offering for foreign missions. An effort to raise \$12,000 for the regular work of the Arabian Mission was approved.

The twenty-fifth anniversary of the Woman's Board of Foreign Missions was held May 9. The treasurer's statement showed that the receipts for the past year had been \$33,029, of which a small balance still remained in the treasury. The secretary of the sewing guild reported gifts from 92 societies and 15 individuals. The work had been systematized and greatly enlarged, and 3,185 articles had been distributed among the foreign missions, including that in Arabia. One hundred and thirty-two bands among young people and children, exclusive of Christian Endeavor Societies, had given \$1,556. The "Baby Roll" showed a membership of 312 infants, the gifts made in whose name go to the support of a babies' home at Perth Amboy, N. J. Twenty-four missionaries were under the special care of this board.

The General Synod met at Catskill, N. Y., June 7. The Rev. George S. Bishop, D. D., of Orange, N. J., was chosen president. The report of the Committee on the State of Religion returned the number of churches of the denomination as 643; of ministers, 701; of families, 59,751; of additions on confession, 4,806; of communicants, 111,665; showing gains of 10 churches, 18 ministers, 1,057 families, and 952 communicants. The number of new members was smaller than for several years past. The Sunday-school enrollment in 1898 was 123,667, an advance of nearly 3,000 over that of 1897; but during the past year there had been an almost equal decline, and the number was now 120,759. The number of Sunday schools was 922, as against 923 in 1898. The contributions to denominational benevolent objects had increased from \$227,849 in 1898 to \$233,831 in 1899, while the contributions to nondenominational objects had fallen off from \$103,846 to \$82,154. The expenditures for congregational objects, \$1,058,040, had increased \$52,164. The Committee on the Amsterdam Correspondence reported that a very important advance had been made in the work committed to their charge. The Rev. Dr. Corwin, agent of the committee, had returned to the United States in November, 1898, bringing a large amount of material collected in Holland, consisting of transcripts of original documents found chiefly at Amsterdam and The Hague. An appropriation had been obtained from the New York State Legislature for the translation of these

documents, and their preparation for publication under the general direction of the State historian. The ends aimed at in obtaining these transcripts could now best be secured by leaving the whole business in the hands of the general committee who had carried the charge of the matter, and at whose request Dr. Corwin had performed his duties, which would act in connection with the Governor and Historian of New York in carrying out the provisions of the act of the Legislature of that State. The committee asked, therefore, to be discharged. The report of the Committee on Sunday Schools and Catechetical Work emphasized the importance of those causes, since, apart from preaching, the religious instruction of the young is almost entirely left to these two agencies. All the classes of the Church except one had appointed permanent Sunday-school Committees, and through these the Sunday-school work had had such care and oversight as it had never enjoyed before. Returns were made by 477 Christian Endeavor Societies and 69 Junior Societies. The Brotherhood of Andrew and Philip returned 54 chapters in this denomination. Less than one third of the Sunday schools had contributed to the boards of the Church—\$12,289 for foreign missions, \$8,138 for domestic missions, and \$173 for education. The Christian Endeavor Societies had given \$5,690 for foreign missions, \$2,749 for domestic missions, and \$60 for education. The home department was in operation in 58 Sunday schools, and included 2,103 members. Normal classes were formed in 54 Sunday schools. The General Synod had on two former occasions about a half century apart, appointed committees to report on the general state of the Church; the first in 1788, on the Administration of the Polity of the Church; and the second in 1847, on the Improvement and Enlargement of its Policy; it now, in view of the approach of the twentieth century, when "the Church stands in a far higher position as to knowledge and experience, means, and opportunities, as well as responsibilities," constituted and appointed, in harmony with the precedents cited, a general committee of 24 members, including the president of the General Synod and representatives of the several boards and institutions of the Church, to review the past progress and present condition of all the departments of church work, and suggest plans for the improvement and enlargement of the same, and to report in the next year, if possible. The Rev. Ferdinand S. Schenck, D. D., was elected Professor of Pastoral Theology and Sacred Rhetoric, and the Rev. John H. Raven Professor of Old Testament Languages and Exegesis in the Theological Seminary at New Brunswick, N. J. The Rev. J. F. Zwemer was appointed an agent to secure an additional endowment of at least \$50,000 for the Western Theological Seminary. A resolution was unanimously adopted, declaring the uncompromising opposition of the Synod to the remarriage of guilty parties in divorce proceedings as opposed to the spirit and mind of Christ, and enjoining the entire body of the Church, clerical and lay, "to take no part in giving approval to such remarriages, however authorized by State law, but, on the contrary, to co-operate unceasingly in the work of developing a strong and healthy public sentiment which shall diminish, if not suppress, the evil practice." A resolution was adopted protesting against the seating of B. H. Roberts as a member of the national House of Representatives from Utah.

II. Reformed Church in the United States.

—The report to the General Synod on the state of the Church represented that during the three

years since the previous meeting of the General Synod encouraging progress had been made in all the departments of the Church's activity. Many new churches had been erected, and 23 new congregations had been organized. The number of ministers had increased from 961 to 1,046, and the membership from 226,572 to 238,644; but the aggregate of benevolent contributions had fallen from \$676,271 to \$630,454; while the contributions for congregational purposes had increased from \$3,067,780 to \$3,212,306.

The General Synod met in its thirteenth triennial session at Tiffin, Ohio, May 23. The Rev. Calvin S. Gerhard, D. D., of Reading, Pa., was chosen president. The Board of Home Missions reported that on account of the stringency of the times its work had not been enlarged during the past three years. It returned 142 missions, with 15,275 communicant members; 162 Sunday schools, with 17,100 teachers and pupils; \$29,696 raised by the missions for benevolent and \$141,008 for congregational purposes, and \$62,079 received for church building. Only \$98,508 of the \$135,000 promised by the synods had been received, and a deficiency of \$26,492 had been incurred. The Woman's Board had contributed \$6,903; legacies amounting to \$12,423 had been received; the board had 80 church-building funds, amounting to \$40,000; 8 Hungarian missions were under its care. A Hungarian traveling missionary had been appointed, a Hungarian paper was published, and the formation of Hungarian classes was asked for. A Bohemian mission had been opened in Chicago. The Board of Foreign Missions reported concerning the mission in Japan, where, with 8 organized churches and 48 unorganized companies of believers, 1,811 communicant members, and 1,623 children in Sunday schools, the field had been divided into a northern and a southern section. The board had not seen its way clear to go into any new field. The Sunday-school Board had employed 12 missionaries, organized 7 Sunday schools, and formed five congregations. In its educational department it had labored for the establishment of home departments of the Sunday schools and for the development of a "twentieth century movement" in behalf of a larger Sunday-school membership; and it had published periodicals and books. Its net profits had been \$9,672. The Committee on Correspondence with Foreign Churches reported correspondents in Germany, Austria, Switzerland, Hungary, Holland, and Russia. Delegates were appointed to the meeting of the Reformed Alliance at Magdeburg, Germany. The subject of the establishment of missions in Cuba and Porto Rico was referred to the Foreign Board. This board was also instructed to open a mission in China. The policy of comity and co-operation in the cultivation of unoccupied mission fields was recommended for favorable action. A committee was appointed to formulate some plan for raising money for benevolences less objectionable than the present apportionment system. The report on temperance recognized the great sin of intemperance, and expressed the full accord and hearty sympathy of the Synod with the temperance work. The work of deaconesses was commended to all the classes and consistories. The Society for the Relief of Ministers and their Widows was invited to enter into closer union with the General Synod. The observance of the Lord's Day as "for every man a day of rest, a day of worship, a day of the promulgation of the Gospel, and a day of doing works of love and mercy" was commended in special resolutions,

and ministers and Sunday schools were advised to take such steps by preaching and instruction as would emphasize the perpetual obligation of the fourth commandment. Favorable action was taken regarding the formation of Hungarian and Bohemian classes. The holding of annual conventions of Hungarian pastors and churches, to have advisory power after the approval of their conclusions by the Board of Home Missions, was authorized; the provision of a suitable course of reading on the subject of American church life was recommended for the benefit of Hungarian missionaries; and the Board of Home Missions were enjoined in their intercourse with foreigners, subjects of missionary work, to emphasize "the imperative necessity of systematic and persevering effort on their part toward self-support." Measures were taken looking to the strengthening of mission work among the Germans in large cities and of the Harbor Mission in New York city.

REFORMED CHURCHES, ALLIANCE OF. The seventh General Council of the Alliance of Reformed Churches holding the Presbyterian System met in Washington, D. C., Sept. 27. The Rev. Marshall Lang, D. D., of Scotland, presided. The opening sermon was preached by the Rev. Prof. John DeWitt, of Princeton, N. J. It was on the subject of The Bible and the Reformed Churches, and presented the conservative attitude of ecclesiastical thought as opposed to the modern school of criticism. An address of welcome was made by the Rev. Dr. W. Radcliff, pastor of the New York Avenue Church, Washington, in which the meeting was held. The opening address of the moderator, Dr. Lang, was on The Progress and Permanence of Christianity, and was regarded as presenting the more liberal or "advanced" school of Presbyterian thought. A report made by the Rev. Dr. G. D. Matthews, general secretary of the Alliance, gave the following summary of the Presbyterian and Reformed Churches in the world:

COUNTRY.	Ministers.	Churches.	Communicants.
Austria.....	98	89	70,751
Hungary.....	2,609	2,055	279,436
Belgium.....	49	50	4,500
France.....	689	569	89,665
Germany.....	132	130	27,553
Italy.....	95	99	25,156
Netherlands.....	2,148	2,061	400,000
Switzerland.....	163	85	16,152
United Kingdom.....	5,183	5,375	1,474,225
Asia.....	255	199	50,726
Africa.....	290	315	125,556
North America.....	14,522	17,935	2,110,431
South America.....	61	93	12,965
West Indies.....	80	33	11,133
Australia.....	460	457	62,965
New Zealand.....	201	172	25,638
Totals.....	26,476	29,733	4,842,594

In this table some "minor" churches were omitted, and some branches which made no reports were not included. The number of "attached" members—that is, of Sunday-school children and persons who, while not members attend more or less regularly upon Presbyterian worship, was estimated at 25,000,000. Of the communicants 1,000,000 spoke the Continental languages of Europe, Asia, and Africa, and 4,000,000 the English language. An organic union of the various churches composing the Alliance was regarded as not possible, owing to the diverse conditions. The belief of the churches showed different shades of orthodoxy, and their polity and their church forms were likewise varied. The fellowship between the different churches had

been increased through the agency of the Alliance, and the knowledge of each other had advanced; and now Presbyterians no longer looked upon their Church as a small affair, but as an organization extending throughout the world. "We have," the secretary said, "more ministers, more congregations, more elders, more church members, more children under Sabbath-school instruction, than ever before, with much larger sums of money contributed for home and foreign Christian work."

As several of the churches represented in the council fundamentally disapprove the singing of any hymns in worship except those of scriptural origin, the Psalter was used exclusively in the devotional services of the Council. The next meeting of the Council was appointed to be held in Liverpool, England, in 1904. The Rev. Principal William Caven, of the Presbyterian Church in Canada, was designated to be its president.

RELIGIOUS TRACT SOCIETY. The one hundredth anniversary of the Religious Tract Society, London, was celebrated May 5. The formation of the society, in 1799, seems to have been suggested by a series of cheap tracts which had been published by Hannah More, and were found to be answering a very useful purpose. The Rev. George Burder, of Coventry, was led by the fact to think whether a further series might not be published which should set out more clearly the evangelical doctrines of the Gospel. On May 8, 1799, Mr. Burder, after the annual sermon of the London Missionary Society, met the ministers who had attended the meeting, when, after an explanation of his plan, a breakfast meeting was appointed for the next day at St. Paul's Coffee House. This meeting was attended by about 40 persons, and the society was formally organized under a name, the Religious Tract Society, which has never been changed. The total circulation of the society's publications since 1799 has amounted to more than 3,000,000,000 copies. Among the special features of this circulation are mentioned the publication of the Pilgrim's Progress in 91 languages and dialects and the circulation of 4,649,000 copies of the tract called The Swearer's Prayer, which was first published in 1806. The trade receipts for the Jubilee year were £38,421; for the past year £109,141. The missionary receipts for the past year had been £794 in excess of those of the previous year, but the grants had exceeded the income by £5,309. Seven hundred and one publications had been issued during the year.

RHODE ISLAND, a New England State, one of the original thirteen, ratified the Constitution May 29, 1790; area, 1,250 square miles. The population, according to each decennial census, was 68,825 in 1790; 69,122 in 1800; 76,931 in 1810; 83,015 in 1820; 97,199 in 1830; 108,830 in 1840; 147,545 in 1850; 174,620 in 1860; 217,353 in 1870; 276,531 in 1880; and 345,506 in 1890. By the State census of 1895 it was 394,758. Capitals, Providence and Newport.

Government.—The following were the State officers in 1899: Governor, Elisha Dyer; Lieutenant Governor, William Gregory; Secretary of State, Charles P. Bennett; Treasurer, Walter A. Read; Auditor and Insurance Commissioner, Charles C. Gray; Attorney-General, Willard B. Tanner; Superintendent of Education, T. B. Stockwell; Adjutant General, Frederick M. Sackett; Commissioner of Industrial Statistics, Henry E. Tiepke; Railroad Commissioner, E. L. Freeman; Record Commissioner, R. Hammett Tilley; Factory Inspectors, J. Ellery Hudson and Helen M. Jenks; Surgeon General, George H. Kenyon; In-

spector of Beef and Pork, James R. Chace; Inspector of Lime, Herbert Harris; Commissioner of Sinking Funds, John W. Danielson; Inspector of Seythe Stones, Benjamin Wilson; Chief Justice of the Supreme Court, Charles Matteson; Associate Justices, John H. Stiness, Pardon E. Tillinghast, George A. Wilbur, Horatio Rogers, W. W. Douglas, and Benjamin M. Bosworth, who died Feb. 9 and was succeeded by Edward C. Dubois; Clerk, B. S. Blaisdell—all Republicans.

Finances.—At a meeting of the Sinking Fund Commission in March it was found that there was \$96,000 in the fund, and it was invested. In order to change the investment of the permanent school fund, the bank stocks in which it was invested were sold at auction, Feb. 9, and good prices were realized, in many instances higher than the market quotation. The reason for the change is the shrinkage in value of the bank stocks since the fund was placed in them.

The Governor said in his message that the State has reached the point where more money than is in sight is required, not for public improvements, but for public necessities. There is a steady rise in the State's expenses, calling for care in appropriations and for revenue measures.

The valuation of Providence this year amounts to \$188,501,780, a gain of \$6,943,060.

Education.—The fiftieth class of the State Normal School, 36 members, was graduated in June; and at the same time 25 completed the city training course. The appropriation for the year was \$54,000, and \$2,000 for pupils' traveling expenses.

The College of Agriculture and Mechanic Arts, at Kingston, conferred the degree of bachelor of science on 15 graduates this year, of whom 5 were women. Certificates were granted to 21 other students. Its State appropriation was \$10,000.

Among the new free public libraries are those of Portsmouth and Wickford, opened this year; the corner stone of one was laid at Pawtucket in November. The Legislature appropriated \$7,000 for free libraries.

The enrollment at Brown University in 1898-'99 was larger than ever before—925, including 99 graduate students and 165 members of Pembroke, the women's college. The faculty numbered 79. Dr. W. H. P. Faunce was inaugurated as president, Oct. 17. The income for the fiscal year 1898-'99 was \$129,677.73; the expenditures, \$142,700.24; there were guarantees amounting to \$9,000, leaving a net deficit of \$3,022.51. The endowment funds amounted to \$1,158,677. The movement to increase the fund by \$2,000,000, which was undertaken early in 1898, was retarded somewhat by the uncertainties caused by the war with Spain. It has reached about \$550,000, all of which appears to be conditioned upon the whole amount being subscribed. The university extension work has been discontinued, interest in it having died out.

The appropriation for the public schools was \$142,000.

Charities and Corrections.—The number of inmates at the State institutions at Cranston at the close of the year were Workhouse and House of Correction, 249; Hospital for the Insane, 723; Almshouse, 374; Prison, 196; Providence County Jail, 250; Sockanosset School for Boys, 329; Oaklawn School for Girls, 46. The total number of inmates of both sexes at the different institutions was: Men, 1,138; women, 614; boys, 358; girls, 57; total, 2,167. The total number shows a decrease of 43 during the year. The Legislature appropriated \$20,000 for repairs at the institutions.

The report of the Rhode Island Hospital shows the average number of patients was 168.37. The receipts were \$67,008; expenditures, \$87,238. Of this, \$4,700 was subscribed by guarantors, leaving the remaining deficiency to be paid from the capital of the hospital. A new pavilion was nearly finished at the close of the year.

The Rhode Island Homœopathic Hospital is in danger of closing for want of funds. The expenses are \$5,000 more than is received from patients.

The Society for the Prevention of Cruelty to Children had 200 new cases in 1899, involving 446 children. It received \$2,500 from the State.

Military.—At the encampment of the National Guard at Quonset in July there were present 95 commissioned officers and 698 men, besides 42 bandmen.

A monument erected to the soldiers of the civil war by the Providence Association of Mechanics and Manufacturers was dedicated June 9, at Roger Williams Park.

An enthusiastic welcome was given to the Rhode Island regiment of volunteers on their return, April 1, to Providence. The colors of the regiment were placed with the archives in the old Statehouse. There were 1,334 men enlisted in the regiment; 49 men from the State were in the United States Hospital Corps. In batteries there were 220 men. The Naval Reserve is not included in the report cited. The expense of the State for recruiting and equipping the troops was \$221,344.14, of which \$212,009.81 was charged to the Government. The State still has a claim against the Government for interest in connection with equipments and supplies furnished to troops during the civil war.

Industries.—Textile industries are carried on in 134 mills, the spindles numbering 2,056,316.

Strikes have taken place among mill operatives at Warwick, Warren, Pawtucket, Natick, Slatersville, Smithfield, Dodgeville, Waterford, Ashton, Bristol, Centerville, and other places; more than 3,000 persons were reported on strike at one time. The principal cause appeared to be that the increase in wages which was announced for April did not equal the cut of 1897 and restore the old prices. There were also strikes of iron molders in Providence and Pawtucket.

Railroads.—There are 16 steam railroad corporations in the State, but only 3 are operating roads, the others having leased their lines and property. The receipts for the year from all sources were \$39,604,572.50; total expenditures, \$33,802,530.36; net earnings, \$5,802,036.14. This is an increase in net earnings of \$215,881.79. The increase in the freight departments was \$1,030,602.39. The number of persons employed in this State by the railroads is 2,722, a decrease of 44 from last year.

The total receipts of street railroads were \$2,027,693.09; expenditures, \$1,217,325.53; net earnings, \$810,367.56. This is an increase of receipts of \$64,776.09; a decrease in expenditures of \$78,590.15; an increase in net earnings of \$143,366.24.

Banks.—The Rhode Island Institution for Savings winds up its affairs after being in liquidation since 1878, having been one of the indirect victims of the Sprague failure. It has paid total dividends of 95.5 per cent.

The Globe National, of Providence, is to liquidate and be closed on account of unprofitable conditions.

Legislative Sessions.—The regular sessions of the General Assembly were held in Providence from Jan. 31 to May 26, and in Newport, May 30 to June 1. A special session was held for two

days, Sept. 19–20. Frank E. Holden was Speaker of the House.

The revised Constitution was again adopted for submission to vote. The time at which the question of a constitutional convention should be submitted to vote was placed at the general election of 1906.

The general act relating to negotiable instruments which was recommended by the national conference of State Commissioners on Uniform Legislation was adopted.

It is forbidden to walk or ride a bicycle on a railroad track on penalty of \$5 to \$20.

The office of deputy railroad commissioner was created.

The act granting State aid to towns for road-making was repealed, and the office of State Commissioner of Highways was abolished.

Authority was given to the State Board of Charities to appoint a State probation officer; and, at their discretion, other probation officers, one at least of whom shall be a woman, to serve during the pleasure of the board in any court having jurisdiction in the place of their appointment. Offenders under the age of sixteen are to be placed temporarily in charge of these officers before sentence. They are not to be placed with adult offenders.

Insurance companies are to pay 2 per cent. of the gross premiums and assessments on property insured in the State and on that insured in other States on which the company is not taxed. Mutual insurance companies incorporated in the State are exempt from taxation by cities and towns on personal estate, except upon the surplus of ratable personal estate in excess of the amount of their unearned premiums and the outstanding claims against them.

A new caucus act was passed. A party to have standing must have polled 2 per cent. of the vote for Governor at the last State election; but nominations may be made by filing papers with 50 signatures of men who have not attended a caucus. Other enactments were:

For appointment of 5 commissioners of birds.

For inspection of concentrated commercial feeding stuffs.

Prohibiting the use of trading stamps.

Making Jan. 1 a legal holiday.

Making unlawful the use of bottles or other vessels with trade-marks by other than proprietors of the marks.

Constituting one justice of the Supreme Court a quorum for trial of petitions for divorce.

Providing that petit jurors be selected by lot and examined by court.

Fixing penalty for abduction of children under sixteen.

Giving ambulances the right of way on roads.

The report of the survey of the line between Rhode Island and Massachusetts having been made, the line was established. The town of Tiverton loses some land, and Pawtucket gains.

According to a custom that has prevailed for several years, the Legislature voted compensation to members for their work on committees—from \$175 to \$500 each. Two representatives, Messrs. Kimball and Brayton, returned the checks sent to them as such payment, objecting to the principle. At the June session an act was passed fixing the amount of pay for committees authorized to sit and hold hearings during recess at \$10 a day for actual attendance. Salaries of clerks for the 3 most important committees—judiciary, corporations, and finance—were fixed at \$800; and other committees will not have provision for clerks or payment for members.

Revision of the Constitution.—The question of a revised Constitution was again submitted to the voters June 20, the amendments proposed amounting to a revision. They were substantially the same as those voted upon in 1898. The proposition was defeated, 4,057 voting for, and 12,472 against.

Protection of Birds.—Under an act providing for the establishment of a Board of Bird Commissioners, the following were appointed: Fenner H. Peckham, Thomas W. Penney, E. R. Lewis, William H. Thayer, and A. O'D. Taylor. They are to receive no salary from the State, and all expenses must be provided for by voluntary contribution. It is their duty to see that violations of the laws relating to birds not only, but also to rabbits, hares, and squirrels, are punished.

The Last Chief.—Gideon Ammons, eighty-eight years of age, the last of the chiefs or presidents of the council of the tribe of Narragansett Indians, was found dead in the woods near his home in Charlestown in November. He was elected a member of the council in 1847, and remained one till 1878, holding the office of president many times. By the act of March, 1880, the reservation, about 5,000 acres, was ceded to the State. But Gideon Ammons claimed that the tribe still owned a strip extending from the shore, worth \$1,075,000, not included in the cession.

Roger Williams Rock.—A public park has been made on the spot where Roger Williams landed in 1636 and heard the salutation from an Indian on the hill, "What cheer, Netop?" What was left on the surface of the rock on which he landed, Slate Rock, was blasted into building material twenty-one years ago. Five years ago the city council appropriated \$3,000 for making the lot into a park, but the work has been delayed. A huge boulder now marks the site of the rock. The park is now several hundred feet from the water, the front having been filled in from time to time.

Political.—The State election took place April 5. Nominations were made by 4 parties.

The Prohibitionists met at Providence, March 1, and nominated for Governor, Joseph A. Peckham; Lieutenant Governor, Alonzo C. Gardiner; Secretary, William P. Bradley; Treasurer, Smith Quimby; Attorney-General, Thomas H. Peabody. Besides approving the general principles of the party, the resolutions said on State affairs: "We acknowledge with shame that our own State is under the domination of one of the most corrupt political dictators that ever lived, and we call upon all good citizens to combine in an effort to overthrow him."

"We demand, therefore, if we are to have a revised Constitution, that it be prepared for the people's judgment by a constitutional convention composed of men elected by the people for that purpose."

The Democratic convention at Providence, March 14, named as candidate for Governor, George W. Greene; Lieutenant Governor, Robert H. Wade; Secretary, Miles A. McNamee; Treasurer, Edmund Walker; Attorney-General, George T. Brown. The platform said, in part: "In this State both the theory and the practice of government by the people have become obsolete. The theory is denied, because, according to the interpretation put upon the State Constitution by the dominant faction of the Republican party, sovereignty is now vested in the votes of two fifths of the people of the State with one vote added. This faction asserts that a minority of the electors can keep the Constitution of the State forever unchanged."

"Every citizen must admit that the government of Rhode Island for all practical purposes is vested in a corrupt political machine. Under its orders laws have been recently passed which can never be amended or repealed. From this intolerable condition of public affairs no relief seems possible save through a constitutional convention whose delegates are chosen by the people."

The Republicans, at Providence, March 15, renominated all the elective State officers. The resolutions were mainly in support of the policy of the party on national issues and in praise of the existing State administration. They concluded as follows:

"We therefore appeal to all friends of good government, of sound money, of the supremacy of the law, and of the best and highest interests of the State, not to be misled by the specious utterances of those whose performance has so often falsified their promise, and who have presented a free-silver candidate for Governor upon a platform containing no word concerning their financial policy, who strenuously urged the inauguration of a complete change in the Constitution in a manner unknown to the Constitution, and in defiance of the opinion of our court of last resort, and who make the question of this unlawful change in the fundamental law paramount to all other issues."

The election gave all the offices to the Republican candidates. For Governor the vote stood: Dyer, Republican, 24,308; Greene, Democrat, 14,602; Herrick, Socialist-Labor, 2,941; Peckham, Prohibitionist, 1,279. The Legislature will stand: Senate—31 Republicans, 6 Democrats; House—58 Republicans, 13 Democrats, 1 Prohibitionist.

ROMAN CATHOLIC CHURCH. Pope Leo XIII, on Jan. 22, published a letter to Cardinal Gibbons entitled *Americanism*, which terminated the dispute as to the soundness of the doctrines ascribed to Father Isaac Hecker, founder of the order of the Congregation of St. Paul. These doctrines had been bitterly attacked in the previous year by French critics of a translation into that language of Father Elliot's *Life of Father Hecker*; and under the title of *Americanism* the more virulent of these critics attributed to the Catholic Church in America radical departures from recognized Catholic teaching, and called upon the Pope to pronounce upon them authoritatively. The letter was expected at the end of 1898, but was evidently held back until time should have softened to some extent the asperities of the controversy. Although upon its appearance it was promptly claimed by each side as a victory, the document itself favored neither. His Holiness cleverly avoided any declaration upholding the contention of the French *doctrinaires* that the errors ascribed to the American Church were really received by it as truth, while at the same time he let it be understood that these teachings, if they really existed, were dangerous and heretical. His attitude toward the main point of the French charge was indicated in one of the opening paragraphs in the letter. "You are aware, beloved son," he wrote, "that the book on the life of Isaac Thomas Hecker, more especially by the work of those who have undertaken its translation and editing in a foreign language, has aroused no small controversy as to the introduction of certain opinions concerning the methods of the Christian life." And in the closing paragraph in the letter he vindicated the name *Americanism* from the reproaches heaped upon it by the foreign controversialists by simply giving it a definition. "From what we have said, be-

loved son, it is evident that we can in no way approve of those opinions which sometimes are included under the name of *Americanism*. If, indeed, by that word is meant certain qualities of mind which distinguish the people of America, as other nations are distinguished, and in so far as the expression applies to the Constitution of your States and your laws and customs, there is not assuredly the smallest reason for us to think that it should be rejected. But if it is used not only to describe, but also to justify the errors we have already pointed out, what doubt can there be that our venerable brethren the bishops of America will be the first to reject and condemn it as injurious to themselves and the whole nation?"

In accordance with the custom instituted by Pope Boniface VIII at the end of the thirteenth century of promulgating a solemn secular jubilee to mark the end of each one hundred years, his Holiness on May 11 issued a bull marking the year 1900 as a holy year, and endowing with extraordinary indulgences those who should make a pilgrimage to Rome in the year of jubilee. Tradition declares that a similar summons was issued in the early ages of the Church, and the custom has been followed uninterruptedly at the end of each century except the last, when Pius VI, then a prisoner of Napoleon, died at Valencia in 1799. The last solemn jubilee, which Leo XIII mentioned in his bull as having personally witnessed, took place in 1825, and was accompanied with the solemn ceremony of the opening of the holy door. The holy year proper, according to the papal promulgation, was to begin on the feast of the Nativity, Dec. 25, 1899, and extend to Dec. 25, 1900. The special indulgences for the jubilee were extended only to those who should make a pilgrimage to Rome, and should visit on ten several days the four great basilicas of St. Peter, St. Paul, St. John Lateran, and St. Mary Major. From those obliged to visit Rome to gain the jubilee indulgence were excepted the members of religious committees and those who, beginning the pilgrimage, should through illness be prevented from completing it. In November the Pope issued two further decrees, the first suspending for the holy year the usual indulgences and the second formally constituting the jubilee indulgence to be gained by a pilgrimage to Rome. He also extended to the ordinaries of the Church the unusual privilege of permitting the celebration of midnight mass on the evening of Dec. 31 of the years 1899 and 1900.

The Pope on Christmas Day inaugurated the jubilee with the solemn ceremony of opening the holy door. This ceremony, which is usually performed but once in a century, originated in the year 1500, in the papacy of Alexander VI. At that time, among other extensive preparations made for the accommodation of pilgrims, the street leading from the bridge of San Angelo to St. Peter's, now known as the Borgo Nuovo, was widened to allow the processions to pass to the basilica with more freedom, and the custom of reserving a special entrance into the church, to be opened with solemn ceremony for the jubilee year became a law from this time forward. The four principal churches of Rome have each five portals, one of which, called the *porta aurea* or *porta sancta*, is ordinarily closed by a wall of solid masonry, and opened only for the celebration of the jubilee, probably to symbolize the special spiritual privileges to which the Church gives access on that occasion. There is an altar inside the holy door, and on it mass is celebrated on Christmas Day in conjunction with the opening

and closing of the jubilee gate and the holy year. In the ceremony of opening the holy door, the Pontiff proceeds in solemn procession to the *porta aurea* of St. Peter's, and strikes the wall at the entrance thrice with a golden mallet, after which it is immediately opened by workmen who stand on the inside. Three cardinals at the same time perform a similar ceremony, using silver mallets for the opening of the *porta aurea* of St. Paul, St. John Lateran, and St. Mary Major.

Although in January the Russian ambassador to the Holy See presented to his Holiness the programme of the disarmament conference, yet, owing to the adverse influence of the Italian Government, the Holy See was not invited to the conference itself. The question of the Pope's right to be represented, which the Czar had taken for granted, was brought up by the Quirinal early in February when Admiral Canevaro, Minister of Foreign Affairs in the Rudini Cabinet, notified the Russian Government and that of Queen Wilhelmina that the Pope ought to be excluded. M. Beaufort, Minister of Foreign Affairs for the Low Countries, was disposed to accede to Italy's demands; Russia and England protested, saying that the exclusion of the Pope would be regarded in an unfavorable light by Christendom; but the Cabinet at Berlin clinched the point for Italy by declaring that if the Quirinal would decline the invitation to the conference Germany also would withdraw. The Holy See was accordingly not invited.

The Pope took occasion, however, at his reception to the Sacred College, to express his entire approbation of the Czar's initiative, and, in order to remove any feeling of constraint in the Italian delegates, had Mgr. Tarnassi, the papal inter-nuncio at The Hague, absent himself for some weeks from the capital of the Low Countries. The influence of the papal chair in peace councils was nevertheless recognized by a letter from Queen Wilhelmina to his Holiness, dated April 5, asking the Pope's moral co-operation in the work of the conference. To this the Pope replied, assuring the Queen of his highest sympathy and co-operation.

Among the public documents issued by his Holiness were a commendation of the Civiltà Cattolica on the occasion of its fiftieth anniversary and a concession of indulgence in honor of St. Mathildis. The Civiltà Cattolica, which was established in the pontificate of Pius IX by the Jesuits, was by this papal brief practically confirmed as the personal organ of the Pope, and the commendation was considered an unusual approbation of the teaching and methods of the Jesuit order. An apostolic letter was issued on May 25, consecrating the human race to the Sacred Heart.

At a private consistory held on June 19 the following appointments were made: Mgr. Huayek to be Patriarch of Antioch for the Syro-Maronites; Mgr. Macaire, Patriarch of Alexandria for the Copts. To be cardinal priests: Mgr. Casali del Drogo, Latin Patriarch of Constantinople; Mgr. Casseta, Latin Patriarch of Antioch; Mgr. Portanova, Archbishop of Reggio, Calabria; Mgr. Francica, Nova di Bontifè, Archbishop of Catania and Nuncio Apostolic at Madrid; Mgr. Ciasca, O. S. A., titular Archbishop of Larissa and Secretary of the Congregation of Propaganda; Mgr. Mathieu, Archbishop of Toulouse; Mgr. Respighi, Archbishop of Ferrara; Mgr. Richelmy, Archbishop of Turin; and Mgr. Missia, Archbishop of Gorz. To be cardinal deacons: Mgr. Trombetta and Padre Calasanzio da Slevaneras, O. S. F. C.

By a decree of the Sacred Congregation of Rites the new litany in honor of the Sacred Heart was

solemnly approved for the whole Church. The same congregation in November raised the feast of St. Bede the Venerable to the dignity of a general feast for the whole Church, with a proper office and mass.

Electric light on an extensive scale (6,000 lamps of 16-candle power) was installed in the Vatican in January. Leo XIII said, in reference to this noteworthy event in the history of the apostolic palace: "People will no longer be able to reproach the Vatican with being the enemy of light."

The Sacred College lost seven of its members by death in the course of the year. They were Cardinal Americo Ferreira dos Santos Silva, Bishop of Porto, Portugal, aged seventy; Cardinal Augustine Bausa, Archbishop of Florence, aged seventy-two; Cardinal Krementz, Archbishop of Cologne, aged seventy-nine; Cardinal Sourrieu, Archbishop of Rouen, aged seventy-four; Cardinal Schönborn, Archbishop of Prague, aged fifty-five; Cardinal Mertel, Vice-Chancellor of the Church, aged ninety-three; and Cardinal Verga, Bishop of Albano, aged sixty-seven.

United States.—Although the papal letter on Americanism was directed to Cardinal Gibbons, it was felt to be addressed to every member of the Catholic episcopal hierarchy in the United States, and was so received and acknowledged. Several of the more important archdioceses throughout the country, notably Baltimore, Philadelphia, and Milwaukee, responded with letters to his Holiness, thanking the Holy Father for his care, and generally condemning and repudiating the views censured by the apostolic letter under the name of Americanism. The superior general of the Paulists, of which Father Hecker was the founder, also thanked his Holiness for defining the objectionable heresy, and promised that the Life of Father Hecker would be withdrawn from sale and altered until it should meet in all respects with the approbation of the Apostolic See. The general tenor of the letters was that of deep gratitude to the Pope for defining Americanism out of existence, and thus refuting the accusation of the French *doctrinaires* that the American Church was given over to heretical doctrines and practices. The term as used by the accusers had been made to cover every form of objectionable dogma, and the papal letter, by defining the two senses in which the term was used, slew no lion of heresy, but a particularly annoying cockatrice.

The annual meeting of the archbishops of the United States was held on Oct. 12 at the Catholic University of America, Cardinal Gibbons presiding. The most important action of the meeting was the decision to appeal to the Congregation of the Propaganda to persuade that body to allow the Christian Brothers to maintain their course of study as pursued for some years in the United States. Early last year the superiors of the order in France proceeded to enforce the rule that the brothers should teach only the branches of a common-school education, thus absolutely prohibiting the teaching of the classics. It was from this last inhibition that the appeal of the archbishops was made.

It was also decided by the meeting to maintain out of Church funds the Indian mission schools, the Government appropriation for which was due to expire June 30, 1900.

The decision of the Propaganda on the appeal of the archbishops was reached in December. It was adverse, being to the effect that the Christian Brothers would be obliged to follow the letter of the rule of the order and cease altogether from teaching classics.

By a decision of the Supreme Court of the United States in the case of *Bradford vs. Roberts*, it was held that a hospital managed by a Catholic religious society was not a religious institution within the meaning of the Constitution. The court maintained that such an institution (referring specifically to the Providence Hospital in Washington, the appropriation to which of a sum of money by Congress brought the matter before the court), when its work was not confined to the members of the Church to which its directors belonged, was a secular corporation.

Five episcopal sees were made vacant through death in the course of the year 1899. Right Rev. William O'Hare, Bishop of Scranton, died Feb. 3; Right Rev. John Vertin, Bishop of Sault Ste. Marie and Marquette, Feb. 26; Right Rev. John A. Watterson, Bishop of Columbus, April 17; Right Rev. Thomas A. Becker, Bishop of Savannah, July 29; and Right Rev. Louis de Goebriand, Bishop of Burlington, Nov. 5; Right Rev. James Duggan, formerly Bishop of Chicago, died March 27.

Right Rev. John W. Shanahan was in January appointed Bishop of Harrisburg, and Right Rev. Peter Bourgade was transferred from the episcopal see of Tucson to the archbishopric of Santa Fé. Other episcopal appointments were: Right Rev. Alexander Christie, formerly Bishop of Vancouver Island, Archbishop of Oregon; Right Rev. G. A. Rouxel, Auxiliary Bishop of New Orleans; Right Rev. James H. Blent, Bishop of Porto Rico; Right Rev. Frederick Eis, Bishop of Marquette; and Right Rev. Frederick C. Hopkins, S. J., Vicar Apostolic of Honduras.

The American archbishops in February issued a general appeal for funds for the support of the Indian and negro missions in the United States. Of the entire number of Indians in the United States (112,130), nearly two thirds, or 74,468, professed the Catholic faith, having 135 Catholic churches and 74 priests.

The Catholic population of the United States at the end of 1899 was reckoned at 10,130,000. The number of archbishops was 14; bishops, 77; priests, 11,636, of whom 8,660 were diocesan. The number of churches was given as 10,339.

Cuba.—The passing of Cuba into the hands of the United States produced a change in the condition of the Catholic Church in the island which promised many a perplexing problem before the Church could be put on a self-supporting basis. Under Spanish rule the clergy received salaries from the Government, the Bishop of Havana receiving the same salary as was given the Governor General. Although the Church was possessed of much valuable property in Cuba, the separation of Church and state left the former financially embarrassed, partly because the Spanish Government had turned into the public purse a large part of the Church revenues, and partly because the Governor General of Cuba had also borrowed extensively from ecclesiastical funds. None of these sums had been repaid, and after a conference between Cardinal Gibbons and Archbishop Chappelle it was decided to present the claim to the representative of Spain, to which power the Church looked for reimbursement.

In the meantime the change from an established church supported by the Government to a free one depending on the contributions of the people compelled a radical change in the entire system of administration. To add to the embarrassments of the situation, a majority of the priests in the island gave notice of their intention to return to Spain. The Church found much difficulty in getting Spanish-speaking priests to take

their places. It was seen to be necessary to establish, without delay, American colleges for the training of priests for service in Cuba and Porto Rico, who should be familiar not only with local conditions, but should also understand political conditions in the United States. The establishment of one such college at New Orleans was decided upon early in the year.

The Philippines.—The war carried on by the American troops against the insurgents resulted in the desecration and spoliation of much of the property of the Church in the islands. In spite of numerous reports to the contrary, Archbishop Chappelle, apostolic delegate to the Philippine Islands, late in the year expressed himself as satisfied that, except in a few detached cases, the looting had been done not by American soldiers, but by the insurgents and Chinese. Several friars were put to death by the insurgents early in the year, and later the leaders of the insurgent troops demanded, as a condition precedent to the acceptance of terms of peace, the expulsion of the friars from the islands and the confiscation of their property. The demand was based upon alleged irregularities and informalities in the titles to the property, but investigation by the American military authorities failed to disclose any such flaws, and the demand was not considered further. Many of the friars, however, who were Spaniards, mainly of the order of St. Augustine, returned to Spain.

As the work of suppressing the rebellion proceeded the monks returned and reopened churches, colleges, and schools in the provinces under American military jurisdiction. Twenty-four Dominican fathers left Barcelona, July 15, to reopen the University of Manila. In December the apostolic delegate visited the islands, for the purpose of investigating the condition of Church affairs, and in particular the alleged flaws in the titles to property of the religious orders. Before his departure he visited President McKinley at the White House, and was by him commissioned to submit to the insurgents certain intentions of the American Government as to the future administration of the archipelago.

England.—The great cathedral at Westminster, which was begun in 1894 at an estimated cost of £100,000, reached a partial stage of completion in 1899, the entire building having been roofed in by the end of the year. Early in July the entire fund at the disposal of the architects (about £95,000) was exhausted, and the work of raising funds was begun. A pastoral letter signed by every bishop in the English province was issued and met with a generous response, sufficient funds being raised to carry on the work, and almost enough more pledged to complete the edifice. It was planned to finish work on the structure by September, 1900, but a difficulty in obtaining materials caused much unforeseen delay. The structure as planned was to be an enormous one, the supporting arches of the nave rising 90 feet from the floor. Nothing but stone was used in its construction save in the domes, which were built of broken brick mixed into a concrete with Portland cement, the mass being 3 feet thick at the arches, tapering to 13 inches at the crown.

The Pope, July 3, issued an apostolic constitution to the Benedictines of England, for the purpose of consolidating the order in that country and giving it uniform laws and regulations. The constitution, after defining the power of the abbots and priors of various houses and regulating the course of studies, raised the monasteries of Downside, Ampleforth, and Douai to the dignity of abbeys.

A ceremony which had been almost unknown in England since the Reformation took place on Sept. 3, when the Bishop of Birmingham blessed and enthroned Mgr. Anagor, first Abbot of St. Thomas's (Benedictine) Abbey, at Erdington.

Right Rev. Robert Brindle, D.D., was on Jan. 27 appointed titular Bishop of Hermopolis and Assistant Bishop of Westminster. Before his promotion he was one of the best-known chaplains in the British army, and received the only pension for distinguished and meritorious service ever given to a Catholic chaplain.

Right Rev. James Bellard, Bishop of Milevis and Vicar Apostolic of Gibraltar, received episcopal consecration on May 1. He was the second army chaplain to be raised to episcopal dignity in 1899, having served with British troops in the field since 1870.

In the United Kingdom and its dependencies there was in 1899 a Catholic population of 10,500,000, as follows: England, 1,500,000; Scotland, 365,000; Ireland, 3,550,000; British America, 2,600,000; Australia and smaller colonies, 2,000,000. There were in England 32 Catholic peers, 17 Catholic lords not peers, 55 Catholic baronets, 19 members of the Privy Council, 3 Catholic members of the House of Commons for England and 69 for Ireland.

Ireland.—The project for a Catholic university in Ireland, which had been agitated for twenty-five years, met a sudden and unexpected rebuff in the statement of the Duke of Devonshire, made in March, and to the effect that "no practical measure dealing with this subject would be brought forward during the existence of the present Government." The blow was especially severe to the friends of the university in view of the favor with which the project had come to be regarded among Englishmen both Catholic and Protestant, and of the promises of leading statesmen of the United Kingdom, notably Mr. Balfour, who had from the beginning approved and aided the measure, and the Earl of Cadogan, the Viceroy of Ireland, who publicly promised his full assistance and co-operation in obtaining it. The setback was especially severe to those who had advocated the proposed scheme of national union, which even its most earnest supporters admitted had been postponed ten years by the Duke of Devonshire's flat refusal to consider a measure of relief.

A strong protest against the Duke of Devonshire's statement was made on June 25 by the bishops of Ireland, who, with Cardinal Logue at their head, passed a resolution calling upon the English Parliament to take up the question. The matter was brought up shortly after by Mr. Dillon and Mr. Balfour in the House of Commons, and though the project was strongly favored by part of the existing ministry, no measure of relief was introduced. The Duke of Devonshire's objection was mainly on the ground that the voters of Ulster opposed the project, and as in them he found the warmest adherents to the unionist policy of the existing Government, to their opinions especially was he bound to defer. The subject was dropped at the outbreak of the war with the Transvaal, but late in the year rumors of French preparation for war brought the question again to the front. Irish sympathies were generally with the Transvaal, and it became incumbent upon Lord Salisbury's Government so to remold Irish opinion as to make it safe to intrust the defense of Ireland to her own sons in case of a French invasion. The gift of a Catholic university was then considered, and by part of the Cabinet favored, as affording a sufficient sop to Irish pride. But the matter was passed over

by the Cabinet majority, part of whom held that the question was too important to be settled out of hand, part that no efforts of conciliation would woo Ireland to a proper fervor of loyalty, and the third part, headed by Lord Salisbury himself, that a less considerable reform would suffice as a pledge of amity, while not committing the party to a definite policy in the matter. His counsel prevailed, and before the end of the year several unimportant concessions were agreed upon.

The new cathedral of St. Canice, Kilkenny, which had been building since 1843, was completed early in the year at a cost of £60,000, and formally opened by Cardinal Logue, Archbishop of Dublin, April 9. The vacancy in the see of Meath was filled June 24, by the consecration of Rev. Dr. Gaffrey.

France.—The work, begun in 1898, of removing from the hospitals and charitable institutions the members of religious orders who had previously managed them and placing the institutions under lay control was continued in 1899, with no particular benefit to the institutions concerned and the creation of a deficit in the national budget. Under the sisters the average cost of daily maintenance per patient was 2 francs 50 in the Paris hospitals; under secular control it rose to 4 francs 20. Early in the year the Augustinian Sisters, who had done service for 1,200 years in the hospitals of the French capital, were expelled, and on the day of their expulsion they had no roof to shelter their members. A deficit of 217,000 francs in one hospital alone was attributed to the discontinuance of fasting and the increase of wines at the nurses' table. The results of laicization thus far were summarized in the Paris Journal of April 6: "Incidents of varied kinds give the public no chance of forgetting that our hospitals are in lay hands; attendants figure in the police courts, distorted figures of charity; nurses little the better for drink are found on the very steps of the hospitals whither they go on duty; a poor patient is forgotten in an over-warmed bath, and threatens to die as *consommé humain*." Of the 1,486 congregations in France, male and female, 731 were in 1899 still recalcitrant as regarded the heavy tax levied in preceding years, and had refused to pay it. In a good many cases the congregations were engaged in active charitable work or in foreign missions, which under the law exempted them from the new rule of taxation, but in the majority of instances the exempt orders made common cause with those not exempt. Under an order of the Council of State issued in October the Minister of Finance proceeded to stringent measures to collect the tax, and succeeded in dishousing 9 congregations. A further measure of repression was indicated by the Government the same month, when the ceremony of consecrating the Abbey Church of Fontgombault was prohibited by the direction of M. Millerand, Minister of Finance. The abbey, which was founded by the Benedictines in 1141, and was destroyed in the French Revolution, had previously been rebuilt, and elaborate ceremonies were announced in connection with its dedication. This celebration, the minister announced, he could by no means allow, inasmuch as he had already solemnly dissolved the Benedictines, who, having no further existence, could not legally consecrate a church. He, however, permitted a banquet to take place in the abbey, though all toasts were suppressed. In the following month three bills were introduced into the Chamber of Deputies aimed at the religious congregations. One provided that candidates for the service of

the state in any capacity must have spent three years in a school affiliated with the University of Paris; the second was intended to enforce payment of the *droit d'accroissement*—the tax above mentioned; while the third formally prohibited any citizen of France, male or female, from making irrevocable vows, any renunciation of individual rights.

The royal chapel at Versailles was closed in September by a resolution of the Chamber of Deputies dismissing Canon Tessier. The chapel was closed during the Revolution, but opened again by order of Napoleon. Since the establishment of the republic it has been the usual place of worship of the presidents. The Budget Commission in November recommended to the Chamber of Deputies the closing of 35 episcopal sees and the suppression of the embassy at the Vatican.

The great celebration in honor of Jeanne d'Arc at Orleans was inaugurated on May 6 by the unveiling of a large equestrian statue of the maid in the courtyard of the bishop's palace in the presence of an enthusiastic throng. The *fête* lasted three days, and was marked by the presentation of the banner of La Pucelle by the mayor to the bishop and a panegyric on the maid delivered by Archbishop Ireland, who laid stress upon the duty of patriotism incumbent upon Catholics, and pointed out how in the long-hoped-for canonization of Jeanne d'Arc the Church would give to France a patron saint of patriotism.

The Pope, between whom and the French Government has not existed an understanding as complete as his Holiness desired, took occasion in May to tell M. Henri des Houx, who is writing a life of Leo XIII, that the republican Government had his fullest sympathy and support. His Holiness recommended Catholics who favored the old dynasties to set aside their political predilections, to acknowledge the republic loyally, and enter its service. This statement of the Pope, made in a public manner, was evidently intended to destroy the contention of the royalist party that the Church still looked for the revival of monarchical government, and indirectly it was intended to create a closer sympathy between the present Government and the Vatican. Mgr. Lorinzelli, Archbishop of Sardis, was appointed in June by the Pope Nuncio Apostolic to Paris to succeed Mgr. Clari. In presenting his credentials to President Loubet, the nuncio assured the President of the declared intention of the Vatican to further in every way the interests of the republic, and to exhort Catholics to loyalty to the existing form of government.

His Holiness under date of Sept. 8 addressed a long encyclical letter to the French bishops and clergy on the selection of subjects as candidates for the priesthood in the work of the missions at home and abroad, and on the manner in which the priests should discharge their sacred duties. In the letter the Pope renewed the affirmation of his affection and solicitude for France, and urged the clergy to increased devotion in view of the strong atheistic tendency in France.

Upon the appearance of the papal letter on Americanism, Cardinal Richard issued a pastoral letter to the clergy of France, calling on them to give the papal document a careful study, and pointing out to them the errors it mentioned. In reply Abbé Klein sent to the cardinal his declaration of submission to the Pope, and regretting the errors mentioned if he had inadvertently fallen into them in his preface to the French version of the Life of Father Hecker. He also stopped the sale of the book.

Cardinal Perrand on May 6 celebrated the twenty-fifth anniversary of his episcopal consecration at Autun. At the same time was celebrated the thirteenth centenary of the bestowal of the pallium on the Bishops of Autun by St. Gregory the Great, in consideration of the hospitality and assistance afforded by St. Syragius to St. Augustine and his companions on their way to England. At the close of July was celebrated at Paderborn the eleven hundredth anniversary of the reception of Pope Leo III by Charlemagne. The historical importance of the event lay in the fact that at this meeting was evolved the scheme of the creation of the Holy Roman Empire and the consolidation of the temporal power of the papacy, a scheme which was carried into effect the following year (800), when Leo solemnly crowned Charles at Rome.

The French pilgrimage to the Holy See, which consisted of more than 1,500 persons, arrived in Rome in the middle of September. The pilgrims, who were nearly all workmen, were received in special audience by the Pope, in spite of his ill health. The ceremonies in connection with the great national pilgrimage of men to Lourdes opened at the Grotto on April 17, with 30,000 pilgrims in attendance.

Mgr. Jean Émile Fonteneau, Archbishop of Alby, died on March 31, aged seventy-four.

Germany.—The year 1899 was marked by a further amelioration of the social and political standing of the Catholics of the German Empire, due partly to a policy of tolerance inaugurated by the Emperor and partly to the possession in the Reichstag of the balance of power by the center or Catholic party, upon which the Emperor counted most strongly for assistance in developing his imperialistic programme. In return for support of the proposal for an increased naval force the Emperor in many ways made the position of Catholics more tolerable. The Jesuits, though still legally exiled, returned in large numbers without opposition. The Emperor, posing as the defender of Catholicity, extended during the year the protection of Germany to Catholic missions in China, and induced Mgr. Anglo, Vicar Apostolic of Southern Chan-Tung, to withdraw from the supervision of the French protectorate. As other indications of his good will toward the Catholics of the empire, the Kaiser made them extensive presents in the course of the year. In connection with his previous gift of the hallowed piece of ground on Mount Sion, known for centuries as "Our Lady's Rest," he defrayed the expenses of extensive explorations of the site, and contributed a considerable sum to the erection of a basilica there. This will be the fifth to be erected on the site, and will replace the ones successively destroyed in the fourth, eleventh, thirteenth, and sixteenth centuries. As another incident in the policy of conciliation, the Emperor in March presented a high altar to the Abbey Church of Maria Laach in the Rhineland. The abbey, which was for seven hundred years a home of the Benedictine friars, had been confiscated by the Government shortly after the Franco-Prussian War. It was restored to the order by the Emperor in 1892.

Two of the most ancient and important archiepiscopal sees in the empire, Cologne and Prague, were made vacant in 1899 by the deaths of Cardinals Krementz and Schönborn. The latter see is the only one in the world whose incumbent has the title of prince. It was filled in September by the appointment of Canon Skrbensky of Olnitz. In the matter of a successor to Cardinal Krementz, however, the Emperor was guilty of a

grave affront to the Catholics of the Cologne province. The cardinal died May 6, and the metropolitan chapter, in accordance with the German constitutional provision, within two weeks sent up three names on approval to Berlin. It was not, however, until five months afterward that the Kaiser signified his willingness to allow the election of an archbishop by the chapter to proceed. In the meantime the suffragan bishop, Dr. Schmitz, died also, leaving the archdiocese without a head. The practical inconvenience of it in a province with a Catholic population of 1,800,000, as well as the lack of courtesy shown, went far to remove the impression of toleration which the Kaiser earlier in the year had created.

Russia.—In spite of the disagreeable outcome of the efforts of the Russian Government to secure representation for the Holy See at the Peace Congress, the diplomatic relations between Rome and St. Petersburg were in 1899 placed upon a footing securer than any they had occupied since the beginning of the century. It had been the hope of both the Czar and the Vatican since the coronation of Nicholas III, in 1894, to establish a cordial diplomatic understanding between the two courts, and when the programme of the conference was presented to the Pope in January by the Russian ambassador, it was felt that the establishment of a papal nunciature in St. Petersburg might be looked for in the near future. The incident was especially significant in view of the fact that the entire plan of the conference, including the choice of The Hague as meeting place, was formulated by the Pope, and by him sent to the Czar in 1894 with the proposal that a general invitation to the conference be issued. The exclusion of the Pope from the congress, however, effectually postponed the project of a papal nunciature at the Russian capital, although it did not affect the accord between it and the Vatican.

Italy.—No improvement marked the relations of the Vatican to the Quirinal in 1899, they being made worse, if possible, by Italy's success in preventing papal representation at The Hague. For the first time since their institution the civic and public celebrations of the beginning of the jubilee year were dispensed with, the Pope remaining practically a prisoner in the Vatican. In a circular letter issued March 28 the Roman vicariate prohibited the Italian clergy and laity from introducing into the Church any kind of flags except such as belonged to ecclesiastical confraternities and such as had been blessed, and in other ways the general intent of the Vatican to ignore the Quirinal as a legitimate government was made manifest. On Oct. 28 the Osservatore Romano was suppressed by the Italian Government for publishing an article discussing the claims of the Vatican to the sovereignty of the papal states.

Belgium.—On Aug. 19 was celebrated the five hundredth anniversary of the crowning of Our Lady of Antwerp. The ceremony, which has been performed annually since 1399, consisted of a solemn procession through the streets of 74 guilds and societies, followed by the statue of the Protectress of Antwerp. The statue before being carried through the streets was solemnly crowned in the cathedral by Cardinal Goossens, assisted by the Archbishop of Paris. The ceremonies are arranged by a guild called the masters of the chapel, organized in 1472, which provides the crown used in the coronation, which in this instance cost \$50,000.

Cardinal Goossens, Archbishop of Mechlin, on March 10 presented to the Pope the sum of £4,000, the first installment of the subscription

opened in Belgium by the Catholic press for the Pope.

Canada.—At a consistory held at the Vatican on June 29 Mgr. Diomedea Falconio, O. S. F., bishop of the united sees of Aceranza e Matera in the Basilicata, was appointed first regular apostolic delegate to Canada. Other Canadian ecclesiastical appointments were that of Right Rev. Denis O'Connor, Bishop of London, to be Archbishop of Toronto, and of Right Rev. Fergus P. McEvoy to be Bishop of London.

Portugal.—The nucleus of a pontifical Portuguese college in Rome was formed in 1899 by the arriving in the Eternal City of a few youths from Portugal to begin their studies for the priesthood under the direction of the Propaganda. The start was given to the work by the donation offered by a Portuguese gentleman in Rome, whose efforts were seconded by contributions from the bishops of Portugal. The inauguration of the college marked a new era in the relations of Portugal and the Holy See, since for eight years only one Portuguese bishop had made a visit *ad limina*, and while duly accredited papal nuncios resided at Oporto, no representation of the Portuguese clergy existed at the Vatican.

Mgr. Sousa Barroso, Bishop of St. Thomas, was appointed Bishop of Oporto in January.

Mexico.—Archbishop Averardi, who early in the year was appointed visitor apostolic to Mexico, was received with scant courtesy by the Mexican bishops, so scant that the distinguished clergyman returned at once to the Holy See. The hostility manifested by the clergy was not against the archbishop himself, but against the reforms which the Pope was known to favor and which his delegate was suspected of being sent to introduce. In all Mexico, with a Catholic population of 13,500,000, there are only 27 episcopal sees, and of these 6 were created by Pius IX and 8 by Leo XIII. The erection of additional sees was a reform which Mgr. Averardi was believed to favor, and this was the principal cause of the hostility to him. The objection to new sees came not so much from the bishops themselves as from the cathedral chapters, which in the majority of instances were exceedingly rich and powerful and reluctant to lose either revenue or authority.

South America.—The most important event for a decade to the South American hierarchy was the convocation at Rome by request of the Pope of the bishops of Latin America. The Congress met in June, and rose July 10. Its work was mainly the unification of ecclesiastical discipline in Latin America, and it was successful in formulating uniform conventions for Mexico, Central and South America. Fifty-three archbishops and bishops were present.

The Pope in September addressed an apostolic letter to the archbishops and bishops of Brazil on the subject of the Catholic revival in that country. In the beginning of the letter his Holiness referred to the many causes of consolation which he found in the revival: and next proceeded to deal with the various measures necessary or desirable for a greater revival. Such he held to be the establishment of seminaries similar to those existing in Europe; the encouragement of the Catholic press; the participation of Catholics in public life; and the furnishing of the ecclesiastical organization with the means required for its due working.

Missionary Countries.—President Kruger of the South African Republic on Aug. 22 took the first step in the history of the country looking toward the removal of the civil disabilities

of Catholics in the Transvaal. Under existing conditions no Catholic, though otherwise qualified for the franchise, could vote, hold office, or receive state employment. In his message to the first (or higher) Volksraad the President made a strong appeal for the removal of these disabilities, urging the Raad, as a test of eligibility, in Article XXXI of the Concept Grondwet, or state Constitution, to substitute for the word "Protestant" the clause "those who believe in the revelation of God through his Word in the Bible." Action on the proposed measure, which would have the effect of extending the franchise to Jews also, was postponed by the Raad for a year.

South Africa in 1899 contained two vicariates and two prefectures apostolic, the vicariates of Natal and the Orange Free State and the prefectures of Basutoland and the Transvaal. There were in 1899 10,000 Catholics in Natal, 5,000 in the Orange Free State, 6,000 in Basutoland, and 8,000 in the Transvaal.

The Nestorians of Asia Minor, who for years were vacillating between the Greek Church and the Catholic, in May turned to the latter in the number of 80,000 at Van, where two French missionaries had taken up their residence.

The Japanese Government in 1899 passed a law recognizing the Christian religion as one of the state organizations. The immediate effect of the law was to improve the status not only of the missionaries in the country, but also of the 125,000 Japanese who had embraced Christianity, of whom 53,000 were Catholics, 48,000 of various Protestant denominations, and the remainder attached to the Greek Church.

The principal missions of the Catholic Church are carried on under the direction of the great French Société des Missions Étrangères, which has a practical monopoly of this work in China, Japan, Tibet, Cambodia, Siam, Burmah, southern India, and the East Indies. The annual report of the society showed 32 bishops and 1,600 priests engaged in the work, 40 seminaries, and 2,985 schools. Their census showed a Catholic population of 1,200,000 in the countries above mentioned, of whom nearly 200,000 had been added in 1899. The feature of the work to which special attention was directed was the preparation and ordination of native priests, of whom there were 584 in 1899.

The Franciscan Fathers who have charge of the missions in Palestine, Syria, Asia Minor, Egypt, and Cyprus had in 1899 450 priests at work in the province and a Catholic population of 63,000. The friars educated 4,000 scholars in 1899 in the ordinary secular branches. In connection with the missionary work in the Holy Land, the Franciscans in 1897 decided to erect a college on Mount St. Sepulchre, near Washington, where postulants would be trained especially for mission service to carry out the four objects of the Franciscan rule in Palestine, which are the propagation of faith, the preservation of the sacred shrines, the civilization and education of the natives to a Christian and social life, and the protection and accommodation of pilgrims. The college and monastery were solemnly dedicated Sept. 17, 1899, by Mgr. Martinelli, the apostolic delegate. The church which was built in connection with the monastery, is of novel form, being shaped like a Greek cross.

ROUMANIA, a monarchy in eastern Europe. The legislative power is vested in a Senate of 120 members, elected for eight years by two classes of property holders, except 2 members for the universities, 8 bishops, and the heir to the throne, and a Chamber of Deputies, consist-

ing of 183 members elected for four years by all the taxpayers, divided into three classes. The reigning King is Carol I, born April 20, 1839, a son of Prince Karl of Hohenzollern-Sigmaringen, elected Domn of Roumania in 1866 after the abdication of Prince Alexander Cuza. Roumania was proclaimed a kingdom on March 26, 1881. The Cabinet at the beginning of 1899, constituted on April 12, 1897, was composed as follows: President of the Council and Minister of Foreign Affairs, Demeter Sturdza; Minister of the Interior, M. Pherekyde; Minister of Agriculture, Industry, Commerce, and Domains, A. Stolojan; Minister of Finance, G. D. Pallade, who succeeded G. M. Cantacuzene in 1898; Minister of War, Gen. A. Berendel; Minister of Public Instruction and Worship, Spiro Haret; Minister of Justice, C. J. Stoicesco, succeeding in 1898 Alexander G. Djuvara; Minister of Public Works, I. I. C. Bratiano.

Area and Population.—The area of the kingdom is 48,307 square miles, with a population in 1894 of 5,417,249. Bucharest, the capital, had 232,009 inhabitants. The number of marriages in 1898 was 43,611; of births, 214,980; of deaths, 155,417; excess of births, 59,563.

Finances.—In 1898 the revenue was 210,591,020 lei or francs, and the expenditure 217,335,486 lei. For 1899 the revenue was estimated at 222,095,000 lei, and expenditure at the same figure. For 1900 the revenue is estimated at 228,376,000 lei, and the expenditure at 228,375,000 lei. Of the revenue for 1900 direct taxes are expected to produce 34,110,000 lei; indirect taxes, 70,290,000 lei; state monopolies, 53,965,000 lei; the Ministry of Agriculture, 24,718,000 lei; the Ministry of Public Works, 16,492,000 lei; the Ministry of the Interior, 11,107,000 lei; the Ministry of Finance, 4,590,000 lei; the Ministry of War, 803,000 lei; the Ministry of Instruction and Worship, 229,000 lei; the Ministry of Foreign Affairs, 236,000 lei; the Ministry of Justice, 380,000 lei; other sources, 11,456,000 lei. Of the expenditures for 1900, the public debt absorbs 85,757,480 lei; expenses of the Council of Ministers, 71,300 lei; the Ministry of War, 45,930,325 lei; the Ministry of Finance, 27,421,167 lei; the Ministry of Instruction and Worship, 28,368,709 lei; the Ministry of the Interior, 18,507,465 lei; the Ministry of Public Works, 5,682,070 lei; the Ministry of Justice, 6,672,676 lei; the Ministry of Agriculture, 6,939,490 lei; the Ministry of Foreign Affairs, 1,796,000 lei; supplementary credits, 1,227,658 lei. The budget for 1900 makes the revenue 228,805,000 lei and the expenditure the same, including 1,287,118 lei for extraordinary and supplementary credits.

The public debt in 1898 amounted to 1,224,849,525 lei, more than half of which was contracted for railroad construction, and the rest to purchase lands for emancipated serfs and to cover deficits. On April 1, 1899, the debt stood at 1,294,073,029 lei, requiring the annual payment of 76,289,134 lei.

The Army and Navy.—The army is formed of 34 regiments of infantry, 6 battalions of rifles, 6 regiments of hussars, 11 of light cavalry, 12 regiments of field artillery, 2 regiments of siege artillery, 2 regiments of engineers, 5 companies of artificers, 4 squadrons of train, a hospital corps, and 2 companies and 4 squadrons of gendarmes. The peace strength is 3,478 officers, 448 civil employees, and 56,489 rank and file, with 12,675 horses and 390 field guns. The territorial army, in which all able-bodied Roumanians are enrolled who are not drawn for service in the standing army, has a strength of 75,000 men. The active army is not composed entirely of conscripts, but is kept up to its legal strength by enlistment of volunteers and of soldiers whose time has expired.

The principal vessel in the fleet is the English-built belted cruiser Elisabetha, of 1,320 tons, carrying 4 6-inch guns. There are besides 7 gunboats for the Danube, a dispatch vessel, a training ship, and 6 first-class and 2 second-class torpedo boats.

Commerce and Production.—The production of wheat in 1898 was 20,600,100 hectolitres, against 12,844,300 in 1897; of barley, 10,450,800 hectolitres, against 7,479,700; of rye, 2,688,335 hectolitres, against 2,394,300; of oats, 6,135,300 hectolitres, against 3,471,900. The production of maize in 1897 was 28,112,300 hectolitres; of wine, 249,630 hectolitres; of prunes, 465,840 hectolitres; of tobacco, 37,900 quintals; of colza seed, 475,780 hectolitres; of flaxseed, 238,135 hectolitres; of hemp fiber, 20,840 quintals; of hay, 13,052,382 quintals. There were 670,909 horses, 2,138,315 cattle, 6,847,825 sheep, and 1,079,312 hogs in 1897. The mineral resources of Roumania are considerable, and since the operation of mines by foreign capitalists was permitted by the law of 1895 various mines have been opened. Coal is mined, and petroleum is obtained, though its quality is poor. The salt mines are operated by the Government with convict labor. The total value of imports in 1898 was 389,908,439 lei, and of exports 283,287,869 lei. The imports of cereals were valued at 6,500,000, and exports at 241,400,000 lei; imports of fruit, vegetables, and groceries at 28,700,000, and exports at 10,200,000 lei; imports of beverages at 1,100,000, and exports at 600,000 lei; imports of animals and animal food products at 7,500,000, and exports at 11,400,000 lei; imports of fuel at 11,800,000, and exports at 3,800,000 lei; imports of minerals, glass, and pottery at 11,200,000, and exports at 800,000 lei; imports of metals and metal goods at 91,700,000, and exports at 2,500,000 lei; imports of hides, leather, and leather goods at 16,900,000, and exports at 1,100,000 lei; imports of timber and wood manufactures at 5,300,000, and exports at 5,000,000 lei; imports of textiles, raw or manufactured, at 149,700,000, and exports at 2,700,000 lei; imports of paper at 6,600,000, and exports at 200,000 lei; imports of drugs and chemicals at 27,200,000, and exports at 400,000 lei; imports of fats and oils at 9,400,000 lei; imports of all other articles at 16,800,000, and exports at 3,200,000 lei. The commerce, valued in lei, was distributed among different countries as follows:

COUNTRIES.	Imports.	Exports.
Austria-Hungary	109,097,000	85,965,000
Germany	110,535,000	12,545,000
Great Britain	76,144,000	37,459,000
Belgium	14,077,000	65,580,000
Turkey and Bulgaria	18,586,000	17,562,000
France	25,738,000	7,876,000
Italy	14,150,000	17,749,000
Russia	7,824,000	4,968,000
Switzerland	4,680,000	3,000
Greece	2,166,000	918,000
All other countries	6,466,000	5,408,000
Total	389,908,000	283,287,869

Navigation.—The number of vessels entered at Roumanian ports in the course of 1898 was 39,115, of 11,144,101 tons; cleared, 39,262, of 11,325,716 tons.

The merchant marine in 1898 consisted of 46 steamers, of 12,087 tons, and 405 sailing ships and boats, of 54,660 tons.

Communications.—The railroads, which are the property of the Government, had in 1899 a total length of 1,893 miles, and 131 miles additional were being constructed and 932 miles surveyed.

The post office in 1898 transmitted 19,344,470 letters, 11,150,715 postal cards, and 37,577,317 newspapers and circulars. The receipts were 6,679,245 lei; expenses of both postal and telegraph services, 8,276,183 lei. The telegraph receipts were 2,975,378 lei. The length of telegraph lines in 1898 was 4,254 miles, with 10,942 miles of wire. The number of dispatches in 1898 was 2,586,534, of which 1,799,262 were internal, 600,113 foreign, 107,829 service, and 79,330 transit dispatches.

Politics and Legislation.—The rejection by the Senate of a bill passed by the Chamber for the creation of an agricultural bank to enable the land to be allotted among the peasantry on easy terms of payment caused a peasant revolt in the district between the Olt and the Danube. Two regiments that were sent to the scene of the disturbances were overpowered and compelled to beat a retreat in the beginning of February. The encounter took place in the neighborhood of Krajova. Other troops were concentrated at Bucharest and dispatched to suppress the rising. The insurgents were imbued with Socialist ideas, and conceived the notion that the Czar of Russia was ready to intervene so as to secure them the land to which they felt entitled. Socialism spread rapidly in the country after the last municipal elections, when the Liberals coalesced in many places with the Socialists, and thus secured a large majority over the Conservatives. The agrarian uprising was suppressed by energetic military measures. The troops that were called out to disperse the assembled peasants and members of Socialist associations met with considerable resistance in numerous places. The rigorous action of the authorities caused the movement to extend rapidly among the country people, who were already embittered by distress that they attributed to governmental injustice and denial of their rights. When they sent deputations to the Government in Bucharest to complain of the action of the officials in the country districts the members of the deputations were taken into custody, and only released after being searched and the papers found upon them being confiscated. Some of the newspapers of the capital denounced this proceeding, which strengthened the feeling among the peasants that only by fighting could they gain their rights. After the military quelled the revolt numbers of persons were arrested. The Minister of the Interior ascribed the Socialist movement among the peasantry to the activity of foreign agitators, and about 30 foreigners were marked for expulsion. In villages inhabited by Roman Catholic Hungarians the priests restrained the people from joining the Socialist associations. In other districts the village mayors and schoolmasters took the lead in founding the associations. The Greek Orthodox clergy also in numerous places took part in the agitation. The rules of these agrarian societies contained a provision that the members should jointly defray the expenses of litigation between any of them and their landlords and their trial whenever any of them were prosecuted by the authorities. Another provision stipulated for the intervention of the societies with the central and communal authorities on behalf of the peasants through members of Parliament and communal councilors belonging to the Socialist party, also by means of petitions, public meetings, and other courses authorized by law. The primary aims were to secure a reduction of taxation, the modification of the form of agricultural contracts between laborers and farmers, and equal justice for the poor as for the rich.

In the beginning of April the parliamentary Opposition began a policy of obstruction, and would allow no bill to be passed or proceeded with except the one providing for the annual military contingent. The ground for the attack, which was directed against the Prime Minister, was that M. Sturdza was believed to have made a secret arrangement with Baron Banffy, the late head of the Hungarian Government, having in view the suppression of the Roumanian national movement in Hungary. The assailants of the Premier carried on a fierce agitation out of doors and convened a mass meeting, which ended in a collision with the troops and the killing of 2 persons and wounding of 11 others by bayonet thrusts. These incidents brought about a ministerial crisis, which ended in the formation of a new Cabinet on April 23, composed as follows: Prime Minister and Minister of the Interior, George Cantacuzene; Minister of Finance, Gen. G. Mano; Minister of War, Gen. Jacob Lahovary; Minister of Education, Take Jonesco; Minister of Justice, C. G. Dissesco; Minister of Domains, N. Fleva; Minister of Foreign Affairs, J. N. Lahovary; Minister of Public Works, Dr. C. I. Istrati.

An extraordinary session of Parliament, convoked for the passing of several urgent measures, began on June 24. The Chamber voted to increase the spirit duties 50 per cent., which was expected to yield a revenue of 20,000,000 lei. Proposals for new sources of revenue were kept back for the autumn session. The Government decided to put into force a law passed in 1895 respecting mines, which the Sturdza ministry refused to carry out. The embarrassments of the landlords and the privations of the peasantry were matters that many representatives of the people were anxious to relieve and were made the study of the ministers, as well as measures for providing revenue and preserving the credit of the state. In July the agricultural laborers in several districts went on a strike like the one that caused trouble in Hungary two years before. They refused to carry out the stipulations of their agricultural contracts in regard to reaping unless the conditions of the contracts were changed, and left the ripe harvest to spoil. In the Jassy district they set fire to the crops.

The ordinary session of Parliament was opened on Nov. 27. The principal measure in the Government programme was a comprehensive scheme of taxation reform designed to distribute the burdens more equally among all classes of the population.

The European Commission of the Danube.—The international commission charged with removing the sand bars and keeping open for navigation the mouths of the Danube, created by the Treaty of Paris in 1856, was endowed with larger powers by the Treaty of Berlin in 1878, and by a treaty concluded in London in 1883 these were prolonged till April 24, 1894. The commission, composed of delegates of Germany, Austria-Hungary, France, Great Britain, Italy, Roumania, Russia, and Turkey, exercises police powers and issues regulations that have the force of law on the Danube below Braila. The receipts in 1898 amounted to 3,239,722 francs, of which 2,040,502 francs were derived from tolls, 61,266 francs from various sources, 805,784 francs surplus from the preceding year, and 332,170 francs the value of material and collectable assets. The expenditures were 2,650,727 francs, including 874,336 francs for administration, 500,457 francs for technical services, 202,023 francs for various expenses, 782,929 francs for special purposes, and 290,982 francs for material and current liabilities, leaving a sur-

plus of 588,995 francs to be carried over. The pension and reserve funds amounted in 1897 to 2,303,545 francs. The exportation of wheat through the Danube in 1898 was 516,819 tons; of rye, 141,089 tons; of maize, 946,359 tons; of barley, 366,142 tons. The number of vessels, exclusive of packet steamers, that passed out of the Sulina mouth of the Danube in 1898 was 1,419, of 1,476,119 tons, comprising 446 English steamers, of 694,773 tons; 143 Greek steamers, of 192,715 tons, and 80 Greek sailing vessels, of 20,728 tons; 142 Austrian steamers, of 181,099 tons; 81 Italian steamers, of 103,636 tons, and 4 Italian sailing vessels, of 1,850 tons; 40 Turkish steamers, of 27,384 tons, and 202 Turkish sailing vessels, of 35,489 tons; 119 Russian steamers, of 55,912 tons, and 15 Russian sailing vessels, of 4,662 tons; 38 Roumanian steamers, of 46,486 tons, and 11 Roumanian sailing vessels, of 3,584 tons; 34 French steamers, of 42,880 tons; 27 German steamers, of 32,665 tons; 22 steamers, of 28,012 tons, and 15 sailing vessels of other nationalities, of 3,324 tons.

RUSSIA, an empire in northern Europe and Asia. The throne is hereditary in the dynasty of Romanoff-Holstein-Gottorp. The system of government is an absolute monarchy, in which the legislative, executive, and judicial powers are united in the Emperor, or Czar, who is assisted by a Cabinet of Ministers, each of whom has charge of an executive department; by a Council of State, which examines and passes upon projects of law submitted by the ministers; by a Ruling Senate, which watches over the general administration and superintends the judiciary; and by a Holy Synod, which directs ecclesiastical affairs. The Czar is the head of the Russian Church, which in its doctrines and ritual is identical with the Orthodox Greek, maintaining the relations of a sister Church with the patriarchates of Constantinople, Jerusalem, Antioch, and Alexandria. The reigning Emperor of All the Russias is Nicholas II, born May 18, 1868, who succeeded his father, Alexander III, Nov. 1, 1894. The heir presumptive is the Grand-Duke George, brother of the Czar, born May 9, 1871. The Committee of Ministers at the beginning of 1899 was as follows: President, J. N. Durnovo; Minister of the Imperial House and Imperial Domains, Gen. W. Freederikz, appointed in 1898; Assistant Minister of Foreign Affairs, Count Michael Muravieff; Procurator General of the Holy Synod, K. P. Pobedonostseff; Minister of the Interior, J. L. Goremykin; Minister of Public Instruction, M. Bogolepoff, appointed in 1898; Minister of War, Gen. Kuropatkin, appointed in 1898; Minister of Marine, Vice-Admiral Tyrtoff; Minister of Agriculture and State Domains, A. S. Yermoloff; Minister of Justice, N. V. Muravieff; Minister of Finance, S. J. Witte; Minister of Railroads and Communications, Prince Hilko; Comptroller General, T. J. Filippoff; Minister and Secretary of State for Finland, Gen. Bobrikoff. The Grand-Dukes Vladimir, Alexis, and Michael are members of the committee; also M. Solsky, M. N. Ostrovsky, and M. Frisch, presiding over the respective departments of state economy, legislation, and civil and ecclesiastical affairs in the Council of State, and Gen. Count Pratassoff-Bakhmetieff.

Area and Population.—The area of the Russian provinces is 1,902,202 square miles, with a population on Feb. 9, 1897, of 94,215,415; the area of Poland, 49,159 square miles, with 9,455,943 inhabitants; the area of Finland, 144,255 square miles, with a population estimated at 2,563,000; the area of the Caucasus, 180,843 square miles, with a population of 9,248,695; the area of Siberia, 4,833,496 square miles, with a population

of 5,727,000; the area of the Transcaspien territory and central Asia, 1,548,825 square miles, with a population of 7,721,084; total land area of the Russian Empire, 8,660,394 square miles; total population, 128,931,827. The average number of females to 100 males is 102.8 in the Russian provinces, 98.6 in Poland, 102.2 in Finland, 89.5 in the Caucasus, 93.7 in Siberia, 89.4 on the steppes, and 83 in Transcaspien and Turkestan. In the empire as a whole the number of females is almost exactly equal to that of males. The Jews of Russia live in the western and south-western provinces of Russia, in Poland, and in the cities of the south. There are about 3,500,000 in all. The population of St. Petersburg in 1897 was 1,267,023; of Moscow, 1,035,664; of Warsaw, 638,208; of Odessa, 405,041; of Lodz, 315,209; of Riga, 282,943; of Kieff, 247,432; of Kharkoff, 174,846. The number of persons who entered Russia during 1896 was 2,725,645; the number who departed, 2,743,418. The net immigration of foreigners was 6,906; the net emigration of Russians was 27,084.

Finances.—The ordinary revenue for 1897 was 1,416,386,096 paper rubles, and the ordinary expenditures amounted to 1,299,649,313 rubles, leaving a surplus of 116,736,783 rubles. The extraordinary revenue amounted to 42,591,539 rubles, and the extraordinary expenditure to 194,948,911 rubles. Of the ordinary receipts 39,243,000 rubles came from the direct taxes on land and forests, 40,617,000 rubles from trade licenses, 15,567,000 rubles from a 5-per-cent. tax on income from capital, 280,129,000 rubles from the spirit duties, 35,294,000 rubles from tobacco duties, 55,476,000 rubles from the excise tax on sugar, 28,894,000 rubles from naphtha, matches, and other excise taxes, 195,615,000 rubles from customs duties, 31,758,000 rubles from stamp duties, 20,254,000 rubles from transfer duties, 23,155,000 rubles from passports, railroad taxes, etc., 3,456,000 rubles from mining monopolies, 17,550,000 rubles from the mint, 25,850,000 rubles from the post office, 15,729,000 rubles from telegraphs, 52,478,000 rubles from the sale of spirits, 15,745,000 rubles from rent from domains, 661,000 rubles from sales of domains, 37,704,000 rubles from state forests, 10,834,000 rubles from Crown mines, 277,846,000 rubles from state railroads, 25,050,000 rubles from invested capital and banking operations, 2,657,000 rubles from private railroads, 37,544,000 rubles from serfs for redemption of land, 50,975,000 rubles from Crown peasants, 12,631,000 rubles from railroad debts, 29,802,000 rubles from Crown debts, 16,380,000 rubles from funds for aid to municipalities, 2,358,000 rubles from military contributions, and 8,164,000 rubles from various sources. The ordinary expenditures consisted of 258,558,000 rubles for the state debt, including 102,456,000 rubles for railroad debts; 2,729,000 rubles for the superior governing bodies; 19,806,000 rubles for the Holy Synod; 12,968,000 rubles for the Ministry of the Imperial House; 4,930,000 rubles for the Ministry of Foreign Affairs; 293,790,000 rubles for the Ministry of War, including 23,661,000 rubles for the reform of armaments and commissariat stores and 5,105,000 rubles for the Transcaspien Railroad; 85,275,000 rubles for the navy; 204,324,000 rubles for the Ministry of Finance, including 3,711,000 rubles for loans to railroad companies; 33,172,000 rubles for the Ministry of Agriculture and State Domains; 80,458,000 rubles for the Ministry of the Interior; 26,476,000 rubles for the Ministry of Public Instruction; 226,861,000 rubles for the Ministry of Ways and Communications, including 168,802,000 rubles for the operation of state railroads and 25,300,000

rubles for new feeding lines and improvements; 41,832,000 rubles for the Ministry of Justice; 6,868,000 rubles for the Comptroller General's office, including 3,309,000 rubles for the control of railroads; and 1,601,000 rubles for the Government studs. Of the extraordinary revenue for 1897 the sum of 32,339,000 rubles came from state loans, 7,688,000 rubles from perpetual deposits in the Bank of Russia, 238,000 rubles from debts paid by railroads, 13,000 rubles from repayments, and 2,314,000 rubles from various sources. Of the extraordinary disbursements 129,194,000 rubles were for railroad building and rolling stock, 1,476,000 rubles for the purchase of railroads, and 64,279,000 rubles for the conversion and redemption of state debt. The surplus of ordinary revenue over expenditure for 1897 was 107,857,350 rubles, but in the extraordinary budget there was a deficiency of 167,105,377 rubles, giving a deficit of 59,248,027 rubles; but for the period of five years ending with 1897 the accounts show a surplus in the total receipts, ordinary and extraordinary, over the total disbursements of 181,066,110 rubles. The budget estimates for 1898 made the ordinary revenue 1,364,458,217 rubles, and the extraordinary revenue 3,300,000 rubles from deposits in the bank and 106,291,709 rubles raised to meet extraordinary expenditure, making the total receipts 1,474,049,923 rubles. The ordinary expenditure for 1898 was estimated at 1,350,085,213 rubles, and the extraordinary expenditure at 123,964,710 rubles; total expenditure, 1,740,149,923 rubles, balancing the estimate of revenue. The budget estimate of the ordinary revenue for 1899 is 1,469,128,203 rubles, of which 113,554,631 rubles were set down to direct taxes, against 100,577,816 rubles in 1898; 667,182,457 rubles to indirect taxes, against 623,679,874 rubles; 52,875,800 rubles to state monopolies, against 48,529,100 rubles; 92,141,000 rubles to the sale of spirits by the Government, against 85,461,000 rubles; 396,307,398 rubles to Government railroads and domains, against 370,127,108 rubles; 902,302 rubles to sales of domains, against 593,339 rubles; 40,433,597 rubles to redemption of land by Crown peasants, against 43,181,586 rubles; 37,260,403 rubles to redemption of land by liberated serfs, against 37,376,714 rubles; 58,879,906 rubles to the repayment of railroad and other loans, against 57,318,227 rubles; 5,643,596 rubles to miscellaneous receipts, against 5,163,453 rubles; and 3,947,113 rubles from war contributions, against 2,450,000 rubles. The extraordinary revenue for 1899 was estimated at 4,000,000 rubles interest on perpetual deposits in the bank and 98,604,443 rubles raised to meet extraordinary expenditure, making the total receipts 1,571,732,646 rubles. The total expenditures for 1899 were estimated at 1,462,659,233 rubles for ordinary and 109,073,413 rubles for extraordinary purposes, together balancing the estimate of revenue from all sources. The ordinary expenditure for the public debt for 1899 is set down as 228,549,279 rubles, against 220,376,536 rubles in 1898; for railroad obligations, 51,688,807 rubles, against 51,716,196 rubles; for higher institutions of state, 2,880,621 rubles, against 2,612,842 rubles; for the Holy Synod, 21,199,144 rubles, against 20,374,941 rubles; for the Ministry of the Imperial House, 12,637,506 rubles, against 12,597,492 rubles; for the Ministry of Foreign Affairs, 5,314,556 rubles, against 4,802,176 rubles; for the Ministry of War, 323,791,710 rubles, against 288,808,664 rubles; for the Ministry of Marine, 83,065,000 rubles, against 67,050,000 rubles; for the Ministry of Finance, 233,381,888 rubles, against 211,118,038 rubles; for the Ministry of Agriculture and State Domains, 36,980,-

741 rubles, against 35,737,983 rubles; for the Ministry of the Interior, 82,145,703 rubles, against 80,175,211 rubles; for the Ministry of Public Instruction, 28,761,171 rubles, against 26,440,843 rubles; for the Ministry of Ways and Communications, 288,074,712 rubles, against 264,677,232 rubles; for the Ministry of Justice, 44,944,651 rubles, against 42,733,274 rubles; for the state control, 7,459,627 rubles, against 7,178,935 rubles; for the state studs, 1,784,117 rubles, against 1,614,850 rubles; for unforeseen and war expenses, 20,000,000 rubles, against 12,000,000 rubles.

The state debt on Jan. 1, 1898, amounted to 2,133,605,827 rubles of gold obligations and 3,141,472,152 rubles in paper, the total being 6,341,880,893 paper rubles, taking the gold ruble at the fixed legal rate of 1.50 ruble in paper or silver, established since 1894. The gold debt consists of 332,830,375 rubles at 3 per cent., 99,421,875 rubles at 3½ per cent., 1,501,787,625 rubles at 4 per cent., 109,707,500 rubles at 4½ per cent., 26,517,860 rubles at 5 per cent., and 63,340,592 rubles of 3- and 5-per-cent. treasury bonds. The currency debt consists of 78,000,000 rubles borrowed at 3 per cent., 104,331,000 rubles at 3.79 per cent., 113,120,874 rubles at 4 per cent., 248,180,000 rubles at 4½ per cent., 152,060,000 rubles at 5 per cent., 35,712,565 rubles paying various rates, 2,131,487,389 rubles of 4-per-cent., 42,157,538 rubles of 5-per-cent., and 38,488,362 rubles of 6-per-cent. treasury bonds, 22,934,404 rubles paying various rates, and 175,000,000 rubles of uncovered paper currency. There was an increase during the year of 15,109,836 rubles of gold bonds of railroads assumed by the Government, and an emission of 80,000,000 rubles of internal currency bonds; on the other hand, the paper currency was covered to the extent of 446,281,634 rubles. In the course of ten years the state debt payable in gold had been increased by 762,291,505 rubles, while the currency debt was diminished by 65,500,832 rubles, and annuities were diminished by 15,838,627 rubles reckoned in paper. The net increase in the capital of the debt for the period was 1,078,881,425 rubles in currency valuation, but the annual interest charge was increased only 3,500,000 rubles. The money in the treasury at the beginning of 1898 was 562,678,265 rubles. The payments for interest and redemption of the debt in 1899, reduced to paper valuation, were 60,045,559 rubles on external loans, 6,597,397 rubles on external bonds, 34,591,956 rubles for internal loans, 94,984,450 rubles for internal bonds, 20,737,028 rubles for obligations of state railroads, 51,688,807 rubles for obligations of guaranteed railroads to be repaid by them, and 1,592,889 rubles of payments of coupons overdue and banking expenses; total, 270,238,086 rubles. The debts were offset to the extent of 2,403,644,873 rubles in currency by sums owed to the Government, including 1,531,392,928 rubles due from peasants for redemption of land, 91,518,196 rubles due from local treasuries, 83,105,961 rubles in gold from the nobles' land bank, 86,568,697 rubles in gold and 123,832,570 in paper from railroads, 175,626,072 rubles in gold of military contributions due from Turkey, 290,108 rubles in paper due from Khiva, and 6,086,346 rubles in gold and 129,490,458 in paper from other debtors. The various funds for famine relief, pensions, and military, agricultural, benevolent, scientific, and other objects amounted on Jan. 1, 1898, to 314,994,844 rubles.

The Army.—About 275,000 young men who reach the age of twenty every year are drawn for service in the active army, remaining with the colors about four years of the legal period of five years. Of the remaining 600,000 who are capable of bear-

arms, part are enrolled in the reserve of the active army and the rest in the zapas, or second reserve. There were 987,917 young men who reached the military age in 1896, and of these 77,542 did not come up to the physical standard, while 30,585 failed to appear. The number taken into the active army was 275,247; the number enrolled in the reserve, 212,209. There were, moreover, 3,394 Caucasian recruits inscribed in the regular army. The reserves are required to drill for six weeks twice a year. The infantry troops are armed with a new small-bore rifle with a magazine holding five cartridges. The dragoons carry a carbine of the same caliber. The artillery have steel breech-loading ordnance, the heavy guns carrying 4,150 yards, the light guns 4,480 yards. The peace strength of the Russian army is estimated at 36,000 officers and 880,000 men; the war strength at 63,000 officers and 3,440,000 men.

The Navy.—The Russian fleet in the Baltic has 6 first-class battle ships, 3 of the second, and 5 of the third class, 11 coast-defense vessels, 9 first-class, 3 second-class, and 4 third-class cruisers, 30 gunboats, and 74 first-class torpedo boats, and it will soon be strengthened by the addition of 5 first-class battle ships, 1 coast-defense vessel, 8 first-class and 4 second-class cruisers, 2 gunboats, and 24 first-class torpedo boats. In the Black Sea fleet are 5 first-class battle ships, 2 of the second class, 2 monitors, 1 third-class cruiser, 8 gunboats, and 25 first-class torpedo boats, and there are building 1 first-class and 1 second-class battle ship and 4 large torpedo craft. The *Oslabya* and *Peresvyet*, of 12,674 tons, launched in 1898, represent the new type of battle ships, excelling in gun power the *Petrovavlovsk*, *Poltava*, and *Sevastopol*, of 10,960 tons, although these carry 12-inch guns coupled in their fore and aft turrets, while the newer vessels have 10-inch Oushakoff guns, but a powerful quick-firing armament, consisting of 8 6-inch, 6 4.7-inch, and 30 smaller guns. They are plated with 94-inch armor on the sides and 9-inch armor on the turrets, all of Harveyized steel, and are provided with water-tube boilers of 12,000 horse power, giving a speed of 18 knots an hour. Two more of this class, the *Pobieda* and *Retvisan*, are in hand, one in the Government yards on the Neva and one in Philadelphia. A third is being constructed by a Russian engineering firm, and one in a new shipbuilding yard of the Russian Government. These are somewhat heavier than the first built. The latest development is the *Tsarevich*, of 13,100 tons, built in France. The *Kniaz Potemkin Tavrichesky*, of 12,480 tons, built at Nikolaieff for the Black Sea fleet, of the same class as the *Tri Sviatitelia*, or *Three Saints*, has 10 inches of side armor, and carries 4 12-inch breech-loading guns in armored turrets, with a secondary armament of 10 6-inch, 16 3-inch, and 30 small quick firers, yet is designed to steam 17 knots with engines of 10,600 horse power. The *Rostislav*, of 8,880 tons, launched in 1896, a sister to the *Sissoi Veliky*, but carrying 10-inch instead of 12-inch guns in the turrets and 8 6-inch and 26 small quick-firing guns, instead of 6 6-inch and 18 small ones, has been followed by another of the same class, having, like the others, 16 inches on the sides and engines of 8,500 horse power, capable of making 16 knots. The armored cruisers of the new Russian navy have been developed from the *Dmitri Donskoi*, of 5,700 tons, built in 1883, which carries 6 6-inch guns and a powerful quick-firing armament. The *Pamiat Azova*, of 6,000 tons, built in 1888, has a maximum speed of nearly 19 knots, and is armed with 2 8-inch and 13 6-inch breech-loading guns and 17 quick firers. The *Rurik*, built

in 1892, has a displacement of 10,933 tons, and is armed with 4 8-inch and 16 6-inch guns and 6 4.7-inch and 18 smaller quick firers, and furnished with engines of 13,250 horse power, capable of making 18 knots. Larger, faster, and more powerful yet is the *Rossia*, having a displacement of 12,130 tons, with from 5 to 8 inches of armor, having 3 engines of 18,000 horse power, capable of making 19½ knots, and carrying an armament of 4 8-inch and 24 6-inch guns and 6 4.7-inch and 30 smaller quick firers. Built larger still, to carry more terrific batteries, is the *Gromoboi*, of 12,336 tons, armed with 4 8-inch, 16 6-inch, 6 4.7-inch, and 50 small guns, all quick firers. The *Bayan* is a new cruiser of 7,800 tons, built in France. The *Diana*, *Pallada*, and *Aurora* are deck-protected cruisers of 6,500 tons, launched in 1898, having engines of 11,610 horse power, capable of steaming 20 knots, and armed with 6 6-inch, 6 4.7-inch, and 35 small quick-firing guns. The *Bogatyr*, *Waryag*, and *Askold*, of 6,500 tons, have been added to this class, and 3 more have been begun. The volunteer fleet, composed of merchant steamers that can readily be converted into cruisers, already numbers 15 vessels, which carry on the tea trade and other traffic between Odessa and China, and at the same time serve as transports for the conveyance of Russian troops to Vladivostok and Port Arthur.

The *Retvisan* has the entire hull amidships covered with armor instead of confining protection to a belt encircling the ship at the water line. This novelty of design is the result of the lessons of the Spanish war, in which much damage was wrought in the upper structures of ships. The plates taper from 9 inches at the water line to 6 inches above and 5 inches in the vicinity of the central battery. The protective deck slopes down to the water line. The turrets have 10 inches of armor. The ship is 374 feet long, 72 feet in the beam, drawing 25 feet of water, and with 16,000 horse power, will have bunkers for 2,000 tons of coal and a speed of 18 knots. The battery will consist of 4 12-inch guns in turrets, 12 6-inch quick-firing guns in a central battery, and as auxiliary armament 20 3-inch, 20 3-pounder, and 6 1-pounder quick firers.

The new shipbuilding programme adopted in 1898 involves the expenditure of 510,000,000 rubles in the course of seven years, of which 90,000,000 rubles were granted for construction in 1899. The programme includes 8 battle ships, 1 armored cruiser, 6 first-class protected cruisers, 10 3,000-ton cruisers, a mining ship of 6,000 tons, a torpedo transport, about 20 destroyers, and 30 torpedo boats. A number of vessels were ordered in France, Germany, and the United States. Four destroyers were built at St. Petersburg, 4 at Elbing, 5 at Havre, and 1 at Birkenhead. The *Kniaz Potemkin Tavrichesky* and *Tsarevich* are included in the new programme.

Commerce and Production.—The area of Russia in Europe is estimated at 1,098,507,780 acres, exclusive of the islands of Arkhangelsk and the pasture lands of the Kalmucks and Kirghiz Tartars, estimated at 40,925,060 acres. The Government owns 410,808,867 acres, including 139,397,498 acres of roads, waste land, etc. The domains of the imperial family have an extent of 19,890,835 acres. The remainder of the total area is divided among the peasants and landowners, the former having 373,310,496 acres, of which 35,545,735 acres are waste, and the latter 294,504,582 acres, comprising 80,063,271 acres of arable soil, 68,628,269 acres of orchards, meadows, and pasture, 110,697,486 acres of forests, and 35,115,566 acres of waste land. Of the total area, 287,969,552

acres are arable, 174,958,734 orchard, meadow, and grazing land, 425,520,714 forest, and 210,058,770 mountain, barren, roads, etc. In Poland 55 per cent. of the land is arable. In the western provinces 2,516,919 peasants redeemed with Government assistance 25,517,788 acres of land, valued at 162,508,868 rubles, the average size of the allotments being 10 acres, purchased at the average price to the peasants of 6 rubles 37 copecks per acre. In the rest of Russia, where the conditions of redemption were more onerous to the peasants, the number of individuals who redeemed their land was 6,641,836, the total area being 61,575,821 acres, the average allotment 9.4 acres, the average price 11 rubles 43 copecks per acre, the total value of the lands 704,018,004 rubles. By the transfer of the land to the peasants through the Government the state mortgage bank received back the loans made to the landlords, about 42 per cent. of the purchase money in the western provinces and 35 per cent. in the rest of Russia, and the remainder was paid over to the landlords to enable them to improve the estates remaining to them. Besides the former serfs, 109,791 leaseholders purchased their holdings, about 2,100,000 acres in total extent.

In European Russia 170,253,400 acres were cropped in 1896; in Poland, 10,284,650 acres; in northern Caucasia, 9,459,440 acres. The area reported from Siberia was 8,402,000 acres and from central Asia 2,495,800 acres; but these returns are far from complete. About 66 per cent. of the arable land was planted in central, 78 per cent. in southern, and 10 per cent. in northern and eastern Russia; in Astrachan, 8 per cent. The production of wheat in 1897 was 6,332,000 tons in European Russia, against 7,986,000 tons in 1896; in Poland, 473,000 tons in 1897, against 518,000 tons in 1896. The rye crop of Russia in Europe was 14,080,000 tons in 1897, against 17,392,000 tons in 1896; in Poland, 1,345,000 tons, compared with 1,534,000 in 1896. Of barley, 4,325,000 tons were raised in the Russian provinces and 340,000 tons in Poland in 1897; of oats, 7,757,000 tons in the Russian provinces and 590,000 tons in Poland; of potatoes, 36,277,000 tons in Russia and 2,950,000 tons in Poland. There were 8,358,000 acres planted to flax in 1897, yielding 290,000 tons of fiber and 645,000 tons of linseed; and under hemp there were 2,241,000 acres, yielding 301,500 tons of fiber and 370,000 tons of hemp seed. The annual production of hops is about 650,000 hundredweight. The hay crop of European Russia in 1897 was 33,208,000 tons; in Poland, 1,805,000 tons; in western Siberia and northern Caucasia, 10,200,000 tons. Siberia produced 4,464,000 quarters of wheat in 1896, and northern Caucasia, comprising the provinces of Kuban, Stavropol, and Terek, produced 5,707,000 quarters. The wheat product of Transcaucasia in 1897 was 5,535,000 quarters. The area planted in 1895 to tobacco in Russia, Siberia, and Caucasia was 128,480 acres, producing 1,263,400 hundredweight. Vineyards cover 16,000,000 acres, but only on 361,000 acres in certain districts of south Russia is wine making carried on successfully, the vintage in 1895 amounting to 4,550,000 gallons. Cotton is grown in central Asia from American seed, but about half the crop comes from the native cotton tree. The production of cleaned cotton in Turkestan, chiefly in Ferghana, was 840,000 hundredweight in 1895; in Khiva and Bokhara, 322,000 hundredweight. This product has been introduced in Transcaucasia also, and about 200,000 hundredweight is raised in Erivan alone. About 330,000 hundredweight of cocoons are produced annually in Turkestan, and the silk culture is

well established in the Caucasus also. Turkestan produces also 2,670,000 hundredweight of rice every year.

The mineral resources of Russia have been rapidly developed of late years. The production of pig iron increased from 448,000 tons in 1880 to 1,612,000 tons in 1897; of coal, from 3,289,000 to 9,314,000 tons; of naphtha, from 352,000 to 7,057,000 tons; of copper, from 3,203 to 5,416 tons. The quantity of finished iron produced in 1896 was 440,000 tons; of steel, 879,000 tons. The output of gold in Siberia and the Urals was 37,176 kilogrammes in 1897. The best Ural mines are exhausted, but in Siberia new fields have been discovered. The production of platinum, which is found only in the Ural mountains, has increased from 2,947 kilogrammes in 1880 to 4,930 in 1897. The production of silver, obtained mainly from the Altai, was 10,757 kilogrammes in 1896; of lead, 412 tons; of zinc, found only in Poland, 4,951 tons; of salt, extracted chiefly in southern Russia, Perm, and Astrachan, 1,523,000 tons; of quicksilver ore in 1895, obtained from the Caucasus, 81 tons, from which 954,000 pounds of mercury were extracted in southern Russia; of cobalt ore from Elisabethpol, 56 hundredweight; of manganese ore, 118,170 tons; of tin from Finland, 12 tons. The imports of coal increased from 1,502,800 tons in 1891 to 1,948,600 tons in 1896; of coke, from 199,900 tons to 357,800 tons.

The production of spirits, reduced to pure alcohol, was 79,300,000 gallons in 1897, against 82,216,000 gallons in 1896; of beer in 1895, 87,282,100 gallons. The sale of spirits by retail was first undertaken by the Government in 1894, and the system had been extended to 25 provinces before 1898. The area planted to the sugar beet in 1898 was 992,980 acres; the production of refined sugar in 238 factories was 636,890 tons in 1897. The cotton industry has grown so that the products are valued at more than 400,000,000 rubles a year, compared with 240,000,000 rubles in 1880.

The customs duties on imports were repeatedly increased until by the tariff of 1894 they averaged 24 per cent. on raw materials, 32 per cent. on manufactured goods, and 61 per cent. on articles of food. Out of a total value of 508,516,000 paper rubles for imports in 1897 raw cotton stands for 67,037,000 rubles; unmanufactured metals, 56,604,000 rubles; machinery, 53,125,000 rubles; wool and woolen yarn, 29,209,000 rubles; metal goods, 26,080,000 rubles; tea, 17,867,000 rubles, besides the overland importations, which were only 3,362,000 rubles in value, although in previous years they exceeded the importations by sea, amounting in 1896 to 20,253,000 rubles; rice, 708,000 rubles by sea and 18,940,000 rubles from Persia, the latter import having increased from 2,775,000 rubles in the previous year; leather and skins, 14,434,000 rubles; colors, 11,926,000 rubles; coal and coke, 10,846,000 rubles; wine, beer, and spirits, 10,345,000 rubles; various textiles, 10,599,000 rubles; raw and spun silk, 10,131,000 rubles; fish, 9,544,000 rubles; chemicals, 9,297,000 rubles; gums and resin, 9,146,000 rubles; fruits and nuts, 6,423,000 rubles; coffee, 6,042,000 rubles; watches and clocks, 2,753,000 rubles; cotton goods, 2,530,000 rubles; tobacco, 2,306,000 rubles. The export of wheat in 1897 was 68,670,000 hundredweight; of barley, 28,780,300; of rye, 23,685,900; of oats, 14,044,000; of corn, 6,810,600. The total value of cereal exports was 353,353,000 rubles. The grain exports form on the average 55 per cent. of the total exports to Europe. The exportation of eggs has grown from 724,000,000 in number in 1893 to 1,737,000,000 in 1897, valued at 25,520,000 rubles, besides 30,300 hundredweight of preserved

eggs, valued at 431,000 rubles. Of fish and caviar the exports were 5,730,000 rubles in value in 1897; of sugar, 10,315,000 rubles; of gin and alcohol, 2,459,000 rubles; of timber and wood manufactures, 54,781,000 rubles; of oil seeds and grass seeds, 45,309,000 rubles; of flax, 56,182,000 rubles; of hemp, 11,215,000 rubles; of bristles, hair, and feathers, 11,727,000 rubles; of wool, 8,933,000 rubles; of furs, 5,027,000 rubles. The export of illuminating oil was 16,007,600 hundredweight and of lubricating oil 2,844,200 hundredweight, the total value of naphtha exports being 25,158,000 rubles. The exports of manufactured goods increased in total value from 11,196,000 rubles in 1895 to 19,146,000 rubles in 1897, of which 2,717,000 rubles represent metal goods, 3,972,000 rubles cotton fabrics, 1,869,000 rubles woollens, and 10,588,000 rubles various manufactures. The shipments of manufactured goods to Vladivostok, which are not included in this total, amounted to 24,552,000 rubles in 1896. The export of horses in 1897 was in number 58,300; total value of animal exports 17,092,000 rubles. The export of oil cake was 12,769,000 rubles in value. The trade by the frontiers of Asia, including the Caucasus, is not included in the above totals. The imports of merchandise in 1896 were 63,015,000 rubles in value; exports, 77,209,000 rubles, including naphtha for 22,911,000 rubles, cereals for 14,809,000 rubles, and oil seeds for 11,820,000 rubles.

The importation of precious metals in 1897 was 139,378,000 rubles; exportation, 8,493,000 rubles.

The value in rubles of the commerce in 1897 with the various countries by the European frontiers and the Black Sea frontier of the Caucasus is shown in the following table:

COUNTRIES.	Imports.	Exports.
Germany.....	179,800,000	175,237,000
Great Britain.....	102,091,000	150,899,000
Netherlands.....	5,863,000	87,255,000
France.....	24,688,000	63,684,000
Austria-Hungary.....	19,297,000	39,082,000
Belgium.....	25,097,000	32,716,000
United States.....	47,678,000	2,707,000
Italy.....	10,538,000	31,472,000
Egypt.....	24,002,000	5,316,000
Turkey.....	5,589,000	12,686,000
China.....	13,771,000	1,008,000
Roumania.....	1,360,000	10,926,000
Denmark.....	1,885,000	9,335,000
Other countries.....	46,582,000	81,499,000
Total.....	508,516,000	704,222,000

In 1898 the total value of imports was 562,000,000 rubles and of exports 588,000,000 rubles. Germany had 35.9 per cent. of the import and 25.2 per cent. of the export trade, Great Britain taking the second place with 32.2 per cent. of the imports and 19.8 per cent. of the exports. The British share of the export trade has decreased from 36.5 per cent. in 1899, and the proportion of British imports is also smaller, while German trade has increased from 122,500,000 rubles, or 31.3 per cent. of the total imports in 1888, to 202,000,000 rubles. The British share in the imports was 101,250,000 rubles, or 25.9 per cent. of the total, in 1898 and 114,000,000 rubles, or 20.2 per cent. of the total, in 1898. The year was a prosperous one for Russian industry, especially in the iron, naphtha, sugar, and cotton branches. The foreign capital embarked in Russian industries is Belgian, French, and German, and to a very small extent British except in the petroleum industry. Russia is making great strides as a manufacturing nation, although agriculture is not advancing. Spinning and weaving machinery is imported from England, but steam engines now come from Switzerland, boilers from Poland,

steam pumps and machine tools from the United States, and electrical machinery from Germany and Switzerland. Wages in the factories are 25 per cent. lower in winter than in summer, and the rates earned by women 30 per cent. below those paid to men for the same amount of work. The factory laws are very strict. Each workman, whether belonging to an *artel* or not, is provided with a book in which are set down the conditions and the period of his engagement. The amount of fines is strictly limited, and these must be paid into a fund for the benefit of the workmen. The manufacturers provide barracks for their work people, and furnish fuel and lights, as well as lodging, for 25 copecks a month or not much more. Food, purchased at wholesale by the *starosta* of the *artel*, makes the cost about 2 rubles 50 copecks a month, including lodging. The peasant operatives can thus deposit in the savings bank 40 rubles or more as the result of their winter's work. Beginning the development of her industrial resources much later than other nations, Russia is putting up factories equipped with the most modern machinery and is adopting the latest perfected methods of manufacture. In this development, which is fostered by the Government, American enterprise and skill play an important part. To equip freight trains on the railroads, as well as passenger trains, with continuous air brakes, the Westinghouse Company has erected a large factory in St. Petersburg. Agriculture in Russia, where the crops have frequently failed in the central and eastern provinces, is in a bad condition. M. De Witte advised the Czar to make the reorganization of the social and material well-being of the Russian peasantry the chief work of his reign. In 1899 the valley of the Volga and adjoining regions were afflicted by one of the periodical famines. The failure of the grain harvest and the grass crop of 1898 in the fertile regions of southern Russia was followed by a repetition of the calamity in Kieff, Poltava, Bessarabia, Kherson, and Taurida provinces in consequence of heat and drought in the spring, while cold and rain injured the crops in the north and northwest. In the east the provinces of Vyatka, Perm, Ufa, Samara, and Kazan had no crops, and west of the Volga the provinces of Riazin, Tula, Simbirsk, Saratoff, Voronezh, and Tamboff suffered a total failure of crops. Not only the spring and winter sowings of grain perished in most of the localities, but also vegetables and grass. The Government granted 35,000,000 rubles to supply six of the provinces that began to suffer in the autumn of 1898 with seed, bread, and fodder. The official allowance of 35 pounds a month was given only to the young and the aged. The Czar gave 3,500,000 rubles for relief. In some districts poor people were unable to obtain firewood. When scurvy in an acute form appeared in the outskirts of the city of Kazan the *zemstros* and the Red Cross Society, which was distributing relief in the provinces of Kazan and Samara, organized a medical force. Students were employed by the Government to distribute food and seed corn. Road making was ordered by the Government on a great scale to give employment to the able bodied, but this kept many of them away from their fields in seedtime. The sum of 6,800,000 rubles was assigned for the purchase of horses and cattle, and 67,800 horses were bought in Siberia and Orenburg for the distressed provinces. Noblewomen took groups of villages under their special care, and landowners and capitalists whose property was in the stricken region and other persons of wealth gave largely. Notwithstanding these efforts, more than 5,000,-

000 people in a total population of 11,000,000 were suffering acute distress in May. In July the Ministry of the Interior drew up regulations intended to guarantee a supply of food in the event of another crop failure, taking this duty out of the hands of the *zemstros* and intrusting it entirely to the Government officials guided by a special famine commission.

Navigation.—The total number of vessels in the foreign trade entered at the ports of Russia and of the Black Sea coast of the Caucasus during 1897 was 9,666, of 7,758,343 tons, of which 1,404, of 760,410 tons, were Russian and 8,202, of 6,997,933 tons, foreign; the total number cleared was 9,521, of 7,735,433 tons, of which 1,359, of 748,958 tons, were Russian and 8,162, of 6,986,475 tons, foreign. The number entered at the Baltic ports was 5,753, of 3,500,453 tons, of which 796, of 290,798 tons, were Russian and 4,957, of 3,209,655 tons, foreign; cleared, 5,682, of 3,489,763 tons, of which 750, of 287,560 tons, were Russian and 4,926, of 3,202,203 tons, foreign; entered in the White Sea, 716, of 314,544 tons, of which 338, of 45,004 tons, were Russian and 378, of 269,540 tons, foreign; cleared, 677, of 312,176 tons, of which 300, of 43,083 tons, were Russian and 377, of 269,093 tons, foreign; entered at ports of the Black Sea and the Sea of Azof, 3,197, of 3,943,346 tons, of which 330, of 424,608 tons, were Russian and 2,867, of 3,518,738 tons, foreign; cleared, 3,162, of 3,933,494 tons, of which 303, of 418,315 tons, were Russian and 2,859, of 3,515,179 tons, foreign. The total number of vessels entered at Caspian ports in 1896 was 18,055, of 8,593,983 tons, of which 17,284, of 8,360,269 tons, were coasters and 771, of 233,714 tons, in the foreign trade. The number of coasting vessels entered at the Baltic, White Sea, and Black Sea ports in 1896 was 38,943, of 13,794,870 tons. The number of vessels that visited the Pacific ports of Vladivostok and Nikolaievsk was 347, of 313,531 tons.

The Russian mercantile navy on Jan. 1, 1898, numbered 391 steamers, of 116,593 tons, and 1,755 sailing vessels, of 155,430 tons. Of the total number, 95 steamers, of 19,053 tons, and 586 sailing vessels, of 78,745 tons, belonged in the Baltic; 33 steamers, of 5,028 tons, and 396 sailing vessels, of 22,149 tons, in the White Sea; and 263 steamers, of 142,512 tons, and 773 sailing vessels, of 54,535 tons, in the Black Sea and the Sea of Azof. The new port of Alexandrovsk, on the Murmanian coast of Lapland, which is kept free of ice all the year round by the Gulf Stream, was opened on July 6, 1899.

Railroads.—The length of new lines in process of construction was 7,426 miles, of which the Siberian Railroad administration was constructing 2,636 miles, the Government 1,064 miles, the Finland authorities 150 miles, and private companies 3,727 miles. Further additions authorized were 2,205 miles in total length, of which 235 miles were to be built by the Government, 63 miles by the Manchurian Railroad Corporation, and 1,917 miles by companies. The Siberian line, which is expected to be completed by 1905, was open in 1898 as far as Irkutsk, 2,030 miles, and from the opposite shore of Lake Baikal to Sretensk, at the head of navigation on the Amur, 701 miles. The Pacific section of 475 miles from Vladivostok to Khabarovsk, on the Amur, was finished in 1897. Tchelyabinsk, the starting point of the main line, is connected with the general system of Russia by a branch line to Ekaterinburg, 150 miles. The section running round the southern shore of Lake Baikal has since been completed. Beyond there the route has been

altered with the object of avoiding engineering difficulties in the Amur valley. The new route runs from Onon, in the Transbaikai, to Vladivostok through Manchuria, and, as 945 miles of the 1,273 are in Chinese territory, a private company was formed in December, 1896, and intrusted with the construction. The main line was open in April, 1899, from the frontier of European Russia to Irkutsk. The Government appropriated 13,611,300 rubles for the purpose of enlarging and completing the harbor of Vladivostok. The increase of traffic on the eastern, and still more on the western, division of the line surpassed all expectations. On the western part 350,000 passengers, 400,000 peasant emigrants, and 490,000 tons of freight were carried in 1898.

After investigation the Czar decided to abolish altogether the system of deportation to Siberia, substituting other kinds of punishment for crime, especially compulsory labor for the benefit of the community as a penal and preventive measure. The condition of the exiles now in Siberia will be ameliorated.

The Transbaikai section of the Siberian Railroad was completed to Stretensk on Dec. 28. From that point, where the railroad will stop until further plans are decided upon, goods and passengers go by steamboats down the Shilko and Amur rivers to the north end of the eastern section, which follows the Ussuri river to Vladivostok. Meanwhile work is continued on the Eastern Chinese Railroad which Russia is building from Stretensk through Manchuria to Vladivostok. This and the Manchurian Railroad to Port Arthur and Niuchwang are expected to be completed before 1902. The total distance from St. Petersburg to Port Arthur is 5,620 miles. Trains are carried across Lake Baikal by ferryboats. From the eastern shore the distance to Stretensk, the present terminus, is 693 miles. The line will have to be relaid with heavier rails and ballasted to accommodate the unexpectedly large traffic that has already been developed.

A new railroad running northwest from Perm by way of Vyatka to Kotlas, on the Dvina, 619 miles, will allow the grain and other produce of western Siberia to be brought to Archangel and shipped thence to any port in Europe. A line from Vologda to Archangel was completed in 1897. In Caucasia a line has been built from Tiflis to Kars, 188 miles, and another runs from the Vladikavkaz trunk line to Petrovsk, on the Caspian Sea. In central Asia an extension of the Transcaspian line runs from Samarcand to Andijan, the capital of Ferganah, with a branch to Tashkend, the capital of Russian Turkestan, having a length of 342 miles. In European Russia new lines have been built or are building to connect Kursk with Veronezh, Moscow with Kazan, Tamboff with Kamyshin, and St. Petersburg with Sestroryetsk. The traffic on the Transcaspian Railroad increased from 292,500 tons in 1896, paying 5,449,030 rubles, to 390,100 tons in 1897, paying 7,061,000 rubles. An important trunk line is projected in central Asia, to run from Alexandrovsk, the terminus of the Ural line, through Transcaspia along the left bank of the Amu Daria as far as Tshardjui, on the Transcaspian Railroad. An alternative project is for a line running from Orenburg through Turgai and Turkestan to Tashkend. The object is to connect the commercial centers of Russia with central Asia by the shortest route. The cost is estimated at 90,000,000 rubles, and the country traversed is capable of raising vast quantities of wheat and other products. A military railroad is contemplated which will run from Tashkend to

Viernoe, on the border of the Chinese territory of Kuldja, whence it can be extended later in a northerly direction to Semipalatinsk, on the river Irtysh, there to meet the projected branch of the Siberian Railroad from Omak to the south. Another branch of the Siberian Railroad from a point near Lake Baikal southward to Kalgan, on the Great Wall of China, is under consideration. The Turkish Government has been asked for permission to build a short railroad from Kars to Erzerum.

The zone tariff for passengers was introduced on Russian railroads in 1894, and in three years the traffic increased 29 per cent. and, although fares were reduced so that a journey of 2,000 miles can be made for 17 rubles instead of more than 43 rubles, the receipts from passengers increased 18 per cent., the total for 1897 being 66,767,500 rubles from 53,354,186 passengers carried. The freight traffic in 1895 was 90,115,000 tons, having increased nearly one third in four years, while the mileage was increased two fifths. The gross receipts for 1896 of all the railroads excepting the Transcaspien and the railroads of Finland, the aggregate length being 25,756 miles, were 426,322,767 rubles, and the working expenses 248,245,732 rubles; net receipts, 178,077,035 rubles. The revenue of the Government from railroads, both state and private, was 312,374,372 rubles, and the expenditure 278,283,293 rubles, leaving a balance of 34,091,079 rubles, whereas in previous years there had been constant deficits, but this balance was reduced by expenditure for improvements to 25,283,461 rubles. The railroads belonging to the Government had a length in 1898 of 17,009 miles, but of these 516 miles were leased by the Government to private companies. The railroads operated by the Ministry of Communications formed two thirds of the total mileage of the empire. The capital cost of the Government railroads was 2,744,923,577 rubles. The gross receipts of the railroads under Government management was 273,969,819 rubles, and the expenses 157,366,602 rubles, leaving 116,603,217 rubles of net receipts. Including a railroad just taken under state management, the net income was 119,666,619 rubles, out of which 110,635,698 rubles had to be paid as interest on capital borrowed for the purchase and construction of the state lines, showing a clear net profit of only 9,030,921 rubles. The lines under private management had a length in 1897 of 9,566 miles, built at a cost of 1,005,145,885 rubles, on which interest was paid amounting to 41,668,695 rubles. The gross receipts from these lines in 1896 were 140,224,306 rubles and the expenses were 81,851,231 rubles, leaving a net revenue of 58,373,075 rubles. By the transfer of private railroads to the Government the debts owed by companies to the state were reduced from 819,170,204 rubles on Jan. 1, 1897, to 253,685,615 rubles on Jan. 1, 1898.

Posts and Telegraphs.—The post office in 1897 carried 271,263,000 internal and 34,568,000 external letters, 54,708,000 internal and 7,098,000 external postal cards, 242,310,000 internal and 25,752,000 external newspapers and circulars and 16,639,000 internal and 606,000 external money letters of the declared value of 23,954,365,000 francs and 369,781,000 francs. The postal receipts were 170,161,024 francs; telegraph receipts, 58,757,372 francs; expenses of posts and telegraphs, 132,117,648 francs. The state telegraphs had a length in 1897 of 84,097 miles, with 175,866 miles of wire. The Anglo-Indian line in Russian territory had a length of 2,253 miles, with 4,860 miles of wire, and privately owned lines a length of 2,641 miles, with 5,300 miles of wire. There were

12,868,226 internal dispatches, 1,054,918 foreign dispatches sent and 1,086,845 received, 224,776 transit dispatches, and 1,083,294 service dispatches in 1897; total, 16,318,059.

Student Troubles.—The regulations issued by Count Tolstoi when Minister of Public Instruction, forbidding students to associate together or to form clubs or societies of any kind, were extended and made more stringent by M. Bogolepoff, the new minister, in the beginning of 1899. Against these new regulations the students of the University of St. Petersburg protested with noisy and turbulent manifestations when they assembled on Feb. 20 to celebrate the anniversary of the foundation. The university building was thereupon filled with police in spite of the protests of students and professors, and when the students left the building and started to go into town over the Neva by the bridge or on the ice the new mounted constabulary, carrying whips like Cossacks, brutally lashed them with these to keep them back. When the Government expelled students who had taken part in the demonstration the whole body remained away from lectures. In consequence of this the minister closed the university, the Military Academy of Medicine, the Institute of Ways of Communication, the Institute of Civil Engineers, the School of Forestry, the Academy of Arts, the Mining School, and the Technological Institute. The students of these schools, about 6,000, remained quiet, although some were arrested daily and numbers of them were expelled and told to leave the city by order of the minister. The strike extended to Moscow, Kharkoff, and other universities, and similar disciplinary measures were taken against the students, some of whom were banished to Siberia. After a stormy discussion in the Council of Ministers, M. Witte undertook to bring the whole matter to the notice of the Czar. As the result of the sympathy displayed in regard to the real grievances of the students in his communication to the Czar, Gen. Vannofsky, ex-Minister of War, was ordered by the Czar to make an inquiry into the causes and circumstances of the troubles. The result was that the expelled students were allowed to return and the power of punishment was taken away from the police and restored to the university authorities. However, shortly after the resumption of lectures, the disturbances were renewed, and the university was again closed. The students of Moscow and Kieff had been subjected to disciplinary punishment, instead of being amnestied like their fellows in St. Petersburg, and the latter decided to support them as they had been supported by all the students in Russia, and at a meeting voted to resume the strike, which extended to the Mining School and other institutions in St. Petersburg, and then to the universities and technical schools of the provinces, affecting more than 30,000 students. The Government decided not to readmit students who could not give guarantees for their future good behavior. The new technical colleges established in the provincial capitals had shown as much discontent as the universities. M. Goremykin, the Minister of the Interior, supporting the repressive policy of the Minister of Education, set to work to discover political disaffection among the students, employing *agents provocateurs*, it was said. Many students were imprisoned for being in possession of a seditious proclamation calling for radical political reforms. When allowed on their petition to return to St. Petersburg and other university towns for the purpose of passing their examinations, the students frequently came into collision

with the police, and hundreds were expelled. The agitation spread to female colleges, and these also were closed. At Kieff the troops were called in to suppress a student riot, and 400 students were arrested. Before the end of April all the higher educational establishments of Russia were ordered to be closed. Only those students were permitted to re-enter who signed a written declaration of absolute submission to the established rules of the universities. Students were arrested in all the university towns by wholesale, tried in secret, sentenced to be banished, and sent away to all parts of the empire. The jails of St. Petersburg were filled to overflowing with imprisoned students, and in the course of a few weeks more than 3,000 were exiled to Siberia. There were 2,160 expulsions from Moscow University, 600 from Kieff institutions, and even from the Ladies' High School at St. Petersburg more than 200. In accordance with Gen. Vannofsky's report, the Czar censured the civil authorities and the police for their harsh proceedings, the teaching authorities for not having more influence and control over the students, and society for sympathizing with the students; condemned the absence of supervision over the work and occupations of students and the overcrowding, which in many institutions is far beyond their space and pecuniary resources; and ordered the students to return to their studies, promising that the leaders and participants in the disorders should be lightly punished unless they were accused of actions and aspirations with political aims. The students imprisoned in St. Petersburg and other towns were released, but were sent away. A new regulation was announced in August, designed to prevent a repetition of the disturbances. All students who in future create or instigate disorders either within the higher educational institutions or outside will be forcibly drafted into the army and made to serve as soldiers for a period of one to three years, according to the decision of the authorities of the institution concerned, assisted by delegates from the Ministries of War, Justice, and the Interior. On Nov. 1 M. Goremykin, who had rendered himself unpopular by his intervention in the student question and by other actions, was dismissed from the Ministry of the Interior, being succeeded by M. Sepiagin, who was appointed, as is usual, for a probationary period at first. A new educational institution was established at Vladivostok for instruction in the Chinese and English languages, with either Japanese, Korean, Mongolian, or Manchu, and French, at the option of the student, also commercial and economical subjects, the object being to prepare young men for administrative, commercial, and industrial posts in east Asiatic Russia and adjoining countries.

Finland.—The grand duchy of Finland was ceded to Russia by Sweden in 1809. By a special grant of Alexander I, which his successors have renewed on their accession, some of the Swedish constitutional liberties secured in 1772 and 1809 were guaranteed, and to take the place of representation in the Swedish Riksdag a Finnish Diet was instituted. Innovations were introduced in 1869 and 1882 into the charter, which provides for the representation of the four estates—namely, the nobles, the clergy, the burghers, and the peasants—in a Parliament convoked by the Czar as Grand Duke of Finland. Projects of law submitted by the Grand Duke are discussed and amended, but he retains the right of veto. Amendments to the Constitution or new taxes must have the consent of all four estates, but the initiative was reserved by Alexander II to imperial

authority. The projects of law are framed by the State Secretary for Finland in St. Petersburg, assisted by four councilors, two of whom are appointed by the Russian Government and two selected by the Senate at Helsingfors, the members of which are nominated by the Crown. The Senate is the executive authority in Finland, and consists of the Department of Finance, which administers the railroads, telegraphs, canals, and customs, and the Department of Justice, which has charge of public health and the judiciary. Military affairs are looked after by the Russian Ministry of War and foreign affairs by the Russian Chancellor. Finland has its own currency, but in 1890 the Russian paper and silver rubles were declared legal tender. A penal code enacted by the Senate in that year was not put into force, by decision of the Russian Government. The post offices of Finland were placed in charge of the Russian Minister of the Interior and attached to the Russian postal service in 1891.

The estimated revenue for 1897 was 65,601,740 marks or francs, of which 14,664,098 marks were the balance from former budgets and 2,000,000 marks were taken from the reserve fund. The estimated expenditures left a surplus of 11,227,168 marks to be carried over to the following year. Of the revenue indirect taxes produced 24,480,000 marks and direct taxes 5,801,620 marks. The chief expenditures were 9,827,195 marks for civil administration, 7,997,920 marks for military affairs, 7,682,335 marks for education and worship, and 4,663,160 marks for the public debt. The debt amounted to 84,264,668 marks.

The land of Finland is divided among 345 nobles, 2,218 burghers, 297 foreigners, and 111,557 peasants. Of the owners 28 per cent. have farms under 12½ acres, 51 per cent. between that size and 62½ acres, 19 per cent. between the latter figure and 250 acres, and 2 per cent. estates of greater extent. Rye, oats, barley, potatoes, wheat, flax, and hemp are the crops. Of horses there are 300,650, and 1,409,183 cattle, 1,067,384 sheep, 197,356 hogs, and 129,984 reindeer. The Crown forests cover 14,050,471 hectares, and their produce brings in 2,284,000 marks a year, less 628,000 marks for maintenance. The product of iron ore in 1895 was 67,724 tons; of pig iron, 23,220 tons; of bar iron, 17,863 tons. Besides iron and mechanical works, there are factories for textiles, leather, beer, spirits, paper, and chemicals, and wood and bone working employs a great many people. The total value of imports in 1897 was 202,500,000 marks, of which 73,200,000 marks came from Russia, 65,700,000 marks from Germany, 29,200,000 marks from Great Britain, 12,200,000 marks from Sweden and Norway, and lesser amounts from Denmark, France, Spain, and other countries. The total value of exports was 168,700,000 marks, of which 51,200,000 marks went to Great Britain, 48,300,000 marks to Russia, 17,000,000 marks to Denmark, 14,600,000 marks to France, 13,000 marks to Germany, and the rest to Sweden, Spain, and other countries. The principal imports were cereals for 41,000,000 marks, cotton and cotton goods for 13,900,000 marks, iron and hardware for 12,800,000 marks, machinery for 12,100,000 marks, coffee for 11,170,000 marks, woollens for 8,500,000 marks, sugar for 6,600,000 marks, and for smaller amounts chemicals, leather goods, tobacco, oils, etc. The export of timber was valued at 79,400,000 marks, butter at 30,300,000 marks, paper and paper pulp at 15,600,000 marks, iron and iron goods at 4,400,000 marks. Lesser items were textiles, leather, hides and skins, tar, and pitch.

The number of vessels entered at Finnish ports

during 1897 was 8,376, of 1,868,713 tons, of which 5,871, of 822,907 tons, were Finnish; 528, of 83,414 tons, Russian; and 1,977, of 962,392 tons, foreign. The total number cleared was 8,354, of 1,861,177 tons. The Finnish merchant marine on Jan. 1, 1898, consisted of 1,790 sailing vessels, of 248,809 tons, and 218 steamers, of 35,103 tons.

The principal avenues of internal communication are the canals connecting the lakes of Finland, through which 24,332 vessels passed in 1896. The railroads have a total length of 1,535 miles, all belonging to the Government except 20 miles. The number of letters and postal cards carried in the mails in 1896 was 11,123,781; of newspapers, 10,631,868; of parcels, 1,939,899.

Under the military law of 1878 all Finns at the age of twenty-one have to present themselves to be drawn by lot for service in the army, which lasts three years with the colors and two years in the reserve; those not drawn for active service pass into the reserve, and during the five years are called out three times for instruction. The officers and underofficers must be of Finnish nationality, under the chief command of the Governor General. The Finnish troops in 1898 consisted of 1 battalion of rifles, incorporated in the Czar's bodyguard at St. Petersburg, 8 battalions of rifles of the line, and 1 regiment of dragoons; total effectives, 236 officers and 6,020 men. Of Russian troops there were stationed in the grand duchy 8 battalions of rifles, 2 battalions of fortress infantry, 4 batteries, 16 companies of fortress artillery, and a detachment of sappers; total strength, 300 officers and 9,200 men.

In 1898 the Senate was called upon by the Grand Duke to prepare a scheme of universal obligatory military service for Finland. On Jan. 25 the Parliament, which was convoked every four or five years between 1861 and 1888, but had not met since the latter date, was called together in extraordinary session, and Gen. Bobrikoff, who had just been appointed Governor General in succession to Count Heydon, read to the representatives of the four estates of the Finnish people a speech from the throne, in which the Czar announced that since Finland had no need of troops separate from those of the Russian army, being indissolubly united with the empire and under the protection of the entire Russian state, the law of military service in Finland must be made uniform with that of the empire at large. At the same time, it being desirable that the new law should be made to harmonize with local conditions as far as possible, the project of the law would be submitted to the Diet. The obliteration of the special privileges and national Constitution of the Finns has been the desire and aim of the Slavophile party since the time of Alexander III, who would not countenance the Russification of the grand duchy to the extent that process was carried on in the Baltic provinces and in Poland before the close of his reign. On Feb. 15 an imperial manifesto was published stating that all legislation affecting the empire at large, as well as Finland, would in future be transacted by submitting projects of new laws to the Finnish Diet for its opinion as to the best method of adapting them to the conditions prevailing in the grand duchy, after which they will be passed over to the Russian State Council to be dealt with and promulgated in the usual way. In such cases the Emperor will be approached only by the imperial minister whom the projected law concerns and the State Secretary for Finland. The discussion of such laws in the State Council will be attended by the Governor General and the State Secretary, and when necessary by cer-

tain members of the Finnish Senate appointed by the Czar. In this way the Finnish Parliament and Senate will no longer have the exclusive right of discussing measures designed for the purpose of bringing Finland into closer conformity with the rest of the empire, and therefore also affecting Russia. The manifesto declares that the existing system is maintained in full force as regards the promulgation of local laws touching exclusively the internal affairs of Finland, but reserves to the Emperor and his advisers the ultimate decision as to which laws come within the scope of the general legislation of the empire. This decision to treat any Finnish question that a Russian minister may consider to be connected with the requirements of the state in general as a matter to be decided by the Russian Council of State, leaving the Finnish Diet only a consultative voice, was totally unexpected, and it created a profound depression in Finland.

The Finnish people saw in this new fundamental law the virtual abrogation of their self-government and the prelude to the obliteration of their customs tariff and fiscal independence, of their currency, of their separate railroad administration, of their system of education, perhaps of their language and religion in the end. Their Parliament would be reduced to the position of a Russian provincial *zemstvo*. When the imperial manifesto became known at Helsingfors the ladies and most of the men put on mourning. At first the Finnish Senate did not wish to promulgate the new law without having first protested and made an effort to have it repealed. The party known as Finnish, which is opposed in Finland to a so-called Swedish party, was divided in opinion at first, having on previous occasions justified Russian interference because the Russian authorities have usually befriended the peasantry in their conflicts with the Swedish nobility. The chief of the Finnish party resigned his seat in the Senate as a protest against holding back the Czar's manifesto. Later the bulk of the Finnish party were of the same mind as their former opponents as to the seriousness of the Russian attack on the chartered liberties of the grand duchy. The Senate, in spite of the irregularity of the procedure according to the Finnish Constitution, which declares that the Emperor and Grand Duke shall not make a new law without the knowledge and consent of the Diet or abolish an old law, decided to promulgate the manifesto and the new law that accompanied it, and at the same time to send a deputation to St. Petersburg, consisting of the *talman*, or spokesman, of each of the four estates, to plead with the Czar. The Minister State Secretary sought for this deputation an audience with the Czar, but Nicholas II refused to receive it, answering that he was deeply affected at learning that it was thought that he desired to break his word. He had given the best guarantee for the preservation of the internal legislation of Finland, and he commanded the State Secretary to request the deputies to return to their work at Helsingfors. A long petition coming from the Senate of Finland was forwarded to the Czar at the same time. It called attention to the paragraph of the Constitution declaring that fundamental laws can be made, amended, explained, or repealed only on the proposition of the Emperor and Grand Duke and with the consent of all the estates, and begged the Emperor to declare that no restriction of the constitutional rights of the Finnish people was implied in the new imperial enactment. No response was given to that, and next the Finns circulated a popular petition to which 523,000

names were signed, and this was taken to St. Petersburg by 500 representatives of all classes from every part of Finland. This address represented that the imperial manifesto had aroused alarm and sorrow throughout Finland, because it had dislodged the foundation stone of the social structure and taken away the right of the Finnish people to partake in their legislation, which Alexander I had promised forever and Alexander II and Alexander III had confirmed and extended; and pointing out that, although it had calumniators in Russia, the Finnish people had been faithful, law-abiding, averse to revolutionary doctrines, unflinching in the preservation of public order, the petitioners, unwilling to believe that the imperial intention was to menace the internal tranquillity, prayed the Emperor, who had placed right above might, to ordain that the new statutes be brought into harmony with the fundamental law of Finland, recognizing that the right of a small people is as sacred as that of the greatest nation and its patriotic feeling a virtue from which it may never recede. The deputation arrived in St. Petersburg in the middle of March without having first obtained the permission of the Governor General, in default of which Gen. Procope, the Minister for Finland, could neither receive them himself nor ask for them an audience with the Emperor. The Czar sent word that he was not offended, but they must go back to their homes and transmit any appeal they might have to make through the Governor General. The Emperor also wished the Minister Secretary of State to explain to the deputies that the manifesto does not interfere with the internal legislation of the country, but only applies to laws of imperial interest.

The committees of the Diet which examined the law for the reorganization of the army went exhaustively into the constitutional question, and reported that the proposed treatment of the Finnish army was inadmissible both in substance and in form. The military commission suggested that the Diet should accept as far as possible the new military burden, involving the addition of 7,200 men to the army and the raising of 10,000,000 rubles a year for their support, by raising the strength of the army on the peace footing from 5,600 to 12,000 men, retaining the present three years' service. The Russian proposal was for the ultimate increase of the army to 36,000 men, with a service of five years, and it was part of the plan to draft the men into the Russian army for service in remote parts of the empire under Russian officers, whereas the Constitution of Finland declares that none but Finnish citizens shall be eligible as officers, and prescribes that the troops shall be kept at home for the defense of Finland except when in time of war their services may not be needed at home and may be required elsewhere to aid in the general defense of the empire. The purpose of garrisoning Finland with Russian troops was another feature of the plan. The provisions of the army law were not only a grievous charge to be borne in a country which had hitherto escaped the crushing burden of modern military service, but to deport the young Finns to Russia and quarter Russian troops in Finland was obnoxious to the traditional sentiments of the people, an invasion of their guaranteed liberties if accomplished without the consent of the Diet, and apparently designed to extirpate their liberties and their nationality by the process that was being applied to the Poles, the Baltic Germans, the Armenians of the Caucasus, and alien elements in the empire everywhere.

The political excitement caused in Finland was a new manifestation in that quiet country. Newspapers that contained bitter comments on the Czar's manifesto and its tendency were confiscated or warned. Among the peasants there were many who welcomed the advent of Russian law and administration. Other Finns, to escape universal military service, emigrated to the United States or Canada. Notwithstanding the receipt of a communication stating that by the decision of the Emperor the military law belongs to the category of laws concerning the whole empire, the Diet adopted the conclusion of the committee that a law relating to military service can not be legally enacted in Finland without parliamentary consent. It resolved further that the militia should not be employed outside of Finland save for the defense of St. Petersburg. After the Diet had refused its consent to the Russian proposals, its session was closed on May 27 by an imperial edict. The Finnish Government had proposed to spend 10,000,000 marks of the surplus funds on railroads, including an extension from Uleaborg to Tornea, on the Swedish frontier. The Russian authorities insisted that the Finns should build a bridge across the Neva and connect their railroads with the Russian system rather than the Swedish. Of the amount set aside for railroad construction, it was ordered from St. Petersburg that only 6,000,000 marks should go for this purpose, while 2,000,000 marks should be expended on the army and 2,000,000 marks should form a fund with which land might be gradually acquired for the *torpars*, or agricultural laborers, of whom it was found that a third had no land of their own. The Finnish Senate was instructed to form a committee for carrying out this scheme, which made the Russians still more popular with the poorer peasantry. A society was organized for the propagation of the Russian language in Finland by classes and lectures. The educated Finns, however, who were attached to their constitutional liberties, sank their former differences with their Swedish-speaking compatriots of the noble and burgher classes in order to defend the parliamentary system as well as they could against the encroachments of autocracy and their national institutions from Russification. In addition to their political troubles, the people were face to face with distress amounting almost to famine, due to a very late spring and floods, which accelerated the emigration movement from the barren northern and eastern districts.

The infringement of the Czar's Government on the chartered rights and privileges of the Finns aroused the sympathy of lovers of constitutional liberty in all countries. A deputation of foreigners went to St. Petersburg to intercede with the Czar and present to him addresses signed by 800 eminent citizens of 12 parliamentary countries of Europe praying him to give heed to the petition of half a million Finnish men and women, and not continue in a course that might retard the cause of amity among the nations which he had sought to promote in summoning the Peace Conference at The Hague. These six gentlemen were politely informed by the Minister of the Interior that the Czar could not receive them and that their addresses could not be accepted. They went then to Helsingfors, and, after receiving an ovation from the Finns, they deposited the addresses in the Finnish archives with the rejected monster petition of the Finnish people. In September Gen. Procope, who had defended the rights of his fellow-countrymen at St. Petersburg as well as he could, was replaced by W. K. von

Plehwe, one of the authors of the policy of Russification, who was appointed acting Secretary of State, being the first Russian who has represented Finland in the Russian Government since the retirement of Count Speransky in 1811. An imperial rescript published on July 4 emphasized the Czar's determination to persevere in his policy in spite of the remonstrances of the representatives of the Finnish people, which were declared to be out of place. Finland was an organic part of the Russian state and inseparable from it, and while the Czar considered it beneficial to preserve the special organization of internal legislation granted by his ancestors, he also inherited

S

SALVADOR, a republic of Central America. The legislative power is vested in the National Assembly, a single chamber of 42 members, 3 to each department, elected every year by universal suffrage. The President is elected also by the direct vote of the people for the term of four years. Rafael Antonio Gutierrez was elected President for the term ending March 1, 1899, and Dr. Prudencio Alfaro was elected Vice-President. The Cabinet constituted in 1897 was composed as follows: Minister of the Interior, Dr. Prudencio Alfaro; Minister of War and Marine, Dr. Juan F. Castro; Minister of Public Instruction and Charity, Dr. Carlos Bonilla; Minister of Public Works, Public Credit, and Justice, Dr. Antonio Ruiz. The direction of foreign affairs was delegated to the United States of Central America, a federation composed of Salvador, Honduras, and Nicaragua. In November, 1898, the opponents of federation in Salvador upset the constitutional Government and established a provisional Government under Gen. Tomas Regolado.

Area and Population.—The area of Salvador is 7,225 square miles. The population on Jan. 1, 1895, was estimated at 803,534, of whom only about 20,000 are of pure European descent. San Salvador, the capital, has about 50,000 inhabitants.

Finances.—The revenue in 1898 was \$4,600,000 in silver, and expenditure at least \$11,000,000. In 1896 the revenue was \$10,174,000, and expenditure \$9,745,000. The revenue from import duties was estimated at \$5,144,000; from spirit duties, \$2,524,000. The expenditure of the Ministry of Finance was reckoned at \$2,845,000; for the Ministry of War, \$1,908,000; for the Ministry of the Interior, \$1,487,000; for the Ministry of Public Works, \$1,417,000.

The foreign debt, amounting to £725,000, has been assumed by an English company in consideration of various concessions. The Government agreed to pay to the company £24,000 a year for eighteen years and to hand over the railroad free of charge. The subsidy of £24,000 per annum was secured on 15 per cent. of the import duties. The company was bound to finish the railroad by July, 1901, or pay a forfeit of £1,000 for every month's delay. The internal debt was \$8,000,000 in 1896.

Commerce and Production.—The land is exceedingly fertile, and the people are industrious and frugal. The chief product is coffee. Indigo, sugar, and tobacco are also cultivated. The total value of imports in 1896 was \$3,347,718; of exports, \$7,485,384. The chief imports were cotton for \$961,554, spirits for \$371,205, iron manufactures for \$183,616, flour for \$132,438, and silk

the task of defining the relations of the grand duchy with the Russian Empire by the force of positive law. With this object he confirmed the fundamental law of Feb. 15 laying down rules for issuing general state laws for Finland, and in accordance with this legislative act, which remains unshakable in the future, the labors of the extraordinary Diet would be taken into consideration in drafting the new military law. He commanded the Governor General to impress upon the minds of the population the true meaning of the measures undertaken for the purpose of strengthening the bonds uniting the empire and the grand duchy.

goods and yarn for \$142,389. The chief exports were coffee for \$5,857,646, indigo for \$979,990, tobacco for \$274,208, and balsams for \$92,659. The trade relations are mostly with the United States, Great Britain, Germany, and France. The imports of specie in 1896 were \$119,199 and exports \$187,688. The number of vessels that visited the ports in 1896 was 338. There are 72 miles of railroad, and other lines are building. The length of telegraphs is 1,724 miles of wire, besides 597 miles of telephone line. The number of telegraphic messages in 1896 was 660,682.

SAMOA, a kingdom occupying the Samoan Islands in the south Pacific Ocean, of which the neutrality and independence were guaranteed by the act signed at the Samoan conference in Berlin on June 14, 1889, by representatives of Germany, Great Britain, and the United States.

The area of the islands, 14 in number, is 1,701 square miles. The population in 1897 comprised 35,565 natives, about 450 whites, and 800 South Sea islanders working on the plantations. Of the Polynesian natives about 10,600 live in the island of Upolu, 12,500 in Savaii, and the rest in Tutuila. The foreigners in 1895 comprised 203 British and Australasians, 120 Germans, 26 Americans, 26 French, and 25 others. In 1899 there were about 475 foreigners.

The total value of imports in 1897 was 1,384,446 German marks—747,751 marks by German, 217,317 marks by English, 220,756 marks by American, and 198,622 by other houses. The value of exports was 1,004,632 marks, of which the value of 910,018 marks was exported by German, 352,213 marks by English, 33,651 marks by American, and 5,750 marks by other houses. The exports consist of copra, the pith of the palm tree, cotton, cacao, coffee, bamboo, and fruits. Most of the imports, including beer, woollens, wines, table delicacies, coal, umbrellas, ready-made clothing, and hardware, are for the use of the foreigners settled in the islands, most of whom reside in Apia. Apia was visited in the course of 1897 by 58 steamers, of 76,369 tons, and 22 sailing vessels, of 5,367 tons.

The taxation of the foreign population yielded 110,822 marks in 1897, of which 69,706 marks were import duties, 16,640 marks export duties, 8,025 marks Government taxes, and 16,451 marks municipal taxes. Of the total Germans paid 72,966 marks, English 11,801 marks, Americans 14,835 marks, and others 11,220 marks.

Provisional Government.—In the last days of 1898 Chief-Justice Chambers held court to decide the rival claims to the kingship of Malietoa Tanu, son of the late King, and Mataafa, whose party was twice as numerous, but who was de-

barred as a former rebel, who had been allowed to return from exile in the Marshall Islands on the condition that he should never again take part in Samoan politics. The American, English, and German consuls were present until the German consul withdrew, saying that the chief justice was not conducting the investigation properly and that the question should be decided by popular vote. The chief justice pointed out that the Supreme Court was the tribunal appointed by the provisions of the Berlin treaty. His life being openly threatened, the American and British flags were hoisted together over his residence, the German consul refusing to associate himself with his colleagues in this act of protection. On Dec. 31 the chief justice decided in favor of the claims of Tanu and against those of Mataafa. The American and British consuls intimated their acquiescence in the decision, but the German consul never acknowledged the receipt of the court's decree.

The German officials encouraged the supporters of Mataafa to resist, and German merchants offered to supply arms. Having as his military adviser a German ex-officer named Von Bülow, Mataafa mustered his 4,000 warriors on Jan. 1. Tanu's fighting force was only half as strong. When hostilities were seen to be inevitable, Capt. Sturdee, of the British war vessel Porpoise, sent 25 bluejackets ashore to guard the residence of the chief justice. Mataafa's men occupied the roads leading to Apia, drove the loyal natives back upon the capital, and finally hemmed them in and entered the town. Tanu was saved from capture by the British naval commander and the American and British consuls, who escorted him to a mission building, in which 600 of his people had already taken refuge. Fighting continued in the streets all the afternoon, and toward night Mataafa's victory became assured. Tanu and Tamasese, the Vice-King, escaped to the Porpoise, to which 1,200 of the defeated warriors fled on their boats. Capt. Sturdee emphatically refused to give up Tanu and Tamasese to Mataafa. For two days burning and plundering went on in Apia and the surrounding country. On Jan. 4 the American and British consuls decided in the interests of the protection of life and property to open negotiations with the successful rebels and to acknowledge Mataafa as *de facto* King. A provisional Government was formed, composed of Mataafa and 13 chiefs, with Dr. Johannes Raffel, the German president of the municipal council, who had taken a prominent part on Mataafa's side, at its head as executive chief. His first official act was to issue a decree proclaiming himself acting chief justice. Mr. Chambers having taken refuge on the British war vessel. He took the ground that, aside from the flight of Chief-Justice Chambers, the old Government was superseded by the provisional Government, which the chief justice did not recognize and in which he had no part, and which therefore could not recognize his judicial authority without stultifying itself by calling its own in question. In taking this course Dr. Raffel was strongly supported by the German consul and residents. On Jan. 9 the German consul general, Rose, issued a proclamation stating that it was legally impossible for Mr. Chambers to continue in the office of chief justice in a government constituted in consequence of the violent overthrow of his decision, and that the president of the municipality would therefore under the treaty fill the office during the temporary vacancy. The American and British consuls protested energetically, and the British naval commander gave notice that

Chief-Justice Chambers would hold court under the protection of the British guns, which would open fire if resistance were offered. Capt. Sturdee explained that in thus upholding the authority of the chief justice his motive was to assert and protect the rights of Great Britain and the United States in Samoa. On this intimation the provisional Government withdrew the guard posted at the courthouse, and on the appointed day Chief-Justice Chambers, accompanied by the American and British consuls and escorted by a guard of bluejackets, approached the courthouse. Dr. Raffel and the German consul protested and refused to open the door, which was broken, and the chief justice took his seat and read a decree condemning the unauthorized, unlawful, and rebellious proceedings of the provisional Government.

The United States Government, which had recently contracted for the construction of a coal-station at Pago Pago harbor, ordered Rear-Admiral Kautz to proceed to Samoa on the Philadelphia. The Malietoa chiefs who were captured by Mataafa's men were banished to Tutuila, where they were welcomed by the people. Fighting continued in Upolu outside of Apia. The Mataafa people looted the houses of the defeated party and destroyed what they could not carry away, but sometimes their opponents overpowered their bands in the bush. A German resident of Apia, named Grossmühl, having shown his contempt for the authority of the chief justice after it was restored by breaking the windows of the courthouse, Chief-Justice Chambers had him arrested and imposed a fine and sentenced him to imprisonment. By direction of Dr. Raffel the German chief of police released the prisoner, and the German consul protested against the action of the chief justice as an infringement of the rights of the consulate. The British and American consuls held that the chief justice had jurisdiction in the matter, and they declined to hold further intercourse with the German consul or the municipal president except in writing unless an apology were offered for their behavior toward the chief justice. Dr. Raffel was cited to answer for contempt of court, and the German consul protested that this was an invasion of his consular jurisdiction. Otherwise he recognized the restored authority of the chief justice under instructions from his Government. Mataafa refused to let the natives deal with the British cruiser while Tanu and Tamasese and the chief justice were on board, but the threatening attitude of Capt. Sturdee impelled him to revoke his orders and to make an apology.

Mataafa and his followers did not entirely trust the Germans, who were formerly his chief enemies, and many of the people who at first declared for the experienced Mataafa in preference to the youthful Tanu began to waver when they saw that the old chief could not obtain the recognition of the English and American governments and might be abandoned by the German Government. All the inhabitants of Tutuila and half those of Savaii were on the side of Malietoa Tanu. There was little prospect of the settlement of the question without protracted civil war, even after the protecting powers should come to an agreement. The dispute was complicated with missionary rivalries, Mataafa being a Catholic and Tanu a Protestant. While awaiting the decision of the three powers as to who should be King the sentiment in Upolu, which had been preponderantly in favor of Mataafa, veered round to the cause of Tanu, and many chiefs deserted Mataafa. Still his partisans were

greatly in the majority on the principal island. They would not recognize the supreme court or bring suits before the chief justice. Mataafa's provisional Government taxed the people heavily and imposed fines on adherents of Tanu. In Savaii the soldiers of Mataafa threatened to burn Malietoa villages unless the people sent taxes and recruits to support Mataafa. A British cruiser visited the island and threatened to shell the Mataafa villages if the peace were disturbed. The British and American consuls issued proclamations threatening to take strong action if the provisional Government interfered with the Malietoans. The German consul issued a proclamation upholding the provisional Government and denouncing the action of his colleagues. Dr. Raffel was recalled by the German Government and left Samoa. Admiral Kautz arrived on the Philadelphia.

Negotiations for the settlement of the Samoan difficulties, carried on by the representatives of the American, English, and German governments, were conducted in Washington and Berlin. A basis was sought for the alteration of the Samoa act of 1889, which was considered unsatisfactory and impracticable by all three governments. A petition of 61 German residents of Apia complained that English was used in the courts; that they paid the greater part of the taxes and customs dues, yet were deprived of influence by a hostile combination of English and American officials; that the natives would not pay the poll tax because the chief justice ignored their customs; therefore they prayed the German Government to proclaim a protectorate over Samoa. The German Government protested against any action of the American and British consuls in which the German consul did not concur, as the Berlin treaty makes the unanimity of the representatives of the three powers an essential condition of any decision affecting the administration of the islands. The grounds for this protest were furnished by cabled instructions from Washington to the American admiral to act in accordance with the decision arrived at by any two of the representatives of the powers in default of unanimity. The American Government in its reply recognized the necessity of unanimity under the treaty as a condition of a settled policy or permanent action, and said that any action taken by the admiral on the agreement of a majority of the representatives of the powers when an emergency should arise rendering delay dangerous would be subject to ratification or adjustment by the unanimous vote of the three powers at the earliest possible moment, no permanent arrangement being admissible without such unanimous vote.

When Admiral Kautz arrived at Apia he found existing a state of affairs bordering on anarchy. The decrees of the Supreme Court could not be enforced, and the lives of the chief justice and other Americans were in danger. Mataafa had a large force of armed men surrounding Apia, and his followers defied the constituted authorities. There was constant danger of an outbreak, in which the lives of Americans and British, as well as those of the followers of Malietoa Tanu, would be sacrificed. Admiral Kautz called a meeting of the consular representatives and naval commanders of the three powers to discuss means of ending these conditions. The German representatives did not attend the meeting. By the decision of the American and British representatives the adherents of Malietoa Tanu who had been banished to other islands were brought back and their arms were restored to them. A proclama-

tion was issued by Admiral Kautz declaring Mataafa's Government to be illegal, and calling upon the Mataafa chiefs to disperse their forces and return to their homes, threatening bombardment if they did not withdraw from the vicinity of Apia. On March 13 Mataafa evacuated Mulinu, the native capital, which was fortified by the Americans for the reception of the Malietoans that the British ship *Royalist* had brought from other islands. After the German consul had issued a counter-proclamation, saying that Admiral Kautz's proclamation was untrue and that he should uphold the provisional Government, Mataafa assembled his forces and hemmed in the town. His men entered the municipality, killed an American marine and three British sailors, barricaded the streets, and seized British houses. An ultimatum was sent to them on March 14, saying that if they did not evacuate the town in twenty-four hours they would be shelled. A bombardment was first opened on villages along the shore, some of which took fire. Marines took possession of the town, which the rebels attacked in the night of March 16, killing an American sentry. The bombardment was kept up for eight days, the whites taking refuge on the war ships. When a third British war ship arrived, the cruiser *Tauranga*, the British and American consuls issued a proclamation stating that they would give Mataafa a last chance to submit. The French priests tried to induce him to give up, but all efforts failed. The Mataafans continued to pillage the property of foreigners and destroyed bridges and barricaded roads. With the aid of the Malietoans, British and American sailors attempted to clear the country around Apia. A party of Mataafans was attacked and put to flight on March 29 at Maguigui. One of the native auxiliaries was seen carrying the head of one of the enemy, and the British officer commanding, threatening to shoot any man found taking heads, induced Malietoa Tanu to issue a proclamation forbidding the practice. The German consul wrote to Admiral Kautz, asking if the American and British commanders countenanced decapitation by their savage allies, and elicited the reply that if the German consul had not resisted the lawful decision of the Supreme Court there would have been no bloodshed, and that the barbarous Samoan custom first became known to the world ten years before when the chief Mataafa, whom the German consul was now upholding, had cut off the heads of brave German sailors.

Armed cutters destroyed villages and boats belonging to Mataafa's party along the coast, and a flying column was sent out from Apia into the bush daily. On April 1 a force of 214 British and Americans, commanded by Lieut. Freeman of the *Tauranga*, was caught in an ambush on a German plantation at Vailele. When the rebels opened fire from three sides the friendly natives ran away, but the marines and sailors stood their ground until their machine gun got jammed, and finally retreated in good order after killing nearly 50 rebels and wounding many. Lieut. Angel F. Freeman and two British seamen were killed and two were wounded, and of the Americans Lieut. Philip Lansdale of the Philadelphia and Ensign John Monaghan, who attempted to rescue him, were killed, also two seamen, and five were wounded. The savages carried off the heads of the slain, according to their practice, but these were recovered by French priests. The German manager of the plantation was arrested and carried as a prisoner on board of a British man-of-war on the charge of having incited the natives to attack the British and

American column. On March 23 Malietoa Tanu was installed as King of Samoa at Mulinu'u in the presence of the American and British representatives, the German officials taking no part in the ceremony. The Germans objected on the ground that the provisional Government was constituted by the unanimous vote of the three consuls, and could not be disturbed unless all three concurred. Admiral Kautz held that it was accepted provisionally, and that by carrying out the decision of the chief justice the situation was brought into accord with the Berlin treaty.

The officers and men of the German cruiser Falke took no part in the operations, the declared policy of the German Government having been from the first not to interfere in the internecine conflicts of the islanders. When the German ex-Lieut. Von Bülow set out with an expedition of natives in boats to take possession of Savaii the Falke compelled the boats to turn back. Admiral Kautz stopped a German schooner that attempted to steal out of the harbor. On April 15 Lieut. Gaunt and a party of 100 men from the Porpoise, after landing at Muliangi, were compelled to retire to their ship under a heavy fire, but returned when the Malietoan natives attacked the Mataafans and drove them from their village. Instructions were sent to Admiral Kautz from Washington ordering him to preserve the *status quo*; and when these arrived he retired on the Philadelphia to Pago Pago, leaving the British to carry on the operations against Mataafa alone. The Mataafans occupied Vailima, where they were unsuccessfully attacked on April 17 by Lieut. Gaunt with a party of trained natives, aided by friendlies. The British continued to bombard villages on the northern coast of Upolu. The British commander also ceased his intervention on receiving instructions to confine himself to the protection of life and property. Hostilities among the natives were suspended also when the consuls informed them of the coming of the commission. Capt. Stuart, of the Tauranga, sent orders to Mataafa on April 23 that he should withdraw his forces outside of a zone 12 miles long and 6 miles broad. He replied defiantly, refusing to withdraw unless the German consul and naval commander agreed. Admiral Kautz and Capt. Stuart then sent an ultimatum, and after guns had been landed at Mulinu'u Mataafa agreed to withdraw. Lieut. Gaunt with his brigade of 900 natives patrolled the prescribed area, and the truce was observed outside of the lines by both parties of natives. The Mataafans encamped at Falenta and proceeded to build forts outside the lines, within which Tanu and Tamasese with their chiefs governed, having a force of 3,500 men, including those brought over from the other islands and comprising half the adult males of Samoa, of whom 2,700 were armed with rifles. The Mataafans declared that if the commission confirmed Tanu as King they would never recognize him, but would resume the war.

The Joint Commission.—The result of the diplomatic negotiations was the acceptance of the German proposition to appoint a joint high commission to study the Samoan question on the spot. The German Government proposed that the commissioners should settle everything by a unanimous agreement on all points. According to the American and English view, the main questions should be referred to the respective governments, and on minor details a majority vote of the commissioners ought to decide. The commissioners were empowered to examine and report upon the state of affairs in Samoa and to assume temporarily the government of the

islands. The United States first accepted the proposition, and a few days later England agreed, that the decisions of the commission must be unanimous in regard to the provisional administration of the islands. If on any point the commissioners were unable to come to an agreement, they were directed to refer to their governments for instructions. The consular and naval officers of the three powers were instructed to obey the orders of the commission. The conclusions arrived at by the commissioners as to the future government of the islands were expected to be followed by the three governments if adopted unanimously by the commission, but the powers of the commission in this respect were only advisory. The commissioners were to furnish separate reports on the recent events, and to make recommendations, either unanimously or separately, as to the future government of the islands.

President McKinley selected Bartlett Tripp to be the United States commissioner. C. N. E. Elliot was appointed by the British Government and Baron Speck von Sternburg by the German Government. The international commissioners arrived in Apia on May 13. Malietoa Tanu, with Tamasese, and Mataafa both visited the commissioners, who recognized neither as King, and said they had power to establish a government with or without a king. The Germans for the first time acted with the representatives of the other powers, sending a guard ashore. In obedience to a proclamation of the commissioners, both the Malietoans and the Mataafans surrendered their arms. Admiral Kautz departed on the Philadelphia on May 21. The British consul, Ernest Maxse, and the German consul, F. Rose, to whose rivalry and ambition the natives attributed the troubles, were recalled, and left Samoa on June 17. American engineers arrived for the purpose of erecting a jetty at Pago Pago, and stores of coal were deposited there. The German peace officer Marquardt, appointed by the provisional Government, and the German manager of the Vailele plantation, both of whom had been detained on the Falke at the request of the English authorities, were released.

The commissioners on June 10 issued a proclamation accepting as valid and binding Chief Justice Chambers's decision recognizing Malietoa Tanu as the rightfully elected King according to native customs. He was, however, induced to abdicate, the commissioners having decided to abolish the kingly office. Mr. Chambers having been confirmed in the office of chief justice, he too resigned. The commissioners appointed a provisional Government, consisting of the consular representatives of the three powers, with Dr. Wilhelm Solf, the new German municipal president, as adviser, the majority to act in all cases where unanimity is not required by the Berlin act.

The commissioners in their investigations found that the kingship depended upon the grant of certain titles by different districts, which were in the gift of small bodies of chiefs, who so often disagreed that it was not unusual for two candidates to be elected at the same time and to decide their claims by force of arms. Even the provision of the Berlin treaty that the chief justice should decide had not averted war. The King in recent years had possessed no authority or practical power to even collect taxes outside of the municipality. The greater part of the population was in permanent rebellion against him, and the mere fact that orders were issued through him was enough to provoke disobedience in certain districts. For many years there had been no law or government other than native custom

outside of the limits of Apia. Murder and other serious crimes, when committed by men of rank, remained unpunished, and the Supreme Court and the nominal Government at Mulinuu had been alike powerless. The importance and bitterness of the disputes arising from the election of a king and his subsequent efforts to exert his authority were complicated by rivalries between the foreign nationalities among themselves and their disposition to take sides in native politics. The insufficient enforcement of the customs regulations allowed unscrupulous traders to distribute large numbers of arms among the native population rent by political factions and ready to fight both one another and Europeans. Even the most important chiefs acquiesced in the abolition of the kingship, which was not an ancient institution. The commissioners recommended its permanent abolition, and in its place they proposed to create a native system of government, by which the islands should be divided into administrative districts, corresponding with those recognized by Samoan usage, for each of which a chief would be responsible, and these chiefs should meet annually in Apia in a native council to discuss matters of general interest and make recommendations to the Government. Native courts would be allowed to punish minor crimes in accordance with native law and custom. To guard against strife between rival claimants for the office of provincial chief it was recommended that the head of the administration should have power to appoint the provincial governor or chief in case of dispute. Because of evils arising from rivalry and mutual hostility of the different nationalities, which formed two parties in the municipal council and decided all questions on partisan and national considerations, the commissioners proposed that an administrator be appointed by the three powers acting in concert, or, in the event of their disagreement, chosen by some disinterested power, to be assisted by delegates of the three protecting governments, who might exercise consular powers. These four would form a legislative council, with power to modify existing laws and ordinances, to alter the boundaries of districts and the details of native government, etc. Consular jurisdiction would be abolished, and the chief justice empowered to decide cases between Europeans and between natives and Europeans, and also to try natives when charged with serious crimes against one another. A municipal magistrate would act as a court of the first instance within the limits of the municipality. The treaty provision against the importation of firearms and the sale of liquor to natives, which had become a dead letter, the commissioners proposed to make more stringent. The commissioners did not think it possible to do away with the disturbing influence of national jealousies under a tripartite administration, and they all agreed that the only natural and normal form of government for the islands, and the only system capable of insuring permanent prosperity and tranquillity, was the government by one power. The task of the commission was to find a workable system under the tripartite arrangement. The chief justice, to be selected in the same way as the administrator, would have power to interpret the amended act, the powers reserving the right to modify or revoke judicial, executive, or legislative decisions on certain political or international questions.

The commissioners visited every district of the islands, and held meetings of the natives. They brought about a reconciliation between the adherents of the Tanu and Mataafa parties, and

learned the views of the people in regard to the form of native government that would be acceptable and best adapted to their requirements. After having decided upon the amendments necessary and proper to be made in the Berlin general act, the commissioners called a meeting on July 14 of all the leading and common chiefs of both the Malietoa and Mataafa factions at Apia. At this meeting 450 chiefs of all ranks were present. The commissioners explained the general propositions contained in their amendments, and these were agreed to and adopted and signed by 13 chiefs delegated by each party. When Chief-Justice Chambers returned to America on July 14 Dr. Wilhelm Solf, the new German municipal president, claimed that the office devolved upon him, but waived his rights at the instance of the German commissioner, and the commission appointed Luther W. Osborn, the American consul general, to act as chief justice until the nomination of a permanent incumbent under the new Constitution. The commission advised the abolition of the office of municipal president, the division of the municipality into three districts instead of two, the election of a mayor by the six councilors, and the submission of the regulations passed by the municipal council to the administrator for approval, instead of to the consular representatives. After appointing Dr. Solf as adviser to the new provisional Government, consisting of the consuls of the three powers, the high commissioners departed on July 18. It was not till a week later that the consular board issued a proclamation assuming the government. The Malietoans failed to obey the orders of the commissioners to leave Mulinuu and dissolve their Government. The Mataafans complained, and the consuls ordered them anew to go to their homes, but failed to give effect to their proclamation.

Division of Samoa between Germany and the United States.—The three governments, adopting the conclusion of their commissioners that the *tridominium* in any form would not lead to permanent tranquillity, negotiated on the basis of a partition of the islands, and on Nov. 14 concluded the following convention:

"The commissioners of the three powers concerned having in their report of the 18th July last expressed the opinion, based on a thorough examination of the situation, that it would be impossible effectually to remedy the troubles and difficulties under which the islands of Samoa are at present suffering as long as they are placed under the joint administration of the three governments, it appears desirable to seek for a solution which shall put an end to these difficulties, while taking due account of the legitimate interests of the three governments.

"Starting from this point of view, the undersigned, furnished with full powers to that effect by their respective sovereigns, have agreed on the following points:

"ARTICLE I.—Great Britain renounces in favor of Germany all her rights over the islands of Upolu and of Savaii, including the right of establishing a naval and coaling station there, and her right of extraterritoriality in these islands. Great Britain similarly renounces, in favor of the United States of America, all her rights over the island of Tutuila and the other islands of the Samoan group east of 171° longitude east of Greenwich, Great Britain recognizes as falling to Germany the territories in the eastern part of the neutral zone established by the arrangement of 1888 in West Africa. The limits of the portion of the neutral zone falling to Germany are defined in Article V of the present convention.

"ART. II.—Germany renounces in favor of Great Britain all her rights over Tonga Islands, including Vavau, and over the Savage island, including the right of establishing a naval station and coaling station, and the right of extraterritoriality in the said islands. Germany similarly renounces, in favor of the United States of America, all her rights over the island of Tutuila and over the other islands of the Samoan group east of longitude 171° east of Greenwich. She recognizes as falling to Great Britain those of the Solomon Islands, at present belonging to Germany, which are situated to the east and south-east of the island of Bougainville, which latter shall continue to belong to Germany, together with the island of Buka, which forms part of it. The western portion of the neutral zone in West Africa, as defined in Article V of the present convention, shall also fall to the share of Great Britain.

"ART. III.—The consuls of the two powers at Apia and in the Tonga Islands shall be provisionally recalled. The two governments will come to an agreement with regard to the arrangements to be made during the interval in the interest of their navigation and of their commerce in Samoa and Tonga.

"ART. IV.—The arrangement at present existing between Germany and Great Britain and concerning the right of Germany to freely engage laborers in the Solomon Islands belonging to Great Britain shall be equally extended to those of the Solomon Islands mentioned in Article II, which fall to the share of Great Britain.

"ART. V.—In the neutral zone the frontier between the German and English territories shall be formed by the river Daka as far as the point of its intersection with the ninth degree of north latitude, thence the frontier shall continue to the north, leaving Morozugu to Great Britain, and shall be fixed on the spot by a mixed commission of the two powers in such manner that Gambaga and all the territories of Mamprusi shall fall to Great Britain, and that Yendi and all the territories of Chakosi shall fall to Germany.

"ART. VI.—Germany is prepared to take into consideration, as much and as far as possible, the wishes which the Government of Great Britain may express with regard to the development of the reciprocal tariffs in the territories of Togo and of the Gold Coast.

"ART. VII.—Germany renounces her rights of extraterritoriality in Zanzibar, but it is at the same time understood that this renunciation shall not effectively come into force till such time as the rights of extraterritoriality enjoyed there by other nations shall be abolished.

"ART. VIII.—The present convention shall be ratified as soon as possible, and shall come into force immediately after the exchange of ratifications."

An explanatory declaration was exchanged at the same time:

"It is clearly understood that by Article II of the convention signed to-day Germany consents that the whole group of the Howe Islands, which forms part of the Solomon Islands, shall fall to Great Britain.

"It is also understood that the stipulations of the declaration between the two governments signed at Berlin on the 10th April, 1886, respecting freedom of commerce in the western Pacific apply to the islands mentioned in the aforesaid convention.

"It is similarly understood that the arrangement at present in force as to the engagement of laborers by Germans in the Solomon Islands per-

mits Germans to engage those laborers on the same conditions as those which are or which shall be imposed on British subjects nonresident in those islands."

Tutuila, the island that falls to the United States, has an area of only 55 square miles, but contains the only safe harbors in Samoa, of which Pago Pago, almost bisecting the island, has been occupied as an American coaling station. With the little adjacent islands, Tutuila has about 4,000 inhabitants, mainly engaged in fishing. The island is mountainous in the interior, and thickly wooded, and is considered the most fertile of the Samoan group. Sugar, coffee, cotton, and the cocoanut palm are the most promising products.

SANTO DOMINGO, a republic in the West Indies, a Spanish colony before independence was achieved in 1844, occupying the eastern part of the island of Hayti. The Congress is a single chamber of 24 members, elected by direct qualified suffrage for two years, 2 members for each of the 6 provinces, 2 for each of the 6 maritime districts. The President is elected for four years by an electoral college. Gen. Ulisses Heureaux was elected President for the term ending Feb. 27, 1900, having already served three terms in succession. The Vice-President is Gen. Wenceslao Figuereo. The Cabinet at the beginning of 1899 was composed as follows: Secretary of the Interior and Police, Gen. J. Pichardo; Secretary of Foreign Affairs, Enrique Henriquez; Secretary of Justice and Public Instruction, S. E. Valverde; Secretary of Finance and Commerce, J. Alvarez; Secretary of Fomento and Public Works, Gen. T. Cordero; Secretary of War and Marine, Gen. T. D. Morales.

Area and Population.—The area of Santo Domingo is 18,045 square miles. The population is estimated at 610,000. Santo Domingo, the capital city, has 14,150 inhabitants. At the head of each province and maritime district is a governor. The language of the country is Spanish. Almost the entire population is of negro or mixed blood. The state religion is Roman Catholicism, but all creeds are tolerated.

Finances.—The revenue, which is raised mostly by duties on both imports and exports, amounted in 1897 to \$1,601,294 in gold, against \$1,545,450 in 1896, \$1,382,500 in 1895, \$1,378,450 in 1894, \$1,115,500 in 1893, and \$652,500 in 1892. Gen. Heureaux has kept up an army of 2,500 men, well drilled and equipped, which has swallowed up half the revenue. He also maintained 3 well-armed gunboats.

The foreign debt was consolidated in 1897 into \$13,325,000 of 2½-per-cent. and \$7,500,000 of 4-per-cent. bonds guaranteed by the customs duties and other assigned revenues, the collection of which was intrusted to the Santo Domingo Improvement Company of New York, which effected the conversion of the debt and undertook to complete unfinished railroads and other improvements. There are also unfunded liabilities bringing up the total indebtedness to nearly \$30,000,000. Before Gen. Heureaux seized the presidency in 1882 the principal debt was the Hartmont loan negotiated with the Rothschilds in 1868, and amounting to \$3,675,000 nominally, although only \$35,000 reached the treasury. President Heureaux raised a loan of \$3,850,000 in Hamburg, Amsterdam, and Brussels in 1888 and one of \$4,500,000 in 1890 in Amsterdam for railroad construction. All these loans were assumed by the American syndicate that undertook to complete the railroads, and this syndicate received \$1,250,000 of bonds for the gunboats, which cost only \$300,000, then \$1,500,000 of bonds when the French in-

demnity of \$400,000 was paid, and \$1,750,000 bonds additional to pay off \$700,000 of advances from the French bank, afterward incorporated by the syndicate as the national bank of Santo Domingo. These were 4-per-cent. bonds, and when the whole debt was consolidated at lower rates of interest the nominal amount was increased, but not a twentieth of the total sum was legitimately expended for public purposes.

Commerce and Production.—Over five sixths of the area of the country is fertile. The forests contain valuable woods and other products. Coffee and cacao are cultivated on an increasing scale, and banana plantations have been established with American capital. Sugar cane also is planted more extensively than heretofore, while the cultivation of tobacco has declined. There is no mining industry, although iron and copper are found, as well as coal, salt, and alluvial gold. About 45 per cent. of the imports come from the United States, 12 per cent. from the Danish West Indies, 11 per cent. from England and her colonies, 7 per cent. from France, 7 per cent. from Germany, and the rest mostly from Curaçoa, Belgium, and Italy. The total value of imports in 1896 was estimated at \$1,875,000, and of exports at \$2,885,000. The export of sugar was 86,866,240 pounds; of cacao, 4,308,820 pounds; of tobacco, 6,332,148 pounds; of coffee, 2,437,400 pounds; of molasses, 1,777,120 gallons; of divi-divi wood, 1,304,930 pounds; of mahogany, 264,254 feet; of other woods, 14,740 tons. The total imports in 1898 were \$1,694,280 and exports \$5,770,489. During 1898 the ports of Santo Domingo were visited by 544 vessels entered and 380 cleared.

Railroads, Posts, and Telegraphs.—The railroad from Samana Bay to La Vega, 62 miles in length, is being carried through to Santiago, and another line is to be built from Barahona to the Cerro de Sal, or Salt mountain. The length of railroads in operation in 1898 was 116 miles.

The post office handled 333,908 internal and 214,092 foreign pieces of mail matter in 1896. The length of telegraphs in 1896 was 430 miles. Several new lines were projected. The cable of the French company transmits foreign dispatches.

Revolution.—Formerly Mexican dollars constituted the principal currency. As these steadily depreciated, while the commerce of the country was mainly with gold-paying nations, President Heuraux, being urged thereto by the merchants and planters, had a law enacted in 1895 retiring the silver currency and declaring a gold basis. All customs dues were made payable in gold, and Mexican money was declared to be no longer current. There being but little gold in the country, a dearth of currency was felt immediately. A merchant and planter named Vicena, to whom the President was indebted, received permission to put into circulation for the payment of laborers and ordinary internal requirements the sum of \$2,200,000 in silver dollars and minor coins. They were minted in the United States, and contained at first 12, afterward only 8 cents' worth of silver. Although declared legal tender at 50 cents on the dollar in gold, the people would not accept them except at a heavy discount as soon as it became known that they were made of base metal. The scarcity of money was more and more severely felt, and to supply a circulating medium the National Bank was authorized in January, 1899, to issue \$4,200,000 of paper currency at the exchange rate of \$2 for \$1 of American gold or bills. It was guaranteed by the Government and declared redeemable in lawful money of the republic, but declared also to be itself lawful money. Congress appropriated

20 per cent. of the export duties for its redemption, a provision that carried little assurance, since the fund would not exceed \$125,000 a year. The National Bank is owned by the Santo Domingo Improvement Company, except one third of the stock, which was sold or given to President Heuraux. The new bills became known as Heuraux's money, and almost on the day of issue they dropped to four to one, falling soon to six to one, at which rate they were held as long as no more were put out. President Heuraux decreed that six to one should henceforth be the legal rate, and then began to issue more, upon which the rate fell till it was twenty to one, and merchants were afraid to accept the money, fearing that the emission was already much in excess of the authorized amount. The planters had agreed to pay laborers \$3.50 a day in currency for harvesting the sugar crop, but the prices of food and clothing rose to ten, to twenty times what they had been, and many storekeepers refused to take the bills at all. When the people began to starve the revolutionary spirit became rife. In May President Heuraux quit issuing the paper, and to check the rising anger of the people he announced that he would soon redeem the notes with gold at six to one. This remained an empty promise. He had so exhausted the credit of the Government by previous borrowings and financial mismanagement that he could no longer raise a loan on any terms. When he pleaded with merchants to accept the bills at six to one they demanded the redemption of the great quantity they had already taken in and could not get rid of.

Gen. Heuraux, taking what little gold he could get, determined to go into the most disaffected and hostile section of the interior and endeavor by publicly exchanging gold for bills and ostentatiously burning these to restore confidence among the common people and impress his enemies by his bravado. Taking only a small bodyguard, he journeyed on one of his naval vessels from Santo Domingo city to Samana Bay, from Sanchez to La Vega by rail, and thence on horseback to Moca. Arriving there, he was received by the municipalities with outward deference, but was alarmed to find that his orders were not obeyed. Still he went about courageously, giving gold coins to poor people, as was his custom. Suddenly he was surrounded by a band of conspirators and shot down by one of them. No one attempted to arrest the murderer, not even the members of the President's bodyguard who were present.

The American gunboat *Machias* and the cruiser *New Orleans* were ordered to Santo Domingo as soon as the news of the murder reached Washington, with orders to protect American lives and property in the event of public disturbances. The arrival of these war vessels had the effect of checking the machinations of some of the individual members of the Cabinet who aspired to the presidency and would have used force to realize their ambition except for the fear of American intervention. As it was, they united under the aged Vice-President in repressing the revolutionary movement against the existing system, each waiting for a favorable moment to unmask his own design. Rioting and shooting had begun in the streets of Santo Domingo, but ceased as soon as the *Machias* arrived.

The most popular and powerful candidate for the succession—one who had already fitted out expeditions and organized uprisings for the overthrow of Heuraux—was Juan Isidro Jimenez, the wealthiest and most enterprising of the Domini-

can merchants and planters. He had been an object of suspicion and jealousy to President Heuraux, and in consequence had lived in exile and had suffered losses through the discriminations of Government officials. He openly opposed the military despotism of Gen. Heuraux, and on May 31, 1898, he landed at Monte Christi from the United States steamer Fanita, having plenty of arms that he had obtained on the pretense of conducting an expedition to Cuba to supply the soldiers of Gomez. He expected to find 1,000 men ready, but his message had not been delivered to Gen. Toribo Garcia, and he was compelled to flee before the Government troops to his ship, and was arrested in the Bahamas on complaint of the United States consul, tried by a jury, and acquitted.

President Heuraux was murdered by Ramon Caceres, whose father was executed by his order in 1884. Gen. Figueroa, the Vice-President, immediately assumed the functions of President. Partisans of Gen. Jimenez who were living in exile at Cape Haytien prepared to enter Santo Domingo. Jimenez was in Havana. With a staff of Dominican and Cuban supporters he took passage at Cienfuegos, but was detained by order of Gen. James H. Wilson. Later he was released. War material had been collected on the east coast of Cuba, and he intended to conduct an expedition from Baracoa. Meanwhile his partisans rose at Moca. Caceres, who escaped to the mountains, raised 300 followers and entered San Francisco, the governor of which surrendered without a blow, although he had 150 men armed with repeating rifles. Business was suspended at the capital in consequence of the severe repressive measures taken by the Government to prevent an outbreak. Numbers of Liberals were put into prison every day. Five revolutionary generals occupied the towns of Guayabin, Sabaneta, Manzanillo, and Dajabon, which the Government troops abandoned. The insurgents were joined by 1,200 Dominicans from Hayti, who crossed the Yaqui river under fire of mitrailleuses and defeated the Government troops, killing 18. Gen. Francisco Liriano, who was ordered to march from Monte Christi to attack Gen. Ramon Pacheco at Dajabon, the revolutionary headquarters, was deserted when in front of the enemy by the main part of his command, and had to retire in haste. Gen. Pacheco next attacked the troops of Gen. Antonio and defeated them, inflicting a loss of 150 men and capturing two field pieces, losing only 13 of his own men. After this the revolutionists marched on Santo Domingo. The Government sent out commissioners to ascertain their demands. Porto Plata and all the other towns of the chief maritime district and nearly the whole of the interior were in their possession. On Aug. 30 they established a provisional Government in the city of Santiago, with Gen. Horacio Vasquez as President and Gen. Ramon Caceres as Minister of War. The general desire was that Gen. Jimenez should be the permanent President. The Government in Santo Domingo adjourned Congress. One city after another declared for Jimenez, and the governor of the province thereupon announced his allegiance to the cause of the revolution, and sent out the intelligence that the city had been taken by the revolutionists. There was no fighting except the few engagements with the trained soldiers of Gen. Heuraux that remained steadfast. On the day that the provisional Government was proclaimed and the revolutionists set out for Santo Domingo the Cabinet ministers had arms and ammunition loaded on schooners to be sent to Azua. The

people of the city collected together, demanded that the ministers should resign their posts, and broke into the palace and stoned the ministers' houses. The frightened ministers announced that they would turn over their powers to men selected by the citizens. Four were chosen by acclamation to act with the governor as a committee of safety until the arrival of the members of the provisional Government. Business and agricultural work were resumed and went on as usual, while the provisional President proceeded to the capital with an escort of horsemen. The town of Monte Christi did not surrender till Sept. 8. Provisional President Sanchez issued a proclamation declaring duties payable 70 per cent. in gold and 30 per cent. in national silver, and announcing that the value of paper money would not be decided until the meeting of Congress. This made paper no longer current, causing dissatisfaction, and therefore with the approval of Jimenez a fresh proclamation was issued announcing that paper would be accepted at the same rate as silver. When Gen. Jimenez arrived in the middle of September Gen. Sanchez resigned the presidency in his favor. An election was held later, in which Juan I. Jimenez was chosen President and Horacio Sanchez Vice-President for a term ending in 1903.

SERVIA, a kingdom in southeastern Europe. The legislative body is a single chamber, called the Skupshtina, composed of 198 members elected by the votes of all male Servians who pay 15 dinars, or francs, in direct taxes. The reigning King is Alexander I, born Aug. 14, 1876, who succeeded to the throne in 1889 upon the abdication of King Milan, his father, and assumed the government in person on April 13, 1893. The ministry, constituted on Oct. 23, 1897, was composed in the beginning of 1899 as follows: President of the Council and Minister of Foreign Affairs, Dr. Vladan Georgevich; Minister of Finance, Stevan D. Popovich; Minister of Commerce, Agriculture, and Industry, Sima Lozanich; Minister of the Interior, Jefrem A. Andonovich; Minister of Public Instruction and Worship, Andreas Georgevich; Minister of Justice, Costa N. Christich; Minister of Public Works, Gen. J. Atanatskovich; Minister of War, Col. D. Vutchkovich.

Area and Population.—The area of Servia is 19,050 square miles. The population at the census of Dec. 31, 1895, was 2,312,484, consisting of 1,186,594 males and 1,125,890 females. On Dec. 31, 1898, it was computed to be 2,413,694, comprising 1,240,105 males and 1,173,589 females. The number of marriages in 1898 was 22,521; of births, 84,789; of deaths, 55,300; excess of births, 29,489. Belgrade, the capital, had 59,259 inhabitants in 1898.

Finances.—In the budget for 1899 the total revenue was estimated at 68,824,500 dinars or francs, of which 22,035,000 dinars come from direct taxes, 6,000,000 dinars from customs, 3,850,000 dinars from excise, 2,500,000 dinars from courts of law, 19,461,000 dinars from monopolies, 6,200,000 dinars from state railroads, 660,000 dinars from instruction and sanitary funds, and 5,084,000 dinars from various sources. The expenditures were estimated at the total sum of 68,822,569 dinars, of which 1,200,000 dinars were for the civil list, 360,000 dinars for ex-King Milan's appanage, 76,810 dinars for court employees, 20,784,545 dinars for the service of the national debt, 150,000 dinars for the Skupshtina, 155,816 dinars for the Council of State, 341,400 dinars for general expenses, 2,722,051 dinars for pensions and subventions, 1,722,531 dinars for the Ministry of Justice, 2,937,366 dinars for the Ministry

of Worship and Public Instruction, 1,844,217 dinars for the Ministry of Foreign Affairs, 3,353,750 dinars for the Ministry of the Interior, 8,195,130 dinars for the Ministry of Finance, 15,754,613 dinars for the Ministry of War, 4,764,903 dinars for the Ministry of Public Works, Agriculture, and Commerce, 428,358 dinars for miscellaneous expenses, and 1,005,052 dinars for the Board of Audit.

The total debt on Jan. 1, 1899, was 416,912,807 dinars, of which 352,190,000 dinars were converted bonds of 1895, 29,785,000 dinars lottery bonds of 1881, 10,012,500 dinars revenue bonds of 1886, 3,750,000 dinars a Russian loan, 1,352,000 dinars a loan secured on the salt monopoly, 9,640,000 dinars one secured on the tobacco monopoly, 924,500 dinars a railroad loan, and 9,258,807 dinars borrowings from the national bank.

Commerce and Production.—In Servia nearly nine tenths of the men are farmers owning from 10 to 30 acres or more of glebe land, orchard, and pasture. The crops are Indian corn, wheat, barley, rye, oats, tobacco, hemp, flax, wine, prunes, and other fruits. The forests belong to the Government and the villages, and are cut methodically, cask staves being exported to Hungary and France. Pigs, cattle, and sheep are reared for export. The Government and various companies mine coal, iron, lead, zinc, antimony, silver, etc. The total value of imports in 1898 was 41,102,000 dinars, and of exports 56,991,000 dinars. The imports of horticultural and agricultural produce were 4,116,000 dinars, and exports 22,259,000 dinars; imports of food and drink 1,357,000 dinars, and exports 1,824,000 dinars; imports of colonial goods, 3,368,000 dinars; imports of animals and animal products 451,000 dinars, and exports 26,744,000 dinars; imports of hides, leather, and rubber 2,798,000 dinars, and exports 3,279,000 dinars; imports of wool and woollens 1,483,000 dinars, and exports 157,000 dinars; imports of seeds and seed products 1,483,000 dinars, and exports 157,000 dinars; imports of wood and wood manufactures 2,407,000 dinars, and exports 495,000 dinars; imports of metals 4,352,000 dinars, and exports 596,000 dinars; imports of stone, clay, and glass products 2,523,000 dinars, and exports 319,000 dinars; imports of paper, 984,000 dinars; imports of drugs, dyes, and chemicals 1,320,000 dinars, and exports 147,000 dinars; imports of machines and instruments 1,320,000 dinars, and exports 23,000 dinars; imports of cotton and linen goods 6,884,000 dinars, and exports 959,000 dinars; imports of silk goods, 660,000 dinars; imports of hardware, 1,111,000 dinars; imports of trimmings, embroideries, and bonnets 2,703,000 dinars, and exports 2,703,000 dinars; imports of fertilizers 2,000 dinars, and exports 71,000 dinars. The values in dinars of imports from and exports to different countries in 1898 are given below:

COUNTRIES.	Imports.	Exports.
Austria-Hungary	22,965,000	50,982,000
Germany	4,282,000	2,248,000
Turkey	1,806,000	1,989,000
Great Britain	3,887,000	
Roumania	2,357,000	200,000
Bulgaria	1,526,000	956,000
France	652,000	378,000
United States	1,053,000	
Italy	739,000	3,000
Belgium	546,000	
Switzerland	507,000	14,000
Greece	353,000	46,000
Russia	291,000	
Bosnia	39,000	167,000
Total	41,102,000	56,991,000

The Army.—Obligatory military service was decreed in 1896, commencing at the age of twenty-one and lasting two years with the colors, eight years in the reserve, ten years in the first ban, and ten years in the second ban. The authorized strength of the active army in 1897 was 1,248 officers and 21,200 men, of whom 14,000 were infantry, 1,400 cavalry, 4,000 artillery, 1,000 engineers, 300 train, and 500 sanitary troops. The number of horses was 4,846; of field guns, 192. The war effective is calculated at 5 divisions of 22,049 men, making 110,245 men in the regular army.

Railroads, Posts, and Telegraphs.—The length of railroads in operation is 377 miles, consisting of the Servian section of the international railroad to Constantinople and branches to Pirot, Velika Plana, and Kraguyevatz. There are 2,526 miles of telegraph, with 5,042 miles of wire. The number of dispatches in 1898 was 996,094, of which 838,828 were internal, 131,082 international, and 26,184 in transit. The postal letter traffic in 1898 was 11,222,000 in the internal, 3,864,000 in the foreign, and 1,513,000 in the transit service, and of registered letters and postal orders 310,000, with 101,728,000 francs, were sent in the internal, 151,000, with 57,644,000 francs, in the external service, and 671,000, with 30,440,000 francs, in transit.

Political Affairs.—The rivalry of the two native Servian dynasties, the Karageorgevichs and the Obrenovichs, which have alternately seized the supreme power, the contest between Austria and Russia for a predominating influence in Servian affairs, the rival ambitions of the Servian King and the Prince of Montenegro to unite all Serbs under one scepter, and the fierce and vindictive passions roused by the struggle for place between the leaders of the Radical, Liberal, and Progressive parties have kept the kingdom in a constant turmoil, and have retarded its political, social, and economic development, permitting it to be outstripped by Bulgaria and Roumania, which have inferior natural advantages. The Radical party, which represents the bulk of the peasant population, has always been bitterly hostile to King Milan, subservient to Russian influences, and clamorous for a reduction of the army and the substitution of a peasant militia, which would reduce taxation and relieve the people from onerous military service and at the same time curb King Milan's power, who has always been popular with the army, although he led it to defeat. The Liberals, who draw their main strength from the town population, have no definite political principles aside from a general leaning toward Russia. The Progressives have supported King Milan's policy of favoring Austrian aid and influence, being jealous of Russian interference with national independence, and looking to western Europe both for the impetus to political and intellectual progress and for the stimulus and the necessary capital for economic progress. While King Milan reigned he was engaged in an incessant conflict with his many foes, and in the end he succumbed to the Radicals, aided by Russian influence and the friends of his divorced consort. On being promised a liberal yearly allowance, he agreed in 1888 to go into perpetual exile. It was decided that Queen Natalie should likewise live abroad, and that the heir apparent should be proclaimed King, with M. Ristich, the Liberal leader, as regent. Queen Natalie, however, came back and was only expelled after a desperate resistance on the part of her adherents in 1891. The Radical party, under the lead of M. Pashich, then took the helm, and proceeded to carry out

to its ultimate conclusions the liberal Constitution extracted from King Milan at his abdication. Radical rule was wrecked on the rock of finance, and when the Government became insolvent, and a system of foreign control had to be accepted in regard to a part of the revenue, M. Ristich succeeded in ousting the Radicals and gaining the offices for his own party, which set to work exterminating the Radicals in order to make the tenure secure. The country was drifting toward civil war when the young King, on April 1, 1893, declared himself of age, dismissed the regents, and abrogated the Constitution. Ex-King Milan, who had suggested the *coup d'état*, was recalled from banishment, and, though residing much of the time abroad and keeping in the background at first, guided with his cunning hand the policy of his son, becoming gradually bolder, until, having effected a formal reunion with Queen Natalie, he was appointed generalissimo of the Servian army in 1898. At the elections which followed the Radicals were only allowed to send one Deputy to the Skupshtina, and he immediately resigned.

In the session of the Skupshtina which closed on Jan. 23, 1899, a general tariff was adopted, with other measures designed to strengthen the finances of the state. The Russian minister, M. Jadovski, lost no opportunity of showing dissatisfaction with the presence of ex-King Milan, who in violation of his compact to reside abroad and interfere no more in Servian affairs was now the supreme military dictator. Early in March M. Jadovski departed from Belgrade, leaving Russian interests in the care of a *chargé d'affaires*.

In the spring border fights occurred between Servian peasants and their Mohammedan neighbors, who had driven many of the Christians out of the Turkish vilayet of Kossovo and forced them to emigrate into Servia. This engendered conflicts, in which the frontier was violated on both sides. A serious affray took place on June 16, when a large body of Albanians gathered threateningly on the border was fired upon by Servians in ambush and Turkish *nzams* from the neighboring fort joined in the fighting. The Servian Government dispatched 8 battalions to the spot, informing the Porte that it was compelled to provide protection for the frontier, since Turkish promises to respect it had proved untrustworthy. The Turkish Government replied that the Ottoman troops had only acted in self-defense when they were fired upon and some of them killed by Servian gendarmes. The Albanians, who had recently been supplied with Mauser rifles from the Turkish arsenals, returned to their homes, and the incident was closed, without the blame being fixed on either side, by the appointment of a joint commission to prevent further disorders.

On July 6, as ex-King Milan was driving through one of the principal streets of Belgrade, a political adventurer fired at him twice with a revolver, grazing his body. His aid-de-camp interposed and received a wound, and as the would-be assassin was seized he fired a fourth shot at his own head, but missed. He was a Bosnian, who had served in the fire department, a young man named Giuro Knezevich, who implicated several of his acquaintances and told a story of going to Roumania and receiving a thousand imperials from a stranger, presumably the Karageorgevich pretender or his agent. Prince Alexis Karageorgevich, son-in-law of Prince Nicolas of Montenegro, was heard of at this time in a Hungarian town near the Servian frontier. A suspicious character who gave the name of

Krezovich, a Turkish subject, had recently been arrested and had given information against prominent members of the Radical party. Other informers told of peasants who had predicted a change of Government in a few days. King Milan assumed that there was a widespread conspiracy to overturn the Obrenovich dynasty in favor of Peter or Alexis Karageorgevich or the Prince of Montenegro. He assumed that all his enemies and critics were involved in it. Martial law was proclaimed, and all the leaders of the Radical party and the independent writers and speakers who had expressed disapproval of the Government were arrested, as well as the persons incriminated by Knezevich's confession and the villages who hoped for the return of the Radicals to power. A cousin of the Prince of Montenegro, one Bozo Petrovich, who had received a pension from the Servian Government, was conducted across the frontier. Gen. Sava Gruich, Servian minister at St. Petersburg, was relieved of his functions because he had censured the Government in a private letter. He was once the head of a Radical Cabinet, but had since taken no part in domestic politics. The Czar conferred a decoration upon him in response to the message discharging him from his post, dismissing him from the army, and summoning him home to stand trial for complicity in a treasonable conspiracy. When Pasich, the leader of the Radical party, was arrested the police found notes of a committee meeting at which the heads of the party discussed the plan of counseling the peasantry to withhold their taxes until the collectors called upon them to pay, as they expected in the meantime to get control of the offices. Pasich, Taushanovich, Listich, Protich, and other prominent Radicals were arrested, including the Pope Jurich, a renowned political orator, also Prof. Milenko Vesnich, of the Belgrade University. Russia and Austria-Hungary refrained from diplomatic interference, as they were bound by a secret mutual understanding not to intervene directly in the affairs of the Balkan states. Both, however, gave unmistakable unofficial warnings against the attempt of ex-King Milan to seize this opportunity to get rid of all his political opponents. Of 56 persons arrested, 16 were set at liberty after the preliminary examination. The trial, which was held at Nish, began, after several postponements, early in September, and lasted three weeks.

Meanwhile the Skupshtina was summoned to meet in extraordinary session, principally for the purpose of granting a bill of indemnity for the proclamation of a state of siege. Before it met the Minister of the Interior, M. Andonovich, and the Minister of Commerce, M. Lozanich, handed in their resignations, which were accepted. M. Petrovich, the Minister of Finance, was appointed on Aug. 11 to be Minister of Commerce *ad interim* and M. Genshich to be Minister of the Interior. On the eve of the state trial one of the prisoners, the Prefect Angjelich, believing that the Government had deserted him, and being anxious to secure for his widow her pension, found means to hang himself in his cell. As the trial was conducted under the law of the minor state of siege, the prisoners were not allowed to confer with their counsel, nor were the counsel informed of the specific charges and proofs brought out against their clients in the preliminary investigation; neither were they permitted to cross-examine witnesses during the trial. When the prisoner Knezevich was interrogated he retracted his former confession, and said that he alone had planned the crime, because an acquaintance had told him that ex-King Milan, to whom he

intended to apply for employment in the army, would be likely to send him to prison and have him tortured, as he hated Bosnians. The proofs that the prosecution relied upon to connect ex-Col. Nicolich and other persons with Knezevich or to trace the latter's journey to Roumania broke down. Knezevich repeated his accusations against the others, and before the end of the trial recanted them again, saying that he wanted to pay off grudges against those persons and to save his own skin. The wholesale denunciations of Krezich or Krezovich, whose real name was proved to be Payich, he having stolen the passport of one Dimitri Krezovich, were no better established. Ranko Tisich, once the aggressive Radical leader of the Servian peasantry, was included in the indictment, but he had been long a refugee, holding a post of honor in the Montenegrin Government. Several other accused peasants took flight before the arrests were made. Six of the prisoners, including Knezevich, were charged with being concerned in the plot to kill ex-King Milan, the other 23, on the information of Krezovich, with conspiring with members of the Karageorgevich family to overturn the Obrenovich dynasty. Ten more were placed on trial for the minor offense of *lèse-majesté* or for infractions of the press law. The *lèse-majesté* consisted in uttering insults against ex-King Milan, who was heir to the throne. This offense was proved by the evidence to have been committed by Taushanovich and others of the Radicals; but the antidynastic plot was not shown, nor were any relations with the pretenders, except on the part of the priest Jurich. The court ruled that offenses against ex-King Milan were offenses against the dynasty. To the surprise of many people who had followed the proceedings, the judges, on Sept. 25, found most of the prisoners guilty. Knezevich was sentenced to death, and was immediately shot, protesting once more before his execution that he had no accomplices. Three of those whom he had accused and exculpated by turns were sentenced to twenty years' hard labor, as were Jurich, Protich, Pavichevich, and even Milinkovich, who claimed to be a Government spy in the employ of the prefect that had killed himself after protesting that he had acted under instructions from ex-King Milan. Pasich, with seven others, was sentenced to five years' imprisonment; Taushanovich to nine years' imprisonment. Tisich and Uroshevich, a fugitive in Roumania, were sentenced *in contumaciam* to twenty years' penal servitude. Six peasants who had spoken of an impending change of administration were condemned to prison for five years, because, though not actually conspiring, they had omitted to inform the Government. M. Vesnich, Professor of International Law, was sentenced to two years' penal servitude, and M. Pavolovich, who had been previously deprived of a professorship for writing against ex-King Milan, received a three years' sentence, two others sentences of six and eight years, and six more various terms on the charge of *lèse-majesté*. Pasich was pardoned within an hour, and in thanking the King for his clemency he promised him his support. Plots against the Obrenovich dynasty were known to exist, although no direct connection of any of the prisoners with such a plot was legally proved at the trial, and in the course of his deposition Pasich had blamed himself for not having rid the Radical party of the antidynastic elements. His letter to the King was tantamount to a recantation of his Radical principles and a condonation of the constitutional changes which destroyed the Constitution of 1888.

After the court had rendered its unexpectedly severe verdict the Russian *chargé d'affaires* left Belgrade, intrusting to the second secretary the conduct of the business of the legation, after first calling the attention of the Servian Government to the painful impression produced abroad by the severity of the sentences. The representatives of France and Italy made similar representations.

The Skupshtina was convoked at Nish on Oct. 2. Stricter laws against sedition were submitted. A commercial convention with Turkey was approved. The revenue was increasing, and arrangements were made for the extension of railroad communications, especially a contract with an English firm for a railroad through western Servia. The development of the army, the raising of the material condition of the people, and the return of the people from political agitation to productive work were the avowed objects of the Government programme. The loyalty of the people not being agreeable to the subversive elements, these were represented in the royal speech as having hired a venal individual to strike at the life of King Milan with a view to the destruction of legal order. The state of siege was raised just previous to the convening of the Chamber. The Government, which has often before broken its pledges to its creditors and concessionaires, attempted to confiscate the railroad surplus that had been mortgaged to bondholders, offering to substitute for this security the profits of the match and cigarette-paper monopolies. The foreign creditors, who are mostly Germans, refused to accede to the change. The fruit harvest was so abundant in 1899 that only a part was marketed. The Government has offered inducements to English capitalists to improve the means of communication and open up the mines of the country.

SIAM, an absolute monarchy in southeastern Asia. The reigning King is Chulalongkorn, born Sept. 21, 1853, who succeeded his father Mongkut on Oct. 1, 1868. The King, who has power to name his successor from among the princes of the royal family, on Jan. 17, 1895, nominated as Crown Prince his eldest son, Maha Vajiravudh. By the royal decree of Jan. 10, 1895, a Legislative Council was created, consisting in 1899 of 43 members, including the Ministers of State.

Area and Population.—The territory east of the Mekong river as far as the mountain range of Annam, formerly claimed by Siam, was conceded to be French in the treaty of September, 1893. The present area of the kingdom is about 244,000 square miles, including 60,000 square miles in the Malay Peninsula. The population, estimated at 10,000,000, comprises about 2,500,000 Siamese, 3,000,000 Chinese, 2,000,000 Laotians, 1,000,000 Malays, and 1,500,000 Cambodians, Burmese, Indians, and others. Bangkok, the capital, has over 400,000 inhabitants. The labor of the country is mostly done by immigrants—Karens and Burmese in the teak forests of the north and Chinese coolies in the mines and factories of the south. The natives are liable to forced labor, and compelled to work for the local governors at certain periods of the year. Slavery for debt is legal, though by an edict of the present King no person born since his accession can be held in slavery after reaching the age of twenty-one.

The standing army numbers about 12,000 men, but not more than 5,000 are kept under arms. The principal vessel of the navy is the cruiser Maha Chakrkrri, of 3,000 tons, armed with 4 4.7-inch and 8 6-pounder quick firers.

Commerce and Production.—Rice is the chief agricultural product, being the common food of

the people and an important article of export. The cultivation has been extended by the cutting of irrigation canals through the upper part of the Menam delta. Pepper and sesame are also grown for export, and tobacco, coffee, hemp, and cotton for domestic consumption. Salt and dried fish are exported in considerable quantities. The forestry products are important. Most of the teak forests have been leased to Englishmen. The ruby and sapphire mines in Chantabun are worked by an English company. Concessions have been granted for gold mining. Coal, iron, copper, manganese, zinc, and antimony exist, but are not regularly mined. The trade of the country is carried on by Europeans, Chinese, and other foreigners. The total value of imports in 1897 was £2,484,807, and of exports £3,203,218. Included in the imports are £874,376 of treasure, and in the exports £116,520. The importation of cotton goods was £237,208; of silks, £91,519; of gunny bags, £75,692; of kerosene, £75,437; of piece goods, £68,863; of sugar, £82,316; of opium, £55,055; of cotton yarn, £46,016; of hardware and cutlery, £39,933; of iron and steel goods and machinery, £29,974; of other merchandise, £829,418. The exportation of rice was £2,342,619; of teak, £284,012; of fishery products, £84,888; of various woods, £39,173; of pepper, £22,693; of other articles, £313,313. During 1897 there were 533 vessels, of 431,611 tons, entered and 521, of 463,244 tons, cleared at the port of Bangkok. Over 73 per cent. of the vessels entered and 77 per cent. of the vessels cleared was British.

Railroads, Posts, and Telegraphs.—There is a railroad between Bangkok and Paknam, 14 miles, and of the railroad from Bangkok to Korat 98 miles have been completed. Another railroad has been sanctioned leading from the capital to Ban Mai, on the Patiew river, and a line running from Bangkok to the northeastern extremity of the country has been surveyed. An American company has constructed trolley roads and an electric-lighting plant in Bangkok.

The telegraph lines have a total length of 1,820 miles. The post office in 1896 forwarded 471,295 internal and 373,704 foreign letters, etc.

Political Affairs.—The reorganization of the Government and nation on European models with the help of foreign experts was the policy adopted by King Chulalongkorn when the encroachments of the British from Burmah and of the French from Annam threatened his kingdom with extinction. To prevent the undue growth of foreign political influence he has placed different departments of administration under the control of Europeans of different nationalities, preferably from the small and neutral countries that have no great interests or ambitions in the East. After the annexation of the five border Shan States to Burmah in 1884 he was for some time distrustful of Great Britain. The endless disputes with France since the rectification of the frontier of Annam and Tonquin in 1893 turned his animosity toward that power, and, as Great Britain supported him in his territorial claims against French pretensions, he has favored British commerce in Siam and employed British officials, and toward the French he has shown constant hostility. The assumption by France of protection over the descendants of Annamite and Laotian prisoners of war, colonies of whom are scattered over the Menam valley, has been a constant source of irritation. Although this class of people was recognized as entitled to French registration by the treaty of 1893, the Siamese authorities have raised every possible difficulty to

their claim, and have continued to subject them to taxation and forced labor. By the Anglo-French convention of 1896 the integrity of the Menam valley was secured by mutual pledges on the part of Siam's powerful neighbors. By her diplomatic support in securing the evacuation of Siamese territory when French troops occupied the capital in 1893 England obtained for herself the reversionary right to the Siamese Malay states, while France was restricted to the old frontier of Annam.

The Siamese Government is indebted to a distinguished Belgian jurist, Rolin Jacquemyns, its chief European adviser, for the reform of its laws and law courts and the general reorganization of the administration. The chief branches of the administration are in the hands of princes of the royal house. The Minister of Finance is a brother of the King, Prince Mahitson. The Minister of the Interior is Prince Damrong. The Minister of Justice, Prince Rabi, a son of the King, was educated in Oxford University and called to the bar in London. A college has been founded with an Englishman at its head for the education of the sons of the nobility, so that they can carry on the work of the administrative departments now intrusted to foreigners. The chief criminal judge is a Siamese who read law in England, and the attorney-general an advocate from Ceylon. Many of the smaller courts have Belgian advisers attached to them. A Dane has reorganized the rural police, with countrymen of his own for subordinates. The inspector of the police in Bangkok and on the river and railroad is an English official from Burmah, who has other Englishmen under him, and has introduced Pathans and Sikhs into the police force of 2,515 men. The foreign naval officers are all Danes. Belgians are employed in many of the departments, but since 1896 the leading part in the reform of the public services has been confided to English officials lent by the authorities of Burmah. An English surveyor general with ten English assistants has undertaken a cadastral survey of the country. The English conservator of the forests has effected a thorough reform of the forestry department. Effective control has been instituted, and regulations similar to those which have conserved the teak forests of Burmah have been enforced, arresting the wholesale destruction that threatened the teak forests of upper Siam. Leases are given for six years, and only trees of a certain girth that have been girdled for two years are allowed to be felled. Under the new supervision the royalties collected have increased fourfold, and a permanent source of revenue has been restored to the Government.

The reform of the financial administration was undertaken in 1896 by Mitchell Innes, of the Burmese Government staff, who was succeeded early in 1899 by Rivett Carnac, also from Burmah. In the year preceding the appointment of a financial adviser, the year ending March 31, 1896, the revenue was £1,080,000, being £30,000 more than the average for the last two previous years. For the year ending March 31, 1898, this amount had risen to £1,488,000. During the same time expenditure increased from £762,000 in 1896 to £1,416,000 in 1898. For 1899 the revenue was estimated at £1,740,000 and expenditure at £1,560,000. The increase in revenue is attributed partly to the increased prosperity of the country and partly to more punctual and efficient collection, partly also to the introduction of an improved system of accounts and to improvement in the administration of justice. The revenue from the farming of gambling privileges increased

from £116,800 in 1896 to £253,800 in 1898, that yielded by the opium farm from £165,600 to £190,200, and that of the spirit farm from £165,600 to £187,800. Customs receipts increased from £128,400 to £159,000, and the *likin* revenue from £72,600 to £82,200, notwithstanding the abolition of a large majority of the inland transit duties. There was an increase in the land tax on paddy land from £56,760 to £88,560, and in the revenue from teak from £7,380 to £33,240. The poll tax collected in 1898 was £56,100, having increased more than threefold. Old debts collected in 1898 amounted to £41,000. Increased expenditure is due chiefly to the reforms in the police and the courts of law, the large increase of European staffs, the cost of the cadastral survey, and a general increase in salaries, especially of the higher officials. The King's civil list, which was formerly 15 per cent. of the gross revenue, has been fixed at £126,000. The Burmese village system has been introduced.

The Siamese Government with British support is seeking a revision of the commercial treaties that have been in operation for more than forty years. The treaties define 3 per cent. as the highest import duty to be levied on foreign goods, payment of which frees them from all other imposts of any kind. It is desired also to reconsider the immunity of taxation enjoyed by foreigners and the multitude of foreign *protégés*, none of whom can be subjected to any impost, besides the land tax and the import duties, without the consent of the foreign consul. The privileges of extraterritoriality are extended in Siam to an extraordinary number of persons.

The Government of Siam has always paid current expenses and the cost of whatever public works have been constructed till now out of each year's revenue. A foreign loan has been proposed by the present European advisers. The productivity of the country can be increased by means of railroads and irrigation works, especially rice production in the upper valley of the Menam. A system of irrigation canals has been decided upon, and Dutch engineers were sent for to take charge of the construction and management.

By the treaty of 1893 a zone of 25 kilometres on the right bank of the Mekong was declared neutral. The French have the right to establish stations there, but neither French nor Siamese armed troops are allowed to enter the strip. In the spring of 1899 M. Doumer, Governor of French Indo-China, went to Bangkok, and in a series of conferences with the King and his ministers brought about a better understanding than had existed for years. The King promised to employ a staff of French engineers in the Public Works Department, to attach French advisers to other departments, to have French professors appointed in the colleges, and to have the French language taught in the schools.

SOUTH AFRICAN REPUBLIC (formerly Transvaal Republic), an independent state in southern Africa, between the Vaal river on the south and the Limpopo on the north, bounded east by Portuguese possessions and west by Bechuanaland. Capital, Pretoria. The legislative powers are vested in the Volksraad, consisting of 2 chambers, each having 27 members elected in as many districts. The members of the First Chamber are elected by burghers of the first class—white male citizens who were resident in the Republic previous to 1876 or who served the Republic in the war of independence, the Malaboch war, the expedition to Swaziland, or other native wars, or the operations against the Jameson raiders. The sons of

all such citizens are also first-class burghers from the age of sixteen. The second class of burghers, who are permitted to cast votes for members of the Second Chamber only, consists of naturalized white citizens. An alien may become a naturalized citizen after two years of residence by inscribing his name on the books of the field cornet and paying a fee of £2. To become eligible to the Second Raad, an alien must have resided two more years in the country and must take the oath of allegiance. The sons of naturalized burghers must also be naturalized before they are entitled to vote. Naturalized burghers may become first-class burghers after being naturalized twelve years; but even then the application must be signed by two thirds of the burghers in the district and be approved by a special vote of the First Chamber. No bill passed by the Second Chamber becomes a law until it is approved by the First Chamber. The President and the Commandant General are elected by the votes of the first-class burghers only, and the members of the Executive Council by the First Chamber.

The President of the Republic is Stephanus Johannes Paulus Kruger, elected for his fourth term of five years in February, 1898 (see page 412 of this volume). The Vice-President and Commandant General was P. J. Joubert; State Secretary, F. W. Reitz; Superintendent of Natives, P. A. Cronje; Keeper of the Minutes, J. H. M. Kock; nonofficial members of the Executive Council, J. M. A. Wolmarans and S. W. Burger.

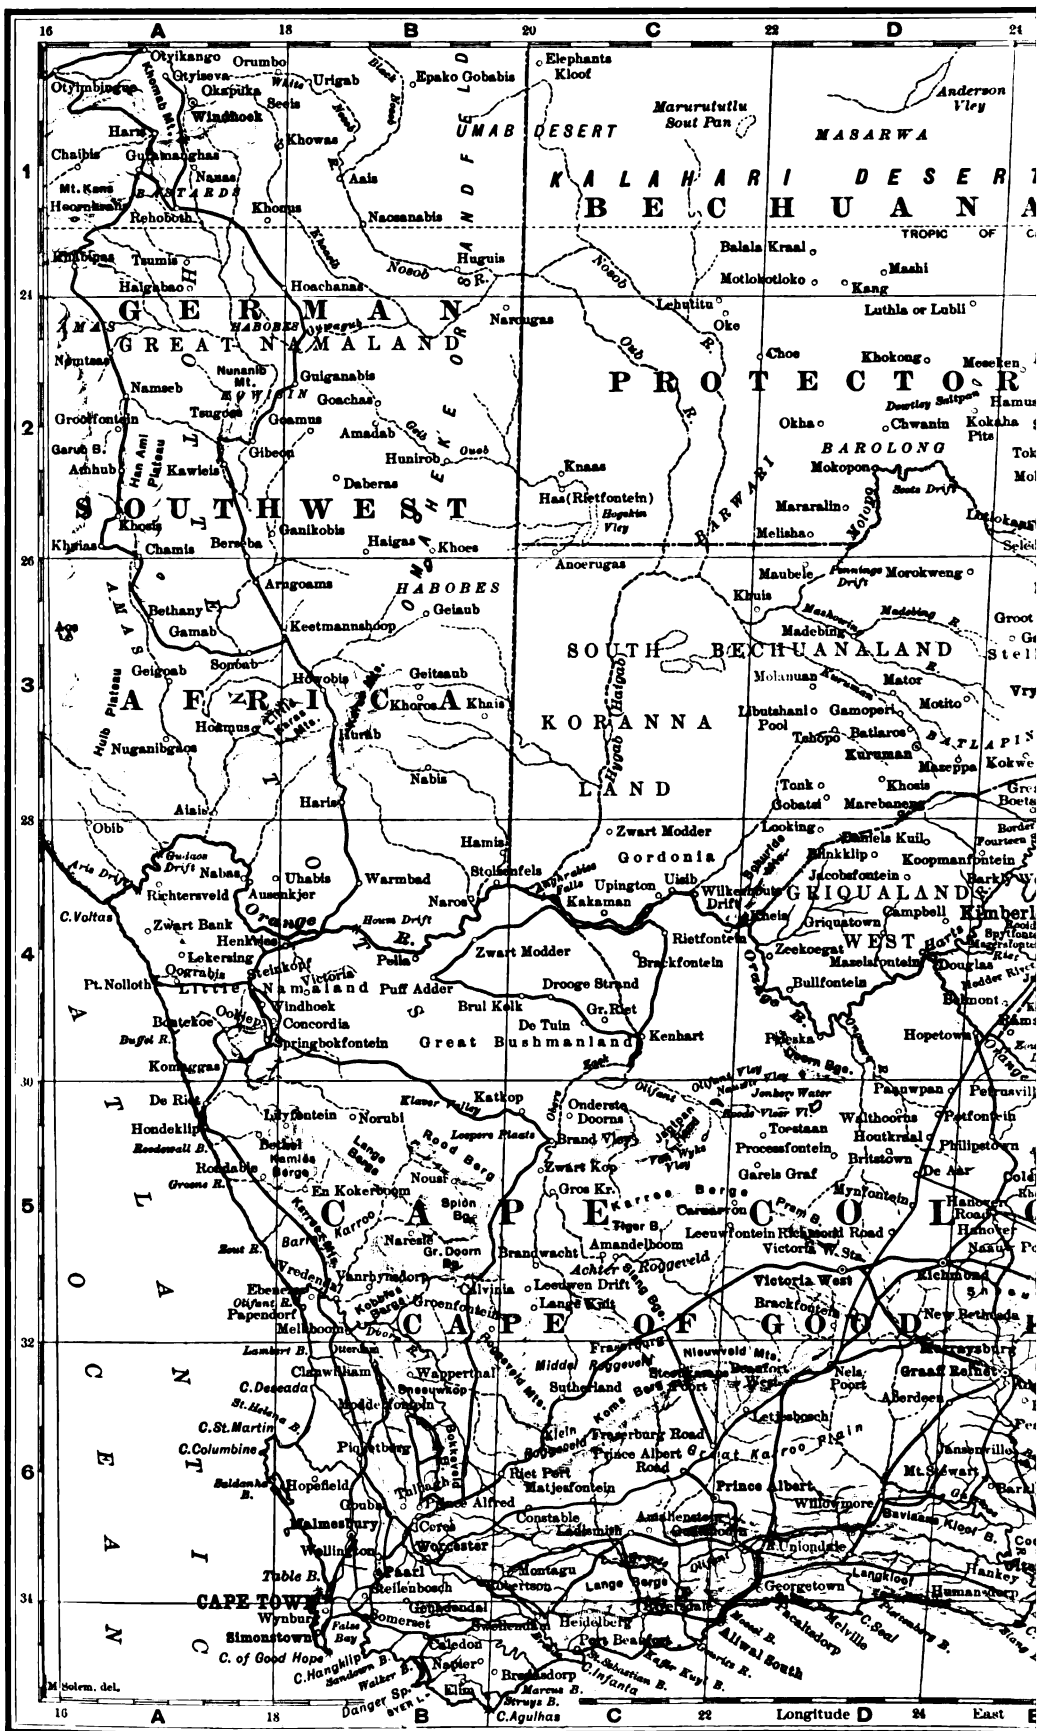

Area and Population.—The area of the South African Republic is 119,139 square miles. The population was estimated in 1898 at 1,094,156, of whom 345,397 were whites, comprising 137,947 males and 107,450 females, and 748,759 were colored, comprising 148,155 men, 183,280 women, and 417,324 children. Pretoria, the capital, has a population of about 10,000, counting whites only. Johannesburg, the chief town of the Witwatersrand, had a population in 1896 of 102,078, of whom 79,315 were males and 22,763 females, the total comprising 50,907 whites, 952 Malays, 4,807 Indian coolies and Chinese, 42,533 Kaffirs, and 2,879 of mixed race.

Defense.—All the burghers under the age of sixty are liable to be summoned into the field in case of war. The number inscribed on the rolls of the field cornets was 26,299 in 1894. Since the Jameson raid of 1896 3 bodies of volunteers have been organized, numbering 2,000 men, equipped by the Government. The artillery force numbers 32 officers, 79 noncommissioned officers, and 289 men.

Finances.—The revenue in 1897 amounted to £4,480,218, and the expenditure to £4,394,066. Of the revenue, £1,276,319 came from customs, £737,366 from the Netherlands Railroad Company, £427,230 from prospecting licenses, £300,000 from explosives, £258,396 from stamps, and £215,320 from posts and telegraphs. Of the expenditures, £1,012,866 were for public works, £996,960 for salaries, £396,384 for war, £271,435 for the purchase of explosives. The mining commission at Johannesburg received £896,044 and expended £101,369.

The public debt in September, 1897, amounted to £2,673,690, including a loan of £2,500,000 and £146,690 due to the British Government.

Commerce and Production.—The Boers devote themselves to raising live stock, but do not till more than 50,000 acres, and are obliged to import cereals. The number of farms is 12,245, of which 3,636 belong to the Government, 1,612 are the property of nonresidents, and 6,997 are owned by resident owners and companies. The gold-

mining industry of the Witwatersrand and Barberton districts has changed the economical, political, and social conditions of the country. The gold production, which was £6,010 in 1895, grew to £1,869,645 in 1896, £8,589,555 in 1897, and £11,476,260 in 1898, exceeding that of any other country. The quantity extracted in 1897 was 3,289,720 ounces, of which 3,034,678 ounces were from the Witwatersrand, 113,972 ounces from De Kaap, 84,781 ounces from Klerksdorp, 50,942 ounces from Lydenburg, 223 ounces from Zoutpansberg, and 5,120 ounces from Swaziland and other districts. The 72 principal companies in 1897 employed 8,060 whites, paying them £2,521,603 in wages. The number of natives employed in the mines was about 70,000. In 1898 the output of the Rand increased to £16,240,630 in value, with a prospect of its reaching £20,000,000 in 1899. Since the opening of the mines in 1884 the total production has been

£1,254,058 for clothing, £869,443 for railroad material, and £864,126 for iron goods.

Railroads and Telegraphs.—The railroads of the Republic have outlets at the Cape, Durban, and Delagoa Bay. There were 774 miles in operation on Sept. 1, 1897, and 270 miles were under construction and 252 miles projected.

The telegraphs erected within the boundaries of the Republic have a total length of about 2,000 miles, connecting the principal towns with the systems of Cape Colony, Natal, and the British South Africa Company's territory.

Swaziland.—The native territory of Swaziland passed under the administration of the South African Republic by a convention concluded with Great Britain in 1894; but it is not to be incorporated in the Republic, and the natives retain the right to govern themselves in accordance with their own laws so far as these are consistent with civilized customs, and must not be deprived of

PORT NATAL AND DURBAN.

£70,228,603. The investments in the mines are held not alone in Great Britain, but largely in France also, and to a considerable extent in Germany.

Coal is found within convenient distance of the Witwatersrand and other gold fields. The quantity raised in 1897 was 1,600,212 tons, valued at £612,668.

Besides gold, the principal exports are wool, cattle, hides, grain, ostrich feathers, ivory, and minerals. The dutiable imports in 1897 amounted to £13,563,827, paying £1,289,039 in duties. The total value of imports was estimated at £21,515,000, of which £17,012,000 came from Great Britain, £2,747,000 from the United States, £1,054,226 from Germany, and £701,774 from Holland, Belgium, and France. The values of the principal imports were £1,876,391 for machinery,

their lands and grazing grounds. The hut tax and other imposts have been collected since August, 1898. The territory has an area of about 8,500 square miles and a population of 40,000 to 60,000 natives and about 1,000 whites. The permanent chief, Ngwane, has an army of 18,000 men. Before the natives began to pay taxes the Government of the South African Republic had to provide about £48,000 a year for the expenses of the administration, which is in charge of a special commissioner, J. C. Krogh. Gold is mined to some extent, and recently coal mines have been opened. Tin was formerly obtained, but mining has been suspended.

The Boer Ultimatum.—After the failure of the Bloemfontein conference and the enactment by the Transvaal Volksraad of a seven years' qualification for the franchise, Mr. Chamberlain,

on July 27, proposed a joint commission of inquiry to examine the question whether it would give such substantial and immediate representation as would serve for a satisfactory basis of settlement (see CAPE COLONY). The Government of the South African Republic objected to a joint inquiry as prejudicial to the independence of the Transvaal in internal affairs. Accordingly, negotiations were opened between Dr. Smuts, the State attorney, and Conyngham Greene, the British agent, with a view of ascertaining what proposals would be acceptable to the British Government. If it would end the tension, the Transvaal Government was willing to give to the Uitlanders a five years' retrospective franchise, such as Sir Alfred Milner had demanded at Bloemfontein, and to increase the representation of the Rand from 2 to 10 seats in a Volksraad of 36 members, which was more liberal than the proposal of the High Commissioner; to grant also a like increase in the representation of the mining community in the Second Volksraad, if desired, and to guarantee that its proportional representation should in the future never be diminished. These offers would be made only on the assumption that the British Government would agree that a precedent should not be formed by their present intervention for similar action in future, and that no future interference in the internal affairs of the Republic would take place contrary to the terms of the London convention; and also that the British Government would not insist further upon the assertion of suzerainty, the controversy on this subject being tacitly allowed to drop. In regard to arbitration, it was assumed that it would be conceded, the foreign element being excluded and only British or South African jurists being admissible as arbitrators. Mr. Greene's notes mention the right of the new burghers to vote for President and Commandant General, and of the new members of the Volksraad to use their own language. Dr. Smuts denied that he had made such offers. Mr. Greene found the proposals such as he could recommend for the acceptance of his Government. As regards suzerainty, he felt sure that the British Government could not and would not abandon the right which the preamble of the convention of 1881 gave, but would have no desire to hurt Boer susceptibilities by publicly asserting it so long as no reason to do so were given by the Government of the South African Republic. Sir Alfred Milner having telegraphed that the proposals would be considered on their merits, they were drafted in a formal communication which was dispatched to London on Aug. 19. Mr. Chamberlain suggested that the additional concessions contained in Mr. Greene's minutes be added, but the Transvaal Government declined to make any alteration or amplification of the offered terms. On Aug. 28 Mr. Chamberlain sent a dispatch declining the conditions attached to the offer of a five years' franchise. The State Secretary, F. W. Reitz, in his reply on Sept. 2, intimated that his Government had been led to believe that the offer with the conditions attached thereto would be accepted. As the proposal had been rejected, the Transvaal Government considered that it had lapsed. If the British Government chose to make a unilateral inquiry into the working of the seven years' franchise, the Transvaal Government was ready to submit to the Volksraad any proposals that might be suggested which could make the franchise law clearer or more effective, though such inquiry appeared to it to be premature. In regard to a joint commission, assuming that it was not intended to interfere in the in-

ternal affairs of the Republic or to establish precedent, the Government of the South African Republic would be glad to learn from the British Government how it proposed that the commission should be constituted, and when and where it should meet. As to the suzerainty question, Mr. Reitz declared that his Government, though abiding by the views it had formerly expressed, had neither asked nor intended that the British Government should abandon any right that it really might have, on the ground either of the convention of 1884 or of international law, to intervene for the protection of British subjects in the Transvaal. In regard to arbitration, he desired to know what subjects the British Government was unwilling to submit to the court, since the assurance of a final settlement of all questions in dispute, or that might arise, might be frustrated by these limitations. On Sept. 8, after a Cabinet council had ominously been convened, Mr. Chamberlain replied that the British Government was not willing to drop the question of suzerainty, because the Government of the South African Republic had claimed the status of a sovereign international state. The British Government would not go back to the seven years' franchise, as the Transvaal Government had itself recognized that its previous offer might with advantage be enlarged. The latest offer would be acceptable, provided that the inquiry, whether joint or unilateral, showed that it was not incumbered by conditions that would nullify the intention to give substantial and immediate representation to the Uitlanders. It was assumed that they would be permitted to use their own language in the Volksraad. The acceptance of these conditions would remove the tension, and in all probability render unnecessary any further intervention on the part of the British Government to secure the redress of grievances which the Uitlanders themselves would be able to bring to the notice of the Executive and of the Raad. An immediate and definite reply was urged. If it were favorable, the details of arbitration could be arranged by a conference, Uitlander grievances and questions of interpretation being excluded from the consideration of the tribunal. If the reply were negative or inconclusive, the British Government reserved to itself the right to consider the situation *de novo*, and to formulate its own proposals for a final settlement.

On Sept. 16 a dispatch was sent by the Transvaal Government declaring that the proposal of Aug. 19 had been induced by suggestions given by the British agent, which had been accepted in good faith and on express request as equivalent to an assurance that they would be acceptable to the British Government. At the opening of the Orange Free State Volksraad President Steyn said that the Transvaal had been decoyed into making an offer which it otherwise would not have made. In its reply the Transvaal Government said that it was prepared to recommend the Volksraad and people to run the danger to the independence of the State involved in giving an immediate vote in the Legislature to a large number of inpouring Uitlanders, in order to avoid the greater danger to its independence of the continuous and threatening claim of suzerainty, the interference of the British Government in the internal affairs of the Republic, and the want of an automatically working manner of regulating differences between the two governments. Mr. Reitz could not understand why the British Government should refuse to agree to the joint inquiry into the existing franchise that it had proposed as soon as the Transvaal Government sig-

nified its acceptance of the invitation, nor why the Secretary of State for Colonies should expect the five years' franchise to be granted when the conditions attached to the offer were rejected, nor why he should now declare the seven years' franchise inadequate when he had proposed an inquiry to determine whether it gave substantial representation to Uitlanders. His Government was still willing to have a joint commission, and to consider amendments in the existing franchise law. That it had ever agreed to the use of the English language in the Volksraad he denied. The Government of the South African Republic was ready and willing to co-operate in the composition of a court of arbitration, having the firm intention of abiding by the convention of 1884, and desired to have it made clear what were the definite questions that would be discussed at the proposed conference and that could not be subjected to arbitration. If the British Government, abandoning the idea of making new proposals more difficult for the Transvaal and imposing new conditions, would abide by its own proposal of a joint commission, for which on its acceptance by the Transvaal Government it had substituted an entirely new proposal, it would put an end to the tension, race hatred would decrease and die out, and the prosperity of South Africa would be developed. On Sept. 22 Mr. Chamberlain telegraphed to Sir Alfred Milner, after another Cabinet council, that in view of the refusal of the South African Republic to entertain the offered settlement of the franchise difficulty, the British Government was compelled to consider the situation afresh, and to formulate its own proposals. It had no desire to interfere with the independence of the South African Republic provided the conditions on which it was granted were observed in letter and spirit, and was ready to guarantee that independence against attack by British or foreign foes, nor had it asserted any rights of interference in the internal affairs of the Republic other than those derived from the conventions or which belong to every neighboring government. On Sept. 26 Mr. Reitz sent a dispatch dealing with the petition of the Uitlanders to the Queen, which would have received attention had it been presented to the Transvaal Government, although the grievances are mostly chimerical. The petition emanated from British subjects who were unwilling to comply with the laws and institutions of the country under the convention, from the South African League which made a propaganda of race hatred, yet boasted of its influence over the policy of the Imperial Government and really supplied false allegations and exaggerated statements that received an official stamp by being printed in British blue books and repeated in the speeches of British ministers. As far as the Republic was concerned, the South African League was an organization having the object to create revolution and undermine its independence; and if the wrong impression that the policy of the League was approved by the Imperial Government were removed, then the tension would disappear, the Afrikaner people would fear no longer that the interests of the British Empire necessarily imply the destruction of the republics and the enslavement of the Afrikaner population, and both sections of the white race would return to the brotherly harmony that had set in before the treacherous compact of 1895 revived passions on both sides.

The fresh proposals of the British Government were not sent, but on Sept. 30 another Cabinet council was held, at which it was decided to call out the reserves. Troops were sent to South

Africa from England and from India, and the troops that had gradually been collected there were massed on the Natal border at Ladysmith and Glencoe. In answer to this movement, the Transvaal Government called out a part of the burgher militia and formed laagers near Laings Nek, at Zandspruit and Volksrust. Commandant Ben Viljoen assembled a force in the Orange Free State near Van Reenen's pass, Commandant Piet Cronje one on the Bechuanaland border, menacing Mafeking, and Kimberley was threatened by another commando. The British Government recalled Gen. Sir William Butler, who as acting High Commissioner had tried to settle the disputes with the Boers amicably, informing the Government in London that it would require two army corps to conquer the Transvaal. In his place Lieut.-Gen. Sir George S. White was appointed commander in chief of the forces, with headquarters at Ladysmith.

On Oct. 9 a note from the State Secretary was delivered to the British agent, in which it was set forth that, save in the article of the London convention guaranteeing the right to enter, travel, and reside in any part of the Republic without being subject to unequal taxation, the British Government has no rights with regard to the Uitlander population; and that only a violation of those rights would furnish grounds for diplomatic representations or intervention, while the regulation of all other questions affecting the Uitlander population were handed over to the Republican Government, among which are included those of the franchise and representation of the people; that, although the exclusive right of the Government of the Republic and the Volksraad to regulate the franchise is indisputable, the Government has found occasion to discuss the franchise with the British Government in a friendly fashion, but without recognizing any right thereto on the part of the British Government, and in framing the existing franchise law those friendly discussions were kept in view; that on the part of the British Government these friendly discussions had assumed a more and more threatening tone, creating tension in the minds of the people of the Republic and of all South Africa, and finally the British Government had broken off friendly correspondence on the subject and intimated that it must proceed to formulate its own proposals for a final settlement; that while friendly correspondence was still going on an increase of troops on a large scale was introduced and stationed on its borders which the Government of the Republic, having regard to occurrences in its past history, could only consider as a threat against its independence, and in answer to an inquiry the High Commissioner had made a mysterious reference to possibilities which strengthened the suspicion that the independence of the Republic was being threatened, the promised proposal for a final settlement meanwhile being withheld, although the promise was repeated. The unlawful intervention of the British Government in the internal affairs of the Republic in contravention of the convention of 1884 and the extraordinary strengthening of the troops in the neighborhood of the borders had caused an intolerable condition of things to arise, whereto the Government of the Republic felt itself obliged, in its own interest and that of all South Africa, to make an end as soon as possible and to press for its termination and request the assurance that all points of mutual difference should be regulated by friendly arbitration or whatever amicable way might be agreed upon; that the troops on the borders should be instantly

withdrawn; that all re-enforcements that had arrived since June 1 should be removed from South Africa on the agreement that no attack within a period of time to be agreed upon should be made by the Republic on British possessions during further negotiations, and that the armed burghers should be withdrawn from the borders; and that the British troops on the high seas should not be landed in South Africa. An affirmative answer was demanded within forty-eight hours; otherwise, the action of the British Government would be regarded as a formal declaration of war, and if any further movement of troops in the direction of the frontier took place in the interval that also would be regarded as a declaration of war. Mr. Chamberlain replied by telegraph on the night of Oct. 10 that the conditions demanded were such as the British Government deemed it impossible to discuss. In answer to inquiries made by Sir Alfred Milner, President Steyn formally stated that the Orange Free State would make common cause with the Transvaal.

An interchange of telegrams had taken place between Sir Alfred Milner and President Steyn, who suggested when the High Commissioner said that the Imperial Government desired to prevent action on the part of the Transvaal Government that would make a pacific solution impossible that the threatening movement of British troops should be stopped. He offered his services as mediator, expressing his conviction that two years' difference in the franchise could easily be bridged over if peace were desired, but that continued warlike movements could only result in war. Sir Alfred Milner resented any suggestion about the disposition of imperial troops, and retorted with a reference to the grave fact that both republics were placing their forces on a war footing. President Steyn replied that the Transvaal had armed because an alien and hostile population in its midst was stirring up hatred under the incitement of organizations that for political and financial reasons desired to undermine the independence of the state; the Free State, which had everything to lose and nothing to gain by a rupture, would only call out the burghers when convinced that the British troops menaced the independence of the Transvaal, which the Orange Free State was bound to assist.

On Oct. 1, and again on Oct. 5, when President Steyn asked what the fresh British proposals were, the Colonial Secretary replied that they were not ready. On Oct. 9 the mobilization of an army corps was ordered.

After the refusal of the British Government to comply with the Boer ultimatum, President Steyn issued a proclamation calling upon the burghers to rise against the oppressor and the violator of rights, charging the British Government with shameless breaking of treaties, violation of international justice, and transgression of laws on feigned pretexts; with having for years past placed troops on the frontiers of the sister republic to encourage revolutionary disturbance and compel the Republic by fear to accede to demands involving the loss of the independence of the country as a self-governing sovereign state. No gratitude had been shown for the magnanimity exhibited, at the request of the British Government, to British subjects who had forfeited their lives and property under the laws of the Republic, and no feeling of shame had prevented the British Government, after gold mines of immense value had been discovered, from making claims the consequence of which, if allowed, would be that those who, or whose forefathers, had saved the country from barbarism and won it for civilization would

lose that control over the interests of the country to which they were justly entitled according to divine and human laws. President Steyn denounced the unfounded claim of paramountcy over the whole of South Africa, affecting even the Orange Free State, and the policy of Great Britain which had denied to the South African Republic its original position in respect to foreign affairs. The conventions had been perverted from their original intentions and been used as a means for the practice of tyranny and of injustice and for the support of a revolutionary propaganda. The experience of the Orange Free State made it clear that the solemn promises and agreements of Great Britain could not be relied on, for when the burghers had overcome a barbarous black tribe on the eastern frontiers, the British Government had unjustly and unlawfully intervened; and when diamonds were discovered in a portion of the territory of the Free State the dominion over this district had been forcibly appropriated by Great Britain, contrary to existing treaties.

When the forty-eight hours of the ultimatum expired and military operations began the Cape Parliament closed its session, and Sir Alfred Milner issued a proclamation warning the Cape Colonists of the penalties of treason. This was countersigned by Premier Schreiner, who appealed to the members of Parliament to endeavor to save the colony from being involved in the vortex of war, and instructed the field cornets to try to calm the people. But many of the Cape farmers had already supplied themselves with rifles and ammunition.

The Investment of Ladysmith.—Two days before the dispatch of the Boer ultimatum the mobilization of a field force for service in South Africa was ordered by the commander in chief of the British army with the approval of the Secretary of State for War. The increase of the force in Natal by 10,000 men had been ordered nearly a month before, and Sir Redvers Buller was appointed to conduct the expected campaign. Troop ships began to leave in the middle of September, when Sir George White left with his staff to take command of the troops in Natal, which, with the re-enforcements from England, amounted to a division, consisting of 18,000 officers and men. In Cape Colony also the garrison had been gradually strengthened, especially with engineers, artillery, and railroad troops; and troops had been moved toward the frontier of the Orange Free State to protect the railroad and garrison Kimberley, where fortifications were being constructed. The defenders, consisting of a British battalion and volunteers, numbered 2,500 men. Cecil Rhodes went to the threatened diamond mines. The ramparts were mounted with Maxims and heavy guns, more of which were cast in the De Beers workshops. The railroad officials for a long period had been preparing for the emergency by eliminating Afrikaners from the service and employing loyal Englishmen, who thus had time to become thoroughly familiar with the tracks. Col. Robert Baden-Powell had been engaged in recruiting and training a force of about 1,000 Cape volunteers for the defense of Rhodesia and Bechuanaland, with which he went to Mafeking, the headquarters of the Bechuanaland border police. The Indian military authorities thought they could spare 12,000 men from the European army in India, but not more with safety, and of this contingent 5,800 embarked for South Africa on Sept. 18 and subsequent dates.

The mobilization of the Transvaal Boers was ordered on Sept. 25. The distribution of Mauser rifles and cartridges was completed in three days.

and the burghers were moved in detachments to the front. Under the law, every male old enough to carry arms was liable for service, and any article needed for warlike purposes could be commandeered or requisitioned. Horses were annexed from their stables or taken out from the shafts in the street. Stores containing provisions, saddlery, clothing, or other requirements for the army were stripped of their contents, a receipt being given to the owner. The forces were thus hastily equipped and sent to the front by rail. The Free State commandos were also ordered out to guard the passes of the Drakensberg. Gen. Jan Kock commanded the forces on the Natal border, Gen. Schalk Burger those on the eastern frontier of the Transvaal, and Gen. Cronje took charge of the western frontier. The State artillery, with many large Creusot and Krupp guns, left Pretoria for Zandspruit and Volksrust on Oct. 4. That was the chief point of concentration, and before the sending of the ultimatum 8,000 armed burghers were assembled there. The arrival of troops from India made the English feel secure in their fortified positions, but it was decided not to defend the small town of Newcastle. The Australian colonies and Canada offered to raise regiments for the British army. The war officials decided at first to accept only units of 125 men—two units from the larger and one unit from the smaller colonies. Of 25,000 reserves called out in the United Kingdom 84 per cent. responded. These are time-expired short-service men who have returned to civil occupations, but in consideration of part pay are bound to return to the colors when summoned for active service. The Imperial Light Horse was recruited in Natal, mainly from Johannesburg refugees. The Boers raised an Irish corps, which Major Blake commanded. One corps of German volunteers went into camp near the Natal border under the command of Col. Schiel, who was the chief artillery officer. The Free State commandos assembled on the border near Aliwal North to the number of 9,000 men. Another commando under Piet Cronje moved toward Kimberley, and one section took up a position on Modder river.

The first hostile act was the commandeering of a railroad train at Harrismith on Oct. 11, as soon as the term of the ultimatum expired. Martial law was proclaimed, and British subjects who had not obtained permits to remain were ordered to leave Transvaal territory within eight days. Although a proclamation was issued commanding foreigners to join the Boer army, as one of the articles of the Constitution requires, the law was not put in force, and none but volunteers were accepted. The mines on the Rand were commandeered, and many miners remained to work there for the Government. All available troops in Cape Colony were sent up to De Aar, the junction of the railroad from Port Elizabeth and the line to Kimberley and Rhodesia from Cape Town. Gen. Piet Joubert, commandant general of the Transvaal, directed the campaign in Natal. Gen. Prinsloo was elected commandant general of the Free State forces, but Commandant Cronje directed operations in the field in the west. When the British agent was recalled and war was certain, President Kruger sent a message to sympathizers in the United States, in which he said the republics were determined that if they must belong to England a price will have to be paid that will stagger humanity; but that they have faith that the sun of liberty will rise in South Africa as it rose in North America. On Oct. 12 the Free State forces encamped on the eastern frontier advanced into Natal by Olivier's Hoek, Tintwa and

Van Reenen's passes. At the same moment the Transvaal commandos entered the northern corner of the colony from Volksrust and Wakkerstroom and marched southward to the passes in the mountains near Glencoe and Dundee. The Rustenburg and Marico commandos concentrated on Mafeking. An armored train returning from Vryburg was wrecked and the soldiers and two guns were captured. Vryburg was taken afterward with the aid of resident Boers. Repeated attacks with artillery were made upon Mafeking. Commandant Cronje crossed into Bechuanaland and commanded the investing force.

The British forces in Natal were deployed along a strategical line of about 60 miles, extending from Estcourt to Dundee, so as to hold both ends of the Biggarsberg range and protect the railroad. When the Boers crossed the Drakensberg at Van Reenen an equal force was sent out of Ladysmith by Sir George White to give them battle and prevent their getting into the rear of Ladysmith to cut the railroad. Ben Viljoen, crossing at Botha's pass, occupied Newcastle, and Charlestown was seized by the main column under Piet Joubert, consisting of a mixed force of Transvaalers and Free Staters, with the Hollander volunteers and one of the German legions, which crossed at Laings Nek. As these troops advanced along the line of the railroad to Ingogo and Ingagane they were joined by the columns from Wakkerstroom and Utrecht, which crossed Buffalo river at Meyer's and De Jaager's drifts. Meanwhile, Ben Viljoen's column pushed on to Dannhauser, while the Free State columns on the other British flank occupied Acton Homes, from which there was an easy line of advance to Colenso, where the railroad crosses Tugela river, and those that crossed the Drakensberg by Van Reenen pass and Nelson's Kop went into laager near Bester's Station, whence they could strike the Glencoe Railroad line in the vicinity of Modder Spruit. Sir George White sent out a detachment to Acton Homes as well as to Besters, in the hope of engaging both columns, but both declined battle until the arrival of the columns from the north. The plan of the Boer leaders was to envelop the whole British position, cutting off railroad communications in the rear, and at the same time sever the troops guarding Dundee and Glencoe under Gen. Symons from the main body at Ladysmith and crush these before closing in on the latter camp, which was provisioned for four months. Gen. Joubert had planned to draw out and entrap the British by first engaging them with a column advancing from Ingagane to Hatting Spruit, on the main road from Dannhauser. When they were well engaged in repelling this frontal attack, Lucas Meyer, who had marched down from Vryheid, crossed Buffalo river at Landman's drift, and approached Dundee from the northeast, could assail them in the rear, and Ben Viljoen, advancing from Waschbank, could fall on their left flank, cutting off retreat by the railroad or the direct wagon road to Ladysmith.

The Boer columns, numbering 9,000 men to 4,000 under Sir William Penn Symons, could not keep up telegraphic communications, and consequently they arrived at different times. Gen. Symons first perceived the troops of Gen. Meyer, 3,000 strong, with six guns, deploying on Talana hill, commanding his camp, and he sent the greater part of his force to attack them, while the rest remained to watch the force that was advancing from the left. The battle was opened at dawn on Oct. 20 by the Boer guns, placed in the night on Talana ridge, 3 miles from the camp. The Boer shells were defective and did

not explode, though they were well aimed and all fell in the camp. It was easy, therefore, for the heavy artillery of the British to silence the Boer guns; but Boers moved over the hill toward the south with the evident intention of turning the British position. To check this movement, Gen. Symons ordered an advance of cavalry and infantry. The infantry pushed forward toward the hill in the face of a terrific rifle fire. Although they were protected by the guns, which poured shrapnel into the Boer position on the summit, they stopped and fell back in the hottest zone of fire, rallied and rushed ahead once more, were checked again on the hillside, reformed a second time under the personal lead of Gen. Symons, charged up the hill for the third time, and finally reached the top and drove the Boers back to the

necessary to oust them from their position among rocky hills in order to keep open the line of retreat for the forces at Dundee. During the previous day, while Gen. Symons was engaged with Lucas Meyer's commando, his forces were kept busy by demonstrations of the Boer commandos on the west, which feigned an advance in force upon Ladysmith in order to prevent re-enforcements from being sent to Glencoe. On Oct. 21 the Imperial Light Horse and an infantry regiment, making a wide circuit along the crest of the ridge, fell upon the right flank of the slender detached force at Elands-laagte, while another regiment of foot delivered a frontal attack, supported by three field batteries, and this was followed up by charges of lancers and dragoons. Night fell before the manœuvre was completed,

MALIKOE-MARICO FORD, IN THE SOUTH AFRICAN REPUBLIC.

east. Of 4,000 British troops engaged 214 were killed or wounded. The Boer column under Commandant Erasmus, which the British supposed to be the main body of the enemy, did not advance from Hatting Spruit, but halted as soon as it came in contact with the British cavalry screen. The British commander, supposing that the Boers had left Talana hill in disorderly flight, ordered a cavalry force with a Maxim to go around the hill to intercept them. This detachment was itself put to flight by a large Boer force, and one squadron of hussars was surrounded and captured. Besides prisoners the British lost 224 killed and wounded in the battle.

Jan Kock's Johannesburg commando, eluding the patrols from Glencoe, crossed the Biggarsberg, and established its camp, with artillery, on the hills commanding the railroad at Elands-laagte, within 16 miles of Ladysmith. After capturing a cattle train they cut the railroad there, and afterward it was more effectually cut by the destruction of the long bridge at Waschbank. Scouts from Ladysmith discovered the enemy at Elands-laagte, and Gen. White deemed it neces-

and this enabled the bulk of the Boers to get away. They defended their position with great tenacity, their gunners returning to their guns whenever the British cannonade ceased for a moment. Their shells were not defective, but they did no more damage to the British than those fired into Glencoe camp, although the pieces were skillfully and pluckily served by trained German and Hollander artillerymen, whose fire was not as accurate as that from Talana hill. The British cavalry, who charged through the Boers three times, were exasperated at being fired at from behind, and the lancers when they caught a company of Boers in a place from which they could not escape refused quarter and stabbed them all after they had grounded their arms. Gen. J. T. P. French directed the British attack, and Jan Kock, who was mortally wounded and captured, was the Boer general. Commandant Schiel, leader of the German corps, was also taken prisoner. The Boer position was naturally strong, but the British, outnumbering them three to one, surrounded them and broke them up with a destructive bombardment before attempting the assault.

They lost about 100 killed and 200 prisoners, including wounded, nearly a third of their entire force, while the British casualties were 253. The Transvaal commando expected to be re-enforced by the Free State troops north of Ladysmith, but these remained away.

Lucas Meyer with the Utrecht and Vryheid commandos, re-enforced by the column of Erasmus, closed in again on the British camp.

The converging movement on Dundee had failed for the moment because Commandant Erasmus did not arrive at the rendezvous. Nevertheless, a hasty retreat to Ladysmith was all that could save the force of Gen. Symons, now commanded by Gen. Yule. Gen. Symons, mortally hurt, and the other British wounded were left in the hands of the Boers in the town of Dundee, for the gallant charge of the British infantry had accomplished nothing. Piet Joubert was advancing with a powerful body by way of Hatting Spruit. Evacuating Dundee and abandoning the camp between Dundee and Glencoe and everything in it, Gen. Yule, when the Boers appeared in force on the northern road on Oct. 21 and began shelling the camp—ineffectually as before, for the shells did not burst—tried to retire by way of Glencoe. He intended to take up a defensive position there and hold the Boers in check for some time, thinking that the victory at Elandslaagte had restored railroad communications, and that his cavalry could intercept the defeated Boers when they attempted to recross Biggarsberg pass. Finding the Boers in possession of the Glencoe route, and the railroad bridge over the Waschbank destroyed, he took up a defensive position on a hill, which he evacuated in the night of Oct. 22, and by forced marches made his way to Ladysmith by the longer western road that passes through Beith, coming into touch with the garrison in the night of Oct. 25, Sir George White having averted an attack by the Boers at Beaters by moving out a force to meet Gen. Yule's troops, which held the Free Staters in check at Rietfontein, near Modder Spruit. The British, commanded by Gen. French, consisted of 4 cavalry and 4 infantry regiments and 3 batteries, and they lost 19 killed and 91 wounded, but did not succeed in driving out the Boers, whose artillery fire was remarkably good. The Boers not only failed to intercept the column, but their investment was not completed in time to stop considerable re-enforcements that came up by railroad, the most important being a naval detachment with ship's guns mounted on special carriages, without which the artillery in Ladysmith would have been outtraged by the heavy guns of the Boers.

The force concentrated at Ladysmith numbered more than 12,000, including 4 regular cavalry regiments and the colonial mounted troops, 6 field batteries, a mountain battery, and the naval battery. On Oct. 28, two days after Gen. Yule entered Ladysmith, the Boers began to close round the place and to plant position guns on the neighboring hills. Lucas Meyer's force, which had pursued Gen. Yule's retreating column, brought up several heavy guns and began to bombard the town at a distance of more than 6,000 yards. Gen. White, on Oct. 30, made a sortie with his whole garrison, moving out in 3 columns in the night, cavalry scouts having on the previous day ascertained the nature of one of the enemy's main positions and the number of his guns. A brigade under Col. Grimshaw, with 4 field batteries, was directed against the Boers' left; one under Col. Ian Hamilton, with 3 field batteries and a mountain battery, moved upon

their right; Col. Carleton, with 2 battalions and a mountain battery, was ordered to seize Nicholson's Nek in order to turn their right flank; while Gen. French, with the cavalry manœuvring on the same flank, attempted to draw them out from their position. The position previously observed, on which they had mounted guns, a hill 5 miles north of Ladysmith, was the vulnerable point toward which the evolution was directed, but when this was reached it had been evacuated. Instead of converging on the Boer position, one of the columns found itself a mark for the Boer artillery posted in a semicircle around it, and the others had to hurry to its aid. One of the British columns, however, that commanded by Col. Carleton, which advanced early to inclose the position where the enemy was supposed to be, became isolated, and was surrounded by a superior force after it had first been thrown into confusion by the stampede of the mules attached to the mountain battery. The result was, that the guns were lost and the Irish fusiliers and the Gloucester regiment had to surrender at Nicholson's Nek. The number captured was 843, while 52 were killed and 150 left wounded. A like fate would have overtaken Col. Grimshaw's brigade, which was attacked on both flanks by the enemy that was supposed to be in front, but the guns that had been shelling the empty hill quickly changed front and covered the retreat, facilitating also the recapture of 2 field pieces that had fallen into the enemy's hands. The battalions were ordered to retire because the Boers had made a feint on Ladysmith from the north, and were thrown into confusion when crossing an open space under fire. The quick-firing naval guns arriving at a critical moment silenced the Boer siege artillery and enabled the British to bring off their forces and silence the great Creusot siege gun that had dropped 13 shells into Ladysmith.

The result of Gen. White's unfortunate sortie, for which he held no one responsible but himself, was to reduce the garrison to fewer than 10,000 men. The Orange Free State Boers joined hands with Gen. Joubert, and before the end of October four commandos were laagered in a semicircle round the north side of the town at a distance of less than 10 miles. A few days later the town was beleaguered on all sides by a force estimated at 18,000. It was not a well-chosen position, because it was commanded at long range by hills, from which the Boers fired shells into the town daily, which caused few casualties, however, as the garrison soon constructed intrenchments and pits, which were strengthened day by day. Many of the women and children, the sick and wounded, and other inhabitants were permitted to leave the town by Gen. Joubert. The rest deserted their dwellings and lived in bomb-proof caves. Cavalry and light artillery sallied out several times, but accomplished nothing to recompense them for their losses. Armored trains went back and forth from Colenso until that place was occupied on Nov. 2, the garrison retiring to Estcourt, the day on which the bombardment of Ladysmith was begun in earnest. On Nov. 6 a cavalry action took place near Dewdrop, in which the British lost 28 men, including 2 officers, the object being to drive the Boers from their commanding position at Groblers Kloof and recover Colenso, which they had not yet occupied in force. A Boer commando marched through Zululand, raising the Transvaal flag. The northern part of Natal was declared to be annexed to the South African Republic by a proclamation from Pretoria. On Nov. 9 the Boers made a general attack on Ladysmith,

which was repelled by the British, who had planted guns on the nearer hills, the bombardment having been intermitted. An assault was attempted after it had been prepared by artillery fire, but British riflemen stole forward and fired volleys on the Boers at close range, occupying in one instance a trench that had just been dug by the Boers, who finally retreated from the ridge and kopjes they had occupied adjacent to the British position. They were demoralized by the lyddite shells, against which Gen. Joubert had protested as inhuman. More guns arrived later from the Transvaal, and when the line of investiture was complete Gen. Joubert detached several thousand men, who occupied Colenso, blew up the long lattice-girder railroad bridge across the Tugela, began to destroy the railroad south of that place, and in small parties raided the country as far as Weenen and the outskirts of Estcourt. The commando that advanced through Zululand traversed the eastern districts. The people of Pietermaritzburg were in a panic, and the English colonists in Natal joined the volunteers. The Dutch farmers of the colony enlisted under the Republican standard or aided the invaders in other ways. At Estcourt a force of about 2,000 British was concentrated under Gen. Wolfe Murray. After the arrival of troops from India there was no more fear that Pietermaritzburg or Durban would be captured by the Boers. Armored trains from Estcourt tried to protect the railroad to Colenso until a detachment of about 500 Boers appeared on Nov. 15 with artillery, entrapped a train by getting between it and Colenso and throwing it off the track, and brought their cannon to bear on the overturned trucks. The engine, which was behind, was brought away with 12 men, and others escaped on foot, but 132 were made prisoners. With the captured was the newspaper correspondent Winston Churchill, who was held a prisoner of war because he assisted the soldiers with a rifle, but was allowed to escape afterward from Pretoria.

For the first few days after the Boers closed in around Ladysmith the British dreaded an assault, and the naval gunners drew their fire while all other troops were at work building breastworks. These were so far complete at the end of a week that the besieged were confident of holding their own, which they did when a determined attack was made on the works on Nov. 9. After this failed the Boers gave up the effort to take the place by storm and relied on shell fire to compel a surrender. They mounted guns on all points of vantage within range. They had not completed their siege dispositions when Sir Francis Clery's relief force began to concentrate south of the Tugela. When they had six guns in position on Bulwana hill capable of dropping shells into the town, and emplacements also on Telegraph Kopje and the other hills, the garrison, cheered with the hope of relief, began to make sorties, and more than once surprised the tired Dutch gunners by night. Before the end of November the rigors of the siege were severely felt.

The Isolation of Kimberley.—Col. Kekewich, an engineer officer, was sent to Kimberley before the outbreak of hostilities, with a small detachment of regular troops, to put the town into a defensive condition. Cecil Rhodes arrived afterward. A force of irregular cavalry was recruited in Griqualand West, and a considerable body of volunteers was raised among the townsmen. A ring of fortifications was constructed that made the town practically impregnable to assault. Immediately after the expiration of the time allowed by the Boer ultimatum bodies of Free State and

Transvaal troops simultaneously crossed the western frontier at various points between Orange river and Mafeking. Except a small body of cavalry under Col. Gough at Hopetown and the garrisons of Kimberley and Mafeking, the British had no troops in this part of the colony. The Boers destroyed the railroad in numerous places, their plan being to isolate and then invest and capture the two fortified towns. They blew up the railroad bridge over the Modder river on Oct. 12, and a day later the force advancing on Mafeking cut off its communication with Rhodesia by destroying the Malopopo bridge. Botha's commando, advancing from Boshof, captured Border Station on Oct. 13. Two days afterward Taungs and Vryburg were occupied, half the inhabitants of the latter town welcoming the Boers. Riverton was next seized and destroyed, and Klipdam and Windsorton were occupied, and 14 streams also, which the British evacuated on Oct. 15, after which President Steyn proclaimed the annexation of Griqualand West to the Orange Free State. To this Sir Alfred Milner responded in a counter-proclamation. By Oct. 15 the investment of Kimberley as well as of Mafeking was complete. The artillery fire of the Boers, however, had little effect, and the defenders made some spirited sorties, inflicting losses on the Boers at Spytfontein on Oct. 16, and at Macfarlane's farm on Oct. 24. By Nov. 1 Gen. Cronje had concentrated his force on Kimberley, and a closer investment began. On Nov. 4 the Boers attacked the town vigorously, but were beaten off. The Boer commandant demanded the surrender of the town on pain of bombardment, and Col. Kekewich in reply invited him to effect its occupation as an operation of war. The bombardment of Kimberley had less effect than in the other beleaguered towns. On Nov. 7 and succeeding days the town was hotly bombarded. The Boers encircled the place with intrenchments, and when Lord Methuen's relief column appeared on Orange river Cronje drew off his troops, leaving only a containing force at Kimberley, and marched southward to contest the advance. The artillery force was equipped by Cecil Rhodes at the expense of the De Beers Company, and additional guns were made in the company's workshops. The water supply having been cut off, wells were sunk. Provisions had been stored up for a nine months' siege.

When the Boers hoisted the *riekleur* at Vryburg on Oct. 18 and proclaimed the annexation of Bechuanaland to the Transvaal, Col. Kekewich issued a proclamation warning all colonists that they would be dealt with as rebels and traitors if they joined the enemy's ranks. After the police had left the native town and mission station of Kuruman, a Boer force appeared and demanded its surrender. The missionary in charge, who had armed many natives and half-castes with rifles, defied the Boers, who, after laying siege to the town, withdrew.

The Siege of Mafeking.—Col. Robert Baden-Powell went out in the summer to take command of the Bechuanaland protectorate forces and defend the border in the event of war. He at once began to put Mafeking in a state of defense for the impending siege by surrounding the town with wire entanglements, constructing barricades, digging shelter trenches and bomb-proof pits, and mounting guns. He collected about 1,000 men and sent most of the women and children down to Kimberley as soon as a Boer commando on Oct. 6 lagged on the Transvaal border at Rooigrond. The burghers, commanded by Piet Cronje, advanced at once on Mafeking the day that hostilities were declared, hoping to reduce

it speedily and go back to their farms to harvest their crops. They found the place so strongly entrenched that they could only approach it by siege works. Some vigorous sallies of the garrison, supported by an armored train, made them the more cautious, though the losses of the British were severe, amounting to 18 in the first action fought on Oct. 14 by the mounted troops under Lieut. Fitz Clarence. An attempt to bring up two more guns for the defense on an armored train sent down to Kimberley under Lieut. Nesbitt ended in the capture of the guns and the force by the Boers, who threw the train off the track at Kratpan on Oct. 12. On Oct. 15 they made an attack on Mafeking, and were repelled. Commandant Cronje brought up a heavy gun from Pretoria after a futile bombardment and general attack on Oct. 23, and when he renewed the attack on Oct. 30, killing 2 officers and 4 men, he summoned the commander to surrender so as to avoid useless bloodshed. Col. Baden-Powell sent word that he would say when he had enough. Commandant Cronje retired later with the major part of his force in order to take charge of the siege of Kimberley, leaving his son Piet Cronje in command. The bombardment was kept up continuously sometimes for several days. The Boers occupied Lobatsi, and destroyed the railroad both north and south of the beleaguered place. During a bombardment all the people had to creep into their underground shelters. Col. Baden-Powell, however, kept them from losing heart, and baffled the besiegers by ingenious resources. He sent out a party to steal into the enemy's trenches and create a panic by a bayonet charge at night. In this action, which took place on Oct. 24, the British had 15 casualties. A car loaded with dynamite was pushed down the track, and when the Boers approached and fired at it some of them were killed. The natives, whose town was alongside of the European settlement, were not only employed on the earthworks, but according to Boer statements they were armed and took part in the military operations. The Dutch commander, Snyman, complained of this, and Col. Baden-Powell retorted that since the Boers had raided native kraals the natives had a right to defend themselves. Another controversy took place over the buildings protected by the Red Cross flag, which Baden-Powell charged the Boers with deliberately shelling; this they denied, but they wanted to know why the flag was flying from three of the largest buildings, and received the reply that these buildings harbored women and wounded persons, and that the Geneva treaty set no limit to the number of buildings that could fly the Red Cross flag.

Col. Plumer, who commanded the forces in Rhodesia, could not come to the relief of Mafeking, because he was confronted at Tuli by another Boer commando. On Oct. 31 the Boers made a determined assault on the works, in which their commander and many others were killed and on the British side 5 were killed and 5 disabled. The Boers gradually drew their trenches more closely round the town, so that their marksmen could pick off any soldier who showed his head over the parapet. The bombardment compelled all who were not necessary to man the trenches to remain most of the time underground. Sickness was caused by the unsanitary conditions long before the food supply grew short. The constant strain was relieved only on Sundays, when both sides rested by agreement. The Boers worked their trenches up to 500 yards, and the situation was so desperate that toward the end of December Col. Hore led out a force, covered

by the guns of the armored train, with the object of storming one of their works, which had been previously reconnoitered. The Boers, however, strengthened this weak place in time, and of 80 assailants 21 were killed and 33 wounded. The besiegers became more aggressive after administering this check, and the situation was so desperate that Col. Baden-Powell sent word secretly to the burghers that they would be well treated after the war if they would disband and return to their farms. This exasperated Commandant Snyman not less than the accusation that he had fired on the women's quarters. Relief was looked for from Col. Plumer, who pushed his way to Gaberones, 100 miles north, but was held in check at that point. The native chief Khama sent his regiments to the border, but the Boer commandant evaded a conflict. Col. Holdsworth approached within 120 miles of Mafeking, and was then compelled to retire. On Feb. 11 Col. Plumer attempted to surprise the opposing force at Crocodile Pools and capture a gun. The Boer position was well fortified, and Major Bird, who commanded the assailants, withdrew with a loss of 31 officers and men. On Feb. 17 and the day following the Boers made fierce assaults on the works at Mafeking. In March Col. Plumer's column advanced as far as Lobatsi, where it was opposed by the bulk of Commandant Snyman's force, only a small number of men being required to man the siege works at Mafeking.

Invasion of Cape Colony.—The Boers neglected the opportunity they had of overrunning Cape Colony at the beginning of hostilities when there were not 3,000 British troops to defend it. The burghers of the Free State were not as enterprising and bellicose as the Transvaalers, and those of both states were unwilling to serve at a distance from their homes. Natal was chosen for attack by the Transvaal because there was a large burgher population within short reach of that frontier, which had only to be supplemented by commandos assembled along the railroad line from Volksrust to Pretoria to make a formidable force. Another reason for making Natal the battle ground was that its rough and broken surface was favorable to Boer tactics. Yet another was that they hoped to regain this territory that once had belonged to them. The burghers of the eastern part of the Transvaal went to defend the Portuguese and Swazi border. Mafeking was besieged by a force gathered from the neighboring western districts. In the Free State the eastern commandos marched into Natal to co-operate with the Transvaalers, while the western ones went to attack Kimberley.

The burghers of the south were anxious about the attitude of the Basutos, and for some weeks a commando of about 3,000 men was kept on the border of Basutoland. Their suspicions were strengthened by the fact that the Basuto laborers who were accustomed to reap their crops and gather their fruit for them could not be induced to perform these services this year. This lack of labor, moreover, kept some of the Boers at home. They asked the British administrator of Basutoland, Sir Godfrey Lagden, to allow the Basutos to come and work for them as usual, but he refused unconditionally. The Basuto chiefs that were most loyal and obedient to their British rulers were desirous of fighting the Boers; others would have fought on the Boer side; but both the Boers and the British, although accusing each other of endeavoring to draw the Basutos into the war, firmly set their faces against arming these natives to take part in the white men's quarrel. In the north Col. Baden-Powell was re-

ported to have armed some of the Baralongs, and when one reverse after another had overtaken British arms and a commando went through Zululand hoisting the Transvaal *cierkleur* flag, Mr. Balfour announced in Parliament the intention of arming the Zulus so that they could defend their country. This policy was not carried out, however. Natives were employed freely on both sides in transport service and other labor which white men are not used to doing in Africa. The extensive fortifications of Kimberley supplementing the bulwark already existing that was formed by the mounds from the diamond mines were entirely the work of the 20,000 native miners.

Just before the meeting of the hostile forces at Dundee commandos began to gather at Donkerspoort, near the southern border of the Free State, and soon afterward to move down to Bethulie, Norval's Pont, and other points on Orange river. Sailors were sent from Simon's Bay to assist in the defense of Naauwpoort. Colesberg was evacuated by the British when a Boer commando appeared on the other side of Orange river with artillery. In the early days of November the burghers crossed into Cape Colony at Norval's Pont, another force at Bethulie, and not till the middle of the month a third commando at Aliwal North. They destroyed the bridge at Achterung on Nov. 6, and Colesberg bridge two days later. The Dutch joined the invaders in large numbers. In Barkly East the citizens seized the arsenal before the arrival of a Boer force. The British fell back from Aliwal North, Naauwpoort, and Stormberg, to the railroad junctions, concentrating at De Aar and Queenstown, which were put in a state of defense with feverish haste. Premier Schreiner issued a circular adjuring the colonists to remain loyal. Martial law was proclaimed by the Cape Government in the northern districts on Nov. 15, and the proclamation of the Free State annexing the districts occupied by the burgher forces was denounced as of no effect by the Governor. Although re-enforcements from England sufficient to defend the colony had not arrived, those that had arrived having been sent out to Natal, still the burghers were not aggressive, but seized only those places where they were welcomed by the colonists. They gave receipts for all supplies requisitioned by them. They were still nervous lest the British should allow the Basutos to ravage their own country, and their advance to Colesberg was delayed till Nov. 15. Van Hendric Olivier, chief commandant of the invading forces, ordered the burghers of the districts in which he had hoisted the Free State flag to take the field. Though only the young Dutch colonists who voluntarily joined his commandos were taken, the loyalists were ordered out of the occupied districts. On Nov. 18 Sir William Gatacre arrived at Queenstown with the advance guard of the force that was destined to defend the colony and repel the invaders. Gen. French, who had been recalled from Ladysmith before the siege was complete to take command of the cavalry division, advanced by the railroad from Port Elizabeth and reoccupied Naauwpoort in order to support Sir William Gatacre and protect the flank of Lord Methuen's Kimberley relief column. The arrival of re-enforcements at De Aar enabled Gen. French thus to assume the offensive soon after he took the command. On Nov. 23 a sharp skirmish ensued at Arundel when a British reconnoitering force appeared. On Nov. 6 the British advanced and occupied a strong position in the direction of Colesberg. The invaders who crossed at Bethulie, led by Swanepoel and Du-

ploy, deferred their advance to Burghersdorp until after the western force had occupied Colesberg. Steynsburg was occupied on Nov. 20, and Stormberg not till Nov. 28. From there they overran the whole country as far as Molteno. Gen. Gatacre soon got into touch with these advance parties. On Nov. 22, following a reconnaissance to Molteno, he advanced to Putter's Kraal, on Nov. 24 Sterkstroom was occupied, and on Nov. 27 an advanced position was occupied at Bushmanshoek, causing the Boers to fall back on Molteno. In the Barkly and Aliwal districts the Boers from Rouxville, who crossed at Aliwal North, found no British force to oppose them. They seized Aliwal North on Nov. 14, Ladygrey on Nov. 18, and Barkly East on Nov. 22. A detachment occupied Jamestown on Nov. 18, but evacuated it on Nov. 24.

The plan of operations that military men recommended for the British was to advance slowly and surely with overwhelming strength from Cape Colony to Bloemfontein and Pretoria, leaving Ladysmith and Kimberley to be reduced by the Boers or to be relieved automatically by the withdrawal of the besiegers for the defense of their own country. Political and sentimental considerations dictated the splitting up of the British army corps and the sending of one large division to Natal to raise the siege of Ladysmith and another to the west for the relief of Kimberley. The forces under Gen. French and Gen. Gatacre in the center were only large enough to stay the tide of invasion and preserve the Cape railroads from destruction, hardly large enough to restrain the growing rebellion among the colonial Dutch. Jamestown and Dordrecht were occupied by the Boers, and at Stormberg, their fortified camp, they were gaining accessions not only from the Free Staters, but from the colonists. Sir William Gatacre, when his force had grown to more than half a division, decided to begin aggressive operations with a night attack on Stormberg. Bringing up his troops from Putter's Kraal to Molteno by train, he set out with 2,500 men, and marched all night. Owing to the treachery or ignorance of the guides, he had not reached his objective when the morning light appeared on Dec. 10. The Boers were aware of his movement, and instead of surprising them he was surprised by volleys poured into the marching column from an unscalable ridge running alongside of the road. The British formed for action, and their guns played upon the enemy's position. The infantry ascended one of the hills in skirmishing order, only to find themselves exposed at the top to rifle fire from front, flank, and rear. They fell back and sought cover, while the two field batteries engaged in a duel with the Boer guns. A retreat was ordered, and in the beginning it was executed in good order. The Boers had guns and mitrailleuses, and when the British retreated they followed along the crest of the hills and did good execution with their artillery, which was well served and carried accurately 5,000 yards. The British threw down everything and made their way back over 9 miles of hills, pursued and shelled almost to Molteno, all except the wounded and 672 men who were cut off and forced to surrender. Two guns were abandoned. The British commander had intended to attack the southwest part of the Boer position, but the guides had led him around to the northwest end. The Boers had 6 laagers at Stormberg, commanded by Commandants Swanepoel and Olivier.

After his reverse Gen. Gatacre was obliged to remain inactive, and the spirit of rebellion spread among the population. On Dec. 18 he directed

that all the inhabitants within 12 miles of his camps should be removed from their houses and confined in laagers close to the military camps. The young loyalists of the northern districts joined Brabant's horse, a corps that performed valuable scouting services. When re-enforcements arrived Gen. Gatacre moved his camp to Sterkstroom, and on Dec. 25 occupied Dordrecht, which the enemy, mostly Cape Boers, made a vain attempt to recapture.

Gen. French's division was composed largely of mounted men, including the Australian and New Zealand volunteers. The district about Colesberg was suitable for cavalry operations, and with only a small force of active skirmishers he kept the opposing Boers employed. On Dec. 13, when 1,800 of them advanced toward Naauwpoort, Col. Porter, with dragoons, hussars, and horse artillery, occupied Vaal Kop and checked them. The division, after receiving accessions of infantry and cavalry, and by flanking movements, compelled the Boers to evacuate both Rensburg and Arundel. Threatened on both flanks, they retired still farther toward Orange river, until they were re-enforced by troops drawn from Modder river. On Dec. 30 the British occupied a position flanking the Boers at Colesberg, and on Jan. 4 a rash night attack was made upon a hill overlooking the town. The Boers shot down nearly all the officers, destroyed half of one company, gave the bugle signal for retreat to throw the others into confusion, and captured one of the companies, the total British loss amounting to 30 killed, 54 wounded, and 119 captured. When the force at the front was increased to 7,000 of all arms an enveloping movement was carried out, and after the British had occupied Slingsersfontein and other positions northwest of Colesberg in the middle of January, the Boers, seeing their line of retreat threatened, began to fall back to Norvals Pont. Re-enforcements arriving from Magersfontein, they pressed the British in turn, who evacuated all their positions and fell back on Rensburg. A 40-pounder on Bastard's Nek and some Vickers-Maxim and other guns gave the Boers a decided superiority. Later Gen. French and his cavalry were called away to take part in the strategic movement for the relief of Kimberley, and then the Boers, who had on their side all the inhabitants of the district, became aggressive once more and forced the British to retire to Rensburg. The British advance had, in fact, covered the withdrawal of the cavalry for operations against Cronje. The 5,000 troops that were ostensibly destined to re-enforce this division were also diverted to the west, and Gen. French soon followed. The retreat from Slingsersfontein on Feb. 12 was attended with considerable losses. The Boers under Commandant Petter surrounded two companies of the Wiltshire regiment and captured 142 men. Gen. Clements retired his whole force to Arundel, and was there invested by the Boers, who were held at bay by the skillful manoeuvring of the Australian mounted men.

Activity was shown at this time by Sir William Gatacre's command to divert the attention of the enemy from the real objective of Lord Roberts. The British advanced on Dordrecht, and attacked the Boers sharply, and on Feb. 16 Gen. Brabant occupied the town.

Kimberley Relief Force.—The column with which Lieut.-Gen. Lord Methuen intended to relieve Kimberley was a picked force, composed of the Highland brigade, the Royal Guards, a brigade of the line, a naval brigade, a good force of scouts and light cavalry under Col. Gough, and 3 field batteries. Col. Gough reconnoitred

on Nov. 10 and found the enemy in position near Belmont, about 700 strong, with 1 gun. In the skirmish he lost 4 officers and 2 privates. The relief column concentrated at Orange river on Nov. 10.

Methuen's division, consisting of 10,000 infantry and 1,000 cavalry, was not ready to move until Nov. 23, when it advanced on the Boer position. In this time the Boers had concentrated on Belmont in great force and had prepared the position there and others in the rear to fall back upon. The British with their guns broke the Boer center in the end. The guards made the march at night, attacked at dawn after a brief artillery duel, climbed the kopjes under a heavy fire, and cleared them with the bayonet only. Three ridges were thus taken in succession, the last attack having been prepared by shrapnel. The Boer force was about 2,000, with 5 guns. Kaffir's Kop, where they made the final stand, was defended with great pertinacity, and the British had to suffer from a cross fire delivered from behind bowlders. The cavalry pursued the Boers from both flanks, but they got away with their guns, transport, and stores, except a few that the British captured. In the assault the British lost 226 killed or wounded, and 83 captured. The Boer losses were much smaller, but 36 were made prisoners, and some of their horses were captured. Lord Methuen accused the enemy of using soft-pointed bullets, of flying white handkerchiefs to deceive his men, and of firing on his troops after being wounded. Such charges were made against the Boers several times later, and all acts in violation of the recognized laws of war were repudiated and denied by the Boer commanders. If such were committed, it was against orders. If dum-dum bullets were used, they must have been captured from the English, as the Boers had none of that kind, though a few of the farmers from remote districts may have brought their elephant rifles and used explosive bullets. The effects of Mauser bullets were found to be sometimes like those of explosive projectiles. They would go through muscle, occasionally even bone, injuring only the tissue in their path, but in striking sacs containing fluids would cause a destructive disturbance.

At Belmont, as in all the actions, the British officers suffered disproportionately, although care had been taken to remove all distinctive marks from their uniforms. This was owing to the custom in the English army for regimental officers to lead their men in every assault. The mounted infantry in this engagement, in an attempted flank movement, fell into an ambush and came off with difficulty. On the day of the battle the garrison at Kimberley, which was in heliographic communication with Lord Methuen, attempted a sortie, which failed. In trying to storm the Boer redoubts Major Scott-Turner, the commander, another officer, and 21 men were killed.

On Nov. 25 Lord Methuen advanced on a position occupied by a body of 2,500 Boers at Enslin, near Graspan. They had 6 guns and 2 machine guns. The position was strong, and was held with great stubbornness. After firing shrapnel the British infantry advanced to the attack, and after several hours of hard fighting the Boers gave way, and in retreating left many ammunition wagons behind. Early in the action a detachment of 500 was sent to attack the British rear guard, but it was repelled. The Boers were driven back at the point of the bayonet from one kopje to another, and their last position was stormed by the naval brigade, which lost heavily. They made good their retreat, and when the lancers

and the colonial scouts tried to intercept them these suffered severely from a withering rifle fire and were forced to retreat. The total British loss was 198 killed and wounded.

At Belmont the Boers had depended on the natural protection offered by the rocky kopjes. This was their reliance also at Enslin, or Graspan, except that they threw up on the first and strongest kopje a *schanse* or stone parapet that was a source of weakness rather than strength, because when the British infantry advanced to the assault the gunners burst shrapnel along the crest of the wall, preventing the Boers from rising to take aim at the storming party rushing up the slope. From this time they were under the command of Gen. Cronje, an expert in earthworks, who chose and elaborated his positions in accordance with modern theories of intrenchment and protected them with guns, few, but of the best kinds, skillfully placed and well served under the direction of Col. Albrecht.

On Nov. 28 Lord Methuen continued his advance and attacked the strongly intrenched position held by the Boer forces on Modder river. They were about 8,000 strong, and had 2 heavy guns, 2 Krupp field guns, and machine guns. The battle lasted all day. The guards brigade attacked on the right and the infantry of the line on the left, supported by the naval brigade from the railroad. The British had 24 guns. The Boers held a position extending 4 miles, and were intrenched on both sides of the river. Gen. Cronje, the Boer commander, restrained the fire of his guns and rifles until the British had deployed and advanced well within range. By a feint on the extreme left he drew off their artillery strength from his main position. The British general found at heavy cost the strength and disposition of the opposing forces and the location of their works. The steep river banks, covered by a belt of trees on both sides, afforded an excellent natural defensive position, which the Boers had strengthened by the construction of deep trenches and gun pits concealed by the brush growth. Rifle pits in front of the elevated position were not suspected by the British, who were told by spies that the Boer forces had retired to Spytfontein, leaving only a rear guard at this point. Concealed in low trenches, they fired with telling effect on the British as they advanced in widely extended formation. From their concealed trenches on the south side of the river and from the buildings they opened a murderous fire on the British infantry when it advanced unsuspectingly into range. The assault cost the British 474 killed or wounded. The river was in flood, and therefore the British could not execute any flanking operation. Lord Methuen described the battle as one of the hardest and most trying in the annals of the British army. The men were exposed to a burning sun, without food or water. In the end the Boers were forced by shell fire to withdraw from some of their positions, and Gen. Pole-Carew succeeded, with the aid of sappers, in getting a small party over the river. Gen. Cronje had brought up re-enforcements shortly before the battle. Troops had been drawn also from the besieging force before Kimberley, and the garrison took advantage of their absence to make another sortie in order to lighten the task before Lord Methuen's column by making a diversion or perhaps breaking through and joining hands with him. But the attempt was a failure. At nightfall the British were in possession of the ford at the extreme right of the Boer position on the Modder, and their artillery would be able to enfilade the whole position. Therefore the Boers

evacuated it, retiring to prepared positions that were much stronger at Magersfontein. The Free Staters on the right wing had become demoralized by the British gun fire, and their weakness caused Col. Albrecht, the German commander of the artillery, to fear for his guns, which were consequently removed under cover of the night.

In the 3 engagements the relieving force had lost more than 1,000 men. It was re-enforced after the last battle by horse artillery, Highlanders, the Canadian regiment, Australian contingents, and 3 British battalions. The railroad had been repaired up to Modder river, but the bridge would have to be reconstructed before trains could go farther. It was necessary, too, to accumulate stores and ammunition. When Lord Methuen was ready to move forward again he had 10,500 infantry, 2,000 cavalry, 3 field batteries, and a flying battery, with an equal force behind to guard communications. On Dec. 8 Commandant Prinsloo, with 1,000 men, stole behind the British position and began to tear up the railroad, but was driven off before much damage was done.

The new Boer position was only 6 miles back, and before the British again advanced they had time to render it almost unassailable by digging tiers of trenches with connecting galleries. Re-enforcements of Transvaal troops, which replaced the Free Staters, brought up the strength of the defending force to nearly 8,000, little more than half the British strength, with still greater inferiority in artillery, but these disadvantages were counterbalanced by their position of great natural strength skillfully fortified by Gen. Cronje. The position was too extended to permit of an enveloping movement, running in a semicircle from Magersfontein to Spytfontein. Gen. Methuen therefore decided on a frontal attack prepared more thoroughly by artillery fire, which had proved so effective in the last engagement. After half a day of shelling, which this time had small effect in the sheltered trenches, and did not even draw the fire of the Boer artillery, so that their gun positions could be located, the Highland brigade led the attack in the gray dawn of Dec. 11. There were concealed rifle pits in front of the hill, and before the Scots deployed they were struck down by a cross fire at short range. They sought cover, having lost 50 officers and 650 men killed or wounded. Other losses brought the total up to 963. The assault of the Highlanders, intended as a surprise, was undertaken against the advice of Gen. Wauchope, their commander, who was one of the first to fall. They ran into barbed wire, and the fire was opened from rifle pits dug in the open ground in front of the kopje. Supports coming up, they tried to storm these trenches, but failed. The cannonade that followed silenced the Boer artillery at times, but no further attacks or bombardments could dislodge the Boers, who made one attempt to get at the rear of the British over the open ground, but were driven back by the artillery. On Dec. 13 Lord Methuen retreated to his former position on Modder river. After this defeat at Magersfontein he made no further attempt to storm Gen. Cronje's works, which were daily strengthened and extended until they covered a front of 30 miles and reached the flanks of the British camp with the object of forcing a retirement to Orange river.

Operations on the Tugela.—The British field force began to arrive in the middle of November. Sir Redvers Buller, who landed at Capetown on Oct. 31, sent one division with a strong artillery and cavalry force to Natal to advance at once for the defense of Estcourt and the subsequent

relief of Ladysmith. The first of the transports conveying the army corps arrived at Cape Town on Nov. 9, and proceeded forthwith to Durban. Another division, under Lord Methuen, proceeded along the line of the Kimberley Railroad for the purpose of raising the siege of that town, and the third, under Sir William Gatacre, went to the northern part of the old colony to oppose the Free State commandos that had found a lodgment south of Orange river and were commanding Cape Colony Dutch. Sir Francis Clery commanded the forces in Natal except those locked up in Ladysmith until Gen. Buller assumed the command. Gen. Hildyard and Gen. Barton took their brigades to relieve Estcourt, and stopped the Boer raids south of the Tugela. The British under Gen. Barton encamped first on Mooi river, where they were attacked by a strong force of Boers, but held their position by artillery fire. The Boers, who were raiding Natal far and wide, were not alarmed when the first British troops arrived at Mooi river and Estcourt. They even attempted to confine these camps as well as Ladysmith, while threatening to attack Pietermaritzburg.

The British force in Natal, besides the Ladysmith garrison of 9,800 men, was 24,000 in the third week of November. After a fight at Willow Grange, in which Gen. Hildyard, with a loss of 15 killed and 72 wounded, drove the Boers from the high ground dominating the place, he was compelled to abandon it and retreat to Estcourt. Considerable bodies of Boers were still raiding the central districts of Natal. A strong division had entered Natal from the Utrecht district on the east and taken up a position at Highlands, while the Boers that crossed the Tugela and destroyed an armored train near Frere on Nov. 15 concentrated at Ennersdale. They began to pass northward as the newly landed troops concentrated at Estcourt and on the Mooi river. Even between these two camps communication could not be established without a struggle. The Boers held the ridges between them and shelled both camps. Gen. Hildyard made a second attack on the Boers who besieged Estcourt and gained a position on the high ground. Afterward the Boers retired to Tugela river, and the British columns united at Frere.

Sir Redvers Buller landed in Durban on Nov. 25, and at once began to press re-enforcements to the front.

The situation in Ladysmith was becoming graver. Rations were reduced, and enteric and typhoid fevers were prevalent. The Boers had placed two more heavy guns in position, and were firing at a range of 5,000 yards, instead of 8,000 yards as before. Johannesburg miners built, under the banks of the river a subterranean town with chambers and connecting galleries, and into these the people hurried whenever a shell entered the town. After the besiegers began to bombard at irregular intervals by night as well as by day the citizens remained most of the time in these unwholesome shelters. On Dec. 8 Major-Gen. Sir A. Hunter led a force of 600 Natal volunteers against Lombard's Kop, surprised the Boers, and destroyed two of their guns. Another sortie, made by Col. Metcalfe with 500 men, had for its result the destruction of another gun, but was attended with the loss of 12 killed, 43 wounded, and 6 prisoners.

On Dec. 15 Gen. Buller advanced with all his force (20,000 strong) from his camp at Chieveley for a general attack on the Boer position on the Tugela at Colenso, with the intention of forcing a passage by one of the two fords. All the time

that the English were waiting for the forces, stores, and transport to be brought up the Boers toiled incessantly to convert the naturally strong position on the Tugela into a fortress. They had trenches on both sides of the river, protecting each other, and all protected by cannon on the elevations back of them. Barbed-wire entanglements were stretched in front of the intrenchments and even in the bed of the river, which had been cunningly dammed in such a way as to form a deep current where the fords had been. Buller's plan was for one brigade to advance upon one of the fords, one upon the other, and a stronger one to attack in the center and support either of the others. Gen. Hart's brigade on the left, attacking valiantly and suffering great losses, was compelled to retire. Gen. Hildyard's brigade went forward to cover its retreat and seized the railroad station and other buildings. The Irish soldiers in the leading battalion, in attempting to ford the river, found themselves in deep water, and a few swam across. The artillery of the Boers was believed to outclass the British field pieces, but the gunnery of the Boers was supposed to be bad. Col. Long, the officer who commanded the artillery, advanced close to the river, as the range was too far for his guns from the place where they stood. The guns in the forts did not disclose their positions when the naval 12-pounders began shelling with lyddite, and the Boer infantry in Colenso village held their fire till the British battalions and field batteries got into close range. Sharpshooters in unseen trenches 700 yards away then killed the horses, so that only 2 of the guns could be brought off. Twelve guns were captured by the Boers after Lieut. Roberts and other officers had been shot in attempting to rescue them. The attack of Gen. Barton's brigade on the right, supported by Lord Dundonald's cavalry, was met by a flank attack of the Boers from Hlangwane hill. The cavalry and mounted infantry had been ordered to occupy this hill, which was unexpectedly found to be a strong Boer fort. It had not been discovered previous to the battle that the Boers had guns mounted on Hlangwane or any trenches south of the Tugela. After Gen. Buller had lost all his artillery he could do nothing but order a retreat. His losses in killed, wounded, and captured were 1,114. The Boer losses in killed and wounded were reported to be only 30. The Boers held back their fire until the British were within close range, although they themselves were all the time under shell fire. Their position was well planned, and both their intrenchments and their gun emplacements were completely hidden. As in all their attacks, the British were in front of an invisible enemy whose position could not even be fixed by the smoke of the rifles. The shell fire of the Boers was accurate and the projectiles exploded, yet they did little damage. The naval battery was unable to silence any of the Boer guns, as the gunners had made bomb-proof shelters for themselves. It was the rifle fire that caused nearly all the casualties. The magazine rifles with smokeless powder, when properly handled, render a direct assault on an intrenched position an almost impossible manœuvre. It is necessary to rush through a series of zones of fire about 20 yards broad, beginning more than 2 miles from the position, when advancing over open ground. The British commanders who attempted to carry these intrenched positions by storm exaggerated in every instance the number of the enemy, because not only could the Boers stop a charge of ten times their number, but by their sheltered galleries leading to the trenches

they could move men and guns to the point at which the attack was directed, which was indicated to them in time by their pickets on the heights. Their intrenchments they constantly extended, until on the Tugela they covered a line of 20 miles. A trench could be dug under cover of night to a depth sufficient to hide the men, who completed the excavation by day. The Boers were much more skillful with their rifles in volley firing, as well as in marksmanship, than the English, among whom only the officers carried glasses, while of the Boers every fourth man had a binocular. The ranges for their cannon were also measured and marked in front of their position on the Tugela.

On Jan. 6 the Boers made an attack in force on the redoubts south of Ladysmith at Cæsar's camp and Wagon hill. The intrenchments on Wagon hill were three times captured and retaken, and Besters hill was held by the Boers till evening, when they were driven out at the point of the bayonet. Their losses were heavier than the British losses, and the failure of the assault discouraged them from another attempt. The attack on the main objective was prepared by diversions at two other points, and when it was renewed in the afternoon it was supported by troops drawn from the intrenched position on the Tugela. Gen. White signaled that he was very hard pressed, and Gen. Buller made a demonstration against the Colenso trenches, but he found them manned in sufficient numbers to oppose his advance. The British loss in repelling the attack on Ladysmith was 417.

Gen. Buller's force was increased until it amounted to 24,000 infantry, 5,000 cavalry, and 2,000 artillery, with 70 guns, including 20 naval and siege guns. Gen. Joubert's was estimated at 18,600 mounted infantry and 1,500 artillery, with 60 guns, on the Tugela and before Ladysmith. The British, while shelling the Boer works daily, carried out cavalry reconnaissances east and west from Chieveley. On Jan. 11 Gen. Buller began a flanking operation west of Colenso. He occupied the bank of the river at Potgeiter's drift, 4½ miles south of an intrenched position of the Boers. If he could force back their left wing and reach Acton Homes, he would find a level road to Ladysmith. On Jan. 10, the Boers having retired from the south side of the Tugela on account of the flood in the river, Lord Dundonald seized Zwart Kop, an eminence commanding Potgeiter's drift, enabling the infantry to follow on the next morning. On Jan. 16 Gen. Lyttleton's brigade crossed to the north bank by the ferry, and the next day howitzers bombarded the Boer position. The naval guns were mounted on Mount Alice at the northern end of Zwart Kop. The Boers, who had offered no opposition to the crossing, added constantly to their defenses. They intrenched Spion Kop and the kopjes opposite Potgeiter's drift. At Trichard's drift, 5 miles farther west and 20 miles from Colenso, Sir Charles Warren with another column effected a passage by means of a pontoon bridge. While these movements were carried out a demonstration in force was made by Sir Francis Clery against Colenso and another position to the east of it. While Sir Charles Warren's advance was directed against the northern side of Spion Kop, Lord Dundonald's cavalry passed round to the west of Acton Homes, and in a skirmish at Dewdrop took 23 prisoners. The main force was that under Sir Charles Warren. The Boers were known to be strongly intrenched in front of Potgeiter's drift, but it was supposed that they had made no preparations to oppose an advance over Tri-

chard's drift. The forward movement took longer than was expected, on account of the great difficulty of transport over the wet ground. The first plan was to turn the enemy's position by the route opened by the cavalry; but this was abandoned when the Boers were found swarming on the heights commanding the route, and a frontal attack on their position, with the object of breaking through, was decided on. The cavalry were therefore ordered to retire from Acton Homes. On Jan. 20, while Gen. Hildyard on the right drew the attention of the Boers and an advance was made in the direction of their main position by dint of constant shelling, Sir Charles Warren's column worked its way along Taba Myama ridge toward Spion Kop. Gen. Hart's brigade attacked them and, though they had few guns and were subjected to a very heavy shrapnel fire, they stuck to their position on a commanding ridge, where they were sheltered behind bowlders and stone breastworks, and when they abandoned the trenches in the night they fell back half a mile on a still stronger position. The British casualties were 92. The opposing forces held their respective positions for three days, keeping up a fire of musketry, which did little harm. The British found that they could make no farther advance in this direction, because there was no position for their guns, and to attack the ridge they would have to cross a bare, open slope; so an advance on Spion Kop was ordered, as this eminence was supposed to command the Taba Myama ridge that the British were confronting and also the Boer positions on Brakfontein ridge, opposite Potgeiter's drift, where the Boers under Gen. Schalk Burger had constructed elaborate fortifications. As all the fighting had been on Gen. Warren's extreme left, while the mountain was outside of his right, he thought it would have few defenders and could be taken by surprise in the night. Two and a half battalions of Major-Gen. Woodgate's brigade were led by Col. Thorneycroft up the steep and narrow path in the darkness and rain, and when they reached the top of the southwest peak without being observed the 30 defenders, after one hasty volley, fled out of their trenches to escape the bayonets of the British infantry. The captors hastily dug trenches, only to find when the morning of Jan. 24 came that they were exposed to the fire of two Maxim-Nordenfeldts on the opposite peak of the mountain and four other guns behind the ridge of Taba Myama. Boer riflemen scattered over the hill slowly advanced in skirmishing order, while the machine guns shelled the trenches incessantly. The Boers drove the men out of the trenches, and were themselves driven out in turn at the point of the bayonet. Two battalions were sent up to re-enforce the rapidly dwindling detachment, while the guns that the British had placed in position on a kopje in front of Taba Myama ridge tried in vain to silence the Maxim-Nordenfeldts, drawing the fire of the unseen battery behind the ridge, with which a duel ensued. Two more battalions were sent from Gen. Lyttleton's brigade, which made an attack on the Brakfontein position to divert the attention of the Boers on that wing. These regiments climbed the eastern slope of Spion Kop, exposed at every step to the fire of sharpshooters on both sides of them. Two more battalions arrived, and the top of the hill was crowded with men who only made a better target for the guns and rifles which they could not answer effectively. To add to their difficulties, they could find no water. The men who found no shelter at the top sought cover on the side of the hill, where the Maxim-

Nordenfeldt shells played havoc among them. In the evening a mountain battery arrived, and two naval 12-pounders reached the foot of the hill, to be brought up the next day, when Gen. Hildyard's brigade was to advance against the main ridge of Taba Myama. Engineers were also on the way to intrench the position; but Col. Thorneycroft, who had succeeded to the command, Gen. Woodgate having been killed early in the action, had already given the order to retire in the night, and when the leading troops went down they met the sappers coming up. The failure to retain Spion Kop made all further attempts to cross the range hopeless, so on Jan. 25 Gen. Warren's division recrossed the Tugela. The British losses in the second attempt to relieve Ladysmith were 1,744, including 95 officers.

After another period of inactivity Gen. Buller made a third attempt to break through the line of fortifications and rescue the suffering garrison and population of Ladysmith. The movement this time had the additional object of engaging the attention and the activity of Gen. Joubert's forces so as to leave the way clear for Lord Roberts's operations. Already the Free Staters were leaving Colenso and the Ladysmith laagers, in order to be ready to resist an invasion of their country from the south or the west. Part of the Transvaal troops and guns were also withdrawn when the newly arrived British forces were seen to be concentrating in Cape Colony for action in some other quarter. The situation of Ladysmith was not as desperate as it was supposed to be after the assault of Jan. 6, and the pressure on the garrison was somewhat eased and the bombardment less trying than it had been before a part of the guns had been removed for the defense of the right flank on the Tugela and the strengthening and extension of its defenses to resist the British forces gathered there and prevent a turning movement. The British still retained Spearman's camp and their fortified position on Zwart Kop. On Feb. 5 another advance over the Tugela was made. Additional troops were brought up from Chieveley for the attack, which was made at a point east of Brakfontein, where the Boer line was weakest. While a feint was made on the left against Brakfontein by Gen. Wynne's brigade, Gen. Lyttleton's brigade crossed the river on a pontoon bridge that the engineers had built under fire and attacked and took the nearest kopje of the Vaal Krantz ridge. Creeping along under the high bank of the river for a quarter of a mile, the battalions formed in extended order, crossed an open plain under rifle fire from kopjes in front and dongas and broken ground on the right and right rear, and rushed the kopje with the bayonet. For the rest of the day they remained under a heavy fire of shrapnel, Maxim-Nordenfeldts, and rifles from the Doorn Kloof, a high mountain on the right, which was not supposed to be strongly occupied. But the Boers had posted a Long Tom and another Creusot there and concentrated a force of mounted infantry, in expectation that the British would make their advance in this quarter not by a bridge, but over the Schiet drift. Hence the hill that the British took was only weakly occupied. The advance over the river was covered by batteries on Zwart Kop previously masked. On the hill the British infantry were exposed to rifle fire from a large donga on the left, running down from Brakfontein, as well as from Doorn Kloof. They advanced along the ridge until they came to a higher kopje, where they intrenched themselves. In the night the Boers placed additional guns in position, one of them of the disappearing

pattern, and during the following day their batteries exchanged shots with the British guns on Zwart Kop and shelled the trenches on Vaal Krantz hill and the field batteries that the British were moving up. In the afternoon the Boers made a determined attack on the British in their intrenched position, and the latter wavered, but the officers rallied them till re-enforcements came presently. Other re-enforcements followed, and the British advanced along the ridge, which is a spur a mile long jutting out at right angles from the higher Brakfontein ridge. One day more they held their position, but could not advance on account of the raking artillery fire from Doorn Kloof, Brakfontein, and Spion Kop. During the night and on the morning of Feb. 8 they retreated across the Tugela.

The movement of the other force over the Pont drift, though intended only as a demonstration, was a difficult and dangerous operation both in the advance and in the retreat, executed in front of the highest part of Brakfontein. The trenches were constantly shelled by five British batteries, and there was no rifle fire until the retirement began; but shrapnel swept the column and almost put out of action a field battery, which was hastily retired.

A few days after the last action on the Tugela the Boers before Ladysmith began to withdraw in considerable numbers toward the north and across the Drakensberg.

On Feb. 14 Gen. Buller began a turning movement on the right flank. The first point seized was Hussar hill, a long ridge south of Hlangwane mountain. Infantry advanced over wooded ridges to a higher ridge east of Hlangwane and connected with it, where the enemy was intrenched, but the defenders were few and were driven back by Colt machine guns. The troops were kept still for two days on account of the heat. On Feb. 17 they captured Cingolo; and Green hill and Monte Cristo, defended by Boer artillery which did little damage because of the thick woods, were taken the next day. The British losses in the four days were 274. A British force reoccupied Vaal Krantz on Feb. 18 to reconnoiter the Boer positions on that flank, and found them practically undefended. The object of the movement was to turn the flank of Hlangwane, and that of the resistance of the Boers was to enable it to be evacuated with safety. They got their guns away from all their positions, and on Feb. 19, when the British occupied Hlangwane, their rear guard passed over Tugela river unmolested. On the same day Gen. Hart occupied Colenso, meeting with feeble resistance. The advance north of the Tugela was vigorously contested. The Free State Boers had yielded up the advanced position beyond the river in order to return to their homes and prepare for the invasion of their own country, and this necessitated the abandonment of the line of the Tugela and the raising of the siege of Ladysmith. Several days were necessary, however, to retreat beyond the Drakensberg and the Biggarsberg mountains with the heavy guns and all the stores and munitions. The artillery did not remain long to contest the passage of the Tugela. The British began the attack on Feb. 23, after what was considered a sufficient artillery preparation. They advanced, but were effectually checked by musketry fire and 1-pound shells. In a hopeless attack on Railway hill 250 Irish soldiers fell. Grobler's Kloof, immediately north of Colenso, had to be taken by storm. The Dublin fusiliers volunteered for the effort, and the heights were finally carried after a desperate contest. Two days more of

hard fighting ensued. Pieter's hill was attacked on Feb. 27, after being shelled with lyddite and shrapnel for three days, and the Boers held their trenches until forced out by the bayonet. After this Railway hill was occupied without opposition. The way was then open to Ladysmith, which was first entered on March 1 by the cavalry of Lord Dundonald, which had made a detour round the defenses on the right. The last train left with the last of the Boers' stores on the day that Gen. Buller entered the city. Some supplies were abandoned, but only 2 guns fell into the hands of the British.

The bad sanitary conditions and the resulting prevalence of disease had greatly weakened Sir George White's force, which had stood the siege for one hundred and eighteen days. The rations for the fighting men just sufficed to keep them on their feet. The only water came from Klip

ordered. At the same time Col. Baden-Powell with other officers went to Rhodesia to recruit two regiments of horse. He had at Mafeking a force of 1,500 volunteers, and Col. Kekewich at Kimberley had 3,000. Additional re-enforcements were taken from India, Egypt, and the Mediterranean stations. The addition of 10,000 men to the force in Natal was ordered on Sept. 7. This gave 25,000 regulars in South Africa. On Sept. 29 the Cabinet authorized the dispatch of a large field force, composed of an army corps of 32,000 men, a cavalry division of 6,000 men, and 9,000 men to guard lines of communication, making a total of 47,000 men, with 11,000 horses, 14,000 mules, 2,650 wagons, and 114 field pieces. Mobilization was ordered on Oct. 9, when President Kruger's warlike message was received. The battalions that were sent abroad were replaced by the militia, of which 33 battalions were called

A ZULU KRAAL.

river, which was so polluted as to cause fever and dysentery. The cavalry horses, and toward the end those of the artillery, were converted into food. In January the stock of medicines was exhausted, and the death rate increased enormously. In the fighting since the siege began 24 officers and 235 men were killed and 70 officers and 520 men wounded, while 6 officers and 340 men died of disease.

The British Mobilization.—The garrison in South Africa, from the time it was increased in May, 1897, till the failure of the Bloemfontein conference in July, 1899, consisted of three and a half battalions of infantry and two companies of fortress artillery in Cape Colony and three battalions of infantry and four batteries—three of field and one of mountain artillery—in Natal. The 6,000 infantry were without regimental transport, which was sent out in July. The first re-enforcement consisted of a battalion from Gibraltar and one from Ireland, dispatched in August when the concentration on the Natal frontier was

out. Parliament met in special session and sanctioned the dispatch of the army corps by voting £8,000,000 to maintain it in Africa for four months. The Government called out 25,000 of the 81,000 men in the regular army reserve, and of these 21,000 rejoined the colors. About 9,000 men were retained with the colors who would otherwise have been discharged from the army. The finding of steam transports and of supplies, vehicles, and animals delayed the shipment of troops till Parliament came together, when in the course of a few days 24,000 were sent off. Sir Redvers Buller was appointed commander in chief in Africa. Parliament was prorogued on Oct. 27 after a session of eleven days.

The use of heavy ordnance in the siege of Ladysmith and the skill of the Boer artillerists surprised the British, who had no siege artillery until they improvised some by sending up naval guns and gunners. The offers of the British colonies to send bodies of volunteers were not accepted at first with the idea of receiving sub-

stantial military assistance from them, but simply as an earnest of the spirit of imperial solidarity. The British military authorities had little confidence in the efficiency of such troops, and above all they wanted all the honors of victory to go to the regular army in order to redeem the inglorious defeats it had suffered at Majuba and the other battlefields of the war of 1881. For the same reasons the enlistment of Uitlander fugitives from the Transvaal and of Cape Colonists and Natalians was not encouraged at first. When afterward it became evident that the war would tax the military resources of the empire, and when the colonial corps and the South African volunteers proved better fighters than the average British soldier, larger bodies were accepted, and they were employed freely in operations where their mobility and their abilities as scouts and mounted infantry were of service, and hence some of the hardest fighting as well as the chief honors of the war fell to them. At the beginning of the war the Cape volunteers, numbering 7,000, and those of Natal, 2,500 in number, including the Imperial Light Horse, were called to arms so as to release the British garrisons, and 2,000 more were raised in Cape Colony and 1,000 in Natal.

At first a division was regarded as sufficient to establish British supremacy; but the fighting had hardly begun when the army corps was found insufficient. On Nov. 11 orders were issued for the mobilization of a fifth infantry division. On Nov. 30 a sixth division was called for, making a total force, including the cavalry division and the local troops, of 9,000 men. The Transvaal Government notified foreign governments on Oct. 12 that a state of war existed with Great Britain, but it was not till Nov. 26 that the British Government concluded to recognize the two republics as belligerent powers and notified the European cabinets to that effect. When the sixth division took its departure from England in the middle of December a seventh was immediately ordered to be mobilized, bringing the forces up to 89,070 regulars and, including the local and colonial contingents, to a total of 105,770 men of all arms. Sir Charles Warren, an old South African campaigner, was assigned to the command of the fifth division, and Lieut.-Gen. Sir Charles Mansfield Clarke to the command of the sixth. After the successive reverses of Gatacre, Methuen, and Buller, all in one week, it was found necessary to put forth the whole military strength of Great Britain, and the colonies were invited to send their best fighting men. An eighth division was ordered to be raised in the United Kingdom. All the reserves not yet embodied were called out. The militia were asked to enlist for the war, nine battalions in addition to three that had already been enrolled for foreign service, and those that had taken the place of regular troops at Gibraltar and Malta were sent to South Africa. A force of imperial yeomanry was recruited, each soldier furnishing his horse and equipment. Mounted infantry corps were enlisted, composed of men who could ride and shoot. This was the class that the colonies were expected to send also, and Gen. Buller was instructed to recruit as many as he could in South Africa. Re-enforcements of artillery, including three howitzers batteries, were sent out as soon as possible. The guns that had been sent with the army corps were found to be almost useless, as they were outranged by the Boer guns and were not effective against infantry sheltered in trenches or behind boulders on the kopjes and often hidden by hills. The ammunition was shrapnel instead of common shell. The employ-

ment of naval guns firing cordite shells was all that enabled the British troops to maintain their positions at Ladysmith, Chieveley, and Modder river. The new re-enforcements raised in the United Kingdom added 50,000 men to the 75,000 that were in the field and 20,000 that were on the way. The regular infantry numbered 61,860; cavalry, 8,660; artillery, 8,940, with 210 guns; engineers, 3,200; auxiliary services, 6,910; naval brigade, 1,100, with 38 guns; colonial contingents, 2,400; local South African forces, 13,200. The local troops were increased later to more than 25,000, the colonial contingents were increased to 4,000, and more volunteers were raised in Great Britain until there were more than 200,000 men in the field. Lord Roberts of Candahar was appointed commander in chief in South Africa, and Lord Kitchener of Khartoum his chief of staff.

The losses in battle up to January, 1900, amounted to 9,900 officers and men, and at least 30,000 were incapacitated by sickness.

The Republican Forces.—The two republics were able to put into the field, under their law of military conscription, which requires every burgher between sixteen and sixty years of age to report with horse and accouterments at the summons of his field cornet, an army of nearly 70,000 burghers, not including Uitlanders and recruits from Cape Colony and Natal. It was not necessary to mobilize their whole force at any time, because with their hardy ponies, able to subsist on the herbage that begins to grow abundantly in October, and to cover a distance of 40 or 50 miles a day, they could take their places in the ranks whenever their services were required, and even move from one frontier to the opposite one in eight or ten days, and when necessary they could carry a week's rations of jerked beef with them, and at other times enjoy an abundant commissariat supplemented by food prepared by the patriotic Boer women. The commandos were armed mainly with the Mauser rifle without bayonet, of which the South African Republic had obtained 40,000 after the Jameson raid, with 25,000,000 or more cartridges. They had also a great number of Martini-Henrys. Even before that event both governments had begun to order guns from Creusot and Krupp. The Boer gunners had been trained by French, Dutch, and German instructors. Their ammunition, however, obtained by contract, was inferior, and where their fire was most accurate the shells often failed to explode. The guns possessed by the Boers were estimated by the British Intelligence Department before the war at 60 of various sizes, including fortress artillery, in the Transvaal, and 25 field pieces of small caliber in the Free State. The military authorities of the South African Republic deceived British spies, who penetrated into the forts at Pretoria and took notes of the war material, old and new, that was visible, but did not get a chance to see guns and ammunition that were hidden away. Up to the beginning of hostilities ordnance and ammunition were imported by way of Lourenço Marques, marked as ordinary merchandise or concealed in locomotive boilers, piano cases, or other strange receptacles. After the campaign opened the Transvaal army was known to have 8 15.5-centimetre or 100-pounder Creusot guns of the Canet pattern, called by the English soldiers the Long Tom; 8 Krupp guns of the same caliber; 18 7.5-centimetre Creusot guns; 9 Maxim-Nordenfeldt 1-pound machine field guns, the kind most dreaded by the British soldiers; 24 3.7 automatic Maxim guns; 8 12-centimetre

field howitzers, half of them Krupps and half Creusots; and 4 3.7-centimetre Krupp mountain guns. The Free State artillery had 12 7.5-centimetre field guns. There were besides 18 guns of older designs. In all, with old guns, the Boers possessed about 108 pieces of artillery, and in various battles they captured 19 from the enemy. Col. Albrecht, Col. Schiel, and other German officers were the artillery instructors and commanders of the artillery in the field, and besides the Boer gunners there were many trained German, Hollander, and French artillerymen in the army. Col. de Villebois-Mareuil, a French officer, and other Continental military men served on Gen. Joubert's staff. A French engineer named Léon Joubert supervised the transportation of the great Creusot gun over the mountains from Laings Nek to Ladysmith, selected the positions for the siege guns, directed the operations of the artillery, and got it away safely in the retreat. M. Grunberg, another French engineer, saw to the repairing of the damaged matériel sent back to Pretoria and Johannesburg, the Long Tom among others, which the British in Ladysmith, by a bold sally, surprised and blew up with gun cotton. He also established a factory for projectiles in Johannesburg. The engineering, telegraph, postal, ambulance, electric, and other technical services, the search lights, the bakeries, etc., were intrusted to Europeans. The intrenchments were made by the Boers themselves, who often made them very deceptive by making mounds of the earth dug from the rifle pits on one side or in the rear, at which the English gunners fired their lyddite shells. Unseen trenches of this description excavated in advance of the elevated positions, and protected by other rows of trenches on the high ground behind them, enabled the Boer sharpshooters to inflict terrible havoc on the British infantry when it advanced to storm the position and unexpectedly received a cross fire at close range. Barbed-wire entanglements were a great impediment to the British bayonet charges. This barbed wire was imported in vast quantities shortly before the war, ostensibly for the fences along the Netherlands Railroad. The commissariat of the Boers was abundantly supplied with meat, bread, potatoes, rice, tea, and coffee, and clothing and equipment were liberally distributed. Rice, flour, and coffee began to grow scarce as the campaign advanced. The British cruisers stopped vessels going into Delagoa Bay. One was an English vessel with a cargo of American flour, and the United States Government protested. The German Government raised a protest when a German mail steamer was searched and merchandise seized. The Boer bases of supply were at home, and the transport was arranged on the relay system in three directions, requiring very few men for its protection. If one base was threatened, the supplies could be destroyed. The British, on the other hand, had to bring their supplies from over sea, and all their material as well, and to guard the long railroad lines of communication they needed almost as many soldiers as they could put into the field. The tracks were watched by natives, four in every mile, who signaled when the track was threatened or had already been tampered with. When Lord Kitchener and Lord Roberts arrived with re-enforcements their plan of campaign depended on the organization of a system of military transport equal to that of the Boers or better, one that would give mobility to the army and enable it to operate away from the railroad lines.

The entire Boer population capable of bearing arms was reckoned by the British War Office

just before the war at 31,579 in the Transvaal, including 800 artillerymen and 1,500 police, and at 22,314 in the Orange Free State. This comprised the whole estimated male population between the ages of sixteen and sixty, and was reduced in the estimate to 51,000 for both States because boys of sixteen years were not counted as fit for military duties, and to this number were added 4,000 probable recruits from the British colonies and 4,000 foreigners. Boys of less than sixteen actually fought in the Boer trenches, and showed themselves efficient soldiers and good marksmen. The actual strength of the Boer troops was estimated after the war began at 40,000 Transvaal Boers, 4,500 enlisted men, 5,000 Uitlanders naturalized before 1897, 3,000 naturalized since that date, 27,500 Free State burghers, 2,500 foreigners, and 8,500 Cape and Natal Dutch; total, 91,000.

British Invasion of the Free State.—When Field-Marshal Lord Roberts began to carry out his strategic plan he managed to conceal in a great measure the disposition and movements of his troops from the enemy. His plan was to cut off the retreat of Gen. Cronje to Bloemfontein when advancing upon the Boer position at Magersfontein in sufficient force to envelop it, though the Boer fortifications covered a front of 25 miles, both flanks touching Modder river. Col. Pilcher, on Jan. 1, with a force of Canadians, Queenslanders, and mounted infantry, surprised and captured a Boer laager at Sunnyside, northwest of Belmont, where Lord Methuen's line of communications by railroad was threatened. This was the beginning of active operations against Gen. Cronje. The important movements of troops were concealed. Freshly landed forces were sent to the front by railroad without any accurate information of their numbers reaching the enemy. On Jan. 6 Gen. Wood occupied Zoutpansdrift, a place where there was no opposing force, on the Free State side of Orange river. Gen. Cronje till now had counted on the fact that no considerable bodies of English troops could move or live in the arid country between Jacobsdal, his advanced base of supplies, and Bloemfontein. He was not ignorant of the improved mobility they had attained under the direction of the new staff. Between the British position on Modder river and Pretoria were 100 miles that had to be traversed without a railroad. To supply an army of 30,000 or 40,000 men on that march required nearly the whole of the transport that the British had collected in South Africa. Accordingly, the wagons and animals were assembled at De Aar and Orange river, and immense reserves of supplies were heaped up at De Aar and other points near the front. Gen. French was at that time spreading out his force of about 10,000 men over a front of 40 miles, and pressing the Boers back toward Orange river by threatening their flanks and rear, creating a diversion that caused them to dislocate a part of their forces to meet his advance just at the time that he quietly drew his off to take part in the intended operation of turning Gen. Cronje's position and cutting off his retreat. Gen. Kelly-Kenny, with part of a newly arrived division, was sent to Thebus, apparently threatening the central advance that everybody expected that Lord Roberts to make over the southern border of the Orange Free State; another part was attached to Gen. French's command, pointing to the same line of advance, yet within easy reach of the real objective; part moved up to Modder river. A ninth division was formed on the Modder under the command of Gen. Coleville,

composed of troops that had been holding the lines of communication. The army corps first sent to South Africa was an army corps only in name, and not only was it divided without regard to co-ordinate action, but the divisions and brigades were split up in defiance of all theories of army organization, and of the remnants of shattered units composite regiments and brigades were formed.

On Feb. 3 Sir Hector MacDonald, with the Highland brigade, to the command of which he succeeded after the death of Gen. Wauchope, a regiment of lancers, and 2 batteries of artillery, crossed the Modder, penetrated the Orange Free State to Koodoesberg, and occupied kopjes on both sides of Riet river. He was attacked on Feb. 7 by a force of Boers, who mounted guns on the same ridge; but Gen. Babington arrived with a regiment of cavalry and 2 batteries of horse artillery, and the Boers were shelled out of their positions on the mountain and at Painter's drift. The British lost 50 men. When Lord Roberts arrived at the Modder river camp on Feb. 9 Sir Hector MacDonald was recalled from his isolated position, having made a useful reconnaissance.

Already, in anticipation of Lord Roberts's plan to attack the line of communication between Jacobsdal and Bloemfontein, Gen. Cronje had begun to remove his guns and the bulk of his troops from Magersfontein and his stores from Jacobsdal, some eastward by the Modder river route, some northward around by Kimberley. The British operations when begun were executed more swiftly and thoroughly than the Boer leader expected.

On Feb. 12 Gen. French seized Dekiel's drift on Riet river, a detachment led by Col. Hanay having on the previous day defeated a Boer force on the way to Randam. On Feb. 13 3 brigades of cavalry with mounted infantry and horse artillery dashed northward to seize the drifts on the Modder. The same day saw two British divisions encamped in Orange Free State territory, having moved, one after the other, across the Riet to support the cavalry. Gen. French's cavalry seized Klip drift and occupied the hills north of the Modder, capturing 3 laagers of the retreating Boers with supplies. Col. Gordon's brigade was detached to make a feint on Rondevaal drift westward. Encountering little opposition, it occupied this drift and another nearer one, and captured 2 more Boer laagers. Gen. French made his march of 25 miles on an intensely hot day in a dust storm. Gen. Kelly-Kenny's division moved after the cavalry from Waterval drift on the Riet.

Gen. French's division pressed on, fought two engagements, and by forced marches entered Kimberley in the evening of Feb. 15. The seventh division under Gen. Tucker occupied Jacobsdal. The Boers in withdrawing from Magersfontein had pressed the siege of Kimberley and drawn their lines closer. When Gen. French arrived a considerable force was still there. He manoeuvred south of the town, and they scattered without offering much resistance. There were 14,000 white people and 19,000 blacks in the civil population, and the garrison numbered about 6,000. The meat ration was reduced to a quarter of a pound months before, and since early in January it had consisted of horseflesh. Typhoid fever, dysentery, and typhus were raging, and among the blacks scurvy also. The death rate was three times as great as in normal times. Supplies of provisions were brought up from Modder river as soon as possible, and a force under Lord Methuen occupied the place. When Gen. Kelly-Kenny's

division reached Rondevaal drift in the evening of Feb. 15, scouts brought in the intelligence that a large convoy was moving along eastward, and a brigade started in pursuit.

Gen. Cronje with the remainder of his force evacuated Magersfontein, fell back on Jacobsdal, loaded 1,000 transport wagons with the supplies and ammunition, and retreated in all haste along the Modder. By Feb. 15 the last of the Boers had left Spytfontein and Magersfontein. The British overtook the Boers, who formed a laager on Drieput kopje, by the Klip drift, abandoning 78 wagons laden with stores and 2 laden with Mausers, shells, and other munitions. Gen. Cronje was compelled to go into laager, owing to the fatigue of his oxen, and this gave time for the rest of the sixth division to come up. The seventh and the ninth divisions were brought up also as soon as possible. The cavalry, which had been engaged in dispersing the small force of Boers around Kimberley, returned to take part in the pursuit. Lord Kitchener assumed the command. The battle of Feb. 16 at the Klip drift went on all day. The British field pieces were overmatched. Naval guns were sent forward. The Highland brigade came up by a forced march, while the Boers continued their retreat to Paardeberg, greatly hampered in their progress by the ox wagons and harassed by Gen. French's cavalry. They occupied successive kopjes in order to protect the slowly moving convoy, and kept up a continual artillery fight with the British, following in the rear. A convoy of 180 wagons laden with provisions and ammunition and 2,800 oxen destined for the British forces was captured by Commandant De Wet after a fight with the guard in which the Boers took 58 prisoners. On Feb. 18 Gen. Kitchener endeavored to surround Gen. Cronje's laager near Paardeberg. He also made repeated direct assaults, in all of which the British were driven back with heavy losses, while those of the Boers were trifling. The object was to prevent the escape of the Boers and to hold them there until the British forces should be strong enough to complete the investment. Every mile that Cronje won brought him within easier reach of the re-enforcements that were coming from Natal and the southern border and farther from the British base. Commandant De Wet, with his 1,800 men, was already impeding the operation by driving parties from kopjes that they had occupied.

Gen. Cronje's laager was at Koodoosrand drift, a defensible position which he had made every effort to reach before being brought to a stop. The mounted infantry came up with the Boer rear guard in the night of Feb. 17 and drove it up the river toward the main body, which was laagered on the north bank. The main body of Gen. Kelly-Kenny's division advanced on the same side of the river to outflank the enemy, while mounted infantry on the south bank manoeuvred on the Boers' right front and flank, thus inclosing their whole position and holding the two drifts. The British troops advanced to the attack early in the morning and were under fire all day. They could only approach over level ground on either bank, and the Boer force, which had dwindled to a mere guard for the convoy, was able to check every advance in spite of the vast numerical superiority of the assailants, who were forced to retire or to lie down flat. At night the positions remained unchanged. The mounted infantry who harried their rear the Boers kept off by means of intrenchments thrown up during the night in the dry bed of the river. The attack was begun early in the morning. The

Highlanders forming part of Gen. Coleville's division, which had come up in the night, advanced on the right flank and rear while the enveloping movement was carried out, the other regiments swinging round in a long line to the front. The assault of the Highland brigade was stopped immediately, the men throwing themselves down on their faces. A large force which included the Canadian regiment was led by Gen. Smith-Dorrien in a charge against the laager, and was met by shell fire and stopped effectually by rifle fire. A Vickers-Maxim and other guns mounted on a kopje on the south bank prevented a convergent attack. The high banks on both sides of the river afforded excellent vantage ground for the Boer riflemen, who kept off the British infantry and mounted men on both sides. Toward evening the British batteries began firing from the rear, forcing the men in the river bed to fall back to the sheltered ground near the laager, which was shelled also with such destructive effect that the Boers removed their wagons, animals, stores, and whole camp to the bed of the river. Gen. French's cavalry division arrived during the battle and, proceeding to the front, confined the Boer detachments that were escaping. On the next day Gen. Tucker's division arrived, and the naval brigade a little later. Gen. Cronje could use his small machine guns at first with good effect, but his efforts to mount his heavier guns were frustrated by the British artillery fire.

Lord Roberts superseded Lord Kitchener in the command after the second day's battle. He was anxious to avoid the heavy loss to be incurred by following up the plan of an infantry attack, and, having great superiority in artillery and a line of investment inclosing Gen. Cronje's position, he decided after a reconnoissance in force to bombard the Boers in the river bed, using his large force of mobile troops to form an outside line for the purpose of intercepting the small bodies of Boers that were now pouring in from Natal and other quarters to re-enforce Gen. Cronje. Several of these bodies were driven off in various directions on Feb. 20, and on one kopje 50 men who had come from Ladysmith surrendered on being shelled. The bombardment with 56 guns was kept up two days. Lyddite shells exploded in all parts of the bed of the river, while shrapnel searched every bush and donga. The wagons and everything combustible were set on fire and the animals were killed, but the people found shelter under the banks of the river, except those on the firing line, some of whom crept out to take aim at the naval gunners, who were firing at a range of 1,000 yards. At the end of the first day's battle, when his cordon was drawn completely around Gen. Cronje's camp, Lord Kitchener asked the Boer commander if he would not surrender so as to avoid useless bloodshed. Piet Cronje replied that he still had men and ammunition, and saw no need of surrendering. He knew the need that Commandant-Gen. Joubert had of time to concentrate his widely distributed forces and prepare his second line of defense, and determined that he would hold the invading army in check as long as it was possible for him to prolong his resistance. Lord Kitchener began the bombardment the next morning, and at the close of the day Gen. Cronje requested an armistice for twenty-four hours to enable him to bury his dead. This was refused, and he sent word that if the British general was so inhuman he saw no other course than to surrender. Lord Kitchener set out to meet him, and was met by a messenger who said that Gen. Cronje had made

no proposal to surrender; that he would fight till he died. All the batteries then went into action, concentrating their fire on a space not a mile square. Gen. Roberts reconnoitered the position when he took command, and continued the bombardment. Commandant Botha brought a considerable force to relieve Gen. Cronje, but Gen. French's cavalry stopped him. Other re-enforcements kept coming, which required the attention of the mounted men and the infantry who occupied the surrounding kopjes. On Feb. 22 and succeeding days the shelling was continued intermittently while the British pushed their trenches nearer and nearer. The hope that the burghers who were known to be operating north and east of the British positions would break through the line and enable the besieged force to escape was abandoned after the dispersion of Botha's large command on Feb. 23. Howitzers had been brought up and observations from a captive balloon enabled them to drop lyddite shells wherever the Boers appeared in the bed of the river, and the other guns and the infantry to put a stop to any activity. The river bed and banks were raked by field and machine guns at a range of 1,000 yards, and the line of intrenchments was worked up to 600 yards. In the night of Feb. 26 the Canadians and engineers dashed forward and seized a place where they could intrench themselves only 80 yards from the Boer trenches. The Boers had expended all their ammunition, and could offer no resistance to the expected assault. The next morning Gen. Cronje sent a letter stating that he surrendered unconditionally, and afterward, on the demand of Gen. Roberts, he presented himself at the British camp and marched his men out of the laager after they laid down their arms. Only 3,000 were left out of 8,000 with whom he began his retreat from Magersfontein, most of the rest having separated from the command during the rear guard fight. The casualties had not been very heavy, but the condition to which the men were reduced before surrendering, the lack of food and water, and the effluvia from decaying corpses that they had to endure could not be supported longer. The men were sent in charge of their own officers to the prison ships in Simon's Bay, and Piet Cronje was deported to St. Helena.

Gen. Roberts had an army of about 50,000 men. On March 2 he established his camp at Osfontein. A few miles southeast of that place Col. Remington's scouts came in touch with the Boers. The united commands of Botha, Prinsloo, and De Wet formed a force of about 6,000 men, which acted as a corps of observation, retiring as the march of the British was resumed. When Lord Roberts entered Bloemfontein President Steyn and the officials had departed for Kroonstad, which was proclaimed the new seat of government. Lord Kitchener went to Arundel, where the Boers had lately been pressing the colonial troops under Gen. Clements. A rebellion that had broken out in Cape Colony was kept in check by placing a large force in the rebellious district, and the 3,000 rebels soon surrendered their arms or returned to their homes. The Republicans evacuated the positions they held in the northern part of Cape Colony and made their way northward, while of the colonists who had joined them some went along with them, some quietly resumed their peaceful occupations, and some surrendered their arms. Many of the burghers of the Free State in the districts occupied by the British gave up their weapons. The large body of Boers commanded by Olivier at Stormberg retired to Rouxville, and marched thence to join Gen.

Joubert near Kroonstad, having an immense train of wagons to protect, with which they made their way round by the Basutoland border and the Drakensberg before the arrival of Gen. French's cavalry, which sought to intercept them. Commandant Olivier's force from Colesberg joined the commands of Botha and De Wet in the attempt to re-enforce Cronje. After Cronje's surrender and the occupation of Bloemfontein President Kruger, after a conference with President Steyn, in a circular note to the United States and of the European powers, asked their mediation to secure peace on the basis of the preservation of the independence of the republics. The United States Government, which had undertaken at the beginning of the war to care for the interests of British subjects in the Transvaal through its consul in Pretoria, was the only one that addressed a communication to the British Government on the subject. Lord Salisbury replied that no proposals of mediation by a foreign power would be considered.

SOUTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution May 23, 1788; area, 3,750 square miles. The population, according to each decennial census, was 249,073 in 1790; 345,501 in 1800; 415,115 in 1810; 502,741 in 1820; 581,185 in 1830; 594,398 in 1840; 688,507 in 1850; 703,708 in 1860; 705,606 in 1870; 995,577 in 1880; and 1,151,149 in 1890. Capital, Columbia.

Government.—The Governor, William H. Elerbe, died June 2. The Lieutenant Governor, Miles B. McSweeney, succeeded, and the President *pro tem.* of the Senate, R. B. Scarborough, became Lieutenant Governor. The other State officers in 1899 were the following: Secretary of State, Marion R. Cooper; Treasurer, W. H. Timmerman; Comptroller, John P. Derham; Attorney-General, G. D. Bellinger; Superintendent of Education, John J. McMahan; Adjutant General, J. W. Floyd; Railroad Commissioners, Messrs. Evans, Wilborn, and Garriss; Phosphate Inspector, S. W. Vance; Chief Justice of the Supreme Court, Henry McIver; Associate Justices, Eugene B. Gary, Ira B. Jones, and Y. J. Pope; Clerk, U. R. Brooks—all Democrats.

Finances.—The receipts for 1899 were \$3,253,020.79; this included the cash balance of \$450,077.06 left from 1898. The general taxes of 1899 (paid this year) amounted to \$586,982.57, and those of 1899 (paid) to \$243,213.85. The privilege fertilizer tax brought \$62,123.88, and the phosphate royalty \$39,279.28. The disbursements were \$2,744,145.14, leaving a balance of \$508,875.65. The larger items of expense were: Salaries, \$145,082.58; legislative expenses, \$43,589.94; educational, charitable, and penal institutions, \$227,359; pensions, \$101,145.55. The treasury received from dispensary sales \$1,593,240, paid on the account proper of the dispensary \$1,428,008.79, and transferred to the school fund from dispensary \$75,000.

The State entered a claim against the Government for reimbursement of expenses incurred in organizing and equipping troops for the war with Spain; and the treasurer was notified that the Government holds bonds of the State amounting with interest to \$248,750. On the other hand, again, the State has Revolutionary War claims amounting to about \$550,000; and of this about \$350,000 is said to be principal and interest of a debt acknowledged by the Government in 1831, as proved by official documents.

The taxable property as assessed for 1899 was \$176,422,288, an increase of \$3,185,183 over the amount in 1898.

The income tax law is not enforced. More than 20 counties made no returns, and less than \$10,000 was collected in 1898.

Education.—The total enrollment in the public schools is more than 276,000. The majority of pupils are colored.

The Winthrop Normal and Industrial School for Girls, at Rock Hill, has 348 students in the college classes. The Legislature this year increased the number of scholarships to 124.

The Citadel Military Academy, at Orangeburg, graduated only 9 this year—a small class, owing to the expulsion of 64 cadets last year.

Clemson College graduated 16 and had 325 students. Newberry College gave diplomas to 15, and Wofford College to 10.

M. B. MCSWEENEY,
GOVERNOR OF SOUTH CAROLINA.

The summer school for teachers at Rock Hill was the largest gathering of educators ever held in the State, about 300 having been present.

The Southern Chautauqua was chartered in May, with a capital of \$25,000, in 5,000 shares. The Isle of Palms, Charleston, is chosen for the location of the institution. Its objects as given are "to establish and maintain schools and lecture halls and to forward in every way literary, scientific, moral, and æsthetic culture."

There were 607 students at the State college for colored students, including those in the model school and the preparatory department; in the college classes, 60.

Charities and Corrections.—There was an average this year of 906 inmates at the State Hospital for the Insane; 1,399 were under treatment at some time during the year. The number of recoveries was 102, or about 25 per cent. of the admissions. The cost of maintenance was \$102,342.43.

The Institution for the Deaf and the Blind enrolled 196 pupils, who were taken care of at an average cost of \$132.

There were 801 convicts remaining in the Penitentiary Dec. 31. The receipts, including a balance of \$4,804.44, were \$68,322.67, and the disbursements \$58,436.

The Legislature ordered an investigation of charges against the management of the Penitentiary, and a committee was appointed. The retiring superintendent, W. A. Neal, was alleged to be short in his accounts; this was found to be true, and careless and dishonest management was also proved. The State property had been given away, and convicts had been employed to work for the superintendent's friends. Several men in public life were involved in this scandal. The convicts were found to have been treated well, and the State farms were well managed. The receipts of the institution were \$11,104.41 short, but the bondsmen could be held for only \$2,812.41, which they promptly paid. Three indictments were found against Col. Neal—one for failing to turn over moneys to his successor and two for breach of trust with fraudulent intent, upon which he is to be tried in 1900.

The report of the Attorney-General says there were 227 trials for murder in the State during the year, and 97 convictions.

The Dispensary.—The House, at the legislative session, passed a resolution condemning the beer dispensaries, and in September the Board of Control announced that they would be closed, and that semisterilized beer would be supplied to consumers through the regular county dispensaries. J. B. Douthit, a former member of the Board of Control, was chosen commissioner of the dispensary in April. He was removed in October by a vote of three to two members of the board. He refused to vacate, and this led to an investigation in which serious irregularities were charged upon the dispensary management in sworn statements. The judge before whom the case was brought decided in November that the commissioner had been improperly removed.

The number of seizures during the first six months of the year was 673; the cost of the constabulary \$15,634.89. The special dispensary school fund for 1898-'99 amounted to \$130,000. There were 372 violations of the dispensary laws and 100 convictions.

The Governor, in June, reduced the force of constables from 59 to 34. The Supreme Court decided in July that constables must wear their pistols in sight, having no more right to carry concealed weapons than other citizens.

Railroads.—The added mileage this year amounted to 237. The total earnings of the roads in the State were \$3,916,383, an increase of \$827,053 over those of 1898; the expenses, \$5,831,246; the taxes, \$383,716. The Governor says: "One of the most important changes in the railroad situation during the year has been the leasing of the South Carolina and Georgia Railroad by the Southern Railway system. The result of this transaction has been to give the city of Charleston a continuous mileage tariff to all sections of the State reached by these lines. The same is done by the Atlantic Coast Line system."

Insurance.—Premiums amounting to \$1,948,824.39 were reported for the year ending Sept. 30; on these the State tax, $\frac{1}{4}$ of 1 per cent., was \$9,743.63. This does not include taxes paid to counties and municipalities. No tax is laid upon fraternal or assessment companies, and no record is kept by the State of their operations. More than 100 companies operate in the State, and the Governor recommends an examiner for banks and insurance companies.

The Supreme Court decided in a case before it in March that in assessment insurance the contract is suspended by nonpayment of assessments, and if the property is burned before assessments are paid there can be no recovery of insurance.

Militia.—The militia has been reorganized, and the active force now numbers 3,000 men. The design is to have this force well organized and equipped. Small companies to the number of 34 have been disbanded, and 45 strong companies have been retained. The force is to consist of 1 regiment of cavalry, 2 regiments of infantry, 1 battalion of infantry, 1 battalion of naval militia, 1 battery of artillery, and 1 battalion of infantry known as National Guard.

Cotton Mills.—Statistics from the office of the Secretary of State show that 11 cotton mills have been chartered and fully organized this year, with an aggregate capital of \$3,275,000; existing mills, 16, have increased their capital stock by \$2,429,000; and 14 mills have taken commissions of incorporation with a total capital of \$2,275,000.

Cotton.—The production of cotton in the State in 1898-'99 is given as 960,000 bales.

Lawlessness.—For the murder of the negro postmaster at Lake City in 1898 (see Annual Cyclopædia for 1898, page 699) eleven men were placed on trial, April 10. Two others who were indicted turned State's evidence. The case ended in a mistrial, the jury having failed to agree; five, it is said, were for conviction. The citizens have petitioned for the reopening of the post office, which was closed by the Government after the crime. The closing of the office obliged them to go three miles for their mail.

Six colored men who caused the death of an old negro by whipping him after the manner of "whitecaps" for alleged immorality, and to imitate Florence, found guilty, and sentenced to imprisonment at hard labor for life. One other eighth was tried with them was acquitted, and an eleventh implicated had turned State's evidence.

In a case of a claim for damages on account of the lynching of a negro, Lawrence Brown, who had been arrested on a charge of arson and dismissed by the magistrate, a jury in Orangeburg County found for the county, under instructions from the judge, because he was not taken from officers of the law, and it was held by the judge that the provision of the Constitution of 1895 allowing \$2,000 or more damages to the estate of a person lynched did not apply unless the prisoner was in the care of officers. The Supreme Court reversed this decision and ordered a new trial, which took place, and in October a verdict was again brought for the county.

A negro who was found in a white girl's room in Greenville by her father, Aug. 22, and allowed by him to go, on the plea that he was drunk and did not know what he was doing, was taken at night by a mob, hanged to a tree, and shot.

An attempt by three constables to search the house of John Stuart, in Columbia, in February, for liquors said to be kept for sale contrary to the law, resulted in an affray in which Mrs. Stuart was mortally wounded by a shot from one of the constables, who was tried and acquitted in June.

Three days after the above-mentioned incident a newly appointed dispensary constable was shot by a former friend in a quarrel that began with the accusation against the constable that he was a spy. He lived only a few hours after being wounded.

Legislative Session.—The General Assembly met Jan. 10 and adjourned Feb. 21.

R. B. Scarborough was elected President *pro tem.* of the Senate and Frank B. Gary Speaker of the House. The right of the representative and the Senator-elect from Lee County to seats was questioned on the ground that the Supreme Court had declared the act of the General Assembly establishing the county to be null and void, since it was shown that the proposed change was not voted for by two thirds of the electors in the part of Darlington County that was to form part of Lee, and they were excluded.

About 150 acts and joint resolutions were passed. Several bills were introduced in regard to the distribution of the profits of the dispensary, and the two houses finally united upon a bill to apply the dispensary profits to make up the deficiencies in counties where the schools could not be kept open three months with the proceeds of the poll taxes and the constitutional 3-mill tax. Bills for radical changes in the dispensary system failed. The use of the palmetto tree upon dispensary bottles was forbidden.

Combinations of fire insurance companies to control rates were prohibited on penalty of revocation of license.

Provision was made for the increase and reduction of capital stock by corporations other than railway, turnpike, and canal companies. It is forbidden to levy and collect taxes to pay township bonds in aid of railroads not completed through the townships and not accepted by the Railroad Commissioners.

The law for inspection of fertilizers was amended. They are not to be sold without the stamp or tag showing that they have been inspected. Dealers in long, or sea island cotton in the seed are to pay a license of \$50. A maximum schedule of charges for the sale of leaf tobacco by warehouses was fixed. Cotton bales weighing 300 pounds or more are made merchantable, and buyers are required to accept them.

Loans by the Sinking Fund Commission must be repaid in gold or silver coin, in United States currency, or national bank notes. A poll tax of \$1 a year is to be levied, the proceeds to go to public schools. The penalty for nonpayment is \$5 to \$10 or imprisonment ten to twenty days. Liens for taxes are to expire in ten years.

An instrument without a seal shall be construed as having a seal attached when it is clear that the makers intended it to be sealed. It is required that the affidavits upon which a warrant attachment is granted be filed at once, and copies served upon the defendant.

A general law was made for the amendment of town and city charters. The metropolitan police law was repealed. Places of 45,000 may acquire lands for hospital, park, and other municipal purposes. Such cities or towns, before contracting debt beyond their income for the current year, except for light, water, and sewerage, must declare their intention by a two-third vote in council, must affirm this declaration by a two-third vote of electors, and must submit the proposition to the Legislature for approval. Towns of 500 to 1,000 may maintain fire departments and establish fire limits.

The act for establishing new counties and for changing county lines and moving county seats was amended. Recent legislative acts establishing new counties, found to be unconstitutional, were repealed and the former status restored. County supervisors may exchange convict labor and hire such labor, one county from another.

Persons holding offices of the State or in public institutions are forbidden to take compensation other than that provided by law. An act was passed creating a board of county commissioners, taking the place of the present county and township commissioners, who are to continue in office as county boards of equalization and township assessors.

The tax levy was fixed at 5 mills. Among appropriations were: To South Carolina College, \$25,000; to the Citadel Military Academy, \$20,000; to the negro college, \$15,000; to Winthrop, \$35,450, of which \$5,450 is for scholarships; for the militia, \$8,000; to the Asylum for the Deaf and Blind, \$19,000; to the Hospital for the Insane, \$108,800; Catawba Indians, \$800.

Among other measures were the following:

Making distress for rent subject to prior liens on property; landlords may issue distress warrants where tenants remove from their premises before expiration of the contract.

Making desecration of graves and cemeteries a misdemeanor.

Requiring travelers on roads, causeways, and bridges to keep to the right of the center.

Permitting the State Board of Health to order vaccination and enforce orders.

Requiring the State Board of Health to co-

operate with the Government in establishing quarantine rules for the protection of the live stock industry.

Authorizing the utilization of the county chain gang for labor for preserving public health.

Requiring employers of women in mercantile establishments to provide seats for them.

To prevent shooting on the highways.

Making it a misdemeanor to order work to be done in shops on Sunday.

To provide for immediate payment of wages due discharged laborers.

To punish persons digging ginseng from March 15 to Sept. 15.

Permitting convicts sentenced for less than five years, instead of three, to be employed in the chain gang.

Decisions.—The statute allowing an owner of land surrounded by private lands to gain a private road to a highway by condemnation proceedings was pronounced unconstitutional this year, as taking private property for private use without the owner's consent.

Two decisions were rendered in regard to dogs—one that they are property and may be subjects of larceny; the other, that a railroad company can not be charged with negligence and held for damages for the killing of a dog upon the track by a train.

In a case of the State against a railroad in which it was sought to collect taxes on property which, it was alleged, had been escaping taxation, the court decided that assessment was necessary to produce liability, and as the complaint did not claim that the property had been assessed there was no liability.

Claims against the Government.—The Governor in November wrote to the governors of other Southern States, asking their co-operation in recovering from the Government moneys claimed to be due to citizens of those States. The amount, the letter says, is about \$11,000,000, arising from the sale of cotton seized by the forces of the United States and its Treasury agents during the period of the war and during a few years thereafter.

SOUTH DAKOTA, a Western State, admitted to the Union Nov. 3, 1889; area, 77,650 square miles. The population, according to the census of 1890, was 328,808. Capital, Pierre.

Government.—The following were the State officers in 1899: Governor, Andrew E. Lee, Populist; Lieutenant Governor, John T. Kean, Republican; Secretary of State, William H. Roddle, Republican; Treasurer, John Chamber, Republican; Auditor, James D. Reeves, Republican; Attorney-General, John L. Pyle, Republican; Superintendent of Schools, E. E. Collins, Republican; Commissioner of School and Public Lands, David Eastman, Republican; Adjutant General, H. A. Humphrey; Mine Inspector, James Cusick; Oil Inspector, R. E. J. Meyer; Public Examiner, Maria Taylor; Commissioner of Insurance, L. C. Campbell; Surveyor, William L. Bruce; Veterinarian, J. W. Elliott; Chief Justice of the Supreme Court, Dighton Corson, Republican; Associate Justices, Dick Haney and Howard G. Fuller, Republicans; Clerk, Miss Jessie Fuller.

Finances.—The report of the Treasurer for the year ending June 30 shows the receipts from all sources to have been \$1,048,979.28. The disbursements were \$1,011,387.28. Among collections were: From counties, \$237,674.79; lease of lands, \$2,382.75; liquor license, \$56,752.28; insurance, \$21,239.87; miscellaneous, \$131,324.77; telegraphs, \$8,874.94; telephones, \$2,984.07. Receipts from counties for the insane tax were \$85,-

525.31; sleeping-car companies paid \$352; express companies, \$2,512; licenses for grain warehouses amounted to \$762; the State Reading Circle fund was replenished to the amount of \$1,460.85. On the bond interest and sinking fund \$145,004.87 was collected; on the constitutional bond fund, \$13,043.06; and on the Taylor deficiency school fund bonds, \$31,792.92. The bonded debt was decreased materially; the amount of bonds due was \$708,300, of which \$440,800 was in coupon bonds and \$267,500 in registered bonds. The entire debt falls due in twelve years. At the close of the year there was more than \$150,000 in the bond interest fund.

Education.—The school population this year was 116,278, an increase of 3,467 in one year. The amount apportioned from the land fund was \$202,436, giving about 30 cents more *per capita* than in any previous year. The Legislature appropriated \$22,000 for the Madison Normal School, \$25,000 for the Spearfish Normal, and \$19,500 for the Agricultural College, at Brookings. The college has established an experiment station at Highmore, in Hyde County, where special attention will be given to the growing of hard grasses that will do well in dry climates.

Charities.—A terrible catastrophe occurred at the hospital for the insane at Yankton at two o'clock in the morning of Feb. 12. A fire broke out in the laundry building, which was used as a cottage on account of the crowded condition of the institution. Of the 40 inmates housed in the 3 stories of the building, 17 lost their lives. The 12 attendants in charge of them escaped. The coroner's jury brought in a verdict, finding that no one was criminally responsible for the fire, but found also that "by reason of insufficient appropriations no night watchman had been employed on the hospital grounds for at least four years." There was no insurance upon the burned building. The Legislature appropriated \$70,000 for improvements. The contract for building the Northern Hospital for the Insane, at Redfield, was let in October for \$22,500. The Home for the Feeble-minded, for which the Legislature provided, is to be at Redfield.

The Government is to build an asylum for insane Indians at Canton. The site selected contains 160 acres, and the appropriation is \$45,000.

Military.—The Governor wrote to the President in April, asking for the return of the First Dakota Regiment from the Philippines, since the war for which it was enlisted had ended, and criticising the course of the Administration in carrying on the war in the islands as an "attempt to enforce title with bayonets to a nation of brown men purchased from a disgraced and vanquished despot," after this nation had spent blood and treasure "to repudiate the theory that the white man could buy the body and force the services and the allegiance of the black man."

The volunteers reached home in October, and were received with great rejoicing. A fund of \$31,000 for paying the transportation for them from San Francisco was raised in the State, with the understanding that the next Legislature will reimburse the contributors. A list of those in the service in the Philippines who lost their lives before May 14 numbers 57; of these, 30 died of disease, 1 was drowned, and the others were killed or mortally wounded in action.

The State has credit with the War Department for arms and equipment of troops, which will be returned in equipment for the reorganized militia.

River Improvement.—The War Department in the spring approved plans for improving the Missouri from Sioux City, Iowa, to Bismarck,

N. D., involving an outlay of \$170,000; of this, \$100,000 is to be used at Yankton, Elk Point, Pierre, and Fort Pierre.

Railroads.—Several new roads are projected, and preparations were made for beginning work in the autumn. A new road between Yankton and Omaha, and a road to the Black Hills, to be known as the Dakota Southern, are among the new enterprises. An estimate of the taxation of roads in the State makes the average \$89.52 a mile. The Railroad Commissioners are engaged in litigation with the Milwaukee Railroad in reference to maximum rates. The commission costs the State \$15,000 a year.

Banks.—The condition of the 26 national banks, Feb. 4, was given as follows by the Comptroller: Since the date of the last report, Dec. 1, the resources have increased from \$7,753,037 to \$7,904,095; loans and discounts decreased from \$3,344,339 to \$3,335,257; reserves increased from \$1,683,905 to \$1,732,693, of which gold holdings increased from \$310,322 to \$341,028. The deposits increased from \$4,792,607 to \$4,974,434, and the average reserve held decreased from 36.23 to 36.11 per cent. The Yankton Savings Bank suspended payment Nov. 22, in consequence, it seems, of a run precipitated by the fact that the county treasurer, who had defaulted, was known to have deposited public funds there.

Products.—The amount of gold produced from Black Hills mines in 1899 is reported by the Mine Inspector at \$9,131,436. The Homestake leads with \$2,674,336. The resources of the State have been summed up as follow: "South Dakota is third in the production of gold of all the States. She is also third in the production of wheat, first in the production of flax, fifth in barley, oats, and rye, about eighth in wool, and tenth in live stock. She is also high among the States in the production of dairy products, and is a liberal producer of almost all known minerals and coal, and even natural gas in many localities."

Lands.—From a statement published in March it is learned that of the 168,000 acres of Government land opened for settlement two years ago on the Yankton Indian Reservation in Charles Mix County, all but 15,000 acres have been entered by actual settlers. These lands have cost the settlers \$3.75 an acre, but when it is considered that they are in one of the favored sections of the State and largely on the Missouri bottom, it will be seen that the owners have made an excellent bargain. Much of the land is now worth \$12 to \$20 an acre.

Tolstoi.—The following was published in August: "Near the Nebraska line, in the eastern part of the State, lies the new village of Tolstoi. It is neither on the maps nor on the railroad, but is a thriving village. Although but two weeks old, it has a school, a church, and a store. Tolstoi is occupied by a band of Russians, exiled on account of religious persecution from their mother country. They came from the province of Kherson, in the eastern part of Russia. All are of the Dhouchoborski faith, which means spirit wrestlers. The store, as well as the farm and school property, is owned in common, but the members are allowed to have individual property, as they pay their quota of the running expenses of the plant. The colony has about 3,000 acres of land in one body."

Legislative Session.—The sixth biennial session of the Legislature began Jan. 3 and ended March 3. The Republicans were in a majority in each branch. A. G. Somers was Speaker of the House.

The Public Examiner made a report criticising

the management of the office of Oil Inspector Dowell, finding that it had been conducted with little or no system, that the fees had all gone to maintain the office, and that some items of the expense account indicated a scandalous condition of affairs. Report was made also on the State Treasurer's office. The Examiner could not find that any of the interest received by Treasurer Phillips had been turned over to the State. The Governor estimated that the Treasurer had received \$52,653.86, which should have gone to the State, but the Attorney-General could find no law to compel the Treasurer to account for interest on the daily balances.

A constitutional amendment was adopted at the State election of 1898, establishing the dispensary law for the sale of liquors, but it could not go into effect until a method of administering it should be prescribed by the Legislature. Bills with this intent were introduced, but none were passed. Instead, the question was resubmitted, and in 1900 the voters will have before them the question of repealing the amendment that they adopted in 1898. Meantime, the liquor license law continues in force, as was decided by the Supreme Court in a test case brought before it in September.

A new registration law was enacted.

A bill was passed prescribing the method of carrying into effect the initiative and referendum amendment to the Constitution adopted at the election of 1898.

The game and fish laws were made more stringent; provision was made for licensing hunters and for protecting large game.

An act was passed to classify cities according to their population. The issuing of bonds by cities for water works and the refunding of bonds were provided for.

Supplies for State and county institutions must be bought, as far as is practicable, within the State or county. An appropriation was made for a building for the care and training of feeble-minded persons. Tuition in State educational institutions is to be free to soldiers and sailors and orphan children of men who have served in the army or navy.

Acts were passed offering bounty for killing wolves, coyotes, and mountain lions; for preventing the spread of disease among swine, and for preventing the shipping or driving of stolen cattle from the State.

The laws in regard to location certificates on mining claims were amended, and it was provided that owners of mining claims must post copies of mortgages before employing laborers.

The levy and limitation of taxes was regulated. Taxes may be paid in two installments. Buildings must not be removed from city lots nor timber from claims till taxes are paid.

Property sold under judgment subject to redemption may be redeemed by payment of the purchase price with 7 per cent. interest instead of 12 as formerly.

Bonds for sites or buildings, or for refunding indebtedness, are limited to 4 per cent. of the assessed valuation instead of 3 per cent. as formerly. Districts having debts beyond the constitutional limit may issue extension coupons on bonds coming due.

Other measures were as follow:

Relating to the divulging of telegraph and telephone messages, imposing a penalty of \$50.

Providing that adulterated food must be labeled as such.

Creating a State board to license embalmers.

Providing that graduates of schools of oste-

opathy may receive certificates allowing them to practice, though osteopathy is defined as not the practice of medicine within the meaning of the law.

An act regulating the assessment and collection of taxes for artesian wells was declared partly void, since the assessments were graduated in proportion to the relative distance from the well, while the Constitution requires taxes to be in proportion to the value of property and limits special taxation for local improvements to cities, villages, and towns.

The general appropriation bill amounted to \$891,750; the appropriations for deficiencies to \$58,742.32; for judgments and claims, \$4,133.27; to replace burned public buildings, \$67,500; for new buildings, \$141,000; for legislative expenses, \$71,000; for printing, \$17,000; total, \$1,251,125.59.

Memorials to Congress were adopted relating to savings banks, to taxes on Indian allotments, to free homesteads, to Fort Meade (asking that it be made permanent), to the treaty with Spain (that it be heartily and promptly supported), and for the establishment of a branch of the national home at Hot Springs, S. D.

A law of 1893, providing that property sold under mortgage foreclosure might be redeemed within one year, or within two, provided the mortgagor pays at the end of the first year the taxes, the interest due, and the interest for a year in advance, is declared void as regards mortgages given before it was passed, on the ground that it impairs the obligation of contracts.

Political.—An election for 3 justices of the Supreme Court was held in November. The Republican convention, at Aberdeen, June 28, renominated Judges Dighton Corson, Dick Haney, and Howard G. Fuller. The resolutions were strongly in favor of the principles of the party and the policy of the national administration.

The Populists, Democrats, and Free-Silver Republicans united in convention at Mitchell, Sept. 4, and nominated Edmund Smith, Silver Republican, C. B. Kennedy, Populist, and Julian Bennett, Democrat. The resolutions approved the Chicago platform and advocated the nomination of Mr. Bryan; denounced the Philippine war as a repudiation of the Declaration of Independence and of the Monroe doctrine, and an assault upon liberty; demanded the political independence of Cuba; and deprecated the formation of trusts.

The Republican candidates were elected, receiving majorities of 6,231, 6,029, and 5,189 respectively, in the order of their names as above. The total vote cast was nearly 42,300, about half the number of electors.

SPAIN, a kingdom in southwestern Europe. The legislative power is vested in the Cortes, consisting of a Senate of 360 members and a Congress of 432 members. Of the Senators half are life and official members and half are elected by the provincial and communal assemblies, ecclesiastical bodies, universities, academies, and individuals paying the highest taxes. The Senators in their own right number 80, including royal princes, if there are any, grandees of Spain having an income of 60,000 pesetas, captains general of the army, admirals of the navy, archbishops, and the presidents of the superior tribunals. The Senators appointed by the Crown for life number 100. The elective Senators sit for ten years, the moiety being renewed every five years, but if the Cortes are dissolved all go out. Every Spaniard twenty-five years of age enjoying full civil rights and a citizen of a municipality for two years possesses the right of suffrage.

The present King is Alfonso XIII, born May

17, 1886, the posthumous son of Alfonso XII, for whom his mother, Maria Cristina, daughter of Archduke Karl Ferdinand of Austria, acts as Regent until he becomes of age.

The Cabinet of ministers constituted on May 18, 1898, was composed as follows: President of the Council, Praxedes M. Sagasta; Minister of Foreign Affairs, J. M. Sanchez y Gutierrez de Castro, Duke de Almodovar del Rio; Minister of Justice and Grace, C. Groizard; Minister of War, Gen. M. Correa; Minister of Marine, Capt. R. Aunon; Minister of Finance, Lopez Puigcerver; Minister of the Interior, F. R. Capdepon; Minister of Public Welfare, Agriculture, and Commerce, M. Gamazo; Minister of Colonies, V. Romero Givon.

Finances.—The revenue for 1897 was 822,411,446 pesetas and the expenditure 808,955,658 pesetas. For 1898 the revised estimates make the revenue 865,816,890 pesetas and the expenditure 868,479,417 pesetas. The budget estimate of revenue for 1899 was 865,816,890 pesetas, and of expenditure 868,479,417 pesetas. The law of May 17, 1898, provided for an extraordinary expenditure of 209,423,917 pesetas to be spread over six years and defrayed by means of an advance of 31,070,232 pesetas from the tobacco company, a loan of 90,000,000 pesetas on the guarantee of the Almaden mines, and a tax on traffic producing 88,353,685 pesetas. The revised budget estimate for 1899 makes the total revenue 805,816,890 pesetas, of which 297,360,810 pesetas come from direct taxes, 305,273,000 pesetas from customs and indirect taxes, 132,696,024 pesetas from stamps and *regie*, 24,787,056 pesetas from national property, and 105,700,000 pesetas from the public funds. The expenditures were estimated at 868,479,417 pesetas, of which 9,250,000 pesetas are for the civil list, 1,638,085 pesetas for the legislative bodies, 399,236,677 pesetas for the public debt, 1,614,651 pesetas for the judiciary, 61,749,730 pesetas for indemnities and pensions, 980,883 pesetas for the presidency of the Council of Ministers, 4,935,919 pesetas for the Ministry of Foreign Affairs, 54,748,649 pesetas for the Ministry of Justice, 145,929,521 pesetas for the Ministry of War, 25,190,539 pesetas for the Ministry of Marine, 28,381,198 pesetas for the Ministry of the Interior, 80,728,570 pesetas for the Ministry of Public Works and Public Instruction, 18,659,467 pesetas for the Ministry of Finance, 34,560,528 pesetas for contributions, and 875,000 pesetas for Fernando Po. The extraordinary budget for six years has reached the sum of 236,344,883 pesetas, of which 44,920,966 pesetas are for repayments, 58,000,000 pesetas for the army, 71,175,678 pesetas for the navy, and 63,248,239 pesetas for railroads. The total amount of the debt in 1897 was £283,046,000 sterling, of which sum £183,967,000 represent the consolidated debt, £66,225,000 the extinguishable debt, £14,574,000 debts of the public treasury, and £18,280,000 floating debt.

The payments made on account of Cuba from the commencement of the insurrection in 1895 to the final evacuation of the island were 1,796,269,000 pesetas. During the same period 7,098,000 pesetas were spent on Puerto Rico and 165,988,000 pesetas for the Philippines, making a total of 1,969,355,000 pesetas. The debt incurred by the Ministry of the Colonies amounted on June 1, 1899, to 1,445,280,000 pesetas. The annual amount required for the interest and redemption of these colonial debts is 211,013,000 pesetas, which became a charge on the general revenue of Spain when the colonies were lost, together with 48,044,000 pesetas formerly paid by the colonies. Pensions of military and naval officers and the

indemnity to the steamship company for services during the war represented a sum of 259,067,000 pesetas. The floating debt was reduced, by deducting 119,000,000 pesetas received from the United States, to 252,000,000 pesetas, which the deficit in the budget increased to more than 300,000,000 pesetas. The revenue for 1900 was estimated at 937,930,415 pesetas, and expenditure at 937,178,134 pesetas. These results were obtained by reductions in expenditure, by measures for the conversion and resettlement of debts, and by new sources of revenue that Señor Villaverde, who became Minister of Finance in March, proposed in the financial programme presented in June, 1899. The redemption of Peninsular redeemable and customs bonds and of Cuban and Philippine mortgage bonds was suppressed and interest on Cuban bonds was reduced by the imposition of a tax of 20 per cent., on the Philippine bonds by one of 15 per cent., on the bonds of the Ministry of the Colonies from 5 to 3 per cent. The Cuban and Philippine debts were further subject to a duty of 20 per cent. The treasury bonds, the floating debt, the customs bonds, the current requirements of the treasury, the bonds of the colonies, and those of companies and banking establishments for which the Government was liable, and a part of the debt due to the Bank of Spain it was proposed to consolidate in a new 5-per-cent. loan. The proposed new sources of revenue were an income tax on both capital and labor, including revenues from Government, provincial, and municipal bonds and bank shares; a surtax of 20 per cent. on town property and industrial and commercial concerns, agricultural property remaining exempt; a reform in *octroi* duties; an export tax on iron and copper ores; a tax on chicory; an increase in the price of tobacco; increases in stamps, succession duties, the tax on titles of nobility, railroad taxes on freight and passengers, and a salt tax; and special taxes on the manufacture of sugar and alcohol. An issue of 300,000,000 pesetas of 5-per-cent. bonds was guaranteed by the tobacco revenue. No reduction was made in the interest on the external 4-per-cent. bonds pending negotiations with the council of foreign bondholders in London, a pledge having been given in 1882 that these bonds would be exempt from taxation. The wide-reaching programme of financial reform encountered so much opposition in the country and was so distasteful even to many supporters of the Government that it was abandoned or postponed, with the exception of the provisions for the reorganization of the debt.

The Army.—The peace effectives on July 18, 1899, comprised 45,770 infantry, 12,447 cavalry, 12,834 artillery, 4,115 engineers, 1,460 administrative troops, 881 medical troops, 403 royal guards, 554 in the military academy, and 1,534 on special service; total, 80,000 men, not including 18,140 gendarmes. The army is composed of 64 infantry regiments of 2 battalions, each battalion consisting of 23 officers and 326 men, to be raised in time of war to 27 officers and 1,000 men; 15 battalions of rifles, each consisting of 23 officers and 716 men on the peace footing; 28 regiments of cavalry, the squadron consisting of 5 officers and 100 men in peace and 150 in war; 16 regiments of field and mountain artillery, each consisting of 4 mounted batteries of 6 pieces with 4 officers and from 71 to 98 men; 10 battalions, or 60 companies, of fortress artillery, the company numbering 4 officers and 88 men; 1 regiment of siege artillery, 4 companies of artillery artificers, 4 regiments of sappers, 1 regiment of pontonniers, 1 battalion of railroad troops, 1 bat-

talion of telegraph troops, 1 brigade for topographic service, 1 company of engineer artificers, 8 depots of reserve artillery, 8 depots of engineer reserves, 16 companies of administrative troops, and 6 sanitary companies. There are 55 regiments of infantry reserves and 14 of cavalry reserves. The effective of the active army was fixed for 1900 at 80,000 men.

The Navy.—The armored cruisers *Maria Teresa*, *Oquendo*, and *Vizcaya*, of 7,000 tons, and the *Cristobal Colon*, of 6,840 tons, with the destroyers *Furor* and *Pluton*, were lost at the battle of Santiago on July 3, 1898. The *Reina Cristina*, *Castillo*, *Antonio de Ulloa*, *Juan de Austria*, *Isla de Cuba*, *Isla de Luzon*, *Velasco*, and *Mindanao* were destroyed in the battle of Cavité on May 1, 1898. The gunboats *Delgado Parayo* and *Centenella* were burned at *Manzanillo* on July 20 and the *Jorge Juan* sunk at *Nipe* on July 21, 1898. Other gunboats were captured by the Americans in Cuba and the Philippines. The effective vessels left in the Spanish navy are 1 battle ship, 2 coast-defense armor clads, 4 armored cruisers, 5 second-class and 4 third-class cruisers, 60 gunboats of various sizes, and 20 first-class, 3 second-class, and 4 third-class torpedo boats. Three small cruisers, a gunboat, and 4 first-class torpedo boats were not yet completed when the war ended. The battle ship *Pelayo*, of 9,900 tons, built in France in 1887 and reconstructed in 1898, has a belt of steel armor 18 inches in the thickest part, carries 2 12.5-inch and 2 11-inch guns in barbette turrets, with 15 quick-firing guns, and has engines of 6,800 horse power, capable of making 15.8 knots. The *Emperador Carlos V* is an armored cruiser built at *Cádiz* in 1892, of 9,235 tons displacement, carrying a powerful secondary armament, and having engines of 15,000 horse power, capable of steaming 20 knots. The *Cataluña*, *Cardenal Cisneros*, and *Princesa de Asturias*, of 7,000 tons, are of the type of the belted cruisers that were sunk by the Americans, having 12 inches of steel armor and engines of 13,000 horse power, giving a nominal speed of 20 knots. The coast-defense vessels are the antiquated ironclads *Numancia* and *Vitoria*. The new protected cruisers *Alfonso XIII* and *Lepanto*, of 4,800 tons, have engines of 12,000 horse power, capable of a speed of 20 knots.

Commerce and Production.—Of the total area of Spain about 80 per cent. is productive, and of this 33.8 per cent. is given up to agricultural crops, 3.7 per cent. to vineyards, 1.6 per cent. to olive groves, 20.8 per cent. to fruits, and 19.7 per cent. to grazing and meadow. Wine is the most important product. Oranges, olives, raisins, grapes, and nuts are exported largely. The agricultural crops are wheat, rye, barley, corn, esparto, flax, hemp, and leguminous plants. In 1895 there were 383,113 horses, 1,496,703 asses and mules, 2,071,326 cattle, 16,469,303 sheep, 2,820,827 goats, and 1,910,368 hogs. The land has passed into the hands of a great number of proprietors. On the tax lists there are 3,426,000 separate properties, five times as many as at the beginning of the century. The mineral resources of Spain are valuable. The value of mineral produce in 1896 was 108,221,668 pesetas, and of metals extracted 141,476,545 pesetas. The quantity of coal produced was 1,830,771 tons; of iron ore, 6,808,000 tons; of pig lead, 170,790 tons; of copper ore, 2,825,000 tons; of zinc, 45,000 tons; of iron pyrites, 200,000 tons; of manganese, 100,000 tons; of salt, 350,000 tons; of silver, 222,900 kilogrammes; of mercury, 1,513,999 kilogrammes. The produce of the fisheries is worth about 38,000,000 pesetas a year, most of this coming from

the tunny, cod, and sardine catches. The sardines canned every year amount to 15,000,000 pesetas.

The bulk of the manufactures of Spain were formerly exported to the colonies. In 1892 the manufacturers of Catalonia obtained a practical monopoly of the colonial markets by securing a large increase in the customs tariff on manufactured goods. This gave a great impetus to the industries, and brought wealth to the capitalists of the industrial province and led to many new factories being started. Foreigners who had a business established in the colonies could only retain it by selling Spanish goods or building factories of their own in Spain. The exports to Cuba, Porto Rico, and the Philippines increased from 172,500,000 pesetas in 1894 to 210,500,000 pesetas in 1896, two thirds of the total consisting of manufactured goods. The export trade with the colonies was nearly a quarter of the total export trade of Spain. About 23,000,000 pesetas was paid annually to Spanish steamship companies for freight and passage money to the colonies. Two fifths of the Spanish exports to Cuba consisted of provisions. A considerable part of this trade is retained in spite of the loss of the island and the cessation of discriminating duties. Spanish goods are admitted by treaty on the same terms as American.

The total value of the imports in 1898 was 595,925,751 pesetas, compared with 784,196,987 pesetas in 1897; of exports, 859,747,055 pesetas, compared with 979,545,623 pesetas in the preceding year. Imports of stone, minerals, glassware, and pottery were 72,715,632 pesetas in 1897 and 58,120,006 pesetas in 1898; exports, 126,508,381 pesetas in 1897 and 127,217,080 pesetas in 1898; imports of metals and metal manufactures, 24,651,656 pesetas in 1897 and 6,850,248 pesetas in 1898; exports, 100,230,107 pesetas in 1897 and 101,303,110 pesetas in 1898; imports of drugs and chemicals, 60,183,616 pesetas in 1897 and 53,239,528 pesetas in 1898; exports, 23,861,030 pesetas in 1897 and 22,291,954 pesetas in 1898; imports of cotton and cotton manufactures, 93,300,414 pesetas in 1897 and 80,831,060 pesetas in 1898; exports, 61,877,408 pesetas in 1897 and 37,948,534 pesetas in 1898; imports of other vegetable fibers and manufactures thereof, 22,822,432 pesetas in 1897 and 21,848,147 pesetas in 1898; exports, 4,098,348 pesetas in 1897 and 2,564,513 pesetas in 1898; imports of wool and hair and manufactures thereof, 20,142,415 pesetas in 1897 and 15,124,126 pesetas in 1898; exports, 17,662,758 pesetas in 1897 and 19,903,614 pesetas in 1898; imports of silk and silk manufactures, 19,055,231 pesetas in 1897 and 14,469,342 pesetas in 1898; exports, 4,972,237 pesetas in 1897 and 4,847,623 pesetas in 1898; imports of paper and paper manufactures, 9,080,978 pesetas in 1897 and 7,082,525 pesetas in 1898; exports, 11,725,116 pesetas in 1897 and 8,774,969 pesetas in 1898; imports of timber and wood manufactures, 45,342,129 pesetas in 1897 and 34,045,202 pesetas in 1898; exports, 43,554,124 pesetas in 1897 and 46,848,309 pesetas in 1898; imports of machinery, vehicles, and vessels, 49,911,624 pesetas in 1897 and 39,551,263 pesetas in 1898; exports, 521,517 pesetas in 1897 and 1,750,226 pesetas in 1898; imports of grain, sugar, wine, and other alimentary substances, 148,235,985 pesetas in 1897 and 98,798,401 pesetas in 1898; exports, 334,036,792 pesetas in 1897 and 399,601,954 pesetas in 1898; imports of miscellaneous products, 5,822,002 pesetas in 1897 and 3,823,346 pesetas in 1898; exports, 15,400,305 pesetas in 1897 and 1,930,135 pesetas in 1898; various special imports, 21,532,866 pesetas in 1897 and 25,792,057 pesetas in 1898; imports of gold and silver

coin and bullion, 123,796,122 pesetas in 1897 and 70,223,934 pesetas in 1898; exports, 170,628,820 pesetas in 1897 and 21,403,150 pesetas in 1898. The wine exports in 1897 amounted to 143,471,188 pesetas, of which 681,600 pesetas represent heavy wines, 11,257,440 pesetas vintage sherries, and 101,393,600 pesetas common wine. The value in pesetas of the commerce with different countries in 1897 is given in the following table:

COUNTRIES.	Imports.	Exports.
Spanish colonies.....	170,881,439	872,827,080
Great Britain.....	155,076,488	263,643,588
France.....	146,856,965	264,459,511
United States.....	99,408,141	12,265,411
Germany.....	52,582,999	21,474,816
Portugal.....	37,614,127	34,575,353
Russia.....	49,350,795	1,140,921
Belgium.....	27,544,655	19,307,109
Italy.....	22,964,842	10,161,536
Sweden and Norway.....	34,025,088	2,211,557
Turkey.....	6,614,168	825

Navigation.—The total number of vessels entered at Spanish ports during 1898 was 17,355, of 13,278,151 tons, 9,706 of these, of 7,265,436 tons, with cargoes and 7,649, of 6,012,715 tons, in ballast; cleared, 16,957 vessels, of 13,995,920 tons, of which 15,298, of 13,013,250 tons, were with cargoes and 1,659, of 982,670 tons, in ballast. Of the total number entered 8,490, of 5,495,903 tons, and of those cleared 7,792, of 5,322,412 tons, were Spanish vessels. The merchant marine consisted in 1898 of 1,145 sailing vessels, of 164,504 tons burden, and 436 steamers, of 341,951 tons.

Colonies.—The loss of Cuba and Porto Rico and of the Philippine Islands and Guam, as the consequence of the war with the United States in 1898, left Spain with no colonial possessions in America, and with only the Caroline Islands and Palaos and the minor islands of the Marianne or Ladrones group in the Pacific. The Carolines, with Palaos, have an area of about 560 square miles, with a population not exceeding 36,000. The Ladrones without Guam have an area of perhaps 50 square miles and 1,000 inhabitants.

In Africa Spain possesses a sphere of influence on the Atlantic coast of the Sahara 243,000 square miles in extent, embracing the Rio de Oro territory and Adrar, with only about 100,000 inhabitants. The territory on the banks of the Muni and Campo rivers, having an extent of 69,000 square miles, with 500,000 inhabitants, is claimed both by Spain and by France. The settlement at Rio de Oro is administered by a local official under the orders of the Governor of the Canary Islands, which are politically joined to Spain. Ifni, near Cape Nun, is a Spanish settlement with an area of 27 square miles and 6,000 inhabitants. Other African possessions are Fernando Po, Annabon, Corisco, Elobey, and San Juan, having a combined area of 850 square miles and 30,000 inhabitants.

Politics and Legislation.—The Cortes met on Feb. 20, 1899, having adjourned in the previous September after authorizing the Government to conclude peace with the United States in accordance with the Washington protocol of Aug. 12, 1898. The consent then given by the Cortes to the renunciation of sovereignty and the cession of territories in the colonies did not cover, in the view of the Opposition at least, the surrender of sovereign rights in the Philippines and the Sulu Archipelago. Therefore Premier Sagasta prepared a bill sanctioning the cession of these islands, and it was passed before the Queen Regent ratified the treaty of peace. The Republicans and some malcontents in the army and

navy found fault with the Government for having made peace on such hard conditions, and the Carlists tried to make the surrender of the colonies the occasion of a new insurrection. The Basques and Catalans, however, unwilling to sacrifice their prosperity by engaging in another civil war, would give Don Carlos only a theoretical support, nor could he obtain financial assistance except from a few fanatical reactionaries in France and England. He had missed the favorable opportunity when the whole nation felt hurt and irritated in consequence of the peace. Just before the reassembling of the Cortes he issued a circular forbidding the Carlist Senators and Deputies to take their seats in the Parliament that was about to sanction the treaty of peace. At the opening of the session attacks were made upon the military and naval commanders who had capitulated to the United States forces. The Government had decided to prosecute Gen. Jaudez, who signed the capitulation of Manila, Gen. Toral, who made the surrender of Santiago, Admiral Cervera, and Admiral Montojo. The Ministry of the Colonies was abolished by royal decree. On Feb. 9 the constitutional guarantees, which had been suspended for seven months, were restored in all the provinces of Spain, the state of siege was raised, and the censorship of the press abolished. All persons who had been condemned for press offenses received pardons. In the election of a commission to report on the bill for the cession of the Philippines the Government suffered a moral defeat in the Senate, the vote being 99 to 90 for the ministry, with 17 Conservatives abstaining. When Gamazo withdrew from the Cabinet and seceded from the ministerial party in October, 1898, taking 30 Senators and 63 Deputies with him, the Sagasta Government no longer commanded a majority, but no hostile combination was willing to relieve it of the responsibility of carrying through the treaty bill and the financial and other measures rendered necessary by the defeat of the Spanish forces. The Conservatives, the dissident Liberals, and the Republicans all recognized the imperative necessity of accepting the peace treaty. The Republicans offered a formal opposition in order to disclaim any share in the responsibility for the loss of the colonies, since they had been out of power for a quarter of a century and had always advocated colonial self-government.

On March 1, in consequence of a virtual defeat in the Senate, Señor Sagasta offered the resignation of the Cabinet, declining to carry on the Government longer unless there was a dissolution of the Cortes. The Queen Regent then commissioned Señor Silvela to form a Conservative Cabinet. The Cabinet was definitely formed on March 4 as follows: President of the Council and Minister of Foreign Affairs, Francisco Silvela; Minister of the Interior, Señor Dato; Minister of Mercy and Justice, Señor Duran y Bas; Minister of Finance, Señor Villaverde; Minister of Public Works and Instruction, Marquis De Pidal; Minister of War, Gen. Polavieja; Minister of Marine, Gomez Imaz. The Queen signed the ratification of the treaty of peace on March 17, although it had not been formally sanctioned by Parliament, and on the same day the Cortes were dissolved and a decree issued convoking the new Parliament in June. The reform of Spanish finances was the main task of the new Government. The cost of the recent prolonged campaigns in Cuba and the Philippines and of the war with the United States, including the expense of the repatriation of troops and arrears of pay due to the colonial army, navy, and civil services, had

added about 3,000,000,000 pesetas to the obligations of the Government, half of which sum was owed to the Bank of Spain for advances. The interest on the national debt was consequently increased by about 150,000,000 pesetas. In 1898 it amounted to over 588,000,000 pesetas. The coupons of the Cuban debt were paid on April 1.

Disturbances occurred in various places when the elections were held on April 16. The supporters of Silveira were elected in 180, supporters of Gen. Polavieja in 33, Ultramontanes in 30, supporters of the Duke of Tetuan in 18, Liberals in 86, supporters of Gamazo in 30, Republicans in 15, supporters of Romero Robledo in 5, Carlists in 4 constituencies. Señor Castelar, who was elected in Murcia, resigned because his majority was small. In the senatorial elections the ministerialists obtained 110 seats, Liberals 50, Gamazists 7, Tetuanists 6, Carlists 3, Ultramontanes 1, Republicans 1, and 1 went to an independent, giving the ministerialists a majority of about 40. Before the assembly of Parliament the Government concluded an arrangement for the sale to Germany of the Caroline Islands, the Pelew Islands, and the Ladrones, with the exception of Guam, already ceded to the United States. The Cortes met on June 2. The Government programme, in addition to the refunding of debts, the creation of new funded obligations, the new taxes to be equally distributed among all classes, and the contemplated economies, included measures for the reorganization of the army and navy on the basis of compulsory service, for completing the coast and frontier defenses, for regulating the position of officials and their right to pensions, for decentralizing provincial and municipal administrations in such manner as to place them in certain necessary cases under the supervision of the state, for changing the jury system in criminal cases, for amending the municipal and commercial code, for altering the electoral law in regard to disqualifications, and for the construction of branch railroads. When the Minister of Finance brought in his budget demonstrations against the new taxes necessitated the intervention of the troops in several provinces. In Saragossa and Valencia martial law was proclaimed. In Granada and Murcia riots occurred. In most of the cities the stores were closed in accordance with a decision of the chambers of commerce. The rioters attacked convents in some places. In Barcelona and other towns there were demonstrations in favor of a revision of the trial of the anarchists confined in Montjuich prison. The Republicans in the Chamber proposed the expulsion of the Jesuits from Spain. In consequence of serious rioting in Barcelona a state of siege was declared there also. The Carlists were plotting in a desultory way, and in several places concealed arms were found by the police. The animosity of the Radical element against the priests and friars was excited by their open efforts, especially those of the Jesuits, to take advantage of the troubles of the country in order to regain their old political control. In a Church congress at Burgos violent antidynastic speeches were made by many priests, and the disasters of Spain were attributed to the Liberal Constitution. A letter from the Pope counseling legality and discountenancing Carlism was hissed, and finally the papal nuncio, who presided, broke up the congress by refusing to put the resolutions and leaving the hall.

After approving a bill for the reorganization of the internal debts, including a provision authorizing the Bank of Spain to put in circulation 2,000,000,000 pesetas of paper money on condition that it loan money to the Government at

2½ per cent., the Cortes adjourned at the end of July till October. The refusal of the Ministers of War and Marine to reduce the numerical strength or the expenses of the army and navy, their ground being that it would produce discontent and drive the dismissed officers to give their services to the Carlists or Republicans, destroyed any chance that there was of the new tax proposals being accepted. The principles of regionalism made progress in the country, especially in Catalonia, which was smarting under a sense of injury engendered by the loss of trade in the former Spanish colonies, and this caused the Government to study the question of conceding a greater degree of provincial autonomy. The court-martial that tried the officers concerned in the capitulation of Santiago exonerated them, but censured those who were responsible for the lack of munitions and supplies.

The opponents of Señor Villaverde's budget had no alternative proposal for the financial regeneration of the country. The only thing that they were united on was a demand for retrenchment in the pay rolls of the civil service, and especially in the army and navy. Before the Chamber reassembled on Oct. 30 the Prime Minister and the Minister of Finance endeavored to induce the Minister of War to agree to a large reduction in his budget. Gen. Polavieja originally proposed to fix the strength of the army for 1900 at 108,000 men, but consented to reduce it to 80,000 men. His first requisition for recruits was for 41,000; later, when the effective was cut down, he asked for 60,000, in order to pass them through the ranks rapidly and give more men a military training. He also demanded large sums for frontier fortifications and for defensive works in the Balearic and Canary Islands. The officers returned from Cuba and the Philippines increased the proportion of officers in the army, of whom there were 23,000, drawing 66,000,000 pesetas as pay; but he would not consent to a reduction of the number, nor to the admission of a smaller number of cadets. He was not supported in his position by his colleagues, and therefore resigned on Oct. 1, and was succeeded by Gen. Azcarraga. Barcelona merchants and industrialists who refused to pay taxes unless the Government modified its financial proposals were brought to terms by their goods being detained in the customhouse until they settled their accounts with the tax office. The tax that they refused to pay was the war tax on industry. They put forward a demand for fiscal autonomy, such as is enjoyed by the Basque provinces in virtue of their ancient rights. This the ministry would not consent to. On Oct. 23 Señor Duran y Bas resigned his portfolio as Minister of Justice because he differed with his colleagues on the question of decentralization. He was succeeded by Count Torrealanaz.

SWEDEN AND NORWAY, two kingdoms in northern Europe united in the person of the sovereign. The throne in both descends to the heirs of the house of Bernadotte. Affairs common to both kingdoms are referred to a mixed Council of State. The reigning King is Oscar II, born Jan. 21, 1829. The heir apparent is Prince Gustavus, Duke of Wermland, born June 16, 1858.

Sweden.—The legislative power is vested in the Riksdag, consisting of the First Chamber, of 150 members, elected for nine years by the provincial and municipal bodies, and the Second Chamber, of 230 members, elected for three years, 80 in the towns by direct suffrage and 150 in the rural districts, part directly and part indirectly by natives of Sweden who own or farm land of

a certain value or pay taxes on 800 kronor of income. The Council of State at the beginning of 1899 was composed as follows: Minister of State, Erik Gustaf Boström; Minister of Foreign Affairs, Count Ludvig Vilhelm August Douglas; Minister of Justice, Per Samuel Ludvig Annerstedt; Minister of War, Baron Axel Emil Rappe; Minister of Marine, Jarl Casimir Eugène Christerson; Minister of the Interior, Julius Edvard von Krusenstjerna; Minister of Finance, Count Hans Hansson Wachtmeister; Minister of Education and Ecclesiastical Affairs, Nils Ludvig Alfred Claesson; Councilors of State, Baron Albert Lars Evert Akerhielm and Sven Herman Wikblad.

Finances.—The total revenue for 1900 was estimated in the budget at 137,307,000 kronor, of which 93,450,000 kronor are the receipts classed as extraordinary, 22,541,000 kronor the ordinary receipts, and 21,316,000 kronor the balance from preceding budgets. Of the ordinary receipts 983,000 kronor are derived from the land tax, 1,500,000 kronor from tonnage dues, 2,200,000 kronor from rent of public lands, 700,000 kronor from the personal tax, 10,000,000 kronor net from railroads, 1,510,000 kronor from telegraphs, 4,600,000 kronor from forests, and 1,048,000 kronor from various sources. Of the extraordinary receipts 45,200,000 kronor are derived from customs, 10,800,000 kronor from the post office, 4,700,000 kronor from stamps, 17,500,000 kronor from the duty on spirits, 9,000,000 kronor from the beet-sugar duty, 6,000,000 kronor from the income tax, and 750,000 kronor from various sources. The total expenditures are made to balance the revenue. The ordinary expenditures are set down as 84,941,530 kronor, of which 1,320,000 kronor are for the royal household, 3,842,450 kronor for justice, 629,250 kronor for foreign affairs, 27,461,078 kronor for the army, 7,484,840 kronor for the navy, 5,831,900 kronor for the interior, 14,194,672 kronor for worship and public instruction, 3,429,450 kronor for pensions, and 20,747,890 kronor for finance, including 2,804,200 kronor for customs, 10,305,000 kronor for the post office, 450,000 kronor for excise, 1,510,000 kronor for telegraphs, 1,602,000 kronor for forests, and 4,076,090 kronor for other expenses. The extraordinary expenditures are 39,299,170 kronor, of which 19,525,132 kronor are for the army and navy, and 19,774,038 kronor for various expenditures, including 11,416,300 kronor for the debt, etc., 1,400,000 kronor for insurance of workmen against sickness and old age, and 250,000 kronor for accident insurance. The internal loan of 1887 amounted on Jan. 1, 1900, to 48,779,000 kronor and various foreign loans to 234,944,011 kronor; total public debt, 283,723,011 kronor, paying 3 and 3½ per cent. interest.

Commerce and Production.—Agriculture, forestry, and mining are of almost equal importance. Of the total area of Sweden about 8.4 per cent. is under crops, 3.6 per cent. meadow and pasture, and 47.5 per cent. forest. The crop of rye in 1897 was 8,316,400 hectolitres; of barley, 5,040,500 hectolitres; of oats, 20,605,900 hectolitres; of wheat, 1,611,200 hectolitres; of mixed grain, 3,356,200 hectolitres; of pulse, 848,300 hectolitres; of potatoes, 19,772,500 hectolitres. The total value of the cereal crops was 265,200,000 kronor. There were 512,406 horses, 2,554,577 cattle, 1,298,732 sheep, and 788,736 hogs in 1897. In 1896 the number of cattle exported was 25,146, and of sheep 12,793. The output of iron ore in 1896 was 2,038,094 tons; the production of pig iron was 487,147 tons and of bar iron 321,615 tons. The export of iron ore was 1,150,695 tons; of pig iron, 71,343 tons; of bar iron, 180,372 tons.

Of other ores 15,381 tons of silver lead, 27,351 tons of copper, 44,041 tons of zinc, and 2,056 tons of manganese ore were raised. The production of coal was 225,878 tons. The quantity of gold produced was 114, of silver 2,082, of lead 1,518, of copper 248,586 kilogrammes.

The total value of imports in 1897 was 408,332,000 kronor, and of exports 358,195,000 kronor. The imports of coal were 38,120,000 kronor in value; coffee, 26,838,000 kronor; machinery, 19,876,000 kronor; rye and wheat, 19,273,000 kronor; woolen goods, 17,639,000 kronor; hides and skins, 14,218,000 kronor; iron manufactures, 14,019,000 kronor; cotton, 11,201,000 kronor; woolen yarn, 10,405,000 kronor; fish, 10,355,000 kronor; cotton goods, 8,475,000 kronor; petroleum, 8,451,000 kronor; vegetable oils, 7,214,000 kronor; tobacco, 6,691,000 kronor; wood manufactures, 6,488,000 kronor; wool, 5,311,000 kronor; iron, 5,260,000 kronor; paper, 4,755,000 kronor; silks, 4,182,000 kronor; wine, 3,320,000 kronor; clothing, 3,276,000 kronor. The exports of timber were valued at 150,303,000 kronor; iron, 43,843,000 kronor; butter, 41,592,000 kronor; wood pulp, 16,730,000 kronor; iron manufactures, 8,381,000 kronor; machinery, 7,989,000 kronor; paper, 7,157,000 kronor; matches, 6,598,000 kronor; fish, 4,905,000 kronor; cotton goods, 4,603,000 kronor; animals, 4,367,000 kronor; glass, 4,197,000 kronor.

The commerce in 1897 was distributed among foreign countries as shown in the following table, giving values in kronor:

COUNTRIES.	Imports.	Exports.
Great Britain.....	121,813,000	149,968,000
Germany.....	186,102,000	45,853,000
Denmark.....	46,492,000	43,184,000
Norway.....	32,860,000	80,638,000
Russia and Finland.....	27,153,000	15,047,000
France.....	7,625,000	91,802,000
Netherlands.....	8,531,000	94,436,000
Belgium.....	18,013,000	12,128,000
Africa.....	8,980,000
United States.....	7,421,000	181,000
Spain.....	1,123,000	2,586,000
Portugal.....	1,619,000	753,000
Italy.....	1,273,000	466,000
Australia.....	1,086,000
West Indies.....	804,000
All other countries.....	1,810,000	696,000
Total.....	408,332,000	358,195,000

Navigation.—The number of vessels that were entered at Swedish ports in 1897 was 32,785, of 7,429,000 tons, of which 16,575, of 2,652,000 tons, were Swedish; 2,249, of 863,000 tons, were Norwegian; and 13,961, of 3,914,000 tons, were foreign. The total number cleared was 32,837, of 7,449,000 tons, of which 16,423, of 2,648,000 tons, were Swedish; 2,444, of 876,000 tons, were Norwegian; and 13,970, of 3,925,000 tons, were foreign. Of the total number entered 13,296, of 3,007,000 tons, were with cargoes; of the number cleared 21,179, of 5,372,000 tons, were with cargoes. The number of steamers among the vessels entered was 15,196, of 6,057,000 tons, of which 5,044, of 2,444,000 tons, were with cargoes; the number of steamers cleared was 15,292, of 6,092,000 tons, of which 8,080, of 4,136,000 tons, were with cargoes. The merchant navy on Jan. 1, 1898, consisted of 2,002 sailing vessels, of 289,490 tons, and 786 steamers, of 230,636 tons.

Railroads, Posts, and Telegraphs.—The railroads on Jan. 1, 1899, had a total length of 6,432 miles, of which 2,282 miles belonged to the state and 4,150 miles to companies.

The post office during 1897 carried 61,825,000 internal, 13,883,000 international, and 230,000 transit letters, 7,745,000 internal, 1,116,000 inter-

national, and 21,000 transit postal cards, 101,913,000 internal, 7,932,000 international, and 62,000 transit newspapers and circulars, and 3,500,000 internal money letters and postal orders of the value of 779,877,000 francs, 361,000 in the international service of the value of 67,723,000 francs, and 2,000 in transit of the value of 931,000 francs. The post office receipts in 1897 were 14,620,431 francs; expenses, 12,901,663 francs.

The state telegraphs in 1897 had a length of 5,450 miles, with 15,635 miles of wire; the railroad lines had a length of 3,144 miles, with 10,390 miles of wire. The number of paid internal messages was 1,201,337; international messages, 796,702; transit dispatches, 294,238; service dispatches, 141,993; total, 2,434,270. The receipts were 2,255,844 francs; expenses, 1,902,944 francs.

The Army and Navy.—The Swedish army in 1899 was composed of 48 general and staff officers, with 233 employees; 56 battalions of infantry, numbering 27,633 men, including 1,220 officers; 50 squadrons of cavalry, numbering 5,269 men, including 232 officers; 3,509 field artillery, inclusive of 257 officers; 497 fortress artillery, inclusive of 30 officers; 172 artillery in Gotland, inclusive of 16 officers; 9 companies of engineers, numbering 77 officers and 914 men; and 8 companies of train, numbering 66 officers and 706 men; total strength, 39,124 men, including 1,946 officers, with 6,891 horses. In the reserves were 683 officers and 450 noncommissioned officers. The *beväring*, or militia, numbered about 250,000 men, the Landstorm 200,000 more.

The fleet consisted of 6 armored turret cruisers built since 1886, named the Svea, Göta, Thule, Oden, Thor, and Niord, averaging over 3,000 tons; 4 armored monitors, named the John Ericsson, Loke, Thordön, and Tirling; 9 ironclad gunboats; 3 torpedo cruisers, built since 1896; 3 old corvettes; 1 dispatch vessel; 9 first-class and 5 second-class gunboats; 1 destroyer; and 10 first-class, 9 second-class, and 5 third-class torpedo boats. The principal vessels are all modern, built entirely in Swedish shipyards. The older ones are available for coast defense, especially the 14 monitors. The aggregate tonnage of 40 effective vessels is 42,816 tons, not counting 17 small gunboats nor the torpedo boats; aggregate motive power, 56,410 horse power; armament, 289 guns. The 6 armored cruisers carry 118 modern guns. Several more vessels of this class are building.

Political Affairs.—The type of constitutional government actually existing in Sweden is the same as exists in Denmark. The ministers possess the confidence of the King and of the upper house of the Riksdag, but do not command a majority in the lower house. Yet this condition does not arouse such popular fermentation as in Denmark and formerly in Norway. The Farmers' party, which formerly constituted the great majority of the popular branch, is no longer united on any question of immediate importance. It has been able to impress its will upon the Conservative ministry by enforcing economy in administration and the promotion of agricultural interests. The protectionist issue was settled in accordance with its desires, and since then the Riksdag is divided up into six or more groups on minor questions. The agricultural element cherishes no greater antagonism toward the aristocracy, who compose the Conservative party, than toward the Radicals of the cities, and generally approves the unbending attitude of the Government in the quarrel with Norway and the development of the military power of the country under the law of compulsory service, the victory of the protectionists having prepared the ground

for the growth of national pride. The danger of Russian aggression was formerly advanced as a reason for increasing the army and navy; latterly it is the growth of the Norwegian armaments, the neglect of which has been for half a century the chief burden of the complaints made against the Norwegians by the Swedes, who said that the task of defending the frontiers was shifted upon them alone. The influence of Germany has caused the growth of militarism in Sweden and the creation of a strong military caste allied to and in great part identical with the landholding and titled aristocracy. The army has been almost entirely reorganized under the law of obligatory service adopted in 1892, and the new and growing Swedish navy is regarded with admiration by experts. In April, 1899, the Riksdag voted 10,000,000 kronor for the purchase of new military rifles and as much more for strengthening the fortifications. The ministerial changes made during the year were the appointment of C. H. T. A. von Lagerheim to succeed Count Douglas as Minister of Foreign Affairs, that of J. I. von Krusebjörn as Minister of War, that of Commodore G. Dyrsen as Minister of Marine, and that of D. G. Restadius as Councilor of State in the place of Baron Akerheim.

Norway.—The legislative power is vested in the Storting, containing 114 members, elected indirectly for three years, 38 by the towns and 76 by the rural districts. The Storting elects one fourth of its members to form the Lagthing, which has a veto power over the acts of the Odelsting, composed of the rest of the members. The Council of State in the beginning of 1899 was composed as follows: Minister of State, Johannes Wilhelm Christian Steen; Minister of Worship and Public Instruction, Vilhelm Andreas Wexelsen; Minister of Justice and Police, Ole Anton Qvam; Minister of the Interior, Georg August Thilesen; Minister of Public Works, Jörgen Gunderson Lövlund; Minister of Finance and Customs, Elias Sunde; Minister of National Defense, Col. Peter Theodor Holst; section of the Council sitting in Stockholm, Otto Albert Blehr, Minister of State, and Hans Hein Theodor Nysom and Einar Löchen, Councilors of State.

Finances.—The revenue for 1897 amounted to 69,047,000 kroner, of which 4,634,000 kroner came from direct taxes, 35,792,000 kroner from indirect taxes, 25,150,000 kroner from miscellaneous sources, and 3,471,200 kroner from loans. The total expenditure was 56,730,000 kroner, of which 22,651,000 kroner were for defense, 6,882,000 kroner for debt, 16,553,000 kroner for public works, and 30,644,000 kroner for general expenses and administration. The revenue for 1898 was estimated at 70,863,331 kroner and expenditure at the same figure. For 1899 the budget balances at 86,591,837 kroner. Of the estimated revenue 4,000,000 kroner come from income tax, 31,900,000 kroner from customs, 3,500,000 kroner from the spirit duty, 3,500,000 kroner from the malt duty, 550,000 kroner from the succession tax, 865,000 kroner from stamps, 850,000 kroner from judicial fees, 459,800 kroner from mines, 4,350,000 kroner from the post office, 1,770,000 kroner from telegraphs, 3,055,794 kroner from Government property, 10,139,400 kroner from railroads, 6,463,789 kroner from miscellaneous sources, and 15,188,054 kroner from loans raised for defense and railroad building. Of the estimated expenditures 482,838 kroner are for the civil list, 646,550 kroner for the Storting, 1,319,872 kroner for the ministries, 8,582,878 kroner for worship and education, 6,390,790 kroner for justice, 3,190,256 kroner for the interior, 8,697,200 kroner for the postal and tele-

graph services, 14,444,717 kroner for the Government railroads, 4,549,763 kroner for roads, canals, harbors, etc., 3,711,288 kroner for finance and customs, 585,450 kroner for mines, 1,521,960 kroner for amortization of debt, 5,796,378 kroner for interest, 15,824,000 kroner for the army, 3,018,300 kroner for the navy, 773,590 kroner for foreign affairs, and 2,056,007 kroner for miscellaneous expenses.

The national debt on June 30, 1898, amounted to 180,171,300 kroner, most of it paying 3 and $\frac{3}{4}$ per cent. The assets of the Government, including the invested funds, collectable arrears, and the value of the railroads, were 166,363,900 kroner.

Railroads, Posts, and Telegraphs.—The railroads in 1898 had a total length of 1,228 miles. The state telegraph lines had a total length of 7,480 miles, with 17,026 miles of wire; the railroad telegraph lines a length of 1,176 miles, with 2,158 miles of wire. The number of internal dispatches in 1898 was 1,326,979; of international dispatches, 795,715; of service dispatches, 24,778; receipts, 2,003,879 kroner; expenses, 2,170,350 kroner.

The post office forwarded in 1898 in the internal service 33,563,600 letters and postal cards, 2,236,900 money letters, containing 334,500,000 kroner, and 48,743,400 newspapers, etc.; in the foreign service, 11,206,500 letters and postal cards, 84,900 money letters, containing 23,500,000 kroner, and 5,002,700 newspapers, etc. The receipts were 4,497,867 kroner; expenses, 4,183,221 kroner.

Commerce and Production.—Only 25 per cent. of the land surface of Norway is productive, 22 per cent. being forest and 3 per cent. agricultural land. The cereal products of 1897 were valued at 37,792,700 kroner, the rye crop alone at 17,029,600 kroner. Of the forests, covering 26,320 square miles, 73 per cent. is pine. The Government forests are 3,870 square miles in area. The export of timber in 1897 was valued at 42,212,400 kroner; of wood manufactures, 19,461,900 kroner. The mineral products are not worth more than 3,000,000 kroner a year, metals not more than 1,300,000 kroner. Much more important are the fishery products. Their value in 1896 was 21,714,253 kroner, the codfish alone being valued at 14,332,606 kroner and herring at 2,648,514 kroner. This total does not include the catch of whale, seal, walrus, etc., worth 4,000,000 kroner a year.* The value of merchandise imports in 1898 was 280,179,000 kroner; of exports, 159,349,000 kroner. The imports of cereals were valued at 45,600,000 and exports at 700,000 kroner; imports of liquors at 8,000,000 and exports at 500,000 kroner; imports of colonial products at 24,500,000 and exports at 700,000 kroner; imports of fruits and vegetables at 4,700,000 and exports at 100,000 kroner; imports of animals and animal products at 14,500,000 and exports at 51,700,000 kroner; imports of coal at 17,300,000 kroner; imports of metals at 10,500,000 and exports at 1,400,000 kroner; imports of hides and leather at 10,200,000 and exports at 5,900,000 kroner; imports of textile materials at 5,300,000 and exports at 200,000 kroner; imports of timber at 5,700,000 and exports at 40,200,000 kroner; imports of minerals at 6,200,000 and exports at 7,200,000 kroner; imports of metal manufactures at 23,200,000 and exports at 2,200,000 kroner; imports of textile manufactures at 34,900,000 and exports at 500,000 kroner; imports of paper at 2,300,000 and exports at 8,800,000 kroner; imports of leather goods at 1,200,000 and exports at 400,000 kroner; imports of wood manufactures at 3,900,000 and exports at 21,500,000 kroner; imports of drugs

and colors at 1,500,000 and exports at 200,000 kroner; imports of oils at 13,300,000 and exports at 6,100,000 kroner; imports of miscellaneous articles at 47,400,000 and exports at 11,000,000 kroner.

The commerce of 1898 was distributed among foreign countries as follows, values being given in kroner:

COUNTRIES.	Imports.	Exports.
Great Britain	81,049,000	66,284,000
Germany	82,190,000	23,147,000
Sweden	23,618,000	15,348,000
Russia and Finland	22,974,000	4,967,000
Netherlands	12,043,000	9,274,000
Denmark	14,431,000	6,863,000
Belgium	12,581,000	6,698,000
United States	14,196,000	1,349,000
France	5,130,000	6,861,000
Spain	8,424,000	8,456,000
Italy	1,706,000	3,322,000
Portugal	1,490,000	502,000
All other countries	6,397,000	6,173,000
Total	280,179,000	159,349,000

Navigation.—The Norwegian merchant marine on Jan. 1, 1898, comprised 7,147 vessels of all sizes, of 1,552,199 tons, and of these 3,700, of 1,451,753 tons, were engaged in foreign commerce. The total number of sailing vessels was 6,143, of 1,169,079 tons, of which 3,109, of 1,090,100 tons, were in the foreign trade; the total number of steamers 1,004, of 383,120 tons, of which 591, of 361,653 tons, were in the foreign trade. The number of vessels entered at the ports of Norway during 1898 was 13,831, of 3,077,386 tons, of which 6,504, of 1,963,013 tons, were with cargoes and 7,327, of 1,114,373 tons, in ballast; the total number cleared was 13,729, of 3,055,931 tons, of which 12,502, of 2,533,729 tons, were with cargoes and 1,227, of 522,202 tons, in ballast. Of the total number entered 7,198, of 2,055,522 tons, were Norwegian and 6,633, of 1,021,364 tons, foreign; of the total number cleared 7,091, of 2,030,064 tons, were Norwegian and 6,638, of 1,025,867 tons, foreign.

The Army and Navy.—The Norwegian active army is composed of the young men between twenty-four and thirty years of age, who receive a training of from forty-eight to seventy days in the first year and twenty-four days in succeeding years. The Landwehr and Landsturm, in which all Norwegians capable of bearing arms are inscribed till they are fifty years old, are called out only for the defense of the country. The maritime population serve in the navy, and between the ages of twenty-three and thirty-six are liable to be called out for seventy days annually. The strength of the active land army is about 1,700 officers and instructors and 18,000 men. By means of the Landwehr this force can be doubled.

The fleet consists of 2 armor clads built in England in 1897, the Harald Haarfager and Tordenskjold, of 3,500 tons each, 4 ironclad monitors, 3 first-class and 8 second-class gunboats, 1 torpedo dispatch boat, and 6 first-class and 15 second-class torpedo craft. The 2 modern cruisers are capable of making 17 knots and carry 20 guns each, the largest being of 8-inch caliber. The aggregate tonnage of 37 vessels is 16,359 tons; their armament is 142 guns, but the vessels are mostly of antiquated types and few of the guns are modern.

Constitutional Conflict with Sweden.—The Norwegians in their struggle with the Swedish Government gained a moral advantage in 1899 by having the Swedish emblem symbolizing the

union stricken from their commercial flag. King Oscar signed the decree in accordance with the resolution of the Storthing, albeit under protest and against the desires of his Swedish subjects. The Interparliamentary Peace Conference was opened at Christiania on Aug. 2 by the Minister of State, who seized the opportunity to express the Norwegian view that the Scandinavian states are neutral and to proclaim the desire of Norway for international arbitration and its demand for entire liberty and independence. The action of the Swedish ministers in preventing the King from giving effect to the address of the Storthing asking him to try to have agreements made with foreign powers that any dispute arising between Norway and any of them should be settled by arbitration served as a test, in the view of the Norwegians, of the impossible position of Norway in regard to the conduct of foreign affairs. This address was first voted in 1890, and in 1897 a similar address was carried by the unanimous vote of the Storthing, yet no notice was taken of it. The rejection by Sweden on behalf of both countries of the arbitration proposals of the United States Government in 1891 was likewise objectionable to the Norwegian Radicals. The conflict between the two states has arisen since the alteration of the Swedish Constitution in 1885 for the reason that the changes made by the Swedes in their Constitution affected indirectly the relations between the King and Norway by compelling him to follow the advice of Swedish ministers. It is only since then that the Swedish Government has claimed a deciding voice in Norwegian foreign affairs, not only such as concern Sweden also, but such as may be held to concern Norway alone. The appointment of Swedes to represent both countries in the consular as well as in the diplomatic service, and the issuance of all instructions by the Swedish Ministry of Foreign Affairs controlled by the preponderantly Swedish Ministerial Council in Stockholm and responsible to the Swedish Parliament, has resulted in a state of affairs that gives Norwegians cause to complain that their commercial and shipping interests, as well as their political interests, are neglected or made subservient to those of Sweden. Under the act of union the King has the right to decide the preparation and administration of foreign affairs as he thinks best. Formerly he sometimes chose Norwegian ministers to prepare and administer Norwegian foreign affairs, and these were frequently discussed and settled by the Norwegian Cabinet Council without consulting the Swedish Foreign Minister, who was simply directed to carry out the decisions made. There existed a ministerial council for general foreign affairs affecting both kingdoms, and when responsible government was extended in Sweden this consultative body was retained, but its composition and character were changed. It consisted formerly of two Swedish ministers and one Norwegian minister. By the new Swedish Constitution its responsibility to the Riksdag was increased by the addition of a third Swedish member, the Premier; and, instead of the King having the right to prepare foreign affairs as he thought best, it became compulsory in Sweden that they should be prepared and laid before the King in the Council by the Swedish Minister of Foreign Affairs. By the Norwegian Constitution the King still possesses his former powers. The Swedish Government has repeatedly offered to add a second Norwegian minister to the Council, and the Norwegian Government has as often refused this compromise, because it would place Norway in the position of accepting the

unconstitutional status without effectually changing it. The law introducing a purely Norwegian flag was passed by the Storthing in the summer session and communicated to the Swedish-Norwegian Minister of Foreign Affairs in September. The Storthing has in the last two years voted millions of crowns for guns, ships, and fortifications, and has increased the active army to 25,109 men. This growth of armaments and the like active preparations on the part of Sweden appear suspicious in view of the tension between the two governments and the failing condition of the King's health. The Norwegian people have never entertained jealous feelings to any extent toward King Oscar nor toward his brother and predecessor, Charles XV, but the Crown Prince is believed to hold strong convictions adverse to the Norwegian pretensions, and when he visited Christiania in the spring of 1899 in the capacity of Regent he was received in silence by the people who gathered at the railroad station. The party of the Left placed at the head of its programme for the electoral campaign, issued late in 1899, a demand for Norway's independence to be brought about by means of a separate Norwegian Ministry of Foreign Affairs and a separate consular system; also a proposal to labor for a court of arbitration and neutrality. In regard to internal policy, it advocates a system of insurance against incapacity to earn a livelihood, to apply to the whole Norwegian people.

SWITZERLAND, a federal republic in central Europe. The legislative power is vested in the Federal Assembly, made up of two bodies, a National Council of 147 members, elected by direct universal suffrage for three years, and a States Council of 44 members, representing the cantons, in some of which they are elected by the direct vote of the people, in others by the cantonal legislatures. The executive authority is vested in the Federal Council, consisting of 7 Swiss citizens elected for three years by the Federal Assembly, and from among the members of the Federal Council the President of the Confederation and the Vice-President, who by custom is chosen President for the next succeeding term, are elected annually. The Federal Council for the term ending in 1899 was composed as follows: Chief of the Military Department and President of the Confederation for 1899, Eduard Müller, of Bern; Chief of the Department of Finance and Tolls and Vice-President, Walther Hauser, of Zurich; Chief of the Department of Justice and Police, Dr. E. Brenner, of Basel; Chief of the Department of the Interior, A. Lachenal, of Geneva; Chief of the Department of Commerce, Industry, and Agriculture, Dr. A. Deucher, of Thurgau; Chief of the Department of Posts and Railroads, Dr. J. Zemp, of Luzern; Chief of the Department of Foreign Affairs, Eugène Ruffy, of Vaud.

Finances.—The revenue of the Federal Government in 1898 amounted to 95,277,453 francs, of which 577,438 francs were derived from real estate, 2,067,278 francs from invested capital, 56,073 francs from the general administration, 39,285 francs from the Political Department, 476,087 francs from the interior, justice, and police, 2,915,096 francs from the Military Department, 49,027,205 francs from customs and finance, 297,822 francs from the Department of Industry and Agriculture, 31,248,554 francs from posts, 8,285,162 francs from telegraphs and telephones, 283,709 francs from railroads, and 3,745 francs from unexpected resources. The total expenditures were 94,109,943 francs, leaving a surplus of 1,167,510 francs. The expenditures were 4,304,603 francs for interest and amortization of the debt,

1,136,834 francs for the general administration, 648,805 francs for the Political Department, 12,805,151 francs for the Department of the Interior, including 10,323,847 francs for construction, 403,226 francs for justice and police, 26,498,658 francs for the Military Department, 4,952,589 francs for customs and finance, 4,413,549 francs for industry and agriculture, 30,204,417 francs for the post office, 8,285,162 francs for telegraphs and telephones, 381,106 francs for railroads, and 35,843 francs for unforeseen expenses.

The liabilities of the federation, including the currency reserve, were 84,392,065 francs on Jan. 1, 1899; the assets were 199,481,095 francs.

The Army.—All able-bodied citizens of the republic are liable to military service, and those not required to serve are subject to the military tax, of which the federal treasury receives half. Out of 527,074 men liable to military duty in 1897 the number enrolled in the Auszug, or active army, and the Landwehr was 242,529. The recruits for the Auszug in 1898 numbered 18,339. Service in time of peace consists of training in camp, which lasts from forty-two to eighty days in the first year and sixteen days every second year for the rest of the twelve years of service, with rifle practice for the infantry and exercises for the cavalry every year. Service in the Landwehr lasts for twelve years after the period in the Auszug is completed. All able-bodied citizens who are not incorporated in the Auszug or the Landwehr compose the Landsturm. The strength of the Auszug in 1898 was 147,191; of the Landwehr, 83,283; of the Landsturm, 271,780.

Commerce and Production.—The industry of Switzerland is mainly agricultural and pastoral, though the manufactures are important and handicrafts are frequently pursued in combination with husbandry. The cultivators are the proprietors of the soil, and more than half of the forest area is the property of the communes or cantons. Of the total area of the country, 28.4 per cent. is unproductive, 35.8 per cent. pasture and meadow land, 29 per cent. covered with forest, 18.7 per cent. orchard and vineyard, and 16.4 per cent. farm and garden land. The chief crops are rye, oats, and potatoes, of which the production is not half enough, however, to feed the population. The principal rural industries are the manufacture of cheese and condensed milk. In 1897 the export of cheese was 232,000 quintals and of condensed milk 202,000 quintals. The number of cattle in 1896 was 1,306,696. There are over 2,000,000 acres of forests, of which 1,100,000 acres, forming the belt stretching from Lake Lemán to the northern end of the Lake of Constance, are under strict federal supervision. In this area, which by the act of 1876 must never be diminished, new plantings are constantly being made. Fish culture is carried on extensively, in order to stock the streams and lakes. Salt is mined in five districts, and the manufacture of cement is considerable. In about 5,000 industrial establishments subject to the factory laws, which are quite strict, over 200,000 hands are employed. Half the machinery is driven by water power. The textile manufactures are the most important, giving employment in 1895 to 91,454 work people, while 16,334 were employed in the manufacture of watches and jewelry, 14,004 in manufacturing articles of food, 9,936 in metal industries, 8,365 in working leather and rubber, 4,058 in chemical works, and for woodworking and carving there were 7,528 separate workshops reported, employing 11,347 persons. Alcohol is manufactured by a federal *régie*, which sold 42,081 metric quintals of spirits for manufacturing

in 1897. The breweries produced 1,879,567 hectolitres of beer. There are over 14,000 hotels in Switzerland, which receive 90,000,000 francs a year.

The total value of imports in 1898 was 1,154,240,000 francs and of exports 781,423,000 francs, including 88,935,000 francs of specie imported and 57,597,000 francs exported. The value of silk imported was 124,700,000 francs; cereals and flour, 120,700,000 francs; live animals, 51,600,000 francs; coal, 48,600,000 francs; woolen goods, 44,400,000 francs; precious metals, 40,600,000 francs; wine, 37,800,000 francs; iron, 35,600,000 francs; chemical products, 35,100,000 francs; cotton goods, 32,400,000 francs; machinery, 31,700,000 francs; raw cotton, 25,600,000 francs; iron manufactures, 24,000,000 francs; timber, 23,600,000 francs; sugar, 21,300,000 francs; barley, malt, and hops, 17,400,000 francs; leather, 16,900,000 francs; coffee, 15,700,000 francs; wool, 14,000,000 francs; building materials, 12,300,000 francs; silk goods, 12,300,000 francs; books, maps, etc., 12,000,000 francs; linen goods, 10,200,000 francs; eggs, 10,200,000 francs. The export of silk goods was 141,800,000 francs in value; cotton goods, 110,400,000 francs; watches, 109,200,000 francs; cheese, 39,400,000 francs; raw silk, 38,800,000 francs; machinery, 38,000,000 francs; spun silk, 35,100,000 francs; chemical products, 26,600,000 francs; milk, 19,700,000 francs; cotton yarns, 16,600,000 francs; live animals, 12,800,000 francs; straw goods, 11,200,000 francs; hides, 9,900,000 francs; woolen yarns, 9,100,000 francs; precious metals, 8,100,000 francs; fruit, 7,500,000 francs; woolen goods, 7,300,000 francs. The value of the commerce with different countries in 1898 was in francs as follows:

COUNTRIES.	Imports.	Exports.
Germany	314,612,000	194,012,000
France	208,382,000	83,219,000
Great Britain	50,859,000	148,204,000
Italy	158,819,000	88,739,000
United States	73,065,000	73,738,000
Austria-Hungary	66,218,000	43,008,000
Russia	61,099,000	50,619,000
Belgium	26,516,000	12,868,000
Spain	15,550,000	5,098,000
Netherlands	3,205,000	5,090,000
Rest of Europe	13,574,000	24,486,000
Rest of America	24,898,000	18,798,000
Asia	86,852,000	82,171,000
Africa	13,465,000	5,777,000
Australasia	5,906,000	3,523,000
Not indicated		3,245,000
Total merchandise	1,065,305,000	723,896,000

Communications.—The railroads on Jan. 1, 1898, had a total length of 2,374 miles. Their cost up to the end of 1896 was 1,176,294,358 francs. The receipts for that year were 118,393,713 francs; expenses, 70,514,275 francs. The receipts in 1897 from 12,568,109 tons of freight and 46,231,354 passengers were 111,155,255 francs. In pursuance of the law of Feb. 20, 1898, the railroads will be transferred to the Government in May, 1903.

The telegraphs, which belong to the Government, had a total length in 1898 of 4,443 miles, with 13,092 miles of wire. The number of messages in 1898 was 3,977,576, of which 1,684,719 were internal, 1,569,071 international, and 157,256 official.

The post office in 1898 forwarded 93,049,000 domestic and 41,136,000 foreign letters, 24,617,000 domestic and 18,380,000 foreign postal cards, 35,296,000 newspapers and circulars in the domestic and 22,372,000 in the foreign mails, and 5,131,000 domestic postal orders for 563,346,000 francs and 1,086,000 foreign ones for 46,762,000 francs.

T

TENNESSEE, a Southern State, admitted to the Union June 1, 1796; area, 42,050 square miles. The population, according to each decennial census since admission, was 105,602 in 1800; 261,727 in 1810; 422,771 in 1820; 681,904 in 1830; 829,210 in 1840; 1,002,717 in 1850; 1,109,801 in 1860; 1,258,520 in 1870; 1,542,369 in 1880; and 1,767,518 in 1890. Capital, Nashville.

Government.—The following were the State officers in 1899: Governor, Benton McMillin; Secretary of State, William S. Morgan; Treasurer, Edward B. Craig; Comptroller, Theodore F. King; Superintendent of Agriculture, John T. Essary, succeeded June 1 by Thomas H. Paine; Superintendent of Instruction, Morgan C. Fitzpatrick; Insurance Commissioner, E. B. Craig; Adjutant General, Horton C. Lamb; Attorney-General, G. W. Pickle; Commissioner of Labor and Inspector of Mines, A. D. Hargis, succeeded June 1 by Robert A. Shiflett; Railroad Commissioners, N. W. Baptist and Messrs. McKenzie and Williams; Factory Inspector, Martin J. Noonan; Prison Commissioners, W. M. Nixon, John H. Trice, and W. M. Morrow, succeeded in July by A. J. McWhirter; Librarian, Jennie Lauderdale; Chief Justice of the Supreme Court, David L. Snodgrass; Associate Justices, W. C. Caldwell,

John S. Wilkes, W. K. McAllister, W. D. Beard; Clerk, A. W. McMillin; Justices of the Court of Chancery Appeals, M. M. Neil, S. F. Wilson, R. M. Barton, Jr.; Clerk, James Turney. All are Democrats.

Finances.—The receipts of the treasury for the first quarter of the year were larger than usual owing to the enforcement of the law requiring county officials to make prompt collections and returns.

BENTON McMILLIN,
GOVERNOR OF TENNESSEE.

The receipts were \$1,364,611, the disbursements \$1,478,490. The cost of the legislative session was about \$86,000.

The bonded indebtedness of the State at the opening of the year was more than \$16,000,000, bearing interest at 3 per cent., and due, most of it, in 1913. The floating debt was \$850,000; \$250,000 of it was paid by June 1, and \$600,000 was then borrowed in New York at 3½ per cent.

The State has a claim against the Government of about \$1,500,000, for the use of public buildings, prisons, railroads in which the State had interest and damage by National troops during the civil war. The Government has a counterclaim against the State, amounting to about half that sum, for bonds and unpaid interest upon them. The State has also a claim for equipment of troops during the Spanish war, amounting to about \$40,000.

Education.—The school population, by the returns of 1899, was 760,183, while in 1898 it was

732,823. There were 7,924 public schools and 9,078 teachers in 1898. The amount distributed from the State school fund for the first half of the year was \$68,899.

The State Board of Education decided in May that no Senator may reappoint negroes to the colored institutions of the State, and that hereafter scholarships will be good for only two years.

The summer normal schools were enabled to do better work this year, by reason of an increase in the appropriation from \$1,500 to \$2,500. They have help also from the Peabody fund.

The report of a committee of the Legislature appointed to investigate the affairs of the Peabody Normal College was quite unfavorable to its financial management; the matter was afterward taken up by a committee of the State Board of Education, which found that the finances had been mismanaged, but did not fix the responsibility, and referred the reports and the testimony to the trustees of the Peabody fund. Other educational institutions of the State were found by the legislative committee to be in satisfactory condition.

A new building for a gymnasium and a manual training school was opened in December at the School for the Blind. W. K. Vanderbilt has supplied Vanderbilt University with funds for a dormitory. The University of the South, at Seawancee, has a school of forestry, established this year under the Government Forestry Commission.

Military.—The militia organization of the State having been broken up by the enlistments for the Spanish and Philippine wars, the military authorities decided that there was no longer a State guard; and the Adjutant General has been forming a new organization. At the close of the year the returns from his office showed 21 organized companies, with a strength of 1,480 men, 25 noncommissioned officers, and 89 commissioned. In addition to the companies forming the Fifth and Sixth Regiments, there are 3 unattached companies of infantry and a troop of cavalry. Three of these 4 organizations are composed of Confederate veterans; the fourth is Company G (colored), of Nashville.

A large number of military, civic, and fraternal organizations took part in the parade which opened the exercises of the reception given to the First Tennessee Regiment upon its return from the Philippines in November.

The Penitentiary.—For the year ending Dec. 1 the gross earnings of the State Prison amounted to \$320,147.31, and the total expenses to \$188,416.69, making net earnings \$131,731.24. Of the gross earnings, \$306,731.35 were covered into the treasury of the State and \$218,470.45 were drawn from the treasury, leaving a balance turned in of \$88,260.30. The difference between the balance of the fund covered into the treasury and the net earnings shown by the report, amounting to \$43,470.94, represents bills and notes to be collected, resulting from sales of coal and coke. The average cost of a convict in 1898 was \$95.90. There are 800 or more prisoners. The Supreme Court decided, Nov. 1, that no workhouse, city, county, or State Prison keeper has a legal right to whip a prisoner. The court sustained a judgment for \$500 returned by a lower court against the keeper of the Knox County Workhouse for whipping a colored woman who was unruly.

Insurance.—For nearly two years the Insurance Commissioner has been examining, through his representatives, the books of all insurance companies doing business in the State, for the purpose of ascertaining the correctness of tax returns, the law requiring a tax on all premiums received in the State. Premiums properly taxable and not reported have been found running back as far as fifteen years, and in all cases companies have been required to pay the tax, as well as 6 per cent. interest. Most of the unreported premiums were due to misconstruction of the law or carelessness. The expenses of examination are paid by the delinquent companies. This is the first time that the State has ever made such investigation.

National Banks.—According to the abstract of the reports of the condition of the national banks of the State, the total resources on Sept. 7, 1899, aggregated \$38,881,748.70. This is \$3,434,411.24 in excess of the total resources as shown by the corresponding statement of 1898. The individual deposits were \$21,090,657.96, as compared with \$17,827,335.97 in September, 1898. The loans and discounts show an increase over those recorded by the last statement of 1898 of nearly \$1,000,000, the amount this year being \$21,395,696.58. There is an increase in the lawful money reserve in the banks of about 33 per cent. as compared with the statement of last September, the figures being \$2,428,050.55, against \$1,803,387.45. In the vaults of the 49 national banks of Tennessee there was \$1,532,579.55 in specie; in legal tender notes, \$895,477.

There is only a fraction of 1 per cent. difference in the average reserve held by Tennessee's banks on the date of the statement in 1899 and that of the preceding year, the figures being 32.09 per cent. this year, against 32.80 last year.

Railways.—The report of the Railroad Commissioners for the last biennial period showed a total main track mileage of 3,186.22, of which 3,049.10 represented the mileage for operations for railway earning purposes; 118 miles have since been added. The cost of the commission, aside from salaries, was \$1,780.89.

In October an agreement was reached by the State Board of Examiners and the attorneys representing the railroads which took out of the courts the litigation in regard to the assessments of railroad property for 1897-'98. In 1897 the railroads of the State were assessed at \$63,818,404, an increase over the previous year of about \$25,000,000. The examiners were enjoined from certifying the assessments, but the Federal court directed the railroads to pay taxes on a basis of 75 per cent. of the assessment. The case was still pending. The present Railroad Commission assessed the railroads for the next two years at \$52,880,718, and the examiners had decided to increase the assessments by about \$6,000,000 when the compromise proposition was made, and, after negotiations, accepted. The assessment as fixed by the commission of \$52,880,718 is to be accepted by the State and by the railroads for all four years—1897 to 1900.

Localized railroad property is assessed at \$2,322,289, as against \$2,689,222 in 1896, and \$3,118,234 in 1897. A compromise was made also with the Knoxville and Ohio, which has a charter of exemption from ad valorem taxes, but has had to pay privileges. The railroad is to pay \$4,500 annually for ten years and then surrender the charter of exemption as to ad valorem taxes.

Telephone and telegraph property is assessed at \$1,332,941.10, as against \$765,067.10 in 1896 and \$2,185,395.50 in 1897.

Industries and Products.—The phosphate industry has been growing rapidly, and large amounts of capital are now invested in it. The product in 1898 was given as 272,191 tons.

The cotton crop of 1898-'99 was 414,000 bales, and the amount consumed by mills in the State 34,316 bales. There are 23 mills with 103,366 spindles.

From the report of the Commissioner of Labor, Statistics, and Mines, published in May, it is learned that the number of coal mines in the State was then 76, of which 61 were in operation, while several others were opened in the summer, and 3,084,748 tons were produced during the year. The maximum number of men employed was 7,820. The amount of coal converted into coke was 736,280 tons.

The production of other minerals was as follows: Iron ore, 595,777 tons; pig iron, 263,439 tons; copper, 89,721 tons; zinc, 454 tons; manganese, 1,250 tons.

All minerals have shown an increase over the previous year, the most marked being in coal, coke, and iron ore. The increase in the output of coal was 203,754 tons; coke, 25,960 tons; and iron ore, 69,013 tons.

There were strikes of miners at the Dayton, Ducktown, and Goddy mines.

Lawlessness.—A dispatch of Sept. 2 says: "Wednesday night 6 Mormon elders were conducting a meeting in a schoolhouse at Pine Bluff, Stewart County, when the building was stormed by a mob of over 100 men. Eggs and rocks were thrown through the windows and the building almost demolished. Those present fled to save their lives, as bullets commenced to strike the building thick and fast. Miss May Harden, a young woman of the place, walked between the elders Olson and Petty with a view to checking the work of the mob. While the trio passed down the road shots were fired from ambush, and the woman was hit and almost instantly killed."

Legislative Session.—The General Assembly met Jan. 2 and adjourned April 24. Hon. Sied Waddell was President of the Senate, and Hon. Joseph W. Byrns was Speaker of the House.

Senator William B. Bate was re-elected to the United States Senate by a vote of 94 to 23 for Hon. G. N. Tillman, the Republican candidate.

Out of 1,721 bills introduced, 435 were passed. Many were important. Among them was the creation of a sinking fund for beginning the payment of the State debt. The tax rate was raised to 50 cents on the hundred dollars; of this 35 will be for general purposes and 15 for schools. The assessment law was redrawn, with a view to reaching personalty that has been escaping taxation and all property that has been rated too low. The power which it seemed to give for back assessments of property that might be found to have escaped its just taxes caused dissatisfaction and criticism; the matter was referred to the courts, and an opinion was rendered at Chattanooga in October that no reassessments or back assessments could be made under the law till 1900, and not then unless the owner refuses to turn in his property at its actual cash value. A State board of equalization was created, to consist of the Treasurer, the Comptroller, and the Secretary of State, who are to serve without additional compensation. The revenue laws were changed so as to increase the income. The fee for filing the charter of a foreign corporation will be \$100. A tax of one tenth of 1 per cent. is imposed on the capital stock of domestic corporations. The fee for registering a charter is raised from \$3 to \$10. The tax on mutual fire-insurance

companies operating outside of their domicile and counties adjacent thereto was increased from \$150 to \$300. Assessment life companies have to pay 2½ per cent. of the gross amount of premiums in the State, instead of a fixed tax of \$200 a year. The tax of 1½ per cent. on the premium receipts of home companies was repealed.

A privilege tax of \$500 was imposed upon trading stamp companies in each county where business is done by them; and every merchant dealing with or through such companies must pay a tax of \$250. Other privilege taxes were changed.

A local option bill was defeated, but a measure was passed which allows towns under 2,000 to incorporate without being required to grant licenses for the sale of liquor, and towns of that size may surrender their charters and reincorporate.

Gov. Taylor pardoned or commuted sentence of nearly 700 convicts during his two years of office. A statement was made by a Senator that money had been used in procuring the pardons, and he was requested to file specifications and substantiate or withdraw his charges. It does not appear that he paid any attention to the resolution. But it was thought best to relieve the Governor of the whole responsibility for granting and refusing pardons; and the Prison Commissioners were constituted a board of pardons to advise with the Governor and to serve in this capacity without additional compensation.

Several bills were introduced with the object of reducing the cost of schoolbooks, and the Governor sent in a special message on the subject. The result was a schoolbook commission, consisting of the Governor, the Superintendent, and three members of the State Board of Education, who are to select a subcommittee of five men actively engaged in school work.

At the request of the union labor men, the office of Shop and Factory Inspector was created. The salary, \$1,500, is to come from the fees charged to factories inspected. Only counties of more than 30,000 inhabitants are affected.

The negotiable instrument law proposed by the conference of commissioners on uniform legislation was adopted. It was provided that contracts for payment of money in gold, silver, or coin may be discharged in any legal tender.

The keeping or conducting of halls or houses where the game of craps is played was made a felony.

The appropriation for pensions to Confederate soldiers is \$100,000. The sum for maintenance of the National Guard is \$10,000. For repairs upon the Capitol \$10,000 was appropriated. The annual appropriation of \$20,000 to the Peabody Normal Institute was continued.

Among other measures were the following:

Providing that contractors on public work must give bond to pay laborers and those that furnish material.

Making wages up to \$30 exempt from execution or attachment.

Making it unlawful for news agencies to discriminate against newspapers, and for an employee to aid in the business of an agency refusing to supply.

Making Saturday afternoon a legal holiday.

Requiring fire escapes in hotels.

Allowing graduates of the school of osteopathy at Kirksville, Mo., to practice in the State.

Regulating primary elections in counties of 100,000 to 110,000.

Abolishing the office of State Geologist and Mineralogist.

Reducing the pensions of disabled soldiers.

Making the second Friday in May Confederate Memorial Day.

Providing that franchises be submitted to vote in cities of 36,000 or more inhabitants.

Decisions on Laws.—In the United States Court at Memphis, Oct. 17, the opinion was filed that a homestead, though exempt from executions at law in ordinary prosecutions, must be included in the aggregate of value in a proceeding in bankruptcy.

The Supreme Court of the State passed upon the cigarette law in September, declaring cigarettes not legitimate articles of commerce, and upholding the law.

The law of 1877 regulating foreign corporations for mining or manufacturing was declared void in so far as regards the provision that creditors resident in the State shall have priority in distribution of assets over creditors of other States and countries, because it violates the United States Constitution, which declares that citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

A decision affecting combines was given by the Supreme Court at Memphis in June. Memphis plumbers formed an association, requiring the members to pay into the treasury of the association taxes graded in accordance with the work performed when a member did work in competition with another member, and brought suit to compel such payment. The court held that the by-law of the association providing for a tax upon a member when work is done in competition with other members is void because in restraint of trade and public policy, its tendency being to prevent and destroy competition; that associations formed for farming out business and work, as this association is shown to have been, can not use the courts to discipline recalcitrant members.

TEXAS., a Southern State, admitted to the Union Dec. 29, 1845; area, 265,780 square miles. The population, according to each decennial census since admission, was 212,592 in 1850; 604,215 in 1860; 818,759 in 1870; 1,591,749 in 1880; and 2,235,523 in 1890. Capital, Austin.

Government.—The following were the officers of the State for the year: Governor, Joseph D. Sayers; Lieutenant Governor, J. S. Browning; Secretary of State, D. H. Hardy; Treasurer, J. W. Robbins; Comptroller, R. W. Finley; Superintendent of Public Instruction, J. S. Kendall; Commissioner of Agriculture, Jefferson Johnson; Adjutant General, Thomas Scurry; Commissioner of the General Land Office, Charles Rogan; Attorney-General, T. S. Smith; Chief Justice of the Supreme Court, Reuben R. Gaines; Associate Justices, Thomas J. Brown and F. A. Williams; Clerk, Charles S. Morse—all Democrats.

Finances.—On Aug. 31, 1898, there was a balance in the treasury to the credit of general revenue of \$811,279.74; the receipts during the year ending Aug. 31, 1899, amounted to \$2,790,897.18; making the total receipts, including balance, \$3,602,176.92. There was disbursed during the same period \$2,375,607.60; transfers adjusting accounts amounted to \$133,761.38; leaving a balance on hand, Aug. 31, 1899, of \$3,092,807.94. This shows that at the close of the fiscal year there was an increase in the cash balance of \$281,528.20, the increase being accounted for by the Comptroller "because of economy in expenses throughout the administration, fewer delinquencies, and closer collection of taxes, and also because of the fact that a large percentage of the appropriations made by the last Legislature for permanent improvements at the various eleemosynary institutions of the State had not been

expended at the close of the fiscal year." The receipts and disbursements of the available school fund during the same period were: Balance on hand in 1898, \$97,789.85; receipts during the fiscal year, \$3,151,409.18; total receipts, including balance, \$3,249,199.93; disbursed during the same period, \$3,232,624.27; leaving a balance on hand of \$16,574.76. The permanent school fund had a cash balance in 1898 of \$967,157.12; the cash received during the fiscal year amounted to \$1,268,059.63, making a total of \$2,235,216.75; the disbursements during the same period amounted to \$261,874.95, leaving a cash balance of \$1,973,341.80; bonds on hand to the credit of this fund in 1898 amounted to \$6,962,531.54, the value of county bonds purchased during the year being \$250,002, making a total of \$7,212,533.54; county bonds redeemed during the year, \$765,286.49; leaving a balance on hand in 1899 of \$6,447,247.05. The occupation taxes yielded an aggregate of \$916,997.53, a decrease from the previous year of \$24,703.55, the principal receipts being from the following occupations: Retail liquor dealers, \$555,600; wholesale liquor dealers, \$12,000; beer dealers, \$91,200; merchants, including pawnbrokers, \$149,891; physicians, \$19,610; lawyers, \$11,175; bankers, \$10,900; billiard and pool tables, \$9,740. The total value of taxable property in 1899 was shown to be \$922,927,231, which was an increase of \$69,307,866 over the previous year. The Comptroller says, in his report for 1899: "There is a general increase in almost every form of taxable property, most notable of which is an increase of \$4,281,890 in lands in organized counties; town lots, \$2,848,171; cattle, \$7,160,792; goods and merchandise, \$2,157,461; moneys rendered by others than bankers, \$2,577,097; notes and other credits rendered by others than bankers, \$1,430,394; amount of shares of capital stock companies and associations, \$3,167,881; miscellaneous property, \$37,870,275, in which item franchises are included; railroads, \$6,417,616, exclusive of railroad franchises assessed; telegraph and telephone lines, \$329,308."

Education.—A summary of school property and expenditures in the cities containing over 8,000 inhabitants showed: Number of school buildings, 157; number of seats for study, 46,533; value of all public property used for school purposes, \$3,127,704; expenditure for supervision and teaching, \$572,839; expenditure for all purposes, loans and bonds excepted, \$718,321. There were 8 institutions for the colored race in operation, with 82 teachers; the elementary students numbered 1,748, the secondary 471, the collegiate 72, the total being 2,291. There were 14,400 colored persons in the industrial training schools.

Railroads.—There were 9,540.21 miles of railroad in the State, exclusive of yard tracks and sidings, which amounted to 1,528 miles. The net increase in length of tracks of all classes was 181.4 miles. There were 72 different roads in operation. The total earnings for the year were: Passenger, \$7,209,766.46; mail, \$1,090,927.85; express, \$677,247.86; extra baggage, etc., \$93,026.52; freight, \$31,170,645.94; miscellaneous, \$860,972.51; total, \$41,102,587.14. This was an increase of \$3,762,360.45, or about 10 per cent. over the gross earnings for the preceding year. The operating expenses were: Maintenance of way and structures, \$7,409,387.05; maintenance of equipment, \$4,347,020.64; conducting transportation, \$17,046,892.93; general expenses, \$1,460,646.51; unclassified, \$29,801.13; aggregate, \$30,293,749.16. The general average of percentage of operating expenses to gross earnings was 73.70 per cent. Taking the roads as a whole, their averages per

mile were as follow: Freight earnings, \$3,291.47; passenger train earnings, \$957.85; gross earnings from all sources, \$4,330.70; operating expenses, \$3,194.86; and net earnings, \$1,135.84.

Galveston.—Galveston has become the first cotton exporting point in the United States, and, as the Galveston News puts it, "is therefore the biggest primary cotton port of the world." New Orleans is the only point that Galveston recognizes as a competitor. The following facts are given by the Galveston News: "The past year witnessed the consummation of negotiations for the union of the Southern Pacific rail and steamship interests at Galveston. The coming of the Southern Pacific means a largely increased business at this port. The concentration of business at Galveston will make it the basing point for southwestern rates. This city occupies fifth place among the 127 foreign exporting points of the United States. During the past season she exported 6.39 per cent. of the merchandise that left the country. Her exports increased \$10,500,000, or 13 per cent., during the year. The navigable depth of water in the channel, where the bars formerly were, is 27 to 29 feet. In the season of 1896-'97 deep water was first utilized to any great extent, and beginning with that season the port has each year made gigantic strides forward. There is a greater variety of articles exported than ever in the history of the port, for the reason that the West is sending its products to the Old World through here, these products in previous seasons having gone by way of Atlantic ports. The import articles also show a greater variety, owing to the fact that the demand for import goods through Galveston is from a greatly widened territory. Galveston handled 67.91 per cent. of the 1898-'99 cotton crop, against 68.80 per cent. for 1897-'98. There was an increase for 1898-'99 in wheat exports of over 3,000,000 bushels compared with the previous season. Galveston is becoming a great lumber port. The exports of lumber and wood manufactures for 1898-'99 were \$1,247,914, against \$1,120,539 for the previous year, this business having been built up almost entirely since the advent of deep water. The exportation of hog and dairy products, eggs and poultry, is also a new business which contains unknown possibilities. The port handled \$200,000 worth of eggs the past season. The close of the war with Spain was followed by the exportation of live stock to Cuba through this port, the live stock exports to Cuba in 1898-'99 being \$676,254, against \$295,572 the previous year."

Cotton.—Statistics place the cotton crop of 1898-'99 at 3,574,921 bales. The crop for 1897-'98 was 2,948,826 bales. Thus there was an increase of 626,095 bales.

The Brazos Flood.—A large part of the Brazos valley was flooded in August, the counties that suffered most being, in the order named, Fort Bend, Washington, Milam, Burleson, Waller, Austin, Brazos, Robertson, Falls, Grimes, Brazoria, Bell, and McLennan, the loss ranging from \$2,500,000 to \$10,000. A report issued by the United States Department of Agriculture, which sent a statistician to the submerged region, gave the following facts: The farms submerged had a total area of about 1,380,000 acres. Of this area, at the time of the flood, about 503,000 acres were under cultivation, 339,000 acres being in cotton, 124,000 acres in corn, 10,800 acres in sugar cane, and 28,600 acres in other crops, with a total production in sight equivalent to about \$7,950,000. The value of the land itself was estimated at \$16,322,000, that of the buildings and other improvements at \$3,678,000, that

of implements and machinery at \$364,000, that of live stock at \$2,955,000, and that of corn on hand at \$127,000, a total of \$23,446,000, exclusive of growing crops. This land, yielding in an ordinary season a general average of three fourths of a bale of cotton, or 40 bushels of corn, to the acre, was submerged to a depth of 2 to 20 feet, during about eight days, for the entire area of about 2,160 square miles.

It was estimated that the actual destruction included about 227,000 bales of cotton, representing, at an average price of $\frac{1}{4}$ cents a pound, about \$5,100,000; 4,400,000 bushels of corn, worth 20 cents a bushel, \$880,000; sugar cane to the value of \$355,000; and other crops estimated at \$235,000; a total loss of standing crops of \$6,570,000. This amount, added to farm property, made the total loss \$7,414,000, or about \$74 per capita of the population of the district, which was estimated at 100,000, negroes largely predominating.

Lynching.—In May there was a triple midnight lynching in Henderson County. George Humphries, colored, and his two sons were taken from their farm homes, which were within a few hundred yards of each other, and all three were hanged on one tree by a mob. It was charged that the Humphries were concealing a man who was suspected of killing a constable of the county a year before.

TONGA, a Polynesian kingdom in the Tonga or Friendly Islands. There is a Legislative Assembly of 31 hereditary nobles and an equal number of elected members. The reigning King is Taufa Ahau, styled George II. The Prime Minister is Josateki Tonga.

The islands have an area of about 385 square miles. The population in 1807 was 20,917, including 479 foreigners. The people profess Christianity, and have been taught by Wesleyan missionaries. The value of imports in 1898 was £35,176 and of exports £39,464. About one third of the trade is conducted by Germans; most of the rest of it by British houses. The chief export is copra, and next to that come fruits, mats, combs, and fish nets. The revenue, amounting to about \$100,000, is derived from customs, a poll tax, and leases. No lands can be sold to foreigners. In January, 1899, Germany made preparations to establish a coaling station on the island of Vavao. Debts due from the natives to a German company were made the basis of the claim. A British ship was sent with authority to raise the British flag over the whole archipelago, and in consequence of this the Germans desisted from their purpose. By the Anglo-German agreement conceding to Germany the right to annex the Samoan Islands, with the exception of the portion relinquished to the United States, Germany renounced all claim to interfere in the Tonga Islands, and recognize them as under English influence, besides ceding two of the principal islands of the Solomon group.

TURKEY, an absolute monarchy in eastern Europe and western Asia. The Sultan is the eldest prince of the line of Osman. Abdul Hamid II, the thirty-fourth Sultan of the Osmanli dynasty, born Sept. 21, 1842, succeeded his brother Murad V, who was deposed on Aug. 31, 1876, on the ground of insanity. The Sultan is recognized as Khalif, or temporal chief of Islam, not only within the bounds of the Ottoman Empire, but by a large proportion of the Sunnite Mohammedans outside. In matters of religion and law the Sultan is advised by the Sheikh-ul-Islam and guided by the decision of the Ulema, a body of eminent expounders of the sacred books that sits in

Constantinople. In civil and political matters the Sadrazam, or Grand Vizier, is the chief executive officer under the Sultan. These two functionaries, together with ministers at the head of the departments of state, form the Privy Council, or Cabinet, which was composed at the beginning of 1899 as follows: Grand Vizier, Halil Rifat Pasha; Sheikh-ul-Islam, Jemaleddin Effendi; Minister of War, Riza Pasha; Minister of the Interior, Memduh Pasha; Minister of Foreign Affairs, Ahmed Tewfik Pasha; Minister of Marine, Hassan Pasha; Minister of Finance, Reshad Pasha; Minister of Justice, Abdurrahman Pasha; Minister of Public Works and Commerce, Mahmud Pasha; Minister of Public Instruction, Zuhdi Pasha; Grand Master of Artillery, Mustafa Zeki Pasha; Intendant of Religious Endowments, Galib Pasha; President of the Council, Said Pasha. The Ministry of Public Works becoming vacant, Zihni Pasha was appointed.

Finances.—The average revenue of the Ottoman Government for the three years ending with 1895 was £ T. 18,927,745. The revenue for 1898 was estimated at £ T. 18,511,322. The yield of the land and property tax was estimated at £ T. 2,511,924, of the military exemption tax at £ T. 886,210, of various direct taxes at £ T. 321,273, receipts from military departments at £ T. 532,793, the Government's share in the profits of the tobacco *régie* at £ T. 51,775, tribute revenues, part of which are assigned to the Debt Administration, at £ T. 1,136,316, and revenues from salt, tobacco, spirits, stamps, fisheries, silk, and other sources, mostly assigned to the Ottoman Debt Administration, at £ T. 2,571,146. All these are taken at the same figures as the average receipts for the years aforesaid, but tithes were reckoned at £ T. 4,100,000 instead of £ T. 4,332,338, income tax at £ T. 500,000 instead of £ T. 742,135, the sheep tax at £ T. 1,937,840 instead of £ T. 1,737,849, customs at £ T. 2,000,000 instead of £ T. 2,165,784, and receipts of civil departments at £ T. 1,962,036 instead of £ T. 1,938,202. The expenditures for the three years ending with 1895 amounted on the average to £ T. 19,796,182, of which £ T. 932,550 were for the civil list, £ T. 6,483,253 for the debt, £ T. 795,490 for pious foundations, £ T. 5,296,953 for the army, £ T. 1,254,174 for the gendarmery, £ T. 653,170 for the navy, £ T. 552,122 for the artillery, £ T. 901,853 for the Grand Vizierate, Council of State, and Ministry of the Interior, £ T. 583,939 for the Ministry of Finance, £ T. 450,541 for the Ministry of Justice, and £ T. 1,892,137 for other civil departments. The estimated total expenditure for 1898 was £ T. 18,429,411. The civil list was cut down to £ T. 882,550, pious foundations to £ T. 749,484, expenditure on the army to £ T. 4,489,698, on the gendarmery to £ T. 1,013,944, on the navy to £ T. 546,209, and on the artillery to £ T. 462,177, while the expenses of civil departments were estimated at higher figures, the Grand Vizierate, State Council, and Interior Department at £ T. 980,322, the Ministry of Finance at £ T. 668,011, the Department of Justice at £ T. 461,441, and other departments at £ T. 1,707,269. The debt charges are £ T. 750,059 for tributary debt, £ T. 2,861,991 for loans under the Debt Administration, £ T. 1,204,839 for other loans, £ T. 523,523 for floating debt, £ T. 868,894 for railroad guarantees, and £ T. 450,000 for the war indemnity to Russia; total, £ T. 6,159,306.

A loan of £5,000,000 sterling contracted in 1854 and one of £5,700,000 contracted in 1871, both of which were converted into 3½-per-cent.

bonds in 1894, and one of £5,000,000 contracted in 1877 and converted into 4-per-cents. in 1891, are all secured on the Egyptian tribute. One of £7,427,260, raised in 1878 to pay advances of Galata bankers, was made a first charge on indirect contributions conceded to the bondholders. A compromise was made with the creditors in 1881, and all loans except these and the loan of £5,000,000 raised in 1855 and guaranteed by France and Great Britain, were consolidated into four series, for the payment of the interest and sinking fund of which the excise duties, the Bulgarian, Eastern Roumelian, and Cyprus tributes and the tax on Persian tobacco were handed over to an international council of administration, which was to devote 20 per cent. of the collections to the sinking fund and 80 per cent. to interest, paying over to the Government any surplus if the maximum interest of 4 per cent. should be reached. The interest paid has in fact not been over 1 per cent. The debts contracted subsequently have been placed in charge of the Council of Administration, with the exception of the 5-per-cent. loan of £5,909,080 raised in 1886 and guaranteed by the customs and the 4-per-cent. Tumbeki loan of £900,000 raised in 1894. The outstanding bonds of the series A, B, C, and D amounted on July 1, 1898, to £78,303,942 sterling, various loans contracted between 1888 and 1894 to £28,304,620, lottery bonds to £13,045,084, the 5-per-cent. customs loan of 1886 to £4,892,471, the Tumbeki loan to £859,600, and the 5-per-cent. loan of 1896 to £2,945,200; total, £128,350,917. Besides this bonded debt, the Turkish Government owed £ T. 24,513,000 of war indemnity to Russia, £ T. 50,000 to Russian subjects, and £ T. 273,494 to the Damascus Railroad Company; total, £ T. 31,551,958. A loan raised in 1855, of which £ T. 4,196,720 were outstanding, the 4-per-cent. defense loan of 1891, amounting to £ T. 6,737,412, and the 3½-per-cent. loan of 1894, amounting to £ T. 8,896,294, were guaranteed on the Egyptian tribute. Arrangements were made in 1899 for the conversion of the 4-per-cent. loan of 1855, the customs loan of 1886, and the fisheries loan of 1888. The revenues of the vilayets of Konia, Sivas, Angora, Castamouni, and Adana are pledged for the payment of the Russian annuity of £ T. 350,000.

The Army and Navy.—Every Turkish subject capable of bearing arms owes three years of service in the active army. If assigned to the cavalry or artillery, he serves four years. Any conscript, however, at the end of five months can purchase his discharge by paying 30 Turkish pounds. After serving their time in the permanent army, infantrymen are attached to the reserve for three, cavalry and artillery soldiers for two years. For the next eight years they are liable to be called out with the Redifs or territorial army, and for the following six years in the Mustahfiz or territorial army reserve. The Nizams, or regular troops, are armed with Mauser rifles of 7.65 millimetres, with five cartridges in the magazine, or of 9.5 millimetres, with 9 cartridges. The nominal strength of the permanent army in 1898 was 350,000 men; of the territorial army, 300,000 men; of the territorial army reserve, 250,000 men; total, 900,000 men, 750,000 of whom possess a complete military training.

The navy in 1898 consisted of 3 armor clads with casemated batteries, having an aggregate tonnage of 20,507, with 37 guns, named respectively the Assar i Tewfik, Hamidije, and Messudije; 2 turret ships, the Azizije and Osmanije; 2 broad-side ships, 7 corvettes, 1 monitor, 1 ironclad gunboat, 2 river gunboats, 2 torpedo catchers,

and 15 first-class and 7 second-class torpedo boats. The total tonnage of 42 vessels is 66,947; total motive power, 51,411 horse power; armament, 153 guns.

Commerce and Production.—Only a small fraction of the land in Turkey, a part of the house property in towns and land purchased from the Government by villagers, is freehold. Of greater extent, but still inconsiderable, are the lands granted in former times to the spahis for military services, which are hereditary and exempt from tithes. The vacouf lands, granted for religious and charitable uses, although officials divert the revenues into their own pockets, have a large aggregate area. The bulk of the land, however, belongs in theory to the Government, which collects a fee from every occupier, and has the right to oust him if he neglects to cultivate his farm for three years. The lack of roads or other means of communication, the system of levying tithes on all produce, and the exaction of transit dues at the boundaries of the provinces combine to discourage agriculture, although the soil is generally fertile. About 44,000,000 acres are cultivated and 21,000,000 acres under forests. Cereal crops, tobacco, cotton, figs, olives, almonds, grapes, wine, various nuts and fruits, coffee, madder, opium, silk, and gums are the products of various parts of the empire. Forest regulations copied from those of France have been adopted, but since they are not enforced the country is being stripped of its forests. The production of wine is about 1,000,000 hectolitres per annum, of which 160,000 hectolitres are exported. The production of cocoons in 1896 was 5,386,119 kilogrammes, valued at 58,568,561 piasters. The opium product in 1897 was 8,000 chests of 50 to 60 okes, or 140 to 170 pounds; but in 1898 it fell off to 3,500 chests. The production of oil of roses in 1898 was 2,000 kilogrammes. The mineral resources of the country include coal, copper, iron, lead, silver, manganese, chrome, bitumen, sulphur, salt, and alum, but there is very little mining, owing partly to the restrictive laws. The fishery products are numerous and valuable. The fish caught in the Bosphorus are valued at 15,000,000 piasters a year. On the Mediterranean coast sponges of fine quality are obtained, in the Red Sea pearl shells, and in the Persian Gulf pearls. The total value of imports in 1896 was 2,057,567,000 piasters and of exports 1,553,563,000 piasters.

The value in piasters of the commerce with various countries in 1896 is shown in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain	741,560,000	639,511,000
France	237,265,000	365,707,000
Austria-Hungary	437,098,000	190,903,000
Russia	160,299,000	37,773,000
Italy	67,119,000	55,813,000
Bulgaria	87,728,000	34,710,000
Roumania	61,255,000	20,018,000
Belgium	59,462,000	9,642,000
Netherlands	16,216,000	51,733,000
Germany	23,493,000	41,597,000
Greece	39,412,000	28,413,000
Persia	55,837,000	1,625,000
Egypt	53,221,000	
United States	3,370,000	35,539,000
Serbia	4,233,000	6,160,000
Sweden	4,327,000	
Tunis	2,655,000	12,000
All other countries	3,077,000	4,537,000
Total	2,057,567,000	1,553,563,000

Navigation.—The merchant marine of the Turkish Empire consisted in 1898 of 1,349 sailing vessels, of 252,947 tons, and 87 steamers, of

46,498 tons. There were 14,753 vessels, of 11,456,178 tons, entered and cleared at Constantinople during 1897, and of these 11,146, of 11,183,508 tons, were in the foreign trade, comprising 2,667 sailing vessels, of 316,126 tons, and 8,479 steamers, of 10,867,382 tons.

Railroads and Telegraphs.—Railroad communication between Turkey and other European countries was first established in 1888. The total length of railroads in operation in 1897 was 2,542 miles. The Government pays about £ T. 650,000 of guaranteed interest each year. In September, 1898, the length of railroads was 2,807 miles, of which 1,247 miles were in Europe, 1,347 miles in Asia Minor, and 213 miles in Syria.

The telegraph lines have a total length of 21,800 miles, with 33,760 miles of wire. The annual receipts are 21,359,000 piasters; expenses, 7,237,000 piasters.

Political Events.—The agitation that is started in Macedonia nearly every spring was more actively pursued by the Macedonian committees in the early part of 1899 than usual, because the approaching peace conference at The Hague raised hopes of European intervention. It was stimulated also by seeing a Greek prince chosen as ruler of Crete, indicating ultimate annexation to the Hellenic Kingdom in spite of the warning of the powers that neither belligerent should profit by the Greco-Turkish War. The Bulgarian and Servian governments discouraged any popular agitation, having no desire to enter upon a conflict with Turkey or with one another, and being warned anew by Russia and Austria acting in concert. The Turkish Government, in order to avert all danger, strengthened the already enormous military force that it had maintained in Macedonia since the Greek war until there were 200,000 soldiers within striking distance of the border. The Albanian Mohammedans had received arms from the Government when the attitude of the Balkan states became threatening during the Greek war, and now the Vali proposed to the chiefs that they should give them up, as they seemed likely to prove a troublesome element. The chiefs replied that they saw no reason why their people should be disarmed.

The activity of the Roumanians in establishing schools in Macedonia roused the jealousy of the Bulgarians, and the direct action of the Roumanian Minister of Public Instruction in appointing teachers for the Roumanian schools in Monastir, Salonica, and Kossovo was regarded as inadmissible by the Grand Vizier, who refused to recognize the professors appointed by a foreign government, and ordered the schools to be placed in the hands of Ottoman subjects of proved loyalty, appointed in the country itself, as had been formerly customary. The Greek schools, while still the most numerous, have receded before the later Bulgarian movement. The whole Christian population, in spite of acute rivalry among the various nationalities, is represented by the Macedonian committees as united in the desire for liberation from the Turkish yoke and as capable of harmonious self-government. The Central Committee in January addressed a memorial to the representatives of the powers at Constantinople calling upon Europe to rescue 2,000,000 Christians from cruel Mussulman fanaticism, and reiterating the demand made in 1896 for a Christian governor general at Salonica to rule over the vilayets of Salonica, Monastir, and Uskub with the aid of a General Assembly of representatives elected by the people. An encounter occurred in February between a Christian Albanian tribe and the Mohammedan inhabitants

of Mitrovitz. The Arnauts in Old Servia had numerous conflicts with the Serbs. Serious disturbances in Kossovo caused the Turkish authorities to re-enforce the garrisons in that vilayet. On May 17 a fight between Albanians and Serbs near Vronya led to the interference of the Servian frontier guard. On June 13 a collision took place between the Servian frontier guard and Turkish Nizams in the district of Jablonitz.

The Armenians about Van and down the valley of the Tigris suffered extreme distress in the early part of 1899, owing to a bad harvest, and contributions were collected abroad to relieve them. Some of the orphanages that had been opened by English and American missionaries were closed by the authorities on the alleged grounds that they harbored seditious persons or were used for proselyting. As the result of representations made by the British and American ambassadors, the Porte ordered that the orphanages be reopened. On Oct. 11, by recommendation of a commission appointed to investigate the Armenian question, it was ordered in an imperial irade that the special measures for preventing the free movement of Armenians in the provinces be abolished except in the case of suspected persons; that churches, schools, and monasteries destroyed during the Armenian troubles be rebuilt with Government assistance; that the sums due to Armenian Government officials who were killed or expelled be paid; that an orphanage be built at Yedikule, near Constantinople; and that 54 Armenian prisoners be pardoned and 24 who were sentenced to death have their sentence commuted into imprisonment for life.

The condition of the Mohammedans in Crete was so unendurable that all emigrated who could. The Sultan gave £ T. 100,000 from his privy purse to enable others to escape the oppression of their Christian fellow-countrymen. The Turkish authorities conveyed them to Asia Minor and left them in most cases to shift for themselves. In the vilayet of Adana, where 3,000 of them were located, they terrorized the population by their depredations. In Smyrna there were 24,000 in the summer, and it was decided to distribute them all over the Asiatic vilayets. The plan of sending them to Armenia, and the Armenian refugees from Russia to Crete, was regarded with favor. The Druses in Hauran gave trouble by withholding their taxes, and the Government was unwilling to proceed to coercion because of their determined attitude. Arms and ammunition were smuggled into Syria. European influence has gained a foothold in Palestine through the Jewish colonies established there, which rear silkworms, raise grapes, olives, and almonds, and make wine, and have infused a love of agriculture into the Oriental Jews, who were formerly content to live on charity while studying the Talmud. The immigrants are already twice as numerous as the original Jewish population, and of the 200,000 inhabitants of the country one fifth are now Jews.

The German concessionaries who built the Anatolian railroads obtained permission to build a harbor at Haidar Pasha. A German firm obtained a concession for a telegraph cable between Kustendji and Constantinople, which is to be extended through Bucharest to Berlin, forming an alternative line of telegraphic communication with western Europe. The Germans, the English, the French, and the Russians competed for a concession to build a railroad through Asia Minor and Mesopotamia to the Persian Gulf. The German and French united their interests, and the Anatolian Railroad Company obtained the con-

cession for the continuation of its line to Bagdad. The line is to run from Koma, the southern terminus of the present Anatolian Railroad, through Adana, Marash, Aintab, Urfa, Diarbekr, and Mosul to Bagdad, with the right to extend it to Basra. It is to be completed in eight years, and any time after its completion the Turkish Government has the right to take over the lines, binding itself to intrust the administration to officials of the Anatolian Railroad in case it finds that it can not work them with its own officials. The line from Constantinople to Bagdad and Basra will shorten the route to India and the far East, enabling European passengers to embark on the Persian Gulf instead of in southern Europe, and it will pass through a region that was once the granary of the world, a region also of great mineral resources. The Anatolian Railroad has already done much to build up the part of Asia Minor through which it passes by greatly increasing the agricultural production.

The insurrection in Yemen, after apparently subsiding, was renewed as soon as Turkish troops attempted to occupy new posts in the country. The Turkish forces operating against the Arab insurgents in Yemen achieved several victories in November and December, 1898, capturing the rebel position in Shanel and occupying villages on the road between Hodeida and Sana. Abdullah Pasha, the Turkish commander, next advanced

upon Sadeh. The province of Yemen has a population of about 3,000,000, mostly cultivators of the rich soil, which produces all kinds of grain. The Turkish forces numbered 38,000 men, and the Government refused to augment them, relying on the conciliatory policy of the vali, Hassan Hilmi Effendi. His efforts seemed to promise success, but later disturbances were renewed, and the Turkish army, although re-enforced, was not able to accomplish much. Abdullah Pasha marched into the hostile country in May, but was forced to retire to Sana, after losing many of his men from hunger, disease, desertion, and Arab night attacks. In June he proceeded northward to attack the tribes occupying Kuflet el Azin, and was again compelled to retreat. The country between Sana and Hodeida was thoroughly subdued. North of that line the Imam Zeid, the religious leader of the rebellion, controlled all the fertile valleys of the mountains, having his headquarters at Sadeh. The Turkish troops were able to penetrate a short distance into the mountains and destroy some of the coffee plantations. The fortified villages in the hills, only accessible by narrow paths, they could not reach. The causes of the formidable rebellion of 1890 have never been removed; indeed, they have their root in the hatred and contempt felt by Arabs generally for Turks. The Arabs of Yemen refuse to recognize the Sultan as the Khalifa.

U

UNITARIANS. The Unitarian churches in the United States return for 1899 552 ministers, 460 churches, and 71,000 members, showing a gain for the year of 9 ministers, 11 churches, and 1,000 members.

American Unitarian Association.—The secretary of the American Unitarian Association reported at the annual meeting of that society that the number of contributing churches had risen from 274 in the past year to 319 in the present year—the largest number in the history of the association. The gifts for current expenses had aggregated \$57,513, against \$52,397 in the previous year; and the bequests for capital account had amounted to \$39,591, against \$7,397 in 1898. The association closed the year with a surplus of \$8,000. During seven years that Mr. Charles P. Ware, who now retired, had served as secretary of the Church Building Loan fund, that fund had increased from \$104,923 to \$142,326, and loans had been made to 49 societies. Among the notable incidents of the year's operations of the society it was mentioned that several churches had given the association trust deeds for their real property, reserving the right of occupancy so long as they shall continue to be living Unitarian churches. By accepting the Tompkins fund and the Annie Delano Hitch fund, the association had adopted a new policy, and had declared its willingness to become the trustee of funds of which the income goes to aid the work of certain local parishes. Mrs. C. B. Hackley, of New York, had given notice of her purpose to transfer to the association her property at Tarrytown, N. Y., for the establishment of a school for boys. The work of the publishing department had been somewhat accelerated. New tracts had been added to the lists, while the older ones had continued to be circulated; 1,088 copies of Channing's works had been given to ministers and divinity students applying for them; the weekly

journal the Christian Register had been published, and a monthly bulletin issued in co-operation with the Woman's Alliance and the Young People's Religious Union had been circulated gratuitously. The growth of the churches under the care of the home missionary department toward stability and self-support had been more rapid than usual, and the abolition or reduction of the subsidies heretofore granted to a number of the aided churches had made practical the inauguration of some new enterprises and the support of other churches which needed it.

At the seventy-fourth annual meeting of the association, held in May, resolutions were passed recognizing "the intellectual agreements and the deep faith of the heart which, beneath all diversities of gifts, bind together the Unitarian and the Universalist fellowships," and inviting the Universalist General Convention to join with the association in appointing a conference committee of five members from each body to consider plans of closer communion and devise ways and means for more efficient usefulness.

Meetings were held in connection with the meeting of the Association of the Unitarian Sunday-school Society, the National Alliance (Unitarian Women's), and the Unitarian Temperance Society.

The National Conference.—The eighteenth meeting of the National Conference of Unitarian and other Christian Churches was held in Washington, D. C., Oct. 16 to 19. The Hon. George F. Hoar presided. The report of the council began with a review of the history of the convention, the founders of which, in 1864, had in view the extension of Unitarian thought and doctrines to all parts of the country. Since then the number of Unitarian churches, said the report, "has increased faster than the population of the country, although we have not made the inroad which we should have made on the well-organized ranks of

persons baptized in Europe by the Church of Rome. . . . It has proved, however, that the increase of the Unitarian Church is especially within the ranks of other congregations than ours. . . . With the advancing catholicity of the creed-bound churches, it is easier for conscientious Unitarians to join them or to remain in them than it was." Strong churches had been founded during the preceding two years in Ottawa, Canada; Amherst, Mass.; Lincoln, Neb.; Erie, Pa.; Dunkirk and Jamestown, N. Y.; and several smaller places. The need of a school where Unitarian principles were upheld had been met by the establishment of an institution of high grade at Tarrytown, N. Y. A proposition was offered for the purchase of Lithia Springs—a convenient camp ground in southern Illinois where summer assemblies were held—for \$8,000. The order of business of the meeting was so arranged that subjects relating to the fundamental necessities of religion should be discussed on the first day; those concerning the practical demands which the year and the country made upon religious men on the second day; and the reports of the American Unitarian Association and other executive agencies of the Church on the third day. A report on the better organization of the church life of the denomination was adopted, recommending that each church "give honor and dignity to its statement of religious spirit and purpose; make its statement simple, clear, and strong; and having its membership involve no test of creed or sacrament, shall make it expressive of Christian purpose and a pledge of loyalty. The simple statement, 'In the love of truth, and in the spirit of Jesus, we unite for the worship of God and the service of man,' which is in use in more than 80 of our churches, is commended; that this or some similar statement be made by each parish or incorporated in the articles of organization of the society or parish; and that all persons in the parish be urged and invited to subscribe to the same, and thereby become members of the Church." The report also advised that the classes in the Sunday schools, when their members come to maturity, be encouraged to join the Church publicly "after some definite preparation and instruction." Rules were adopted defining the powers and method of proceedings of the Fellowship Committee, the duty of which is to prepare and look after the list of Unitarian ministers. A resolution was adopted giving advice concerning the conditions governing the ordination of ministers, to the effect that a candidate for the Unitarian ministry should be ordained "only by a church or other religious society, or at the request of a church or other religious society, after a call duly given has been accepted by the candidate, except that, whenever it is desirable to ordain a person for special service other than the pastorate of a church, then, by the approval of the Fellowship Committee, the faculty of a divinity school or the officers of a conference may ordain." An expression of sympathy with the Protestants in Russia was voted. Other resolutions related to the appointment of committees in all the parishes to look after contributions to the American Association; declared confidence in the wisdom and integrity of the officers and directors of the association; and commended the Young People's Religious Union, recognizing in it "the means of guiding and expressing the religious life of our young people, and a vital help to the work of our churches." A message of greeting was sent to the Universalist General Convention, which was about to meet in Boston; a proposal of the American Unitarian

Association for the appointment of a Conference Committee to consider plans of closer co-operation between the two denominations was approved; and a fraternal delegation was appointed to visit the Universalist Convention and convey to it the assurance of the good will of the Unitarian Conference.

British Unitarians.—The anniversary meetings of the British Unitarians began with that of the Sunday-school Association, May 23. Mr. John Dendy, of Manchester, presided and delivered the opening address on the subject of The Sunday-school Teacher as a Social Reformer. The statistical report showed an increase of Sunday schools, teachers, and pupils, the number of the latter being upward of 34,000. The income and expenditure for the year had nearly balanced at about £1,263. An effort had been successfully made to diffuse the publications of the association more widely in the schools.

The Essex Hall Lecture was delivered by the Rev. P. H. Wickford, upon Mediævalism and Modern Thought.

The annual report of the British and Foreign Unitarian Association gave the total income for the year as having been £4,816. The expenditure included grants of money and books to congregations and ministers amounting to £2,632. Bequests had been received severally of £1,000 and £2,720, besides others of smaller amounts. Among the chief features of the year's work had been the preaching by the Rev. Stopford Brooke at various churches throughout the country. Special endeavors had been made to increase the attention paid to the religious education of young people. A missionary had been sent to India to fraternize and advise with the theists of the Brahmo Somaj, and to diffuse Unitarian Christian teaching, especially in the university centers. Resolutions were passed disapproving the issue of Sunday editions of daily newspapers, commending the International Conference on disarmament, and condemning the action of the Liverpool School Board in adopting the Evangelical Free Church Catechism. The Central Postal Mission reported concerning the work which it with affiliated societies was doing by means of advertising, lending literature, and corresponding with religious inquirers. More than 1,000 names of correspondents were on its books. These correspondents were to be found in many lands, including New Zealand, Cape Colony, Canada, Newfoundland, India, Greece, Italy, China, Cairo, and Jerusalem.

UNITED STATES OF AMERICA, a federal republic in North America. The legislative power is vested in the Congress, consisting of the Senate and the House of Representatives. There are 90 Senators, 2 from each State, elected by the State Legislatures for six years, one third being renewed every two years. The House of Representatives has 357 members, elected by the ballots of all the qualified voters of the several States, which are divided into congressional districts containing each approximately 173,900 inhabitants at the census of 1890. The executive power is vested in the President, who is commander in chief of the military and naval forces, and has a power of veto over acts of Congress, which can be overcome by a two-thirds vote of each house. The Vice-President is President of the Senate, and in case of the death, removal, or resignation of the President he succeeds the latter for the remainder of the term. In case of the death or disability of both President and Vice-President, the Secretary of State becomes acting President, and after him the other members of the Cabinet in their order.

The Senate can remove the President after a trial on articles of impeachment presented by the House of Representatives, and other executive officers can be removed for unconstitutional actions by the same procedure. The President nominates the officers of the Cabinet, who are the heads of the eight administrative departments, and all other superior officials, but his appointments must be confirmed by the Senate. The President and Vice-President are elected by a college of electors, who are chosen by each State in the manner that the Legislature prescribes, which is in almost every State by popular suffrage, their number being equal to the sum of the Senators and Representatives of the State. It is the custom of political parties to nominate in national convention their candidates for the presidency and vice-presidency, and for the electors, who are chosen by each State on a collective ticket, to vote solidly for the candidates designated by their parties beforehand. Thus the election of the President and Vice-President has come to be in fact, though not in form, by the direct vote of the nation. The term of the presidency is four years, and elections are held on the Tuesday following the first Monday in November of every leap year. The President-elect is sworn into office on March 4 of the year following. The President for the term ending March 4, 1901, is William McKinley, of Ohio, and the Vice-President was Garret A. Hobart, of New Jersey. The Cabinet at the beginning of 1899 was composed as follows: Secretary of State, John Hay, of the District of Columbia; Secretary of the Treasury, Lyman J. Gage, of Illinois; Secretary of War, Russell A. Alger, of Michigan; Attorney-General, John William Griggs, of New Jersey; Postmaster-General, Charles Emory Smith, of Pennsylvania; Secretary of the Navy, John Davis Long, of Massachusetts; Secretary of the Interior, Ethan Allen Hitchcock, of Missouri; Secretary of Agriculture, James Wilson, of Iowa. Elihu Root, of New York, was appointed Secretary of War on the resignation of Mr. Alger.

Area and Population.—The area of the United States, including 3 Territories represented by Delegates in Congress and the Indian Territory, is 3,025,600 square miles. Alaska has an area estimated at 531,400 square miles. The population at the census of 1890 was 62,622,250, exclusive of 179,321 in the Indian Territory and 30,329 in Alaska. The total population was estimated, including these Territories, at 77,803,000 at the beginning of 1899. Hawaii, with an area of 6,740 square miles and a population of 109,020, was annexed in 1898, and by the treaty of peace concluded on Dec. 10, 1898, Spain ceded to the United States Porto Rico, with an area of 3,670 square miles and a population of 798,566; Guam, with an area of 370 square miles and 9,172 inhabitants; and the Philippine Islands, including the Sulu Archipelago, having an area of about 115,300 square miles and a population estimated at 9,000,000. Including these new dependencies, the total area subject to the legislation of the Congress of the United States is 3,683,080 square miles, with a total population of nearly 88,000,000.

Immigration.—Of 229,299 immigrants into the United States in 1898, the number that came through the port of New York was 178,748; through Boston, 12,271; through Baltimore, 10,735; through Philadelphia, 8,360; through San Francisco, 2,274; through other ports, 16,911, including 10,737 who passed through Canada. The immigration from British America and Mexico is not reported. Of the total number as above given, 52,531 were laborers, 23,656 servants, 16,243 farm-

ers, 2,904 carpenters, 3,826 tailors, 3,229 shoemakers, 1,152 blacksmiths, 1,604 miners, 2,031 clerks. The number of professional men was 1,342; of skilled laborers, 33,145; of other occupations, 104,238; occupation not stated, 149; of no occupation, including women and children, 90,425. The total number of immigrants in the year ending June 30, 1899, was 311,715, of whom 98,730 were Italians, 32,345 Irish, 28,466 Poles, 26,631 Germans, 23,249 Scandinavians, 15,838 Slovaks, and 10,712 English. The total number of European immigrants was 297,349; from Asia, 8,972; from Africa, 51; from all other sources, 5,343. The total immigration was divided as to sex into 195,277 males and 116,438 females. The number of Chinese of the exempt classes admitted during the year was 3,925; the number refused admission was 950. The laws and regulations regarding immigration were extended to Cuba, Porto Rico, and the Philippines.

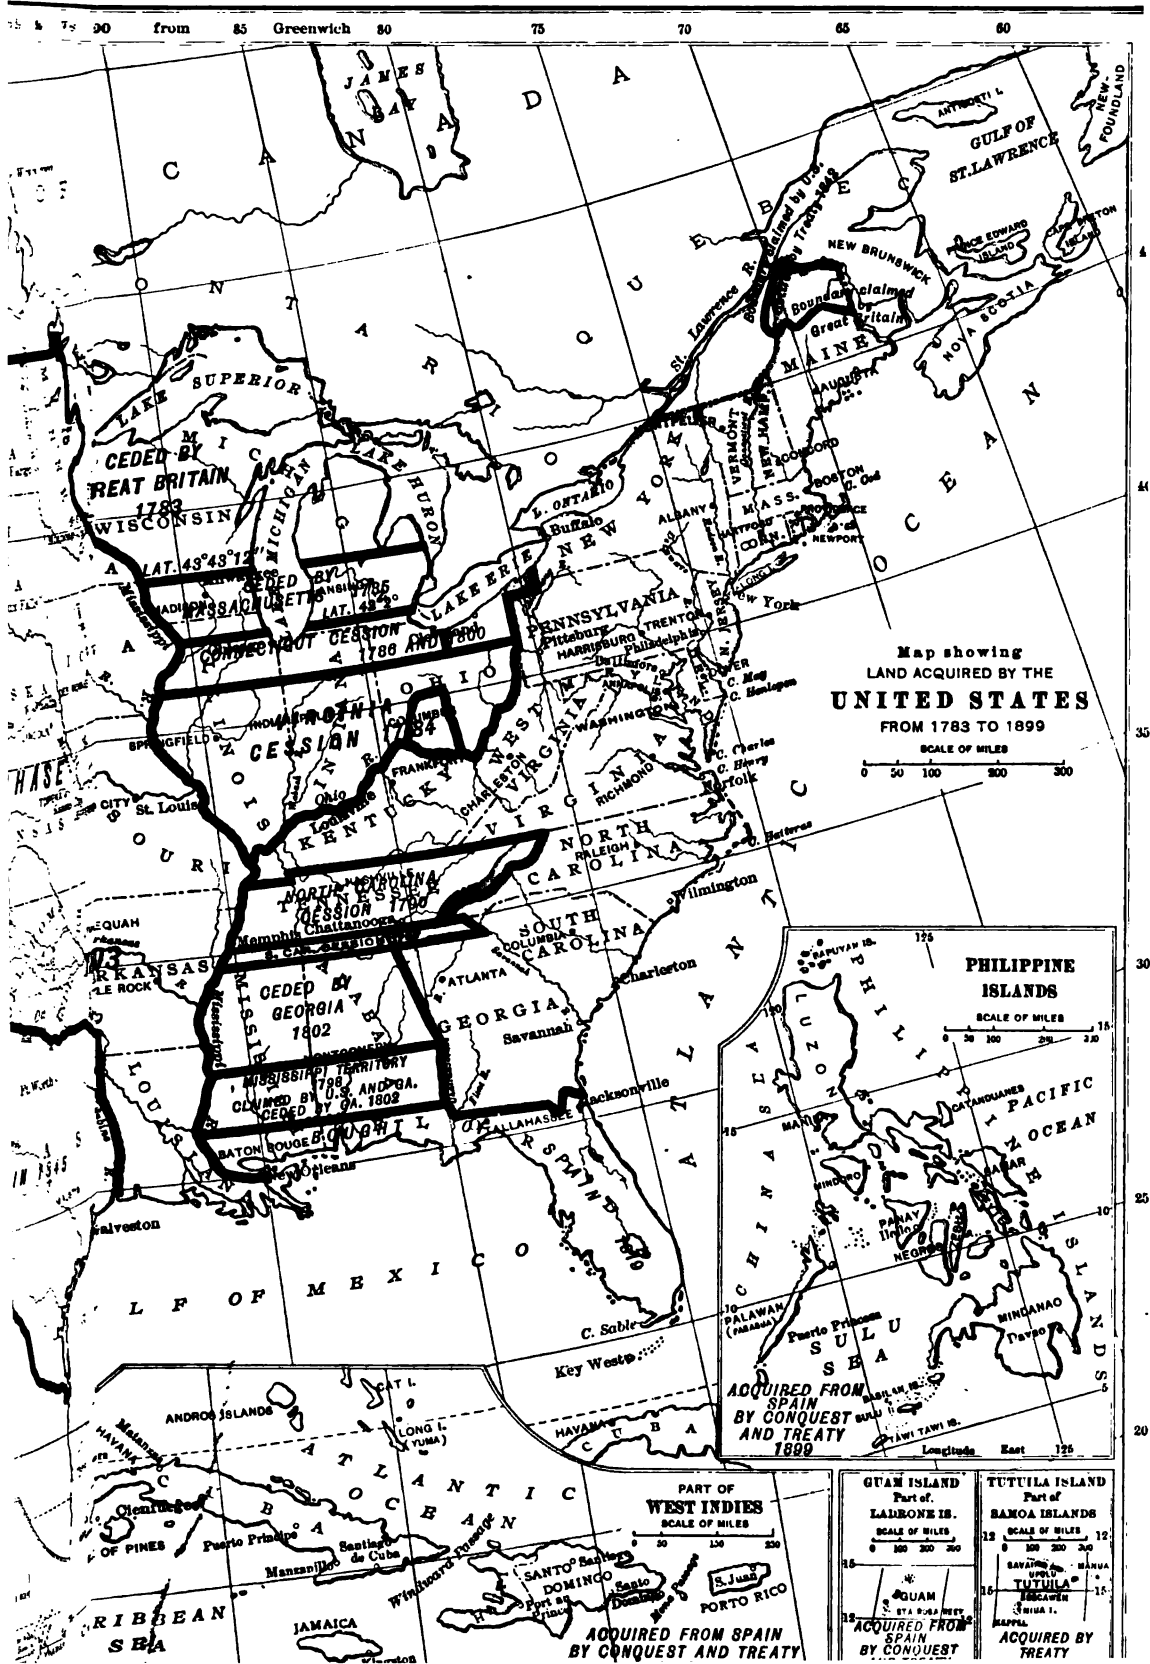

The Army.—The authorized strength of the regular army under the act of March 4, 1899, is 65,000 enlisted men. The President was further authorized to raise a volunteer force of 35,000 men for the term of two years and four months, or until July 1, 1901, at which period the volunteer force shall be discharged, or earlier if the necessity therefor ceases, and the regular army be reduced to its former strength of 26,610 men. The regular army on July 1, 1899, numbered 581 general officers, staff officers, medical officers, and officers of engineers and the Signal Corps, with 2,093 men; 1,177 infantry officers and 34,450 men; 472 cavalry officers and 12,340 men; 357 artillery officers and 11,070 men; 752 men in the Engineer Corps; 720 men in the Signal Service; and 75 Indian scouts. The army is organized in 25 infantry regiments, including 2 of colored troops, each composed of 3 battalions of 4 companies; 10 regiments of cavalry, including 2 colored regiments, each having 3 sections of 4 troops of 100 men; 7 regiments of artillery of 14 batteries, including 2 mounted batteries of 6 pieces; 1 battalion of engineers, having 5 companies; a medical corps, a detachment of mechanicians, and a detachment at the Military Academy. The infantry are armed with the Krag-Jørgensen rifles of 30 millimetres caliber, the mounted artillery with breech-loading guns of the caliber of 3.2 inches.

The volunteer army, commanded by 4 major generals and 17 brigadier generals, consisted of 27 infantry regiments, including 2 colored regiments, and 3 regiments of cavalry, numbering 1,200 officers and 31,416 men in the infantry and 50 officers and 1,234 men in the cavalry, besides 14 officers and 400 men in a native battalion in Porto Rico.

The organized militia of the States consists of 9,376 officers and 115,627 men. There are 10-149,184 able-bodied men in the country.

The Navy.—The navy of the United States at the end of 1898 comprised 4 first-class battle ships (the Iowa, of 11,340 tons, and the Indiana, Massachusetts, and Oregon, of 10,288 tons); the second-class battle ship Texas, of 6,315 tons; the armored cruisers Brooklyn and New York; the protected cruisers Columbia and Minneapolis, of 7,375 tons, and Olympia, of 5,870 tons; the double-turret monitor Puritan, of 6,060 tons; the barbet monitor Monterey; the protected cruisers Chicago, Baltimore, Philadelphia, Newark, San Francisco, Charleston, New Orleans, Albany, Cincinnati, Raleigh, Atlanta, and Boston, of 3,000 to 4,500 tons; the double-turret monitors Miantonomoh, Amphitrite, Monadnock, and Terror, of 3,990 tons; the cruiser Lancaster, of 3,250 tons;

the third-rate cruisers *Hartford*, *Mayflower*, *Mohican*, *Adams*, *Alliance*, *Essex*, *Enterprise*, *Alert*, and *Ranger*; the ram *Katahdin*; the single-turret monitors *Ajax*, *Canonicus*, *Mahopac*, *Manhattan*, *Comanche*, *Catskill*, *Jason*, *Lehigh*, *Montauk*, *Nahant*, *Nantucket*, and *Passaic*; the unprotected cruisers *Detroit*, *Montgomery*, and *Marblehead*; the dispatch boat *Dolphin*; the steel gunboats *Bennington*, *Concord*, *Yorktown*, *Castine*, and *Machias*; the iron gunboat *Topeka*; the composite gunboats *Annapolis*, *Vicksburg*, *Wheeling*, *Marietta*, *Newport*, and *Princeton*; the light-draught gunboats *Wilmington*, *Helena*, *Nashville*, and *Monocacy*; the dynamite gunboat *Vesuvius*; the training ship *Fern*; the fourth-rate cruiser *Michigan*; the gunboats *Petrel*, *Bancroft*, and *Pinta*; and the torpedo boats *Cushing*, *Ericsson*, *Foote*, *Rodgers*, *Winslow*, *Porter*, *Dupont*, *Morris*, *Talbot*, *Gwin*, *Mackenzie*, *McKee*, *Manly*, *Somers*, and *Stiletto*.

The vessels under construction were the first-class battle ships *Maine*, *Missouri*, and *Ohio*, of 12,500 tons, and *Kearsarge*, *Kentucky*, *Illinois*, *Alabama*, and *Wisconsin*, of 11,525 tons; the monitors *Arkansas*, *Connecticut*, *Florida*, and *Wyoming*; a gunboat; the destroyers *Bainbridge*, *Barry*, *Chauncey*, *Dale*, *Decatur*, *Hopkins*, *Hull*, *Lawrence*, *Macdonough*, *Paul Jones*, *Perry*, *Preble*, *Stewart*, *Truxton*, *Whipple*, and *Worden*, of 420 to 435 tons, engined to steam 28 to 30 knots; the submarine torpedo boat *Plunger*; and the torpedo boats *Rowan*, *Dahlgren*, *T. A. M. Craven*, *Farragut*, *Davis*, *Fox*, *Stringham*, *Goldsborough*, *Bailey*, *Bagley*, *Barney*, *Biddle*, *Blakely*, *De Long*, *Nicholson*, *O'Brien*, *Shubrick*, *Stockton*, *Thornton*, *Tingey*, and *Wilkes*. Including these, the navy numbers 12 first-class battle ships, 1 of the second class, 2 armored cruisers, 1 armored ram, 6 double-turret monitors, 4 iron and 13 steel single-turret monitors, 13 protected cruisers, 2 protected wood-sheathed cruisers, 3 unprotected cruisers, 9 gunboats, 3 light-draught gunboats, 6 composite gunboats, 1 training ship, 1 dynamite gun vessel, 1 dispatch vessel, 16 torpedo-boat destroyers, and 35 steel torpedo boats; total, 129 effective vessels, in addition to which there are 5 iron cruising vessels, 1 submarine torpedo boat, 1 wooden torpedo boat, 8 wooden cruising vessels, 6 sailing vessels, 14 tugs, 11 wooden steamers and 6 sailing vessels unfit for service, and 8 vessels captured in the Spanish war, making the total number of vessels in the navy 189.

The first-class battle ships *Georgia*, *New Jersey*, and *Pennsylvania* were authorized in 1899, also the armored cruisers *California*, *Nebraska*, and *West Virginia*. The new steel gunboats *Chattanooga*, *Cleveland*, *Denver*, *Des Moines*, *Galveston*, and *Tacoma* will have a displacement of 3,200 tons, engines of 4,700 horse power, capable of making 16 knots, 10 5-inch rapid-firing guns in the main battery, and a secondary armament of 8 6-pounders, 2 1-pounders, and 2 Colt automatic guns. The number of large, swift, and powerful armored cruisers of great coal endurance is disproportionate to the rest of the navy, and in the programme recommended to Congress the Secretary of the Navy has proposed the construction of 12 sheathed and coppered gunboats of 900 tons in addition to 3 new armored cruisers and 3 protected cruisers. The armored cruisers will have a displacement of about 13,000 tons, and will carry the heaviest armor and the most powerful ordnance for vessels of their class and have the highest practicable speed and great radius of action. The protected cruisers are to have a displacement of 8,000 tons, to carry powerful batteries, and to have high speed combined with coal endurance.

There were 1,340 commissioned officers and 177 warrant officers on the active list of the navy at the end of 1899. The enlisted force of the navy on June 30, 1899, numbered 4,370 petty officers and 10,131 men; total, 14,501. The number of apprentices was 2,221. The marine corps consists of 201 officers and 6,000 men.

Pensions.—The number of pensioners on the roll on June 30, 1899, was 991,519, showing a decrease during the year of 2,195. There were 316,834 invalids, 653 nurses, and 90,608 widows and dependent children drawing army pensions, and 4,721 invalids and 2,293 widows and dependent children drawing navy pensions, under the general pension act; and 405,987 invalids and 124,127 widows and dependents connected with the army, and 14,925 invalids and 6,139 widows and dependents connected with the navy were drawing pensions under the act of June 27, 1890. The number of claims allowed in the course of 1899 was 1,975 for invalids and 3,460 for widows, etc., making a total of 1,616,391 since 1861. The sum disbursed during the year was \$139,482,696; the total disbursements since 1861 have been \$2,423,592,488. There was 1 pensioner of the War of 1812 surviving on June 30, 1899; of widows of soldiers of 1812 there were 1,998. The pensioners of the war with Mexico numbered 9,204; widows, 8,175. Survivors of Indian wars numbered 9,204; widows, 177. Pensions for the war with Spain were granted to 123 invalids and 177 widows.

Public Lands.—The area of the public lands remaining vacant and subject to entry and settlement on July 1, 1899, was 929,308,068 acres, of which 318,205,724 acres had been surveyed. Of the unsurveyed lands 359,492,760 acres were in Alaska, and the greater part of the remainder consisted of barren mountain and desert. Not included in these figures are military and Indian reservations, reservoir sites and timber reservations, and tracts covered by selections, railroad grants, and unadjudicated claims, a part of which may be added to the public domain. The receipts of the General Land Office in 1899 were \$3,070,137, of which \$2,594,690 were from disposal of public land, \$442,914 from disposal of Indian land, and \$890,702 from fees and commissions.

The Patent Office.—The number of applications for patents in the calendar year 1898 was 33,915; for design patents, 1,843; for reissues, 84; for registration of trade-marks, 1,796; for registration of labels, 316; for prints, 50; number of caveats filed, 1,695; total, 39,683. The number of patents granted, including designs and reissues, was 22,267; of trade-marks registered, 1,238; of labels, 200; of prints, 35; total, 23,740. There were 4,368 patents withheld for nonpayment of fees. The number of patents that expired was 15,548. The total number of applications since 1837 has been 1,073,950; total number of caveats filed, 109,074; total number of original patents granted, including designs, 623,535. The receipts of the Patent Office from its first establishment till the end of 1898 were \$1,137,734; expenses, \$1,136,196.

Commerce and Production.—The number of farms in the United States in 1890 was 4,564,651, having a total acreage of 623,218,619 acres. The estimated value of farm products is \$2,460,107,454 per annum. The forest area of the United States, exclusive of Alaska, is estimated at 699,500,000 acres, or 1,094,514 square miles, being about 36.5 per cent. of the total land area. About 2,250,000,000 cubic feet of lumber are consumed annually in building and manufactures in the United States, 27,000,000 cubic feet are required for railroad ties, 30,000,000 cubic feet for fen-

cing, 1,000,000,000 cubic feet for miscellaneous purposes, and 15,000,000,000 cubic feet of wood are burned for fuel, making the total estimated domestic consumption 18,307,000,000 cubic feet. The average annual loss from forest fires is estimated at \$20,000,000. Under the act of 1891 the United States Government set apart 17,968,440 acres of the public lands in Colorado, New Mexico, California, Arizona, Wyoming, Oregon, and Washington as perpetual forest reservations previous to 1897. In that year 13 additional reserves were proclaimed, with a total area of 25,683,840 acres; and since then tracts in Arizona, New Mexico, South Dakota, Montana, Utah, Wyoming, and California have been added, making the total area of national forest reservations 46,425,527 acres. New York and Pennsylvania have State reservations.

The Indian corn crop of the United States for 1898 amounted to 1,924,185,000 bushels; wheat, 675,149,000 bushels; oats, 730,905,000 bushels; barley, 55,792,000 bushels; rye, 25,657,000 bushels; buckwheat, 11,722,000 bushels. In 1897 there were 80,095,051 acres under corn, producing 1,902,967,952 bushels, valued at \$501,072,952; 39,465,066 acres under wheat, producing 530,149,168 bushels, valued at \$428,547,121; and 25,730,375 acres under oats, producing 698,767,809 bushels, valued at \$147,974,719. The hay crop in 1898 was estimated at 60,377,000 tons; potato crop, 192,306,000 bushels. The annual production of hops is about 2,000,000,000 pounds; of peanuts, 2,600,000 bushels. The area planted to tobacco in 1896 was estimated at 595,000 acres, producing 403,004,000 pounds, valued at \$24,258,000. The cotton crop of 1899 was 11,235,383 bales, averaging 487 pounds. The exports to Europe in the year ending June 30, 1899, were 7,146,009 bales; consumption of the United States and Canada, 4,030,448 bales; total, 11,176,457 bales. There were 17,938,300 spindles in operation in the United States in 1899, consuming 3,553,000 bales of 500 pounds. The production of cane sugar in 1898 was estimated at 707,951,878 pounds; of molasses, 29,335,441 gallons. The consumption of sugar was 1,997,344 tons, of which 1,640,637 tons were the refined product of imported sugar, 317,447 tons refined from domestic cane sugar, 5,000 tons maple sugar, 33,960 tons domestic beet sugar, and 300 tons sorghum and other domestic sugar. The production of distilled spirits in 1898 was 83,668,411 gallons, of which 13,439,459 gallons were Bourbon whisky, 8,818,240 gallons rye whisky, 11,672,795 gallons alcohol, 1,340,547 gallons rum, 1,267,580 gallons gin, 20,613,205 gallons pure neutral spirits, and 2,906,198 fruit brandy. The consumption of domestic brandy in 1898 was 1,411,448 gallons; of other domestic spirits, 79,207,887 gallons; of imported spirits, 916,549 gallons. The production of malt liquors for the year ending June 30, 1899, was 36,581,114 barrels. The production of wine is over 24,000,000 gallons a year. The consumption of domestic wines in 1898 was 20,567,317 gallons; of imported wines, 3,113,633 gallons. The consumption of domestic beer, ale, and porter was 1,160,651,991 gallons; of imported, 2,457,348 gallons. The imports of bottled malt liquors in 1899 were 869,957 gallons; in barrels, 1,927,470 gallons. The imports of spirituous liquors were 1,389,352 gallons; of still wines in casks, 2,240,387 gallons; of still wines in bottles, 247,464 dozen; of sparkling wines, 351,112 dozen.

The total value of the mineral products of the United States for 1898 was \$697,847,802, of which sum \$344,079,986 represent metallic products, \$352,767,802 nonmetallic products, and \$1,000,000 the estimated value of products unspecified. The

pig iron product was 11,773,934 long tons, valued at \$116,557,000; iron ore, 19,278,369 long tons, value at the mines \$22,788,069. The product of silver was 54,438,000 troy ounces, of the coining value of \$70,384,485 and the commercial value of \$32,118,420. The gold product was 3,118,398 troy ounces, value \$64,463,000. Of copper 528,375,591 pounds, including some made from imported pyrites, were produced, having an export value at New York of \$61,849,132. The yield of lead was 231,269 tons, having an export value of \$17,345,175; of zinc, 115,399 tons, value \$10,385,910. The product of quicksilver was 31,092 flasks, its value in San Francisco \$1,186,627. The aluminum produced amounted to 5,200,000 pounds, worth in the Pittsburgh market \$1,716,000. The product of antimony was 1,120 tons, value \$184,050; of nickel, 13,411 pounds, value \$4,694; of platinum, 225 troy ounces, value \$1,913. Of the total value of nonmetallic products coal stands for \$208,000,850. The output of Pennsylvania anthracite was 47,663,075 long tons, valued at \$75,414,537; of bituminous coal, 166,592,023 short tons, valued at \$132,586,313. These figures do not include brown coal and lignite nor the anthracite coal mined outside of Pennsylvania.

The product of petroleum was 55,354,233 barrels of 42 gallons, valued at \$44,183,359; the value of natural gas, \$14,750,000. The value of the stone quarried was \$36,607,264; value of brick clay, \$9,000,000; of other clay, \$1,000,000. The value of clay products was \$71,470,689. The production of cement was 11,968,708 barrels; value, \$9,781,501. The limestone used for iron flux was 5,275,819 long tons, valued at \$2,638,000. The phosphate rock taken out amounted to 1,308,885 long tons; value, \$3,453,460. The salt product was 17,612,634 barrels of 280 pounds; value, \$6,212,554. The quantity of mineral waters sold was 28,853,464 gallons; value, \$8,051,833. The product of zinc white was 33,000 tons, value \$2,310,000; of borax, 16,000,000 pounds, value \$1,120,000; of gypsum, 291,638 tons, value \$755,280; of mineral paints, 58,850 tons, value \$694,856; of fibrous talc, 54,356 tons, value \$410,430; of asphaltum, 76,337 tons, value \$675,649; of soapstone, 22,231 tons, value \$287,112; of pyrite, 190,150 long tons, value \$577,731; of barytes, 31,306 long tons, value \$108,339; of feldspar, 12,000 long tons, value \$32,395; of fluorspar, 7,675 short tons, value \$63,050; of flint, 19,130 long tons, value \$42,670; of bauxite, 25,149 long tons, value \$75,437; of fuller's earth, 14,860 short tons, value \$106,500; of marls, 60,000 tons, value \$30,000; of infusorial earth and tripoli, 2,733 tons, value \$16,691; of pumice stone, 600 tons, value \$13,200; of magnesite, 1,263 tons, value \$19,075; of asbestus, 605 tons, value \$10,300; of sulphur, 1,200 tons, value \$32,960.

The value of grindstones produced was \$489,769; of oilstones, \$180,738; of millstones, \$25,934; the quantity of corundum and emery, 4,064 tons, valued at \$275,064; the quantity of abrasive garnet, 2,967 tons, valued at \$86,850. The product of mica was 129,520 pounds of sheet and 3,999 tons of scrap, valued at \$103,534 and \$27,564 respectively. Of bromine 486,979 pounds were obtained, value \$126,614; of monazite, 230,776 pounds, value \$12,462; of cobalt oxide, 7,848 pounds, value \$11,772; of rutile, 140 pounds, value \$700. The product of crystalline graphite was 2,360,000 pounds, or amorphous 890 tons; total value, \$75,200. The quantity of manganese ore mined was 15,957 long tons, value \$129,185. The total value of precious stones was \$160,920.

The growth of the iron and steel industry has placed the United States in the van of the ex-

porting nations. In less than twenty years the balance with Great Britain has so changed that, instead of importing 1,500,000 tons from that country, the United States in 1898 exported more than 1,000,000 tons to the United Kingdom. Exports are also sent to other European countries—to Russia in large quantities on account of the great railroad development there—to Asia, and to Africa. The Siberian Railroad in its eastern portion has been built of American material and equipped with American rolling stock. The cost of Bessemer pig at Pittsburg has in this period been reduced by half, and steel rails, formerly imported at \$50 a ton, were quoted for export in 1898 at \$15 to \$17 a ton.

The estimated number of sheep in the United States on Jan. 1, 1899, was 39,114,453, valued at \$107,698,000. The estimated wool clip in 1899 was 272,191,330 pounds; imports, 76,736,209 pounds; exports, 14,095,335 pounds, of which only 1,683,419 pounds were domestic wool; retained for home consumption, 334,832,204 pounds. A third or more of the butter and cheese of the world is made in the United States. The exports of butter in 1899 were 20,247,997 pounds; of cheese, 38,198,753 pounds. The number of hogs packed in 1899 was 29,791,000. The exports of bacon in 1898 were 650,108,933 pounds; of hams, 200,185,861 pounds; of pork, 100,357,363 pounds; of lard, 709,341,015 pounds; total, 1,659,996,202 pounds, of which 899,520,708 pounds went to Great Britain, 305,950,114 pounds to Germany, 102,421,995 pounds to Belgium, 96,331,113 pounds to the Netherlands, 42,785,483 pounds to Canada, 34,676,437 pounds to Cuba, 24,973,722 pounds to France, 12,772,738 pounds to the British West Indies, 12,211,972 pounds to Denmark, 11,781,097 pounds to Sweden and Norway, 10,922,596 pounds to Hayti, 8,264,637 pounds to Porto Rico, and smaller quantities to Venezuela, Mexico, Newfoundland, British Guiana, Columbia, Brazil, and other countries.

The extraordinary exportations, only slightly less in value than in 1898, when they were swelled by high prices for grain and a strong demand, consequent upon short crops in Europe, together with a moderate increase in imports, make the total volume of trade in the year ending June 30, 1899, the largest in the history of American commerce. The foreign trade has more than doubled since 1870, the imports for 1899 being 60 per cent., the exports 212 per cent. greater. The value of imports per capita of the population has declined in this period from \$11.30 to \$9.15, while the exports per capita have grown from \$10.19 to \$16.12, a decrease on the one side of 20 per cent., an increase on the other of 58 per cent. There has been but little increase in the importation of manufactured articles, although population has doubled, nearly the whole increase being in articles for use in manufacturing and in foodstuffs that can not be produced in the United States. The imports of woolen goods and of manufactures of iron and steel are much smaller than thirty years ago, and the increase in cotton and silk stuffs, fibers, leather, and earthenware has been far below the increase in population. The exports of manufactures in 1899 were not only larger by \$48,000,000 than in any previous year, but formed a far larger percentage of the total exports than ever before. The exports of manufactures exceeded imports in 1898 for the first time, the excess being \$60,706,000, and in 1899 this excess grew to \$76,334,000. The increase of commerce with the tropical islands that had come into closer relations with the United States was very marked, indicating that these islands can

exchange for products of American growth and manufacture a considerable part of the tropical agricultural produce that forms a large proportion of the natural and necessary imports of the United States. The total value of merchandise imports into the United States in the year ending June 30, 1899, was \$697,148,489. The total value of domestic exports was \$1,203,931,222; of foreign exports, \$23,092,080; total exports, \$1,227,023,302, against \$1,231,482,330 in 1898, \$1,050,993,556 in 1897, \$882,606,938 in 1896, and \$807,538,165 in 1895. The total imports and exports were \$1,924,171,791 in 1899, \$1,847,531,984 in 1898, \$1,815,723,968 in 1897, \$1,662,331,612 in 1896, and \$1,539,508,130 in 1895. In 1890 the volume of trade was \$1,647,139,093; in 1885, \$1,319,717,084; in 1880, \$1,503,593,404; in 1875, \$1,046,448,147; in 1870, \$828,730,176. The excess of merchandise exports over imports in 1899 was \$529,874,813; the excess was \$615,432,676 in 1898, \$286,263,144 in 1897, and \$102,882,264 in 1896.

The values of the articles imported in the year ending June 30, 1899, are given in the following table:

	Value.
Agricultural implements.....	\$4,852
Animals:	
Cattle, free.....	95,353
Cattle, dutiable.....	2,925,009
Horses, free.....	286,252
Horses, dutiable.....	284,798
Sheep, free.....	46,132
Sheep, dutiable.....	1,153,949
All other, including fowls.....	81,559
Antimony ore.....	40,822
Antimony, regulus and metal.....	179,573
Articles made in the United States returned.....	3,541,321
Articles specially imported.....	681,216
Art works, the production of Americans.....	418,867
Art works, other.....	2,040,121
Asbestos.....	286,386
Asphaltum, crude.....	224,420
Bark, hemlock.....	62,554
Beads and bead ornaments.....	1,085,068
Beeswax.....	109,987
Beverages:	
Ginger ale.....	268,883
All other.....	86,698
Bismuth.....	204,473
Blacking.....	58,680
Bolting cloths.....	207,480
Bones, horns, and hoofs.....	704,969
Bones and horns, manufactures of.....	181,718
Books, maps, engravings, etc., free.....	1,689,892
Books, maps, engravings, dutiable.....	1,893,509
Brass, and manufactures of.....	55,185
Breadstuffs:	
Barley.....	53,696
Corn.....	1,618
Oats.....	4,433
Oatmeal.....	17,740
Rye.....	932
Wheat.....	1,407,625
Wheat flour.....	4,067
All other, and preparations of, free.....	208,615
All other, and preparations, dutiable.....	861,000
Bristles, crude.....	12,399
Bristles, sorted or prepared.....	1,445,853
Brushes.....	890,639
Burr stones.....	19,968
Buttons.....	451,331
Cement.....	2,776,386
Chalk.....	47,219
Chemicals, drugs, and dyes:	
Alizarin and alizarin colors.....	700,485
Argols, or wine lees.....	1,914,460
Barks, cinchona, etc.....	846,576
Coal-tar colors and dyes.....	97,563
Cochineal.....	23,207
Logwood.....	546,274
Other dyewoods.....	222,967
Extracts of dyewoods.....	219,192
Glycerin.....	1,024,131
Gum arabic.....	116,382
Camphor, crude.....	822,100
Copal, cowrie, and dammar.....	1,844,779
Gambler, or terra japonica.....	754,497
Gum chicle.....	863,051
Shellac.....	1,397,695
All other gums.....	1,070,321
Indigo.....	1,698,583
Licorice root.....	1,566,880
Lime, chloride of.....	1,159,271

	Value.		Value.
Chemicals, drugs, and dyes:		Fruits and nuts:	
Mineral waters.....	\$596,337	Bananas.....	\$5,665,589
Opium, crude.....	1,223,951	Currants.....	798,357
Opium, prepared for smoking, etc.....	829,308	Dates.....	324,087
Potash, chloride of.....	174,302	Figs.....	356,762
Potash, muriate of.....	1,509,915	Lemons.....	4,398,004
Potash, nitrate of.....	406,818	Oranges.....	1,097,595
Potash, all other.....	892,551	Plums and prunes.....	63,574
Quinia, sulphate, alkaloids, or salts.....	949,104	Raisins.....	282,400

A. The imports of animals free of duty, for breeding, consisted of 624 cattle, 1,067 horses, and 2,396 sheep. The other imports were 199,128 cattle, 1,975 horses, and 343,515 sheep. The quantity of asphaltum imported was 73,494 tons; of beeswax, 452,016 pounds; of bismuth, 173,802 pounds; of bristles, sorted or bunched, 1,835,156 pounds; of hydraulic cement, 2,086,053 barrels.

B. Of breadstuffs, 1,871,101 bushels of wheat formed the chief item in the total sum of \$2,544,765. The importation of bottled beer has declined, being 918,562 gallons in 1899; not so that of beer in casks, which was 1,928,672 gallons.

C. Among chemicals, drugs, and dyes figured 5,227,098 pounds of alizarin and alizarin colors and dyes, including extract of madder, 23,300,762 pounds of argols or crude tartar, 3,281,977 pounds of cinchona and similar barks for the extraction of quinine, 97,563 pounds of cochineal, 37,375 tons of logwood, 3,183,864 pounds of extracts and decoctions from dyewoods, 15,665,252 pounds of glycerin, 928,089 pounds of gum arabic, 1,807,889 pounds of crude camphor, 18,126,228 pounds of copal, dammar, and cowrie gums, 38,123,478 pounds of gambier, 2,445,061 pounds of gum chicle, 9,830,111 pounds of shellac, 3,127,357 pounds of indigo, 98,432,319 pounds of licorice root, 113,107,250 pounds of chloride of lime, 1,608,468 gallons of mineral waters, 513,499 pounds of crude opium, 124,214 pounds of prepared opium containing less than 9 per cent. of morphia, 2,807,718 pounds of chlorate of potash, 95,856,263 pounds of muriate of potash, 19,985,505 pounds of crude nitrate or saltpeter, 30,828,207 pounds of other potash, 3,978,421 ounces of sulphate of quinia and alkaloids or salts of cinchona bark, 18,405,272 pounds of caustic soda, 122,314 tons of nitrate of soda, 4,224,680 pounds of sal soda, 45,444,305 pounds of soda ash, 23,891,135

pounds of other salts of soda, 128,683 tons of crude sulphur, 12,975,970 pounds of ground sumac, and 272,174 pounds of vanilla beans. The total value of chemicals, drugs, and dyes was \$42,681,504, of which \$25,170,201 represent free and \$17,511,303 dutiable substances. The import of raw chickory was only 159,269 pounds, against 16,930,162 pounds in 1897 before the duty was put on. The import of chocolate was 1,124,515 pounds, showing a steady increase, but not greater than that of crude cacao, of which 35,512,364 pounds were imported, while the import of prepared cocoa—926,219 pounds—was less than in former years. Of clays and earthenware, 116,757 tons were imported. The importation of bituminous coal was 1,258,784 tons, about equal to the average for the five years preceding. Coffee importations amounted to 831,827,063 pounds, a little less than in 1898, though much exceeding the total for previous years. Coffee substitute declined from 2,373,245 pounds in 1897 to 992,395 pounds in 1899. The imports of copper were 39,812,667 pounds. The importation of raw cotton, which has only attained considerable figures in the past five years, was 50,158,158 pounds. The imports of unbleached cotton cloth were 1,250,932 yards. Those of fine cotton fabrics have increased of late years, and in 1899 attained the figure of 51,196,236 square yards. The import of cotton yarn was 14,550,015 pounds, surpassing all previous figures.

E. The import of emery ore was 159,980 hundredweight, that of grains and ground emery 707,185 pounds.

F. Of flax, 6,474 tons were imported; of hemp, 3,941 tons; of istle or Tampico fiber, 4,419 tons; of jute and jute butts, 83,161 tons; of manila hemp, 53,195 tons; of sisal grass, 71,898 tons; of other vegetable fibers and textile grasses, 7,466 tons. The imports of cordage were 455,001 pounds; of carpets of jute and other vegetable fibers, 254,827 square yards; of oilcloths, 416,658 square yards; of binding twine, 1,819,527 pounds; of coir yarn, 2,530,914 pounds; of yarns or threads of jute and similar fibers, 1,911,295 pounds. The fish imports included 1,224,090 pounds of fresh salmon, 11,382,462 pounds of dried, salted, or smoked cod, haddock, hake, and pollock, 3,590,339 pounds of smoked or dried herring, 160,053 barrels of pickled or salted herring, 6,897,328 pounds of canned and fresh lobster, 81,045 barrels of pickled or salted mackerel, and 521,905 pounds of pickled or salted salmon. Among fruits, the imports of dried currants were 30,849,253 pounds; of dates, 12,943,305 pounds; of figs, 7,284,058 pounds; of almonds, 9,957,427 pounds. The import of prunes has decreased since the development of the California fruit industry from 58,093,410 pounds in 1890 to only 600,360 pounds; that of raisins from 36,914,330 pounds to 4,933,201 pounds.

G. The extension of the glass industry is shown in the decline since 1890 of imports of unpolished window glass from 73,112,550 to 47,202,267 pounds, of rough plate glass from 2,008,931 to 219,099 square feet, of cast and polished plate glass from 2,833,838 to 928,273 square feet. Of polished cylinder and crown glass, 247,074 square feet were imported unsilvered and 4,272,842 square feet silvered; in 1890 only 896 square feet silvered and 2,651,524 square feet unsilvered. The import of guano—4,210 tons—was only half as great as in 1890, while that of phosphates leaped from 9,840 tons in 1898 to 114,954 tons.

H. The imports of hides were 130,396,020 pounds; of goatskins, 69,728,945 pounds; of other skins, 66,965,785 pounds. The quantity of honey

imported was 126,217 gallons. The importation of hops, which varies according to the results of the domestic crop but has declined on the whole, was 1,319,319 pounds. The import of gutta-percha was only 518,939 pounds, although the value was almost the same as for 3,843,854 pounds in 1896. The import of rubber was 51,063,066 pounds, which was considerably greater than in any previous year.

I. The import of iron ore was only 269,013 tons; of pig iron, 23,316 tons. The importation of bar iron has fallen from 64,125,976 pounds in 1890 to 44,745,118 pounds; of hoop, band, and scroll iron, from 18,706,180 to 19,800 pounds; of steel ingots, blooms, slabs, billets, and bars, from 81,395,033 to 23,797,994 pounds; of sheet, plate, and taggers iron or steel, from 16,978,263 to 4,243,296 pounds; of manufactured ties and hoops for bales and barrels, from 44,621,523 pounds to almost nothing; of tin plates and taggers tin, from 680,060,925 to 108,484,826 pounds; of wire rods, from 139,658,120 to 34,610,636 pounds; of wire, from 9,589,140 to 5,278,044 pounds; of anvils, from 3,162,305 to 530,113 pounds; of chains, from 1,485,606 to 362,855 pounds. The import of ivory was 321,315 pounds; of vegetable ivory, 8,864,237 pounds.

L. The quantity of lead imported was 192,345,318 pounds.

M. The import of manganese ore and oxide grows yearly, amounting to 257,817,560 pounds in 1899.

N. Of nickel ore and matte, 208 tons were imported.

O. The import of whale and fish oil was 531,932 gallons; of olive oil, 930,042 gallons.

P. The importation of rags for paper stock was 55,596,560 pounds, only a third as much as in former years. The import of plaster of Paris was 182,979 tons; of platinum, 6,357 pounds; of plumbago, 15,970 tons. Of cheese, 11,826,175 pounds were imported; of butter, only 23,700 pounds.

R. Of rice, 2,595,600 pounds came from the Hawaiian Islands and 151,241,426 pounds from other countries, besides 50,340,267 pounds of rice flour and meal and broken rice.

S. The import of salt was 363,782,933 pounds. Linseed was formerly imported in large quantities; now still larger quantities are exported, and the imports have fallen to 81,953 bushels. The import of silk cocoons was only 13,537 pounds in 1899, while of raw silk 9,691,145 pounds were imported and of silk waste 1,545,701 pounds. The imports of fancy soap were 793,940 pounds, an average quantity. The imports of spices were 1,530,102 pounds of nutmegs, 12,332,747 pounds of black and white peppers, 13,851,055 pounds of other unground spices, and 3,346,925 pounds ground. The quantity of American spirits returned after being stored abroad was 998,173 proof gallons; the import of brandy, 219,960 gallons; of other foreign spirits, 1,227,824 gallons. The import of molasses—5,821,556 gallons—was less than a third of the imports five years back. The importation of beet sugar was 723,336,352 pounds; of raw cane sugar, free of duty, 462,299,880 pounds; of dutiable cane sugar for refining, 2,731,868,574 pounds; of cane sugar above No. 16, Dutch standard, 62,745,763 pounds; total sugar, 3,980,250,569 pounds. The sulphur ore imported was 296,216 tons. The importation of tea was 74,089,809 pounds, showing a decline of over 25 per cent. since the duty was imposed.

T. The tin import was 67,342,107 pounds. The tobacco imports were 4,147,048 pounds of wrapper leaf, 4,349,034 pounds of other leaf, and 418,634

pounds of cigars. Among the imports of timber and wood were 24,714 thousand feet of mahogany, 198,195 of logs and round timber, 423,928 of boards, 471,594 thousand shingles, and 33,319 tons of wood pulp.

W. The imports of wine comprised 262,371 dozen bottles of champagne, 274,873 dozen bottles of still wines, and 2,253,226 gallons in casks. The imports of wool were 12,976,999 pounds of clothing, 2,155,419 pounds of combing, and 61,603,791 pounds of carpet wool; total, 76,736,209 pounds, valued at \$8,322,897. Of carpets, the imports were 631,547 square yards; of cloths, 4,092,898 pounds; of women's and children's dress goods, 27,098,584 square yards; of yarns, 173,870 pounds. The import of zinc was 2,124,928 pounds.

The total value of imported merchandise entered for consumption in 1899 was \$685,441,889, of which \$299,668,977 represent articles free of duty and \$385,772,912 dutiable merchandise paying \$200,873,429 of duties, or an average rate ad valorem of 52.07 per cent. Articles of food and animals were valued at \$207,468,197, or 30.27 per cent. of the total value, and on \$88,930,552 no duties were collected, while the remaining \$118,537,645 paid \$78,757,947, or 39.21 per cent. of the total duties collected, the average rate being 66.44 per cent. Articles in a crude condition which enter into the various processes of domestic manufacture were valued at \$218,110,941, or 31.82 per cent. of the total value, and on only \$36,842,708 were duties imposed, the average rate being 26.15 per cent., which yielded \$9,635,817, 4.79 per cent. of the customs revenue, while nearly five sixths of the raw materials imported, or the value of \$181,268,233, paid no duties at all. Of articles wholly or partly manufactured which serve as materials in the manufactures and mechanic arts, the imports entered for consumption were \$60,062,540, or 8.76 per cent. of the total, \$13,944,018 being duty free and \$46,118,522 dutiable at an average rate of 29.17 per cent., yielding \$13,451,921, which was 6.70 per cent. of all the duties collected. Articles manufactured and ready for consumption had a value of \$110,735,447, or 16.15 per cent. of the total, and of this amount only \$10,108,391 escaped duty, while \$100,627,056 contributed \$52,605,533 to the revenue, 26.19 per cent. of the whole, the average rate being 52.28 per cent. ad valorem. Articles of voluntary use and luxuries amounted to \$89,064,764, or 13 per cent. of the total value, and on \$83,646,981—only \$5,417,783 being exempt—duties were levied at the average rate of 55.50 per cent. ad valorem, yielding \$46,422,211, which was 23.11 per cent. of the total duty collected on imports. The mean rate of duty on dutiable imports was 50.21 per cent.; on all imports, free and dutiable, 29.48 per cent., 43.72 per cent. of the total imports being exempt from duty.

The values of articles of domestic produce and manufacture exported in the year ending June 30, 1899, are given in the following table:

Agricultural implements:	Value.
Mowers and reapers.....	\$9,053,890
Plows and cultivators.....	1,445,410
All other.....	1,882,967
Aluminum, and manufactures of.....	441,846
Animals:	
Cattle.....	30,516,838
Hogs.....	227,341
Horses.....	5,444,342
Mules.....	516,968
Sheep.....	853,565
All other, including fowls.....	322,087
Art works.....	308,493
Bark, and extract of, for tanning.....	369,698
Beeswax.....	41,016
Blacking, stove.....	430,219
Blacking, other.....	431,968

Bones, hoofs, horns, etc.....	\$195,759
Books, maps, engravings, etc.....	2,656,136
Brass, and manufactures of.....	1,351,049
Breadstuffs:	
Barley.....	1,875,274
Bran, middlings, and mill feed.....	2,008,588
Bread and biscuit.....	809,998
Buckwheat.....	846,028
Corn.....	68,977,448

Total value of domestic exports	\$1,203,931,222

Of the sum of \$1,203,931,222, the total value of the exports of domestic merchandise, \$784,989,087 represent agricultural products, \$28,832,608 the products of mines, \$42,126,964 forest products, \$6,025,446 fishery products, \$3,281,559 miscellaneous products, and \$338,675,558 manufactured articles. The proportion of manufactures in the total exports has increased from 12.76 per cent. in 1860, 15 per cent. in 1870, and 12.48 in 1880 to 20.25 per cent. in 1885, 17.87 per cent. in 1890, 23.14 per cent. in 1895, and 28.13 per cent. in 1899. The percentage of mine products has risen from 1.10 per cent. in 1870 to 2.39 per cent. in 1899. The relative position of forest products has not changed much, although their value has trebled in thirty years. The exports of agricultural products have increased from \$256,560,000 in 1860 and \$361,188,000 in 1870, but their ratio to the total exports has declined from about 80 per cent., the average for fifty years preceding, to 65.20 per cent.

A. The numbers of animals exported were 389,490 cattle, 33,031 hogs, 45,778 horses, 6,755 mules, and 143,286 sheep.

B. The export of beeswax was 152,494 pounds. The total value of breadstuffs was \$273,999,699. The quantity of wheat was 139,432,815 bushels; of wheat flour, 18,485,690 barrels; of rye, 10,140,866 bushels; of rye flour, 4,826 barrels; of barley, 2,267,403 bushels; of buckwheat, 1,533,980 bushels; of oats, 30,309,778 bushels; of corn, 174,089,094 bushels; of corn meal, 791,488 barrels; of oatmeal, 58,042,505 pounds; of bread and biscuit, 16,447,430 pounds; of bran, middlings, and mill feed, 127,953 tons. The export of candles was 3,420,443 pounds; of cement, 64,122 barrels. The beer exported amounted to 1,433,799 dozen bottles and 602,055 gallons in casks. The number of organs shipped abroad was 17,919; of pianos, 1,169.

C. Among the exports of chemicals, drugs, dyes, and medicines, which had a total value of \$10,995,289, were 745,433 pounds of pot and pearl ash, 27,474,801 pounds of sulphate of copper, 478,582 pounds of ginseng, and 48,987,511 pounds of acetate of lime. The export of cider was 490,803 gallons. Of anthracite coal, 1,571,581 tons were exported; of bituminous, 3,480,452 tons; total, 5,051,933 tons, valued at \$13,661,028. The export of coke was 215,513 tons. The export of copper ore declined from 41,269 tons in 1893 to 5,910 tons in 1899, while that of manufactured copper increased from 37,642,464 pounds to 254,987,164 pounds. The copper exports, not including ore, were worth \$35,983,529. The export of sea island cotton was 14,142,052 pounds; of upland and other cotton, 3,759,268,241 pounds; of waste, 14,308,829 pounds; total, 3,787,919,122 pounds, valued at \$210,089,576. The exports of cotton manufactures, which have trebled in a few years and had a total value of \$23,566,914, include 108,940,972 yards of colored and 303,063,083 yards of uncolored cloth.

F. The export of crude phosphate was 780,513 tons; of other fertilizers, 41,587 tons. The cordage exported was 8,659,948 pounds; the total value of manufactures of vegetable fibers and grasses was \$3,093,102. The exports of fish and fish products, having a total value of \$5,169,811, included 1,444,079 pounds of fresh fish, 9,247,076 pounds of dried or cured codfish, hake, haddock, and pollock, 3,101,560 pounds of smoked or cured herring, 842,342 pounds of other fish, dried, smoked, or cured, 1,017 barrels of pickled mackerel, 14,428 barrels of other fish in pickle, and 30,167,277 pounds of canned salmon. The export of dried apples was 19,305,739 pounds; of fresh apples, 380,222 barrels; of prunes, 5,615,565 pounds; of raisins, 4,659,807 pounds.

G. The export of glucose in 1899 was 229,003,571 pounds, having risen from 38,256,161 pounds in 1890. The export of glue rose from 728,696 to 2,368,087 pounds. The export of gunpowder was 1,504,724 pounds. Of hay, 64,916 tons were exported; of hops, 21,145,512 pounds. Of rubber boots and shoes, 486,586 pairs went abroad.

I. The iron and steel exports were valued at \$93,716,031, having increased from \$70,406,885 in 1898, \$57,497,872 in 1897, \$41,160,877 in 1896, \$32,000,989 in 1895, and \$29,220,264 in 1894. The quantity of iron ore was 31,412 tons; of ferro-manganese pig, 495 tons; of other pig iron, 299,146 tons; of scrap iron, 91,985 tons; of bar iron, 23,564,511 pounds; of wire rods, 56,492,797 pounds; of other bars or rods of steel, 73,861,862 pounds; of billets, ingots, and blooms, 43,242 tons; of hoop, band, and scroll iron, 6,753,270 pounds; of iron rails for railways, 11,776 tons; of steel rails, 266,109 tons; of iron sheets and plates, 15,107,028 pounds; of steel sheets and plates, 112,690,113 pounds; of tin plates, 205,910

pounds; of structural steel and iron, 49,069 tons; of wire, 215,194,475 pounds; of car wheels, 23,933 in number; of fire engines, 4; of locomotive engines, 517; of stationary engines, 605; of safes, 2,257; of cut nails, 32,869,265 pounds; of nails, 55,813,055 pounds.

L. The export of sole leather, 37,120,912 pounds, was equal to the average in quantity and value; that of upper and other leather, especially splits, has largely increased. Of boots and shoes, 1,934,277 pairs were exported, compared with 587,108 pairs in 1890. The value of leather exports was \$23,466,985, grown from \$12,438,847 in 1890. The export of lime was 73,385 barrels.

N. The exports of naval stores in 1899 were \$9,982,955 in value, consisting of 2,563,229 barrels of rosin, 36,903 barrels of tar, 22,945 barrels of turpentine, and 17,761,533 gallons of spirits of turpentine. Of nickel and nickel oxide, 4,907,722 pounds were exported.

O. The export of oil cake from cotton seed was 1,079,993,479 pounds, having more than doubled in four years, while that of flaxseed oil cake shows a great falling off, being only 87,177,390 pounds. The exports of animal oils consisted of 917,007 gallons of lard oil, 79,767 gallons of whale oil, 946,358 gallons of fish oil, and 166,372 gallons of other oils. The vegetable oils, having a total value of \$13,809,335, consisted mainly of 2,360,623 gallons of corn oil, 50,627,219 gallons of cottonseed oil, 107,000 gallons of linseed oil, and 117,462 pounds of oil of peppermint. The value of the coal oil exports was \$56,273,168, the export of illuminating oil being 722,279,480 gallons; naphthalas, 16,252,785 gallons; crude oil, 113,088,060 gallons; lubricating oil and heavy paraffin oil, 67,424,393 gallons; residuum, 730,214 barrels. The export of oxide of zinc was 9,719,741 pounds.

P. The total value of provisions in 1899 was \$175,508,608, the highest figure yet attained. The quantity exported of canned beef was 38,385,472 pounds; of fresh beef, 282,139,974 pounds; of salt and pickled beef, 46,564,876 pounds; of other cured beef, 1,579,313 pounds; of tallow, 107,361,009 pounds; of bacon, 562,651,480 pounds; of hams, 225,846,750 pounds; of fresh pork, 41,310,364 pounds; of salt or pickled pork, 137,197,200 pounds; of lard, 211,259,851 pounds; of lard compounds and substitutes, such as cottolene and lardine, 22,144,717 pounds; of mutton, 379,110 pounds; of oleomargarine oil, 142,390,492 pounds; of imitation butter, 5,549,322 pounds; of butter, 20,247,997 pounds; of cheese, 78,198,753 pounds. The quicksilver exported was 1,123,471 pounds. Of rice, 852,704 pounds only were exported; of rice bran, meal, and polish, 14,481,985 pounds. Shipments of printing paper amounted to 98,154,644 pounds, the value of paper exports being \$5,477,884, twice what it was three years before. The exports of paraffin and paraffin wax show steady increase, amounting in 1899 to 174,844,701 pounds.

S. The export of salt was 25,256,634 pounds. The seed exports were \$5,079,396 in value, comprising 19,982,234 pounds of clover seed, 34,443,806 pounds of cotton seed, 2,830,991 bushels of flaxseed, 16,149,611 pounds of timothy seed. Of soap, other than toilet soap, 32,529,003 pounds went abroad. The export of spermaceti and wax was 214,443 pounds. Exports of American spirits consisted largely of alcohol and neutral and cologne spirits, of which 1,476,028 gallons, proof, were shipped, while of Bourbon whisky the quantity was 224,918 gallons; of rye whisky, 99,884 gallons; of brandy, 20,994 gallons; of rum, 850,719 gallons; of wood spirit, 727,062 gallons. The export of starch was 110,193,776 pounds; of stearin, 1,174,167 pounds. Sugar exports were of the

value of \$2,053,888, comprising 5,682,080 gallons of molasses, 10,070,650 gallons of sirup, and 9,462,228 pounds of refined sugar.

T. The tobacco exports had a total value of \$30,646,216, consisting of 272,421,295 pounds of leaf tobacco, 11,191,827 pounds of stems and trimmings, 3,732 thousands of cigars, 1,169,467 thousands of cigarettes, 8,999,945 pounds of plug tobacco, and snuff and other manufactures of tobacco in smaller quantities. The total value of timber, lumber, and wood manufactures was \$41,489,526. Of sawed timber there were 406,448 thousand feet shipped; of hewed timber, 4,796,658 cubic feet; of boards, deals, and planks, 970,170 thousand feet; of joists and scantlings, 34,294 thousand feet; of shingles, 73,791 thousand; of staves, 44,382,689; of wood pulp, 55,932,270 pounds.

V. There were 436,817 gallons of varnish exported. The vegetable exports had a value of \$2,799,400, comprising 883,201 bushels of beans and peas, 164,902 bushels of onions, 579,833 bushels of potatoes, and canned vegetables, pickles, sauces, etc.

W. Of whalebone the export was 144,283 pounds. The wine exports were 10,973 dozen bottles and 1,498,078 gallons in casks and other coverings. The export of raw wool was 1,683,419 pounds; of carpets, 107,779 yards; of dress goods, 27,657 yards; the total value of wool manufactures being \$1,047,407. The export of zinc ore was 15,489 tons; of zinc in pigs, bars, plates, and sheets, 18,321,375 pounds.

The merchandise imports from the various foreign countries in 1899 had the following values:

Of the total imports in 1899 Europe furnished 50.76, North America 16.09, South America 12.42, Asia 15.36, Oceania 3.87, and Africa 1.50 per cent.

Of the total exports Europe took 76.33, North America 12.88, South America 2.90, Asia 3.94, Oceania 2.43, and Africa 1.52 per cent.

The value of merchandise received from foreign countries for immediate transit across United States territory in 1899 was \$80,028,446. Of the total value of imports \$33,424,821 came by land in vehicles, \$82,050,118 by sea in American vessels, and \$581,673,550 in foreign vessels. Of the total exports \$83,870,907 went by land, \$78,562,088 in American vessels, and \$1,064,590,307 in foreign vessels. The percentage of the carrying trade taken in American vessels was 12.4 per cent. of the imports and 6.9 per cent. of the exports by sea; of the whole sea-borne trade, amounting to \$1,806,876,063, the proportion of American vessels was \$160,612,206, or 8.9 per cent.

The imports of gold coin and bullion in 1899 amounted to \$88,954,603. The exports were \$27,478,412 of domestic and \$10,043,674 of foreign; total, \$37,522,086, leaving an excess of imports over exports of \$51,432,517 in amount, against \$104,985,283 in 1898, and \$44,653,200 in 1897, and an excess of exports in 1896 amounting to \$78,884,882. The imports of silver in 1899 were \$30,675,056 in coining value, and the exports were \$51,168,770 of domestic and \$5,150,285 of foreign; total, \$56,319,055, an excess of exports of \$25,643,999, against \$24,177,458 in 1898, \$31,413,411 in 1897, and \$31,764,484 in 1896. The value of silver imported in ore in 1899 was \$20,961,270.

Telegraphs.—The telegraph lines of the Western Union Company in 1899 had a total length of 189,856 miles, with 904,633 miles of wire. The number of messages sent during the year was 61,398,157. The receipts were \$23,954,312; expenses, \$18,085,579.

Navigation.—The total number of seagoing vessels under the United States flag in 1899 was 22,728, of 4,864,238 tons, of which 6,837 were steamers, of 2,476,011 tons, and 15,891 sailing vessels, etc., of 2,388,227 tons, the whole being valued at \$215,069,296. There were 357 steamers, of 355,913 tons, and 927 sailing vessels and barges, of 481,316 tons, engaged in the foreign trade; total, 1,284 vessels, of 837,229 tons. In the coasting trade the total number was 19,980, of 3,965,313 tons, of which 6,470, of 2,115,981 tons, were steamers, and 13,510, of 1,849,332 tons, were sailing vessels and barges. The tonnage employed in the whale fisheries was 11,017, of which 4,117 was steam; in the cod and mackerel fisheries, 50,679 tons. In 1899 there were 1,273 vessels, of 300,038 tons, built and registered, of which 439, of 151,058 tons, were steamers, 420, of 98,073 tons, sailing vessels, 13, of 1,411 tons, canal boats, and 401, of 49,496 tons, barges. The tonnage of iron and steel vessels built in 1899 was 131,379 tons, of which steam vessels make 103,018 and sailing vessels and barges 28,361 tons. In 1899 there were 2,614,869 tons owned on the Atlantic and Gulf coasts, 539,937 tons on the Pacific coast, 1,446,348 tons on the Northern lakes, and 263,084 tons on the Western rivers; total, 4,864,238 tons.

The tonnage entered at American seaports from foreign countries in 1899 was 21,963,407, of which 3,359,091 tons were sailing vessels, 974,552 tons being American and 2,384,539 tons foreign, and 18,604,316 tons were steam vessels, 2,358,211 tons being American and 16,246,105 tons foreign. The total tonnage cleared was 22,177,483, of which 3,350,261 tons were sailing vessels, 1,008,363 tons being American and 2,341,898 foreign, and 18,827,222 tons were steam vessels, 2,454,886 tons being American and 16,372,336 tons foreign. The tonnage entered and cleared from the various foreign countries is shown in the following table:

COUNTRIES.	Entered.	Cleared.
Belgium.....	800,537	831,566
France.....	627,255	929,080

Railroads.—There were 2,047 railroads in the United States on June 30, 1898, having an aggregate length of 186,810 miles and operating 247,532 miles of track, which was an increase for the year of 48,039 miles. The number of passengers carried during the year was 501,066,081, an increase of 11,621,483; tons of freight carried, 879,006,307, an increase of 137,300,361 tons. The gross earnings on 184,648 miles of lines were \$1,247,305,621, exceeding those of the preceding year by \$125,235,848. The operating expenses for 1898

were \$817,973,276, an increase of \$65,448,512; net earnings, \$429,352,345, an increase of \$59,787,336. Surplus earnings amounted to \$140,319,421; dividends declared, \$96,240,864. The railroad capital, not including floating debt, amounted to \$10,818,554,031. No dividends were paid on 66 per cent. of the total. The length of railroads in operation in 1899 was 191,310 miles. The cost of construction per mile was \$62,658.

Banking and Currency.—Gold coin was restored to circulation on Jan. 1, 1879, as the result of the resumption act of Jan. 14, 1875. The amount of money of various kinds in the country, including bullion in the treasury, was reported by the Secretary of the Treasury to be on July 1, 1899, as follows:

MONEY.	In Treasury.	In circulation.	Total.
Gold coin and bullion.....	\$988,780,334	\$679,738,050	\$1,668,518,384
Gold certificates.....	1,641,900	32,655,919	34,297,819
Standard silver dollars.....	502,215,656	61,481,426	563,697,082
Silver certificates.....	3,948,897	402,136,617	406,085,514
Subsidiary silver coin.....	5,800,728	69,065,824	74,866,552
Currency certificates.....	1,080,000	20,275,000	21,355,000
United States notes.....	38,329,174	808,351,842	846,681,016
National bank notes.....	3,545,432	287,805,439	291,350,871
Fractional currency.....	956,516	92,561,764	93,518,280
Total money....	\$384,607,840	\$1,449,004,345	\$1,833,612,185
Total certificates.....	6,670,787	455,067,530	461,738,317

The estimated coining value of the gold produced in the United States in 1898 was \$64,463,000; of the silver, \$70,384,485; commercial value of the silver, \$32,118,000. The coinage of the United States mints in 1898 was \$77,985,757 of gold, \$23,034,033 of standard silver dollars, and \$1,124,835 of minor coins; total, \$102,144,625. The reserves held by national banks on Sept. 7, 1899, against \$3,031,500,000 of deposits amounted to the sum of \$890,500,000, or 29.3 per cent., consisting of \$466,300,000 of lawful money, with \$414,100,000 due from agents, and \$10,100,000 of redemption funds.

The banks held \$137,690,618 of gold coin, \$23,152,390 of Treasury certificates, \$148,495,000 of clearing-house certificates, \$8,361,974 of silver dollars, \$6,543,425 of fractional silver, and \$32,578,638 of silver certificates.

The resources and liabilities of 3,595 national banks in operation on Sept. 7, 1899, were reported as follow:

NATIONAL BANK STATEMENT.

Resources:	Amount.
Loans.....	\$2,516,100,000
Bonds for circulation.....	229,600,000

Undivided profits.....	21,457,150
Capital stock.....	23,560,060
Total.....	\$2,400,831,472

The total number of depositors in 1899 was 5,687,818, and their aggregate deposits were \$2,230,366,954, making the average due to each depositor \$392.13.

Anglo-American Commission.—The joint high commission appointed for the settlement of the outstanding questions between the United States and Canada sat constantly during the early part of the year until Feb. 20, when the meetings were adjourned till August, the commissioners having failed to reach a final agreement on any of the points at issue. The desire of Canadian lumbermen for free entry for their product was opposed by the lumber interests of the United States. The rights of American fishermen in Canadian waters were one of the matters in dispute. But the chief cause of difference was the claim of Canada to a part of the Alaskan shore, on the theory that the outer rim of the islands skirting the shore form the true seacoast, not the edge of the mainland, and that the 30-mile strip ceded by Russia to the United States should be measured therefore from this outer rim, which would give Canada one or more seaports. There were 12 independent questions, each of which the American commissioners wished to discuss and arrange separately. The Canadian commissioners insisted that an informal agreement on all the questions should precede a definite arrangement in regard to any one of them. The British commissioners proposed arbitration of the boundary, which the American commissioners were willing to accept, but not exactly on the same terms as in the Venezuela boundary reference. They objected to different European umpires suggested by the Canadians, who were equally opposed to Mexico, Brazil, or Switzerland, when they were proposed by the Americans; neither would they accept the proposal of a court of 6 jurists, 3 nominated by each party, to decide the question without an umpire. The stipulation that existing settlements on tide waters should in any case continue to belong to the United States was also unacceptable to the British commissioners. The boundary fixed in the Anglo-Russian treaty of 1825 runs from Mount St. Elias, where the meridian 141° west of Greenwich cuts the Pacific coast, to 56° of north latitude, and thence by water to the south end of Prince of Wales island in 54° 45' of north latitude; but nowhere on the mainland was the width to exceed 10 marine leagues. Canada claimed the right to the possession of natural gateways to the interior, such as the Stickeen river, the Taku inlet, and the Lynn Canal, on the theory that the 10-league line was intended to be measured from the ocean and not round the

shores of narrow inlets that indent the coast more than 10 leagues. The most important of these inlets, the Lynn Canal, runs nearly a hundred miles into the mainland. It forms two harbors, on one of which have been built the towns of Dyea and Skagway at the entrances of Chilkoot and White or Skagway passes, which lead to the Klondike mining fields, and over the latter route a railroad has been built 40 miles to the head waters of navigation on the Yukon. Pyramid harbor, the other arm of the inlet, gives access to the Dalton trail, over which 250 miles of land carriage is necessary before navigable water is reached. The Canadians claimed all the landing places, including the American towns, as natural Canadian gateways. The coast was surveyed by joint commissioners in 1895, but the international delimitation of territory was not carried out. The Legislature of British Columbia had already passed a law preventing the acquisition of mining rights by Americans in the recently discovered gold field at Atlin lake, and after the adjournment of the commission the Canadians made a law forbidding the export of logs, although Americans owned a great deal of standing timber in Canada, which they were accustomed to export in the form of logs to be sawed in mills that they had constructed for the purpose. Negotiations on the Alaska question were carried on direct between the British and American governments, and a proposition made by the Secretary of State was regarded as acceptable by Lord Salisbury, especially after a further concession had been obtained. The Canadian Government, however, rejected it, and the British Foreign Minister thereupon not only withdrew his provisional acceptance, but refused to proceed with the revision of the Clayton-Bulwer treaty regarding Nicaragua until Canadian claims in Alaska were satisfied. Before separating, the commissioners had signed a protocol fixing a provisional boundary at the summits of the White and Chilkoot passes, and leaving the provisional boundary on the Dalton trail and further details of a *modus vivendi* to be arranged, if possible, by direct negotiation. The death of Lord Herschell and Nelson Dingley, and the resignation of Senator Gray, necessitated changes in the commission, in which the British representatives were Lord Russell, Sir Wilfrid Laurier, Sir Richard J. Cartwright, Sir Louis G. Davies, John Charlton, and Sir James S. Winter, and the American representatives were Senator Charles W. Fairbanks, Charles J. Faulkner, Sereno E. Payne, John W. Foster, John A. Kasson, and T. Jefferson Coolidge. Before Aug. 2, when the joint high commission was to meet again, it was agreed to postpone the meeting indefinitely. A proposal for a lease of a port on the Lynn Canal to Canada, first made by the American commissioners, was renewed by the English Government. A provisional boundary on the Dalton trail was agreed upon, and a *modus vivendi* was signed on Oct. 20. The arrangement does not give Canadians access to the head of the Lynn Canal on their own territory, nor even a free port under American sovereignty. The provisional boundary running along the summits of the White and Chilkoot passes is protracted by an undefined line to a point on the Dalton or Chilkat route about a mile and a half above the village of Klukwan. This is 22 miles above tide water at Pyramid harbor, and is even north of the head of canoe navigation. The line begins on the west at a peak west of Porcupine creek; thence running to the Klehini river in the direction of the peak north of the river, it follows the right bank of the Klehini to its junction with the

Chilkat river at the point above mentioned, whence it runs to the summit of the peak east of the Chilkat river. Persons proceeding to or from Porcupine creek are to be freely permitted to follow the trail between the creek and the junction of the rivers into and across the territory on the Canadian side of the temporary line wherever the trail crosses to that side, and, subject to reasonable regulations of the Canadian Government, for the protection of the revenue, may carry with them such goods as they desire, without payment of customs duties. It is understood that citizens or subjects of either power found within the temporary jurisdiction of the other shall suffer no diminution of the rights and privileges that they previously enjoyed. The fixing of the provisional boundary is without prejudice to the claims of either party in the permanent adjustment of the international boundary.

Supreme Court.—At the close of the October term, 1897, 316 cases were not disposed of. The number of cases docketed at the October term, 1898, was 523, making the total number pending at that term 839, and of this number 531 cases were disposed of during the term. The number actually considered by the court was 468, of which 255 were argued orally and 213 submitted on printed arguments.

Keck vs. United States, decided Jan. 9, 1899. Herman Keck, charged with smuggling diamonds, was held not guilty as charged. The case involved the construction of a paragraph in the Wilson tariff act, under which it was contended that it was intended to admit diamonds free, because a semicolon follows the word "diamonds" in the paragraph. Diamonds were held subject to duty. In this case the attempt at smuggling was not completed. The court held that mere acts of concealment of merchandise on entering the waters of the United States do not, taken by themselves, constitute smuggling or clandestine introduction. Justices Brown, Harlan, Brewer, and Chief-Justice Fuller did not concur in the opinion, especially in reference to the definition of smuggling which required that the goods shall be actually unladen and carried upon shore.

The case of **Allen vs. Smith**, decided March 6, 1899, involved the question of title to the bounty on sugar under the act of Oct. 1, 1890, and the subsequent act of March 2, 1895. The court said: "Bounties granted by a government are never pure donations, but are allowed either in consideration of services rendered or to be rendered, objects of public interest to be obtained, production or manufacture to be stimulated, or moral obligations to be recognized. To grant a bounty irrespective altogether of these considerations would be an act of pure agrarianism; and to determine who is entitled to the benefit of the bounty is but little more than to determine who has rendered the consideration."

In **United States vs. Buffalo Natural Gas Fuel Company** it was held that natural gas brought in pipes under Niagara river and used for fuel and for illuminating should be admitted free of duty, as it comes under the head of a crude mineral or crude bitumen.

In **Scott vs. United States**, Scott was a letter carrier, charged with purloining money. It was held that a decoy letter, addressed to a fictitious person, mailed for the purpose of discovering frauds of a letter carrier, was to be treated as a real letter, intended to be conveyed by the mail, within the meaning of the statutes on that subject. It is the same to all outward appearance as other letters, and the duty of the carrier who takes it is the same.

In *Home for Incurables vs. Noble* it was held that in cases of wills the intention must prevail over the words. A court of equity has power to correct mistakes apparent on the face of the will. In the case in question Mrs. Mary Ruth made a bequest of \$5,000 to the hospital of the University of Pennsylvania, and then devised the remainder of her estate to the Home for Incurables, of New York. She made a codicil revoking the "bequest of \$5,000 to the Home for Incurables and bequeathing that amount to Emeline Colville." The court held that the designation of the home in the codicil was incorrect, and that the intention of the testator was to divert the bequest made to the Pennsylvania institution to Mrs. Colville.

Holmes vs. Hurst was a bill in equity by the executor of the will of Oliver Wendell Holmes, praying for an injunction against the infringement of the copyright of *The Autocrat of the Breakfast Table*. The infringement consisted in selling copies of the several parts as they were published in the *Atlantic Monthly*. It was held that a copyright on a book the contents of which have been published serially without being previously copyrighted is invalid.

The cases *Nicol vs. Ames, in re Nichols, Skillen vs. Ames, and Ingwersen vs. United States* (173 U. S., 509) were brought to determine the constitutionality and construction of that provision of the war revenue act of 1898 which levies a tax upon each sale, agreement of sale, or agreement to sell any products or merchandise at any exchange or board of trade or other similar place. The cases of *Nicol vs. Ames, in re Nichols, and Skillen vs. Ames* grew out of transactions on the Chicago Board of Trade. The court held that the law taxing sales of merchandise on such an exchange was valid. It was held that the tax was not upon the property sold and can not, on that ground, be found to be a direct tax within the meaning of the Constitution. The general objection on the ground of want of uniformity was not considered well founded. In the case of *Ingwersen vs. United States* the sole question was whether the Union Stock Yards, of Chicago, came within the act as being "an exchange of board of trade or other similar place," and the court held it did.

The suit *Cosgrove vs. Winney* involved a construction of the treaty between Great Britain and the United States. *Cosgrove* was extradited from Canada and brought before a police court in Detroit on the charge of larceny, gave bail for his appearance, and returned to Canada. Before the time fixed for trial he returned to Detroit voluntarily, and was arrested for an offense for which he was not extraditable. It was held that he retained the right to have the offense for which he was extradited disposed of and then to depart in peace, and his arrest could not be sustained.

The case of the *Addyston Pipe and Steel Company vs. the United States* was decided Dec. 4, 1890. This case was brought under the Sherman antitrust act of July 2, 1890, and an injunction had been asked to enjoin six corporations engaged in the manufacture of water and gas pipe, which composed the combination, from continuing to do business under the agreement by which they had divided the territory of the United States among themselves, and by which they had arranged to fix prices. The court affirmed the decision of the Circuit Court of Appeals against the corporation, and established the principle that Congress can regulate trusts that do an interstate business.

In *Blake vs. McClung* the validity of certain provisions of a statute of Tennessee, whose object was to secure the development of the mineral resources of the State and facilitate the introduction of foreign capital, was involved. It is not in the power of one State, when establishing regulations for the conduct of private business of a particular kind, to give its own citizens essential privileges connected with that business which it denies to citizens of other States. Such discrimination against citizens of other States is repugnant to sec. 2, Art. IV of the Constitution, although, generally speaking, the State has the power to prescribe the conditions upon which foreign corporations may enter the territory for purposes of business.

In the trial of *Lake Shore and Michigan Southern Railway Company vs. Smith* it was held that the act of the Legislature of Michigan providing that 1,000-mile tickets shall be kept for sale at the principal ticket offices of railroad companies at a certain price, and when presented by any other than the person or persons named therein such tickets shall be forfeited to the railroad company, and that such tickets shall be valid for two years only, and if not wholly used within that time providing for redemption and a charge of three cents a mile for the portion used, was unconstitutional.

A decision was handed down by Justice Harlan, in the case of *Lake Shore and Michigan Southern Railway Company vs. Ohio*, construing the constitutionality of the law of Ohio regulating the stoppage of through trains at stations in the State. The law requires that any railroad company in the State shall have at least three trains a day (if so many are run) stop at any place on its line containing more than 3,000 inhabitants. The action was begun against the company because of its refusal to obey the law. The company contended that the statute was antagonistic to the Constitution in that it interfered with commerce between the States. The court held this contention to be unfounded, saying that the question involved was only that of subserving the public convenience, and that the State had a right to legislate to that end. Justices Shiras, Brewer, and Peckham dissented.

The case of *Cummings and others vs. the Board of Education of Richmond County, Georgia*, involved the right of the board to establish a high school for whites in Augusta without also establishing a high school for colored children. The case was based upon the petition of colored people of the county, who asked that an order be issued compelling the board either to give their children the advantages of a public high school or to refrain from carrying on a white high school for the support of which the petitioners are taxed. The case attracted considerable attention. The decision was adverse to the colored people, as the court failed to see that there was any violation of the fourteenth amendment to the Constitution.

There was a libel *in rem* against the British steamship *Elfrida*, to recover \$22,000, with interest and costs, claimed to be due for services rendered in the performance of a salvage contract. Many cases in this country and in England, where salvage contracts have been set aside and compensation awarded in proportion to the merits of the services, were examined, and the principles governing the subject were stated. Where no circumstances exist which amount to a moral compulsion, such a contract should not be held bad simply because the price agreed to be paid turned

out to be much greater than the services were actually worth. On the Continent of Europe the courts appear to exercise a wider discretion, and to treat such contracts as of no effect if made when the vessel is in danger, but this was not accepted as expressing the true rule on the subject.

The case of the *Olinde Rodrigues* was the first prize case by the Spanish-American War that was considered by the Supreme Court. It grew out of the capture by the cruiser *New Orleans* of the French vessel *Olinde Rodrigues* for an attempted violation of the blockade of the port of San Juan, Porto Rico. The principal question determined by the court was that the blockade of San Juan was effective, although maintained by one modern cruiser alone.

The court decided in the naval prize-money case growing out of the capture of the Spanish steamer *Buena Ventura* that the condemnation of the vessel was illegal, and ordered the proceeds of the sale of the vessel be turned over to the owners. This decision turned upon the construction of the clause of the President's message of April 26, 1898, exempting Spanish vessels in American ports from the operation of the proclamation of war until May 21. It was shown that the *Ventura* had left an American port seven days before the presidential proclamation was issued, and that it was captured on the same day on which the proclamation appeared. It was held that the President's proclamation applied to vessels under this condition, and that on this account the *Ventura*, though owned by a Spanish house, was exempt. Justices Gray and McKenna dissented.

The Chief Justice delivered the opinion of the court in the cases of the *Pedro* and the *Guido*, and the condemnation of these vessels was affirmed. Four of the nine members of the court united in a dissenting opinion in the *Pedro* case. The *Pedro* left Antwerp in March, 1898, with a cargo for Cuban ports, with the intention of afterward proceeding to the United States for a cargo of lumber for her return voyage. She reached Havana on April 17, and on the 22d took her departure for Santiago, Cuba, and was captured the same day by the cruiser *New York* and duly condemned. The Chief Justice held that war had been practically declared on the 21st, and that the officers of the vessel must have known this fact. He dwelt upon the fact that the vessel was proceeding from a port of the enemy when overtaken, and contended that the case did not come under any of the exemptions of the President's message.

The court affirmed the opinion of the Court of Claims in the case of the claim of *La Abra Silver Mining Company* against the republic of Mexico, holding that claim to be fraudulent and unfounded. The claim was for about \$4,000,000.

Railways.—The latest report issued by the statistician to the Interstate Commerce Commission shows that on June 30, 1898, the total length of the railway systems of the United States was 186,396.32 miles. Unofficial records, very carefully and intelligently kept by the editors of the *Railway Age*, show that 6,337.10 miles were constructed during the eighteen months that began July 1, 1898; making a total mileage of 192,733.42 on Dec. 31, 1899. On June 30, 1898, there were also 11,293.25 miles of second track, 1,009.65 miles of third track, 793.57 miles of fourth track, and 48,039.73 miles of yard track and sidings; making a total trackage, at that time, of 247,532.52 miles. Of the 186,396 miles

of railway, 51,577.37 miles, or 27.67 per cent., were in the region north of the Potomac and Ohio rivers and east of Lake Michigan and the Indiana-Illinois State line; 33,472.57 miles, or 17.96 per cent., were south of the Potomac and Ohio rivers and east of the Mississippi, 41,316.97, or 22.16 per cent., were west of Lake Michigan and the Indiana-Illinois State line and north and east of the Missouri river; 44,971.17, or 24.13 per cent., were west of the Missouri and Mississippi rivers and east of the Rocky mountains; and 15,058.24 miles, or 8.08 per cent., were on the Pacific slope. The increase in railway mileage during each year (ending June 30), beginning with 1890, was as follow: In 1890, 5,838.22 miles; in 1891, 4,805.69 miles; in 1892, 3,160.78 miles; in 1893, 4,897.55 miles; in 1894, 2,247.48 miles; in 1895, 1,948.92 miles; in 1896, 2,119.16 miles; in 1897, 1,651.84 miles; in 1898, 1,967.85 miles; in 1899, 3,197 miles; total, 31,834.49 miles.

The location of recent construction indicates in a measure the state of economic development attained in certain sections. During the calendar year 1899 there were constructed 4,500.10 miles of new railway line, of which 582.66 miles were in Iowa, 368.84 miles in Minnesota, and 269.48 miles in Arkansas. No other State had more than 200 miles of new line. Between 150 and 199 miles were built in Pennsylvania, South Carolina, California, Idaho, Louisiana, and Oklahoma; from 100 to 149 in Alabama, Florida, Georgia, Illinois, Michigan, Mississippi, New Mexico, and Utah; from 50 to 99 miles in Indiana, Missouri, Nebraska, North Carolina, Ohio, Texas, Virginia, Washington, Wisconsin, Wyoming, and Indian Territory. No new railway was constructed in South Dakota, Nevada, Delaware, New Hampshire, or Rhode Island. The 6 New England States, which may now be regarded as fully supplied with railways, had but 75.50 miles of new line.

The preliminary report of the statistician to the Interstate Commerce Commission for the year ended June 30, 1899, shows that the gross railway receipts from operations in that year were \$1,307,253,484, of which \$360,227,319 were from passenger and \$913,358,488 from freight service. The operating expenses for the same period were \$852,428,105, and the taxes were \$44,165,714; consequently there was a balance of \$410,659,665, to which must be added \$49,176,168, receipts from other sources than operation. The necessary deductions from income, including interest on bonds, amounted to \$326,852,804; \$82,214,820 were distributed as dividends (not including payments by subsidiary companies); and \$50,768,209 accumulated as surplus.

The traffic of 1899 was probably heavier than any that was ever before carried, but it was taken at the lowest rates ever known. The average rate per passenger per mile in 1898 was 1.973 cent, and the charge per ton per mile was 0.753 cent. Similar averages for 1899 are not yet available, but that they were considerably lower is unquestionable. The average ton-mile rate obtained by the Pennsylvania Railway during the year ended June 30, 1899, was but 0.469 cent, and that of the Baltimore and Ohio Railroad was 0.458 cent.

Recent improvements in railway facilities have had the effect of notably increasing the efficiency of the railway train as a machine for moving passengers and property. This has been accomplished by increasing the size of cars and locomotives, decreasing the proportion of dead weight to paying weight in the train, reducing grades, increasing the radii of curves, using heavier rails,

supplying better yard and side-track arrangements, and increasing the number of tracks. The freight cars now building have a capacity of 30 to 50 tons of freight, and steel is rapidly being substituted for wood as their principal material. An American establishment that manufactures more locomotives than any other concern in the world reports that the average weight of a locomotive in 1890 was 92,370 pounds, and in 1899 it was 128,920 pounds. Another American manufacturer reports an increase of 47 per cent. since 1891. The result of these improvements is expressed by the average train load, which was 175.12 tons in 1890 and 228.45 tons in 1898.

The year 1899 was remarkable on account of the general maintenance of harmonious relations among the great railway systems and the observance of published rates. While due in large measure to the abundant traffic and widespread prosperity, this condition is also attributable to the increased influence of the Interstate Commerce Commission and a growing recognition on the part of railway managers and owners of the public value of reasonable statutory regulation of railway transportation.

UNITED STATES, FINANCES OF THE.
During the year ending June 30, 1899, the net ordinary receipts of the Government, including those of the postal service, amounted to \$610,982,004, being considerably more than before received for any one year—except for 1866, when they were slightly exceeded. The increase above the amount of the preceding year was \$116,648,050. From internal-revenue sources alone the increase of the year amounted to \$102,536,520, of which nearly \$7,000,000 was due to an increase in the tax on distilled spirits, \$16,000,000 on manufactured tobacco, \$29,000,000 on fermented liquors, and \$43,000,000 to the stamp taxes. Only \$11,998,314 was received on account of the indebtedness of the Central Pacific Railway.

There was an increase in the receipts from the postal service of \$6,008,766. None of the usual sources of receipts showed any decrease.

Owing to the expenses incident to the war with Spain the expenditures of the Government for the year under consideration were greatly increased, the total of such expenditures not having been exceeded since the war of the rebellion; and despite the greatly increased receipts there was a

deficiency of \$89,111,559. This deficiency was met by the sale of about \$200,000,000 3-per-cent. bonds at par, thus not only providing for the deficiency, but adding an increase to the cash of the Treasury of more than \$100,000,000, greatly strengthening the financial condition of the Government.

The operations in detail are shown below, compared with like items for the previous year:

EXPENDITURES.

Gross expenditures	\$1,041,239,563	\$913,701,044

Of the debt having an equivalent reserve there has been an increase in gold certificates during the last calendar year of nearly \$150,000,000. These certificates circulate as money, and their issue has to a large extent been a net increase of the circulating medium. The increase of gold in the country has been due to an increased domestic production, and to unusual heavy importations of that metal made necessary to meet the payments for goods exported largely in excess of those imported.

The following table shows the changes during the calendar year in the debt with equivalent reserve:

DEBT WITH EQUIVALENT RESERVE.	OUTSTANDING DEC. 31,	
	1899.	1898.
United States notes (greenbacks).....	\$100,000,000	\$100,000,000
Treasury notes (1890).....	88,880,280	96,528,280
Currency certificates (1872).....	12,350,000	20,685,000
Gold certificates.....	184,844,619	86,808,999
Silver certificates.....	401,464,504	399,430,504
Total.....	\$787,479,408	\$653,447,788

A report of the issue of the bonds on account of the Spanish war loan had already been made, hence the statement of the debt bearing interest shows but little change for the last calendar year. In the aggregate a reduction is shown owing to the purchase during the year of a considerable amount of the interest-bearing debt.

The following table shows in detail the changes in the debt without reserve during the calendar year:

DEBT WITHOUT RESERVE.	OUTSTANDING DEC. 31,	
	1899.	1898.
Funded loan continued at 3 per cent.....	\$25,364,500	\$25,364,500
Funded loan of 1907, 4 per cent.....	545,366,550	559,650,300
Refunding certificates, 4 per cent.....	37,170	39,100
Loan of 1904, 5 per cent.....	95,009,700	100,000,000
Loan of 1925, 4 per cent.....	162,315,400	162,315,400
Ten-twentieths of 1898.....	198,079,000	192,848,780
Old loans matured.....	1,308,500	1,287,300
Old demand notes.....	53,847	53,997
United States notes (greenbacks).....	246,681,016	246,681,016
National bank redemption account.....	33,299,218	28,868,814
Fractional notes.....	6,899,559	6,899,974
Total.....	\$1,317,895,460	\$1,323,940,981

Owing to the increase of gold in the country as above stated the amount of money in circulation has been in the aggregate considerably increased the last year as will be seen by the following comparative table:

CIRCULATION OUTSIDE OF THE TREASURY.	IN CIRCULATION DEC. 31,	
	1899.	1898.
Gold coin.....	\$617,977,830	\$667,796,579
Standard silver dollars.....	70,480,047	65,183,553
Subsidiary silver.....	78,651,321	70,627,818
Gold certificates.....	161,122,797	35,300,259
Silver certificates.....	395,040,816	392,831,995
Treasury notes (1890).....	86,934,351	94,942,741
United States notes (greenbacks).....	318,269,365	313,415,738
Currency certificates (1872).....	11,980,000	20,465,000
National bank notes.....	242,001,643	238,357,729
Total.....	\$1,980,898,170	\$1,897,301,412

The aggregate of the cash assets of various kinds held by the Treasury for various purposes exceeds \$1,000,000,000, perhaps the greatest accumulation of money in the world. Of this amount only about \$283,000,000 was in the general Treasury balance subject to the draft of the United States Treasurer, and of that amount \$100,000,000, represented by gold coin, was held as a fund for the redemption of United States notes under the resumption act.

The following table shows the assets and liabilities at the end of the calendar years 1888 and 1899:

ITEMS.	YEAR ENDING DEC. 31,	
	1899.	1898.
Liabilities:		
Gold certificates.....	\$184,844,619	\$86,808,999

Grand total.....	\$136,855,676	\$82,009,923

UNIVERSALISTS. The Board of Trustees of the General Convention of this denomination reported to that body, at its meeting in October, the following statistics: Number of parishes, 1,003; of families, 47,411, showing an increase of about 1,200; of church members, 52,177; of members of Sunday schools, 59,179; value of parish property less debt, \$9,623,672; amount of contributions, including those for parish expenses, \$1,105,809. The figures represent an increase of 64.5 per cent. in church membership and 18 per cent. in Sunday-school membership since 1884. The convention was in debt to the amount of \$31,374. It had spent during the past year \$8,934 for the mission in Japan.

The Universalist General Convention met in Boston, Mass., Oct. 19. The opening sermon was preached by President Elmer Hewitt Capen, of Tufts College. The Hon. Charles L. Hutchinson, of Chicago, presided. The most important business was the final adoption of the statement of belief transmitted from the previous General Convention held in Chicago, Ill., in 1898, in the form of a platform of principles instead of a creed. This declaration is as follows:

"The essential principles of the Universalist faith is: The universal Fatherhood of God; the spiritual authority and leadership of his Son, Jesus Christ; the trustworthiness of the Bible as containing a revelation from God; the certainty of retribution for sins; the final harmony of all souls with God."

The declaration was adopted by a vote of 132 to 10. The Rev. Dr. Edward Everett Hale was received as a fraternal delegate from the National Conference of Unitarian and other Christian Churches, and addressed the convention. Resolutions were also received from the American Unitarian Association proposing the appointment of a conference committee of five members from each body, to consider concerning a closer co-operation of the two organizations (see article UNITARIANS for the text of the resolutions). The proposal was adopted by a vote of 101 yeas to 25 nays, and the 5 members of the committee to represent the General Conference were appointed.

URUGUAY, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 19 members, 1 from each department, elected by indirect suffrage for six years, and a Chamber of Representatives, containing 69 members, elected for three years by the direct suffrage of all adult male citizens who are able to read and write. The President is elected for four years. Juan Luis Cuestas, who was elected Vice-President, succeeded to the office of President on the assassination of Idiarte Borda, Aug. 25, 1897. The Cabinet at the beginning of 1899 was composed as follows: Minister of War and Marine, Gen. Gregorio Castro; Minister of the Interior and of Justice, Edoardo Maceachen; Minister of Agriculture, Industry, Public Instruction, and Public Works, Jacobo Varela; Minister of Finance, José R. Mendoza; Minister of Foreign Affairs and Worship, Dr. Mendilaharsu.

Finances.—The revenue for 1894 was \$15,376,614; for 1895, \$15,120,941; for 1896, \$16,042,133; for 1897, \$14,257,723; and for 1898, about the same amount. The estimate for 1899 was \$15,973,540, of which customs yield \$10,061,487, property tax \$1,831,689, trade licenses \$890,650, factory taxes \$470,595, the tobacco tax \$463,936, instruction \$427,457, stamps \$369,668, bank profits \$350,000, posts and telegraphs \$260,000, and other sources \$848,064. The total expenditures were estimated at \$15,799,231, of which \$341,114 was for the legislative bodies, \$67,242 for the presidency, \$131,968 for the Ministry of Foreign Affairs, \$2,365,086 for the Ministry of the Interior, \$961,160 for the Ministry of Finance, \$1,124,672 for the Ministry of Public Works, \$1,918,031 for the Ministry of War and Marine, \$5,040,743 for the public debt, \$945,636 for railroad guarantees, \$1,416,407 for pensions, and \$887,173 for various expenses.

Commerce and Production.—The main industry of the country is stock raising. There were 392,246 horses, 15,589 mules, 5,881,402 cattle, and 16,397,484 sheep in 1896, having a total value of 73,038,000. The number of cattle slaughtered in 1897 was 670,900. The wool clip was 33,000 tons. About 300,000 tons of wheat were raised. Of 21,045 farmers, 10,853 owned their farms. Gold mining is carried on in the north, and in the department of Rivera alone 87,336 grammes of the metal were extracted in 1897. Silver, copper, lead, magnesium, and lignite are the other minerals. The annual imports are about \$25,000,000 and exports \$30,000,000. The chief exports are hides and live animals, sent to Brazil, France, Belgium, England, and the Argentine Re-

public. Hides are exported also to the United States, the imports from which country are increasing, consisting of petroleum, lumber, and agricultural implements mainly. The bulk of the imports come from England, the Argentine Republic, Germany, France, and Italy.

Politics.—President Cuestas, who assumed a dictatorship at the beginning of the civil war of 1898, was constitutionally elected on March 1, 1899, after resigning his powers for two weeks into the hands of the president of the Senate. He appointed a new Cabinet, as follows: Minister of War and Marine, Gen. Callorda; Minister of the Interior and Justice, Saturnino Camp; Minister of Agriculture, Industry, Public Instruction, and Public Works, C. M. Peña; Minister of Finance, Dr. Campestegey; Minister of Foreign Affairs and Worship, Herrero y Espinosa. The Chambers voted amnesty for all political offenders. Economies were introduced in all departments of the Government, yet on account of the increase in the debt the budget was barely made to balance, revenue for 1900 being estimated at \$15,977,000 and expenditure at \$15,969,000.

UTAH, a Western State, admitted to the Union Jan. 4, 1896; area 84,970 square miles. The population in 1890 was 207,905; the estimated population in 1895, 247,324. Capital, Salt Lake City.

Government.—The State officers during the year were as follow: Governor, Heber M. Wells, Republican; Secretary of State, James T. Hammond; Treasurer, James Chipman; Auditor, Morgan Richards, Jr.; Attorney-General, A. C. Bishop; Adjutant General, Charles S. Burton; Superintendent of Public Instruction, John R. Park; Coal Mine Inspector, Gomer Thomas; State Engineer, Robert C. Gemmell; Board of Equalization, Robert C. Lund, John J. Thomas, J. E. Booth, and Thomas D. Dee; Board of Labor, John Nicholson, J. S. Daveler; Regents of the University, J. T. Kingsbury, President; Chief Justice, George W. Barch; Board of Agriculture, J. A. Wright, Secretary; State Art Institute, created in 1899, H. L. A. Culmer, President.

Finances.—The State Auditor showed in his report of June 30 that the balance in the general fund would have been a deficit had not a loan of \$50,000 been made to the treasury from the State Bank of Utah. About the middle of July this loan was repaid by an overdraft accommodation of \$10,000, extended by Wells, Fargo & Co., at 4 per cent. annual interest. The warrants issued in July amount to \$95,772.99, including the \$50,000 repaid to the State bank.

Following is the Auditor's statement: Balance on hand Jan. 1, 1899, \$485,031.54; receipts for half year ending June 30, \$261,738.16; total, \$746,769.70; disbursements for half year ending June 30, 1899, \$568,063.01; balance in treasury June 30, \$178,706.69, distributed to the several funds as follows: State land accounts, \$131,867.29; general fund, \$40,678.91; district school fund, \$6,112.58; trust funds, \$47.91; total, \$178,706.69; warrants outstanding June 30, \$22,970.84; balance less outstanding warrants, \$155,735.85.

The total number of failures for 1899 was 149; total assets, \$141,139; total liabilities, \$329,025; for 1898, total number, 127; total assets, \$189,697; total liabilities, \$468,182.

Valuation.—The total raw products of the farm for 1899 were \$7,280,000; total finished products as butter and cheese, wool and mutton, cattle, poultry, etc., \$8,724,000; from which deduct the value of food consumed to produce them, \$2,500,000, and the total farm products were valued at \$13,504,000; total assessed valuation of all

property in the State, \$87,361,254; total value of live stock taxed, \$7,238,085; number of animals, 1,835,051; total assessed valuation of all railroads in the State, \$11,914,287; value of street car companies alone, \$350,327; value of telegraph lines, \$92,058; telephone property, \$144,726; tax levy for State purposes, 4½ mills; for schools, 3 mills; making a total of 7½ mills.

Beet Sugar.—The Utah County Factory, at Lehi, paid the farmers in 1899 for beets \$243,000. The average was 4,400, and the tons produced 52,625. The report for the year ending March 1, 1899, showed that 43,111 tons of beets were worked last year, 11.49 per cent. of sugar was extracted, and 9,999,950 pounds of sugar was produced. The sum of \$191,126.84 was paid for beets, \$38,421.20 was paid for labor, and \$58,318, or 25 per cent., was paid in dividends to the stockholders. The sale of sugar and pulp, including sugar on hand, amounted to \$516,437.90, an increase of \$95,000 over the previous year. The chief item of expense was in putting in the Osmore process for extracting the sugar from the low products. This yielded a profit of \$19,000.

On Oct. 26 the first branch sugar factory to be built in the United States was opened at Springville, 24 miles from Lehi. The juice is extracted from the beets at the Springville branch and piped to Lehi through a 5-inch pipe. The Ogden factory the past year paid to farmers about \$150,000 for beets delivered at the factory. About 3,000 acres were devoted to the raising of these beets, and the number of tons harvested was about 31,000. The pulp sells readily to the farmers at 50 cents a ton. Farmers report it as a very satisfactory fattening food for stock.

Bounties.—Summit County's clerk sent a verified claim against the State for reimbursement for half of the amount of \$1,234.02, paid in May and June for scalps of destructive wild animals. Deducting \$5.25 for bounty on 7 coyotes, the remainder represented the premium on 81,958 squirrels at 1½ cent each.

The claim of Utah County for bounty paid on muskrats, gophers, pelicans, fishhawks, loons, squaks, fish ducks, and English sparrows for the first six months of the year amounted to \$877.32.

Irrigation.—After ten years of labor, the Hill's Canal and Irrigation Company completed its task, in April, 1899, and about 10,000 acres of land, the most fertile in eastern Utah, will be reclaimed. A vast quantity of water is yearly permitted to flow into the Gulf of California by way of Price river, which this enterprise will employ in the upbuilding of Castle valley.

Crops.—The growing of alfalfa seed has become an important industry in Utah. Fifty dollars an acre is easily made in raising seed for the market. In 1898 125 car loads of seed were shipped out of the State, which, at 5 cents a pound, netted the farmers \$187,500. The demand came from all over the United States, and from France, Germany, and Australia. The value this year of the seed produced is \$200,000.

"Alfalfa honey" commands the highest price.

Sorghum is produced in Utah. The value of the output is about \$50,000. Wine, cider, and vinegar show an output of \$50,000 more. Dried apples, peaches, plums, and apricots are worth from \$50,000 to \$75,000 a year.

"Utah beats the world for potatoes," is an old saying that has never been successfully challenged. The annual production is about \$400,000.

The yield of wheat for Utah in 1899 was 3,736,454 bushels, the yield per acre being 20.7 bushels. The yield for 1898 was 5,105,184, valued at \$2,756,799, the yield per acre being 28 bushels.

The Utah factories canned 90,000 cases of tomatoes this year, a case containing 24 cans of 2½ pounds.

Utah oats averaged during the past six years 34.6 bushels an acre, worth \$12. The year 1898 shows the highest yield, also the highest average value, being 39.7 bushels, worth \$15.09.

Dairying.—In 1890 there were 3 factories in the State; to-day there are about 60 modern butter and cheese factories, representing an investment of \$200,000. The factory output in butter and cheese during the year was estimated at \$700,000, and the by-products of these factories—skim milk and whey—at between \$100,000 and \$150,000.

Fish and Game.—The Fish and Game Warden shipped 110,000 mountain graylings from Elk creek, Montana, to the fish hatchery near Murray, Utah, in June. In 1898 150 small bass fry and 200 spawning fish were taken from Utah lake to stock private ponds in the State. By a proclamation of Feb. 10 the President of the United States set aside a reserve of 75,000 acres of land known as Fish Lake plateau in Sevier County. After June 15, midnight, the law prohibiting angling for trout expires, but fishing in closed streams is unlawful. A new hatchery was located in June on 5½ acres of land in Big Cottonwood cañon. Elk, antelope, and mountain sheep are nearly extinct in the State. The feathered wild game, except the California quail and a few Eastern quail, are rapidly disappearing. The Dixie quail are found in large numbers in Washington and Kane Counties. The pheasant or ruffed grouse, the prairie chicken, and the sage hen are becoming scarce. There were 130 arrests for violations of fish and game laws, and 104 convictions, in 1897 and 1898, with \$457.70 fines reported.

Insane Asylum.—The number of patients in the asylum Sept. 30 was: males, 153; females, 148; total, 301. Admitted during month: males, 2; females, 3; total, 5. Under treatment: males, 155; females, 151; total, 306. Discharged during month: males, 3; females, 4; total, 7. Remaining Oct. 31: males, 152; females, 147; total, 299. Balance on hand Oct. 1, \$153.04; received during month, \$3,143.06; disbursed, \$3,097.45; balance on hand Nov. 1, \$385.58.

Land.—The amount received from the sale of land during 1898 was \$196,319.29; amount invested, \$419,688.35; on hand for investment Jan. 1, 1899, \$37,265.95; number of preferred claims filed, 1,936; number of acres offered and sold April 9, 636.11; number offered May 14, 5,000 acres, sold 1,880; number offered Dec. 1, in Iron County, 16,939 acres, sold 560; offered in Sanpete County, 16,649.95, sold 2,513.44; offered in San Juan County, 32,659.63 acres, sold 2,400; number of acres of school land appraised for the year, 102,655.19, value \$122,821.31. Eastern Utah is at last rid of its greatest plague spot, the notorious "strip" that lies between the Uintah and the Uncampahgre reservations, one and a half miles east of Fort Duchesne. When the surveys were made for these two reservations this strip of land was left out of both, and later became a kind of no-man's land. It is triangular, 3 miles long at its narrowest and 6 miles at the widest point. It contains vast deposits of asphaltum. During the year 106 applications to lease were filed, covering 127,846.33 acres of land, and from these 71 leases were executed, embracing 66,698.63 acres, the appraised value being \$86,458.85, and the annual rental \$1,742.56.

Militia.—The 250 men of the Utah artillery sailed from Manila for home on July 1, leaving

25 men behind, a majority of whom re-enlisted. By a proclamation of the Governor, Aug. 19, 1899, was made a legal holiday "for the purpose of general thanksgiving and rejoicing," and that all the people might join in welcoming home the brave men who volunteered to serve their country in time of war.

Mining.—Utah is third on the list of the silver-producing States, having an output of \$9,496,969 in 1899, and sixth among gold-producing States, having an output of \$3,369,509 in gold. Utah's output of copper in 1898 was 3,750,000 pounds, with an increase in 1899. Wolfram or tungstic ocher was found in the Deep Creek district, and as it is very scarce in the markets of the world it will become a valuable find when railroad facilities permit of its transportation. In 1898 more than 673,297 tons of coal were produced in the State. In the year there were 3 fatal and 14 nonfatal accidents in the coal mines. Utah's total production of coal in 1898 was 673,297 short tons; cash value, \$784,787.42.

Mothers' Congress.—The Mothers' Assembly of Utah, familiarly known as the "Mothers' Congress," began its second annual meeting in Assembly Hall, April 10. Kindergarten work, heredity and environment, and the relations between the mother, the child, and the state, engaged most of the attention of the ladies present for the first day's sessions. There was a large attendance, especially at the evening session, many delegates being present from various towns.

Education.—On Jan. 9, 1899, the State Superintendent apportioned the sum of \$246,014.48 for 83,113 children of school age, thus giving for each child \$2.96. On Dec. 31, 1899, there was \$250,245.87 from tax collections in the treasury available for apportionment among the 84,419 children of school age in the State. In Salt Lake County 87 per cent. of the children of school age attended school. The value of the property controlled by the trustees was \$183,961.65. Three new buildings were erected in 1899, at a cost of \$5,428.33. The average salary paid to teachers was \$65.73 for males and \$46.48 for females. There were 108 teachers employed, 50 males and 58 females. There were 7,310 children of school age in the county—3,713 boys and 3,592 girls. In Davis County \$8,271.78 were apportioned among 2,748 children of school age. In Tooele County there were 12 school districts with 1,685 children and 30 teachers. In Ogden County there were 5,390 children of school age.

The Auditor's report for July showed receipts on hand, \$898.66; loan due Treasurer, \$940.07; total disbursements, \$3,778.63; warrants paid, \$3,778.63. The Davis County Public School Library Association has in active operation the first free circulating library system that has been tried in the State.

The United States Government has granted to the State a 60-acre tract within the Fort Douglas military reservation, on the bench east of and overlooking the city for a university site, conditioned that the institution shall establish itself there before 1904. Four buildings are to be constructed, known as the library, the normal, the museum, and the physical science buildings. The regents of the university asked for \$84,200 for the general maintenance of the university proper; for special purposes, \$7,150; for State normal school, special, \$3,700, kindergarten, \$4,600; for branch normal, \$15,000. The biennial report of the university showed an attendance during the last two years of 733 students—331 males and 402 females; total number of graduates, 107; normal graduates, 376; registration for 1899, 585

—250 males and 335 females in the university proper; in normal school, 332; kindergarten department, 9; in preparatory school, 114; summer school, 50; grand total, 666. For the maintenance of the Agricultural College for the next two years the sum of \$48,605 was asked. The value of the buildings and real estate was \$165,800; of the college equipment, \$30,222.56; of the experiment station equipment, \$7,281.90; of the live stock, \$3,091.50.

Mormon Affairs.—In the semiannual conference of the Mormon Church, held at the tabernacle on Oct. 10, the secretary reported the number of schools represented as 1,019; male officers and teachers, 7,524; female officers and teachers, 52,624; grand total for 1898, 116,703; total collections, \$17,264.33; balance on hand, \$3,986.21. Every one of the 40 stakes of Zion, reaching from Canada to Mexico, was represented in the gathering.

The revenue from church tithing for June, July, August, September, and six days in October was shown to have been \$164,900; for the year 1899, the tithings amounted to \$700,000 in cash and \$800,000 in produce.

Legislative Session.—The Legislature was in session from Jan. 10 to March 17, and consisted of 2 Republicans and 16 Democrats in the Senate, with 15 Republicans, 26 Democrats, and 4 Cannon fusionists in the House.

The bills passed and approved by the Governor included the following:

Permitting the use of testimony given by witnesses in criminal cases at subsequent trials when such witnesses are dead or beyond the jurisdiction of the court.

Making the theft of any range or domestic animal, regardless of their value, the crime of grand larceny.

Providing that only property taxpayers who are qualified electors shall be eligible to petition for or vote upon propositions for town incorporations.

Providing for the creation of a State institute of art.

Establishing a branch of the experiment station, under the direction of the State Board of Horticulture, in southern Utah.

Providing for the erection of a hospital for the Utah State School for the Deaf and Dumb at Ogden, and carrying an appropriation of \$3,500.

Giving the State Board of Pardons authority to parole prisoners and to reduce the sentences of convicts for good behavior.

Exempting all the wages of a married man for a period of sixty days after date of rendition of judgment.

Making the lien of a docketed judgment subsist for eight instead of five years.

Repealing section 1,499 of the Revised Statutes, which required the doing of \$50 worth of work on a mining claim within ninety days from date of posting notice of location.

Providing for the removal of the University of Utah to the site granted by Congress on the western edge of the Fort Douglas military reservation, and providing for the construction of buildings therefor and improvement of grounds at a cost of \$200,000.

Political.—For two years Utah will have but one representative in the Senate of the United States. The joint session of the Legislature adjourned *sine die* a few minutes after midnight, March 17, without having elected a Senator; 165 ballots for Senator had been taken without any one of the 8 candidates having received the 32 votes necessary for election.

V

VENEZUELA, a republic in South America. The legislative power is vested in the Congress, consisting of a Senate of 27 members, 3 from each State, elected for four years, and a House of Representatives numbering 63 members, 1 to 35,000 inhabitants, who are elected for four years by the votes of all adult male citizens. The Congress elects for four years a Council of Government, and for the same term the President of the republic. Gen. Ignacio Andrade was elected President for the term beginning March 4, 1898. The Cabinet in the beginning of 1899 was composed as follows: Minister of the Interior, Gen. Zoilo Bello Rodriguez; Minister of Foreign Affairs, Gen. Juan Calcaño Mathieu; Minister of War and Marine, Gen. A. Fernandez; Minister of the Treasury, M. A. Matos; Minister of Public Credit, C. V. Echeverria; Minister of Education, Dr. B. Mosquera; Minister of Posts and Telegraphs, Dr. J. L. Arismendi; Minister of Agriculture, Industry, and Commerce, Gen. N. Rolande; Minister of Public Works, Dr. Alberto R. Smith.

Finances.—The budget for 1899 makes the total revenue 34,542,000 bolivars or francs, of which 25,000,000 bolivars come from customs, 5,292,000 bolivars from internal revenue duties, and 4,250,000 bolivars from State revenues. The total expenditures are made to balance the revenue. The amount of the national debt on June 30, 1898, was 201,419,202 bolivars, of which 66,614,550 bolivars represent the external 3-per-cent. debt, 63,439,430 bolivars the internal consolidated 6-per-cent. debt of 1896, 49,250,000 the 5-per-cent. Venezuelan loan of 1896, 10,565,199 bolivars the 5-per-cent. aqueduct bonds, 7,774,893 bolivars the 3-per-cent. Spanish, French, and German loan, 3,605,773 bolivars warrants repayable at the rate of 1 per cent. a month, and the remainder the debt resulting from the revolution and unpaid balances of older debts.

Forces.—The permanent army in 1898, its strength being fixed by the reorganization law of July 30, 1895, consisted of 10 battalions, each composed of 6 companies of 60 men. The fleet comprised 3 steamers.

Commerce and Production.—On the alluvial lands of the coast and the delta of the Orinoco sugar cane, coffee, cacao, grain, and other agricultural products are grown, about a fifth of the total population of the country being employed in their cultivation. On the grassy plains at a higher elevation stock raising is carried on. The herds of cattle are estimated to number 5,000,000 head. The forest regions furnish rubber, copaiba, tonga beans, vanilla, and other commercial products. Gold mining is carried on in the Yuruari territory, half of which is in dispute between Venezuela and Great Britain. In 1897 43,500 ounces were exported. Silver is mined in Bermudes, Lara, and Los Andes. Copper is mined also. Iron is found in abundance, and coal, sulphur, lead, asphaltum, kaolin, and tin could be mined. There are deposits of salt in various places, and these are worked for the Government, which obtained from them a revenue of 1,727,490 bolivars in 1894. The total value of the exports in 1896 was 111,455,143 bolivars. The chief article of export is coffee, the shipments of which in 1897 amounted to 44,667 tons. Of cacao 4,047 tons were exported. Of hides and skins there were exported 3,440,109. The export of rubber was 339

tons; of quina bark, 31,044 kilogrammes. Minor exports were copaiba, tonga beans, fustic, divi-divi, feathers, and fish sounds. The value of the coffee exported in 1896 was 85,786,000 bolivars; of cacao, 10,091,000 bolivars; of gold, 11,792,000 bolivars; of hides, 2,957,000 bolivars; of animals, 1,552,000 bolivars. The export of bar gold was 1,353 kilogrammes. The chief imports were provisions, piece goods, hardware, coal, kerosene, timber, and machinery.

Navigation.—The number of vessels entered and cleared at the port of La Guayra in 1897 was 312, of 676,500 tons; at Maracaibo, 285, of 78,620 tons; at Ciudad Bolivar, 133, of 58,367 tons. The merchant fleet in 1898 consisted of 11 steamers, of 2,185 tons, and 17 sailing vessels, of 2,760 tons. The merchant marine in 1898 consisted of 17 sailing vessels, of 2,760 tons, and 11 steamers, of 2,185 tons.

Railroads and Telegraphs.—The length of railroads in operation in 1898 was 530 miles, and 1,000 miles more were projected.

The telegraphs in 1898 had a total length of 3,882 miles.

Revolution.—A revolution against the administration of President Andrade was started in the province of Los Andes in June, 1899, and in the course of the next two months it spread through the country. Gen. Manuel Hernandez, who headed the first rising, was defeated. He was captured and put in prison in the capital, and his followers were dispersed. Gen. Cipriano, Governor of Los Andes, then assembled an insurrectionary force, and by rapid marches through the passes of the mountains arrived before Barquisimeto, where the scattered forces of Gen. Hernandez joined his army. In August many politicians were arrested. In a battle near Barquisimeto on Aug. 23 the revolutionary forces made prisoners of several battalions of Government troops and captured a large quantity of ammunition. When the President left Caracas to take command of the troops in the field, a new Cabinet was appointed, symptoms of vacillation and defection having been observed among the ministers, one of whom, Zoilo Rodriguez, of the Department of the Interior, was arrested on Sept. 6. Gen. Juan Pietry and Ramon Ayala, members of Congress, after making an energetic protest against the dictatorial acts of President Andrade, fled to Curaçoa to prepare a filibustering expedition in aid of Castro's rebellion. Gen. Rangel Garviras raised the revolutionary standard, invaded the state of Tachira, and captured Colon, San Cristobal, and other important places. Gen. Francesco, with another body of insurgents, operated around San Antonio. Gen. Gutierrez raised a force to attack Guirra.

Gen. Castro had 10,000 men under his immediate command. On Sept. 15 he captured Valencia after a severe engagement with the garrison, which was unable to hold out until Gen. Andrade arrived with re-enforcements. The Government troops were afterward surprised in the plains near Valencia and were put to rout with a loss of more than 1,000 killed or wounded. The revolutionists next occupied Puerto Cabello and Maracay, and advanced on Caracas. The American, British, and French ministers asked their governments to send men-of-war to protect the interests of their citizens. Gen. Andrade conce

trated his forces for the defense of the capital, which was practically besieged by the insurgents advancing from Valencia and Victoria, while another division moved on La Guayra for the purpose of preventing the President's escape. President Andrade sent an envoy to the revolutionary leader, offering to resign so as to allow the peaceful election of Gen. Castro, thus averting a military dictatorship. Negotiations were suspended, then resumed, and after two weeks of parleying, Gen. Castro sent an ultimatum, which was accepted. Gen. Andrade did not wait to transfer the executive authority to Gen. Castro, but fled to La Guayra before the entry of the latter into Caracas on Oct. 21. Several members of his Cabinet and others of his adherents preceded him in his flight. Before departing the President disbanded the Government troops, except a selected force which he took with him to La Guayra, and embarked on the Government gunboats and transport. Gen. Castro as acting President requested the foreign diplomatic representatives to take measures to prevent Gen. Andrade from leaving La Guayra with naval vessels and a large supply of ammunition. The United States minister, to whom as dean of the diplomatic corps the request was preferred, declined to interfere. The fleet sailed for Maracaibo on the same day that the revolutionists entered Caracas.

Gen. Castro was invested with power as provisional President by Congress, and on Oct. 23 appointed a Cabinet as follows: Minister of the Interior, Francisco Castillo; Minister of Foreign Affairs, Anduego Palacio; Minister of Finance, Tello Mendoza; Minister of War, Gen. Ignacio Pulido; Minister of Agriculture, Industry, and Commerce, Manuel Hernandez; Minister of Public Works, Victor Rodriguez; Minister of Public Instruction, Clemente Urbaneja. Gen. de Barri arrived in Maracaibo on Dec. 1 to establish the authority of the provisional Government. The naval vessels demanded his surrender from the American steamer on which he came, but the captain refused to give him up. The adherents of the new Government rose in arms as soon as Gen. de Barri gave the signal, and attacked the customhouse. The opposing troops, strengthened with the crews of the gunboats, resisted through the night and the next morning, but finally surrendered the customhouse and threw down their arms.

Anglo-Venezuelan Boundary Arbitration.

—The tribunal appointed, under the treaty signed at Washington on Feb. 2, 1897, to arbitrate in the matter of the disputed boundary between Venezuela and British Guiana met formally in Paris on Jan. 25, 1899, and then separated, to resume its sittings on June 15. The arbitrators named in the treaty were Chief-Justice Melville W. Fuller and Justice David Brewer of the United States Supreme Court, and Lord Herschell and Justice Sir Richard Henn Collins, British jurists. The president of the tribunal was to be selected by these arbitrators or, in case of disagreement, by the King of Sweden and Norway. The jurist selected by the arbitrators was Prof. Frederick Martens, of the Russian Ministry of Foreign Affairs. Lord Herschell having died, Lord Russell of Killowen, the Lord Chief Justice of England, was chosen to take his place as a British arbitrator. The Venezuelan and British cases, with supporting documents and the counter-cases and printed arguments on both sides, were laid before the tribunal, filling 23 volumes. The oral arguments were presented by ex-President Benjamin Harrison, assisted by Benjamin F. Tracy, Severo Mallet Provost, and James Russell Soley in behalf of

Venezuela, and by Sir Richard Webster, Attorney-General of England, assisted by Sir Robert Reid and G. R. Askwith, as junior counsel for Great Britain.

The Venezuelan Government contended that an original title to the whole of Guiana, the region bounded by the Orinoco, the Amazon, and the Atlantic Ocean and Caribbean Sea was established by Spain by virtue of discovery, exploration, formal proclamation of sovereignty, and occupation and by the recognition of the Spanish claim to the New World in the papal bull of 1493. Columbus sighted the coast of Guiana near the mouth of the Orinoco in 1498, and subsequent explorers ascended the Amazon and the Orinoco and passed from one to the other through the channel of the Cassiquari connecting their upper waters, thus circumnavigating the region that came to be known as the island of Guiana. Settlements that Spaniards attempted to establish on the coast were destroyed by the Caribs until Berrio, in 1592, in search of El Dorado, the gold field of the Incas that was believed to exist in Guiana, penetrated from Granada to the Orinoco and descended it to Trinidad. On this island a Spanish post was established, and on the Orinoco the town of Santo Thome. The Dutch, who revolted from Spain in 1581, visited the Guiana coast for trading and employed the Caribs to war upon the Spanish settlements. In 1626 the Dutch West India Company was chartered, and it established a trading post at Kijkoveral, an island in the Essequibo river. In 1648 the treaty of Münster recognized the right of the Dutch to trade and to possess the places they then held in Guiana, which was only the station of Kijkoveral and nothing in the country to the west of the Essequibo, which was recognized as Spanish territory according to the Venezuelan version of the treaty.

The British view rejected this interpretation as well as the Spanish prior title founded on discovery, and claimed that the Dutch had the same right to extend from Kijkoveral that the Spaniards had to extend from Santo Thome. The Dutch did extend their occupation up the delta of the Essequibo as far as the falls of the Massaroony and the Cuyuni and westward along the coast to the Pomeroon and Maruka rivers. The Spanish Capuchin friars established missions south of the Orinoco, which were gradually extended until they approached the Cuyuni, on the bank of which the authorities of Santo Thome built a fort to protect these missions from the Caribs. Dutch traders penetrated the upper valley of the Cuyuni to buy horses from the mission Indians. They also made their way along an inland water way connecting the Essequibo with the rivers flowing into the estuary of the Orinoco. The Caribs were aided by the Dutch in their wars against the Spanish, and received subsidies for catching and returning runaway negro slaves from the Dutch plantations. Dutch slave raiders traversed the wild regions of the interior, and Dutch outlaws settled in the Barima district, which acquired importance in the Venezuelan controversy from the fact that it dominates the principal mouth of the Orinoco. The Spaniards sent expeditions to break up Dutch settlements on the Cuyuni and along the coast from Barima as far eastward as the mouth of the Maruka; otherwise, they exercised no authority nor did they make settlements in the country south of the Orinoco except in the open savanna, where the mission stations were. The Dutch authorities disclaimed jurisdiction beyond the Maruka. The Spanish authorities disavowed

likewise all responsibility for the Barima district, which became the Alsatia of Spanish and Dutch outlaws and runaway slaves, and the base of operations for French buccaners and Dutch expeditions designed to wrest from the Spaniards the gateway to El Dorado.

In 1810 the republic of Venezuela gained its independence and succeeded to the rights of Spain in Guiana, and in 1814 the Dutch colony of Essequibo, with Demerara and Berbice, was ceded to Great Britain. In 1841 Robert Schomburgk was employed by the British Government to survey the boundary. He drew a line based partly on certain old maps and certain ruins and other evidences of former white occupation which he assumed to have been Dutch, though the ruins at Point Barima were probably those of a French fort, partly on the geographical configuration of the country (see map in *Annual Cyclopædia* for 1895, page 740). In his report he extolled the value to Great Britain of Point Barima as controlling the only entrance to the Orinoco that was navigable by large vessels. He erected boundary marks at the mouths of the Barima and Amacura rivers, and British officials appeared at Point Barima, creating intense excitement in Venezuela, and drawing from the Venezuelan Government a remonstrance, in consequence of which the British Government caused the boundary posts to be removed, explaining that they were not intended to indicate possession. Schomburgk's revised map, completed after the survey, made the proposed boundary run along the crest of the Imataca mountains, giving to Great Britain the whole of the Cuyuni river and its tributaries, whereas his first line, the one that was communicated to the Venezuelan Government and made public, crossed the Barima, the Barama, the Cuyuni, and the Massaroony midway in their course.

The Venezuelan claim embraced all territory west of Essequibo river except the coast district from the Maruka to the Essequibo and the lands along the left bank of the Essequibo and on the lower course of the Cuyuni and the Massaroony which could be claimed by England by prescriptive right derived from Dutch settlement in the last century. The British extreme claim embraced the whole basin of the Essequibo and Cuyuni, reaching almost to the Orinoco and the Caroni, and the whole seacoast up to and including Point Barima, with the drainage basins of the Barima and Waini. This was the claim made by Lord Salisbury that led to the rupture of diplomatic relations by Venezuela when preparations were made to take possession of Barima in 1880. The British Government adhered to Schomburgk's capricious line, as the Venezuelans described it, the one published in 1841, except when Lord Aberdeen in 1844 and Lord Granville in 1881 offered slight concessions to Venezuela to end the dispute. In 1850 the two governments agreed mutually, in an interchange of notes, that they would not encroach on the disputed territory until the boundary should be settled. When the Venezuelan Government granted some forest lands to an American company, part of which Great Britain asserted lay within the disputed territory, the latter asserted that this was a breach of the agreement.

On the discovery of gold in the Yuruari and Yuruan districts of the upper Cuyuni valley, miners from British Guiana flocked into the country, and the British Government announced the intention of exercising jurisdiction up to the Imataca mountains and the Amacura river. Lord Salisbury brought forth a later boundary drawn by Schomburgk as the final result of his sur-

vey, which made the whole basin of the Cuyuni British territory. When informal negotiations were opened in 1876 Venezuela agreed to accept the line of the Maruka river and the upper Cuyuni proposed by Lord Aberdeen in 1844. Lord Granville claimed a large extent of territory to the north of it on the coast, and in 1881 offered a line starting not far from the mouth of the Waini. When Venezuela reopened the question of arbitration in 1887, after the discoveries of gold, Lord Salisbury refused to arbitrate anything east of the Schomburgk line. The second Schomburgk line, before that kept secret, was then communicated to the Venezuelan Government, and in 1889 the Barima was declared British territory, and British posts were established in the Yuruan and Yuruari gold fields. In 1895 President Cleveland announced that the traditional and established policy of the United States Government was opposed to extension of the possessions of any European power on the American continent. When the British Government, in reply, declined to accept the Monroe doctrine, he proposed to Congress in a message, and Congress agreed on Jan. 2, 1896, to appoint a commission to determine what the true boundary is between Venezuela and British Guiana. He declared in his message that it would be the duty of the United States to resist the appropriation by Great Britain of lands or the exercise of jurisdiction over territory which of right belongs to Venezuela, as a willful aggression upon its own rights. The American commission, consisting of Justice David J. Brewer, Richard H. Alvey, Andrew D. White, Frederic R. Coudert, and Daniel C. Gilman, took much testimony, but made no report, because the British Government in the meantime reconsidered its position and agreed to arbitrate.

The British claim presented to the tribunal did not include the whole region in the interior to which Lord Salisbury had laid claim, but was nearly the same as the one that Lord Palmerston advanced in 1850, following the earlier Schomburgk line. The Venezuelan Government adhered to its position that the Essequibo was the political boundary indicated in the treaty of Münster and never altered by any legal act. The territory in dispute had an extent of nearly 60,000 square miles.

The counsel for Venezuela were not prepared to prove any acts of sovereignty or evidence of occupation on the part of Venezuela within the disputed territory, because they understood that the fifty-year prescription reserved by Great Britain in the treaty of arbitration applied to the period antedating the cession of British Guiana to Great Britain, and that nothing that occurred subsequent to 1814 could be taken into account. The British counsel made it clear that the fifty years of continuous possession insisted upon in the correspondence and stipulated in the treaty were those running back from 1897, the date of the treaty. The American counsel being convinced of this, did not urge the point.

The unanimous award of the arbitrators was delivered on Oct. 3. The boundary line between the colony of British Guiana and the United States of Venezuela was determined as follows:

Starting from the coast at Point Playa, the line of boundary shall run in a straight line to the river Barima at its junction with the river Muruma, and thence along the midstream of the latter river to its source, and from that point to the junction of the river Haiowa with the Amacura, and thence along the midstream of the Amacura to its source in the Imataca ridge, and thence in a southwesterly direction along the

highest ridge of the spur of the Imataca mountains opposite to the source of the Barima, and thence along the summit of the main ridge of the Imataca mountains in a southeasterly direction to the source of the Acarabasi, and thence along the midstream of the Acarabasi to the Cuyuni, and thence along the northern bank of the river Cuyuni westward to its junction with the Wenamu, and thence following the midstream of the Wenamu to its westernmost source, and thence in a direct line to the summit of Mount Roraima, and from Mount Roraima to the source of the Cotinga and along the midstream of that river to its junction with the Takutu, and thence along the mid stream of the Takutu to its source, thence in a straight line to the westernmost point of the Akarai mountains, and thence along the ridge of the Akarai mountains to the source of the Corentin, called the Cutari river.

The provision was inserted in the award that the line of delimitation fixed by the arbitrators shall be subject and without prejudice to any questions now existing or which may arise to be determined between the Government of her Britannic Majesty and the republic of Brazil, or between the latter republic and the United States of Venezuela.

In fixing the above delimitation the arbitrators considered and decided that in times of peace the rivers Amacura and Barima shall be open to navigation by the merchant ships of all nations, subject to all just regulations and to the payment of light or other like dues; provided that the dues charged by the republic of Venezuela and the government of the colony of British Guiana in respect of the passage of vessels along the portions of such rivers respectively owned by them shall be charged at the same rates upon the vessels of Venezuela and Great Britain, such rates being no higher than those charged to any other nation, provided also that no customs duties shall be chargeable either by the republic of Venezuela or by the colony of British Guiana in respect of goods carried on board ships, vessels, or boats passing along the said rivers, but customs duties shall only be chargeable in respect of goods landed in the territory of Venezuela or Great Britain respectively.

VERMONT, a New England State, admitted to the Union March 4, 1791; area, 9,565 square miles. The population, according to each decennial census, was 154,465 in 1800; 217,895 in 1810; 235,966 in 1820; 280,652 in 1830; 281,948 in 1840; 314,120 in 1850; 315,098 in 1860; 350,551 in 1870; 332,286 in 1880; and 332,422 in 1890. Capital, Montpelier.

Government.—The State officers in 1899 were: Governor, Edward C. Smith; Lieutenant Governor, Henry C. Bates; Secretary of State, Frederick A. Howland; Treasurer, John L. Bacon; Auditor, Orion M. Barber; Adjutant General, T. S. Peck; Superintendent of Education, Mason S. Stone; Chief Justice of the Supreme Court, Jonathan Ross; Associate Justices, Loveland Munson, John W. Rowell, R. S. Taft, H. R. Start, L. H. Thompson, James M. Tyler; Clerk, M. E. Smilie. All the State officers are Republicans.

The State Senate, which has 30 members, is unanimously Republican. In the House there are 201 Republicans, 42 Democrats, 1 Prohibitionist, and 1 Independent.

Finances.—The State Treasurer's report for the fiscal year ended June 30, 1899, shows gross receipts, \$1,413,221.55; disbursements, \$1,280,288.04; leaving cash in treasury, \$133,632.91. Among the receipts is \$1,581.27 from 28 towns,

for excess of profit on liquor agency sales. Ludlow reports the largest sum, \$173.14; Highgate the smallest, 98 cents. The corporations paid \$403,535.99; the collateral inheritance tax, \$13,661.36.

The Auditor's orders paid amounted to \$635,994.59; debentures of the General Assembly, \$57,844.20; extra State pay, Spanish war, \$31,958.18; interest, \$31,034.36. The remaining items of expenditure were mostly for repayment of borrowed money and distribution of State, road, and school taxes.

The Treasurer estimated the revenues of the State, including cash on hand, at \$879,248.33; liabilities, \$530,737.47; balance available for the current fiscal year, \$348,510.86.

Railroads.—Under the charter granted by the Legislature of 1898 the Central Vermont Railway Company was reorganized at St. Albans in April. This reorganization was effected to carry out the agreement of the bondholders with the Grand Trunk Railway, and for the purpose of consolidating the various properties included in the recent sale of the road. The general manager of the Grand Trunk Railway said of it: "The organization of the Central Vermont property has been unique in that the relations between all interests have been adjusted satisfactorily and the property has been put on a sound financial basis without an assessment made on any class of security holders—the only instance of the kind known in modern railroad organizations."

In October a new arrangement was made with the conductors and brakemen, by which they are to receive pay according to the number of miles they run instead of by the month. It was said that this would increase their income.

Highways.—In May a meeting of road commissioners of Washington County was held in Montpelier to discuss the problem of permanent road building. The State Highway Commissioner, W. B. Viall, addressing the meeting, said that in five counties in which he had already held such meetings he had found only one man who had expanded the 5-per-cent. State tax according to law. Mr. Viall said he considered the macadamized road the best, and the so-called stone road next best. The State has insisted since the law was passed in 1894 that this 5-per-cent. tax shall be laid out for permanent roads, but this has not been done. J. P. Rice, of Northfield, explained his method of building permanent stone roads. Good drainage helps good roads. Slate gravel has been used by him with much success. The State money has been expended for gravel, and a separate account has been kept of it. Joseph Bartlett, of Plainfield, believed in the use of tile, and that it should be put in deep. Others gave the results of their experiments, and the subject was discussed thoroughly.

Forests.—A writer in the New England Homestead says: "One can but note with apprehension the gradual depletion of our Vermont forests, with no effort made to replace the annual output with young growth of the varieties most in demand, such as spruce and pine. The vast inroads made upon our young spruce and pine forests at the Christmas holidays' approach is especially destructive. Thousands upon thousands of young spruce trees from three to ten feet in height are annually shipped to the larger cities. The small pittance the farmer receives for them becomes a source of wonderment to those who have the preservation of our forests at heart. There are many acres in Vermont that could be set out to spruce and pine that would prove not

only a source of beauty but of added profit to the farmer."

Holidays.—The first Monday in September, known as Labor Day, became a legal holiday this year by legislative enactment. The weather was good, and celebration was general throughout the State.

Oct. 12 was observed as Dewey Day. Public-spirited citizens guaranteed the necessary funds for the arrangements, and special trains were run on all the railroads. It was estimated that 40,000 strangers were in Montpelier that day. At the reviewing stand the Governor presented the admiral with a gold medal. At Northfield, where Dewey received his early education, he laid the corner stone of a new building for the university which is to bear his name. Natives of Vermont no longer resident in the State have subscribed funds for a statue of the admiral, to be placed in the portico of the Capitol, at Montpelier.

Souvenir Guns.—The ordnance department of the United States navy has given to Montpelier two guns taken from the Spanish cruiser Castilla, which was sunk in Manila Bay by Admiral Dewey's fleet. The guns are 24 feet long and of 6½-inch caliber.

National Guard.—The Supreme Court of the State delivered in July an opinion concerning the status of the National Guard. The opinion holds that the First Regiment practically went into the United States army on leave of absence and, upon its return, resumed its old status; that all former members of the National Guard who went to the war are still members of the National Guard; that all former guardsmen who did not go are honorably discharged from service; and that citizen volunteers who enlisted to bring the companies up to a war strength upon their muster out returned to civil life and are not members of the National Guard.

VIRGINIA, a Southern State, one of the original thirteen, ratified the Constitution June 25, 1788; area, 42,450 square miles. The population, according to each decennial census, was 747,610 in 1790; 880,200 in 1800; 974,600 in 1810; 1,065,116 in 1820; 1,211,405 in 1830; 1,239,797 in 1840; 1,421,661 in 1850; 1,596,318 in 1860; 1,225,163 in 1870; 1,512,565 in 1880; and 1,655,980 in 1890. Capital, Richmond.

Government.—The following were the State officers in 1898: Governor, J. Hoge Tyler; Lieutenant Governor, Edward Echols; Secretary of State, Joseph T. Lawless; Attorney-General, A. J. Montague; First Auditor, Morton Marye; Second Auditor, Josiah Ryland, Jr.; Treasurer, A. W. Harman, Jr.; Adjutant General, W. Nalle; Superintendent of Public Instruction, Joseph W. Southall; Commissioner of Agriculture, George W. Koiner; Register of the Land Office, J. W. Richardson; President of the Supreme Court of Appeals, James Keith; Justices, John W. Riely, John A. Buchanan, George M. Harrison, and Richard H. Cardwell; Clerk, G. K. Taylor. All are Democrats.

Finances.—The Treasurer's report of the operations of the treasury for the fiscal year ending Sept. 30, 1899, has this synopsis:

On account of the Commonwealth: Balance on hand Oct. 1, 1898, \$236,881.73; received in the fiscal year 1898-'99, \$3,475,404.37; total, \$3,712,286.10. Disbursed in the fiscal year 1898-'99, \$3,106,343.65. Balance on hand Oct. 1, 1899, \$605,942.45.

On account of the literary fund: Balance on hand Oct. 1, 1898, \$205,626.55; received in the fiscal year 1898-'99, \$273,238.61; total, \$478,865.16. Disbursed in the fiscal year 1898-'99, \$274,584.62. Balance on hand Oct. 1, 1899, \$204,280.54.

On account of interest on the public debt: Balance on hand Oct. 1, 1898, \$5,177.07; received in the fiscal year 1898-'99, \$706,396.35; total, \$711,573.42. Disbursed in the fiscal year 1898-'99, \$707,568.03. Balance on hand Oct. 1, 1899, \$4,005.39.

On account of the sinking fund: Balance on hand Oct. 1, 1898, \$405,001.18; received in the fiscal year 1898-'99, \$133,904.63; total, \$538,905.81. Disbursed in the fiscal year 1898-'99, \$101,045.18. Balance on hand Oct. 1, 1899, \$437,860.63.

On account of the Miller fund: Balance on hand Oct. 1, 1898, \$5,398.18; received in the fiscal year 1898-'99, \$71,884.17; total, \$77,282.35. Disbursed in the fiscal year 1898-'99, \$67,011.35. Balance on hand Oct. 1, 1899, \$10,271.

The total balance in the treasury to the credit of the several funds Oct. 1, 1899, was \$1,262,360.01. In addition to this the United States direct tax fund had to its credit \$1,162.74.

The amount paid for pensions was \$106,235.

Education.—In the year ending July 31, 1899, the total population of school age was 665,865, of whom 397,162 were white and 268,703 colored. The number of schools was 8,806, of which 6,492 were for white pupils and 2,314 for colored. The number of pupils enrolled was 358,825, of whom 241,696 were white and 117,129 colored. The total average attendance was 203,136. The number of teachers was 8,836, of whom 6,671 were white and 2,165 colored. The average monthly salary was \$32.09 for men and \$26.39 for women. The cost per month for each pupil enrolled was 80 cents; for each pupil in attendance, \$1.41. The number of schoolhouses was 7,218; the total number of volumes in the school libraries, 17,660. The superintendent says in his report: "Among the encouraging indications of the growing influence of public education in Virginia is the increasing tendency to establish school libraries in the rural districts as well as in the towns and cities. During the last school year more books were purchased for this purpose than in any similar period of our history. In Roanoke County the school trustees have set aside a certain amount of their local tax fund to be spent for such books as they, in conjunction with the county superintendent, may select for the various schools. Other counties have similar provisions."

Penitentiary.—The superintendent of the Penitentiary says in his report: "For the first time in some years our report shows much decrease in our number from the year before. This is accounted for largely by the conditional pardon law. This law has worked well, but I renew the recommendations made in my last report as to amending the law in two particulars: First, that the law should not apply to those with sentences of less than two years; and, second, that those who have kept the prison rules two years continuously just prior to their time of application should be allowed the privileges of the law."

The average number of convicts in the Penitentiary in the year was 1,262, and the expense of keeping them was \$71,863.99. The per capita daily expense was 15 cents and 6 mills. Besides these, 281 were employed outside. The products of the State farm were valued at \$9,029.92.

State Hospitals.—In the Western State Hospital the number of patients cared for and treated during the year was 1,115, the largest in the history of the hospital, and there was a large increase in the number of applications for admission. It reached 286, of which 214 were approved and the applicants admitted. All the wards were occupied to their full capacity, and new patients were received by granting furloughs

to such patients as could be safely allowed to return home. The average per capita cost of maintenance was \$108.38, which is increased to \$112.36, if the cost of insuring the buildings and of the transportation of patients be included. Never in the history of the hospital has the cost been so small.

In the Eastern State Hospital the number treated was 659, the largest number in any year since it was established. On Sept. 30 the number was 564. The superintendent says in his report: "I have on file 18 applications for admission, with no hope of providing for their reception in the near future, except in the ordinary course of removal by death or discharge. It has been my purpose, since assuming charge of this hospital in February last, to give relief to as many of this unfortunate class as it was possible to do, by receiving all who applied, until the capacity of the institution is taxed to its highest degree." The per capita cost for the year was \$128.25.

In the Central State Hospital the number treated was 1,015, and the daily average was 860, the largest since it was established. At the close of the year the number of patients was 852. The per capita cost for the year was \$88.87.

In the Southwestern State Hospital the number of patients during the year was 489. The largest number at any one time was 410. The per capita cost for the year was \$129.62. The superintendent in his report says: "The most important need here is the early completion of the new building"; and again: "Of applicants, 122 have been admitted; some have gone to other hospitals, some have died in the jails or at their homes, and some are still waiting for want of room. Strenuous efforts have been made on the part of this hospital, and on the part of the other State hospitals also, to admit as many as possible, and especially to keep the county jails free from insane, as near as we could; but this has been impossible. Some remain in jail at this time. As said before, the number in jail varies often each day, as the friends often, when no room can be had at the State hospitals, come at once and take them out of jail on bond."

Agriculture.—The Commissioner of Agriculture says in his report: "This department is now chiefly a fertilizer bureau, and is giving to the farmers of the State valuable protection, in securing for them fertilizers up to their guarantee. Our farmers spend annually over \$4,000,000 for fertilizers. This is a large expenditure of money, and without careful protection they could be easily defrauded out of large sums. The commissioner in a neighboring State reports that the farmers in his State lost annually at least 25 per cent. in value in the fertilizers they bought, before the State required the fertilizers sold therein to be inspected by law. If such were true in this State, this department is saving our farmers over \$1,000,000 annually.

"Owing to the stringent pure-food laws which have been passed by other States, except Virginia, this State has become the dumping ground for much adulterated food and feeds. The extensive and increasing sale of oleomargarine and butter adulterations in this State, which is advertised

and sold here as Virginia butter, has ruined our home-made butter market. Jellies, preserves, molasses, canned goods, and other country-made articles of diet, also food made from cereals and flour, are so much adulterated that the health of many people is no doubt seriously impaired, while the market price for the pure articles is reduced below the cost of production by our farmers."

The commissioner says the State contains 15,000,000 acres of uncultivated arable land.

Military.—The Adjutant General says in his report for the two years 1898-'99: "The Virginia regiments went into the volunteer army of the United States with the desire and the expectation of seeing very much more active service than fell to their lot, and the fact that the names of no battles are inscribed upon their flags is no fault of theirs. They performed well the duties which were assigned to them, and endured as Virginia soldiers should the many privations and hardships incident to army life in the field in time of war. The total number of officers and enlisted men who served in the four Virginia regiments during all or a portion of the time those regiments were in the United States service is 198 officers and 5,128 enlisted men. The losses by death were 2 officers and 68 enlisted men."

Oysters.—The report of the State Board of Fisheries shows that \$54,320.69 was collected from the State oyster beds and fishing grounds, and paid into the State treasury in the year ending March 31, 1899. The net amount of revenue derived from the fish and oyster industries in that time was \$34,247.96. The State's revenue from fish and oysters for the fiscal year ending Sept. 30, 1898, was \$30,000, and the expense of enforcing the law that year was \$2,000 in excess of the total amount of the revenue from the industry.

Confederate Monument.—On June 6 a monument was unveiled in Stonewall cemetery, Winchester, in commemoration of 149 Confederate soldiers of South Carolina who are buried there. The shaft is of Italian marble, 18 feet high, shaped in imitation of Cleopatra's Needle.

Dismal Swamp Canal.—The Dismal Swamp Canal was formally opened on Oct. 14. The Talbot was the first war ship to pass through it.

Legislative Session.—At the session of the Legislature in January among the bills passed were these:

To incorporate the Big Sandy and Cumberland Railroad Company.

For the creation of the Norfolk, Portsmouth and Newport News Railway Company.

To incorporate the Independent Order of Galilean Fishermen.

Authorizing the Jefferson Davis Monument Association to transfer all its funds and property to the United Daughters of the Confederacy.

Requiring the teaching in the public schools of the effect of alcohol on the human system.

Several amendments to the game laws.

A bill to punish wife beaters caused a lively debate. It provided that the offender should be beaten with stripes.

Numerous bills of local interest and importance were passed.

W

WASHINGTON, a Pacific coast State, admitted to the Union Nov. 11, 1889; area, 69,180 square miles. Population, according to the census of 1890, 349,390. Capital, Olympia.

Government.—The State officers for the year were: Governor, John R. Rogers; Lieutenant Governor, Thurston Daniels; Secretary of State, Will D. Jenkins; Treasurer, C. W. Young; Auditor, Neal Cheatham; Commissioner of Public Lands, Robert Bridges; Superintendent of Public Instruction, Frank J. Browne; Attorney-General, Patrick H. Winston—all Populists except Winston, who is a Silver Republican. Chief Justice of the Supreme Court, Elmon Scott; Associate Justices, T. J. Anders, M. J. Gordon, R. O. Dunbar, James B. Reavis, and Mark A. Fullerton.

Finances.—The last report of the Treasurer was that which covers the period from Nov. 1, 1896, to Oct. 31, 1898. A summary of this, including all the important items, was published in the Annual Cyclopædia for 1898, page 825. The total receipts for the two years were \$3,984,049.30; the total disbursements, \$3,443,424.31.

The bonded indebtedness of the State, Nov. 1, 1896, was \$300,000; in each of the ensuing two years bonds to the amount of \$25,000 were redeemed, leaving the bonded indebtedness, Oct. 31, 1898, \$250,000. Besides this, there were warrants outstanding to the amount of \$1,455,969.25, making the total indebtedness of the State, Oct. 31, 1898, \$1,705,969.25. The estimate of receipts for the biennial term ending March 31, 1901, is \$1,663,000; and of expenditures, \$1,035,400.

Banks.—Thirty-two State banks reported to the Auditor in 1898. Their resources on May 31 of that year were as follow: Loans on real estate, \$316,015.35; loans on personal property, \$501,834.21; other loans and discounts, \$1,851,258.47; stocks and bonds, \$203,280.55; State, county, and city warrants, \$307,848.42; real estate, \$1,218,151.31; due from banks and bankers, \$1,235,137.50; furniture and fixtures, \$64,223.60; expenses, etc., \$101,360.05; overdrafts, \$92,297.97; other resources, \$348,293.30; cash on hand, \$924,634.37; total, \$7,164,335.16. Their liabilities were thus summarized: Capital stock paid in, \$1,836,390; surplus fund, \$149,652.69; undivided profits, \$233,308.77; certificate of deposit, \$1,015,824.70; individual deposits subject to check, \$3,047,245.05; due to banks and bankers, \$241,541.80; certified checks, \$9,808.54; savings and trust deposits, \$598,003.49; bills payable and debenture bonds, \$20,250; dividends unpaid, \$990; discounts, \$11,320.12; total, \$7,164,335.16.

Education.—The State Superintendent says in his report: "The last Legislature enacted a code for the government of the public schools, the provisions of which have brought the common schools and the several educational institutions in closest sympathy. One chapter has special reference to the better organization of the schools into a unified system. Under this provision, the normal schools receive the graduates from the eighth grade of the common school; the University and Agricultural College receive students with full credit for work done at the normal schools; the State board are brought in touch with the able leaders of State institutions, and are enabled to adopt such a policy as will lead through the common school course up through the higher institutions of learning. The members

of the faculties of these higher institutions are coming into closer touch with the common schools, and are making themselves felt by work done in county institutes and teachers' associations, and the teaching force of the State is looking to the institutions for inspiration and leadership. The masses of the public seem to be more sensitive to the efforts put forth by the State institutions, and a restored confidence has brought prosperity to such an extent that the haste to get out of the State for a higher education has ceased to manifest itself, and from present indications never will again do so."

No later school statistics are published than those given in the Annual Cyclopædia for 1898.

The experiment of school savings banks was instituted in the spring of 1898. The teacher receives money from the pupils in any sum, even as small as one cent, and gives him a card on which the account is kept. When a pupil's deposits amount to \$3 he receives a bank book, and the money then bears interest at 5 per cent. Money can be withdrawn only with the consent of the parent. In the first three months the number of depositors in the State was 2,039, and the amount deposited was \$2,940.07. This experiment has been tried in other States, and it is said that the school children have thus deposited about \$200,000.

Forestry.—Forestry is taught in some of the educational institutions of the State. In January, 1897, a Forestry Association was organized. Edmond S. Meany, president of the association, said in his address: "The State of Washington presents all the numerous and varied problems that challenge the attention and the interests of the scientific forester the world over. We have in western Washington vast forests to protect; in eastern Washington great treeless areas to be planted; and between these two natural divisions we have the sources of many rivers which the health and prosperity of the people demand to be protected by a generous cover of forest growth. Out of these three classes of general forestry problems will spring all the diversified problems that deserve your attention now, and if neglected will some day compel your attention in ways not pleasant to contemplate. . . . The protection of the western Washington forests from fire is the most pressing problem at this moment, as any one can testify who has lived here during any summer season. The clouds of smoke that dim your eyes, shut out the sun, and choke you with biting fumes speak a most forceful language of acres and acres of the finest timber on earth being wasted and destroyed by needless fires. You all know that if this is to go on long enough all our forests will be destroyed. My observation has suggested two remedies that would help to allay this evil in some degree. One is to enact a law forbidding settlers and farmers from setting fire to slashings in timbered districts, except between Nov. 1 and May 1. This would eliminate one source of these fires. The other is to enact a law requiring railroad companies to do one of two things—clear their rights of way of all inflammable rubbish for 50 feet or more on each side of the track or to provide a perfect spark arrester for each locomotive."

Insurance.—The latest published statistics of insurance in this State are those for 1897. In that

year 11 accident companies received premiums to the amount of \$53,183.48, paid losses to the amount of \$40,290.72, and were taxed \$641.44.

Five marine companies received premiums to the amount of \$42,208.79, paid losses to the amount of \$3,960.34, and were taxed \$105.17.

Six plate-glass companies received in premiums \$6,239.81, paid losses to the amount of \$1,585.99, and were taxed \$41.98.

Nine fidelity and casualty companies received \$30,687.33 in premiums, paid losses to the amount of \$9,358.96, and were taxed \$164.81.

Three steam boiler companies received \$3,300.50 in premiums, had no losses, and paid \$52 in taxes.

One sick benefit company received \$533.87 in premiums, paid losses to the amount of \$464.31, and was taxed \$1.38.

Sixty-four fire insurance companies received premiums to the amount of \$1,204,035.86, paid losses aggregating \$422,165.43, and were taxed \$16,665.53.

Nineteen legal-reserve life companies received \$508,578.54 in premiums, paid losses to the amount of \$176,054.56, and were taxed \$7,167.83.

Eleven assessment life companies received \$51,706.94 in premiums, paid losses to the amount of \$33,416, and were taxed \$412.35.

The fees and taxes collected by the Insurance Department in the two years 1897-'98 amounted to \$52,419.37, while its expenses were \$2,800.

Decisions.—A decision was rendered by the Supreme Court, in May, on the question whether, in an action to recover for bodily injuries, a court has power to compel the plaintiff to undergo an examination by medical experts appointed by the court for the purpose of ascertaining the character and extent of the alleged injuries. It was a case in which a woman sued a railroad company to recover damages for injuries she had received while a passenger on its road. The lower court held that it had no power to order such examination, but the Supreme Court decided that it had. The decision was written by Chief-Justice Gordon and was concurred in by Justices Dunbar and Anders. Justices Reavis and Fullerton dissented.

In June the Supreme Court made several decisions in habeas corpus cases, ruling that when such cases are pending bail is not admissible.

Coal.—In the spring coal was discovered at Bucoda, in Thurston County. It is said to be the finest bituminous coal that has been found in the Northwest, and that the quantity is abundant.

Fish.—The Legislature made liberal appropriations for the department of fisheries, and in April the commissioner began putting the money to the purpose for which it was intended. He began the erection of a new hatchery on Nooksack river, for which \$5,000 was appropriated. The Olympian said in March: "Hatcheries will also be built near Wenatchee, on the Columbia river, and on the Skokomish river and at Willapa harbor. For the Wenatchee hatchery \$5,000 was appropriated, for the Skokomish \$5,000, and for Willapa harbor \$4,000. The Samish hatchery has been bought for the State. A hatchery to cost \$2,000 will be built on Little Spokane river. Later in the season one will be built on the Snohomish, for which \$3,000 is appropriated—\$2,000 this year and \$1,000 next. In 1907 hatcheries will be built."

Legislative Session.—The Legislature met Jan. 9, and sat till March 15. Lieut.-Gov. Thurston Daniels presided over the Senate, and E. H. Guie was elected Speaker of the House.

The Governor, in his message, set forth the ne-

cessity of raising the standard of common-school education, and suggested increased taxation for the school fund; he opposed the maintenance of more than one normal school, and afterward vetoed the appropriations for all but one; he advocated increased taxation of corporations and incomes, and reduction of interest on State warrants; he asked for the establishment of a railway commission, and the creation of the office of bank examiner; he opposed the appropriation of money to complete the State Capitol, and suggested the purchase of Thurston County courthouse instead; he emphasized the desirability of concurrent legislation with Oregon for the government of Columbia river fisheries; he advocated a suitable appropriation for a State exhibit in Paris, also urged an appropriation for a permanent exhibit of the State's resources at Omaha; he recommended the repeal of the law permitting suit to be brought against the State in the court of Thurston County, and declared that the log-scaling law should be either amended to effectiveness in protecting the interests of loggers or repealed.

On the first day of the session the House passed unanimously this resolution:

"Be it resolved by the House of Representatives of the Legislature of the State of Washington, now in session, that greetings be sent to President William McKinley, notifying him that the people of the State of Washington, through their legislative session assembled at the State capital, appreciate and indorse his wise, patriotic, and statesmanlike policy, by which the war against Spain for humanity's sake was commenced, successfully prosecuted, and speedily terminated under the direction of the President of the United States as the commander in chief of the army and navy of the Union; and that we earnestly hope and sincerely trust that the treaty of peace recently agreed to in Paris and signed by the commissioners of the United States and Spain will be speedily ratified by the Senate of the United States. And we further express to the President our confidence in him, and our admiration for the dignified foreign policy which has been inaugurated, with respect to the conquered territory coming into possession of the United States through the gallant and efficient efforts of our military and naval forces, as a conquest of war, and we believe that it should be the policy of this Government to maintain the Stars and Stripes over all territory where they may have been raised."

The most important bill presented at the session was one appropriating \$600,000 to complete the State Capitol. This passed both houses, but was vetoed by the Governor, and it failed to pass over the veto. Other important bills were for constructing or improving State roads. Another was to establish an industrial home for the adult blind at Lake Samamish, in King County, appropriating \$14,000. There are 111 blind adults in the State. Among the other bills passed were these:

Authorizing cities of the first, second, and third classes to maintain bicycle paths.

Relating to maintenance of ferries by cities and counties.

To provide for a museum at the university.

To provide for the maintenance of cemetery associations.

To provide against injury to the public lands.

To require railroads to protect frogs, switches, and guard rails.

To remit delinquent taxes, penalty and interest.

Creating the office of State fruit inspector.

For promotion of fruit growing and horticultural interests of the State.

Relating to manufacture and sale of dairy products.

Requiring horseshoers to pass an examination.

Appropriating \$5,000 for the destruction of Canada and Russian thistles.

Creating the county of Wenatchee.

Reducing the interest on State warrants to 6 per cent.

A resolution to submit to the people a constitutional amendment empowering the Legislature to exempt \$300 in personal property from taxation.

Addison G. Foster, Republican, was elected United States Senator.

WEST AFRICA. European possessions on the western coast of Africa, north of the Congo, previous to the assumption by Germany in 1884 of a protectorate over Togoland and the Cameroons, consisted merely of the English trading posts at Bathurst, Lagos, and on the Gold Coast, the English colony of Sierra Leone, originally peopled by liberated slaves from the West Indies, and the French colony of Senegal. In this last alone was any activity or desire of expansion exhibited. The Spaniards in the Bight of Biafra and the Portuguese at Cape Verde had practically abandoned their settlements on the mainland, retaining only the islands. The English were inclined to contract their boundaries. Since the extinction of the slave trade commerce had steadily declined. Spirits were the chief article of import, and German potato spirits had supplanted the rum formerly supplied by New England and the West Indies. The new colonial projects of Germany reawakened the spirit of colonial enterprise in other nations and gave rise to a sharp rivalry, which was particularly intense in West Africa, the whole of which is now partitioned between France, Great Britain, and Germany, save territories left to the independent republic of Liberia, after the encroachments of the French and English and petty enclaves retained by Portugal and Spain on the shores of Senegambia and the French Congo. As the result of the struggle for spheres of influence in this part of Africa and in other previously unoccupied regions of the earth, the whole undeveloped interior has fallen to France, whose possessions hem in British Gambia, which is now confined to a narrow strip along the banks of the river, confine Sierra Leone and Liberia to the coast region controlled by the actual settlements, inclose the British Gold Coast colony and German Togoland, restrict the *Hinterland* of Cameroons to a conventional frontier, and shut in by treaty Nigeria from extension eastward into the central Soudan. However, in this region the British, who through the instrumentality of the Royal Niger Company developed the greatest activity here, have made good their claim to a wide and promising country traversed by the maritime Niger and the navigable part of the Benue.

The low import duties levied on spirits, 1s. a gallon in Togo and the neighboring British colonies, only 8d. in Dahomey, and not over 4s. 6d. in any part of the coast, have made drinking as easy and cheap as in almost any part of the world. Bishop Herbert Tugwell, of the Anglican West African diocese, in making a public plea for a duty of 10s. 6d. a gallon, the same as in the United Kingdom, called attention to the extraordinary consumption of spirits by the whites on the coast, estimated to average 12 gallons per annum a man, attributed 75 per cent. of the

deaths among Europeans to drinking at all hours and drunkenness. For this statement the Governor of Lagos instituted a prosecution for criminal libel at the demand of the white people; but the charge was withdrawn by the public prosecutor because it could not be legally sustained. In May, 1899, the import duty on spirits was increased 1s. a gallon in the Niger Coast protectorate. An international conference on the African liquor traffic was held at Brussels, at which it was agreed to raise for the period of six years the minimum import and excise duty on spirituous liquors throughout the zone where the general act of Brussels does not provide for total prohibition, from 15 francs a hectolitre at 50° centigrade (the rate fixed by that act) to 70 francs, except in Togo and Dahomey, where it may be exceptionally at the rate of 60 francs. The convention was signed by plenipotentiaries of Germany, Belgium, Spain, the Congo State, France, Great Britain, Italy, Netherlands, Portugal, Russia, Sweden and Norway, and Turkey. The Spanish and Turkish representatives only signed the treaty *ad referendum*. The German representative read a declaration protesting against the differential treatment accorded to certain spirituous liquors in some African colonies, and stating that the German Government on the occasion of a future revision of the convention would make its co-operation dependent on the general aspect which this differential treatment may at that time present. The British representative read a declaration protesting against the insufficiency of the duties, stating that his Government had agreed to the rate solely in order that the labors of the conference should not be without any result, and hoped that at the end of the six years the rate would be raised, and that even before that date, should the need of revision make itself apparent, the powers would not refuse to reconsider the matter at the invitation of the British Government. The convention provides for a new conference at the end of six years and a revision of the import duty, to be based on the results produced by the present rate. The powers retain the right of maintaining or increasing the duty beyond the minimum in the regions where they already possessed that right. The British plenipotentiary had pressed for a duty of 100 francs a hectolitre, equal to 4s. a gallon. The rate of duty had already been raised on the British Gold Coast to 4s. 6d. a gallon, on the French Ivory Coast to 3s. 9d., in Sierra Leone and in Cameroons to 3s. At Lagos and in the Niger territory it had recently been increased from 1s. to 2s. In the *Hinterland* of the Niger Coast protectorate absolute prohibition was proclaimed. In the Niger territories, inhabited to a great extent by Mohammedans and coming within the prohibition regions prescribed by the Brussels act, the prohibition was made general by a proclamation of Sir George Taubman Goldie before the transfer of the territories from the Niger Company to the British Government.

British Possessions.—The British and French spheres have by various agreements been so completely delimited that it is possible to make an approximate estimate of the extent of the British possessions. By the agreement of 1898 Great Britain relinquished 150,000 square miles previously claimed in the Niger region, reducing the area of the Niger territories to about 350,000 square miles, with a population between 15,000,000 and 25,000,000. The *Niger Coast protectorate* is about 3,000 square miles in extent. The Royal Niger Company, formed in 1882 with the main object of obtaining the Niger regions for

Great Britain, has by means of its trading monopoly driven French and German merchants as well as political agents from the field, and has paid dividends on its capital of £1,100,000. The trade of the Niger Coast protectorate has been carried on by a company of Liverpool merchants, who likewise have been excluded from the Niger river by the regulations of the chartered company. The protectorate has heretofore been administered by a commissioner under the direction of the Foreign Office in London. The revenue in 1898 was £153,181, of which £145,440 came from customs; expenditure, £121,900. The imports in 1898 were £639,698; exports, £750,223. The trade in palm oil and palm kernels gave the name of the Oil Rivers district to the country traversed by the Calabar, Brass, and other creeks. Besides these commodities, caoutchouc, ivory, ebony, camwood, indigo, gum, barwood, and hides are exported. Cacao is grown, and plantations have also been started in the *Niger territories* where the cultivation of coffee has been introduced also. The natural products are gums, caoutchouc, ivory, palm kernels, palm oil, vegetable butter, and skins. The military force of the Royal Niger Company, consisting of 1,000 Hausa troops, was supplemented in 1898 by 2,400 black troops raised by Col. F. D. Lugard, which were stationed in Borgu after the subsidence of the excitement caused by the French occupation of a port on the navigable Niger. A public debt of £250,000 was contracted by the Royal Niger Company while contending with France for the possession of Sokoto and Gandu on the middle Niger and with Germany for the countries on the Benue. Early in 1897, when the trial of strength with foreign governments was nearly ended, the Emir of Nupe denied the authority of the company over the country that he occupied with an army of 30,000 men. The Sultan of Ilorin was also defiant. Sir George Goldie, with a force of 800 men, defeated first one and then the other, and issued a decree abolishing the legal status of slavery under the judicial system of the company. The introduction of firearms and spirits into the interior was already prohibited.

Immediately after the ratifications of the Anglo-French convention of June 14, 1898, were exchanged the British Government arranged with Sir George Taubman Goldie, chairman of the Royal Niger Company, the terms of the transfer to the Imperial Government of the administrative authority and territorial rights of the company, together with lands and mineral rights that it was thought desirable to take over and the buildings, military stores, etc. The trading rights to be retained by the company were only such as all other traders possessed, not the virtual monopoly that the control of transport facilities and trading stations, the possession of both banks of the river, and the right to collect duties and tolls had previously preserved. The compensation that the Government agreed to pay was £865,000, representing the debts incurred and advances from profits for administrative expenses and the value of the lands, buildings, mineral rights, etc., acquired from the company. The treaties that the chartered company in its sovereign capacity had made with native rulers contained a clause binding them, when called upon to do so by the company, to place their territories under the protection of the British flag. The trading stations, river depots, wharves, rights of way, factories, and all the rest of its plant and trading assets are retained by the company. The 5-per-cent. debt of £250,000 the Government assumed with the right reserved of redeeming the bonds at any

time at 120. The Government agrees to impose a royalty on all minerals in the part of Northern Nigeria between the Niger and a line running from Yola to Zinder, and to pay half the receipts to the company for ninety-nine years. Of the total sum £820,000 were raised by a loan and £45,000 paid out of revenue, besides which £75,000 were voted for new buildings and the expense of starting the new administration. The entire sum paid to the chartered company was made a charge on the revenues of the new colony. The lands acquired by the Government from the company consisted of a narrow strip extending along both banks of the Niger, nowhere above 2,000 yards wide, but having a total area of 500 square miles. It was the possession of this strip that enabled the company to shut out completely any other traders from sharing the Niger trade. The customs frontiers between Lagos, the Niger Coast protectorate, and the Niger Company's territory were abolished and a common tariff established, except that the importation of spirits into Northern Nigeria was prohibited. In order to guard the better against their introduction into Northern Nigeria a neutral zone is established on the border of Southern Nigeria, within which spirits can be sold but not kept in store. The whole country was divided into the three colonies of Lagos, Southern Nigeria, and Northern Nigeria. Southern Nigeria, embraces the Niger Coast protectorate and the southern part of the Niger Company's territory. Col. Lugard was appointed Governor of Northern Nigeria. The Niger Company, whose charter was to be revoked on Jan. 1, 1900, decided to go on as a concern for trading, banking, the working of forests, the cultivation of indigo, tobacco, and other indigenous products, and generally for any financial and industrial objects. The capital was reduced to £319,760. The actual cash capital on which the company had been built up was said to have been about £160,000; but, in spite of deficit shown in the administrative account, the company had paid large dividends on the nominal capital every year.

The colonial loans bill passed by the British Parliament authorized a loan of £43,500 to the Niger Coast protectorate for harbor works at Old Calabar. This, as well as the rest of the English colonies, has made much progress lately in trade. The revenue for 1898 was £13,000 more than the previous average, which was £140,000.

There was severe fighting at the beginning of 1899. In an attack upon the Niger Company's forces, numbering 400, at Illah, several officers were wounded. After being re-enforced by a body of the West African frontier force, the troops attacked and destroyed Ibo, Kuka, and several other native towns and killed a great many natives. In April the troops of the protectorate marched against the chief Ologboshi, instigator of the Benin massacre in 1897, who was finally captured after the troops had burned six towns, and was executed early in July. In the territory of the Niger Company Capt. Carter was killed in April while attempting to scale the wall of Suntai, a town near the upper Benue, whose chief was committing depredations on his neighbors. A punitive expedition of Hausa troops with mountain guns captured Suntai and its chief in July, after inflicting heavy loss upon the defenders. In September there was prolonged fighting with the Fula tribes on the Benue, and a great many persons were killed and eight towns burned because there had been interference with the river traffic. In Northern Nigeria, which covers about 300,000 square miles, military operations under Col. J. Willcocks were directed to establishing fortified

posts along the western boundary, where the frontier was not yet demarcated, opposite similar posts held by French troops, and to occupying the Niger from Ilo northward. The forts were garrisoned with British troops, of which there were two battalions, three batteries, and a company of engineers, besides a large number of officers and noncommissioned officers for the native troops.

The *Gold Coast* colony proper has an area of about 15,000 square miles, with a population estimated at 1,473,882. There are about 500 whites. The protectorate behind the colony is the Kingdom of Ashantee, now controlled by the British resident commissioner at Kumassi. It has an area of about 31,000 square miles. There are 626 miles of telegraphs. The exports are caoutchouc, palm oil and kernels, and woods. The revenue of the colony in 1897 was £237,857; expenditure, £406,370; imports, £910,540; exports, £857,793. There are many gold mines, some of which are now worked by modern methods. A railroad from Secondee to the gold mines of Tarquah is being built, and this will probably be continued to Kumassi. Another line from Accra to the Volta has been authorized, and for these railroads and for an improved landing at Secondee and harbor works at Accra the Imperial Parliament has authorized loans amounting to £676,000. The Ashantees have been restless because they have no king. Capt. Donald Stewart, in exploring the back country about Wam with Hausa troops, had several encounters with the inhabitants, who objected to compulsory labor on telegraphs and to the house tax. The Ashantees, who formerly numbered 25,000 at Kumassi, all left when the English took the place, which now has only 2,000 inhabitants. Domestic slavery and slave dealing are common still, although slaves are sold by the British that they can leave their masters if they will. Searches for the buried gold of King Prempeh have proved fruitless, and the indications are that the hoards were stolen by the chiefs without the King's knowledge.

Sierra Leone, including the island of Sherbro and annexed territories back of the old colony, has an area of 30,000 square miles and about 250,000 inhabitants. The area of the colony proper is 4,000 square miles, with 74,835 inhabitants, including 224 whites. Freetown, which is the headquarters of the British troops in West Africa, has 30,033 inhabitants. The exports are palm kernels, caoutchouc, kola nuts, ginger, ground nuts, copal, benni seed, and hides. The revenue in 1897 was £106,008; expenditure, £111,667; imports, £457,389; exports, £400,748. The rebellion in 1898 disturbed the normal course of trade. The imports were £606,348 and exports £290,991 in value. The revenue was £117,682, the largest ever collected, in spite of the native rising, which affected some of the ordinary sources of revenue. The expenditure was £121,112, which was also unusually large on account of the insurrection. Of the imports, five sixths came from Great Britain, which took about half the exports. A railroad from Freetown to Moyamba, opened in May, 1899, for 30 miles to Songtown, and extended to Rotofunk before the end of the year, has been built with the aid of a loan of £310,000 guaranteed by the British Government. Columns of troops marched through the country that was the scene of the rebellion, to overawe the natives, who showed no disposition, however, to renew the disturbances in 1899. All the chiefs were brought down to the coast as prisoners. The people rebuilt their towns and planted crops. Sir David Chalmers, the special commissioner appointed to inquire into the causes of the rising and report on

the administration of the colony and of the protectorate, condemned the imposition of the hut tax in the protectorate, which was the cause of the rebellion, and recommended the restoration of the chiefs, who should be intrusted with the ordinary administration and police work under supervision, rather than the frontier police. The commissioner suggested that the subjects of a protectorate have rights, and it should be a work of forbearance and patience, rather than of overpowering force, to instruct them that they have duties and obligations toward the protecting power. By the encouragement of agriculture and industry and of missionary teaching, and by wise and sympathetic government on fixed principles of justice, he believed that the gradual raising of the level of civilization and the increase of population and industry would result in enough revenue for all needs, whereas endeavors to compel revenue by shortsighted and unsuitable means must result in failure. Sir Frederick Cardew, the Governor, defended his policy, and Mr. Chamberlain rejected the recommendations of the special commissioner. He decided to retain the house tax at the original amount of 5s. a house, giving the Governor power to remit it where he thinks it is excessive, and giving the poorer natives the option of paying it in labor. He commended the opinion of the Governor that "the exercise of force, peremptory, rapid, and inflexible, was the element to be relied on," and approved all the actions of the district commissioners and other European officers whom Sir David Chalmers, once Chief Justice of Sierra Leone, charged with acting with oppressive severity, with making arrests illegally, and with other breaches of the protectorate ordinance. Of the prisoners arrested after the suppression of the insurrection, 151 were condemned to death. Bai Bureh, the leader of the rebellion, was deported. The punitive expedition under Col. E. R. P. Woodgate, which marched through the Timani and Mendi country in five columns, not only destroyed 40 villages in the country that was lately in rebellion, but marched into unexplored regions of the hinterland after concentrating at Waïma, and in order to impress the ignorant natives, especially the powerful Gissi tribe, with the strength and mobility of the British forces, destroyed most of the stockaded towns, the natives having already destroyed their stores of rice and grain and cut all their bridges. The punitive operations were followed by a proclamation of amnesty throughout the provinces of the protectorate where the hut tax was confined. The Colonial Secretary decided to impose a hut tax in the colony too, in order to remove the inequality of which the people of the protectorate complained. A hut tax was formerly collected in Sierra Leone, but it was repealed by Sir John Pope Hennessy, whose policy was as popular among the Sierra Leoneans as that of Sir Frederick Cardew has been unpopular. The colony itself has been declining, owing to the competition of the French Government and people in their neighboring possessions. Since by agreement with France a hinterland containing 1,000,000 inhabitants has been secured, which produces rice, rubber, kola, gum, palm kernels and oil in abundance, the light railroad that has been built is expected to develop a considerable commerce, and already the trade is increasing. Simultaneously with the operations in the north one of the new West African regiments and the frontier police advanced into the Kissi country on the Liberian frontier. The chiefs resisted the invasion, finally making their submission after a great number of their people had been killed and 50 villages

burned down. The West African regiments have been recruited from the Mendis and Kimanis, the warlike tribes lately in revolt against the hut tax, and they receive higher pay than the West Indian regiments which have constituted the British military force on the coast hitherto. The British Government in 1899 renewed the demand for compensation from the French Government for the families of British officers killed in the collision with French troops at Waima in 1896. The French have protested that Waima is in Liberian, not in British, territory, while the English assert that it is several miles on their side of the border.

Lagos, the Gold Coast, Sierra Leone, and Gambia are Crown colonies. The island of *Lagos* and the protected territory on the coast have an area of about 1,500 square miles and a population estimated at 100,000. The country of Yoruba in the interior has an area of about 18,500 square miles, with 3,000,000 inhabitants. The revenue of Lagos in 1897 was £177,421, of which £159,819 came from customs; expenditure, £182,669. The value of imports was £770,511; exports, £810,975, of which £306,834 represent palm kernels, £283,184 caoutchouc, and £97,591 and the remainder ivory, gum copal, cotton, cacao, and coffee. There are about 200 Europeans in Lagos. The colonial loans bill included a loan of £792,000 to build a railroad from Lagos through Abeokuta to Ibadan, whence it is to be carried to the Niger. The line runs through a thickly peopled and productive district, the town of Abeokuta having a population estimated at 150,000 and Ibadan 200,000. The railroad was opened to Abeokuta early in 1899, and thousands of men were at work constructing the extension to Ibadan. The Egbas objected to the alienation of the lands through which the railroad runs, and only agreed to give a lease when a large force of Hausa troops was moved into their country.

Gambia has an area of 2,700 square miles, with about 50,000. The population in the settlement, covering 69 square miles, is 14,978, of whom 62 are whites. Ground nuts, caoutchouc, rice, cotton, and corn. The revenue in 1897 was £39,415; expenditure, £27,059; imports, £176,328; exports, £165,894.

French Possessions.—By the last two agreements with Great Britain the French have succeeded in uniting all their possessions in Africa in one continuous empire. The area and population of the chain of protectorates and spheres of influence extending from the Congo to Algeria and Tunis, and from Senegal to the watershed of the Nile, can be only vaguely estimated. The Sahara region south of Algeria is reckoned at 1,684,000 square miles, with a population of 2,500,000; the French Soudan at 250,190 square miles, with 4,900,000 population; Senegal at 115,800 square miles, with 2,000,000 population; the Ivory Coast and hinterland at 64,420 square miles, with 650,000 population; Dahomey at 14,140 square miles, with 600,000 population; Bagirmi, declared a French protectorate in 1897, at 65,650 square miles, with 1,000,000 population; the French Congo at 496,920 square miles, with 8,950,000 population. These make together a total area of 2,691,120 square miles, with an estimated population of 21,600,000. Algeria and Tunis, with the Algerian Sahara, bring up the total to 3,049,934 square miles, with 27,580,000 population. Included in the French sphere as now recognized by England are furthermore the Mohammedan countries of the central Soudan. Bornu has an area estimated at 50,000 square miles and a population estimated at 5,000,000,

while Wadai and Kanem have an area estimated at 107,000 square miles and a population of about 1,600,000. East of these are other territories falling within the French sphere, and on the north are the desert regions of the eastern Sahara, containing Tibesti, Borku, and other inhabited countries.

The *French Congo* and *Gabun* territories extend along the north bank of the Congo and the Mobangi eastward to the Anglo-Egyptian sphere on the Nile, and run northward behind the Cameroons and along the eastern bank of the Shari to Lake Chad. The whole region is mostly covered with forests. There are about 300 Europeans besides the military. The export of caoutchouc in 1897 was 518 tons; of ivory, 105 tons; of palm oil, 140 tons; of palm kernels, 806 tons; of ebony, 1,748 tons; of mahogany, 3,421 tons. Kola nuts, prassava, and other products are also exported, and coffee and cacao are cultivated. The local revenue in 1898 was 3,501,400 francs. The expenditure of France for 1899 was 2,491,165 francs.

Bagirmi is a marshy country on the shore of Lake Chad and the bank of the lower Shari. In accordance with a treaty made with the Sultan a French resident was appointed to Massenia, the capital. The people are Mohammedans, who hold in subjection pagan tribes in the south and hunt slaves in the territories beyond.

Senegal is a French colony, consisting of the port of St. Louis and chains of stations on the river Senegal and along the coast between Gambia and Cape Verde, each with a district around it defined by fixed boundaries. The total population of these settlements is about 135,000. The Governor General is assisted by a Colonial Council. The colony is represented by one Deputy in the French Chamber. The troops, French and native, number 2,508, with 66 officers. The railroads have a length of 248 miles. There are 574 miles of telegraph line, with 1,022 miles of wire. The trade is almost exclusively with France, from which merchandise of the value of 23,524,534 francs was imported in 1897, of which 14,242,351 francs represent imports for consumption within the colony, while native produce of the value of 13,532,087 francs was exported to France. The exports are ground nuts, gums, caoutchouc, palm kernels, palm oil, hides, mats, and gold. The revenue collected in 1898 was 3,929,367 francs. The contribution of France for 1899 was 6,106,942 francs.

The settlements of *French Guinea*, formerly united to Senegal, were made a separate colony in 1890 and called originally the *Rivières du Sud*. The capital is Conakry, on the island of Tombo. The population of the colony proper is 47,541. The value of the imports in 1896 was 4,634,000 francs, of which 525,000 francs came from France; the exports were 5,787,000 francs, of which 864,000 francs went to France.

The *French Soudan* embraces the territory on the upper Senegal, and districts some distance beyond that have been annexed by France and are under the direct administration of the military commandant residing at Kayes and also the Mohammedan countries on the upper and middle Niger and in the rear of the Ivory Coast and Liberia, including Samory's and Tieba's kingdoms. The annexed territory has an estimated area of 54,000 square miles and a population of 360,000; the protectorates are estimated to have an area of 300,000 square miles and 2,500,000 inhabitants. The military commandant acts under the instructions of the Governor of Senegal. A railroad, 94 miles in length, runs from Kayes toward the Niger as far as Bafoulabe. The ex-

ports are mainly earth nuts, but gum, caoutchouc, and rice are also exported. Iron is abundant for native use, and some gold is obtained. The imports in 1897 were valued at 8,551,805 francs and exports at 4,777,282 francs. The local revenue in 1897 was 2,725,500 francs. The expenditure of France for 1899 was 6,873,000 francs.

The *Ivory Coast* colony, east of Liberia and west of the British Gold Coast, consists of the settlements of Grand Bassam, Assinie, Grand Lahou, and Jackeville. Attached to it are the kingdom of Kong and other protected territories in the interior. The imports in 1896 were 4,638,000 francs in value, of which 800,000 francs came from France; exports, 4,400,000 francs, of which 2,236,000 francs were exports to France.

Dahomey, having a coast line extending from German Togoland to British Lagos, embraces the coast district, which has long been French, with settlements at Porto Novo, Kotonu, Grand Popo, and Whydah, and also the negro kingdom from which the colony takes its name—the capital of the protectorate, Abomey, being 70 miles inland. The people of the protectorate are fetich worshippers, but are industrious and skillful, furnishing the best palm oil shipped from the Guinea coast, cultivating corn, and rearing cattle. The exports of palm oil are about 10,000 tons per annum, and of kernels 20,000 tons. The expenditure of France on this colony in 1898 was 1,885,000 francs. The total value of imports in 1896 was 9,729,000 francs, of which 3,741,000 francs came from France; exports, 9,100,000 francs, of which 3,896,000 francs went to France. A railroad is projected from Porto Novo through Abomey, Carnotville, and Nikki to Madicale on the Niger, and the first section to Abomey has been undertaken by a company. A head tax of 2 francs 25 centimes on the coast and 1 franc 25 centimes in the interior has been imposed, and the chiefs are intrusted with its collection, retaining 25 centimes for themselves.

The exploration of the part of the French Soudan between Say and Lake Chad north of the boundary fixed by the Anglo-French agreement of 1898 was committed to Capt. Voulet and Capt. Chanoine after the assassination of Capt. Casemajoux at Sinder, in May, 1898. The new expedition reached Sansanne Hausa, above Say, on Jan. 2, Capt. Chanoine having marched with 360 *travailleurs* through the mountainous country of Bandiagary, the country of the Samos, and Mossi, while Capt. Voulet with the rest of the expedition and the stores and ammunition proceeded by the river. In March the expedition set out for Lake Chad. Lieut. Peteau, who was sent back to the coast, made charges of abuse of authority and gross cruelty to the natives against the leaders of the expedition. Lieut.-Col. Grave, commandant of the eastern Soudan and the French resident at Say, held an inquiry, the result of which was that the Government ordered Lieut.-Col. Klobb, commanding the northern district of the Soudan, to pursue the Voulet-Chanoine expedition, take over the command, and investigate the charges. Proceeding from Kayes, Lieut.-Col. Klobb, accompanied by Lieut. Meynier and an escort of 45 native sharpshooters, found Voulet at Damangara, near Sinder, on July 14. Capt. Voulet replied to his message that he had 600 rifles, and would receive him as an enemy. Lieut.-Col. Klobb, directing his men not to fire if fired upon, advanced, paying no heed to Capt. Voulet's summons to halt and threat to open fire if the party came nearer. When Lieut.-Col. Klobb's party still advanced three volleys were fired by order of Capt. Voulet, killing Lieut.-Col. Klobb,

severely wounding Lieut. Meynier, and killing or wounding 19 of their escort. Voulet and Chanoine had attempted to escape by forced marches through English territory when they first heard of Lieut.-Col. Klobb's approach, but afterward Capt. Voulet with 100 men had come to Damangara to meet him, and had first appealed to his men before ordering them to fire, saying that Col. Klobb would take away the slaves he had given them. The mutinous officers, who had under them 2 lieutenants, 1 French sergeant major, 2 sergeants, 1 surgeon, 20 spahis, 50 Sudanese sharpshooters, and 1,000 irregulars armed with rifles and lances, were proclaimed as outlaws, and messages to that effect were sent to French commands in that part of Africa. Lieut.-Col. Klobb, who had courageously accepted the task of arresting the two madmen, saying that a soldier should never decline a responsibility, found everywhere along the route of his rapid march evidences of the truth of the accusations against them. They had massacred and burned without any apparent motive except to spread terror, and dragged along with them a horde of captives like those that Samory collected in his devastating raids, among whom they had formed an auxiliary force which they supplied with rifles, fearing that the sharpshooters would not follow them to the end. Capt. Voulet, returning to the mission after the murder of his superior officer, informed the Europeans of what he had done, and said that he had revolted against France and that he would take the sharpshooters and his auxiliaries with him in order to create an independent state in Africa. Those who would not join him might return to the Soudan. Chanoine agreed to join him, and they went off to a neighboring village with two noncommissioned officers, the sharpshooters, and the guns and ammunition. One of the sergeants came back, and a day or two afterward the sharpshooters killed Voulet and Chanoine and returned to the mission, of which Lieut. Pallier had taken command. The mission occupied Sinder on July 20, putting to flight the chief who had murdered Capt. Casemajoux. Leaving Lieut. Toalland there with 200 men, he returned to Dosso, discharged 300 of his men, and made preparations to join the Foureaux-Lamy mission in order to place himself under the orders of Major Lamy. The mission of M. Foureaux and Major Lamy had for its object the opening of communication between Algeria and Lake Chad. It arrived at the oasis of Air in May, after some slight encounters with the Tuaregs, who afterward showed themselves friendly and supplied food and transport. The way to Agades was blocked by other Tuaregs, who were also repelled. The caravan reached the southern border of the desert late in the year, but did not venture to approach Lake Chad. Besides the Voulet-Chanoine and the Foureaux-Lamy expeditions a third one was dispatched from the south to join the others in the neighborhood of Lake Chad, and possibly with their aid strike a blow at the power of the Sultan Rabah, whose capital is near the southern end of Lake Chad. The force coming from the French Congo was the Gentil-Bretonnet mission. The advance guard under M. Bretonnet was attacked near the Shari by Rabah himself at the head of a large force. With three small guns the explorer and his little band held out for several hours and killed a considerable number of the enemy. In the end the three Europeans, together with 2 Arabs and 27 Senegalese, were killed, while 3 got away and brought the news to M. Gentil. Another French party under M. de Béhagle, sent out by a commercial syndi-

cate, had been crushed by Rabah, who held its leader a prisoner. The main body of the Gentil expedition had already reached the borders of Wadai and Bagirmi, where its mission was to spread French influence. On learning of the disaster that had befallen his companion's detachment, M. Gentil did not then proceed farther into the regions where Rabah and Zobeir Pasha rule. A more powerful force was organized in French Congo, with which he advanced later in the year to the border of Dikka, the seat of Rabah's power, on the Shari river, near the point where it enters Lake Chad. M. Gentil found Rabah's army of 12,000 men, with 2,500 rifles and 3 guns, entrenched at Kouna. The guns were quickly destroyed by the French field pieces, and after a long and stubborn fight Rabah's forces were put to flight after more than 2,000 were killed, and he himself was wounded. Gentil was unable to follow up the victory, as only half his own force was left, 43 of the Senegalese sharpshooters having been killed and 4 Europeans and 103 of the men wounded. He waited at Kouna until M. de Lamothe, Governor of the French Congo, could send him re-enforcements. Meanwhile the Sultan of Bagirmi, over whom Rabah had tyrannized, offered to join the French in overthrowing his power. The military expenditures in 1898 were so great, exceeding the credits voted for the Soudan by 4,000,000 francs, that the French Government decided to change the system of administration by placing the military authorities under the control of the civil power, as in Indo-China. A decree was signed on Oct. 17 by which the French Soudan ceased to be a distinct dependency, its territories being divided and apportioned to Senegal, French Guinea, the Ivory Coast, and Dahomey, all of which possessions are placed under the Governor General of West Africa, whose seat is at St. Louis.

German Possessions.—The German protectorates of Togoland and Cameroons have an estimated extent, the former of 33,000 square miles, with 2,500,000 inhabitants, the latter of 191,130 square miles, with 3,500,000 inhabitants. *Togoland* is on the Slave Coast, between Dahomey and the British Gold Coast colony. The European residents numbered 110 in 1898, all except 8 of them Germans. Lome, Little Popo, Porto Seguro, and Bagida are the seaports. The military force consists of 150 native soldiers under 7 Germans and 100 police. The exports are gum, cacao, palm oil and kernels, caoutchouc, and dyewoods. Corn, yams, tapioca, ginger, and bananas are cultivated. The cultivation of coffee has been introduced. The revenue, which is mainly derived from import duties, was 382,020 marks in 1896; expenditure, 388,180 marks. The imports in 1897 were of the value of 1,975,940 marks, against 1,886,840 marks in 1896; exports, 771,025 marks, against 1,651,416 marks. By the Anglo-German agreement of November, 1899, the neutral zone back of Togoland and the British Gold Coast was divided on terms more favorable to Great Britain than Germany had before been willing to concede, in consideration of the renunciation of British rights in Samoa. The district that was left neutral because Germany and Great Britain could not agree on a line of division in 1888 was the only large territory in West Africa as to which there was still a dispute between European powers. In previous negotiations regarding the division England proposed to draw the line so that of the two large trading centers Salaga should be British and Yendi German. Germany was willing to consent on condition that the corner of the Gold Coast lying east of the Volta river,

having an area of about 2,000 square miles and a population of 600,000, should become German territory. This the British Government would not agree to, because the district had long been British and was very valuable. Germany has withdrawn this claim, and has further conceded to Great Britain the province of Mamprusi, north of the neutral zone, with the important trade center of Gambaga for its capital, while the neighboring province of Chakosi, of which the capital is Sansane Mango, is recognized by Great Britain as German.

Cameroons is inhabited by Bantu negroes in the coast region and Soudan negroes in the interior. The protectorate extends northward to Lake Chad. The Europeans residing in the country in 1897 numbered 253, of whom 181 were Germans. The military force consists of 28 Germans and 341 native soldiers. Coffee, cacao, and tobacco plantations have been started near the coast, where the soil, being of volcanic origin, is very fertile. The cultivation of caoutchouc has been attempted, and cloves, vanilla, ginger, and pepper are grown experimentally. The revenue, which is mainly derived from import duties, was 546,560 marks, which the German Government supplemented with a contribution of 620,000 marks; expenditure, 1,383,400 marks. Gold and iron exist. The value of the imports in 1897 was 5,340,000 marks; of exports, 3,706,000 marks, the principal articles being palm kernels for 1,320,000 marks, palm oil for 980,000 marks, caoutchouc for 1,000,000 marks, ivory for 370,000 marks, ebony for 111,000 marks, and cacao for 44,000 marks. The German authorities early in 1899 began a campaign for the suppression of slave raiding and the establishment of their power in the hinterland sufficiently to enable expeditions to explore the country up to Lake Chad. Capt. von Kamptz, with 375 men, marched against the chief of the Wute tribe. The Sultan of Tibati, whose troops were well armed and mounted, came to the assistance of his vassal, and this necessitated a campaign against him, which was undertaken in the autumn. This was so successful that the Sultan was taken prisoner.

WEST INDIES. With the exception of Hayti-Santo Domingo, Cuba, and Porto Rico, all the West Indian islands are dependencies of European powers. In speaking of the West Indian colonies it is usual to include British Guiana, French Guiana, and Dutch Guiana on the mainland of South America, and British Honduras in Central America. Reciprocity treaties were concluded in 1899 between the United States and 5 of the principal British colonies in the West Indies. In consideration of certain reductions of the colonial import duties upon American products, British Guiana, Jamaica, and Trinidad obtain a reduction of 12½ per cent. in the duty upon sugar entering an American port; Jamaica, a reduction of 20 per cent. on citrus fruits; pineapples, and vegetables; Trinidad, 12½ per cent. on asphalt; Barbadoes, 12 per cent. on sugar. The reduction of the duty on sugar, in connection with the advantage given in the United States by discriminating duties on the bounty-fed beet sugar of Europe, is calculated to be worth at least \$4.25 a ton to the West Indian planters, and to be as advantageous as if they had prevailed upon the British Government to impose countervailing duties for their benefit. Three quarters of the 200,000 tons exported by the 4 colonies that have obtained reciprocity already goes to the United States, and under the new treaties the remaining 50,000 tons are likely to go there. Most of the crop of 50,000 tons produced by the other

British West Indian islands is also consumed in the United States. These British colonies have suffered more than any others from the depression in the price of sugar, especially those that are not adapted by Nature for the production of other crops, such as Barbadoes, Antigua, St. Kitt's, and Nevis, and the lowlands of British Guiana. Except in British Guiana and Trinidad, the product is the coarse muscovado, obtained by antiquated processes. The development of improved varieties by selection and cross fertilization is only in its infancy, and yet a variety has been obtained in Barbadoes that contains 25 per cent. more saccharine matter than ordinary cane.

British Colonies.—The British West Indian possessions, including British Guiana and British Honduras, consist of 8 colonies, each administered by a Governor, assisted by a legislative body, which in some of the colonies is nominated by the Crown, in others elected by the people. The largest of the British West India islands is Jamaica, which has an area of 4,424 square miles, inclusive of Turk's and Caicos islands, the Caymans, and the Morant and Pedro keys. Jamaica itself has an area of 4,193 square miles, with a population estimated at 706,394. The white population was only 14,692 in 1891, and has dwindled since, while the negro and colored population has grown at the rate of 1.6 per cent. a year. There were 14,118 East Indians in 1896, of whom 1,562 were indentured to planters. The area cultivated in 1897 was 663,560 acres, of which 164,644 acres were tilled lands, while 498,916 acres were pasture. The area under sugar cane was 28,764 acres; under coffee, 22,387 acres; under bananas, 19,760 acres; under cocoanut palm, 10,799 acres; under ground provisions, 80,656 acres. The imports declined from £2,288,946 in 1895 to £1,660,667 in 1897; exports from £1,873,105 to £1,448,443. The imports of cotton goods were £208,318; fish, £110,240; flour, £162,378; rice, £40,432. The exports of sugar were valued at £120,959; of rum, £92,053; of coffee, £165,494. The imports in 1898 were £1,674,381 and exports £1,448,443 in total value. Of the imports 43 per cent. were from the United States and 47.2 per cent. from Great Britain; of the exports 62.3 per cent. went to the United States and 22.6 per cent. to Great Britain. The aggregate tonnage of vessels entered and cleared in the foreign trade during 1897 was 1,560,944 tons. The shipping belonging to the colony comprised 124 sailing vessels, of 6,694 tons, and 1 steamer, of 459 tons. There are 9 railroad lines, having a total length of 185 miles. The receipts in 1898 were £102,170; expenses, £74,592. The number of passengers carried was 356,949. The number of letters and postal cards sent through the post office in 1897 was 4,955,712. The telegraphs have a length of 937 miles; telephones, 831 miles. The number of telegrams in 1898 was 87,545; receipts were £5,086, and expenses £7,686. The military force is mainly composed of colored troops, numbering 1,790 of all ranks on Jan. 1, 1898. The revenue of the colony in 1897 was £677,064, having declined from £818,687 in 1895; expenditure, £766,534. Of the revenue £283,042 came from customs. The public debt amounted to £1,994,184. The chief expenditures were £112,651 for debt, £62,410 for police, and £40,982 for public works. In 1898 the revenue fell to £540,509, while the expenditure was £627,422. The decrease in revenue was due to a decline in imports and in the consumption of rum, caused by the general business depression. The total debt at the end of 1898 was £1,992,284, most of it paying 4 per cent. On March 31, 1899, there was a deficit of £154,784,

the expenditure having for several years exceeded the revenue. To cover it the Imperial Parliament authorized a guaranteed loan of £150,000. The Jamaica Railroad Company has failed to meet its obligations, and its line will have to be taken over by the Government, which was authorized to borrow £88,000 to settle arrears of interest, and £110,000 to complete and equip the railroad. Another loan of £40,000 has been raised to complete the waterworks and irrigation service, and one of £65,000 for sewerage and street pavements in Kingston. The economic prospects of Jamaica are more hopeful than those of the islands that are still entirely dependent on sugar. In 1882 sugar formed 77 per cent. of the total exports, in 1898 15 per cent. The other articles are coffee, logwood, bananas, oranges, pimento, ginger, cacao, cocoanuts, and tobacco. The coffee grown on the Blue mountains at elevations of 3,000 to 5,000 feet commands the highest price in the London market, and that grown in plantations on the lower levels is of good quality, but the Liberian coffee raised by negro settlers does not sell well because it is badly cured. Logwood and pimento grow wild. The low prices of coffee and logwood and a poor yield of pimento caused a serious falling off in the value of these exports in 1898. Cacao is grown in combination with bananas, which shade the young trees until they come into bearing. Ginger is a product for which Jamaica is famous, but the cultivation is rapidly diminishing. Tobacco of good quality has been grown of late years by immigrants from Cuba, and the export of cigars increased from £2,126 in 1887 to £13,984 in 1898. The further expansion of this trade is likely to be retarded by an export tax that the Government now levies on cigars and cigarettes. Sir David Barbour, who as a special commissioner examined into the finances of Jamaica, attributed the excessive expenditure to the division of responsibility between the Government and the elected members of the Legislative Council, and thought the Governor should have greater power by always keeping up the full number of nominated members. The elected members, in a memorial to the Colonial Office, complained of the desire of the Imperial Government to protect British manufactures, which had thus far stood in the way of reciprocity with the United States; complained of the high salaries paid to English officials when capable colonists would work for less; charged the colonial executive with incompetence and neglect; and laid all the blame for the disordered finances upon the Government, which had increased the expenditure despite their protests. Mr. Chamberlain, in reply, placed the responsibility for the deplorable financial position of the island at their door, saying that they had failed to exercise the powers of control with which they had been invested. The salaries of the higher officials he considered none too high, as it was necessary to maintain a scale of salaries for the highest posts that will attract competent men, but in the lower ranks of the public service there might be superfluous offices that should be abolished. When the Legislative Council opened, on March 14, Sir Augustus Hemming, the Governor, announced a new tariff bill, a change in the land tax and minor revenue measures. The elected members refused to pass the tariff measure. They demanded retrenchment, not increased tariff duties that would aggravate the trade depression. The provisions of the new tariff applied specially to such imports as came from the United States. By Mr. Chamberlain's directions, the Governor added 4 nominated members. This made the people very indignant, but the 4 new members were

not enough to turn the scale, and so a deadlock resulted. On March 24 the Council was adjourned for a month. The elected members were unanimous in their opposition to the Governor's bill, and the Constitution provides that their unanimous vote shall be conclusive on financial questions. Another clause in the Constitution gives the Government power to override the vote of the Council in matters of paramount importance. Declaring this to be such, Sir Augustus Hemming announced the intention to promulgate the tariff act without the concurrence of the Council. Public meetings called for the removal of the Governor, and passed resolutions in favor of annexation to the United States. The Governor thereupon surrendered and allowed the elected members the free use of their constitutional privilege. The bill was finally passed by the Legislature in May, Mr. Chamberlain having agreed to reopen negotiations for reciprocity with the United States.

Turk's Island, which is attached to Jamaica administratively, though belonging geographically to the Bahamas, raised a revenue of £9,477 in 1897 and expended £8,384. The imports of Turk's and Caicos islands were valued at £33,239; exports, £43,303. On these keys the best of salt is produced, about 2,000,000 bushels being raked and shipped annually to the United States, Newfoundland, and Canada. From the Caymans turtles and coconuts are exported. The tonnage entered and cleared at Turk's island in 1897 was 328,374 tons.

The Bahamas have an area of 4,465 square miles, and a population of 43,521 in 1891, of whom 11,000 were whites. In 1897 it was estimated at more than 52,000. The number of births was 2,141; of deaths, 1,178. The population of Nassau, the capital, is about 6,000. The sea products are especially valuable, as sponges of the value of £90,111 in 1897, shells, pearls, and ambergris. The cultivation of sisal has been very profitable. The raising of fruits for American cities and for preserving is likewise a growing industry. The pineapples exported in 1897 were valued at £24,581; oranges at £3,398. The total value of imports was £186,010 in 1897; of exports, £149,085. The revenue of the colony was £62,754; expenditure, £63,405. The chief expenses were £18,218 for salaries, £7,219 for public works, £5,549 for police, and £8,385 for debt. The amount of the public debt is £119,026. The customs receipts were £53,456.

The Leeward Islands comprise Antigua, with Barbuda and Redonda; St. Kitt's, Nevis, and Anguilla; Dominica, Montserrat, and the Virgin Islands. They have a total area of 701 square miles, with a population in 1891 of 127,723, of whom 5,070 were white, 23,320 colored, and 99,333 pure negroes. Antigua, which is the seat of government, produces sugar and pineapples; Montserrat, bottled lime juice from groves covering 1,000 acres, also sugar, coffee, cacao, and arrowroot; St. Kitt's and Nevis, sugar and rum; Anguilla, vegetables and salt; the Virgin Islands, sugar and cotton on small plots owned by the negro cultivators; Dominica, coffee of the Liberian variety, fruits, cacao, limes, and sugar; also phosphate of lime from the island of Sombbrero. The total value of imports of Antigua for 1897 was £110,188, having declined from £144,864 in 1895, and of exports £117,202, having increased from £87,125; imports of St. Kitt's and Nevis £135,921, having declined from £172,281, and exports £149,204, having increased from £140,542; imports of Montserrat £22,269, and exports £22,063, having increased from £17,189; imports of

Dominica £54,074, having declined from £69,789, and exports £47,416, having increased from £39,471; imports of the Virgin Islands £3,301, and exports £4,033. The total exports of sugar from the Leeward Islands were £236,209 in value. The imports of cotton goods were £42,828; of flour, £17,756. The revenue of Antigua for 1897 was £46,329, of which £23,800 came from customs; expenditure, £53,417; amount of public debt, £150,671. The revenue of St. Kitt's, Nevis, and Anguilla was £45,247, of which £24,720 came from customs; expenditure, £51,795; debt, £89,450. The revenue of Dominica, £23,610, of which £10,652 came from customs; expenditure, £24,061; debt, £70,900. The revenue of Montserrat was £7,906; expenditure, £9,895; debt, £24,600. The revenue of the Virgin Islands was £1,675; expenditure, £1,776. Barbuda, although 62 square miles in extent, has been kept for three centuries as a game preserve. Besides the European fallow deer, goats, horses, and cattle run wild over the island, and the African guinea fowl is abundant. A settlement of interloping negroes is there also, and they have reverted to African conditions, with a resultant improvement in physique.

The sugar crisis has affected some of the islands of the Leeward and Windward groups more seriously than any other part of the West Indies. The members of the Legislature and citizens of St. Kitt's petitioned the British Government in March to transfer their island to the United States, failing the abolition of the sugar bounties. On Aug. 7 the Leeward Islands were swept by a hurricane as destructive as the one that devastated the Windward Islands and Barbadoes in August, 1898. Not a house nor a church in Montserrat or Nevis escaped destruction or serious damage. Three quarters of the population of Montserrat were left homeless, and the valuable lime tree orchards were demolished, as well as all the sugar cane and the growing crops of all kinds. On this island 84 persons were killed and 1,250 wounded. In Nevis 2,000 persons were left without shelter; 27 were killed. Antigua and St. Kitt's also sustained much damage. The storm afterward passed over Santa Cruz and Porto Rico.

The Windward Islands are Grenada, St. Vincent, the Grenadines, and St. Lucia. In Grenada, the seat of Government, which has an area of 133 square miles and a population in 1897 of 61,229, cacao is the chief product, occupying 11,115 acres of the total of 20,418. Spices are cultivated on an increasing scale, supplanting the sugar cane. The total value of imports in 1897 was £164,356, having decreased from £175,712 in 1895; exports, £154,439, of which £132,642 represent cacao and £13,503 spices. In St. Vincent the cultivated lands, 13,000 acres, belong to 3 firms. Sugar and rum, cacao, spices, and arrowroot are the chief products. Valuable timber is obtained from the forests. The revenue in 1897 was £25,396; expenditure, £26,520; debt, £19,100. The area of St. Vincent is 132 square miles; population, 41,054, of whom 2,445 were white, 554 colored, and 31,005 black. St. Lucia exports sugar and rum, cacao, and logwood. The area is 233 square miles, and the population in 1897 was 47,332. The value of imports was £245,253, having increased from £154,945 in 1895; of exports, £154,267. The revenue was £60,639; expenditure, £56,743; debt, £191,980. To enable the planters of St. Vincent to repair the damages caused to their estates and buildings by the hurricane of 1898 the British Government raised a loan of £50,000 and advanced the money to the colonial government, to be advanced in turn to the planters. The

greater part of the cultivable land of St. Vincent has passed into the hands of money-lending merchants. The Government has adopted a scheme for creating a peasant proprietary out of the present rack-rented tenants.

Barbadoes has an area of 166 square miles, with a population of about 190,000. Nearly the whole surface of the island is planted to sugar cane. The product of raw sugar in 1897 was 58,600 hogsheds. The exports of manjak or glance pitch, a bituminous mineral used as fuel, were 1,880 tons, valued at £3,760. The annual catch of fish is about £17,000 in value. The merchant shipping of the colony consists of 48 sailing vessels and 2 steamers, having an aggregate burden of 7,105 tons. Barbadoes is the headquarters of the British troops in the West Indies, numbering 32 officers and 815 men. There are 24 miles of railroad and telegraph line, and 635 miles of telephone line. The total value of imports in 1897 was £1,008,699; exports, £736,163. The exports of sugar were £447,430; of molasses, £86,094. The imports of flour were £57,843; of rice, £50,664; of fish, £82,457; of cotton cloth, £131,562. The tonnage entered and cleared during 1897 was 1,335,962 tons. The revenue for 1897 was £184,606; expenditure, £172,551; debt, £409,150. The revenue from customs was £106,880. The expenditure for salaries was £78,406; for debt, £31,561; for police, £23,370. No island in the world is more densely populated than Barbadoes, and no soil is better adapted to the production of sugar cane; but this is the only crop for which the soil is suitable. The great damage caused by the hurricane that swept this island in 1898 has been in part repaired by means of a loan of £50,000 obtained from the British Government. The chief agricultural station created in accordance with the recommendations of the West Indian commission has been established here under the supervision of Dr. Morris, and under the auspices of the new Imperial Department of Agriculture in the West Indies a conference was held in January to devise a co-operative policy for the promotion of the economic interests of the colonies.

Trinidad has an area of 1,754 square miles, with a population estimated in 1897 at 254,518. Of the total area of 1,120,000 acres, 442,924 acres have been sold to private owners. There are 57,000 acres planted to sugar cane, 99,500 acres to cacao and coffee, 13,500 acres to ground provisions, and 14,000 acres to cocoanuts. From the pitch lake 124,672 tons of asphalt were taken in 1897. The total value of imports in 1897 was £2,161,231, of which £309,611 were for textile goods, £127,383 for flour, and £148,777 for rice. The total value of exports was £1,994,926, of which £537,107 were sugar exports, £605,053 cacao, and £165,494 coffee. Ships of 1,296,902 tons were entered and cleared during the year. The revenue for 1897 was £567,158; expenditure, £579,027; debt, £516,518. Tobago is a dependency of Trinidad. The area is 114 square miles; population, 20,785. Cacao, cotton, and tobacco are cultivated. The imports in 1897 were £11,655; exports, £4,681. The revenue was £8,107; expenditure, £8,387; debt, £9,500. Sugar, molasses, and rum are important products in Trinidad, though no longer the mainstay of agriculture. There are 83,000 coolie immigrants, who are brought over from India and returned to their homes by the Government, as in British Guiana also, the only other colony that still employs them on a large scale. The Imperial Government has guaranteed a loan of £110,000 for harbor improvements at Port-of-Spain and the extension of the Government railroad.

British Guiana has an area of 76,000 square miles, not including 33,000 square miles between the formerly accepted limits and the Schomburgk line claimed in the dispute with Venezuela. The population in 1891 was 278,328, comprising 2,533 Europeans, 99,615 negroes and colored, 105,465 East Indian coolies, and 3,714 Chinese. In 1898 there were 4,500 Europeans, not counting 12,000 Portuguese laborers from the Atlantic islands. The numbers of Indian coolies had risen to 116,000. Georgetown, the capital, had 53,176 inhabitants. There were 79,278 acres under cultivation, of which 69,814 acres were under sugar cane. The number of sugar estates was 74. Gold mining has been carried on in the disputed territory since 1886. The total value of gold obtained in the ten years ending with 1896 was £2,796,300. The yield of the mines in 1897 was 126,702 ounces; in 1898, 125,080 ounces. The total value of imports in 1898 was £1,282,976; of exports, £1,783,764. The imports of textiles were £156,120; of flour, £139,107; of rice, £95,933; of machinery, £73,381; of fertilizers, £72,597; of fish, £45,859; of coal, £36,451; of hardware, £28,336. The exports of sugar were £1,023,523; of molasses, £9,821; of rum, £132,586; of balata, £30,957; of rice, £21,385; of gold, 125,080 ounces, value £456,436. During 1898 vessels of a total of 621,198 tons visited the ports. The shipping of the colony consisted of 116 sailing vessels, of 5,065 tons, and 16 steamers, of 1,238 tons. There are 40 miles of railroad. The telegraphs and cables, which belong to the Government, have a total length of 546 miles; telephones, 610 miles. The revenue in 1898 was £505,369, of which £294,671 came from customs, £49,780 from the duty on rum, £108,859 from licenses, and £23,902 from the royalty on gold. The chief expenditures were £156,718 for civil, £22,586 for ecclesiastical, and £37,854 for judicial purposes, £31,431 for education, and £23,800 for public works. The public debt is £949,402. The area of British Guiana is fifteen times greater than that of all the island colonies put together, and its population is as thin as that of the islands is dense, being only 2.5 to the square mile. Of the population it has less than 2 per cent. are Europeans proper. The area under cultivation is confined to the heavy, rich soil near the coast, where sugar is grown at great expense for drainage and for labor, but still with profit on the best cultivated estates. This has been the only industry of the colony, and the sugar planters who control the Government on account of the labor problem have prevented the settlement of the elevated lands of the interior. The discoveries of gold have encouraged migration of labor to the diggings, the intermittent activity of which is the only life and enterprise in this promising region. The colony has drifted almost into a state of insolvency. The deficits for the three years ending with 1898 amounted to \$469,307, and the floating debt to \$787,000. Sir Walter Sendall, the Governor, while speaking of the desirability of retrenchment, yet presented a budget for 1900 that was \$90,000 in excess of the estimates for the previous year, to which the representative section of the Legislature demanded that the expenditure should be limited. The importation of 5,000 additional Indian coolies entails an expense to the Government of \$66,000 and an obligation to provide nearly the same amount to restore them to their own country when the term of their indentures is over.

British Honduras has an area of 7,562 square miles, with a population estimated at 34,277, comprising 462 whites and 33,815 negroes and colored. The chief products are mahogany and logwood.

Cultivated products are coffee, sugar, bananas, and cocoanuts; and articles brought down for export from the neighboring countries are India rubber, coffee, and sarsaparilla. In the upland district cattle are reared. The value of the imports in 1897 was \$1,422,097; exports, \$1,404,387. The export of mahogany was 6,777,382 feet. In the year 641 vessels, of 194,144 tons, were entered, and 633, of 196,189 tons, cleared. The shipping of the colony comprised 220 sailing vessels, of 4,906 tons, and 5 steamers, of 748 tons. The revenue for 1897 was \$314,017. Duties on imports yielded \$166,618. Other sources are excise, licenses, a land tax, and sales and leases of public lands. The expenditures amounted to \$322,990. The debt was \$168,815.

French Colonies.—The French colony of *Guadeloupe* has an area of 583 square miles, with the dependent islands of Marie Galante, Les Saintes, Désirade, St. Barthélemy, and St. Martin, 688 square miles, with 167,000 inhabitants. It is represented by a Senator and two Deputies in the French Chambers. The sugar estates, 502 in number, embrace 25,400 hectares. Coffee plantations cover 3,500 hectares, and cacao is grown on 1,634 hectares. Bananas, sweet potatoes, yams, manioc, corn, tobacco, and vegetables are cultivated for domestic consumption. The trade is largely with France, whence 13,085,051 francs of imports were brought in 1897, while exports to France amounted to 11,287,915 francs. On the plantations 15,000 coolies are employed in addition to native labor. The local revenue in 1898 was 5,774,564 francs, and expenditure the same. The debt is 1,000,000 francs. The contribution of the French Government in 1899 was 1,627,037 francs. The cyclone of August, 1899, ruined the coffee and cacao crops, half demolished the town of Le Mourle, which has 10,000 inhabitants, and blew down several villages.

Martinique has an area of 381 square miles, with a population in 1895 of 187,692, divided into 90,373 males and 97,319 females. The number of French-born residents was 1,307. The number of marriages in 1895 was 624; of births, 6,026; of deaths, 5,007. St. Pierre, the capital, has 25,382 population. The products are sugar, coffee, cacao, tobacco, and cotton, besides yams, corn, and other food crops, to which 15,067 hectares were devoted. The exports of sugar in 1896 were 34,429 tons; of rum and arrack, 3,765,000 gallons. The imports from France in 1896 were valued at 18,997,565 francs, the exports to France at 12,965,952 francs. The revenue raised in the colony in 1898 was 5,096,048 francs. The contribution of France for 1899 was 2,581,848 francs. The public debt consists of an annuity of 95,000 francs.

French Guiana has an area of 46,850, including a zone on which gold has been discovered, which has been in dispute between France and Brazil. The population is 22,714, not including savage tribes in the mountainous districts. Cayenne, the capital, has 12,351 inhabitants. The country has been used as a convict colony, and agriculture and industry are backward. Gold is the chief product, and of this 101,938 ounces were shipped in 1896, of which 58 per cent. came from the disputed territory. The imports from France in 1897 amounted to 11,648,848 francs; exports to France, 10,849,482 francs. The local revenue in 1898 was 2,453,261 francs. The expenditure of France in 1899 was 6,368,139 francs, including 4,915,000 francs for the penal establishment.

Dutch Colonies.—The island colony of *Curaçao*, with the dependent islands of Bonaire, Aruba, St. Eustache, Saba, and the Dutch part of St. Martin, has an area of 403 square miles, that of

Curaçao alone being 210 square miles. The total population is 49,599, that of *Curaçao* being 28,884. The chief products are corn, beans, cattle, salt, and lime. The number of vessels entered at the ports in 1896 was 2,569, of 526,148 tons.

Dutch Guiana has an area of 46,060 square miles, with a population of 64,372, exclusive of forest negroes. Paramaribo, the capital, has about 30,000 inhabitants. The production of sugar in 1896 was 10,390,747 kilogrammes; of cacao, 3,088,194 kilogrammes; of bananas, 562,949 bunches; of coffee, 280,875 kilogrammes; of rum, 1,000,747 litres. The output of the gold mines was 874,897 grammes, valued at 1,198,600 guilders. The total production from the discovery of the gold fields in 1876 was 20,694,380 guilders. Stamp mills have recently been erected for treating quartz, the mining hitherto having been alluvial. The total value of imports in 1897 was 5,635,161 guilders; of exports, 5,241,671 guilders. The local revenue for 1897 was 2,348,000 guilders, and the expenditures were 2,348,000 guilders, the difference being made up by a contribution from the Dutch Government.

Danish Colonies.—The islands of *Santa Cruz*, *St. Thomas*, and *St. John* belong to Denmark. Their area is 138 square miles, and their population 114,229, mostly negroes, who raise sugar and make rum for export. The imports of Denmark from these islands in 1897 were valued at 2,959,000 kroner, and exports to the islands at 4,130,000 kroner. The imports from them into Great Britain were £20,122, mainly sugar, and British exports to them were £55,086. *Santa Cruz* was visited on Aug. 8 by a cyclone that nearly destroyed the town of Frederiksted as well as most of the sugar estates.

WEST VIRGINIA, a Southern State, admitted to the Union June 19, 1863; area, 24,780 square miles. The population, according to each decennial census, was 442,014 in 1870; 618,547 in 1880; and 762,749 in 1890. Capital, Charleston.

Government.—The following were the State officers during the year: Governor, G. W. Atkinson; Secretary of State, William M. O. Dawson; State Superintendent of Free Schools, J. R. Trotter; Auditor, L. M. Lafollette; Treasurer, M. A. Kendall; Attorney-General, Edgar P. Rucker; Librarian, P. S. Shirkey; State Bank Examiner, O. B. Wetzel; Adjutant General, J. W. M. Appleton; Commissioner of Labor, I. V. Barton; Chief Mine Inspector, J. W. Paul; Game and Fish Warden, Frank Lively—all Republicans; Presiding Judge of the Supreme Court of Appeals, Marquand H. Dent; Associate Judges, Henry Brannon and H. C. McWhorter; Clerk, J. A. Holley—all Democrats except McWhorter, Republican.

Finances.—As an official statement of the finances is issued only once in two years, there is nothing new to report this year. The Annual Cyclopædia for 1898 contains a statement covering the biennial period ending Sept. 30, 1898. The estimated receipts of the treasury during the fiscal year ending Sept. 30, 1899, according to the State Auditor's report, included the following items: State tax for 1898, \$375,000 from the State and \$250,000 from the general school fund; license tax, 1899, \$90,000; license tax, 1898 and previous years, \$80,000; interest on deposits of public funds, \$12,500 from the State and \$12,500 from the general school fund; tax on gross receipts of insurance, express and telegraph companies, \$22,000; license tax on charters, \$90,000; dividends on stock held by the Board of the School Fund, \$11,000. The total estimated receipts for the fiscal year ending Sept. 30, 1899,

were as follow: State, \$722,000; general school fund, \$349,500; school fund, \$32,000. The total estimated expenditures for the same period, \$599,235, include the following: West Virginia School for the Deaf and Blind, \$34,600; West Virginia Reform School, \$18,600; Hospital for the Insane at Weston, \$127,500; Second Hospital for the Insane at Spencer, \$41,800; State Board of Agriculture, \$5,000.

Railroads.—An official statement as to the assessed value of railway property, based on returns for the year ending Dec. 31, 1898, and subject to levy for 1899, shows 51 lines operating within the State. The grand total of all taxable property belonging to the most important lines is as follows: Chesapeake and Ohio, \$4,554,260.50; Baltimore and Ohio (main line), \$5,167,804.80; Norfolk and Western, \$3,133,883; Ohio River, \$1,459,337.38.

Agriculture.—The latest official report of the State Board of Agriculture says: "Of our estimated 825,000 population, fully 473,000 are found upon our 75,000 or more farms, and are sustaining themselves, with much to spare, in some sections, at least, to feed the remaining 352,000 who are engaged in the other callings and professions. Farming in West Virginia is much more profitable than in many of the Western and Northwestern States. The State is well adapted to general agriculture, including fruit growing and stock raising. According to recent figures the percentage of incumbered farms in one of the Western States was more than 55 per cent., and nearly as much in 8 other States—the so-called great agricultural States—and the average for the United States is more than 28 per cent. In West Virginia it was less than 13 per cent. of the whole, there being probably not more than 7,000 incumbered farms in the State. . . . Nearly half of our total area is cleared and in use for farming and grazing, while the remainder is covered with valuable timber, underlaid with beds of coal, oil, or gas. A very considerable area of the forest lands is untouched by the woodman's axe, and only a beginning has been made upon our coal and oil area."

The acreage and yield of the principal crops, Sept. 30, 1898, was as follows: Corn, 624,037 acres, yielding 17,293,210 bushels; wheat, 376,420 acres, yielding 4,525,045 bushels; oats, 188,087 acres, yielding 4,707,755 bushels; Irish potatoes, 20,283 acres, yielding 2,632,780 bushels; hay (all kinds), 569,962 acres, yielding 753,700 tons.

At the same date the number and value of farm animals were as follow: Horses, mules, asses, and jennets, 169,106, valued at \$6,003,055; cattle, all ages, 579,002, valued at \$14,326,550; sheep, all ages, 785,763, valued at \$2,802,409; hogs, all ages, 390,839, valued at \$1,789,040.

Mining.—From the latest available report of the Chief Mine Inspector, showing conditions for the year ending June 30, 1897, the following facts appear: Counties in which coal is mined on a commercial scale, 20; firms operating coal mines on a commercial scale, 215; openings of all kinds subject to the mining law, 350; tons (2,240 pounds) of pick-mined coal from commercial mines, 10,791,482; tons of machine-mined coal from commercial mines, 600,418; estimated tons of coal from small mines, 133,929; tons of coal converted into coke, 2,090,304; tons of coke manufactured (2,000 pounds), 1,374,497; value of coal at the mines, \$8,229,198; value of coke at the ovens, \$1,718,121.25; value of a ton of coal at the mines (2,240 pounds), 70.3 cents; value of a ton of coke at the ovens (2,000 pounds), \$1.25; mining machines in use, 55; coke ovens in use, 8,046; pick miners em-

ployed in commercial mines, 13,218; machine operators and miners employed in commercial coal mines, 652; other underground employees in commercial coal mines, 3,199; outside employees connected with the commercial coal mines, 2,047; number of coke employees, 2,306; total number of men employed at the commercial mines and ovens, 21,422.

Political.—The Democratic caucus of the Legislature on Jan. 18 nominated John T. McGraw for United States Senator, the ballot being: McGraw, 35; Watts, 5; Anderson, 2; Wilson and Bennett, each 1. The nomination of McGraw was made unanimous. The Republican caucus was held on Jan. 19. On the first ballot Nathan B. Scott received 18 votes; Gov. Atkinson, 14; Goff, 5; Poffenbarger, 6; Caldwell, 2; Gaines, 1. On the fourth ballot Scott received 24 votes, a majority of the caucus, but not of all the Republican members of the Legislature. Eighteen ballots were taken, the final result giving Scott 28, Goff 15, and Atkinson 3. The House and Senate took a ballot on Jan. 24, with this result: Scott, 46; McGraw, 46; Goff, 1; Blizzard (Republican), 1. The joint ballot was taken on the following day, resulting in the election of Scott, the vote being: Scott, 48; McGraw, 46. The Democrats filed protests against the votes of Senators Getzendanner and Pierson, declaring that they had forfeited their seats by accepting commissions in the army, which they resigned before the Legislature convened.

WISCONSIN, a Western State, admitted to the Union May 29, 1848; area, 56,040 square miles. The population, according to each decennial census since admission, was 305,391 in 1850; 775,881 in 1860; 1,054,670 in 1870; 1,315,497 in 1880; and 1,688,880 in 1890. By the State census of 1895 it was 1,937,915. Capital, Madison.

Government.—The following were the State officers in 1899: Governor, Edward Scofield; Lieutenant Governor, Jesse Stone; Secretary of State, William H. Froehlich; Treasurer, James O. Davidson; Attorney-General, Emmett R. Hicks; Superintendent of Education, L. D. Harvey; Railroad Commissioner, Graham L. Rice; Insurance Commissioner, Emil Giljohann; Adjutant General, C. R. Boardman; Dairy and Food Commissioner, H. C. Adams; Labor Commissioner, Halford Erickson; Bank Examiner, E. I. Kidd; Health Commissioner, F. M. Schultz; Fish and Game Warden, J. T. Ellarson; Tax Commissioners, Michael Griffin, George Curtis, and Norman S. Gilson; Chief Justice of the Supreme Court, J. B. Cassoday, Republican; Associate Justices, John B. Winslow and Joshua E. Dodge, Democrats, and Charles V. Bardeen and Roujet D. Marshall, Republicans; Clerk, Clarence Kellogg. With the exceptions mentioned, all the elected officials are Republicans.

Finances.—The estimate of expenses for the biennial period 1899–1900, as given in the message in January, was, not including any special appropriations, \$6,877,372; and the estimated income \$6,830,850. The measures taken to increase the revenue and the decisions in regard to special appropriations will be found under Legislative Session. The Board of Equalization raised the total valuation of the property in the State for assessment from \$600,000,000 to \$625,000,000. Under the new insurance law, the additional taxes paid by the stock life companies were estimated at \$167,396.19 for 1899, of which \$152,739.21 was from the Northwestern Mutual Life of Milwaukee. The law taxing express, sleeping car, freight line, and equipment companies also makes a considerable addition to the income. The debt

of the State, which is in certificates to the trust funds of the educational interests, amounts to \$2251,000.

Education.—The school population in 1898 was 708,535; the enrollment in public schools, 430,827; of these, 306,000 were in schools under county superintendents, which cost \$3,171,000, and were taught by 9,800 of the 13,465 public-school teachers in the State. There were 72 county superintendents. The number of high schools has increased to 220, and the Legislature increased the appropriation for them from \$50,000 to \$100,000.

A committee appointed by the Teachers' Association to investigate and report on the advisability of shortening the time for the grade school work now requiring eight years, reported against any change in the length of the course, though in favor of other changes—more study of language as one. The school fund distribution in December was on a basis of \$1.102 to each person of school age.

The enrollment at the university in 1898 was 1,767, the number of instructors 125. The receipts were \$447,434.66; the expenses, \$449,330.16. A summer session of six weeks was decided upon for the present year—a new departure. The short course in agriculture in winter was attended by 249 students.

The enrollment in the 7 normal schools was 2,797, and the expenses for two years were \$662,304.13.

There are 16 day schools for the deaf, 4 in Milwaukee. The State aid is limited to \$150 per capita for nine months' instruction. A bill to furnish them with a superintendent was defeated. They have an enrollment of 160 pupils. The State school is at Delavan, and has nearly 200 pupils enrolled. The School for the Blind, at Janesville, has more than 100 pupils, with an average of 83, and costs about \$36,000.

State Institutions.—The secretary of the Board of Control gives a table showing the cost for the year of subsistence at the State institutions, excepting the Reformatory, reports for which were not in. The average was \$63.62 for each of the 2,617 inmates; but as this includes also the subsistence of the 597 officers and employees of the same institutions, the actual average for the inmates themselves is a little more than 20 per cent. less. The total amount is \$166,505.11. There are altogether 597 officers, employees, and teachers in these institutions.

The cost of care of the chronic insane in county asylums for the year ending Sept. 30 was \$354,479.29.

The new reformatory at Green Bay for first offenders from sixteen to thirty had in February 30 inmates, with 25 more to be admitted. When the buildings are complete there will be accommodations for 600. The site comprises 200 acres 3 miles from the city.

Railroads.—There are 46 lines of road reporting to the commissioner, in 42 systems. The value of railroad property is about \$300,000,000. The taxes paid this year amounted to about \$100,000 more than in 1898.

The Kickapoo Valley road was sold in October, under a mortgage foreclosure, for \$500,000. The mortgage was for \$600,000. The line was in operation from Wauzeka to La Farge, about 54 miles, and is completed to Readstown, a total of 84 miles.

Banks.—The report of the condition of the banks on Sept. 7 shows resources and liabilities of \$63,302,388.98. Compared with their condition April 5, the changes are as follow: Increase in

resources and liabilities, \$2,773,634.78; increase in loans and discounts, \$2,401,182.32; increase in bonds, stocks, and securities, \$649,666.44; increase in surplus and profits, \$79,807.74; increase in deposits, \$2,803,230.75; decrease in capital, \$153,430.80; decrease in available cash, \$268,286.67.

Insurance.—The receipts of the insurance department for 1899 show an increase over the previous year of \$149,673.76. The total receipts for the past year were \$388,448.19. These came from the following sources: Taxes, \$312,078.79; license fees, \$28,600; agents' certificates, \$28,091; filing annual statements, \$8,140; interest, \$9,713.40; copies of statement, \$933.05; filing charters, \$700; certificates and seals, \$149.95; service of summons, \$42. Of the \$28,600 collected for license fees in 1899, \$19,200 was for back taxes. There are now 325 licensed insurance companies doing business in the State, an increase of 18 in the year.

Political.—At the election, April 4, two justices of the Supreme Court were chosen. John B. Cassoday was elected for the full term, to succeed himself, and Joshua Eric Dodge to fill the unexpired term which he was appointed to fill temporarily upon the resignation of Judge Pinney.

New Richmond.—This little city, in St. Croix County, in the extreme western part of the State, was almost totally destroyed by a cyclone, June 12. The loss of life was very great; estimates placed it at 150 to 200; and one fourth to one half the population of about 2,000 were said to be injured. Aid was sent from other parts of the State and from neighboring States, notably from Minnesota, and the rebuilding of the town was begun within a week. The same storm caused damage in Barron, Clear Lake, and other places.

Legislative Session.—The session of the Legislature began Jan. 11 and ended May 4. L. W. Thayer was President *pro tempore* of the Senate and George H. Ray was Speaker of the House.

The term of John L. Mitchell as United States Senator ended this year, and the Legislature balloted several days for a successor, the Republican candidates being Joseph V. Quarles, Joseph W. Babcock, Isaac Stephenson, Samuel A. Cook, and Charles M. Webb. T. E. Ryan was the candidate of the Democratic members. On Jan. 30 Mr. Quarles was nominated in the Republican caucus, and he was elected in joint convention, Jan. 31, by a vote of 110 to 18 for Mr. Ryan.

Many important measures became law. Among them was the so-called antilobby bill, designed to prevent secret lobby influence. It requires agents of those interested in legislation to register in dockets kept by the Secretary of State for that purpose. They must enter opposite their names the number and title of every measure concerning which they are employed, also the name, occupation, and address of the employer; and they must file written authority from him. Thirty days after adjournment the employer must file a sworn statement of all moneys expended. Severe penalties are prescribed for a violation of any of these provisions, and lobbyists may be shut out from legislative privileges. Another measure, designed to protect weak legislators and officials, was the antipass bill. This forbids the giving or offering of any free pass or frank, or any privilege withheld from any person, for the traveling accommodation or transportation of any person or property, or the transmission of any message of communication, to any "political committee, or any member or employee thereof, to any candidate for or incumbent of any office or position under the Constitution or laws, or under any ordinance of any town or municipality, of this State, or to any person at the request or for the advantage of

all or any of them," and forbids the acceptance of such privileges by such committees, candidates, or incumbents. Any violation of the law is to be punished by imprisonment in the State Prison not more than five years nor less than one year, or by fine not exceeding \$1,000 nor less than \$200. An amendment to the Constitution, which was referred to the next Legislature, provides that the giving or accepting of a free pass or frank shall be deemed bribery. Other constitutional amendments proposed and referred to the next Legislature authorize State highway taxes and give the Legislative power to pass a general banking law. Instead, of repassing the amendment referred by the Legislature of 1897, fixing the term of the State School Superintendent at two years, this Legislature passed and referred to that of 1901 an amendment fixing it at four years. The other amendment of 1897, authorizing the Legislature to limit taxation in cities and towns, was not repassed. A tax commission appointed by the preceding Legislature to gather and submit information relating to taxation in this State and elsewhere made its report this year, and an act was passed providing for a commissioner of taxation and first and second assistant commissioners. The term of office is ten years. An act concerning life insurance companies provides for the stipulated premium plan and largely increases the income from these companies. Another revenue measure is for assessment of sleeping car, express, freight line, and equipment companies on the basis of their property in the State, at the average rate of taxation, State and local together, in the State. A direct inheritance tax is to be collected (1 per cent.) and a collateral tax of 5 per cent., on personal property exceeding \$10,000. The general act relating to negotiable instruments, which was recommended by the conference of commissioners on uniform legislation and has been adopted by many of the States, was enacted into law. Provision was made for reorganization of the militia on the system of the regular army. The marriage license law was amended; county clerks must give the license five days before the ceremony takes place, and may not grant to minors without the written consent of parents or guardians. The caucus law of 1897 was amended by the omission of the requirement for the preliminary meeting. Some minor amendments to the election laws were made. The game law was amended; the close season for aquatic wild fowl begins Jan. 1, instead of May 1. Hunters must be provided with licenses, excepting that a resident of the State may hunt any kind of game in the open season, except aquatic fowl or deer, provided he does not use a dog. Thirty special deputy game wardens are authorized. The law governing the State Reformatory was generally amended. The State Board of Control is to inspect twice a year the sanitary arrangements and fire equipment of county asylums, poorhouses, and jails, and is authorized to visit charitable institutions under corporations. The limit of the total tax of a city was raised from 3 to 3½ per cent. of the total valuation. Cities may levy a poll tax of \$1.50. Land sold for city taxes may be redeemed in three years with interest at 15 per cent. Electric railway, light, and power companies have their license fees increased. It was provided that before the salary of a circuit judge is allowed he must swear that no case submitted to him has remained undecided for ninety days, exclusive of time when he has been disabled by illness. Besides the new law for taxation of life insurance companies already referred to, there were other regulations of insurance busi-

ness. College graduates may be authorized to teach on filing evidence that they have given the required amount of study to pedagogy and psychology, and college or normal graduates may receive unlimited certificates after experience—one year for home graduates and two for foreign. County boards may establish training schools except in counties having State normals. Adjoining districts, towns, etc., may unite to establish high schools. The limit of State aid to high schools is raised from \$50,000 to \$100,000, of which not more than \$75,000 may be paid to graded districts. A special commissioner is to investigate the subject of manual training and the study of agriculture.

Acts to assist in forming and circulating libraries were passed.

Among other enactments were the following:

Providing for the branding and sale of renovated butter.

Requiring employers of labor to provide seats for the use of women employees when they are not on active duty.

Regulating the manufacture of cigars.

Prohibiting discrimination by employers against union labor.

Regulating employment agencies.

Making it a misdemeanor to threaten an employee or promise higher wages in order to influence his vote; and providing that when an employer requires notice from an employee intending to quit work on penalty of forfeiture of wages, he shall be liable to the same amount for discharging without notice.

To regulate child labor.

To regulate the manufacture of clothing and tobacco goods in dwellings.

Continuing the geological survey, and appropriating \$10,000 annually for two years.

Continuing the Board of Immigration.

Creating fire and police pension funds in cities of 150,000 inhabitants.

Authorizing mutual bicycle insurance companies, also companies to insure against losses by burglary and mail robbery, and against loss of hogs by disease.

Authorizing incorporation of canal and stream improvement companies.

To prevent forest fires.

Providing that the State, counties, and municipalities shall have no preference over other creditors of insolvent banks.

Admitting destitute army nurses and mothers of Union soldiers to the Soldiers' Home.

Raising the age of consent from fourteen to eighteen years.

Reducing the bounty on wolves from \$5 to \$3, and on wildcats and lynxes from \$3 to \$1, to be paid by the county, with an equal sum from the State.

Providing for inspection of nursery stock.

To prevent adulteration of linseed oil.

Providing that license may be refused to an exhibition employing acrobats under fifteen years of age.

Making it a misdemeanor to advertise an indecent play.

The act of 1897 for licensing plumbers was this year declared partly void. In providing that in the case of a firm or company the licensing of one member is sufficient it is held to discriminate against plumbers doing business alone, and therefore to violate the constitutional requirement of equal protection.

Some of the appropriations were as follow: To the State University, \$268,000; \$30,000 to the Agricultural College, and \$15,000 to the College of Mechanics and Engineering; to the State Fire

men's Association, \$1,000; for sufferers by forest fires in Barron County in 1898, \$10,000; for improvements at the Veterans' Home, \$35,000; additional for use of Fish Commissioners, \$6,000 annually; to normal schools, for buildings, \$75,000; to the reformatory at Green Bay, \$100,000 for maintenance for two years and \$150,000 for buildings; to the Girls' Industrial School, \$16,000 for buildings and repairs; for the Institution for Feeble-minded at Chippewa Falls, \$158,000; for exhibit at the Pan-American Exposition, \$25,000; to the Wisconsin Battle Ship Commission, to buy a silver service and a bronze badger for the ship, \$10,000.

WYOMING, a Northwestern State, admitted to the Union July 10, 1890; area, 97,890 square miles. Population in 1890, 60,705. Capital, Cheyenne.

Government.—The following were the State officers during the year: Governor, De Forest Richards; Secretary of State, F. Chatterton; Treasurer, G. E. Abbott; Auditor, Leroy Grant; Adjutant General, Frank A. Stitzer; Attorney-General, J. A. Van Orsdel; Superintendent of Education, T. T. Tynan; Supreme Court: Chief Justice, C. N. Potter, Republican; Associate Justices, Samuel T. Corn, Democrat, and Jesse Knight, Republican; Clerk, R. C. Morris.

Finances.—The report of the State Board of Equalization shows an assessed valuation of \$35,578,806.32, an increase of \$4,789,514.58 over that of 1898. The year 1899 shows a gain of \$107,322.97 in the value of railroad property over 1898, a gain of \$1,050,909 in the value of cattle, a gain of \$1,467,516.70 in the value of sheep, and a gain of \$230,197 in the value of horses.

The report of the State Board of Charities and Reform for the year ending Sept 30, 1899, included the following items: Expense of State prisoners, \$22,303.96; juvenile delinquents, \$1,769.11;

deaf and blind, \$1,612.45; insane, \$14,235.39; Soldiers' and Sailors' Home, \$5,523.23; Wyoming General Hospital, \$16,281.10.

The earnings of State institutions as paid into the treasury during the year were as follows: Penitentiary, care of United States prisoners, \$1,817.80; Hospital for Insane, care of private patients, \$714; General Hospital, care and treatment of patients, \$13,766.97; Soldiers' and Sailors' Home (national aid, \$1,898.12; pensions retained, \$409), \$2,307.12; total, \$18,605.89.

Taxation.—The tax levies for State purposes were placed at the following rates upon each dollar of assessed valuation: For general fund, $3\frac{1}{2}$ mills; university income fund, $\frac{1}{4}$ mill; fund for insane, $\frac{1}{4}$ mill; State bond tax fund, $\frac{1}{4}$ mill; Capital tax fund, $\frac{1}{4}$ mill; State Hospital maintenance fund, $\frac{1}{4}$ mill; university building fund, $\frac{1}{8}$ mill; Big Horn Hot Springs fund, $\frac{1}{8}$ mill; Hospital for Insane building fund, $\frac{1}{8}$ mill; General Hospital building fund, $\frac{1}{8}$ mill; total, 6 $\frac{1}{2}$ mills.

Sheep.—The sheep industry assumed gigantic proportions in 1899. In 1898 Wyoming ranked third among the wool-producing States, with a total clip of 17,000,000 pounds, Montana and Oregon occupying first and second places respectively. It is estimated that the wool clip for 1899 will aggregate 20,000,000 pounds.

Mining.—In 1898 the coal mines of the State produced 3,046,846 tons more than in the previous year. During the fiscal year ending Sept. 30, 1899, the output was 3,727,325 tons, an increase over 1898 of 680,479 tons.

There are now 20 coal mines, employing 5 men or more, in active operation in Wyoming.

Political.—The Legislature, 1899, consisted of 6 Democrats in the Senate and 3 in the House, 13 Republicans in the Senate and 35 in the House. On Jan. 25 Clarence D. Clark, Republican, was re-elected United States Senator.

Y

YUKON DISTRICT, THE CANADIAN.

Government.—This great gold-bearing region was the subject of a very wide political discussion in 1899, as well as of continued interest because of its mineral wealth. In 1898 the central topic of controversy had been the question of a railway from the coast; in 1899 it was one of general administration. On March 20 Sir Hibbert Tupper introduced into Parliament a long resolution preceded by an elaborate speech denouncing the Dominion Government for maladministration, and even corruption, in the Yukon territory. He was replied to by the Hon. Charles Sifton, and after a heated and prolonged debate the motion of censure was thrown out by a strict party vote—82 to 32—with the exception of 3 western Liberal members, who supported Sir Hibbert.

The political point of the whole controversy was Sir Hibbert Tupper's demand for a royal commission of inquiry to take evidence under oath and to be composed of impartial men. This was refused by the Government, although Sir Hibbert offered to retire from public life if he could not prove his principal charges. The exact truth will perhaps never be known. There is no doubt that the administration of the region is now on a perfectly fair and honest basis. On July 7 Mr. Ogilvie's report on the personal inquiry made by him as commissioner concluded with the following words: "How did these rumors get started and become so generally cred-

ited? In reply, I may state that there is a large percentage of population here who are watching for the chance to make something. If they are forestalled by some one else, they immediately jump to the conclusion that there has been something crooked between that some one else and the officials by whom the transaction was consummated. It has not been necessary to do more than insinuate that some official or officials have been guilty of corrupt acts to have it within a few hours generally so reported, and, I regret to say, generally so believed, notwithstanding that there may not be a tittle of evidence in support of the charge. Transactions that have been actuated by the purest and highest motives have been attributed to the very worst. Of this I have personal knowledge and experience. In concluding, I may say that with such a class there can not exist (in their minds at least) any honest government at all, for reasons that are obvious enough not to need mention."

In September, 1899, A. B. Perry, superintendent of the Northwest mounted police, and E. C. Steele, Gold Commissioner, were placed upon the Yukon Executive Council.

Mines.—On April 8, 1899, the Klondike Nugget declared that the output for the coming season would be more than double that of the last, and royalty would be paid on more than \$8,000,000, while evasions and exemptions would bring up the total production to twice that figure.

This statement illustrates the difficulties of giving detailed facts regarding the gold output of the Yukon. The value of the chief creeks is now well known, and any that fail to reach the mark have been compensated for in the past by new discoveries. The correspondent of the *Toronto Globe*, commenting on the spot upon this estimate of \$16,000,000 as a result of the ensuing "wash-up," declared that the result would be nearer \$25,000,000, and mentioned rich mines that had been omitted from the calculation. Early in January two Ottawa geological experts—R. G. McConnell and J. B. Tyrrell—reported briefly to the Interior Department regarding the general situation, and the following is a summary of their report: They declared that the productive part of the Klondike gold district, as at present known, covers an area of 1,000 square miles, and is between the Klondike and Indian river tributaries of the Yukon and east of the latter river. The region is traversed by a multitude of streams flowing in deep, troughlike valleys. The larger creeks are separated by long ridges, gashed by the smaller streams, and terminating upward in even slopes or lines of rounded hills. The forest growth, which generally covers the district, consists principally of black and white spruce, with some birch and poplar. The approximate area of 1,000 square miles of known gold fields refers to the district traversed by the gold-bearing creeks, and not to the actual area of pay gravels. The latter are confined to the bottoms of a few of the valleys and the lower slopes of the adjoining ridges, and occupy a much smaller area. The rich creeks, so far, are only four—Eldorado, Bonanza, Hunker, and Dominion—and the greater portion of the yield of the past two years has come from the Eldorado and Bonanza. The proved portions of the four producing creeks have an aggregate length of about 30 miles. A number of tributaries of the producing creeks and other streams—such as Bear, Sulphur, Too Much Gold, and All Gold—have yielded small amounts. The gold occurs in the gravels flooring the bottom of the valleys, and in a remarkable moraine or glacial deposit which forms a southern slope of Eldorado and Bonanza creeks for some miles, and which was also found north of the latter creek for some distance above its junction with Eldorado. The stream gravels have a thickness of 2 to 8 feet, and a width along the most productive portions of Eldorado and Bonanza creeks of 100 to 400 feet. They extend across the valley bottoms and increase in width with the gradual enlargement of the latter toward their mouths. The gravels are everywhere auriferous, but the concentration is irregular, and the gold increases in quantity toward the

bottom of the section. The greater part of the pay is usually found within a foot and a half of the bed rock. A considerable portion of the gold is also found in the soft, decomposed, and shattered country rock, on which the gravels rest, into which it has sunk often to a depth of two feet. The beach gravels are of less importance than the stream gravels, and, so far, are worked to a considerable extent only along Bonanza and the lower part of Eldorado creek. The hillsides on the lower portions of the creeks could be washed down by strong streams. Attention is called to the necessity of wagon roads, which could easily be built through the whole country.

The final official announcement of gold production in the Yukon for 1899 was \$7,000,000, and this sum must have been doubled in fact through evasion of the authorities and the tax.

Telegraphic Communication.—On Oct. 5, 1899, a *Toronto* newspaper received the first dispatch by wire from Dawson City to Skagway. Thence the message went to the coast—a six days' voyage—and then it was telegraphed from New Westminster to Toronto. This was the result of a charter granted in 1898 to an English company, with which the late Sir John Pender was connected, and the removal of the almost complete isolation of the country quickly had a beneficial effect upon general conditions.

Dawson City.—D. C. Fraser, M. P., on Oct. 13, 1899, gave the following description of the Yukon capital, which he had just visited: "In the city of Dawson, which has from 8,000 to 10,000 inhabitants, better order prevails, and greater security for life and property, than there is in any other Canadian town with the same or a smaller population; and this is all the more surprising when the cosmopolitan character of the people there is considered. Although there are an enormous number of men of sterling character in and about Dawson, yet there is quite an element that needs watching, and to the Northwest mounted police alone is due the satisfactory condition of affairs at present existing there. A few mounted police in Dawson without any effort—through the knowledge the lawless element has of how they will be dealt with if they transgress—keep the town in most excellent order. Such as come for trial before those charged with the administration of the law are summarily dealt with. No lecturing or moral suasion is attempted by the presiding official. If the prisoner is found guilty he is either fined or, as is usually the case, sent to jail with hard labor on the wood pile, the latter punishment being one that every criminal in Dawson dreads. Dawson has several fine blocks, with plate-glass fronts, and the premises in every respect are modern."

INDEX TO THE FOUR VOLUMES OF THE THIRD SERIES.
